are well developed, in others they are merely rudimental, and in some the very rudiments of them are entirely concealed under the skin.

ZOO'LOGY (Gr. *zoon*, an animal, and *logos*, a discourse), the science which has for its subject the Animal Kingdom (q. v.). This science, itself a branch of Natural History (q. v.) or Biology, is divided into a number of branches, which are often pursued as distinct sciences, the subject being too large to be thoroughly studied except in this manner; although it is also necessary that the results of investigation in particular departments should be brought together, so that the animal kingdom may be viewed as a whole, and the relations of the most widely different groups of animals to each other determined.

The branches of Z. relating to the inferior classes of *Vertebrata* are thus named: that which has *Birds* for its subject is universally known as *Ornithology* (q. v.); that which relates to *Reptiles* is *Herpetology* (q. v.), and the subordinate branch relating to serpents is sometimes called *Ophiology;* that which relates to *Fishes* is *Ichthyology* (q. v.). Among *Invertebrate animals*, the group of *Mollusca* is the subject of the science of *Malacology* (q. v.), although this term is seldom used; and when shells rather than the animals which bear them are considered, the term *Conchology* (q. v.) is employed. No particular term is commonly applied to the branches of Z. which treat of the *Crustacea*, *Arachnida*, &c.: but that which relates to *Insects* is universally known as *Entomology* (q. v.), and the term *Helminthology* (q. v.) is employed to designate that which has *Worms* for its subject. No similar terms are used for the branches of this science which relate to other groups of *Invertebrata*.

The Science of Z., however, divides itself into distinct sciences, not so much in accordance with the divisions of the animal kingdom, as with regard to particular aspects of the subject which may be studied either in relation to animals generally, or to any particular species. Thus, *Anatomy* (q. v.) may be regarded as a branch of Z., when the term Z. is taken in its largest sense, as including man along with the inferior animals, and *Ethnology* (q. v.) must in like manner be considered as belonging to it. The anatomy of the inferior animals is sometimes called *Zootomy*, and the term *Comparative Anatomy* is employed when their structure is studied in relation to that of man, and the structure of one division of the animal kingdom in relation to that of the others. *Physiology* (q. v.) is one of the most important branches of Z.; and with it that branch of chemistry which treats of animal substances is closely connected. A very interesting branch of Z. is that which relates to the habits and instincts of animals. It can hardly be said to have been constituted into a separate science, but has received much attention from those naturalists who have devoted themselves to the study of particular groups of animals. See ANIMAL KINGDOM.

We have no evidence that the study of Z. was prosecuted to any considerable extent before the time of Aristotle. In his hands it became at once a science, and the foundations of a system of classification were laid. No artificial system of classification has ever been produced in Z., like the sexual system of Linnæus in botany; but from the very first to the present day, a natural grouping of animals has always been attempted. To this the widely marked distinctions between the principal groups almost unavoidably led. Aristotle brought to bear upon the subject the highest powers both of observation and of generalization, and some of the groups established by him still retain their place in the most modern systems. Ælian and Pliny show no capacity for the scientific treatment of the subject; and in their writings, facts are largely mingled with fables. During the middle ages, Z., like other kindred sciences, was almost completely neglected. For many centuries, the only name worth mentioning, in connection with the history of the science, is that of Albertus Magnus; whose knowledge, however, was entirely derived from Aristotle and other ancient authors. From his time, in the first half of the 13th c., to the beginning of the 16th, Z. was again almost com-

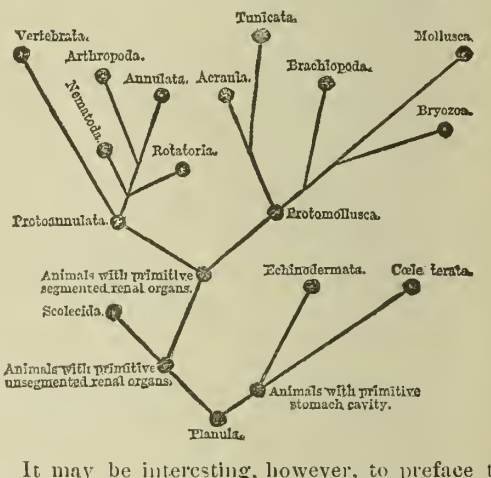
pletely neglected; but the new activity of mind which then displayed itself soon sought this as well as other directions, and an impulse was more especially given to Z. by the progress of geographical discovery.

The names of Belon (q. v.) and Rondelet, are the two greatest in this department at this period, and by them Z. was enriched with many new facts, while attempts were also made at a more perfect classification. Aldrovandi and Gesner (q. v.) soon followed them, besides others who began to direct their attention more specially to particular branches of Z. It was not till after the middle of the 17th c., however, that any real progress was made in classification, founded upon a philosophical study and comparison of animals. The works of Ray (q. v) are described by Cuvier as 'the foundation of modern zoology.' The materials, however, were in great part prepared, and the first outline of a system sketched by Willughby. From the days of Aristotle, Z. had never been prosecuted with such acuteness of observation, accuracy of description, and breadth of philosophical generalization as it was by Willughby and Ray. The progress of the science now became very rapid. Buffon won for it, by his interesting descriptions and brilliant style, the general attention of the educated portion of society, not only in his own but in other countries. He was almost immediately followed by Linnæus, who, extending his studies from botany to Z., not only enlarged the science by his own observations and discoveries, but rendered it far greater service by gathering together the facts ascertained by others, and by the improvement which he effected in classification.

Some of the larger groups established by Linnæus have been retained by all subseqent naturalists without essential modification of their characters, and even his smallest groups—genera—have been very generally retained, although now regarded as constituting tribes or families. According to the Linnæan system, the animal kingdom is divided into six great classes, which are further brought together in groups of two each as follows:

Heart bilocular, with two auricles, blood warm, red,	Viviparous.	1. Mammalia.
	Oviparous.	2. Birds.
Heart unilocular, with one auricle, blood cold, red,	With lungs	3. Amphibia.
	With gills.	4. Fishes.
Heart unilocular, with one auricle, circulating fluid (*sanies*) cold, white,	With antennæ.	5. Insects.
	With tentacula.	6. Vermes.

It was, however, in constituting and defining the genera that Linnæus showed in the highest degree his powers both of observation and arrangement. His labors in the lower departments of the animal kingdom were much less perfect than in the higher; but others speedily entered upon the field, and whilst new species of animals, and their habits continued to be described, the study of comparative anatomy was also diligently prosecuted. The names of Pallas, Hunter, and Blumenbach are particularly worthy to be noticed; but more than any other, the name of Cuvier, who, like Linnæus, took a comprehensive view of the whole subject of Z., and carried forward the work of minute observation, as well as of generalization. His system of classification is so vast an improvement of that of Linnæus as to be almost fundamentally new, and has formed a new starting-point for all further progress.



The divisions, the classes, and many of the orders of Cuvier's system have already been noticed under their proper heads, so that it may be enough here to give the most general outline of the system.

Div. I. Vertebrata.	Class 1. Mammalia.
	" 2. Aves (Birds).
	" 3. Reptilia (Reptiles).
	" 4. Pisces (Fishes).
Div. II. Mollusca.	Class 1. Cephalopoda.
	" 2. Pteropoda.
	" 3. Gasteropoda.
	" 4. Acephala.
	" 5. Brachiopoda.
	" 6. Cirrhopoda.
Div. III. Articulata.	Class 1. Insecta (Insects).
	" 2. Crustacea.
	" 3. Arachnida.
	" 4. Annelida.
Div. IV. Radiata.	Class 1. Echinodermata.
	" 2. Entozoa.
	" 3. Acalephæ.
	" 4. Polypi.
	" 5. Infusoria.

The system of Cuvier has been extensively modified by many subsequent anatomists; notably Lamarck, De Blainville, Ehrenberg, Owen, Milne-Edwards, Von Siebold and Stannius, Leuckart, Agassiz, Huxley, Hæckel, and others. The accompanying outline, while serving to give an idea of the present state of classification, must not be regarded as authoritative or final, since the rapid progress of knowledge is introducing incessant change in our conceptions of the relation of the greater groups. The reverse error must, however, be guarded against—that of supposing one classification as good as another, for each really marks a stage of progress. The taxonomy of the various groups, too, has reached a considerably greater degree of permanence.

The most remarkable waves of progress in Z. since Cuvier, have been due at first to the splendid morphological impulse of Geoffrey St. Hilaire (q. v.); to the prosecution, in the light of the cell-theory, of the study of the simplest forms of life, and of the minute structure of the higher animals; to the pursuit of embryology under Von Baer (q. v.) and his successors; and finally, in the highest degree to Darwin's labors, both in the regions of observation and of theory. Influenced by the theory of evolution (see Darwinian Theory and Descent of Man; Species, Origin of; Geographical Distribution; &c.), and aided by embryology, the zoologist now seeks to arrange his forms in series which should represent not merely resemblance of adult structure, but also should indicate as nearly as possible the lines of descent by which he believes these forms to have originated.

Thus various recent authors, notably Hæckel and Semper, have constructed 'phylogenetic' classifications of the animal kingdom in the form of genealogical trees; but these speculations, however ingenious and suggestive, cannot supersede the existing classifications, at least while our knowledge of embryology, and more especially of palæontology, remains so imperfect; for the line of descent has been made out with apparent certainty only in the case of a few genera, such as the horse (see Mammalia) and

crocodile. It may be interesting, however, to preface the ordinary classification by an example of a genealogical tree, borrowed from Semper.

I. PROTOZOA.

Section A. Monera.—Class 1. Monera.
Section B. Endoplastica.—Class 2. Rhizopoda; 3. Foraminifera; 4. Heliozoa; 5. Radiolaria; 6. Infusoria; 7. Gregarinida.

II. PORIFERA.

Class 1. Myxospongiæ; 2. Fibrospongiæ; 3. Calcispongiæ.

III. CŒLENTERATA.

Class I. Hydrozoa—
Sub-class i. Hydroida.—Order 1. Hydridæ; 2. Corynidæ; 3. Sertularidæ; 4. Campanularidæ.
Sub-class ii. Siphonophora.—Order 5. Calycophoridæ; 6. Physophoridæ.
Sub-class iii. Discophora.—Order 7. Medusidæ; 8. Lucernaridæ.
Sub-class iv. Graptolitida (extinct).—Order 9. Graptolitidæ.
Class II. Actinozoa—
Sub-class i. Coralligena.—Order 1. Zoantharia; (*a*) Malacodermata, (*b*) Sclerodermata, (*c*) Sclerobasica; 2. Alcyonaria; 3. Rugosa (extinct).
Sub-class ii. Ctenophora.—Order 4. Ctenophora.

IV. VERMES.

Class I. Platyelmia.—Order 1. Turbellaria; 2. Nemertea; 3. Trematoda; 4. Cestoidea.
Class II. Nematelmia.—Order 1. Nematoda; 2. Gordiacea.
Class III. Acanthocephala (*Echinorhynchus*).
Class IV. Chætognatha (*Sagitta*).
Class V. Rotatoria.
Class VI. Enteropneusta (*Balanoglossus*).
Class VII. Gephyrea.

Class VIII. ANNELIDA—
Sub-class i. Discophora.
Sub-class ii. Chœtopoda.—Order 1. Achœta; 2. Oligochœta; 3. Polychœta (Tubicola, Errantia).
Class IX. POLYZOA.
Class X. BRACHIOPODA.

V. ARTHROPODA.

Class I. PROTOTRACHEATA (*Peripatus*).
Class II. MYRIAPODA.—Order 1. Chilognatha; 2. Chilopoda.
Class III. INSECTA—
Section A. Ametabola.—Order 1. Anoplura; 2. Mallophaga; 3. Thysanura.
Section B. Hemimetabola.—Order 4. Neuroptera; 5. Hemiptera; 6. Orthoptera.
Section C. Holometabola.—Order 7. Aphaniptera; 8. Diptera; 9. Hymenoptera; 10. Lepidoptera; 11. Strepsiptera; 12. Coleoptera.
Class IV. CRUSTACEA.—Order 1. Trilobita (extinct); 2. Phyllopoda, (*a*) Branchiopoda, (*b*) Cladocera; 3. Cumacea; 4. Edriophthalmia, (*a*) Amphipoda, (*b*) Isopoda; 5. Stomatopoda; 6. Copepoda; 7. Ostracoda; 8. Cirripedia; 9. Schizopoda; 10. Decapoda, (*a*) Macrura, (*b*) Brachyura.
Class V. ARACHNIDA.—Order 1. Merostomata, (*a*) Xiphosura, (*b*) Eurypterida (extinct); 2. Arthrogastra; 3. Araneina; 4. Acarina; 5. Linguatulina.

VI. ECHINODERMATA.

Class 1. Echinoidea; 2. Asteroidea; 3. Ophiuroidea; 4. Crinoidea; 5. Holothuroidea; 6. Blastoidea (extinct); 7. Cystoidea (extinct).

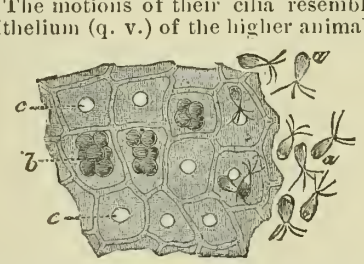
VII. MOLLUSCA.

Class I. LAMELLIBRANCHIATA—
Section A. Dimya.—Order 1. Asiphonida; 2. Siphonida.
Section B. Monomya.
Class II. POLYPLACOPHORA.
Class III. SCAPHOPODA.
Class IV. GASTEROPODA—
Section A. Prosobranchiata.
Section B. Opisthobranchiata.
Section C. Pulmonata.
Section D. Heteropoda.
Class V. PTEROPODA—
Order 1. Thecosomata; 2. Gymnosomata.
Class VI. CEPHALOPODA—
Section A. Tetrabranchiata.
Section B. Dibranchiata.—Order 1. Decapoda; 2. Octopoda.

VIII. TUNICATA.

Class I. PERENNICHODATA (*Appendicularia*).
Class II. CADUCICHORDATA—
Section A. Simplicia.
Section B. Composita.
Section C. Conserta.

IX. VERTEBRATA.



α ACRANIATA (*Amphioxus*).
β CRANIATA.
Class I. ICHTHYOPSIDA—
SECTION A. Cyclostomata.
Section B. Pisces.—Order 1. Elasmobranchii; 2. Holocephala; 3. Ganoidei; 4. Teleostei, (*a*) Physostomi, (*b*) Anacanthini, (*c*) Acanthopteri, (*d*) Pharyngognathi, (*e*) Lophobranchii, (*f*) Plectognathi; 5. Dipnoi.
Section C. Amphibia.—Order 1. Urodela; 2. Anura; 3. Gymnophiona; 4. Labyrinthodonta (extinct).
Class II. SAUROPSIDA—
Section D. Reptilia.—Order 1. Lacertilia; 2. Chelonia; 3. Ophidia; 4. Crocodilia; 5. Plesiosauria; 6. Ichthyosauria; 7. Dinosauria; 8. Pterosauria (the last five extinct.)
Section E. Aves—
i. Saururae (*Archæopteryx*).
ii. Ratitæ (*Cursores*).
iii. Carinatæ.—Order 1. Natatores; 2. Grallatores; 3. Rasores; (*a*) Gallinacei, (*b*) Columbacei; 4. Scansores; 5. Insessores or Passeres, (*a*) Dentirostres, (*b*) Conirostres, (*c*) Tenuirostres, (*d*) Fissirostres; 6. Raptores.
Class III. MAMMALIA—
Section i. Ornithodelphia.—Order 1. Monotremata.
Section ii. Didelphia.—Order 2. Marsupialia.
Section iii. Monodelphia (or Placentalia).—Order 3. Edentata; 4. Ungulata, (*a*) Perissodactyla, (*b*) Artiodactyla; 5. Sirenia; 6. Toxodontia (extinct); 7. Dinocerata (extinct); 8. Tillodontia (extinct); 9. Hyracoidea; 10. Proboscidea; 11. Carnivora; 12. Cetacea; 13. Insectivora; 14. Rodentia; 15. Cheiroptera; 16. Primates, (*a*) Lemuridæ, (*b*) Simiadæ, (*c*) Anthropidæ.

AUTHORITIES.—GENERAL MORPHOLOGY AND CLASSIFICATION—Linnæus, *Systema Naturæ;* Cuvier, *Règne Animal;* Lamarck, *Histoire des Anim. s. Vertibres;* Owen, *Comp. Anat. of Vertebrates;* Bronn's *Klassen u. Ordnung. d. Thier-Reichs;* Huxley, *Anat. of Vertebrated Animals* (1871), and *Anat. of Invertebrated Animals* (1875); Claus, *Lehrb. d. Zoologie* (1882); Gegenbaur, *Introd. to Comp. Anat.* (1875); Balfour's *Embryology* (1881). PHYSIOLOGY—Milne-Edwards, *Leçons s. la physiologie.* DISTRIBUTION—Wallace *On Distribution of Animals*, 2 vols., 1876. ÆTIOLOGY—Darwin's *Origin of Species*, and other works. For bibliography of special subjects, see the works of Bronn, Claus, Huxley, and Gegenbaur, above cited.

ZO'OPHYTE (derived from the Greek *zoon*, an animal, and *phyton*, a plant, and signifying an animal-plant) is a term which was employed by Cuvier, in his earlier attempts at classification, in the same sense as he afterwards employed *Radiata*—viz., to designate the lowest primary division of the animal kingdom, which includes many animal organisms that are fixed to a definite spot of rock, shell, &c., and have more or less superficial resemblance to plants, such as corals, sea-anemones, &c. See above, ZOOLOGY. The term is now disused by scientific naturalists.

ZO'OSPORE (Gr. *zoos*, living, and *spora*, a seed), in Botany, the name given to those Spores (q. v.) of many lower algæ and fungi, which, being furnished with cilia, move spontaneously for a short time after being discharged from the spore-case of the parent plant. The motions of their cilia resemble those of the cilia on the Epithelium (q. v.) of the higher animals. The purpose

Portion of Thallus of a green Sea-weed (*Ulva*):
a, free zoospores, each with four cilia; *b*, young zoospores forming from protoplasm of cell; *c*, opening in cell-wall by which zoospores have escaped.

served by the ciliary motion in zoospores, is evidently the wider diffusion of the species; and the cessation of the motion after a certain time permits the spore to become fixed, in order to germination, which is frequently preceded by conjugation. They are apt to be mistaken by observers with the microscope for Infusoria (q. v.).

ZOO'TOMY, a term sometimes employed to denote the anatomy of the lower animals, as distinguished from human anatomy. See ZOOLOGY.

ZO'RNDORF, a village four English miles north of Küstrin, was the scene of the bloodiest of the many desperate conflicts of the *Seven Years' War* (q. v.). The Russians having for the second time been ordered by the Czarina Elizabeth to invade Prussia, advanced towards Berlin, committing frightful devastations, while Frederick the Great, with the bulk of his forces, was engaged with the Austrians in Silesia and Saxony. The Russians, under Fermor, were 50,000 strong, and easily drove before them Dohna's little Prussian army of 15,000; but Frederick being speedily apprized of this new invasion, hastened northwards with such a reinforcement as raised the army to 30,000; and after taking care, by the breaking down of bridges, &c. to cut off their retreat, engaged the invaders. The battle, which commenced at eight in the morning of August 25, 1758, and lasted till evening, consisted mainly in a succession of furious charges, accompanied with a tremendous artillery-fire, and was not decided till Seidlitz, by an able movement, turned the Russian flank. The Russians, now discovering that they were nearly surrounded, fought with the utmost desperation, and ultimately both armies bivouacked on the field of battle. In the morning, however, Fermor drew off his forces, diminished by 20,000 men, 103 cannon, and 27 standards; having inflicted on the Prussians a loss of 13,000 men, 26 cannon, and a few standards. Generals Soltikof, Czernitchef, and Prince Sulkowski were made prisoners by the Prussians on this occasion; and, oddly enough, the first named was the conqueror of Frederick II. in the next great battle between the two northern powers, at Kunersdorf (q. v.).

ZOROASTER, or rather ZARATHUSTRA (which in Greek and Latin was corrupted into ZARASTRADES and ZOROASTRES; while the Persians and Parsees altered it into ZERDUSHT), is the name of the founder of what is now known as the Parsee religion. The original meaning of the word is uncertain, and though there

have been many conjectures formed about it, yet not one of them seems to be borne out by recent investigations. Most probably, it only indicates the notion of 'Chief,' 'Senior,' 'High-priest,' and was a common designation of a spiritual guide and head of a district or province. Indeed, the founder of Zoroastrianism is hardly ever mentioned without his family name—viz., Spitama. He seems to have been born in Bactria. The terms he applied to himself are either Manthran, i. e., a reciter of Manthras; a messenger sent by Ahuramazda; a speaker; one who listens to the voice of oracles given by the spirit of nature; one who receives sacred words from Ahuramazda through the flames. His life is completely shrouded in darkness. Both the Greek and Roman, and most of the Zend accounts about his life and works are legendary and utterly unhistorical. In the latter, he is to a great extent represented, not as a historical, but as a dogmatical personality, vested with superhuman, or rather divine powers, standing next to God, above the archangels themselves. His temptations by the devil, whose empire is threatened by him, form the subject of many traditional reports and legends.

He is represented as the abyss of all wisdom and truth, and the master of the whole living creation. 'We worship'—so runs one of the prayers in the Fravardin Yasht—'the rule and the guardian angel of Zarathustra Spitama, who first thought good thoughts, who first spoke good words, who first performed good actions, who was the first priest, the first warrior, the first cultivator of soil, the first prophet, the first who was inspired, the first who has given to mankind nature, and reality, and word, and hearing of word, and wealth, and all good things created by Mazda, which embellish reality; who first caused the wheel to turn among gods and men, who first praised the purity of the living creation and destroyed idolatry, who confessed the Zarathustrian belief in Ahuramazda, the religion of the living God against the devils. . . . . Through whom the whole true and revealed word was heard, which is the life and guidance of the world. . . . . Through his knowledge and speech, the waters and trees become desirous of growing; through his knowledge and speech, all beings created by the Holy Spirit are uttering words of happiness.'

In the old Yazna (see ZEND-AVESTA) alone, he appears like a living reality, a man acting a great and prominent part both in the history of his country and that of mankind. His father's name seems to have been Pourushâspa, and that of his daughter, the only one mentioned of his children, Pournchista. Very obscure, however, remains, even by this account, the time when he lived. The dates generally given are as follows. Xanthos of Lydia places him about 600 years before the Trojan war; Aristotle and Eudoxus place him 6000 years before Plato; others, again, 5000 years before the Trojan war. Berosos, a Babylonian historian, makes him a Babylonian king, and the founder of a dynasty which reigned between 2200 and 2000 B.C. over Babylon. The Parsees place him at the time of Hystaspes, Darius's father, whom they identify with a king mentioned in the Shâh-Nâmeh (q. v.), from whom, however, Hystaspes is totally distinct. This account would place him at about 550 B.C. Yet there is scarcely a doubt that he must be considered to belong to a much earlier age, not later than 1000 B.C.; possibly he was a contemporary of Moses. It is almost certain that Z. was one of the Soshyantôs, or fire-priests, with whom the religious reform, which he carried out boldly, first arose. These were probably at first identical with the Vedic Atharvans (fire-priests), as indeed Zoroastrianism is merely an advanced stage of Brahmanism. The former creed, that of Ahura, by way of eminence, transformed, after the outbreak of the schism, the good beings of the latter into devils or devas; e. g., the purely Brahmanic Indra, Sharva, Nâsatya, &c.—unless it promoted them into saints and angels (yagatas).

The conflict that led to this schism between the Iranians and those Aryan tribes which immigrated into Hindustan Proper, and whose leaders became afterwards founders of Brahmanism, sprung from many social, political, and religious causes. The Aryans seem to have originally led a nomad life, until some of them, reaching, in the course of their migrations, lands fit for permanent settlements, settled down into agriculturists. Bactria and the parts between the Oxus and Jaxartes seem to have attracted them most. The Iranians became gradually estranged from their brother tribes, who adhered to their ancient nomad life; and by degrees, the whilom affection having turned into hatred, considered those peaceful settlements a fit prey for their depredations and inroads. The hatred thus nourished, by further degrees included all and everything belonging to these devastators; even their religion, originally identical with that of the settlers. The 'Deva religion' became, in their eyes, the source of all evil. Moulded into a new form, styled the 'Ahura' religion, the old elements were much more changed than was the case when Judaism became Christianity. Generation after generation further added and took away, until Zarathustra, with the energy and the clear eye that belongs to exalted leaders and founders of religions, gave to that which had originally been a mere reaction and spite against the primitive 'Brahmanic' faith, a new and independent life, and for ever fixed its dogmas, not a few of which have sprung from his own brains.

It is, as we said in the article on the ZEND-AVESTA, chiefly from the Gâthas that Zarathustra's real theology, unmutilated by later ages, can be learned. His leading idea was monotheism. Whatever may have caused the establishment of the dualism of gods; the good and the evil in the Persian religion—a dualism so clearly marked at the time of Isaiah, that he found it necessary to protest emphatically against it—it was not Z. who proclaimed it. His dualism is of a totally different nature. It was merely the principle of his speculative philosophy—a supposition of two primeval causes of the real and the intellectual world. His moral philosophy, on the other hand, moved in a triad—thought, word, and deed. There is no complete system of Zoroastrian philosophy to be found in the Zend-Avesta, any more than there is a developed Platonic system laid down explicitly in the Platonic writings; but from what is to be gathered in the documents referred to, it cannot be doubted that Z. was a deep and great thinker, far above his contemporaries, and even many of the most enlightened men of subsequent ages. If proof were needed for the high appreciation in which he was held in antiquity, it might be found in the circumstance, that even the Greeks and Romans, not particularly given to overrating foreign learning and wisdom, held him in the very highest estimation, as may be seen by their reiterated praises of the wisdom of him whose name they scarcely knew how to pronounce.

With regard, then, to the first point, his monotheism, it suffices to mention, that while the fire-priests before him, the Soshyantôs, worshiped a plurality of good spirits called Ahuras, as opposed to the Indian devas, he reduced this plurality to a unity. This one supreme being he called Ahurô Mazdaô (that Ahura which is Mazdao), or the creator of the universe—the Auramazda of the cuneiform inscriptions of the Achemenidian kings, the Ahurmazd of Sassanian times, and the Hormazd or Ormazd of modern Parsees. This supreme god is by Z. conceived to be 'the creator of the earthly and spiritual life, the lord of the whole universe, at whose hands are all the creatures.' The following extract from the Gâtha (Ustavaiti) will leave no doubt on that much-contested point: 'Blessed is he, blessed are all men to whom the living wise God of his own command should grant those two everlasting powers (viz., immortality and wholesomeness). . . . . I believe Thee, O God, to be the best thing of all, the source of light for the world. Everybody shall choose Thee as the source of light, Thee, Thee, holiest spirit Mazda! Thou createst all good things by means of the power of Thy good mind at any time, and promisest us, who believe in Thee, a long life. I believe Thee to be the powerful holy god Mazda! for Thou givest with Thy hand, filled with helps, good to the pious man, as well as to the impious, by means of the warmth of the fire strengthening the good things. From this reason, the vigor of the good mind has fallen to my lot. . . . . Who was in the beginning the father and the creator of truth? Who showed to the sun and the stars their way? Who causes the moon to increase and wane, if not Thou? . . . . Who is holding the earth and the skies above it? Who made the waters and the trees of the field? Who is in the winds and in the storms that they so quickly run? Who is the creator of the good minded beings, Thou wise? Who made the lights of good effect and the darkness? Who made the sleep of good effect and the activity? Who made morning, noon, and night?' Ahuramazda is thus to Z. the light and the source of light. He is wisdom and intellect; he possesses all good things, temporal and spiritual, among them the good mind, immortality, wholesomeness, the best truth, devotion, piety, and abundance of all earthly good. All these gifts he grants to the pious man who is pure in thought, word, and deed. He rewards the good, and punishes the wicked; and all that is created, good or evil, fortune or misfortune, is his work alone.

We spoke of Z.'s philosophical dualism, and of its having often been confounded with theological dualism, which it is certainly very far from being. Nothing was further from Z.'s mind than to assume anything but one supreme being, one and indivisible. But that everlasting problem of all thinking minds—viz., the origin of evil, and its incompatability with God's goodness, holiness, and justice—he attempted to solve by assuming two primeval causes, which, though different, were united, and produced the world of the material things as well as that of the spirit.

The one who produced the *reality* (gaya) is called Vohu Mano, the good mind; the other, through whom the non-reality (ajyâiti) originated, is the Akem Manô, the naught mind. To the first belong all good, true, and perfect things; to the second, all that is delusive, bad, wicked. These two aboriginal moving causes of the universe are called twins. They are spread everywhere, in God as in men. When united in Ahuramazda, they are called Cpentô Mainyus, and Angrô Mainyus—i. e., white or holy; and dark spirit. It is only in later writings that these two are supposed to be opposed to each other, not within Ahuramazda, but without—to stand, in fact, in the relation of God and Devil to

each other. The inscriptions of Darius know but one god, without any adversary whatsoever. But while the one side within him produced all that was bright and shining, all that is good and useful in nature, the other side produced all that is dark and apparently noxious. Both are as inseparable as day and night, and though opposed to each other, are indispensable for the preservation of creation. The bright spirit appears in the blazing flame, the presence of the dark is marked by the wood converted into charcoal. The one has created the light of the day, the other the darkness of night; the former awakens men to their duty, the other lulls them to sleep. Life is produced by the one, and extinguished by the other, who also, by releasing the soul from the fetters of the body, enables her to go up to immortality and everlasting life.

We have said already that the original monotheism of Z. did not last long. False interpretations, misunderstandings, changes, and corruptions crept in, and dualism was established in theology. The two principles then for the first time became two powers, hostile to each other, each ruling over a realm of his own, and constantly endeavoring to overthrow the other. This doctrine, which appears first fully developed in the Vendidad, once accepted by some of the most influential leaders, it soon followed that, like terrestrial rulers, each of the two powers must have a council and a court of his own. The number of councilors was six, each having to rule over some special province of creation; but Ahuramazda, who at first merely presided over this council, came gradually to be included in their number, and we then read of seven instead of the usual six Ameshaspentas, or Immortal Saints. These six supreme councilors, who have also found their way into the Jewish tradition embodied in the Talmud, are both by etymology and the sense of the passages in which they figure, distinctly seen to be but abstract nouns or ideas, representing the gifts which God grants to all those who worship with a pure heart, who speak the truth and perform good actions. The first of these angels or principles (Vohu Mano) is the vital faculty in all living beings of the good creation. He is the *son* of Ahuramazda, and penetrates the whole living good creation. By him are wrought all good deeds and words of men.

The second (Ardibehesht) represents the blazing flame of fire, the light in luminaries, and brightness and splendor of any and every kind. He represents, as the light, the all-pervading, all-penetrating Ahuramazda's omnipresence. He is the preserver of the vitality of all life and all that is good. He thus represents Providence. The third presides over metals, and is the giver of wealth. His name is Sharavar, which means possession, wealth. The fourth (Issandarm. t = Devotion) represents the earth. It is a symbol of the pious and obedient heart of the true Ahuramazda worshiper, who serves God with his body and soul. The two last (Khordâd and Amerdât) preside over vegetation, and produce all kinds of fruit. But apart from the celestial council stands Sraosha (Serost) the archangel, vested with very high powers. He alone seems to have been considered a personality. He stands between God and man, the great teacher of the prophet himself. He shows the way to heaven, and pronounces judgment upon human action after death. He is, in the Yazna, styled the Sincere, the Beautiful, the Victorious, who protects our territories, the True, the Master of Truth. 'For his splendor and beauty, for his power and victory,' he is to be worshiped and invoked. 'He first sang the five Gâthas of Zarathustra Spitama;' that is, he is the bearer and representative of the sacred tradition, including the sacrificial rites and the prayers. He is the protector of all creation, for 'he slays the demon of Destruction, who prevents the growth of nature, and murders its life. He never slumbers, but is always awake. He guards with his drawn sword the whole world against the attacks of the demons, endowed with bodies after sunset. He has a palace of 1000 pillars, erected on the highest summit of the mountain Alborj. It has its own light from inside, and from outside it is decorated with stars. . . . . He walks teaching religion round about the world.' In men who do not honor him by prayer, the bad mind becomes powerful, and impregnates them with sin and crime, and they shall become utterly distressed both in this life and in the life to come.

In the same manner as Ahuramazda, his counterpart, Angrômainyus, was in later times endowed with a council, imitated from the one just mentioned, and consisting of six devas, or devils, headed by Angrômainyus himself, who is then styled Devânam Devo = arch-devil. The first after him is called Ako Mano, or Naught Mind, the original 'non-reality,' or evil principle of Zoroaster. He produces all bad thoughts, makes man utter bad words, and commit sin. The second place is taken by the Indian god Indra; the third, by Shiva or Shaurva; the fourth, by Naonhaitya—the collective name of the Indian Ashuras or Dioscuri; the fifth and sixth, by the two personifications of 'Darkness' and 'Poison.' There are many devas, or devils, besides to be found in the Zend-Avesta, mostly allegorical or symbolical names of evils of all kinds. While the heavenly council is always taking measures for promoting life, the infernal council is always endeavoring to destroy it. They endeavor to spread lies and falsehoods, and altogether coincide together with their great chief, with the devil and the infernal hierarchy of the New Testament.

Thus Monotheism was in later times broken up and superseded by Dualism. But a small party, represented by the Magi, remained steadfast to the old doctrine, as opposed to that of the followers of the false interpretation or Zend, the Zendiks. In order to prove their own interpretation of Zoroaster's doctrines, they had recourse to a false and ungrammatical explanation of the term Zervana Akarana, which, merely meaning time without bounds, was by them pressed into an identity with the Supreme Being; whilst the passages on which the present Desturs, or Parsee priests, still rest their faulty interpretation, simply indicate that God created in the boundless time, i. e., that He is from eternity, self-existing, neither born nor created. Two intellects and two lives are further mentioned in the Zend-Avesta. By the former are to be understood the heavenly, spiritual wisdom, and the earthly wisdom, i. e., that which is learned by ordinary teaching and experience.

The two lives are in the same manner distinguished as the bodily and the mental, i. e., body and soul. From these two lives, however, are to be distinguished the 'first' and 'last' lives, terms which refer to this life and the life to come. The belief in the latter, and in immortality, was one of the principal dogmas of Z., and it is held by many that it was not through Persian influence that it became a Jewish and a Christian dogma. Heaven is called the 'House of Hymns,' a place where angels praise God incessantly in song. It is also called the 'Best Life,' or Paradise. 'Hell' is called the House of Destruction. It is the abode chiefly of the priests of the bad (deva) religion. The modern Persians call the former Behesht; the latter, Duzak. Between heaven and hell, there is the bridge of the gatherer or Judge, over which the soul of the pious passes unharmed, while the wicked is precipitated from it into hell. The resurrection of the body is clearly and emphatically indicated in the Zend-Avesta; and it belongs, in all probability, to Z.'s original doctrine—not, as has been held by some, to later times, when it was imported into his religion by other religions. A detailed description of the resurrection and last judgment is contained in the Bundehesh. The same argument—the almightiness of the Creator—which is now employed to show the possibility of the elements, dissolved and scattered as they may be, being all brought back again, and made once more to form the body to which they once belonged, is made use of there to prove the Resurrection.

There is still an important element to be noticed—viz., the Messiah, or Sosiosh, from whom the Jewish and Christian notions of a Messiah are held, by many, to have been derived. He is to awaken the dead bodies, to restore all life destroyed by death, and to hold the last judgment. Here, again, a later period introduced a plurality, notably a Trinity. Three great prophets are also to appear when the end of the world draws nigh, respectively bearing the names of Moon of Happy Rule, Aurora of Happy Rule, and Sosiosh, who is supposed to be the son of Zarathustra, begotten in a supernatural way; and he will bring with him a new portion of Zend-Avesta, hitherto hidden from man. Even a superficial glance at this sketch will show our readers what very close parallels between Jewish and Christian notions on the one hand, and the Zoroastrian on the other, are to be drawn; but, as we have noticed under PARSEES (q. v.), an attentive reading of the Zend-Avesta reveals new and striking points of contact almost on every page.

We have in the foregoing sketch mainly followed Haug, the *facile princeps* of Zend studies in these days; but we have also taken into account the views of Windischmann, Spiegel, and other prominent investigators, and principally by quoting the words of the sacred sources themselves, when feasible, put our readers in a position to judge on the main points for themselves. We cannot, however, do better than thus briefly summarize, in conclusion, the principal doctrines of Z., as drawn from a certain speech (contained in the Gâthas), which, in all probability, emanates from Z. himself.

'1. Everywhere in the world, a duality is to be perceived, such as the Good and the Evil, light and darkness; this life and that life, human wisdom and divine wisdom. 2. Only this life becomes a prey of death, but not that hereafter, over which the destructive spirit has no power. 3. In the universe, there are from the beginning two spirits at work, the one making life, the other destroying it. 4. Both these spirits are accompanied by intellectual powers, representing the ideas of the Platonic system on which the whole moral world rests. They cause the struggle between good and evil, and all the conflicts in the world, which end in the final victory of the good principle. 5. The principal duty of man in this life is to obey the word and commandments of God. 6. Disobedience is punished with the death of the sinner. 7. Ahuramazda created the idea of the good, but is not identical

with it. This idea produced the good mind, the Divine Spirit, working in man and nature, and devotion—the obedient heart. 8. The Divine Spirit cannot be resisted. 9. Those who obey the word of God will be free from all defects, and immortal. 10. God exercises his rule in the world through the works prompted by the Divine Spirit, who is working in man and nature. 11. Men should pray to God and worship him. He hears the prayers of the good. 12. All men live solely through the bounty of God. 13. The soul of the pure will hereafter enjoy everlasting life; that of the wicked will have to undergo everlasting punishment—i. e., as modern Parsee theologians explain, to the day of the resurrection. 14. All creatures are Ahuramazda's. 15. He is the reality of the good mind, word, and deed.' See PARSEES, GUEBRES, ZEND, ZEND-AVESTA, &c.

ZOSIMUS, of Constantinople, a Greek historian, who lived in the 5th c. A.D. He wrote the History of the Roman Emperors, in six books, from Augustus to 410 A.D. His style is concise, clear, and interesting. He seeks to unfold the causes of the decline of the empire, and being himself a pagan, he adduces as the chief, the neglect of the pagan religion which attended the progress of Christianity. The unsparing severity with which he assails various Christian emperors, especially Constantine, has been considered by some (e. g. Bentley) to detract from his credibility as a historian. From his own point of view, he shows a considerable degree of acuteness in his remarks. Nothing is known of his personal history.

ZOSIMUS, POPE, and successor of Innocent I., requires a brief notice on account of his connection with the history of the heresiarch Pelagius (q. v.). Z. was a Greek by birth, and was elected Bishop of Rome, March 1, 417. The African bishops had condemned the opinions of Pelagius, and this judgment has been ratified by Pope Innocent. In the interval, however, Pelagius appealed to the pope; and his disciple, Celestius, came in person to Rome, where he presented a confession of faith in his own justification. Z., having convened a council of bishops and submitted this to them, was induced by the specious explanations of Celestius to suspend the judgment, and even to write to the African bishops, recommending a reconsideration of the case. This apparent conflict of Z. with his predecessor, although it has been used by the Gallican as well as Protestant controversialists as an argument against papal infallibility, was nevertheless only temporary. On further examination of Celestius, Z. became sensible that he had been deceived; and even before the reply of the African bishops, confirmed and renewed their original condemnation of the Pelagian doctrine. He died December 26, 418. His Letters, which are curious and interesting, are found in Constant's *Epistolæ Romanorum Pontificum*.

ZOUAVES (Arab. *Zwawa*), a body of troops in the French army, which derives its name from a tribe of Kabyles, inhabiting the mountains of Jurjura, in the Algerian province of Constantine. Long previous to the invasion of Algiers by the French, these Kabyles had been employed as hired mercenaries in the service of the rulers of Tripoli, Tunis, and Algiers; and after the conquest of the last-named country in 1830, the French, in the hope of establishing a friendly feeling between the natives and their conquerors, took the late Dey's mercenaries into their service, giving them a new organization. Accordingly, General Clausel created, in 1830, two battalions of Z., in which each company consisted of French and Kabyles in certain proportions, officers, subalterns, and soldiers being selected from either race; the Z., though retaining their Moorish dress, were armed and disciplined after the European fashion; and the battalions were recruited by voluntary enlistment. As it was soon found, however, that the system of commingling the two races did not effect the object intended, the French and Kabyles were formed into separate companies; and in 1837, they were divided into three battalions, and put under the command of a colonel. Their first colonel was Lamoricière, who mainly effected their reorganization, and under whom, as well as his successor, Cavaignac (q. v.), they distinguished themselves in many a bloody conflict with the Arabs of the south.

Gradually, however, the native element was eliminated, and since 1840, they may be considered as French troops in a Moorish dress. In 1852—1855, their numbers were greatly augmented, and they now amount to upwards of 10,000 men, divided into four regiments of four battalions each. They are recruited from the veterans of the ordinary infantry regiments who are distinguished for their fine 'physique' and tried courage and hardihood; clad in a loose jacket and waistcoat of dark-blue cloth ornamented with yellow braid, loose madder-colored trousers, brown cloak, madder-colored Fez cap with a yellow tassel, surrounded by a green turban, a light blue sash of wool, yellow leather leggings, and white gaiters; and armed with a carbine and sword-bayonet. The uniform of the officers and subalterns is the same as that of the hussars.

When the French and the African elements of the original Zouave battalions were separated, the Africans were constituted into a separate body, under the name of Algerian Tirailleurs, a force still recruited in Algiers to form a part (three regiments) of the regular French army. They are better known as *Turcos*.

ZSCHOKKE, JOHANN HEINRICH DANIEL, one of the most eminent German authors of this century, was born at Magdeburg on March 22, 1771. On leaving school at the age of 17, he joined a company of players in the capacity of a dramatic author. He traveled with them for some time, after which he returned to his family, and entered the university of Frankfurt. There he seems to have studied all subjects from divinity to administration (*Kameral-wissenschaften*). He at the same time acted as a private teacher, and published plays which brought him some reputation, but no pay. In 1795, he was disappointed in obtaining the post of Ordinary Professor, for which he applied, and set out on a tour through Germany and France. He settled finally at Reichenau, in the Grisons, where he opened a boarding-school. So much pleased were the governing bodies of the canton with his establishment, that they presented him with the citizenship. In return for this favor he wrote a history of the Grisons, published at Zürich in 1798 (*Geschichte des Freistaats der drei Bünde in Rhätien*). In the same year, however, Z. became unpopular in the canton by advocating its annexation to the Helvetic Republic established by the French, and his school was in consequence closed. He removed to Aarau, then the seat of government, where he was employed as a commissioner to settle the affairs of Unterwalden, Uri, Schwyz, and Zug, a trust which he discharged with the utmost ability and good temper.

The benevolent interest, indeed, which he manifested in the sufferings of the population has made his name memorable as a national benefactor. It would be tedious to enumerate the political and administrative affairs in which Z. was actively engaged after this period; we find him at one time protesting against the arbitrary proceedings of the French, and at another pointing out the prudence of concession, but always taking a course marked by practical sagacity and wisdom. In 1804, he was presented with the citizenship of Aargau and appointed Inspector of Woods and Mines. In the same year, he founded the Swiss Messenger (*Schweizerboten*), a publication which rapidly became popular. It was followed by the Miscellany of the Latest News (*Miscellen für die neueste Weltkunde*), which was continued down to 1813. In 1811, he added a monthly periodical, the *Erheiterungen*, to these publications. He died at Aarau, June 27, 1848. Z.'s works are very numerous, and are always characterized by sound information, good sense, and a vigorous and effective eloquence. The most important of his historical works, not mentioned above, are *History of the Forest Cantons*, a *History of Bavaria*, a *Popular History of Switzerland*. His novels or tales are more numerous and better known; among the best are *The Creole, Alamontade, Jonathan Frock, Clementine, Oswald*, and *Meister Jordan*. As a poet and play-writer, Z. has less merit. The most popular of all his writings was the *Hours of Devotion*, a Sunday periodical: it supplied a complete exposition of modern rationalism, and yet displayed such zeal and eloquence in the cause of sound morality, that it met with approbation from persons of all creeds. It has gone through 40 German editions, and, with many other works of Z., has been translated into English. A collected edition of works of Z. (Aarau, 1825). See *Life of Zschokke*, by Munch (Haag, 1831); and *Autobiography*, Eng. trans. (1845).

ZSCHOPPAU, a town of Saxony, in the circle of Zwickau, and about 26 miles east of the town of that name, on the river Zschoppau. It has a castle and two churches; manufactures of hosiery, cloth, lace, &c.; weaving, wool-spinning, dyeworks, bleach-fields. Pop. (1880) 7991.

ZUG, the smallest of the Swiss cantons, is about 14 miles in length by 10 in width. Pop. (1870) 20,993; (1880) 22,994. The south-eastern part of the canton borders on the Alpine region, and is hilly and pastoral; the north-western part, sloping to the plain of Switzerland, and enclosing a great part of the Lake of Zug, is a rich and beautiful country of corn-fields and orchards. The chief exports of Z. are dried fruit, cattle, and the products of the dairy. Z. is a representative democracy, all citizens above 19 enjoying the franchise. There are two councils, one consisting of 67 members, which discharges legislative functions, and another consisting of 11 members, which conducts the administration. The inhabitants speak Swiss-German, and are Roman Catholic. The battle of Morgarten, which founded the independence of Switzerland, was fought on the frontier of this canton in 1315; but it was not till 1352 that Z. joined the Swiss Confederation.—Zug, the capital of the canton, has a pop. of about 4300.

ZUIDER ZEE, a large gulf penetrating deep into the Netherlands, between 52° 26′—53° 20′ N. lat., is about 60 miles in length, and 210 miles in circumference. The islands Texel, Vlieland, Ter Schelling, Ameland, and Schiermonnikoog, reaching in a chain from the most northern point of Holland, are the remains of the former line of coast, which form a breakwater against the

North Sea. From Dunkirk in French Flanders to the north of Holland, the interior is defended from the sea by sand-hills or downs. Here, as at the mouth of the Scheldt, the sand-barrier was broken, and the waters overflowing the low lands, separated the province of Friesland from the peninsula of North Holland, and, having united with the small inner lake Flevo, formed the present Zuider Zee. The decisive inundation occurred in 1282.

In the Z. Z., lie the islands Wieringen, Urk, Schokland, and Marken, with a pop. of about 5000 souls. Fishing is the principal industry. The light-tower, on the east point of Marken, stands in 52° 27′ 37″ N. lat.; and the inhabitants are a hardy, industrious, and independent people, who live by fishing and exporting meadow-hay. They cling tenaciously to their old customs, and never marry except among themselves. The houses are built on artificial mounds, or 'hills of refuge;' and the island being liable to frequent and heavy floods, few cows or sheep are kept, no gardens or trees planted, the necessaries of life being almost all brought from the mainland.

From the south-east of the Z. Z., a long narrow arm, called the Y (pronounced *I*), formerly ran nearly due west, through the peninsula of Holland. A strong sea-dyke and locks have been constructed to cut off the Z. Z. from the Y, through which a broad ship-canal has been made between Amsterdam and the North Sea, on which a new harbor is approaching completion. On both sides of the new canal, the Y. has been drained and turned into about 12,000 acres of rich land. The new waterway was formally opened by the king in 1876. It is proposed to make a dyke from the mouth of the Yssel to Enkhuisen, and drain the central part of the Z. Z., making room for 200,000 inhabitants, and adding nearly 500,000 acres to the arable land of the Netherlands.

ZU'LU, or AMAZULU, is the name of that portion of the Kaffir race who inhabit Natal and the region north-east of it, until they gradually merge into the mere negro of the east coast, north of the Zambesi. The Kaffir organization appears to hold an intermediate place between that of the negro and a higher type; and as we go south and west, from the swamps and malaria of Delagoa Bay and Sofala to the more healthy and bracing regions of Natal and Independent Kaffraria, the Kaffir features appear, as it were, to grow more refined—the mouth protrudes less, the lips are less thick, and the nose assimilates more to that of the European, although the distinguishing type of woolly hair may still continue.

The Z. Kaffir is a far more amiable savage than his brother the Amakosa of the Cape frontier districts. He is less warlike and predatory, more industrious, and far more willing to act in the capacity of a farm-laborer or domestic servant. In language, customs, habits, &c., although certain tribal and local differences occur, yet they may be called common to all the nation, as a Z. Kaffir has no difficulty in understanding a native of British Kaffraria; and his views of a future state, purchase of wives, &c., are pretty similar. The Z. is by nature social, light of heart, and cheerful; his affections are gentle, steady, and enduring; his passions are, however, strong, and called out when in a state of war. He is comparatively chaste; crimes which stain European or Eastern civilization are unknown to him. He is hospitable and honest, yet greedy and stingy; he is kind to his own family, yet cruel to dumb animals; and whatever the better nature of his impulses may be, yet when his great chief commands war, he is converted into a demon. He is proud, and very easily can distinguish between an English gentleman and the loafing tribe with which too many of our colonies are afflicted. The writer of this article, by the exercise of a little kindness and firmness, has experienced the most utter devotion from individuals of the Kaffir race generally. Their reasoning powers are good, and with an improved education, a Z. rationalist might not disgrace a chair in the Sorbonne.

It is from the Z. country, however, that those terrible tyrants who so long devastated South-eastern Africa, the chiefs Chaka, Dingaan, Moselikatze, &c. issued. The training of their subjects to a peculiar mode of warfare spread desolation and havoc for many years amongst the Betjuana and other tribes of the interior, until eventually these mighty chiefs with their thousands of followers, fighting, like Homer's heroes, hand to hand, armed with stabbing assagais and shields of ox-hide, the colors of which distinguished the different regiments they were formed into, melted away with broken power into comparative insignificance before the terrible rifles of a few hundred emigrant Dutch Boers, who, in their turn, gave way to the energetic action of the British authorities (see NATAL). The Zulus, although they have very often serious intestine wars amongst themselves, have generally lived on friendly terms with the Natal colonists. That their warlike qualities have not decayed was sufficiently shown in the war that broke out in 1879 between England and Ketchwayo (Cetewayo), the Zulu king. Within a week or two after the British forces crossed the Natal frontier, the Zulus inflicted a severe blow on the invaders by surrounding a camp at Isandhlwana and annihilating the defenders. They repulsed several attacks on their strongholds; but after the British had received reinforcements, were defeated at Ginghilovo, and completely broken by Lord Chelmsford at Ulundi on the 3d July. The king was captured shortly afterwards, and deported to Cape Town.

The Zulu country was divided amongst twelve chiefs (having four British residents). But in 1883, Ketchwayo was reinstated in the central portion of his kingdom, under certain restrictions, with an English resident. The north-east part of his former domains is under a chief independent of the Zulu king; and on the south, adjoining the Natal border, another strip of territory is reserved for the chiefs unwilling to come again under Ketchwayo's authority (one of whom, John Dunn, is of English blood).

A number of missionary societies of the Wesleyan, American, Norwegian, and Episcopal churches labor amongst these tribes. Considerable interest was some time ago provoked with regard to Bishop Colenso's peculiar views for evangelizing these heathens; and Colenso's Zulu was for a while almost as famous as Macaulay's New Zealander.

The Amafengu tribe, now settled along the Cape frontier, are a broken tribe of Zulus, driven far to the south-west by Chaka or Dingaan, then reduced to slavery by the Amakosa Kaffirs, and freed by Sir B. Durban in the Kaffir war of 1834—1835. The principal Z. tribes are the Amazulu, the Amahnte, Amazwazi, and Amatabele. The last emigrated far northwards to the mountains which separate the basins of the Limpopo and Zambesi.

ZU'LULAND. The country lying north-east of the colony of Natal, between its east boundary, the Tugela and Umzimyati rivers, and Delagoa Bay, is generally known under the name of Z., or the Zulu country, inhabited by tribes of Zulu Kaffirs. The great coast chain of mountains, which form in the Cape Colony the Stormbergen, and further to the north-east the Kahlamba and Drachenbergen, still continue well defined to the north-east, running parallel to the coast, but 120 miles distant from it, separating the coast region of Z. from the higher plateaux of the Transvaal, and rising to an average height of 6000 or 7000 feet. East of the Tugela River, the country spreads out into large undulating, grassy plains, but sparsely wooded; while towards the foot of the mountains the kloofs afford some excellent timber. The principal rivers are the Umvoluzi or St. Lucia River, which enters the sea about 80 miles north-east of the Natal frontier; and the Mapoota and its branches, which drain the north part of the region, and fall into Delagoa Bay. The country along the coast between the St. Lucia River and Delagoa Bay is very flat, marshy, and unhealthy. A considerable range of mountains, called the Lebombo, run from the Umvoluzi River almost in a northerly direction to beyond Delagoa Bay, about half way between the coast and the first range we have mentioned, forming a supporting buttress to a plateau of high level, similar to those so common in the Cape Colony and Natal.

This is generally a fertile region, and, as far as the coast-line, is healthy. Sugar, cotton, and other tropical products can be grown as advantageously as in the Natal colony, to which it forms, as it were, an intermediary link between the fever-regions of the east coast and the more healthy climate of Natal and the Cape Colony. The St. Lucia River marks the boundary-line beyond which, to the north-east, Europeans cannot live. Up till the outbreak of the war in 1879, no good map of the Zulu country existed, and even yet, of course, we know very little of its geology or mineral productions. None of the rivers are available for inland navigation, although a large lagoon inside the mouth of the St. Lucia River can be ascended for a few miles. The rivers which flow into Delagoa Bay from the north are sluggish streams, often with no perceptible current, and can be ascended a considerable distance. A large quantity of ivory, rhinoceros' horns, hides, &c. are collected in this region by traders from Natal; and cattle, Indian corn, &c. thrive well in the country before the swampy region commences. The principal tribes are all of the Zulu race—the Amazulu inhabiting the region bordering on Natal; the Amahnte, Amazwazi, &c. the country in the neighborhood of Delagoa Bay. The Portuguese have a very decayed fort and settlement on Delagoa Bay, garrisoned by a few mulatto soldiers, and carrying on some trade with the natives and Dutch Boers in gunpowder, muskets, calico, &c., in exchange for ivory, horns, and other native produce; and a contraband one in slaves is also, we fear, winked at by the authorities, as captures are often made along the coast by our cruisers.

The Dutch emigrant Boers, who very much required a port on the sea-board of South-east Africa, would long since have seized on Delagoa Bay, if it were not from a wholesome dread of the very unhealthy climate, which appears to affect those stalwart sons of the highlands of South-east Africa more even than it does Europeans or North Americans.

ZUMALA-CARREGUY DON TOMAS, the most distinguished of the generals who supported the cause of Don Carlos during the

Spanish Civil War of 1833—1840, was born in 1789 at Ormaiztegua, in the Biscayan province of Guipuzcoa. Of an aristocratic, though not wealthy family, he was deeply imbued from infancy with royalist sentiments, which gathered strength with increasing years, till they led him, like the Vendean leaders, to sacrifice fortune and life for a prince wholly unworthy of such devotion. At the time of the invasion of the Peninsula by Napoleon, Z. was a student of law at Pampeluna, and like many of the Spanish youth, he deserted his studies to take up arms against the invader, serving in Mina's corps till the close of the war. He afterwards served under Quesada in the 'Army of the Faith;' and on the re-establishment of absolutism, was raised to the rank of colonel, and appointed governor of Ferrol. He displayed excellent administrative qualities; but his decided leaning to the party of the Carlists (though he repelled indignantly all proposals to proclaim Don Carlos king during the life of Ferdinand VII.) becoming known, he was tried by a council of war, and acquitted.

In 1832, when the army was purged of all officers suspected of Carlism, Z. was dismissed, and retired to Pampeluna, where he lived in retirement till the death of Ferdinand and the rising of the Basque population called him to head the Carlist insurrection (October 11, 1833). His motley army was without uniform, ill fed, and ill paid; yet the profound esteem in which 'El Tio Tomas' was held by his followers enabled him to maintain an effective discipline. The overwhelming superiority in number of the Christinos, however, forced him to adopt a defensive system of tactics; so, holding the command of Biscay and Navarre, and the strongholds of Fuenterrabia and Irun, to assure his retreat into France, if necessary, he kept his opponents at bay, defeated Rodil in the valley of Amescoas (August 1, 1834), routed another force of Christinos at Viana (September 7), gained a second victory in the Amescoas Valley in the following spring, completely defeating Valdez, after a battle of four days, and routed Iriarte near Guernica. These brilliant successes of his skillful and devoted partisan flattered the too sanguine and somewhat weak-minded Don Carlos with the hope of speedily seating himself on the throne, rendered him less willing than formerly to be guided by the counsels of Z., and led him to interfere with the latter's schemes, to his own detriment. Accordingly, after another year's successful fighting with the Christinos, Z. was ordered to lay siege to Bilbao; but on June 15, 1835, he received a gun-shot wound so severe that he died ten days afterwards. With Z.'s death, all hope of success for the Carlists was extinguished; and though the war dragged on desultorily for some years longer, the result was never doubtful.

Z. was as distinguished for generosity and disinterestedness as for fidelity; and so much had he impoverished himself by liberality to his soldiers, that neither his wardrobe nor his treasury supplied the means for his decent interment.—See Hemingsen's *Twelve Months' Campaign with Zumala-Carregny in Navarre and the Basque Provinces* (2 vols., Lond. 1836).

ZÜ'RICH, a canton on the north-eastern frontier of Switzerland, is drained by the Rhine and its tributaries. Pop. (1870) 284,786; (1880) 317,576. It is traversed by ridges of lofty hills, running north-west and south-east, between which lie three valleys, forming almost its whole surface—those of the Toss, the Glatt, and the Limmat. The Lake of Zürich penetrates Z. for a distance of 26 miles, and connects it with the cantons of Schwyz and St. Gall. Z. has not a fertile soil, but it is carefully cultivated. A considerable quantity of corn is raised in the canton, though not enough to supply the wants of the population. Vineyards and orchards are numerous; but the pasture-lands are of much greater importance, and cattle form the chief wealth of the agricultural population.

Z. was one of the earliest seats of the cotton manufacture in Europe, and the spinning and weaving of cotton are still prosecuted with great success. The silk manufactures are nearly as important; and more recently, the progress made in the manufacture of railway locomotives and other machinery, has been a cause of some alarm to English engineers. The mechanics of Z. divide their attention between agriculture and manufacturing industry, and are among the most prosperous and best educated working-men in Europe. The government of the canton is a representative democracy—all adult citizens of 20 enjoying the franchise. The great council of Z. is elected chiefly by the citizens, but partly also by its own members. It appoints for four years an executive council of nine members. A desire to give a yet more thoroughly democratic character to the constitution led to the appointment in 1868 of a committee to consider its revision; and now the real decision as to laws, taxes, &c., lies with the people. Z. returns 14 members to the national council. The pop. of the canton (663 sq. m.) is German-speaking and Protestant.

ZÜRICH, the capital of the canton of the same name, is situated at the point where the Limmat issues from the Lake of Zürich, and unites with its tributary, the Sihl. Its pop. in 1880 was 25,102. It is one of the most prosperous manufacturing and commercial towns of Switzerland; yet the narrow streets and lofty houses of its older quarters, on the high ground east of the river, give it the quaint appearance of a medieval city. There are many interesting old buildings—the most remarkable being the cathedral erected in the 11th century. The university, the gymnasium, and the school of industry have long enjoyed a high reputation. The town library is extensive; and numerous museums of natural history, &c., indicate the intelligence and cultivated tastes of the population.

ZU'RUMA, or ZARUMA, a town of Ecuador, South America, on the west slope of the Andes, about 30 miles from the west coast, and 90 south of Guayaquil. It is situated in a mining district—its gold and silver mines having rendered it formerly very populous, but its importance has greatly declined. Pop. about 6000.

ZU'TPHEN, a fortified town in the Netherlands, province of Gelderland, is beautifully situated on the right bank of the Yssel, where that river is joined by the Berkel, in a picturesque district of country, chiefly under cultivation, and variegated with abundance of wood. It is one of the oldest towns in the kingdom, but has many elegant modern buildings. The fortifications are promenades, from many points of which lovely prospects are obtained.

Z. is a station of the State Railway from Arnhem to Friesland, and has an extensive trade in wood, bark, and grain. There are factories for weaving and spinning, grain, wool, oil, and paper mills, many tanneries, a soap-boiling establishment, and a large carpet-manufactory. The principal building is the Great Church, supposed to have been founded in 1103; it and the Broederenkerk (Church of the Brethren) belong to the Reformed Communion; the Roman Catholics, Lutherans, and Baptists have each a church, and the Jews a synagogue. Besides good schools for the ordinary branches of education, there are a grammar-school, school of design, a theater, and a concert-hall. The town has several charitable institutions for the sick, orphans, and old people; also the provincial lunatic asylum, which can receive 220 patients. Pop. (Jan. 1, 1880) 14,822.

At Rysselt, a village near Z., is a reformatory, called the Netherlands Mettray, in which about 150 boys are educated, and taught farm-labor, and various handicrafts. It was founded in 1851, and has done much good. Nearly one-half of the boys have been withdrawn by their parents. The others obtain situations through the directors. The largest number have taken to farm-labor and gardening, for which the reformatory specially prepares them. Many have become soldiers and sailors; others smiths, house-painters, shoemakers, tailors, bakers, bricklayers, house-servants, &c. The institution is maintained by annual contributions, legacies, and a small charge for each boy. The receipts are about £3500 annually, of which, on an average, a half is from legacies and contributions. The expenditure is about the same.

ZVENIGORO'DKA, an old town of Russia, government of Kiev, on the Tikritch, a tributary of the Bug, about 98 miles south of the town of Kiev. Pop. 11,200. The trade and manufactures are not worthy of notice.

ZVO'RNIK, a town of Bosnia, which the Austrians, now administrating Bosnia, occupied in 1878 only after severe fighting, is on the Drina, about 60 miles N.E. of Bosna-Serai. The town is strongly fortified, standing on the face of a steep hill, at the summit of which is a strong fortress commanding the valley of the Drina. It has several mosques, Greek and Roman Catholic churches, lead mines, and a considerable trade in timber. Pop. about 12,000.

ZWEI'BRÜCKEN. See DEUX-PONTS.

ZWI'CKAU, a picturesque, irregularly-built, ancient-looking town of Saxony, in a pleasant valley on the left bank of the Mulde, 60 miles south-west of Dresden. The river is crossed here by three bridges. The town is the capital of the circle of Zwickau, and is the seat of a district court, court of appeal, and other public offices. Of its churches, the most noteworthy is that of St. Mary, the finest Gothic edifice in the Erzgebirge, dating from 1453, distinguished by its tall tower, from which an extensive view can be obtained; it contains a very fine altar-piece by the old German master Wohlgemuth, and other interesting works of art. There are also a splendid court-house and exchange; a cloth hall, a district infirmary; a gymnasium, with a library of 20,000 vols.; a burgher, Catholic, trade, and other schools; an old castle, which has been converted into a workhouse. The town is prosperous, and the population increasing. There are cloth manufactories, breweries, dye-works, chemical works, tanneries, oil and saw mills. The chief source of its wealth, however, and that of the neighboring villages, are the rich beds of coal in the surrounding district. There are also large iron-works in the neighborhood. The town is connected by railway with Leipzig, Dresden, and other important places, and has a considerable transit trade. Pop. (1880) 35,005.

ZWINGLI, ULRICH, one of the most important of the reformers, was born 1st January 1484, at Wildhaus, in the canton of St. Gall, Switzerland, and was one of eight sons of the amtmann of that place. He studied first at Bern; then at the university of Vienna, where he devoted himself to philosophy; and afterwards at Basel, where, under Wyttenbach, he directed his attention to theology. He became pastor in 1506 in Glarus. At this time, his studies were chiefly directed to the Latin classics and the church Fathers; but having begun to learn Greek in 1513, he from that time devoted himself to the New Testament. He wrote out the Epistles of Paul in the original language, and learned them by heart, which was of great service to him afterwards in his disputations. In the capacity of army chaplain, he attended the campaigns in Lombardy of the inhabitants of Glarus for the pope against the French, in 1512, 1513, and 1515, for which service he received a pension from the pope till 1517. In 1516, the liberal-minded administrator, Geroldseck, invited him to be preacher in the convent of Maria-Einsiedeln, famous for its pilgrimages. Here Z. began to preach against many abuses prevailing in the church; he also called on the bishops of Sitten and Constance to bestir themselves for the improvement of the church under the guidance of the Word of God. So little was he then suspected, that the papal legate, Antonio Pulci, conferred on him, in 1518, the diploma of chaplain to the Holy See. He was soon afterwards called to Zürich; and he entered on his office as pastor in the great cathedral there, 1st January 1519, with a discourse, in which he declared himself for the pure gospel unfettered by glosses. In this office, to which was joined in 1521 that of canon in the cathedral, he laid the foundation of his subsequent work as reformer. The same cause that had stirred Luther into activity gave the impulse to Zwingli. In 1518, Bernardin Samson, a Franciscan from Milan, came to Switzerland for the purpose of selling indulgences for the benefit of the papal court. Z., who was still in Einsiedeln on Samson's first appearance, opposed him both there and afterwards in Zürich with the whole force of his pulpit eloquence, and succeeded so well that Samson was not allowed to enter the town of Zürich. From this time, Z., although attacked by the monks and many of his brother canons, advanced with rapid steps in his reforming career; for the magistracy of Zürich supported his measures to such a degree that, as early as 1520, they issued an order throughout their jurisdiction that the Word of God should be taught without human additions. In 1522, the Reformation was formally established in Zürich. At this time Z. wrote his first book against the fasts of the Roman Church; he also began to study the Hebrew language. The offers of high promotion made to him by Adrian VI. could not make him waver. In January 1523, the government of Zürich invited all theologians disposed to enter the lists with Z. to a conference at Zürich, which was attended by 600 clergy and laity.

Z. had arranged the articles of faith, to the number of 67, which were to be the subject of the conference, and defended them so ably against the attacks of the celebrated Joh. Faber, afterwards Bishop of Vienna, that the council of Zürich declared in favor of Z.'s doctrines, and upheld him and his assistants in adhering to them. The second disputation, October 1523, at which Z., before more than 900 people, spoke against the worship of images and the mass, was the cause of the removal of all pictures and statues from the churches of the city of Zürich and its jurisdiction; and this was followed, in 1524, by the abolition of the mass. In the same year, Z. entered into the married state with Anna Rheinhard, aged 43, the widow of a nobleman of the name of Meyer von Knonow. In the following year, he published his creed, *Von der wahren und falschen Religion* (Of the True and False Religion). He had thus, in a few years, placed the work reformation in his native land on a solid footing. He now pressed zealously forward in the same course; while the magistracy of Zürich, who all along actively supported him, abolished the begging friars, brought matters relating to marriage before the secular courts, and instituted a better management of church property. On a great many points Z. was at one with Luther and the other German reformers; only, in regard to liturgical matters, he carried out his reform more radically according to the Bible, and rejected the dogma of the presence of Christ in the Lord's Supper.

In order to heal the breach that had, as early as 1524, broken out between the two parties of the new religion on the latter point, a meeting between the Saxon and Swiss reformers was brought about by Philip, Landgrave of Hesse, at Marburg in 1529. The conference lasted for three days, but little progress was made towards unity of opinion. See SACRAMENTARIAN. In 1531, open war broke out between Zürich on the one side, and the Catholic cantons of Lucerne, Schwyz, Uri, Unterwalden, and Zug on the other; and Z., by command of the council of Zürich, had to take the field with the banner of the canton, which had always been borne by a priest. On the 11th October came the conflict; and as their opponents were more than double in number, and also better led, the Zürichers were beaten, and Z. was among the fallen. His collected works were published in Zürich in 1545, in 4 vols.; a selection, in two vols., appeared in 1819—1821, edited by Usteri and Vögelin.—See the lives by Rotermund (1818), Hottinger (1820), Christoffel (1857), and Mörikofer (1869).

Of all the reformers, there is none more fitted to excite our love and respect than Zwingli. Fearlessly honest in purpose; with a clear head and eye for the truth; less violent, if less eloquent than Luther; more candid and open-minded, if less systematic and penetrating in spiritual insight than Calvin; he stands before us quite as original, if not as prominent as these reformers. His work was not so great as theirs, his influence not so extended; but his character was quite as genuine, and his labor, in some respects, quite as enduring.

ZWO'LLE, the capital of the Netherlands province of Overyssel, is situated on the Zwarte Water, and by the canal called the Willemsvaart has connection with the Yssel. It is one of the finest towns in the kingdom, having many beautiful private and public buildings. Both within and without the gates are pleasant promenades and drives, shaded by large trees. The surrounding country consists of rich meadows and cultivated fields, adorned by pretty country-seats. Z. has three extensive suburbs—Diezenpoorten, Kamperpoorten, and Sassenpoorten. It is most favorably situated for commerce, having, by navigable waters and railways, communication with the provinces around the Zuider Zee, Hanover, England, and other maritime nations. The trade in farm-produce and stock is very great. Principal industries are shipbuilding, tanning leather, rope-spinning, beer-brewing, soap-boiling, weaving calicoes and stockings, book and plate printing, making salt, cooperage, and refining sugar. The most important buildings are the Town House, Palace of Justice, and Great Church. There are many excellent charitable institutions; and besides those for the ordinary branches of education, a flourishing grammar-school, in which Pope Adrian VI. was partly educated, and a school of design. Z. has a cabinet of natural history, a literary and a musical society. Here the poet Rhynvis Feith (1753—1824) was born, and Thomas à Kempis lived during 71 years. Between 1815 and 1880, the pop. increased from 12,870 to to 22,760.

ZYGOPHYLLA'CEÆ, a natural order of exogenous plants, allied to *Rubiaceæ*, and containing about one hundred known species, herbaceous plants, shrubs, and trees, chiefly natives of subtropical countries. They have opposite, generally pinnated leaves, without stipules. The flowers are solitary, or two or three together; the calyx 4—5-parted; the petals alternate with the calycine segments, and clawed; the stamens twice as many as the petals, generally rising from the back of small hypogynous scales; the ovary simple, 2—5-celled, with two or more ovules in each cell. The fruit is capsular, rarely somewhat fleshy, with four or five angles or wings. The most important genus is *Guaiacum* (q. v.). The abundance of species of *Zygophyllum* and some other genera constitutes one of the most striking features of North African and Arabian deserts. The flowers of *Z. fabago* are employed as a substitute for capers, under the name of *Bean-capers*. Those of *Melianthus major*, in the Cape of Good Hope, abound in honey. The Turks use the seeds of *Peganum harmala* both as a spice and for dyeing red.

ZYMO'TIC DISEASES have been already referred to, and the most important of them are mentioned in the article NOSOLOGY. The word zymotic, now commonly used as a term to express a class of diseases which are preventable by the removal of known causes, should not be regarded as meaning more than this, or as embracing any scientific group of diseases. It is employed to class together all the diseases characterized by the property, which they have in common, of suddenly attacking large numbers of people. The diseases thus associated together, as Dr. Farr observes, 'distinguish one country from another—one year from another; they have formed epochs in chronology; and, as Niebuhr has shown, have influenced not only the fall of cities, such as Athens and Florence, but of empires; they decimate armies, disable fleets; they take the lives of criminals that justice has not condemned; they redouble the dangers of crowded hospitals; they infest the habitations of the poor, and strike the artisan in his strength down from comfort into helpless poverty; they carry away the infant from the mother's breast, and the old man at the end of life; but their direst eruptions are excessively fatal to men in the prime and vigor of age. They are emphatically called the *morbi populares*.' It must not be assumed, as the origin of the word (*zyme*, the Gr. for a ferment) might lead the reader to infer, that all the so-called zymotic diseases are true fermentations, for the class is intended to comprehend all the principal diseases which have prevailed as *epidemics:* they may be subdivided according to their causes, whether due to *Malaria*—in which case the diseases are endemic—to *specific disease poisons* which are communicable either by direct contact or by the indirect channels of air, water, &c; to *parasites;* or to *scarcity* or *inferior quality* of

food. The diseases of the group, therefore, fall into the four orders of *Miasmatic*, *Enthetic*, *Parasitic*, and *Dietic* disorders.

The causation of the two latter orders is easily grasped, and can in every case be traced. But in the two former it is not always so clear. According to the Germ-Theory (q. v.) of infections diseases, the origin *de novo* of a fever poison is as impossible as the production of a man or a dog without parents. Day by day we observe the discovery of one after another of the septic organisms causing disease, and it is but natural to conclude that within a short time all the specific causes of the diseases referred to will have been traced. It is urged by those who oppose the germ-theory that there must have been at some time a spontaneous origin of the poisons, and that there still may be. This argument, however, has no weight. The question of the origin of the first contagium is to pathology what the 'origin of species' is to physiology. The pathologist who is investigating the causation of specific diseases is no more to be troubled with the former problem, than the biologist who is studying the phases of embryonic development should be with the latter. It has long been known that infections diseases differ greatly in infectiveness. Few of the highly infectious diseases have at any time been supposed to arise *de novo*, but some of the less infectious—such as, for instance, typhoid fever—are still in certain quarters said to be of spontaneous origin, and due to the decomposition of excrementitious matters. But those who hold such a view must show in what way the decomposing matter acts.

Common septic bacteria, we know, cause diarrhœa, but they do not cause typhoid fever. A case of this fever, let us suppose, occurs in a small community. To all appearance the conditions of the place are unchanged, and the house affected does not differ from its neighbors. How is it to be explained according to the spontaneous origin theory? In such cases it seems to be forgotten by what subtle channels contagium may be carried; further, the fact is overlooked that the stage of incubation in such diseases is indefinite, and that a chance visitor may have left the poison behind, while apparently in good health. Every case of a specific fever can be traced by patient search to infection.

The prevalence of certain infectious maladies, more especially of those fevers which are common in childhood, is, according to Dr. Wilson, 'in great measure attributable to the culpable neglect arising from the popular belief, amounting almost to fatalism, that children must contract them some time, and that there is therefore little use in endeavoring to take any protective steps where the disease is epidemic. The consequence is that the epidemic continues to spread so long as susceptible victims are to be found in the community, and only dies out for a time when almost all these have been attacked.'

And it has been stated by Mr. Simon, 'that the deaths which occur in this country are fully a third more numerous than they would be if our existing knowledge of the chief causes of disease were reasonably well applied throughout the country; that of deaths, which in this sense may be called preventable, the average yearly number in England and Wales is about 120,000; and that of the 120,000 cases of preventable suffering which thus in every year attain their final place in the death-register, each unit represents a larger or smaller group of other cases in which preventable disease, not ending in death, though often of far-reaching ill effects on life, has been suffered. And while these vast quantities of needless animal suffering, if regarded merely as such, would be matter for indignant human protest, it further has to be remembered, as of legislative concern, that the physical strength of a people is an essential and main factor of national prosperity; that disease, so far as it affects the workers of the population, is in direct antagonism to industry; and that disease which affects the growing and reproductive parts of a population must also in part be regarded as tending to the deterioration of the race.' The most important of the laws by which zymotic poisons are governed, are noticed under VIRUS.

END OF CHAMBERS'S ENCYCLOPÆDIA.

AMERICAN SUPPLEMENT

CONTAINING OVER FIVE THOUSAND ARTICLES TREATING OF SCIENCE, ART, LITERATURE, HISTORY, BIOGRAPHY, THEOLOGY, PHILOSOPHY, Etc., Etc.

CAREFULLY PREPARED BY AN ABLE CORPS OF AMERICAN EDITORS,

AND INCLUDING AN EXHAUSTIVE SERIES OF ARTICLES ON AMERICAN SUBJECTS,

BY

HENRY A. POWELL, LL.B.

TOGETHER WITH A COPIOUS INDEX.

PREFACE TO AMERICAN SUPPLEMENT.

It has been the aim of the Editors of this Supplement to compress a valuable fund of information into a comparatively small space. Only such matter has been selected as will prove of interest to the general reading public. It has not been assumed that an Encyclopædia should be a national directory, and great eare has been exercised in the selection of subjects, in order that the purchasers of this work might not be compelled to pay for valueless matter.

It is our belief that this Supplement will be found to thoroughly cover all matters of interest to the Americen reader not already treated of in Chambers's Encyclopædia. Great attention has been paid to American Biography and History, and it has been the endeavor of the Editors to make this part of the work complete. In order to insure aceuracy as to facts and dates, the most reliable authorities have, in all instanees, been examined ; and where there have been differences of opinion, that of the *best* has been aceepted.

As a rule, matters treated of in Chambers's Encyclopædia have not been introducod into the Supplement ; but in a few instances, where events of importanee have subsequently occurred, exeeptions have been made.

Believing that the reader of an Encyclopædia desires *facts* and not an exhibition of redundant rhetoric, we have sought in each instance to give these *facts*, stated as coneisely as possible, thus enabling the reader to immediately find what he may want, without waste of time and patience. *Multum in parvo* has been our ideal, and we are confident that the purchasers of this work will find the Supplement an invaluable addition to Chambers's Encyclopædia, which is itself unexcelled by any similar work ever placed before the public. We may add that the Supplement has been executed upon the same general plan as the original to which it is appended.

New York, *June* 1, 1885.

Copyrighted, May, 1885, by

P. F. Collier.

AMERICAN SUPPLEMENT.

A, Gerard Van Der. This individual, and his two sons, Philip and Adolphus, have acquired honorable historical notice in, the annals of the United Provinces, from the strenuous efforts they made to resist Philip II. of Spain in his endeavors to tyrannize over their country, as well as from the distinguished part they took in its liberation, 1571.

AA, Peter Van Der, an eminent lawyer known as Petrus Vanderanus, who, in 1574, became president of the High Court of Justice of Luxembourg. Born at Louvain, 1530; died at Luxembourg, 1594.

AALEN, a district in the circle of Jaxt, kingdom of Würtemberg. Extent 108 square miles. or 69,120 acres. It is watered by the river Kocher, abundantly wooded, and mountainous in the south. Produces cattle, and a little corn. The manufactures are medicine, spun woollen and cotton; and some iron mines are worked. Contains one city, one market-town, and 109 smaller towns and villages. Pop. 22,000.—The capital is of the same name. Inhabitants, 2,800. Lat. 48° 4′ 20″ N., long. 18° 7′ 27″ E.

AALI PASHA, Mehemit, an eminent Turkish statesman, ambassador to England, 1841–44. Five times Grand Vizier. Born 1815; died 1871.

AA'RAU, the principal city in the canton of Aargau, on the right bank of the river Aar, at the south base of the Jura. It is well built, paved, and lighted. Manfactures: cottons, silk, and leather. Pop. 5,500, chiefly Protestant. Lat. 47° 23′ 35″ N., long. 6° 2′ 55″ E.

AARD'-WOLF, (Du., earth-wolf), a genus of digitigrade carnivorous mammals forming the link which connects the civets with the dogs and hyænas. It is a rare and singular animal, having externally the appearance and bone-structure of the hyæna united to the head and feet of the fox, with the intestines of the civet. Its size is about that of a full-grown fox; its habits are nocturnal, and it constructs a subterraneous abode.

AARIFI PASHA was born at Constantinople in 1830, being the son of Shekib Pasha, a distinguished diplomatist. In 1847 he accompanied his father on a mission to Rome, and afterwards to the embassy at Vienna. On his return to Constantinople he was employed in various capacities in the Ministry of Foreign Affairs. After acting as First Secretary to the legation at Vienna, he served at Paris till 1872 as First Translator and later as Interpreter to the Sublime Porte. He subsequently occupied several important posts in Turkey, and then resumed his diplomatic career as ambassador at Vienna. In 1874 he was nominated Minister of Public Instruction; three months later Minister of Justice, and then resumed his post at Vienna. On the establishment of the new Ottoman Constitution he was appointed President of the Senate, and soon afterwards received the Portfolio of Foreign Affairs. In 1877 he succeeded Khalil Sheriff Pasha as ambassador to Paris, and in 1879 was appointed Prime Minister by the Sultan. The new ministry, however, had but a very brief tenure of office.

AAR'SENS, Francis Van, Lord of Someldyck and Spyck, and one of the greatest negotiators of the United Netherland Provinces. In 1641 he was deputed one of the three ambassadors extraordinary to England, to settle the marriage between the Princess Mary and Prince William, the Stadtholder's son. Born at the Hague, 1572; died 1641.

AASEN, Ivar Andreas, a Norwegian philologist. Born of very poor parents, he raised himself to a very eminent literary position. Born at Œrsten, 1813.

AB, in Hebrew chronology the fifth month of the ecclesiastical and the eleventh of the civil year. It contained thirty days, and corresponded to the latter part of our July and beginning of August. The ninth of the month is one of the principal Jewish fast-days, commemorating the destruction of the Temple by Nebuchadnezzar and also by Titus.

ABAB'DEH, a tract of country in Upper Egypt, inhabited by a pastoral people, supposed to be aborigines. A marble, called *breccia verde*, with gold and emeralds, is found in it, and it abounds with ancient and Roman remains. Near the village now called Abadeh are the ruins of Antinœ, a splendid city built by the Roman emperor Adrian.

ABACO, or LUCAYA, (Great and Little), two islands of the Bahamas, the largest being 80 miles long and 15 miles broad. About 2,000 inhabitants are employed chiefly in fishing and shipbuilding. Lat. of lighthouse, 25° 51′ 30″ N., long. 77° 10′ 45″ W.

ABAKA'-KHAN', eighth emperor of the Moguls, of the race of Zingis. He defeated the king of Bokharia and the Egyptians, who had invaded his dominions. He died 1282.

ABAKANSK, a fortified town of Siberia, in the government of Yeneseisk. In the neighborhood are some remarkable figures covered with hieroglyphics. Lat. 54° N., long. 91° 14′ E.

ABANA and PHARPAR, 'rivers of Damascus' (2 Kings v. 12), are now generally identified with the Barade and the Awaj respectively. The former flows through the city of Damascus; the Awaj, a smaller stream, passes eight miles to the south. Both run from west to east across the plain of Damascus, which owes to them much of its fertility, and lose themselves in marshes, or lakes, as they are called, on the borders of the great Arabian desert.

A'BANCAY, a town of Peru, on the river Cuszo, important for its sugar-refineries. Pop. 20,000.

ABA'NO, a town in Italy, 5 miles south-west of Padua, celebrated for its warm baths, in one of which, as a method of cure, the patient is covered with warm mud. Pop. 3,000.

ABA'NO, Pietro di, a learned Italian, who first studied at Padua, and afterwards at Paris. He traveled in Turkey, France, England, and Scotland, whence he was recalled to take the professorship of medicine at Padua, on its becoming vacant. He was not only an astronomer, but an astrologist, and was regarded as a magician. In 1315, for the second time, he was brought before the Inquisition, on account of his doctrines, but died before the inquiry was completed. The judges found that he was guilty, and ordered his body to be burned, but it was secretly taken away by a friend, and he was therefore burned in effigy. Born at Abano, 1250; died 1316.

AB'ARAIM, or ABARIM, mountains of great height and steep ascent, which separated the territories of the Moabites and Ammonites from Canaan. One of these was named Nebo, and another Pisgah, on which Moses died.

AB'ARIS, the Hyperborean, a famous priest of Apollo, of whose learning and accomplishments several writers speak highly, but from what country he came is an undecided question. Some say he was of Scythia, and others of the country about the Caucasus. The Greeks say that he rode through the air on a sacred arrow, which he gave to Pythagoras, in return for the instructions he received from that philosopher. The time of his appearance is variously stated as the 6th and the 8th century B.C.

ABA'TI, Niccolo, a noted fresco painter of Modena, who assisted in decorating the palace of Fontainebleau. His finest easel-piece in oil is in the Dresden Gallery, representing the martyrdom of St. Peter and St. Paul. His brother, son, grandson, and great-grandson, were all painters of considerable ability. Born at Modena, 1512; died at Paris, 1571.

ABAU'JVAR, a district of Upper Hungary. The soil is fertile, and among the products are the grapes from which the famous Tokay wine is made. The district also yields metals, precious stones, salt, and mineral waters. Pop. 124,000.

ABB'ADIE, James, an eminent French divine, who took the degree of D.D. at Sedan, and was afterwards made minister of the French church at Berlin. In 1688 he accompanied Marshal Schomberg to England with the Prince of Orange, and was with that great man when he fell at the battle of the Boyne. On his return to London, he was appointed minister of the French church in the Savoy; and not long after promoted to the deanery of Killalo, in Ireland. Born at Nay, in Basse-Pyrenees, 1658; died at London, 1727.

ABBAS I., surnamed the Great, one of the most celebrated of the sovereigns of Persia, was the youngest son of Shah Mohammed Khodabendeh. After heading a successful rebellion against his father, and causing one of his brothers (or, as some say, both) to be assassinated, he obtained possession of the throne at the early

age of eighteen (1585). Determined to raise the fallen fortunes of his country, he first directed his efforts against the predatory Uzbeks, who occupied and harassed Khorasan. After a long and severe struggle, he defeated them in a great battle near Herat (1597), and drove them out of his dominions. In the wars he carried on with the Turks during nearly the whole of his reign, his successes were numerous, and he acquired or regained a large extent of territory. By the victory he gained at Bassorah (1605), he extended his empire beyond the Euphrates; Achmed I. was forced to cede Shirwan and Kurdistan in 1611; the united armies of the Turks and Tatars were completely defeated near Sultanieh in 1618, and Abbas made peace on very favorable terms; and on the Turks renewing the war, Baghdad fell into his hands after a year's siege (1623). In the same year he took the island of Ormuz from the Portuguese, by the assistance of the British. When he died in 1628, his dominions reached from the Tigris to the Indus. Abbas distinguished himself, not only by his successes in arms, and by the magnificence of his court, but also by his reforms in the administration of his kingdom. He encouraged commerce, and, by constructing highways and building bridges, did much to facilitate it. To foreigners, especially Christians, he showed a spirit of tolerance; two Englishmen, Sir Anthony and Sir Robert Shirley, were admitted to his confidence, and seem to have had much influence over him. His fame is tarnished, however, by numerous deeds of tyranny and cruelty. His own family, especially, suffered from his fits of jealousy; his eldest son was slain, and the eyes of his other children were put out, by his orders.

ABBASSIDES, the caliphs of Baghdad, the most famous dynasty of the sovereigns of the Mahometan or Saracen empire. They derived their name and descent from Abbas (*b.* 566, *d.* 652 A.D.), the uncle and adviser of Mahomet, and succeeded the dynasty of the Ommiads, the caliphs of Damascus. Early in the 8th century the family of Abbas had acquired great influence from their near relationship to the Prophet; and Ibrahim, the fourth in descent from Abbas, supported by the province of Khorasan, obtained several successes over the Ommiad armies, but was captured and put to death by the Caliph Merwan (747). Ibrahim's brother, Abul-Abbas, whom he had named his heir, assumed the title of caliph and, by a decisive victory near the river Zeb (750), effected the overthrow of the Ommiad dynasty. Merwan fled to Egypt, but was pursued and put to death, and the vanquished family was treated with a severity which gained for Abul-Abbas the surname of Al-Saffah, the Blood-shedder. From this time the house of Abbas was fully established in the government, but the Spanish provinces were lost to the empire by the erection of an independent caliphate of Cordova, under Abderrahman

On the death of Abul-Abbas, Almansur succeeded to the throne, and founded Baghdad as the seat of the empire. He and his son Mohdi waged war successfully against the Turkomans and Greeks of Asia Minor; but from this time the rule of the Abbassides is marked rather by the development of the liberal arts than by extension of territory. The strictness of the Mohammedan religion was relaxed, and the faithful yielded to the seductions of luxury. The caliphs Harun Al-Rashid (786—809) and Al-Mamun (813—833) attained a world-wide celebrity by their gorgeous palaces, their vast treasures, and their brilliant and numerous equipages, in all which their splendor contrasted strikingly with the poverty of European sovereigns. The former is known as one of the heroes of the *Arabian Nights;* the latter more worthily still as a liberal patron of literature, and science. It is a mistake, however, to look in the rule of these caliphs for the lenity of modern civilization. 'No Christian government,' says Hallan, 'except perhaps that of Constantinople, exhibits such a series of tyrants as the caliphs of Baghdad, if deeds of blood, wrought through unbridled passion or jealous policy, may challenge the name of tyranny.'

The territory of the Abbassides soon suffered dismemberment, and their power began to decay. Rival sovereignties (Ashlabites, Edrisites, &c.) arose in Africa, and an independent government was constituted in Khorasan (820), under the Taherites. In the West, again, the Greeks encroached upon the possessions of the Saracens in Asia Minor. Ruin, however, came from a less civilized race. The caliphs had continually been waging war with the Tatar hordes of Turkestan, and many captives taken in these wars were dispersed throughout the empire. Attracted by their bravery and fearing rebellion among his subjects, Motassem (833—842), the founder of Samarah, and successful opponent of the Grecian forces under Theophilus, formed body-guards of the Turkish prisoners, who became from that time the real governors of the Saracen empire. Motawakkel, son of Motassem, was assassinated by them in the palace (861); and succeeding caliphs became mere puppets in their hands. Radhi (934—941) was compelled by the disorganized condition of his kingdom to delegate to Mohammed ben Rayek (936 A.D.), under the title of *Emir-al-Omara*, commander of the commanders, the government of the army and the other functions of the caliphate. Province after province proclaimed itself independent; the caliph's rule became narrowed to Baghdad and its vicinity; and the house of Abbes lost its power in the East for ever, when Hulagu, prince of the Mongols, set Baghdad on fire, and slew Motassem, the reigning caliph (20th Feb. 1258). The Abbassides continued to hold a semblance of power in the merely nominal caliphate of Egypt, and feebly attempted to recover their ancient seat. The last of them, Motawakkel III., was taken by Sultan Selim I., the conqueror of Egypt, to Constantinople, and detained there for some time as a prisoner. He afterwards returned to Egypt, and died at Cairo a pensionary of the Ottoman government, in 1538.

ABBEY, EDWIN A., an American artist, born at Philadelphia, 1852. He was a pupil of the Philadelphia Academy of Fine Arts. In 1871 he was employed by Harper & Brothers, and since that time he has almost exclusively devoted himself to drawing for illustrated publications. His professional life has been spent in New York and London. He was elected a member of the Water-Color Society in 1876, of the New York Etching Club in 1877, and of the Tile Club in 1878. Among his water-color pictures are, *The Stage Office*, (1876), *The Evil Eye*, (1877), *Lady in a Garden*, and *A Rose in October*. His *Stage Office* was at the Paris Exposition of 1878. In 1882 the Harpers published his exquisite designs suggested by Herrick's poems, which first appeared in *Harper's Magazine*.

ABBEY, HENRY E., theatrical manager, was born at Akron, O., in 1846. After learning the jewelry business, he opened a store at Buffalo, N. Y. In 1870 he began his theatrical career by becoming advance agent for Edwin Adams, and in 1871 he leased the Akron Opera House. After that he became manager for John T. Raymond, and later for "Lotta." In 1876 he became manager of the Park Theater, New York. In 1878 he leased the Park Theater of Boston, and afterwards opened the Park Theater in Philadelphia. In 1881 he took Sarah Bernhardt on a starring tour throughout the United States, and afterwards entered into a similar engagement with Adelina Patti and Mrs. Langtry; he also leased the Grand Opera House, New York, and became manager of Edwin Booth In 1883 he leased the Lyceum Theater of London, where he starred Mary Anderson, Lawrence Barrett, and other American actors. During the same season he opened the new Metropolitan Opera House of New York with Christine Nilsson and other great artists; and managed the tour in this country of Henry Irving and his Lyceum company.

ABBON, a Norman monk, who at the end of the 9th c., wrote an account of the siege of Paris by the Normans.

ABBON, DE FLEURY, a learned French abbot of the Monastery of Fleury. King Robert sent him to Rome to avert the wrath of Gregory V., who threatened to lay the kingdom under an interdict, and Abbon obtained all that he asked. Killed in a quarrel between the French and the Gascons, 1004.

ABBOT, BENJAMIN, LL. D., successful educator, born at Andover, Sept. 17, 1762; and died at Exeter, N. H., Oct. 25, 1849. He was for fifty years principal of Phillips (Exeter) Academy; a position for which he possessed peculiar qualifications, and under his charge, the institution was exceedingly popular. Among his pupils were Daniel Webster, Edward Everett, Jared Sparks, George Bancroft, and many others who became distinguished. He stood at the head of his profession in New England.

ABBOT, GORHEM DUMMER. LL.D., the youngest of three brothers, Jacob, John S. C., and Gorham D., all American authors. He was born in Hallowell, Maine, Sept. 3, 1807, studied theology, and in 1837 became pastor of a Presbyterian Church at New Rochelle, New York. In 1843 he opened a large female school in New York, called the 'Abbot Collegiate Institute,' and subsequently the 'Spingler Institute.' He retired from teaching in 1866. He has published *Pleasure and Pulpit, Prayerbook for the Young, Mexico and the United States*, and has edited several educational works. He wrote his name Abbot, according to the original American spelling. He died Aug. 3, 1874.

ABBOT, SAMUEL, founder of the Andover Theological Seminary, born Andover, Ms.; died there April 30, 1812. aged 80. Having a feeble constitution, he adopted the mercantile profession in Boston, and, acquiring wealth by integrity and methodical habits, devoted it to religious and charitable objects. Upon the establishment of the seminary at Andover, Aug. 31, 1807, he gave to it $20,000, and in his will left it $100,000 more.

ABBOT OF FOOLS, OR MISRULE (in Scotland, the Abbot of Unreason). A mock abbot appointed by the monks of the middle ages to preside over the Christmas festivities.

ABBOTT, EMMA, was born in Chicago in 1849, where her father was a local musician. At an early age she manifested a taste for singing, and when quite young started east alone. According to her own account she carried her shoes in her hand, and went barefooted to save them. At Toledo, Ohio, she applied for work, and also at Cincinnati. In this manner she worked her way to New York, where she sang in halls, etc., until she came under the notice of her benefactor, who sent her abroad to be educated for the

operatic stage. In 1876 Miss Abbott made her *début* in London, as Maria in *La Figlia del Reggimento*, and was criticised somewhat unfavorably by the English critics. In the mean time some over-zealous friends had been inserting rather injudicious accounts of her marvelous voice in the American papers. Public curiosity was widely awakened, and a desire was felt on all sides to know whether she was really all that her friends had claimed for her, and whether she would prove to be the representative American prima donna to succeed Miss Kellogg. But on her appearance in 1877 at the New York Academy of Music in *La Figlia del Reggimento*, she was severely handled by the critics. They universally agreed that she merely possessed a light and flexible soprano voice, not by any means a phenomenal one either in point of quality or volume or range. She had the perseverance, however, to organize an opera company, supported by William Castle and others, and in spite of adverse criticism, she has become a favorite with her audiences in Western towns.

ABBOTT, Benjamin V., born Boston, June 4, 1830; Austin, born Dec. 18, 1831. The Abbott brothers, sons of Rev. Jacob, practise law in N. Y. City; and have jointly published *Admiralty Reports*, 1857, *N. Y. Practise Reports; Forms of Pleading; Digest of N. Y.; C. P. Reports*, 8 vols; *Digest of U. S. Statutes and Reports* 1789—1867, 4. vols.; *Clerks' and Conveyancers' Assist.; Digest of the Law of Corporations*, 2 vols., 1869; *Treatises on the Practice and Jurisdiction of the U. S. Courts;* many articles in law magazines; and *Conecut Corners*, a novel in support of prohibitory temperance laws.

ABBOTT, Edwin, D.D., born in London in 1838, was educated at St. John's College, Cambridge, of which he became a Fellow. He was Assistant Master in King Edward's School, Birmingham, from 1862 to 1865, when he was appointed Head Master of the City of London School. He was twice Select Preacher at Cambridge, also Select Preacher of the University of Oxford, 1877. The Archbishop of Canterbury conferred on him the degree of D D. in 1872. Dr. Abbott has published the following theological works:—*Bible Lessons*, 1872; *Cambridge Sermons*, 1875; *Through Nature to Christ*, 1877. His other works are, a Shakspearian *Grammar*, 1870; an edition of Bacon's *Essays*, 1876; *Bacon and Essex*, 1877; and an *English Grammar*. Dr. Abbott is also the author of two religious romances, published anonymously:—*Philochristus: Memoirs of a Disciple of our Lord*, 1878; and *Onesimus: Memoirs of a Disciple of St. Paul*, 1882.

ABBOTT, John Stephens Cabot, brother of Jacob, was born in Hallowell, Maine, Sept. 18, 1805. He was educated at Bowdoin College, and at Andover Theological Seminary, where he graduated in 1829. He was ordained to the Congregational ministry, and was pastor in several places. In 1844 he relinquished the pastoral office in order to devote himself to literary pursuits, although he has at intervals resumed the charge of several churches. His earlier works, *The Mother at Home*, *The Child at Home*, and *Practical Christianity*, were of a religious character; but the remainder of his writings are historical. Among these are 10 volumes of small histories prepared in conjunction with his brother Jacob: *Kings and Queens, or Life in the Palace; A History of the Civil War in America; Romance of Spanish History;* and *The History of Frederick the Second, called Frederick the Great*, compiled almost wholly from Carlyle. His most notable works relate to Napoleon I., of whom he is an enthusiatic admirer. His *History of Napoleon Bonaparte*, originally published serially in *Harper's Magazine*, and afterwards in two large volumes, is an indiscriminate eulogy, with little claim to historical value. This was followed by *Napoleon at St. Helena*, *The French Revolution of* 1789, and *History of Napoleon III*, 1868. His style, though often turgid and overstrained, is animated and picturesque; but in the higher qualities of an historian, accuracy in the examination of data and appreciation of the value of facts, he is utterly deficient. He died June 17, 1877.

ABBOTT, Lyman, D.D., son of the late Jacob Abbott, born at Roxbury, Massachusetts, Dec. 18, 1835. He graduated at the University of New York in 1853, was ordained a Congregational minister in 1860, and was pastor of various churches until 1865, when he became Secretary of the Freedmen's Commission until 1868. Subsequently he devoted himself mainly to literary pursuits. He had previously, in conjunction with his brothers, written two novels, *Conecut Corners*, and *Matthew Carnaby*, under the *nom de guerre* of 'Benauly,' formed from the initial syllables of their respective names (Benjamin, Austin, and Lyman). Besides several smaller works he has published *Jesus of Nazareth; His Life and Teachings*, 1869; *Old Testament Shadows of New Testament Truths*, 1870; *A Layman's Story*, 1873; *Commentary on the New Testament*, 1875–77; edited two volumns of *Henry Ward Beecher's Sermons*, 1868; a volume of his *Morning Exercises*, 1870; and, with T. C. Conant, a *Dictionary of Religious Knowledge*. Later he was one of the editors of *Harper's Monthly Magazine*, and principal editor of the *Illustrated Christian Weekly*. Afterwards he became editor of the *Christian Union*. He is a brother of Benjamin V. (born in 1830), and Austin (born in 1831), prominent lawyers in New York, who have prepared several legal works, which have been cited above.

ABBREVIATIONS. There are many abbreviations used in America which are not known in other countries. The following is a supplementary list to that given in the article Abbreviations in another part of this volume; it includes the principal Geographical and other American abbreviations in common use.

A. B. Artium Baccalaureus. Bachelor of Arts.
A. C. Ante Christum, before Christ.
Acct. Account.
Adjt. Adjutant.
Ad lib. Ad libitum, at pleasure.
Adm. Admiral.
Admr. Administrator.
Admx. Administratrix.
Æt. or Ætat. Ætatis, of age.
A. G. Adjutant General.
Ala. Alabama.
Ark. Arkansas.
A. U. C. Anno urbis conditæ, or Ab urbe condita, in the year from the building of the city (Rome).
Bbl. Barrel.
B. I. British India.
B. L. Bachelor of Law.
Brig. Gen. Brigadier General.
Bush. Bushel.
B. V. Blessed Virgin.
B. V. M. Blessed Virgin Mary.
C. Centigrade (thermometer).
Cal. California.
Cap. Capitulum, chapter.
Capt. Captain.
Chap. Chapter.
Chron. Chronicles.
C. J. Chief Justice.
C. O. D. Collect (or cash) on delivery.
C. G. H. Cape of Good Hope.
Col. Colonel; Colossians; Colorado.
Colo. Colorado.
Conn. or Ct. Connecticut.
Cor. Corinthians.
Cor. Sec. Corresponding Secretary.
Coss. Consules, consuls.
C. R. Civis Romanus, a Roman citizen.
D. (*d.*). Denarius, denarii, a penny, pence.
D. C. District of Columbia.
Del. Delaware; delineavit, drew it.
Deut. Deuteronomy.
D. F. Defensor fidei, defender of the faith.
D. T. Dakota Territory.
Dwt. Pennyweight.
E. East.
Eccl. or Eccles. Ecclesiastes.
Ecclus. Ecclesiasticus.
E. E. Errors excepted.
E. I. East India, or East Indies.
Eph. Ephesians.
Esd. Esdras.
Esq. Esquire.
Et al. Et alii, or alios, and others.
Et seq. Et sequentes, or sequentia, and the succeeding.
Ex. or Exod. Exodus.
Exr. Executor.
Ezek. Ezekiel.
F., or Fahr. Fahrenheit.
F. and A. M. Free and Accepted Masons.
F. A. S. Fellow of the Antiquarian Society.
Fla. or Flor. Florida.
F. R. A. S. Fellow of the Royal Astronomical Society.
Ga. Georgia.
Gal. Galatians.
Gen. General; Genesis.
G. M. Grand Master.
Gov. Governor.
Hab. Habakkuk.
Hag. Haggai.
H. B. M. His or Her Brittanic Majesty.
Heb. Hebrews.
Hhd. Hogshead.
H. I. H. His or Her Imperial Highness.
Hon. Honorable.
Hos. Hosea.
H. R. House of Representatives.
Ia. Iowa. (It is incorrect to use this A. for Indiana.)
Id. T. Idaho Territory.
Ill. Illinois.
Ind. Indiana.
Ind. T. Indian Territory.
I. O. O. F. Independent Order of Odd Fellows.
I. O. U. I owe you.
Isa. Isaiah.
I. T. Idaho Territory; Indian Territory. (Id. T. and Ind. T. are preferable.)
Jam. Jamaica.
Jer. Jeremiah.
JJ. Justices.
Josh. Joshua.
J. U. D. Juris utriusque doctor, doctor of both canon and civil law.
Jud. Judith.
Judg. Judges.
Kan. Kansas.
K. G. C. Knight Grand Cross.
K. G. C. B. Knight of the Grand Cross of the Bath.
Ks. Kansas.
Ky. Kentucky.
L. (*l.*, £). Libra, a pound (money).
La. Louisiana.
L. C. Lower Canada.
Lev. Leviticus.
L. I. Long Island.
Lib. Liber, book.
Lieut. or Lt. Lieutenant.
L. S. Locus sigilli, place of the seal.
M. Monsieur.
Macc. Maccabees.
Maj. Gen. Major General.
Mal. Malachi.
Mass. Massachusetts.
Matt. Matthew.
M. C. Member of Congress.
Md. Maryland.
M. E. Methodist Episcopal.
Me. Maine.
Messrs. Messieurs, gentlemen, sirs.

W. Va. West Virginia.
Wy. T. Wyoming Territory.
X. Xplotos, Christ.
Zech. Zechariah.
Zeph. Zephaniah.
&c. Et cetera, and so forth.

ABBT, THOMAS, a German writer, whose precocity of talent enabled him to produce, at the age of 13, a work deemed of great ability, and entitled *Historia Vitæ Magistra*. He subsequently attracted the notice of Prince Schaumberg-Lippe, by whom he was held in high estimation, and liberally patronized. Born at Ulm, in Suabia, 1738; died 1766.

ABDAL'LAH-EBN-ZOBIER, an Arabian chief, who seized the caliphate in 680, notwithstanding the claim of Yezid, and enjoyed the dignity nine years. Fell fighting in the defence of Mecca, in his 72d year.

ABDERA, a Greek town on the south coast of Thrace. Founded B.C. 656, and grew to be a place of considerable importance. The exact site is now unknown. Birthplace of Democritus, Protagoras, and Anaxarchus.

ABDUL-AZIZ KHAN, Sultan of Turkey, was born Feb. 9, 1830, being the second son of the Sultan Mahmoud Khan, who died in 1839, and brother of the late Sultan Abdul Medjid, on whose death, June 25, 1861, he ascended the throne of the Ottoman empire, according to the custom which prefers a brother to a son as heir. He had much stronger military tastes than his predecessor. His government succeeded in raising several loans in the London money market, for the avowed object of reforming the finances of the empire; but whether these reforms are real or illusory time alone can prove. One of the most troublesome questions that for some time affected the interests of the Porte arose out of the scheme of M. de Lesseps, for the formation of the Suez canal, as the Emperor of the French gave a decision in favor of the Company against the Viceroy of Egypt, by which the suzerainty of the Porte was virtually ignored, and its claim therein imperilled for the future. The sultan, who had concluded treaties of commerce with France and England, visited the exhibition at Paris in July, 1867, landed at Dover July 12, and was enthusiastically received in London. The sultan's government was greatly disturbed by the insurrections in Crete, which were fomented by Greece; but peace was ultimately restored at the close of the year 1868. A serious rising in Herzegovina occurred in 1874. Events followed one another in rapid succession. Ultimately the Sultan was deposed May 30, 1876, and was succeeded by his nephew Mourad V. After his deposition the ill-fated Abdul-Aziz was confined in one of the Royal palaces, where he was found dead on the morning of June 4, 1876. It was generally believed that he had committed suicide, but he was probably murdered.

ABDUL-HAMID II., Sultan of Turkey, was born Sept. 22, 1842, being a younger son and the fourth child of Abdul-Medjid, the sultan who died in 1861. On Aug. 31, 1876, he succeeded his brother, Mourad V., who was deposed, on proof of his insanity, after a reign of three months. He was solemnly girt with the sword of Othman, in the Eyoub mosque, Constantinople, on Sept. 7. About this time the Servians, who had been at war with the Sublime Porte, were completely defeated; but, after the capture of Alexinatz by the Turks, the Russian ambassador at Constantinople presented an ultimatum to the Turkish government demanding the immediate conclusion of an armistice for six weeks, which was accordingly granted, Nov. 1. The New Turkish Constitution, devised by Midhat Pasha, providing for the establishment of representative institutions on the West European model, was promulgated at Constantinople, and in the provinces of the Empire on Dec. 23. In the same month a conference of the representatives of the Great Powers was held at Constantinople, but their attempts to avert a war were unsuccessful. On Jan. 18, 1877, a resolution was passed by the Grand Council of Turkey, presided over by Midhat Pasha, rejecting absolutely all the proposals of the European Powers for administrative reforms, on the ground that their acceptance 'would sacrifice the independence of the Empire;' the result being that a week later all the plenipotentiaries left Constantinople. On March 1 a treaty of peace was concluded between Turkey and Servia on the basis of the *status quo ante bellum*. But the Porte had soon to face a more formidable antagonist, for on April 21 a circular despatch from the Russian government to the European Powers announced a declaration of war against Turkey. During the sanguinary conflict which ensued the Turkish troops fought with heroic valor, but they were eventually obliged to yield to superior numbers, and after the fall of Plevna the Porte sued for peace, and an armistice was accordingly signed in Feb. 1878. A Treaty of Peace was soon afterwards signed at San Stefano (March 3), but its provisions were considerably modified by the representatives of the great Powers assembled in Congress at Berlin. On July 8, 1378, the British Ministry announced that five weeks before they had concluded a defensive treaty with the Porte, by which England agreed to guarantee the Asiatic dominions of the sultan, who in turn engaged to introduce 'necessary reforms,' and to cede the island of Cyprus to be occupied and administered by Great Britain.

ABECEDA'RIANS, the name given to a small body of fanatical secretaries, followers of Storck, an Anabaptist, who appeared in the 16th c., and adopted, as their leading doctrine, the rejection of all worldly knowledge, even of the alphabet.

A'BECKETT, GILBERT ABBOTT, author. Educated at Westminster school, and studied for the bar; magistrate of a London Police Court, 1849, contributor to *Punch*, author of *Comic Histories of England and Rome*. Born in London, 1811; died 1856.

ABEEL, DAVID, D. D., missionary to China, born in New Brunswick, N. J., 1804; died at Albany, 1846. He was educated principally at his native place. He was ordained to the ministry in 1826, and labored at Athens, N. Y., two years. His health failing, he went in Oct. 1829 as a missionary to China, and thence to Java, Batavia, Singapore, and Siam, visiting Europe in 1833. On returning home he published *The Claims of the World to the Gospel; Residence in China* in 1829–33; and *Missionary Convention at Jerusalem*, 1838. He went again to Canton in 1839; but the 'opium war' precluding his usefulness there, he visited Malacca, Borneo, and other places, and settled at Kolingsu. Ill health compelled him to return home in 1845, after beginning a mission at Amboy in 1842; and he died soon after.

ABEGG, JULES FREDERIC HENRY, an eminent German jurist, and author of several valuable works on penal law. Born at Erlangen, 1796; died 1868.

ABEL, NIELS HENDRICH, mathematician, a native of Findöe, Norway, studied at the university of Christiana, and was one of the first contributors to the famous *Crelle's Journal*, a publication devoted to mathematics. As a mathematician, he ranks deservedly high, and the Swedish government undertook the publication of his works. He died from consumption at the early age of 27. Born 1802; died 1829.

ABEL DE PUJOL, Alexandre Denis, French painter. Was employed to paint ceilings at the Louvre, altar pieces, and other large works. Born at Valenciennes, 1785; died at Paris, 1861.

AB'ENSBERG, a town of Bavaria, on the river Abense. The manufactures are chiefly woollens. Pop. 1200. Here the Austrians were defeated by Napoleon I., in April, 1809.

ABERCROMBIE, James, of Glassaugh, a British general, born 1706; died deputy-governor of Stirling Castle, April 28, 1781. He was descended from a wealthy Scotch family; entered the army, became a colonel April 16, 1746; major-general January 31, 1756; lieutenant-general March 31, 1759; general May 25, 1772. He was sent to America in June, 1756, with the rank of major-general, to which he had been promoted for services on the continent, and held the chief command until the arrival of Londoun in August, resuming the command on the return of that officer in 1758. On July 8, 1758, at the head of 15,000 men, he attacked Ticonderoga with the bayonet,—causing the death of nearly 2000 brave men. He still further displayed his incapacity by unnecessarily retreating to his intrenched camp on the south side of Lake George. Superseded by Amherst, he returned to England in 1759, and, as a member of parliament, supported the arbitrary measures which resulted in the independence of the United States.

ABERCROMBY, David, M.D., a Scotch physician, spent a considerable portion of the early part of his life on the Continent, and while at Amsterdam was received into the college of physicians in that city. It is likely that he also practised medicine in London. He wrote several medical treatises, besides works on other subjects, of which the principal is his *Fur Academicus*. He died in October, 1701.

AB'ERDARE, a market town and parish in Glamorganshire, on the Cynon, 4 miles from Merthyr. It has coal and iron mines. There are several fine churches and chapels, three banks, and other public buildings, and a People's Park. A large quantity of coal is sent to Cardiff for export. Aberdare forms a portion of the parliamentary borough of Merthyr Tydvil. Station on the Taff Vale Extension of the Great Western Railway. Pop. 37,774.

ABERNETHY, John, a dissenting minister, was born in 1680, at Coleraine, in Ireland, and received his education at Glasgow, where he was made M.A. In 1708 he was called to the ministry, by the Presbyterian congregation at Antrim, where he labored with great diligence. When, however, the controversy arose about subscription to the Westminster Confession of Faith, Mr. Abernethy acted with so much energy on the side of liberty, as to give offence to his congregation. A separation consequently took place, and he removed to Dublin, where he officiated in Wood Street meeting until his death in December, 1740. After he came to Dublin he preached a set of sermons upon the divine attributes, and published in one volume those relating to the existence and natural perfections of the Deity. After his death the second volume, on the moral attributes, was published by his friends. Other sermons by him have also been published.

ABGAR, the name or title of a line of kings of Edessa in Mesopotamia. One of them is known from a correspondence he is said to have had with Jesus Christ. The letter of Abgar, entreating Jesus to visit him and heal him of a disease, and offering him an asylum from the wrath of the Jews, and the answer of Jesus promising to send a disciple to heal Abgar after his ascension, are given by Eusebius, who believed the documents to be genuine. The same belief has been held by a few moderns, but there can be no doubt whatever that the letter of Jesus at least is apocryphal. It has also been alleged that Abgar possessed a picture of Jesus, which the credulous may see either at Rome or at Genoa. Some make him the possessor of the handkerchief a woman gave Jesus, as he bore the cross, to wipe the sweat from his face with, on which, it is fabled, the features of Jesus remained miraculously imprinted.

ABI'ATHAR, 'father of abundance,' a Jewish high-priest, was the son of Abimelech, who was killed by Saul, and a descendant of Eli. He succeeded his father, and attached himself to David, but on his death, attempting to put Adonijah on the throne, he was deposed and banished by Solomon, 1014 B.C., the propheey in the First Book of Samuel, respecting the descendants of Eli, being thus fulfilled.

A'BIB, the first month of the Mosaic Hebrew year, corresponding to our April. The name signified the month of the ears of corn; but after the Babylonish Captivity it was changed to Nisan, month of flowers.

ABIMELECH, occurs first in the Bible as the name of certain kings of the Philistines at Gerar (Gen. xx. 2, xxi. 22, xxvi. 1). From the fact that the name is applied in the inscription of the thirty-fourth psalm to Achish, it has been inferred with considerable probability that it was used as the official designation of the Philistinian kings. The name was also borne by a son of Gideon, judge of Israel, by his Shechemite concubine (Judges viii. 31). On the death of Gideon, who had refused the title of king both for himself and his children, Abimelech set himself to obtain the sovereignty through the influence of his mother's relatives. In pursuance of his plan he slew seventy of his brethern 'upon one stone' at Ophrah, Jotham, the youngest of them, alone contriving to escape. This is one of the earliest recorded instances of a practice exceedingly common on the accession of Oriental despots. Abimelech was eventually made king, although his election was opposed by Jotham, who boldly appeared on Mount Gerizim and told the assembled Shechemites the fable of the trees desiring a king. At the end of the third year of his reign the Shechemites revolted, and under the leadership of Gaal made an unsuccessful attempt to throw off the authority of Abimelech. In Judges ix. there is an account of this insurrection, which is specially interesting owing to the full details it gives of the nature of the military operations. After totally destroying Shechem, Abimelech proceeded against Thebez, which had also revolted. Here, while storming the citadel, he was struck on the head by the fragment of a millstone thrown from the wall by a woman. To avoid the disgrace of perishing by a woman's hand, he requested his armor-bearer to run him through the body. Though the immediate cause of his death was thus a sword-thrust, his memory was not saved from the ignominy he dreaded (2 Sam. xi. 51). It has been usual to regard Abimelech's reign as the first attempt to establish a monarchy in Israel. The facts, however, seem rather to support the theory of Ewald (*Gesch.* ii. 444), that Shechem had asserted its independence of Israel, when it chose Abimelech as its king.

ABINGTON, Frances, a comic actress of great celebrity, whose maiden name was Barton, and whose father was a common soldier. She began life as an errand-girl to a French milliner. For more than thirty years she was the leading comic actress on the London stage. Her last appearance was in April, 1799. Born 1731, or according to some, 1738; died 1815.

AB'IOGENESIS, a term used by modern biologists, to indicate the production of living from inanimate matter. It was first used by Professor Huxley, to replace the older, but less definite phrase, 'spontaneous generation.' It is the opposite of biogenesis, or 'derived from life.'

ABIPONES, a tribe of South American Indians, inhabiting the territory lying between Santa Fé and St. Iago. They originally occupied the Chaco district of Paraguay, but were driven thence by the hostility of the Spaniards. According to M. Dobrizhoffer, who, towards the end of last century, lived among them for a period of seven years, they have many singular customs and characteristics. They seldom marry before the age of thirty, are chaste and otherwise virtuous in their lives, though they practise infanticide, and are without the idea of God. 'With the Abipones,' says Darwin, 'when a man chooses a wife, he bargains with the parents about the price. But it frequently happens that the girl rescinds what has been agreed upon between the parents and bridegroom, obstinately rejecting the very mention of marriage. She often runs away and hides herself, and thus eludes the bridegroom.' The Abiponian women suckle those infants that are spared for the space of two years,—an onerous habit, which is believed to have led to infanticide as a means of escape. The men are brave in war, and pre-eminently expert in swimming and horsemanship. Numerically the tribe is insignificant. M. Dobrizhoffer's account of the Abiponians was translated into English by Sara Coleridge, at the suggestion of Mr. Southey, in 1822.

ABKHASIA, or ABASIA, a tract of Asiatic Russia, on the border of the Black Sea. The surface of this country is generally mountainous, but there are some fertile valleys. There is a considerable traffic in slaves. The principal town in Sukum Kaleh. The territory which lies between long. 37° 3′ and 40° 36′ E. and lat. 42° 30′ and 44° 45′ N., was ceded to Russia by the treaties of Akermann (1826), and Adrianople (1829).

AB'NER, the first cousin of Saul, whom he served with great loyalty against David. Murdered by Joab, 1048 B.C.

ABOMA'SUM, the fourth stomach of ruminating animals, in which the food is converted into chyme, after being macerated and ground down in the first three stomachs.

ABOMEY, capital of the kingdom of Dahomey, in Africa, built without order or regularity. There are four large market places, and the town contains the principal palace of the kings of Dahomey. It is the scene of the yearly 'customs,' at which sometimes as many as 2,000 human beings are put to death. Pop. 30,000. Lat. 7° N., long. 2° 4′ E.

ABOMINATION, a term applied in the Old Testament to certain idols of the heathen, to the worship of which the Israelites were seduced. The idol Chemosh is spoken of as 'the abomination of Moab,' and Moloch as 'the abomination of the children of Ammon.'

ABOMINATION OF DESOLATION. This phrase was used by Christ in prophesying the approaching destruction of Jerusalem (Matt. xxiv. 25, and Mark xiii. 14). Reference is made to the prophet Daniel, who, in three places, refers to the abominations which make desolate (ix. 27, xi. 31, xii. 11).

ABORTION. Of the more recent statutes in the United States, the law of New York provides that 'any person administering, prescribing, advising, or procuring to take by a woman with child any drug or thing whatever, or advising or procuring her to submit to operation with intent to procure miscarriage, unless necessary to preserve her life, shall, if the women or child die through such means, be guilty of manslaughter in the second degree, punishable not less than four nor more than twenty years in state prison.' Any person who does any act calculated to prevent a child being born alive, is guilty of abortion; this extends to the giving of any drug or other matter or substance, or the use of any instrument calculated to produce miscarriage, whether the object be attained or not; if miscarriage be the intention, that constitutes the crime. The administration of a drug, or the actual use of an instrument, is not necessary to the incrimination; if any person sells or supplies any drug or thing to be taken, or any instrument to be used, knowing that miscarriage is the intention, that person is legally guilty of the crime of abortion. The intention is what the law looks at so completely, that it has been laid down that the probable consequence of any act or administration does not signify. If a person administers a bit of bread, with intent to commit abortion, that person is guilty of the crime. If the act be done with the mother's consent, and the child has not quickened, it is not a crime by the common law. Procuring an abortion is not murder by the common law, even if the child has quickened. When, in consequence of the means used to secure an abortion, the death of the woman ensues, it is murder. If a person intending to procure an abortion, does an act which causes a child to be born so much earlier than the natural time that it is born in a state much less capable of living, and afterwards dies in consequence of its exposure to the external world, the person who, by this misconduct, so brings the child into the world, and puts it thereby in a situation in which it cannot live, is guilty of murder; and the mere existence of a possibility that something might have been done to prevent the death will not render it less murder.

ABRAHAM'S BOSOM. This phrase is used by Christ in the parable of the rich man and Lazarus (Luke xvi. 22). It refers to the oriental custom of reclining on couches at meals and in such a way that each guest rested upon the bosom of his neighbor. The position with respect to the master of the house was of especial honor. To be in Abraham's bosom thus became a metaphor expressive of the highest spiritual condition and felicity. At the Last Supper, John, the beloved disciple, 'was leaning on Jesus' bosom' (John xiii. 23).

ABRAN'TES, a fortified town on the Tagus, in Portuguese Estremadura, 70 miles N.E. of Lisbon. The exports are grain, fruits, and oil. Pop. 6000.—Another town in Brazil.

ABSINTHE, a liqueur or aromatized spirit, prepared by pounding the leaves and flowering tops of various species of wormwood, chiefly *Artemisia Absinthium*, along with angelica root, sweet flag root, the leaves of dittany of Crete, star-anise fruit, and other aromatics, and macerating these in alcohol. After soaking for about eight days the compound is distilled, yielding an emerald-colored liquor, to which a proportion of an essential-oil, usually that of anise, is added. The liqueur thus prepared constitutes the genuine *Extrait d'Absinthe* of the French; but much of an inferior quality is made with other herbs and essential oils, while the adulterations practised in the manufacture of absinthe are very numerous and deleterious. In the adulterated liqueur the green color is usually produced by turmeric and indigo, but the presence of even cupric sulphate (blue vitriol) as a coloring ingredient has been frequently detected. In commerce two varieties of absinthe are recognized—common and Swiss absinthe—the latter of which is prepared with highly concentrated spirit; and when really of Swiss manufacture, is of most trustworthy quality as regards the herbs used in its preparation. The chief seat of the manufacture is in the canton of Neufchâtel in Switzerland, although absinthe distilleries are scattered generally throughout Switzerland and France. The liqueur is chiefly consumed in France, but there is also a considerable export trade to the United States. In addition to the quantity distilled for home consumption in France, the amount imported from Switzerland in recent years has not been less than 2,000,000 gallons yearly. The introduction of this beverage into general use in France is curious. During the Algerian war (1844–47) the soldiers were advised to mix absinthe with their wine as a febrifuge. On their return they brought with them the habit of drinking it, which is now so widely disseminated in French society, and with such disastrous consequences, that the custom is justly esteemed a grave national evil. A French physician, M. Legrand, who has studied the physiological effect of absinthe drinking, distinguishes two trains of results according as the victim indulges in violent excesses of drinking or only in continuous steady tippling. In the case of excessive drinkers there is first the feeling of exaltation peculiar to a state of intoxication. The increasing dose necessary to produce this state quickly deranges the digestive organs, and destroys the appetite. An unappeasable thirst takes possession of the victim, with giddiness, tingling in the ears, and hallucinations of sight and hearing, followed by a constant mental oppression and anxiety, loss of brain power, and, eventually, idiocy. The symptoms in the case of the tippler commence with muscular quiverings and decrease of physical strength; the hair begins to drop off, the face assumes a melancholy aspect, and he becomes emaciated, wrinkled, and sallow. Lesion of the brain follows, horrible dreams and delusions haunt the victim, and gradually paralysis overtakes him and lands him in his grave. It has been denied by a French authority, M. Moreau, that these symptoms are due to wormwood or any of the essential oils contained in absinthe, and he maintains that the strong spirit and such adulterations as salts of copper are sufficient to account for the effects of the liqueur. There is, however, no doubt that proportionately the consumption of absinthe is much more deleterious to the human frame than the drinking of brandy or other strong spirits. The use of absinthe has been prohibited in both the army and navy of France.

ABSORP'TION, is the interpenetration of certain bodies by other bodies or influences, which by this means disappear or become lost. There are several important examples of this in Physics.

A. (in Chem.), the disappearance of a gaseous fluid on entering into combination with a liquid or solid; thus, when the gas, ammonia, is passed into water, absorption takes place, and the result is the liquid commonly called spirits of hartshorn.

A. (in Physiol.), a term employed to designate that natural function of the body which is exercised by the absorbent vessels; as the absorption of the chyle by the lacteal vessels.

A. (of Heat), is where the heat-rays seem to disappear within the substances of bodies subjected to their influence, the effects differing greatly according to surface and color. See HEAT.

A. (of Light), will be best explained by considering the causes of transparency, opacity, and color. Transparency in a body is caused by one part of the light striking on it being transmitted through its substance, another being reflected from its surface, and a third being absorbed or lost in its interior. When a body reflects nearly the whole of the light, absorbing only a very small portion, it is said to be opaque. Color is produced in transparent media by part of the color contained in white light being absorbed.

ABSTE'MII, a name given by the early Reformers to members who refused to partake of fermented wine, and, therefore, abstained from the cup in the eucharist. Calvin permitted them to partake of the bread only, touching the cup with their lips; but the Lutherans held such a partial taking of the sacrament to be a profanation.

ABULFAZL, vizier of Akbar, the Mogul emperor. Author of many valuable historical works, among which is *the Ayin-i-Akbari*, a geographical and statistical account of the Mogul empire. This work was translated into English by a Mr. Gladwin, in 1785. Died by assassination, 1602.

ABULGA'SI-BAYATUR, khan of the Tartars. After a reign of twenty years, like Charles V. of Spain, he resigned the crown to his son, and led a retired life, during which he wrote the history of the Tartars, which valuable work was afterwards translated into German and French. Born at Urgens, capital of Khorasan, 1605; died 1663.

ABYSSINIAN CHURCH. See AFRICAN CHURCH.

ACADE'MUS, or ECADEMUS, an Athenian, whose house was employed as a philosophical school in the time of Theseus. He had the honor of giving his name to a sect of philosophers, or rather three sects, called Academics. The old academy had Plato for its chief, the second Arcesilaus, and the last Carneades. No one was suffered to laugh in the academy at Athens, under the penalty of expulsion.

ACANTHA'CEÆ, in Botany, the *Acanthus* order. Herbs or shrubs found in most parts of the world, and abounding in the tropics. There are nearly 1400 known species, some having very beautiful flowers. The elegant lobed and sinuated leaves of the acanthus, which may be taken as the type of the order, are stated to have suggested the capital of the Corinthian pillar.

ACAN'THOPHIS, in Zoology, a genus of venomous serpents, allied to the vipers. From these, however, they are distinguished by their having a single series of plates beneath the tail, except towards the very end of it, where, in some instances, they are separated into two small rows. They are viviparous, and conceal themselves among the roots of trees, depending for their prey on the effects of the poison with which they are imbued

ACAN'THURUS, a genus of fishes, of the order *Thoracici*, natives of the Indian and Arabian seas. The genus contains a large number of species, many of which are extremely beautiful in form and color.

ACAS'TUS, son of Pelias, king of Thessaly, married Astydamia or Hippolyte, who fell in love with Peleus, son of Æacus, when in banishment at her husband's court. Peleus, rejecting the addresses of Hippolyte, was accused before Acastus of attempt upon her virtue, and soon after, at a chase, exposed to wild beasts. Vulcan, by order of Jupiter, delivered Peleus, who returned to Thessaly, and put to death Acastus and his wife.

AC'CENT, is the stress of the voice in pronouncing certain syllables of words. There are three kinds of accents—viz., the acute, the grave, and the circumflex. The acute accent, marked thus (ˊ), shows that the voice is to dwell on the syllables over which it is placed. The grave accent is marked thus (ˋ), and points out when the voice ought to be lowered. The circumflex accent is compounded of the other two, and marked thus (ˆ), it denotes a quavering of the voice between high and low. Accents were first introduced in the Greek language by Aristophanes of Byzantium, about 265 B.C., and were first used by the French early in the 17th century.

Accent and Quantity.—Accent is not identical with quantity, that is the length or shortness of vowel sounds or syllables, but in metrical composition it sometimes modifies it.

Accent and Emphasis.—These are not identical; the former being fixed, the latter depending on the value of the words in their relation to others.

Accented Syllables.—On many words of three or more syllables, there is a double accent, one being less marked than the other, as in 'epi'cur''ean,' in which the doubled accent-mark shows the syllable on which greater stress is to be laid.

ACCEPT'ANCE is the act by which a person binds himself to comply with the request contained in a bill of exchange addressed to him by the drawer. In all cases it is understood to be a promise to pay the bill *in money*, the law not recognizing an acceptance in which the promise is to pay in some other way, as, for example, partly in money and partly by another bill. A. may be absolute, conditional, or partial. *Absolute* A. is an engagement to pay the bill strictly according to its tenor, and is made by the drawee subscribing his name, with or without the word 'accepted,' at the bottom of the bill, or across the face of it. *Conditional* A. is a promise to pay on a contingency occurring, as, for example, on the sale of certain goods consigned by the drawer to the acceptor. No contingency is allowed to be mentioned in the body of the bill, but a contingent acceptance is quite legal, and equally binding with an absolute acceptance upon the acceptor when the contingency has occurred. *Partial* A. is where the promise is to pay only part of the sum mentioned in the bill, or to pay at a different time or place from those specified. In all cases A. involves the signature of the acceptor either by himself or some person duly authorized on his behalf. A bill can be accepted in the first instance only by the person or persons to whom it is addressed; but if he or they fail to do so, it may, after being protested for non-acceptance, be accepted by another '*supra* protest,' for the sake of the honor of one or more of the parties concerned in it. It has been decided in some instances that A. need not be written on the bill, nor, in fact, be in writing at all. But in England, by statute, an A. must be in writing; and in this country similar laws have been passed in the states of Alabama, California, Delaware, Kansas, Maine, Minnesota, Missouri, Oregon, New York, Pennsylvania, and Wisconsin.

ACCES'SORY. It was formerly provided by the common law that the A. cannot be guilty of any other or graver offence than his principal; that he cannot be convicted except jointly with the principal; that he is not guilty if the principal is not guilty; and that if the principal is acquitted, so is the A. Recent statutes, however, in England and in almost all the United States have changed the law. The statutes of Massachusetts and New York provide that any person who, by counselling, hiring, or otherwise procuring the commission of a felony, becomes an A. before the fact, shall be punished in the same manner as the principal felon. In New York it is also provided that the A. before or after the fact may be indicted, tried, convicted, and punished, notwithstanding that the principal felon has been pardoned or otherwise discharged before conviction; and in Massachusetts, if for any reason the principal is not amenable to justice. There are similar statuary provisions in Pennsylvania; and nearly all the states have statutes of the same character.

ACCIAJUOLI, DONATO, a noble and learned Florentine, distinguished as a statesman and scholar. He wrote a commentary on the 'Ethics' of Aristotle, and translated some of the 'Lives' of Plutarch, to which he added those of Hannibal and Scipio. He also wrote a life of Charlemagne. Born at Florence, 1428; died at Milan, 1478.

A'CCIDENT, denotes, in a general sense, any casual event, or, in more philosophical language, an attribute of a thing, or class of things, which neither belong to, nor is in any way deducible from, the essence of that thing or class.

In Grammar, A implies a property attached to a word without entering into its essential definition.

In Heraldry, it is in coat-armor an additional mark, which may be omitted without effecting any change in the dignity.

In Optics, Accidental colors are those which depend on the affections of the eye. The term is applied to the ocular spectrum, which is generally perceived after the eye has been for some time steadily fixed upon a colored object. Thus, if we look for some time upon a yellow piece of cloth, and suddenly turn the eye from it, we will see the color of indigo; red will give a blueish green, and so on. These colors are also called complementary colors, because, when taken in conjunction with those of the spectrum, they make up all the colors of a white light.

In Design, the Accidental point (in perspective) is that point in the horizontal line where the projections of parallel lines meet the perspective plane.

ACCLAMATION, the expression of the opinion, favorable or unfavorable, of any assembly by means of the voice. Applause denotes strictly a similar expression by clapping of hands, but this distinction in the usage of the words is by no means uniformly maintained. Among the Romans acclamation was varied both in form and purpose. At marriages it was usual for the spectators to shout 'Io Hymen, Hymenæe,' or 'Talassio;' a victorious army or general was greeted with 'Io triumphe;' in the theater acclamation was called for at the close of the play by the last actor, who said, 'Plaudite;' in the senate opinions were expressed and votes passed by acclamation in such forms as 'Omnes, omnes, Æquum est, Justum est, &c;' and the praises of the emperor were celebrated in certain pre-arranged sentences, which seem to have been chanted by the whole body of senators. The acclamations which authors and poets who recited their works in public received were at first spontaneous and genuine, but in time became very largely mercenary, it being customary for men of fortune who affected literary tastes to keep applauders in their service and lend them to their friends. When Nero performed in the theater his praises were chanted, at a given signal, by five thousand soldiers, who were called 'Augustals.' The whole was conducted by a music-master, 'mesochorus' or 'pausarius.' It was this case of Nero which, occurring to the recollection of the French poet Dorat, may be said to have originated the well-known Paris 'claque.' Buying up a number of the tickets for a performance of one of his plays, he distributed them gratuitously to those who promised to express approbation. From that time the 'claque,' or organized body of professional applauders, has been a recognized institution in connection with the theaters of Paris. In the early ages of the Christian church it was by no means uncommon for an audience to express their approbation of a favorite preacher during the course of his sermon. Chrysostom especially was very frequently interrupted both by applause and by acclamations. In ecclesiastical councils vote by acclamation is very common, the question being usually put in the form, 'placet' or 'non-placet.' This differs from the acclamation with which in other assemblies a motion is said to be carried, when, no amendment being proposed, approval is expressed by shouting such words as 'Aye' or 'Agreed.'

ACCOL'TI, BENEDETTO, Italian lawyer and historian; chancellor of the republic of Florence. He wrote a history of the Crusade under Godfrey of Bouillon, printed at Venice, in 1532, which was consulted by Tasso in the composition of his *Jerusalem Delivered*. He likewise wrote a little book of the famous men of his time. Born at Arezzo, 1415; died at Florence, 1466.

ACCORAMBONI, VITTORIA, an Italian lady, famous for her great beauty and tragical history. She was maried first to Francesco Peretti, who was assassinated, and afterwards to the Duke of Bracciano, who died bequeathing her the whole of his large fortune, on account of which she was murdered by Lndovico Orsini, a relative. Her history forms the basis of Webster's tragedy, *The White Devil*, and a romance by Tieck. Died 1585.

ACCORSO, FRANCESCO, professor of law at Bologna. Reduced the Code, Digests, and Institutes into one system, printed at Lyons, in 6 vols, folio, 1627. Born at Florence, 1182; died at Bologna 1260.

ACCOUNT, in general, denotes all arithmetical computations. Among merchants it is used for the books in which their business is entered. See BOOK-KEEPING.

ACCOUNT, in law. An open account is one in which some item of the contract is not settled by the parties, whether the account consists of one item or many, or where there have been running or current dealings between the parties, and the account is kept open with the expectation of further dealing. A stated account is an agreement between the parties to an account that all

the items are true. A stated account is in the nature of a new promise. A voluntary settlement of accounts between parties affords presumption that all items properly chargeable at the time were included. This presumption is not conclusive, but clear and convincing proof that such items were unintentionally omitted is necessary to sustain a subsequent claim to recover them. Account Current, is an open or running account between the parties. The acceptance of an account by the party to be charged must be shown, in an action at law, by the party relying upon a stated account; and the acknowledgment, that the sum is due, is sufficient, though there be but a single item in the account. Acceptance may be inferred from retaining the account a sufficient time without making objections.

AC'CRA, a kingdom, of about 500 miles area, and also one of the English ports, Gold Coast, Western Africa. Lat. 5° 30′ N. Long. 0° 12′ W.

ACCUMULA'TION, is that kind of motion existing in some kind of machines at the end of intervals of time during which the velocity of the moving body has been constantly accelerated.

ACCUMULATOR, an electrical machine which generates or accumulates, by means of friction, electric currents of high tension. It is an adaptation of the ordinary cylindrical frictional machine, and the exciting body consists of a large disc or circular plate of vulcanite, or 'ebonite,' as it is generally named by electricians.

ACEPH'ALOCYST, (Greek, 'a headless bladder'), an intestinal parasite which has the appearance of a simple bladder without any visible organs.

A'CETATE, in Chemistry, a compound formed by the union of a base with acetic acid. Many of the acetates are of great importance in the arts. The most important is acetate or sugar of lead. All the acetates are soluble in water.

A'CETYLENE, a luminous hydrocarbon gas, resembling coal-gas, discovered by Berthelot, the eminent French chemist.

ACHÆ'I, the descendants of Achæus, the son of Xuthus, and grandson of Helen. Achæus having committed manslaughter, was compelled to take refuge in Laconia, where he died, and where his posterity remained under the name of *Achæi*, until they were expelled by the Aeraclidæ. Upon this, they passed into the northern parts of Peloponnesus, and, under the command of Tisamenus, the son of Orestes, took possession of the country of the Ionians, and called it Achaia. The successors of Tisamenus ruled until the time of Gyges's tyranny, when Achcia was parcelled into twelve small republics, or so many cities with their respective districts, each of which comprised seven or eight cantons. Four of these—Patræ, Dymæ, Tritæa, and Pharæ—established a confederacy, 284 years B.C., which received the addition of other important places, and continued formidable upwards of 130 years, under the name of the *Achæan League*, and was most illustrious whilst supported by the splendid virtues and abilities of Aratus and Philopœmeu, They directed their arms for three years against the Ætolians, and rose to be powerful by the accession of neighboring states, and freed their country from foreign slavery. At last, however, they were attacked by the Romans, and, after one year's hostilities, the Achæan League was totally destroyed, B.C. 146. From this period the Peloponnesus was reduced to the condition of a Roman province, bearing the name of Achaia.—The name of *Achæi* is generally applied to all the Greeks indiscriminately, by the poets.

ACHARE, Louis Amédée Eugene, a French novelist, born at Marseilles in April, 1814; died March 24, 1875. During the earlier part of his life he was engaged in business, and held several political offices. He then went to Paris, where he made considerable reputation as a journalist. In 1846 he accompanied the Duke of Montpensier to Spain as a reporter. In 1847 he published *Belle-Rose*, a successful novel (5 vols. 8vo); and he afterwards wrote many others, besides a number of plays.

ACHATES, a friend of Æneas, whose fidelity was so exemplary that *fidus Achates* (the faithful Achates) became a proverb.

ACHEEN, a kingdom in the N. W. part of Sumatra, powerful enough, in former times, to expel the Portuguese from the island, and important enough for its sovereigns to receive embassies from some of the greatest potentates of Europe. The climate is comparatively healthy, being freer from woods and swamps than the other parts of the island. The chief produce are fine fruits, rice, cotton, betel-nuts, birds' nests, gold-dust, and sulphur. The imports are salt, soap, opium, wine, arms, gun powder, and manufactured goods. The exports are mace, cloves, nutmegs, pepper, sugar, coffee, and rice. Pop. about 320,000. Religion, Mohammedan. —The Achinese are taller, stouter, and darker complexioned than the other Sumatrans. They are more active and industrious than their neighbors, and have more sagacity and penetration.

ACHEEN, the capital of the above kingdom, seated near the mouth of a river, on the N.W. point of the island, or Acheen Head, in a wide valley formed by two lofty ranges of hills. The houses are built of bamboos and rough timbers, and are raised some feet from the ground, this part of the country being overflowed in the rainy season. A Dutch force obtained possession of the town in 1874. Lat. 5° 22′ N.; long. 95° 34′ E.

ACHENBACH, Andreas, a modern German landscape painter of great eminence. Born at Cassel, 1815.

ACHENWALL, Gottfried, Professor of the University of Göttingen; termed 'the founder of the science of statistics,' an eminent writer on statistics and political economy. Born at Elbing, Prussia, 1719; died at Göttingen, 1772.

ACHERON'TIA, a genus of Lepidopterous insects, fam. *Sphingidæ*, which embraces some of the largest European Lepidoptera, the most remarkable of which is the *Acherontia atropos*, or Death's-head Hawk-moth.

ACHILLES TATIUS, a Greek writer, who probably lived in the fifth century. An erotic romance, *The Loves of Clitophar and Leucippe*, has been several times translated.

ACHILLINI, John Philotheus, born 1538. Was author of a poem, entitled *Viridario*, containing the eulogy of many learned men of his time.

ACIS, in *Mythology*, the son of Faunus and the nymph Symæthis, was a beautiful shepherd of Sicily, who was beloved by Galatea, which so enraged Polyphemus the giant that he crushed his rival with a rock, and his blood gushing forth from under the rock, was metamorphosed into the river bearing his name. This river, now *Fiume di Jaci*, or *Acque Grandi*, rises under a bed of lava on the eastern base of Etna, and passing Aci Reale, after a rapid course of one mile, falls into the sea. The waters of the stream, once celebrated for their purity, are now sulphureous.

ACK'ERMANN, Konrad Ernst, a comedian of Germany, who founded the modern German theater. Born 1710; died 1771.

ACŒ'METŒ, (Gr. for 'sleepless'), an order of Syrian monks instituted by one Alexander, about the middle of the 5th century. They celebrated divine service uninterruptedly night and day, dividing themselves into three sections who relieved each other. Their chief place of meeting was a cloister at Constantinople, known as the Studium, from which they were sometimes known as the Studites. They were put down by the Papacy about the year 536, having adopted the Monophysite heresy, which affirmed that Christ had only one nature.

ACO'MA, or St. ESTEVAN DE ACOMA, a town of New Mexico, seated on a high mountain, with a strong castle. It is the capital of a province.

ACONCAG'UA, a district of the kingdom of Chili, South America, bounded on the north and west by the province of Quillota, east by the Andes, and south by Santiago. Area, 12,000 square miles. The country is mountainous, and fertile in the valleys. It brings forth maize, wheat, beans, pumpkins, melons, and other garden produce; vineyards and orchards are plentiful, and in summer, numerous flocks are pastured on the slopes of the Andes; figs, nectarines, peaches, &c., are sent to Santiago and Valparaiso. Gold and copper are found. Pop. 134,000. The chief town is San Felipe.

ACOSTA, Joaquim, a colonel of engineers in the service of New Granada, and a distinguished geographer and historian, served in 1831 in the Columbian army. In 1834, with the botanist Cespedes, he undertook a scientific expedition, extending from the valley of Socorro to that of Magdalena, and seven years later visited the country from Antioca to Anserma. A. afterwards repaired to Europe, and lived in Spain several years. He has published an excellent map of the territory of New Granada. His most important publication, however, is one on the *Discovery and Colonization of New Granada*. A. has made some valuable contributions to the Geographical Society of Paris.

ACOSTA, Joseph d', a Spanish Jesuit, who, from being a missionary in Peru, became provincial of his order. His *History of the West Indies*, first printed in Spanish, in 1521, 8vo, is universally known and esteemed. Born at Medina del Campo, 1539; died at Salamanca, 1600.

ACROCERAU'NIUM, a promontory of Epirus, with mountains called Acrocerannia, which separate the Ionian and Adriatic seas. The word comes from *akros*, high, and *keraunos*, thunder; because, by reason of their great height, they were often struck by lightning. They were remarkable for attracting storms and thence dreaded by mariners.

AC'ROCORIN'THUS, a steep and lofty mountain, overhanging the city of Corinth, on which was built a citadel, called by the same name.

ACRON, a Sicilian physician, who expelled the plague from Athens by burning perfumes. Flourished B.C. 430.

ACTA ERUDITO'RUM, *Acts of the Learned*, the name of a literary journal founded at Leipsic in 1682 by Otto Mencke, and others, and written in Latin. It had a high reputation, and was

continued until 1782. The whole collection is contained in 117 quarto volumes.

ACTINOM'ETER, an instrument invented by Sir John Herschel to ascertain the intensity of the heat of the direct rays of the sun. It consists of a thermometer, with a large bulb filled with a dark blue fluid. This is enclosed in a box, the sides of which are blackened, and the whole covered with a thick plate of glass. The amount of the heating power of the sun's rays is ascertained by exposing the bulb for equal intervals of time in sunshine and shade alternately.

ACTON, John F. E., Sir, son of an Irish physician, and originally in the French naval service, but subsequently prime minister at the court of Naples. Many of the political persecutions which took place in Naples after the French invasion of 1799 are attributed to the influence of Acton at the Neapolitan court. In 1806, on the entry of the French into Naples, he took refuge in Sicily. Born at Besançon, France, 1736; died at Palermo, 1811.

ACTON-BURNEL, a village of England, eight miles from Shrewsbury.—A parliament was held here in the reign of Edward I., when the lords sat in the castle, and the commons in a barn, which is still standing. A large part of the castle remains, the walls exhibiting great strength, and adorned with fine battlements and rows of windows curiously carved. Its remains still bear testimony to the magnificence of the original structure.

ADAIR, Sir Robert, a statesman and diplomatist. He was the son of Robert Adair, sergeant-surgeon to George III. He negotiated the treaty of the Dardanelles, was afterwards ambassador to Constantinople, and was sent on a special mission to Prince Leopold, when besieged in Liege. Sir Robert married a daughter of the Marquis of Hazincourt, in 1805, but had no issue. In 1802, he represented Appleby, and in 1806–7, Camelford. Born in London, 1763; died 1855.

ADALBERT, an archbishop of Prague, and successful missionary in Hungary, Prussia, and Lithuania, where he was murdered by a pagan priest. It is affirmed that Boselaus, prince of Poland, ransomed the body of this archbishop with its equal weight in gold. Born 939; died 997.

ADALBERT, an archbishop of Bremen and Hamburg. Died 1072. He was a distinguished politician, and, during the minority of Henry IV, was appointed regent of the empire.

ADAM, Adolphe Charles, musical composer. Author of above forty comic operas, and some masses. Born in Paris, 1803; died 1856.

ADAMAWA, a country of Central Africa, about midway between the Bight of Biafra and Lake Tchad. The boundaries are not strictly defined, but it extends about 200 miles from N.W. to S.E., and has a breadth of from 70 to 80 miles. The Benuwe, a branch of the Niger, flows through it, and is joined by a large river, the Faro, which rises in the south. The country was formerly known as Fumbina. A large portion of the population are slaves. The chief town is Yolla, which has about 12,000 inhabitants. Lat. 9° 28′ N., long. 12° 13′ E.

ADAMS, Charles B., an American naturalist, who has devoted much of his time to the study of the Molluscs. Three winters which he passed in the island of Jamaica enabled him to throw much light on the formation of that island, of which a complete monograph is meditated. He has both written and published a great many papers on Conchology. Born at Dorchester, Mass. 1814; died in 1853.

ADAMS, Charles Francis, LL.D., grandson of John Adams, second President, and son of John Quincy Adams, sixth President of the United States, was born at Boston, August 18, 1807. His father holding diplomatic positions in Europe, he spent most of his first ten years abroad, returning to America in 1817, when he entered Harvard College, graduating in 1825. He was admitted to the bar in 1838, but never engaged in practice, having previously married the daughter of Peter C. Brooks, a wealthy merchant of Boston. Previous to 1848 he had served as a member of the Massachusetts Legislature for five years. In 1848 he was nominated by the newly organized 'Free Soil' party for the Vice-Presidency of the United States. This party, composed mainly of Democrats who were opposed to the extension of slavery, cast but few votes; but its members finally coalescing with most of the Northern members of the Whig party formed the Republican party, which came into power in 1860. Meanwhile, in 1858, Mr. A. was elected a member of Congress. In 1861 he was appointed by President Lincoln Minister to Great Britain, a post which he retained until 1868, when he was recalled at his own request. In 1871–72 he acted as arbitrator for the United States in the Commission to settle the respective claims of Great Britain and the United States growing out of the civil war. He was one of the originators of the 'Liberal Republican' movement in 1872, but was defeated by Mr. Greeley in securing the presidential nomination. He subsequently joined the Democratic party, by whom he was nominated for Governor of Massachusetts in 1876. He has furnished many contributions to the *North American Review* and to the *Christian Examiner*, and in 1870 delivered before the New York Historical Society an able discourse on 'American Neutrality,' which has been printed. He has published *The Life and Works of John Adams* (10 vols., 1850–56), and *The Life and Works of John Quincy Adams* (13 vols., 1874–76). His son, John Quincy Adams, born in Boston, Sept. 22, 1833, graduated at Harvard College in 1853, and was admitted to the bar in 1855. In 1866 he was elected to the State Legislature as a Republican, but having favored the 'reconstruction' policy of President Andrew Johnson, failed of re-election in the following year. He has since been a prominent leader in the Democratic party, by which he was sent to the Massachusetts Legislature in 1869–70, and nominated for Governor in 1867 and 1871, but he was not elected. Another son, Charles Francis Adams, jun., born at Boston, May 27, 1835, graduated at Harvard College in 1856, and was admitted to the bar in 1858. During the civil war he was in command of a regiment of colored troops, and was brevetted brigadier-general. He has since been identified with railroad development, has served as Railroad Commissioner of Massachusetts, and ranks high as an authority upon all matters pertaining to railroad management. He has been a contributor to the *North American Review*, and is the author of *The Railroad Problem*, 1875, and, with his brother Henry, of *Chapters of Erie*, 1871. The residence of the family is Quincy, Massachusetts. Henry Brooks Adams, (born in 1838), a third son of Charles Francis Adams, graduated at Harvard College in 1858. During the latter part of his father's service as Minister to Great Britain he acted as his private secretary. In 1870 he was appointed assistant professor of history in Harvard College, and became editor of the *North American Review*.

ADAMS, Edwin, comedian, born at Medford, Mass., Feb. 3, 1834. He first appeared at the National Theater, Boston, Aug. 29, 1853, as Stephen in *The Hunchback*. His first appearance in Philadelphia was Sept. 20, 1854, at the Chestnut, as Charles Woodley in *The Soldier's Daughter*. His first great hit was at the St. Charles Theater, Baltimore. He appeared as a star in all the principal cities of the United States; died Philadelphia Oct. 28, 1877.

ADAMS, Hannah, born at Medfield, Mass., in 1755, was one of the first women of America to engage in literary pursuits. She wrote a *View of all Religions* (1784), *History of New England* (1799), *Evidences of the Christian Religion* (1804), *History of the Jews* (1812), *Letters on the Gospels*, an *Autobiography*, and other works. Died at Brookline, Mass., Nov. 15, 1831. She was the first person whose remains were buried at Mount Auburn.

ADAMS, John, real name Alexander Smith, the patriarch of Pitcairn's Island, and one of the mutineers in His Majesty's ship *Bounty*, 1789. He settled, with several other of the mutineers and some Otaheitans, in Pitcairn's Island, where, after the death and destruction of his English companions, he became, from a rough and desperate character, a humane and religious man; he introduced Christianity and the laws of marriage amongst those that were with him on the island, and regulated the community entirely upon Christian principles. Born 1764; died 1829.

ADAMS, Nehemiah, D.D., Congregational clergyman, born at Salem, Mass., Feb. 19, 1806. He graduated from Andover Theological Seminary in 1829. He settled as colleague with Rev. Dr. Holmes of the First Church, Cambridge, Dec. 17, 1829, and in March 26, 1834, became pastor of the Essex street Church, Boston. He was for many years an officer of the American Tract Society. Dr. A. took an active part in the Unitarian controversy, and has published *Remarks on the Unitarian Belief; The Friends of Christ*, 1851; *Autobiography of Thos. Shepard*, &c., 1832; *Life of John Eliot*, 1847; *Southside View of Slavery*, 1854, presenting a favorable view of the institution; *Correspondence with Governor Wise of Virginia* on the same subject; occasional discourses, &c. He was a frequent contributor to the *Spirit of the Pilgrims*, Boston, 1826–33. He died Oct. 6, 1878.

ADAMS, Thomas, Puritan divine. At one time chaplain to Sir Henry Montague, Lord Chief Justice of England, considered to be the first preacher of his time. His style abounds in brilliant fancies, bearing wit and even humor. Southey designated him 'the prose Shakespeare of Puritan theologians.' Although a Puritan in theology, he was not a Nonconformist. He died previous to 1660.

ADAMS, William, D.D., born at Colchester, Ct., 1807 He graduated at Yale College 1827. His father, John Adams, LL. D., was principal of the Colchester Academy, and afterward of that at Andover, Mass. In 1834 he left his parish to visit the south for his health, became pastor of the Broome street Church, N. Y. (1835–53), and later pastor of the New School Presbyterian Church of New York. He afterwards became a professor of the Union Theological Seminary of the same city. Among his published works are *The Three Gardens of Eden* and *Gethsemani and Paradise*. He died Aug. 31, 1880.

ADAMS, William T., an American writer of juvenile books, under the pseudonym of 'Oliver Optic,' born at Medway, Massachusetts, July 30, 1822. For many years he was a teacher in the public schools of Boston, and is now the editor of *Oliver Optic's Magazine for Boys and Girls*. His principal works are *The Boat Club, Woodville, and Army and Navy* series, 6 vols. each; *Young America Abroad, The Starry Flag, Lake Shore*, a series of stories; *The Riverdale Story Books*, and *In Doors and Out*, a volume of domestic tales.

ADAPTATION, in Biology, the process by which an organism or species becomes modified to suit the conditions of its life. As employed by evolutionists, the term generally implies such modification as arise in an individual, when some change of function and structure is produced by a change of external conditions. *Indirect adaptations* are those which are directly generated in an organism, but only become apparent in its offspring.

A'DAR, the twelfth month of the ecclesiastical and the sixth of the civil year of the Jews. It comprehends a portion of February and the beginning of March.

ADDINGTON, Henry. See Sidmouth, Lord, in Am. Supp.

ADELUNG, Friedrich Von, philologist. Studied at Leipsic, then visited Italy, and collated some ancient German MSS. in the Vatican library. In 1803 appointed instructor to the young brothers of the Czar of Russia, and afterwards became director of the Oriental Institute and president of the Academy of Sciences. Author of works on the Sanscrit and Russian languages. Born at Stetten, 1768; died at St. Petersburg, 1843.

ADET, P. A., an envoy, who represented France in the United States, 1796. He is known both as an original author in chemistry and a translator; he suggested new chemical characters and nomenclature.

ADIAPH'ORITES, a name given to Melanchthon and the party of which he was the leader, because of their submission upon indifferent points to imperial edicts. The imposition by Charles V., in 1548, of an edict known as the Augsburg Interim, proposing a temporary accommodation of the dissensions between the Protestants and Papists, till the dispute could be decided by a council, was the origin of the name. Flacius and the primitive Lutherans opposed Melanchthon in the controversy. The two principal questions debated were—first, whether it was lawful to submit to the opponents of truth, even in unimportant points; and, secondly, whether, granting that it was so, the matters upon which the Interim required submission were unimportant. The point in the edict chiefly insisted on was the doctrine of justification by faith. Melanchthon drew up the so-called Leipsic Interim, which declared that certain rites and observances of the Romish Church, and the jurisdiction of the Roman Catholic bishops, were *adiaphora* (things indifferent). From this controversy other divisions sprung, and from these divisions many of the schisms among Protestants had their origin.

ADIRONDACK MOUNTAINS, a group of mountains in the N. of the state of New York, North America, lying between Lakes Champlain and Ontario. They rise from an extensive plateau about 2000 feet above the level of the sea, and are chiefly of granite formation. Mount Marcy, the highest summit, has an altitude of 5337 feet, and others of the group are from 4000 to 5000 feet high. The two principal streams which take their rise in this region—the Hudson flowing south, and the Richelieu flowing northwards from Lake Champlain—afford abundant means of conveying from the mountains the valuable timber, chiefly pine, with which they are covered. Extensive deposits of magnetic iron ore, of great value, have been discovered; and a village, called Adirondack, has recently sprung up, where smelting is extensively prosecuted. Emerson, in his poem *Adirondacks*, has familiarized the literary world with the scenery of these mountains.

ADIT, in Mining, the entrance to a mine, generally driven horizontally into the side of a hill. Formerly mines were worked by vertical shafts, but now adits are always used where practicable. The doors of ancient theaters were called adits.

ADLER, George J., Ph.D., author, born at Leipsic, Germany, 1821; died Bloomingdale Insane Asylum, N. Y., Aug. 24, 1868. He came to the United States in 1833; was professor of German at the University of New York from 1846 to 1854, and, until he became insane in 1860, was a teacher, and author of text-books. Among his works are a German grammar, 1846; and reader, 1847; a dictionary, 1848, and a manual of German literature, 1853; a Latin grammar, 1858; translations of the *Iphigenia* of Goethe, and a history of Provençal Poetry, by C. C. Fauriel, 1860; *Notes on the Agamemnon of Æschylus*, 1861. He delivered lectures in New York on 'Roman Literature' in 1862, and in 1864 on Goethe's *Faust*. His *Letters of a Lunatic* were published in 1854.

ADME'TUS, the most remarkable of this name was a king of Pheræ, in Thessaly. Apollo, when banished from heaven, is said to have tended his flocks for nine years, and to have obtained from the Parcæ that Admetus should never die, if another person laid down his life for him. This was cheerfully done by his wife, Alcestis.—Admetus was one of the Argonauts, and was at the hunt of the Caledonian boar. Pelias promised his daughter in marriage only to him who could bring him a chariot drawn by a lion and a wild boar. Admetus did this by the aid of Apollo, and obtained Alcestis in marriage.

AD'MIRAL. The grades of rear-admiral and commodore in the United States navy were first established by act of July 16, 1862, which provides that the number of each grade shall not exceed 9 rear-admirals, 18 commodores, 36 captains, 72 commanders, 144 lieutenant-commanders, 144 lieutenants, 144 masters, and 144 ensigns. By act of Congress of Dec. 21, 1864, the President was authorized to appoint from the rear-admirals one vice-admiral, who shall be the ranking officer in the navy of the United States, and whose relative rank with officers of the army shall be that of lieutenant-general in the army. This grade was created for and bestowed upon Rear-Admiral Farragut. By act of July 25, 1866, it was provided that the number of officers of each grade on the active list should be 1 admiral, 1 vice-admiral, 10 rear-admirals, 25 commodores, 50 captains, 90 commanders, 180 lieutenant-commanders, 180 lieutenants, 160 masters, 160 ensigns, and in other grades the number now allowed by law. The rank of admiral was bestowed upon Vice-Admiral David Farragut. A law was passed at the 3d session of the 42d United States Congress abolishing the grades of admiral and vice-admiral in the navy. It provides that vacancies occurring in the grades of admiral and vice-admiral shall not be filled by promotion or in any manner, and that when the offices of said grades shall become vacant, the grades shall cease to exist. The pay of admiral is $13,000 a year; of vice-admiral $9000; and of rear-admiral $6000.

AD'MIRALTY. In the United States exclusive admiralty and maritime jurisdiction is by the Constitution delegated to the Federal courts. It rests with Congress to determine upon what court the jurisdiction shall be conferred. It has accordingly vested it in the first instance in the district court. No distinction is taken here between the instance and the prize court. Admiralty jurisdiction is either civil or criminal. Its civil jurisdiction embraces cases of maritime contracts and maritime trespasses in general. The principles and course of practice of the court in civil cases are principally derived from the Roman or civil law.

ADOLPHUS, Count of Nassau, elected emperor of Germany in 1292. His rapacity and tyrannical conduct caused a confederation to be formed against him, at the head of which was Albert, duke of Austria. Born 1252; fell in battle, 1298.

ADOLPHUS, G., a warlike duke of Holstein and son of Frederick, king of Denmark.—His name frequently occurs in the military transactions of Germany. Born 1526; died 1586.

ADOLPHUS FREDERICK, II., of Holstein Gottorp, king of Sweden, succeeded his father in 1751. He reformed the laws, and encouraged learning and the arts of peace.—This sovereign instituted, at Torneo, in Lapland, an academy of inscriptions and *belles-lettres*. Born 1710; died 1771.

ADOLPHUS, John, historian and barrister was born in London on the 7th August 1768. He was educated under the care of a grand-uncle, and after making a voyage to the West Indies was enrolled as an attorney about the year 1790. Called to the bar in 1807, he devoted himself to practice in criminal causes, and in a few years attained a leading position among Old Bailey counsel. His masterly defence of Thistlewood and the Cato Street conspirators, for which he had been retained only a few hours before the trial, did much to extend his reputation. He was very skilful in the management of his cases, but his hastiness of temper frequently led to unseemly altercations with other counsel. He held a good position in society, and was on terms of intimacy with the leading literary men of the day. *The History of England from the Accession of George III. to* 1783, which he published in 1802, was favorable noticed in the *Edinburgh Review* for its impartiality and accuracy. A new and enlarged edition of this work, in eight volumes, was in preparation, but only seven volumes were completed when the author died, 16th July 1845. His other literary works were—*Biographical Memoirs of the French Revolution* (1799); *The British Cabinet* (1799); *History of France from* 1790 *to* 1802 (1803); *Memoirs of John Bannister*.

ADOLPHUS, John Leycester, son of the above, also a distinguished barrister (died 1862), was the first to pierce the mask of the author of *Waverley*, in a series of critical letters addressed to Richard Heber, which he published in 1821.

ADON'IC, in Poetry, a verse which consists of a dactyle and a spondee or trochee; as *rara juventus*. It was so called from being first used in the elegies on Adonis, the lover of Venus.

ADORATION, an act of homage or worship which, among the Romans, was performed by raising the hand to the mouth, kissing it, and then waving it in the direction of the adored object. The devotee had his head covered, and after the act turned himself

round from left to right. Sometimes he kissed the feet or knees of the images of the gods themselves, and Saturn and Hercules were adored with the head bare. By a natural transition the homage that was at first paid to divine beings alone came to be paid to men in token of extraordinary respect. Those who approached the Greek and Roman emperors adored by bowing or kneeling, laying hold of the imperial robe, and presently withdrawing the hand and pressing it to the lips. In eastern countries adoration was performed in an attitude still more lowly. The Persian method, introduced by Cyrus, was to bend the knee and fall on the face at the prince's feet, striking the earth with the forehead, and kissing the ground. Homage in this form was refused by Conon to Artaxerxes, and by Callisthenes to Alexander the Great. In England the ceremony of kissing the king's or queen's hand, and some other acts which are performed kneeling, may be described as forms of adoration. Adoration is applied in the court of Rome to the ceremony of kissing the Pope's foot, a custom which is said to have been introduced by the popes after the example of the Emperor Diocletian. In the Romish Church a distinction is made between *Latria*, a worship due to God alone, and *Dulia* or *Hyperdulia*, the adoration paid to the Virgin, saints, martyrs, crucifixes, the host, &c.

ADRASTA, one of the Oceanides, who nursed Jupiter.

ADRIAN, a town of the United States, capital of Lenawee county, Michigan, situated on a branch of the Raisin river, and on the Michigan Southern Railway, 73 miles W.S.W. of Detroit. Adrian is the center of trade for the surrounding district, which is chiefly grain-producing. Its extensive water-power is employed in mills of various kinds. It has several fine churches and other public buildings. Pop. in 1880, 7849.

ADUL'TERY. Adultery is not a crime by the common law, but is made so by statute in some of the States. To make the offence adultery at least one of the parties must be married. A person may be indicted in the following States for the crime of adultery: Alabama, Arkansas, Connecticut, Georgia, Illinois, Iowa, Maine, Massachusetts, Michigan, Minnesota, Mississippi, New Hampshire, New Jersey, North Carolina, Nebraska, Ohio, Pennsylvania, Rhode Island, Tennessee, Vermont, Virginia, Wisconsin. In the following States the parties must have publicly lived together in order to be punished for the crime: California, Missouri, Texas, Indiana.

AD'VENTISTS, a sect of Christians who are found principally in the United States. The main characteristics of their faith are the speedy advent or second personal coming of Jesus Christ; the final annihilation of the wicked; and the sleep of the dead till the day of judgment. The founder of this sect was William Miller, of Massachusetts, who in 1833 prophesied that the second advent of Christ would occur in 1843—hence the members of this denomination are often termed Millerites. Another branch of Adventists, called Seventh Day Adventists, originated in 1844. They set no time for the coming of Christ, believing that the year 1844 only brought the world to the cleansing of the tabernacle, a period of brief duration preceding the coming of Christ. The census of 1880 returns the number of Adventists in the United States as 90,079, including 746 ordained ministers.

A'DVERB. As an adjective is joined to a noun, so is an A., for analogous purposes, to a verb, an adjective, or another A. From the frequency with which adverbs are joined to verbs, they get their name. An A. cannot be the subject, the copula, or the predicate of a proposition; and is, therefore, a secondary part of speech, logically speaking. According to their signification, adverbs may be divided into—1. Adverbs of Place, as, *where, towards;* 2. of Time, as *ever, immediately;* 3. of Degree, as, *very, almost;* 4. of Manner, as, *thus, wisely;* 5. of Belief or Doubt, as, *perhaps, no,* &c.—It is commonly said, that 'some adverbs admit of comparison;' as if in this respect they differed from adjectives. The truth is, that adverbs admit of comparison under the same limitations, neither more nor less, that restrict the comparison of adjectives. Thus, *soon* is compared as naturally as *hard.* If *now* or *thus* cannot be compared, neither can *wooden* nor *circular;* and in both cases, for the same reason—the sense forbids it. The laws of euphony prevent alike *miserable* and *miserably* from being compared grammatically, i. e., by the addition of *er* and *est;* but both admit of logical comparison by the use of *more* and *most.*— A large class of adverbs in English are formed from adjectives by annexing the syllable *ly*, which is just the word *like.* Most languages have some such means of distinguishing the A. from the adjective, except the German, in which they are alike. Adverbs in general may be looked upon as abbreviations of phrases; thus, *here = in this place, then = at that time, wisely = like a wise man.* Combinations of words that can thus be represented by a single adverb, and all combinations that are analogous, though they may have no single word equivalent to them, are called adverbial expressions.

ADVE'RTISEMENT (Fr. *avertissement*). The public notification of a fact. This is now commonly effected either by means of the ordinary newspapers, or of newspapers, printers' lists, and other publications specially devoted to the purpose. Advertisements, both printed and written, are still posted on church-doors and other places of public resort, in which case they are commonly called bills or placards. The most formal kind of A., and that which is employed in the case of royal proclamations and the like, is publication in the *Gazette* (q. v.); but so little is the *Gazette* read by private persons, that, as regards the customers, publication in it alone is not a sufficient notice of a dissolution of partnership to free the partners from debts afterwards contracted in name of the company. Public notifications are frequently enjoined by statute; as, for example, under Road and Bridge Acts, the Bankrupt Statutes, &c. In many other ways, their legal effects are important. Advertisements by public carriers, railway companies, and the like, are equivalent to offers whereby the advertiser will be bound to those who send goods on the faith, and in accordance with the terms of the A. By advertising a *general ship*, for a particular voyage, the master places himself on a footing of a public carrier, and is bound to receive goods for the port to which the vessel is advertised to sail. A merchant in such circumstances can insist on his goods being received, unless the ship be full, or the entire freight engaged. The contract of affreightment is completed by the A., and the shipping of the goods in conformity and with reference thereto. See CHARTER-PARTY, CARRIER.—In 1833, the duty on advertisements, was 3*s.* 6*d.* in Great Britain, and 2*s.* 6*d.* in Ireland for each A., was reduced to 1*s.* 6*d.* in the former country, and 1*s.* in the latter (3 and 4 Will. IV. c. 23). In 1853, it was wholly repealed (16 and 17 Vict. c. 62). In 1832, the year previous to the reduction, the duty amounted to £170,650; in 1841 it was £131,608; and in 1853, the year of the repeal, it had increased to £180,000, thus exceeding the amount before the period of reduction. Advertisements are found in England as early as the middle of the 17th c.; but advertising was not general till the beginning of the 18th. In America, advertising has long been practised to an enormous extent; and since the repeal of the duty, it has increased in this country at a very rapid rate. Most newspapers are rendered remunerative to their proprietors only by means of the advertisements which they contain. See Sampson's *History of Advertising* (1874). See NEWSPAPER.

Æ'ACUS, son of Jupiter, by Ægina, and king of the Island of Œnopia. A pestilence having destroyed all his subjects, he entreated Jupiter to repeople his kingdom; and, according to his desire, all the ants which were in an old oak were changed into men, and called by Æ. *myrmidons*, from *murmex*, an ant. Æ. married Endies, by whom he had Telamon and Peleus. He was a man of such integrity that the ancients have made him one of the judges of hell, with Minos and Rhadamanthus.

ÆGINE'TA, PAULUS, a native of the island Ægina, who first noticed the cathartic quality of rhubarb. His knowledge of surgery, as shown in his works which have been preserved, was very great. His works were published at Paris in 1532, folio. Lived in the 7th century.

ÆGIS'THUS, king of Argos, was son of Thyestes by his daughter Pelopea. Being left guardian of Agamemnon's kingdoms, and of his wife Clytemnestra, he fell in love with her and lived with her. They were both put to death afterwards, by Orestes, after a reign of seven years from the murder of his father Agamemnon.

ÆGYP'TUS, son of Belus, and brother to Danaus, gave his fifty sons in marriage to the fifty daughters of his brother. Danaus, who had established himself at Argos, and was jealous of his brother, obliged all his daughters to murder their husbands the first night of their nuptials. This was executed, with the exception that Hypermnestra alone spared her husband, Lynceus. Even Æ. was killed by his niece Polyxena. Æ. was king after his father, of a part of Africa, which from him has been called Egyptus.

Æ'LIA CAPITOLINA, a name given to a city built by the Emperor Adrian in 134, near the spot where the ancient Jerusalem stood.

ÆLIANUS, CLAUDIUS, an Italian historian and rhetorician, who, though he never left his native country, became so perfect in the Greek language as to write it with the greatest purity. In the reign of Antoninus he taught rhetoric at Rome, and wrote a *Varia Historia*, which consists of a curious collection of anecdotes. He also wrote a valuable *History of Animals.* Probably lived about the middle of the 3d century.

ÆLST, EVERT VAN, a Dutch painter, famous for his dead-game and fruit pieces. Born at Delft, 1602; died 1658.

AELST, WILLIAM VAN, Dutch painter, nephew and pupil of the preceding, and an excellent painter of fruit and flowers. Visited Italy, where some of his finest works are preserved. Born at Delft, 1620; died at Amsterdam, 1679.

ÆOL'IPILE, a hollow ball of metal, to which a pipe is attached. On being filled with water, and placed on the fire, the steam issues from the tube with sufficient force to turn a wheel placed within its power. Aranca, who was an Italian mechanician of the 17th century, is supposed to be the first who applied the æolipile to useful purposes, but a somewhat similar apparatus was described by Vitruvius in the first century. In Italy a form of æolipile is used to cure smoky chimneys, by creating an upward draught.

ÆOLIS, or ÆOLIA, in *Ancient Geography*, a country of Asia Minor, settled by colonies of Æolian Greeks. The name in its limited sense was applied to the coast extending from the river Hermus to the promontory of Lectum, on the north side of the entrance to the Gulf of Adramyttium, and lying between Ionia to the S. and Troas to the N. In its wider acceptation it comprehended Troas and the coast of the Hellespont to the Propontis, where there where likewise several Æolian colonies.

ÆOLUS, was the son of Hippotes. He reigned over Æolus, the island Lipari, to the north of Sicily; and because he was the inventor of sails, and seems to have acquired a considerable knowledge of meteorology, the poets have called him the god of the wind. According to Virgil, Æ. was indebted to Juno for his royal dignity.

ÆPINUS, Franz Maria Ulrich Theodor, a distinguished electrician, who was the first to see the affinity between magnetism and electricity in its full extent, and to perceive how these may illustrate each other. He is also the inventor of the condensor of electricity and of the electropus. He published several memoirs relating to philosophical subjects, and seems to have devoted a considerable portion of his time to mechanical pursuits. Professor of physics at the Imperial Academy of Sciences, St. Petersburg. Born at Rostock, Lower Saxony, 1724; died at Dorpat, in Livonia, 1802.

ÆQUI, a people of Italy, inhabiting the valley of the Anio, who, after long hostilities, were subdued by the Romans, 302 B.C.

ÆRAR'IANS, a clan in ancient Rome who had been degraded by the censors. They were heavily taxed, could not vote in assemblies, serve in the army, nor occupy any post of honor or profit.

ÆRA'RIUM, (Lat.), among the Romans, the term applied to the place where the public money was kept, the care of which devolved upon the quæstors.

AE'RIANS, a sect of Christians, formed about 342, followers of Aerius, a presbyter, native of Pontus. They objected to the observance of Easter, Lent, and other festivals and fasts, and to the practice of offering prayer for the dead. Being exposed to persecution, they assemblied in woods and caves.

AEROE, or Arroe, an island of Denmark, in the Little Belt, lying 7½ miles S. of Funen, between Alsen and Langeland. It is of an irregular triangular shape, about 15 miles long and 8 broad at the widest points, with a hilly surface, but a fertile and well-cultivated soil. Pop. 10,200; chief town, Aeroeskjobing, on the east coast.

AESIR. See Scandinavian Mythology.

ÆSO'PUS, Claudius, a famous actor, who had the honor of instructing Cicero in oratory. He was a great epicure, and at an entertainment is said to have had a dish of singing birds which cost above £800. His son was also noted for his luxuriousness; and Horace says that he swallowed a pearl of great value dissolved in vinegar. Died worth £160,000., 60 years B.C.

Æ'TION, a Greek painter, whose picture of the nuptials of Alexander and Roxana, shown at the Olympic games, obtained for him the daughter of Proxenidas, one of the judges, in marriage, although he was quite unknown.

AETIUS, a famous general, sometimes spoken of as 'the last of the Romans,' in the reign of Valentinian III., emperor of the West. He was brought up in the emperor's guards, and after the battle of Pollentia in 403, was delivered as a hostage to Alaric, and next to the Huns. On the death of Honorius, he took the side of the usurper John, for whose service he engaged an army of Huns. He was afterwards taken into favor by Valentinian, who gave him the title of count. Being jealous of the power of Boniface, governor of Africa, he secretly advised his recall, and at the same time counselled the governor not to obey the mandate. This produced a revolt, which caused an irruption of the Vandals into that province. The treachery of Aëtius being discovered, a war ensued between him and Boniface, in which the latter was slain. Aëtius now appealed to the Huns, of whom he raised a large army, and returning, so greatly alarmed Placidia, the mother of Valentinian, that she put herself into his power. He defended the declining empire with great bravery, and compelled Attila to retire beyond the Rhine. Stabbed, 454, by Valentinian.—This crime was committed under the conviction that Aëtius entertained a design upon the throne of the emperor.

AETIUS, a bishop of Antioch, who, before entering into orders, was a physician, and remarkable for a contentious and sceptical spirit. He contended for a dissimilarity between the Father and the Son, for which he was banished by Constantius, but recalled by Julian. His followers were named Ætians. Died at Constantinople, 367.

AFANASIEF, Aleksandr Nikolaevich, a Russian scholar, distinguished for his researches into Slavonic literature and archæology, was born about 1825. He contributed many valuable articles to the serial literature of his country, but his reputation rests chiefly on two works of more permanent interest. The first was an extensive collection, in eight parts, of *Russian Popular Stories;* the other a treatise, in three volumes, on the *Poetical Views of the Old Slavonians about Nature*, completed just before the author's death, which occurred in the autumn of 1871.

A'FER, Domitius, an ancient orator, who obtained the prætorship of Rome; but being disappointed of further promotion, he became an informer against Claudia Pulchra, cousin of Agrippa, and by his abilities succeeded in gaining the favor of Tiberius. He wrote an inscription, which he affixed to a statue of Caligula, and which embodied the remark that he had been a second time consul at the age of twenty-two. This was meant for an encomium, but the emperor took it as a sarcasm, and made a violent speech in the senate against the author. A., instead of replying, supplicated pardon, saying that he feared less the power of the emperor than his eloquence, which flattery so pleased Caligula, that he raised him to the consular dignity. Born at Nismes; died at Rome, A.D. 60.

AFFIDAVIT. In the United States, judges, justices of the peace, commissioners of deeds, notaries public, and other officers have authority by law to take affidavits. All the states appoint commissioners residing in other states and give them authority to exercise this power. By recent statutes of New York affidavits to be used there may be taken in foreign countries and in other states by any person who is authorized there to exercise similar power. Judges of the higher courts in other states are also vested by most of the states with the same powers given to their commissioners. Ministers and consuls of the United States residing abroad, may take affidavits, and their consular seals sufficiently authenticate their acts. By the English law British ambassadors and consuls have similar powers.

AFFIRMATION. The use of affirmation in the United States instead of oaths is now quite general, as experience seems to have demonstrated that the force of evidence is not lessened thereby.

AFFO, Ireneo, Italian critic and historian. A Franciscan monk, and professor of Philosophy, and librarian of the Ducal Library at Parma. Author of many historical, biographical, and literary works of great value, and a volume of sonnets published under an assumed name. Born at Basseto, 1741; died there, 1797.

AFRAGO'LA, a Neapolitan town, where straw bonnets are largely made. It is six miles from Naples. Pop. 16,500.

AFRA'NIA, the inventor of the bassoon. He flourished at Ferrara in the 16th century.

AFRICA. History and Progress of Discovery.—The name Africa was given by the Carthaginians to the territory adjacent to their city, on the shores of the Mediterranean, including the basin of the river Bagradas: and to this day the district bears the name of Frikeah, or Afrikeah. Greek and Roman geographers gave the name Libya to the then Roman portion of Africa, next to Egypt. The following are the dates of the most remarkable expeditions of discovery.

	B.C.
Traditionary circumnavigation of Africa by the Phœnicians	610–594
Hanno sailed from Carthage, said to have passed the Straits of Gibraltar, and reached a point to the south of Senegal, about	500
	A.D.
Cape of Good Hope discovered by Bartholomew Diaz	1487
Vasco de Gama doubled the Cape and explored the coast	1497
An English African company formed under a patent granted by Queen Elizabeth	1581
An English expedition sent to the Gold Coast	1599
Thomson explored the Gambia, and was killed	1611
Dutch colony at the Cape founded	1598
Bruce commenced his travels	1768
An English settlement established at Sierra Leone	1787
Mungo Park's two expeditions to trace the Niger	1795–1804
Clapperton, Denham, and Oudney crossed the Great Desert	1822–1825
The brothers Lander traced the course of the Niger	1830
The great Niger expedition to found a colony in Central Africa, supported by a Parliamentary grant of £60,000, but resulting in a total failure	1841
Richardson explored the Great Sahara	1846

Livingstone explored the country north of Cape Colony and discovered Lake Ngami..... 1849
Livingstone's second expedition, in which he reached Loando, and crossed the continent to Quillimane on the east coast. He walked 11,000 miles, discovered the Victoria Falls and traced the Zambesi 1851–1856
Second expedition of Richardson, accompanied by Oberweg and Barth, the two former die..... 1852
Silva Parto, a Portuguese trader, crossed the Continent from Benguela to the mouth of the Rovuma, on the east coast. 1853
Du Chaillu visited equatorial Africa.....1856–1859
Burton and Speke discovered Lake Tanganyika..... 1858
Livingstone having engaged in another expedition, discovered Lakes Shirwa and Ayassa..... 1859
Speke and Grant discovered Lake Victoria Nyanza, supposing it to be the source of the Nile..... 1863
Du Chaillu's second expedition..... 1863
Baker discovered Lake Albert Nyanza..... 1864
Livingstone started from Zanzibar on an expedition to discover the source of the Nile... 1866
Dr. Schweinfurth's Explorations.....1868–1871
Stanley (sent out by the proprietor of the *New York Herald.*) reached Livingstone..... 1872
Livingstone died, after having discovered an immense lake district..... 1873
Lieut. Cameron surveyed the Southern portion of Lake Tanganyika, and crossed the continent on foot..... 1874
Stanley arrived at the West Coast, having traversed the continent, discovered the source, and traced the course of the Congo..... 1877
Col. Gordon in the Equatorial Regions solved several important geographical problems; assisted by two Americans, Col. Long and Col. Mason, and Purdy Bey....1874–1879
Dr. Braza's Explorations on the West Coast.....1875–1879
Serpa Pinto's journey across Africa.....1877–1879
Thompson's journey to the African Lakes.....1878–1879
Stanley's Expedition for the International Association..... 1879
Lieut. Wiseman's journey across Africa.....1880–1882

AFRICA, CHURCH OF. Christianity, from the very beginning, spread among the peoples of the entire northern seaboard, and up the valley of the Nile to Nubia, Abyssinia or Ethiopia. The churches founded in the south and west of the continent, are of modern origin. Of the North-African churches the most famous are those of Egypt and Carthage. The historian Eusebius attributes to the evangelist St. Mark the foundation of the see of Alexandria. There, as in Asia Minor, Greece, and in Rome itself, the numerous Jewish residents were among the first believers, and the most zealous propagators of the faith. During the persecutions the African churches had their illustrious martyrs and confessors, while the rigor exercised against the Christians drove many into the solitudes on both banks of the Nile, and gave rise to the colonies of recluses and monks which flourished there in the fourth century. At the beginning of this same century (306) the heresiarch Arius, a native of Libya, began to dogmatize, sapping the established belief in the divinity of Christ. The religious troubles caused by his teaching were only very partially settled by the provincial council of Alexandria in 321, and even by the general council of Nice in 325. The heresy spread all over the Roman empire, infected some of the barbarian tribes, who possessed themselves of Italy, Gaul, Spain, and Northern Africa, and disturbed the peace of Christendom for two hundred years and more. The church of Egypt produced many great and learned men, such as Clement of Alexandria, St. Athanasius, and St. Cyril. The church of Carthage early possessed Tertullian and St. Cyprian, and later St. Augustine. The first seeds of Christianity are believed to have been sowed in Ethiopia and along the Upper Nile by the officer of Queen Candace, baptized by Philip the Deacon (Acts viii, 27). Their growth seems to have been checked or entirely destroyed afterward; for St. Frumentius of Tyre, visiting the country with his uncle in 316, saw the latter murdered by the natives, was himself reduced to slavery in the court of Axum, where his saintly example won the esteem of the Abyssinians. Having been given his liberty, he returned to Alexandria, was ordained priest by St. Athanasius, and sent back as bishop of Ethiopia to be the apostle of that country. Before he died the Abyssinian church possessed eight episcopal sees. The numerous councils held by the North African church before the invasion of Mohammedanism, attest the vigorous spiritual life prevailing her faithful. Unhappily the Greek proclivity toward disputatiousness infected not only Alexandria and all Egypt, but the other provinces as well. The court of Byzantium, which undertook to regulate church doctrine and discipline as it did temporal matters, protected or proscribed alternately both the true believers and the heretics. The Arian Vandals then took possession of Africa, ruining the churches there; and then the Mohammedan wave swept the entire north shore, annihilating Christianity there. In Abyssinia, which had, like Egypt itself, become heretical, the Christian faith survived, overrun by errors and superstitions, down to the sixteenth century, when the Jesuit missionaries were called in to give it the beginning of a new life. With the conquest of Algeria by the French in 1830, dawned a new era on the extinct church of Carthage. There is, at present, an Archbishop's see at Algiers, suffragans at Oran and Constantine, and a Vicariate at Tunis; in Egypt there are two Vicars Apostolic, one Coptic, and the other Latin, with jurisdiction over Abyssinia; in Central Africa is another Vicariate Apostolic, with its seat at El Obeid in Cordofan. Passing by, on the west coast, the episcopal sees in the Canary and Cape de Verd Islands, we find a vicariate at Senegambia; a French Missionary Society evangelizing the entire coast between Sierra Leone and the Niger together with the vicariate of Benin. There is a Portuguese bishop at Angola; between the Portuguese territory and Orange River, is the vicariate of Cinibebasia; two vicariates at the Cape of Good Hope, a third at Natal. The Jesuits are in charge of the missions along the Zambesi. Then Madagascar had flourishing missions before the calamitous war with France. And in the Mauritius the bishop of Saint Louis depends immediately on the Holy See. The missions in Upper Egypt are, for the time being, blotted out by the successes of the Mahdi. But among the Gallas, the populous tribes swarming around the equatorial lakes, and along the Congo missions are being slowly but surely established. —The Christian SCHOOL OF ALEXANDRIA, sprung from the Jewish School which flourished in that city under the Ptolemies, and produced the Septuagint Version of the Old Testament, enjoyed a world-wide fame in the third century, when Pantænus, Origen, and Clement taught there.

AFRICAN METHODIST EPISCOPAL CHURCH. This religious body was organized in 1816 by colored Methodists, who had formerly belonged to the Methodist Episcopal Church. Rev. Richard Allen was elected their first bishop in 1816. Their doctrines are almost similar to those of the parent Church. They have four high academies, one university, and two weekly journals. In 1880 they reported 1418 itinerant preachers, 3168 local preachers, and 214,808 members.

AFRICAN METHODIST EPISCOPAL ZION CHURCH. A religious body formed in 1820 by a secession of African Methodists from a congregation of the Methodist Episcopal Church in New York city. Their first annual conference, in 1821, was composed of 22 preachers, and reported 1426 church members. In 1838 Rev. Christopher Rush was elected by the conference its first bishop, with the title of superintendent. Its superintendents are elected quadrennially by the general conference. Their doctrines are similar to those of the Methodist Episcopal Church. In 1880 they claimed 1500 itinerant preachers, 2500 local preachers, and 190,900 members.

AGGERHUUS', or AKERSHUUS' a province of Norway, the largest and in many respects the most important in the kingdom, having an area of 36,380 square miles. Its mines, agriculture, and commerce are considerable and valuable. (See NORWAY.) Pop. 165,000. Lat. between 58° 48′ and 62° 40′ N., long., between 7° 40′ and 12° 30′ E.

AGGREGATION, STATES OF. The three states in which matter occurs, solid, liquid, and gaseous. In the solid state, the molecules adhere so firmly that their relative positions cannot be changed without the application of force; in the liquid state, they more freely and readily act on each other; in the gaseous state, they have a tendency to separate and diffuse through a vacant space.

AGLA'OPHON. There are two Grecian painters distinguished in antiquity by this name, natives of the island of Thasos. Flourished about 500 B.C.

AG'NOETA, a sect founded about 370 by Theodosius of Cappadocia; they are said to have doubted the omniscience of God. The name is applied about 530 to the followers of Themistius of Alexandria, who held peculiar views as to the nature of Christ, maintaining that his human nature did not become omniscient by its union with his divinity. The sect was anathematized by Pope Gregory the Great.

AGNOLO, BACCIO D', a Florentine wood-engraver, which profession he abandoned for that of an architect. Whilst in Rome, pursuing his studies among the remains of antiquity, his workshop was visited by Raphael, Michael Angelo, and others, and on returning to Florence he rose into eminence, notwithstanding the ridicule and detraction which too often follow the footsteps of originality. Michael Angelo was his most powerful opponent. When he died, his son Giuliaeo directed the works he had left unfinished. Born in Florence, 1460; died 1543.

AGNO'MEN, a kind of honorary name given by the ancient Romans to a person on account of some distinguishing circumstance in his life. It was the fourth in order of the Roman names: the others being the *prænomen*, corresponding to our Christian name; the *nomen*, or name of the clan; and the *cognomen*, or name of the family; as in Publius Cornelius Scipio Africanus.

AGNOSTICS, a name applied generally to describe those who, without professing atheism, or actual denial of the possibility of the existence of God, consider that his existence is not proved, and therefore not to be accepted as a demonstrated truth.

AG'OBARD, an archbishop of Lyons, who was deprived of his dignity for deposing Louis the Meek, in the assembly of Compiègne, but was afterwards restored. He opposed image-worship, and wrote against the belief of witchcraft and the practice of duelling. His works were printed in 1666, in two vols. Born in 779; died at Saintonge, 840.

AGON'IC LINES, the imaginary lines on the earth's surface where the magnetic needle indicates a declination or deviation from the terrestrial meridian—that is, points to the true north and south.

AGOSTINO and AGNOLO (or Angelo.) DA SIENA, two brothers, architects and sculptures, who flourished in the first half of the 14th c. Della Valle and other commentators deny that they were brothers. They certainly studied together under Giovanni Pisano, and in 1317 were jointly appointed architects of their native town, for which they designed the Porta Romana, the church and convent of St. Francis, and other buildings. On the recommendation of the celebrated Giotto, who styled them the best sculptors of the time, they were chosen to execute the tomb of Guido, bishop of Arezzo, which that artist had designed. It was esteemed one of the finest artistic works of the 14th c., but unfortunately was destroyed by the French under the Duke of Anjou.

AGOSTINO, Paolo, an eminent Italian musician, born at Valerano in 1593. He studied under Nanini, and succeeded Ugolini as conductor of the Pope's orchestra in St. Peter's. His musical compositions are numerous and of great merit, an *Agnus Dei* for eight voices being specially admired. He died in 1629.

AG'REDA, Marie d', superior of the convent of the Immaculate Conception at Agreda, in Spain, who pretended to have received directions in a vision to write the life of the Virgin Mary, which she accordingly did, but the book was not published till after her death, when it was prohibited at Rome, and censured by the Sorbonne of Paris, though highly esteemed in Spain. Born 1602; died 1665.

AGRIC'OLA, Christoph Ludwig, landscape painter of Bavaria. His works are chiefly of the cabinet size. Born at Regensberg, 1667; died there, 1719.

AGRIC'OLA, George, an eminent metallurgist and physician, who wrote a number of books on metals, &c. Born at Glauchy, Saxony, 1494; died at Chemnitz, 1555.

AGRIC'OLA, Johann, German musician, pupil of Sebastian Bach, composed operas and choral music, and wrote on musical subjects. Born at Dobitschen, 1720; died, 1774.

AGRICOLA, Michael, one of the early Swedish reformers, and translator of the New Testament into Finnish. Bishop of Abo, 1544. Born in Nyland, Sweden, about beginning of 16th c.; died at Kyroniem, 1557.

AGRICULT'URAL EDUCATION. As early as 1844 professorships of Agriculture were established in the larger colleges. In 1855 the first American agricultural college was founded at Cleveland, Ohio; in 1857, another at Lansing, Mich. Pennsylvania and Iowa established similar institutions in 1859. In 1862, Congress granted from the public domain to each state 30,000 acres for each Senator and Representative in Congress, 'in order to promote the liberal and practical education of the industrial classes.' This was given to regular colleges in several states, and employed to endow an agricultural department. In other states it was used to found agricultural colleges or to endow those which were already in existence. In 1880 there were 46 institutions aided by the national land grant, in 30 of which agricultural instruction was given by about 100 professors to 1000 students. Agricultural periodicals are published in nearly all parts of the country.

AGRICULT'URE. The principal agricultural products of the United States are corn, wheat, hay, rye, oats, barley, potatoes, cotton, tobacco, hemp, and sugar. The largest quantities of wheat are raised in Minnesota, Iowa, Illinois, Indiana, California, and Ohio; while great quantities of corn are grown in Missouri, Illinois, Indiana, and Ohio. Cotton is the great staple of the Southern States, where it has been grown extensively since 1793, when the cotton-gin was invented. Tobacco is raised principally in Virginia, North Carolina, Kentucky, and Missouri, though considerable tobacco is also grown in Wisconsin and Connecticut.

The sugar-cane is a tropical plant, and its cultivation is almost entirely confined to the Mississippi delta in Louisiana. Potatoes are cultivated largely in New York, Pennsylvania, Ohio, Michigan, Illinois, and Wisconsin. The great hay crops come from the Northern and Western States. Rice, flax, hops, buckwheat are also cultivated in considerable quantities. Apples, pears, and plums flourish in the Northern States; melons and grapes in the Middle States; and pine-apples, figs, pomegranates, almonds and oranges in the Southern States. The total area of farms in the United States in 1880 was 539,309,179 valued at $10,197,096,776. The number of persons employed in agricultural pursuits according to the census of 1870 and 1880 was as follows:

	1870.	1880.
Agricultural laborers	2,885,996	3,323,876
Apiarists	136	1,016
Dairymen and dairywomen	3,550	8,948
Farm and plantation overseers	3,609	3,106
Farmers and planters	2,977,711	4,225,945
Florists	1,085	4,550
Gardeners, nursery and vine growers	32,547	51,482
Stock-drovers	1,085	3,449
Stock-herders	5,590	24,098
Stock-raisers	6,588	16,528
Turpentine farmers and laborers	2,478	7,450
Others in agriculture	....	45
Total engaged in agriculture	5,920,375	7,670,493

AGRICULTURE, Department of, was established by Congress in 1862, for the purpose of collecting statistics, introducing from foreign lands seeds of new plants, testing their adaptability to our soil and climate, and disseminating information to the farmers.

AGRIO'NIA, among the ancients, an annual festival in honor of Bacchus, which was usually celebrated during the night at Orchomenus, Bœtia, exclusively by women and priests. When first established, a virgin was killed as a sacrifice; but that practice was afterwards abandoned. According to Plutarch, it was so named on account of the rudeness and intemperance which generally attended its celebration.

AGUA, Volcano de, a huge mountain in Central America, 25 miles S.W. of Guatemala. It is of a conical shape, and rises to a height of 15,000 feet above the level of the sea. At the summit there is a crater, measuring about 140 yards by 120, from which stones and torrents of boiling water are occasionally discharged. In close proximity to Agua are the volcanoes of Pacaya, on the S. E., and Fuego on the W., and the three present together a scene of great magnificence.

AGUILAR, Grace (1816—47), an admired English authoress, was the daughter of a Jewish merchant in London. She was educated wholly by her parents, and commenced her literary career at an early age. Her works, written in a pleasing, elegant, and impressive style, consist chiefly of religious fictions, such as *The Martyr* and *Home Influence*. She also wrote, in defence of her faith and its professors, *The Spirit of Judaism*, and other works. Her services in the latter direction were acknowledged gratefully by the 'women of Israel,' in a testimonial which they presented shortly before her death. In 1835 she had a severe attack of measles, from the effects of which her constitution never wholly recovered. After a long struggle with increasing bodily infirmities, she died at Frankfort, on her way to Schwalbach, in the autumn of 1847.

A'GUIRRA, Josef Saenz d', a Spanish Benedictine monk, who received a cardinalship from Innocent XI. He compiled a collection of the councils of Spain, in six vols. folio, and wrote some theological pieces and commentaries on the Ethics of Aristotle. Born at Logrogno, 1630; died at Rome, 1699.

AHANTA, a district on the Gold Coast of Africa, extending from the Ancobra to the Chaddah.

A'HAZ, king of Judah, who, at the beginning of his reign, defeated Rezin, king of Syria, according to the promise of Isaiah. Notwithstanding this, he abandoned the worship of God, fell into idolatrous practices, and became so impious that his body was not permitted to be buried in the royal sepulchres.—Reigned 741—725 B.C.

AHAZI'AH, king of Israel. There are two kings of this name mentioned in Scripture: the first was the son of Ahab, and the other king of Judah. This last was slain by Jehu, 886 B.C.

AHIME'LECH, 'brother of the king,' the son of Ahitub, and the successor of Ahiah in the priestship of the time of David.

AHITH'OPHEL, 'brother of foolishness,' a native of Gillo, and the friend of David until the rebellion of Absalom, whose cause he espoused, but on foreseeing the probable issue of its failure, hanged himself to avert the certainty of a more ignominious death. This is the first suicide (B.C. 1023.) recorded in sacred history.

AH'MED SHAH EL AB'DALY, the founder of the kingdom of Cabul and Candahar. He was a great warrior, and broke the power of the Mahrattas, by defeating them in the battle of Panipat, on the 7th January, 1761. In the latter part of his life he was engaged in continual warfare with the Sikhs, but ended his days the sovereign of an empire which he had conquered, and which extended from Sirhind on the east to Herat on the west, and from the mouths of the Indus and the Arabian Sea on the south to the banks of the Oxus and Cashmere on the north.

AIGUILLON, DUKE D', member of Foreign Affairs under Louis XV. Distinguished by his wit and his political incapacity. Obtained promotion by favor of the mistresses of the king. Born 1720; died in banishment, 1798.

AI, a city standing in the east of Bethel, noted as the scene of the defeat of Joshua, and his subsequent victory.—Josh. vii. 2–5, viii. 1–29.

AIKEN, the county-seat of Aiken county, South Carolina, situated on the South Carolina Railroad, 120 miles N.W. from Charleston. Aiken has become a favorite winter resort for northern invalids, especially those suffering from pulmonary complaints. This is mainly on account of the sandy and porous soil and almost perfect system of natural drainage, which keeps the atmosphere exceedingly dry. It has several large hotels, seven churches, several private and public schools, a lyceum-hall, and a weekly newspaper. Pop. 1817.

AIKIN, ARTHUR, eldest son of Dr. John A., inherited much of his father's literary talent, but chiefly applied himself to scientific pursuits. He was for several years editor of the *Annual Review*, and in 1814 contributed to science a *Manual of Mineralogy*. He also produced a *Dictionary of Arts and Manufactures*, and another of *Chemistry and Mineralogy*. Besides being the author of the above, Mr. Aikin was a large contributor to scientific journals, and was, for several years, the resident secretary to the Society of Arts. Born 1784; died in London, 1854.

AI'KIN, JOHN, M.D., an eminent physician, but more distinguished as a popular author. He was the only son of the Rev. John Aikin, D.D., for many years a tutor of divinity at a dissenting academy at Warrington, Lancashire. After finishing his studies at the university of Edinburgh, he became a pupil of Dr. William Hunter, and first settled as a surgeon at Chester, afterwards at Warrington, and ultimately he succeeded in establishing himself in the metropolis. Here, with his sister, Mrs. Barbauld, he pursued literature with considerable success, producing several works, which aimed at making sciencepopular amongst those classes who, without such works, would, in all probability, have never entered upon scientific studies of any kind. He compiled a Biographical Dictionary, and his *Evenings at Home* still commands a wide reputation, and is decidedly the most useful of all Dr. Aikin's works. To this, which extended to six volumes, Mrs. Barbauld contributed, but not to a geater extent than about half a volume. His *Natural History of the Year* is another work which has enjoyed considerable popularity. Born at Warrington, 1747; died at Stoke Newington, 1822.

AIKIN, LUCY, a daughter of the preceding, historian and biographer. Her best known works are *Memoirs of the Courts of Queen Elizabeth, James I., and Charles I.*, and biographies of Addison and of her father. For the last forty years of her life she resided at Hampstead, devoted to literary pursuits. Born at Warrington, 1781; died at Hampstead, 1864.

AIK'MAN, WILLIAM, a Scotch painter, was the only son of William Aikman, Esq., of Cairney, Aberdeenshire, advocate, by Margaret, sister of Sir John Clerk, of Pennycnik, bart. He was intended for the profession of the law, but his passion for the fine arts was so great that he determined to cultivate it. After studying three years in Italy, he visited Turkey; thence he went to Rome, whence, after a short stay, he went back to England, and found a patron in the Duke of Argyle. He excelled most in portrait-painting. Born at Cairney, 1682; died in London, 1731.

AI'LLY, PIERRE D', a bishop of Cambray, and a zealous champion of the Pope. He presided at the council of Constance, where he condemned John Huss to the stake. Nicknamed, 'The Hammer of Heretics.' Pope John XXIII. created him a cardinal. Born at Compiègne, 1350; died 1420.

AILRED, or ALURED, English ecclesiastical historian, abbot and saint. Monk, and afterwards abbot of the Cistercian abbey of Rievaulx, Yorkshire. He wrote a *Genealogy of English Kings*, *The Life of Edward the Confessor*, and many other works. Born about 1109, at Hexham, Northumberland; died at Rievaulx, 1166; canonized, 1191.

AIMARD, GUSTAVE, novelist, was born about 1818, embarked as a cabin-boy at an early age for America, and lived nearly ten years amongst savage tribes. He afterwards traveled through Spain, Turkey, and the Caucasus, being often mixed up in conspiracies and wars. In 1848 he went to Paris, and was appointed an officer in the Garde Mobile. After various other travels A. resolved to publish his adventures in the form of romances. *Les Trappeurs de l'Arkansas* (one of his most popular works), *Le Grand Chef des Aucas*, and *Le Chercheur de Pistes* appeared in 1858; *Le Cœur loyal*, *Les Francs-Tireurs*, and *Les Rôdeurs de Frontières* in 1861; *La Main-Ferme* and *Valentin-Guillois* in 1862; *Les Aventuriers* and *Les Nuits Mexicaines* in 1863; *L'Araucan*, *Les Chasseurs d'Abeilles*, *Les Fils de la Tortue*, &c., in 1864. Several of his works have appeared in the *Moniteur*. Under a pseudonym he published, in 1847, a work entitled, *Un Coin du Rideau*. He died April 30, 1883.

AINS'WORTH, HENRY, an ingenious and learned commentator on the Bible, who from a follower of the founder of the Brownists became an Independent, and proceeded to Amsterdam, where he grew so popular as to gather a congregation for himself. Quarreling with some of the members of his church, he left them and went to Ireland for a time, but once more returned to Amsterdam. A. was well versed in the Hebrew, and his commentary on the Pentateuch, the Psalms, and the Song of Songs, is both curious and valuable. Born near Blackburn, 1560; died at Amsterdam, 1623.

AIR'AY, HENRY, an English divine, who, from a fellow of Queen's College, Oxford, was in 1600, elected provost; and in 1606 served the office of vice-chancellor. He was a cultivated Puritan, and wrote a few theological pieces. Born at Kentmere, Westmoreland, 1560; died 1616.

AI'TON WILLIAM, a Scotch gardener, who going to London to seek employment, obtained it, and became superintendent of the botanical garden at Kew, which he greatly improved, and in 1783 was appointed to manage also the pleasure and kitchen gardens. In 1788 he published his *Hortus Kewensis*. Born near Hamilton, Lanark, 1731; died 1793.

AIT'ZEMA, LEON VAN, a resident represenative of the Hanse Towns at the Hague, who became eminent as an historian. His *History of the United Provinces* is written in Dutch, and extends to fifteen volumes. It has been continued down to 1692 and published. Born at Doccum, Friesland, 1600; died 1669.

AIZA'NI, the modern Tchafter Hissar, a city of Asia Minor, about nine hours' journey from Kutahia. Little is known of its history; but from the extensive remains of which it is composed, it was evidently a place of note. The ruins of a temple dedicated to Jupiter, built on an elevated platform, cut out of a hill side, are very extensive. The columns were single blocks of white marble of great size. Remains of a theater, stadium, and gymnasium have also been discovered.

AJEHO, also called ALCHUKU, a city of Manchuria, in the Chinese empire. It is a busy town, inhabited by Chinese emigrants, who cultivate grain and opium in the surrounding district. Pop. about 40,000.

AK'ABAH, GULF OF, the smaller of the two arms into which the Red Sea is divided at its northern extremity, and about 100 miles long and 12 wide. It is generally about 200 fathoms deep, but its navigation is very unsafe, especially during the prevalence of north winds. The Straits of Tiran, less than half a mile wide, connect it with the Red Sea, and the small island of Tiran lies at its entrance.

AK'ERBLAD, JAN DAVID, a learned Swede, who, being appointed secretary to the Swedish embassy at Constantinople, had opportunity of pursuing researches into Runic, Phœnician, and Egyptian literature. Afterwards Swedish *chargé d'affaires* in Paris. He was not only able to read but to converse in several European and Oriental languages. Born 1760; died at Rome, 1819.

AKERS, BENJAMIN PAUL, American sculptor, born at Sacarappa, Me., July 10, 1825; died Philadelphia, May 21, 1861. In 1843 he went to Portland, where he worked in a printing-office; but seeing Chantrey's statue of Washington in the State House, Boston, he decided to become a sculptor. In 1849, he opened a studio in Portland, and modelled busts of Longfellow, and others. In 1851–52, he visited Italy, and, on returning to Portland, modelled a statue of 'Benjamin in Egypt.' He also made busts of Judge McLean, Edward Everett, Gerrit Smith, and Sam Houston. In 1855, he revisited Europe, residing two years in Rome, where he produced his 'Una and the Lion,' a statue of 'St. Elizabeth of Hungary,' the 'Dead Pearl-Diver,' and an ideal head of Milton. In 1859, he revisited Rome, where he modelled a statue of Commodore M. C. Perry for the Central Park of New York. After returning to America in 1860, he established himself first in Portland, and then in Philadelphia, where he died of consumption. He executed about 40 portrait busts and statutes, besides some marble copies from the antique. His wife, Elizabeth Akers, contributed to juvenile literature under the pseudonym of 'Florence Percy.' A volume of her poems was published in Boston in 1866.

AKI'BA, a Jewish rabbi, who was at first a shepherd, but at the age of forty devoted himself to learning, and became a teacher. He was flayed alive by the Romans, at the age, it is said, of 120 years. He is one of the ten Jewish martyrs named in a penitential prayer used once a year in the synagogues.—A. was one of the first compilers of the cabalistic traditions of the Jews. He died 135 A.D.

AKOLA, the chief town of the above district. There are an English church and school, and barracks for a detachment of troops. Pop. 12,500. Lat. 20° 6′ N., long. 76° 2′ E.

ALABAMA, one of the Southern States of the North American Union, lies betwen 30° 13′ and 35° N. lat., and between 85° and 88° 35′ W. long. It is bounded by Florida and the Gulf of Mexico on the S., Mississippi on the W., Tennessee on the N., and Georgia on the E. Its length is 330 miles, average breadth 154, and area 50,722 square miles. The Alleghany range stretches into the northern portion of the state, but the elevation is nowhere great; the center is also hiliy and broken; on the south, however, for nearly 60 miles inland, the country is very flat, and raised but little above the sea-level. The Alabama is the chief river of the state. It is formed by the junction of the Coosa and the Talapoosa, which unite about 10 miles above the city of Montgomery. Forty-five miles above Mobile the Alabama is joined by the Tombigbee, and from that point is known as the Mobile River. It is navigable from Mobile to Wetumpka, on the Coosa, some 460 miles. The Tombigbee is navigable to Columbus, and the Black Warrior, one of its chief tributaries, to Tuscaloosa. The Tennessee flows through the northern portion of the state, and the Chattahoochee forms part of its eastern boundary. The climate of Alabama is semi-tropical. The temperature ranges from 82° to 18° Fahr. in winter, and in summer from 105° to 60°; the mean temperature for the year being a little over 60°. The average severity of the winter months is considered to have increased—a result due, it is said, mainly to the felling of the forests, which gives more unrestricted scope to the cold north-west winds from the Rocky Mountains. The uplands are healthy, but the inhabitants of the low-lying lands are subject to attacks of intermittent, bilious, and congestive fevers. The stratified rocks of the state belong to the silurian, carboniferous, cretaceous, and tertiary systems. The silurian strata throw up numerous mineral springs along the line of the anti-clinal axes, some of which, such as Blount Springs and the St. Clair Springs, are much resorted to for their health-giving properties. There are also several noted springs arising from the tertiary beds, such as those of Tallahatta and Bladon. Alabama possesses extensive coal deposits. Mr. Tait, the state commissioner for the industrial resources of Alabama, considers that the area of the coal-lands in the state amounts to 5500 square miles, of which 5000 belong to the Warrior, and the remaining 500 to the Cahawba and Coosa fields. Assuming that only one-half of this area can be worked to advantage, Mr. Tait further estimates the aggregate possible yield at 52,250,000,000 tons. The product of the mines was, in 1869, 11,000 tons; in 1876, 100,000 tons; in 1877, 175,000 tons; in 1878, 200,000 tons; in 1879, 250,000 tons. In regard to iron, the natural wealth of Alabama is also very great. Mr. Tait asserts that a ridge of iron, of an average thickness of 15 feet, runs parallel to one of the principal railway lines for a distance of 100 miles; and in other parts of the country there are large deposits of ore, both red hematite and blackband. The ores of Alabama are said to yield from 10 to 20 per cent. more iron than those of Britain. Granite, marble, flagstones, roofing-slate, lime, and porcelain clay, are among the other mineral products. A little gold has also been found in the state.

The soil of Alabama varies greatly in character, but is for the most part productive to a greater or lesser extent, except in the south, where there are considerable tracts of sandy, barren, and almost worthless soil. The forests are mainly in the central and northern parts of the state, and embrace oaks, poplars, cedars, chestnuts, pines, hickories, mulberries, elms, and cypresses. The principal crops are corn and cotton, and both grow abundantly. The average value per acre of cleared land, is $6.53. There were raised in 1880, 21,162,000 bushels of corn, 946,620 bushels of wheat, and 699,654 bales of cotton. The principal other crops are sweet potatoes, sugar cane and rice, and the semi-tropical fruits are produced in large quantities. The total number of farms in 1880 was 135,864 with 6,375,706 acres of improved land. The state contained at that time 113,950 horses; 121,081 mules and asses; 75,534 working oxen; 271,443 milch cows; and 404,213 other cattle. Among the important industries is the manufacture of cotton goods, there being in operation in 1880, 1,060 looms, and 55,072 spindles, consuming 14,887 bales, and employing 1,600 persons. In 1880, 77,190 tons of pig iron were made. The amount produced in 1872 was 12,512 tons; in 1874, 32,863 tons; in 1877, 41,241 tons; and in 1879, 49,841 tons. There are fifteen furnaces in the state. In 1880 there were in all 253,840 manufacturing establishments with a total capital of $2,790,223,506, which employed 2,738,930 hands. Mobile, the chief mercantile city of the state, is connected with the general network of railways of the United States. A line runs from the city through Montgomery and on to Atlanta in Georgia; another runs from Mobile to Meridian in Mississippi; a line crosses the state from Meridian through Cahawba to Montgomery; a loop-line runs from Montgomery to Troy, and proceeding round by Columbus in Georgia, rejoins the main line at Opelika; from Selma a line proceeds north-easterly, following the valley of the Coosa, and passing through Georgia and Tennessee; and another traverses the valley of the Tennessee, from which a branch strikes off to the north to join the Tennessee group of railways at Nashville. A line also connects Mobile with New Orleans. The part of the line from Mobile to Montgomery between Mobile and Tensas was completed under considerable engineering difficulties. It crosses the Mobile River by a swing drawbridge 1000 feet in length, with a draw of 260 feet; while the Tensas River bridge is built on cylindrical piers, each span measuring 152 feet, and its total length 2084 feet. There are at present 1854 miles of railway and 2136 of telegraph lines in operation in Alabama.

Alabama is divided into 66 counties of which the following is an alphabetical list with the respective population of each county: Autauga, (13,113); Baldwin, (8,446); Barbour, (34,026); Bibb, (9,487); Blount, (15,526); Bullock, (29,079); Butler, (19,685); Calhoun, (19,591); Chambers, (23,440); Cherokee, (19,109); Chilton, (10,806); Choctaw, (15,731); Clarke, (17,806); Clay, (12,938); Cleburne, (10,976); Coffee, (8,061); Colbert, (16,154); Conecuh, (12,606); Coosa, (15,132); Covington, (5,650); Crenshaw, (11,755); Cullman, (6,355); Dale, (12,677); Dallas, (48,437); De Kalb, (12,675); Elmore, (17,674); Escambia, (5,719); Etowah, (15,398); Fayette, (10,135); Franklin, (9,155); Geneva, (4,342); Greene, (21,931); Hale, (26,553); Henry, (18,760); Jackson, (25,114); Jefferson, (23,272); Lamar, (12,142); Lauderdale, (21,035); Lawrence, (21,391); Lee, (27,373); Limestone, (21,600); Lowndes, (31,178); Macon, (17,373); Madison, (37,625); Marengo, (30,889); Marion, (9,364); Marshall, (14,585); Mobile, (48,602); Monroe, (17,091); Montgomery, (52 392); Morgan, (16,428); Perry, (30,736); Pickens, (21,479); Pike, (20,640); Randolph, (16,575); Russell, (24,840); Shelby, (17,236); St. Clair, (14,463); Sumter, (2[illegible],728); Talladega, (23,360); Tallapoosa, (23,400); Tuscaloosa, (24,559); Walker, (9,323); Washington, (4,538) Wilcox, (31,832); Winston, (4,253). The city of Montgomery, on the Alabama R., is the capital of the state. The principal cities are Mobile (pop. 29,132); Montgomery, (pop. 16,714); Selma (pop. 7529); Huntsville (pop.4977); Enfaula, (pop. 3886); Greenville, (pop. 2471); Marion; Opelika; Florence; Talladega; Birmingham; Greensboro; Tuscaloosa; Demopolis; Union Springs; Tuscumbia, Wetumpka; Troy; and Cullman.

There is an insane hospital in Tuscaloosa, opened in 1861. It has accommodations for at least 350 persons. The institution for the deaf and dumb at Talladega is also in successful operation, and at Mobile there is an asylum for the blind. The State Penitentiary is at Wetumpka. The constitution provides that free schools shall be maintained in every district for the education of all children between the ages of seven and twenty-one years, but it is forbidden to unite white and colored children in one school, except by the unanimous consent of their parents and guardians. The school fund consists of the sixteenth section land grant, a poll tax of $1.50 per head, and special appropriations made annually by the legislature. The school population is as follows: White, 214,279; colored, 155,168; enrolled, white, 86,485; colored, 54,745. There are 1700 school districts, and 2,696 white and 1,423 colored schools, with 2722 white and 1423 colored teachers. The university of Alabama, at Tuscaloosa, founded in 1831, has an endowment of $300,000. There is a normal school for white teachers at Florence, and two for colored teachers and students at Marion and Huntsville. The state agricultural and mechanical college at Auburn has 7 professors and a large number of students. It has a college farm of 100 acres, and the income from the fund of congressional land scrip is $20,000 per annum. There are 129 periodicals in the state, of which 7 are dailies and 111 are published weekly.

Alabama returns 8 members to Congress. The state government is vested in a governor, Senate, and House of Representatives. The Senate consists of 33 members elected for four years, one half retiring every two years. The House of Representatives consists of not more than 100 members, elected for two years, and apportioned among the counties according to population, each county, however, being entitled to at least one representative. The pay of members of both houses is fixed at $4 a day with an allowance of 10 cents for each mile of necessary travel. The sessions are limited to fifty days. The governor, lieutenant-governor, secretary of state, treasurer attorney-general and superintendent of education are chosen for two years by the electors of the state. The sheriff in each county is elected for four years. The Auditor is chosen for one year. The elections take place on the Tuesday after the first Monday in November. Senators must be at least 27 years old; but any elector is eligible as representative. The constitution provides, that all male residents of the state, 21 years old, born in the United States or naturalized, who have resided in the

state six months preceding an election, shall be citizens of Alabama. Temporary absence does not cause a forfeiture of citizenship.

The Supreme Court consists of a Chief Justice and associate judges, and has appellate jurisdiction only. It meets twice a year at the seat of government. The state is divided into circuits of not less than three or more than eight counties. A judge is chosen for each circuit, who shall, after his election, reside therein. Circuit Courts are held twice a year in each county. The Court of Chancery is composed of four Chancellors. The judges of the Supreme Court receive a salary of $3,000; those of the Circuit Courts and the Chancellors $2,250. All the judges of these courts and the Chancellors are chosen for terms of 6 years, during which they cannot hold non-judicical offices of profit or trust under the state or the United States. The clerk of the Supreme Court is appointed by the judges. The attorney-general resides at the seat of government, and a solicitor is appointed for each county.

Alabama was first penetrated by the Spaniards in quest of gold in 1541, under the celebrated leader De Soto. The natives defended themselves stubbornly, and in their defence inflicted and sustained very severe losses. The present site of Mobile was first occupied by the French in 1711. In 1763 the French possessions east of the Mississippi, including Alabama, were ceded to England. Alabama was originally included in Georgia, but in 1802 became part of the territory of Mississippi. In 1813 the Creek Indians made a desperate effort to check the encroachments of the Anglo-Saxons, but were eventually crushed in the battle of Horse-Shoe Bend by Generel Jackson, who compelled them to surrender three-fourths of their territory. In 1819 Alabama was admitted into the Union as an independent member of the confederation. It seceded in the year 1861, but since the close of the war has been again admitted into the Union. Reconstruction measures were commenced in April, 1865, by the nomination of a provisional governor, and a convention held the same year declared the ordinance of secession and the State war debt null and void, and passed an ordinance against slavery. In 1867, Alabama became a part of the Third Military District under the command of Major-Gen. Pope; in February, 1868, a new constitution was adopted; the fourteenth amendment was ratified in June, and on July 14, the State was turned over to the civil authorities, its representatives having already been admitted to Congress. The fifteenth amendment was ratified in 1870, and the present constitution was adopted in 1875. Alabama has been a democratic state from the time of Jackson down to 1880, supporting Jackson twice, Van Buren twice, and voting for Polk, Cass, Pierce, Buchanan and Breckenridge. In 1864 there was no election, but in 1868 Gen. Grant had a majority of 4,278, and in 1872, 18,828. In 1876, Samuel J. Tilden's majority was 33,682 votes, and in 1880, Gen. Hancock received 35,000 votes.

At the census of 1880 the total population of Alabama was 1,262,794; males, 622,890; females, 639,904; native, 1,253,121; foreign, 9,673; colored, 600,103, including 4 Chinese, and 213 Indians. The census of 1870 showed the following results:—Total population of Alabama, 996,992; colored, 475,510; with 98 Indians. Of these, 987,030 were native born, and 9962 foreign. In 1860 the population was 964,201, of whom 526,271 were whites and 437,770 (435,080 slaves) were colored; in 1820 (the year after Alabama had been admitted into the Union) the numbers were—total, 127,901; whites, 85,451; colored, 42,450 (41,879 slaves). Of the total population in 1870, 488,738 were males (255,023 whites, 233,677 colored, 38 Indians) and 508,254 females (respectively, 266,361, 241,833,060). Amount of State debt, October 1, 1883: funded, $9,164,600; unfunded, $2,999,423; interest at 3 to 6 per cent. The State adjusted its debt in 1876 by issuing 30 year bonds bearing 2 per cent. interest until 1881, then 3 per cent. until 1886, then 4 per cent. until 1896, and then 5 per cent. for the last 10 years, till 1906, thus retiring the old bonds for their face without any allowance for past due coupons. State receipts for year ending October 1, 1883, $1,129,976.11. State expenditures for year ending October 1, 1883, $1,112,148.62. Amount raised by taxation same year, $906,807.54. Amount of taxable property as assessed: real, $91,740,536; personal, $64,285,883. Rate of state tax, 65 cents on the $100, besides the poll tax of $1.50 levied on males from 21 to 45, for the use of the school fund.

ALABAMA CLAIMS. The lengthy negotiations were completed by the treaty of Washington, of which Article I. read as follows: 'Now, in order to remove and adjust all complaints and claims on the part of the U. S., and to provide for the speedy settlement of such claims, the high contracting parties agree that all the said claims growing out of acts committed by the aforesaid vessels, and generally known as the Alabama claims, shall be referred to a tribunal of arbitration,' &c. In a correspondence between Secretary Fish and Sir Edward Thornton, the British minister to the U. S., in Jan., 1871, Mr. Fish wrote, Jan. 30th, that 'the removal of the differences which arose during the rebellion, and which have existed since, growing out of the acts committed by the several vessels which have given rise to the claims generically known as the Alabama claims, will also be essential to the restoration of cordial relations.' Sir Edward Thornton acceded to this request, and a joint high commission was agreed upon to negotiate the treaty. The high commission consisted, on the part of the U. S., of Hamilton Fish, the secretary of state, Robert C. Schenck, the American minister to Great Britain, Samuel Nelson, one of the justices of the Supreme Court, Ebenezer R. Hoar, and George H. Williams; and on the part of Great Britain, of Earl de Grey and Ripon, president of the queen's council, Sir Stafford Northcote, M.P., Sir Edward Thornton, Sir John Macdonald, and Professor Montague Bernard. They finished the treaty of Washington on the 8th May, 1871. In the deliberations the commissioners of the U. S. claimed compensation for 'direct losses' in the destruction of vessels and cargoes, and in national expenditure in the pursuit of the Confederate cruisers, and for 'indirect injury' in the transfer of American shipping to the British flag, in the enhanced rates of insurance, in the prolongation of the war, and in the addition to the cost of the war; they insisted that Great Britain should pay a round sum, to be agreed upon, for all these claims. The British commissioners proposed arbitration. The American commissioners declined to agree to arbitration 'unless the principles which should govern the arbitrators were first agreed upon.' Finally, however, arbitration was adopted, and the rules which should govern the arbitrators were agreed upon. Articles I. to XI. of the treaty refer to the Alabama claims. Art. I. describes the matters submitted for decision; the others describe the constitution of the tribunal, its procedure, and the form of its decision. Art. VII. contains the following three rules:

First. That a neutral government is bound, first, to use due diligence to prevent the fitting out, arming, or equipping, within its jurisdiction, of any vessel which it has reason to believe is intended to cruise or carry on war against a power with which it is at peace; and also to use like diligence to prevent the departure from its jurisdiction of any vessel intended to cruise or carry on war as above, such vessel having been specially adapted in whole or in part within such jurisdiction to warlike use. *Secondly.* Not to permit or suffer either belligerent to make use of its ports or waters as the base of naval operations against the other, or for the purpose of the renewal or augmentation of military supplies or arms, or the recruitment of men. *Thirdly.* To exercise due diligence in its own ports or waters, and as to all persons within its jurisdiction, to prevent any violation of the foregoing obligations and duties; it being a condition of this undertaking that these obligations should in future be held to be binding internationally between the two countries. The tribunal, in making their award, stated, 'Due diligence should be exercised by neutral governments in exact proportion to the risks to which either one of the belligerents may be exposed by failure to fulfil the obligations of neutrality on their part. The government of Great Britain cannot justify itself for its failure in due diligence on the plea of the insufficiency of the legal means of action which it possessed. The claim of the U. S. for the national cost of pursuing the Confederate cruisers cannot be distinguished from the general expenses of the war, and is therefore an indirect loss which cannot be allowed. Prospective injuries to shippers and ship-owners, such as

loss of future profits, are equally uncertain and indirect. All double claims for the same losses are rejected, but interest is allowed.' The tribunal awarded, for actual losses of ships and cargoes and interest, the sum of $15,500,000, but denied all claims of the U. S. for indirect and national losses, confining its judgment to the compensation of American private citizens for losses of ships, cargoes, freight, and wages.

A'LAIN DE LILLE', surnamed the Universal Doctor, and a divine of great reputation in the university of Paris. Born 1114; died about 1203.

ALAMO, a fort in Bexar county, Texas, near San Antonio, on the left bank of the San Antonio river, celebrated in connection with the Texan war of independence. The fort was about an acre in extent, surrounded by a wall 8 or 10 feet high and 3 feet thick. Gen. Sam Houston had caused San Antonio to be dismantled, upon which Santa Anna with a large detachment of his army took possession of Fort A., February 23, 1836. The Texans, consisting of 140 men, commanded by Col. William Barrett Travis, retired into the fort, while the Mexicans, 4,000 strong, erected batteries on both sides of the river, and bombarded the fort for 24 hours. Several assaults were made, but each time the Mexicans were repulsed with loss, the Texan sharp-shooters standing on the ramparts being able to kill a great number of the enemy. Col. Travis sent couriers to San Felipe asking for assistance, but only 32 men succeeded in reaching the garrison. On the 6th of March an attack was made by the whole Mexican force, but they were twice repulsed with severe loss. After the Texans were no longer able to load, they clubbed their rifles and fought with great bravery until they were all cut down but six, who were subsequently put to death by the Mexicans by order of Santa Anna. Among the 6 were Col. Crockett, Col. Bowie, and Major Evans. The Mexicans lost 1,600 men. Eight weeks after the massacre of the A. occurred the battle of San Jacinto, causing the defeat of the whole Mexican army, and the capture of Santa Anna with his generals. At this battle, the war-cry of 'Remember the Alamo!' inspired the Texan troops to fight like tigers.

ALAN, ALLEN, or ALLEYN, William, was educated at Oriel College, Oxford, and in 1550 became one of its fellows. In 1556, he was chosen principal of St. Mary's Hall, and two years afterwards was made canon of York; but on the accession of Elizabeth he went to Louvain, and was appointed head of the English college. Here he wrote, in defence of the Romish church, some treatises, which raised his reputation as a controversialist to such a degree, that he obtained several valuable preferments. In his own country, however, he was considered a traitor, and a man was hanged for bringing over from the continent some of his books. In 1586, he published a defence of the Pope's bull for excommunicating Queen Elizabeth, to which he added an exhortation to her subjects to revolt against her in favor of the Spaniards, maintaining that the heresy of a sovereign absolved subjects from the allegiance. In 1587, he was made a cardinal, and in 1589 archbishop of Mechlin. He founded the college for English Catholics at Douay. Born at Rossall, in Lancashire, in 1532; died at Rome in 1594.

ALANI, a number of nomadic tribes of eastern origin, who spread themselves over Europe during the decline of the Roman empire. The name was probably at first confined to one tribe of Tatar race, whose original seat was on the northern shores of the Caspian Sea, and was afterwards, as the power of that race extended, applied to other tribes. It is supposed that their first encounter with the Romans was during the Mithridatic war, when Pompey led an expedition into the Caucasus. Isolated statements in contemporary writers show that the Alani were frequently in conflict with the Roman power. In March 276 A.D. they received a decisive check in an attempt to make their way eastward into Persia, being defeated by the emperor Tacitus, who forced them to recross the Phasis. The most complete account of the Alani is to be found in the pages of Ammianus Marcellinus (lib. xxxi.), who describes their manners and customs at considerable length. From him, too, we learn of the advance of the Huns, who signally defeated the Alani in a battle fought on the banks of the Tanais in 375. The race thereupon divided, some retiring to the east, while the great majority joined their conquerors in an invasion of the kingdom of the Goths. Associated with the Vandals and Suevi, they left the settlements they had in Pannonia and entered Gaul in 406, whence three years later they crossed the Pyrenees into Spain, and founded a settlement in Lusitania and Bœtica, where they remained in peace for some years. In 418, however, they were attacked and defeated by Wallia, king of the Visigoths, with whom they had quarrelled. Their king, Ataces, was slain in the battle, and they became subject to Gunderic, king of the Vandals, their national independence being lost. Those of the Alani who had remained in Gaul when the others invaded Spain, settled near Valence and Orleans. Though serving under Theodoric, they sympathized with Attila and the Huns, and by deserting at Chalons (451), all but changed the victory of the Romans into a defeat. Soon afterwards their separate national existence in Gaul was merged in that of the Visigoths. The small portion of the Alani that had remained in their original seat in the Caucasus are frequently noticed in history down to the middle ages. In 572, they were allied with the Armenians under King Saroes. They seem to have afterwards regained their independence. In 1221, they were defeated by Gengis Khan, and in 1237, they were so completely subjugated by Batu-Khan that their very name disappears in subsequent history.

A'LARF, is the name given by Mohamedans to the wall which they say divides heaven from hell.

ALARCON, Hernando de, a Spanish navigator of the 16th century, known only in connection with the expedition to the coast of California, of which he was leader. He set sail on the 9th May, 1540, with orders from the Spanish court to await at a certain point on the coast the arrival of an expedition by land under the command of Vasquez de Coronado. The junction was not effected, though Alarcon reached the appointed place and left letters, which were afterwards found by Diaz, another explorer. Alarcon was the first to determine with certainty that California was a peninsula and not an island, as had been supposed. He made a careful and exact survey of the coast, sailed a considerable distance up the Rio del Tizon (Colorado), and was thus able, on his return to New Spain in 1541, to construct a map of California, which, accordingly to M. Duflot de Mofras, scarcely differs from one of the present day.

ALAS'CO, John, uncle to Sigismund king of Poland. Having embraced the Protestant religion, after several years spent in various places in Germany and the Netherlands, he came to England in the reign of Edward VI., and became pastor to a Dutch church in London. On the accession of Mary, he returned to his own country, where he distinguished himself so greatly in the cause of the Reformation, that he received the title of Reformer of Poland. He was greatly esteemed by the leading men among the Reformers; particularly by Erasmus, whose library he purchased. Born 1499; died 1560.

ALASKA, or ALIASKA, formerly Russian America, but now a territory of the United States, is a vast tract of country forming the north-west portion of North America, bounded on the N. by the Arctic Ocean, on the S. and W. by the Pacific Ocean. The name was formerly confined to a long narrow peninsula stretching into the Pacific, but has been extended to the whole territory. Alaska comprises the whole of North America from 141° W. long. to Behring Strait, and also numerous islands along the coast, notably Prince of Wales Islands, and the Aleutian Islands, which stretch seaward from the extremity to the peninsula. From the main portion of the territory a narrow strip, with a breadth of about 50 miles, extends south-east along the Pacific coast and terminates at the confines of British Columbia, in 54° 40′ N. lat. From north to south the extreme length of Alaska is about 1100 miles, and the greatest breadth from east to west is 800 miles. The area of the whole territory is estimated at 514,700 square miles.

The numerous islands, creeks, and inlets of Alaska lengthen out its coast-line to 7860 miles, an extent greater than that of the eastern coast-line of the United States. Beginning at the south-east, the chief creeks and bays are Cook's Inlet, Bristol Bay, Norton Sound, and Kotzebue Sound; while, following the same order, the principal headlands, in addition to the extremity of the peninsula, are Cape Newenham and Cape Romanzoff in the Pacific, Cape Prince of Wales in Behring Strait, and Cape Lisburne, Icy Cape, and Point Barrow in the Arctic Ocean. Point Barrow is in 71° 23′ N. lat., and is the extreme northern point of the country. The exploration of the northern coast was chiefly the work of the British navigators Cook, Beechy, and Franklin, and of the officers of the Hudson Bay Company. The principal river of Alaska is the Yukon, or Kwichpak, which rises in British America, and, receiving the Porcupine river at Fort Yukon, flows westward across the territory, and falls into the Pacific Ocean to the south of Norton Sound. At a distance of 600 miles from the sea this magnificent river has a width of more than a mile. Its tributaries would in Europe be reckoned large rivers, and its volume is so great that 10 miles out from its principal mouth the water is fresh. Among the other rivers of Alaska are the Copper river, the Suschitna, the Nuschagak, and the Kuskokwim, falling into the Pacific, and the Colville, flowing northward into the Arctic Ocean. A great mountain range extends from British Columbia, in a north-west direction, along the coast of Alaska, the summit being covered with snow and glaciers. Mount St. Elias, an active volcano, in 60° 18′ N. lat., and 140° 30′ W. long., rises to the height of 14,970 feet above the sea. The mountain chain runs out along the peninsula which has given its name to the country, and at the western extremity there are several volcanic cones of great elevation; while in the island of Uminak, separated from the mainland by only a narrow strait, there are enormous volcanos, one rising to more

than 8000 feet in height. In the interior and to the north the country is also mountainous, with great intervening plains.

The north-west coast of this part of America was discovered and explored by a Russian expedition under Behring in 1741; and at subsequent periods settlements were made by the Russians at various places, chiefly for the prosecution of the fur trade. In 1799 the territory was granted to a Russo-American fur company by the Emperor Paul VIII., and in 1839 the charter of the company was renewed. New Archangel, in the island of Sitka, was the principal settlement, but the company had about forty stations. They exported annually 25,000 skins of the seal, sea-otter, beaver, &c., besides about 20,000 sea-horse teeth. The privileges of the company expired in 1863; and in 1867 the whole Russian possessions in America were ceded to the United States for a money payment of $7,200,000. The treaty was signed on 30th March, and ratified on 20th June 1867; and on 9th October following, the possession of the country was formally made over to a military force of the United States at New Archangel. It still remains in the military keeping of the United States, no steps having been taken to organize a territorial government. It has, however, been constituted a revenue district, with New Archangel, or Sitka, as the port of entry. Since Alaska was ceded to the United States considerable information has been collected as to the resources of the less sterile parts of the country; but the central and northern parts of this region are only known as the inhospitable home of some wandering tribes of Indians and Esquimaux. Portions of Alaska have also been recently explored by the employees of the Russo-American Telegraph Company in surveying a route for a line of telegraph which was designed to cross from America to Asia near Behring Strait—a project which was abandoned, after an expenditure of £600,000, on communication with Europe being secured by the Atlantic cable.

The climate of the south-western coast of Alaska is tolerably mild, considering its high latitude. The great warm current of the Pacific, sweeping in a north-easterly circuit from the East India Islands, and corresponding very much in character and effects to the Gulf Stream of the Atlantic, washes its shores; and while it modifies the temperature, also causes an excessive rainfall. At Sitka the mean temperature is 42°·9, and the average rainfall about 80 inches. Alaska will never have any great agricultural value. From the great amount of rain and the want of heat, cereals grow, but will not ripen, and vegetables do not thrive. Native grasses and berries grow plentifully, but the chief wealth of the country is in its vast forests, in the furs of its wild animals, and in the fish with which its rivers and seas abound. The forests, rising from the coast and covering the mountains to a height of 2000 feet, consist of a very durable yellow cedar, spruce, larch, and fir of great size, and also cypress and hemlock. The wild animals include the elk, deer, and various species of bear, and also many fur-bearing animals, such as the wolf and fox, the beaver, ermine, marten, otter, and squirrel. Near the coast and islands there are innumerable fur-bearing seals, which are caught in great numbers by the settlers; but from the rigor of the climate and the arduous nature of the work, the trapping of the animals of the interior is left to the Indians. The salmon abounds in the rivers, and there are great banks along the shores, the favorite haunt of cod and other fish. About eighty whalers prosecute their fishing off the coast of Alaska. Coal and iron are the most important minerals, but the value of the deposits remains to be ascertained.

According to the census of 1880 Alaska has a population of 33,620; of which 430 are white; 1746 creole; and the remainder Indians. The Indians are rapidly decreasing in number, and are described as treacherous and discontented. New Archangel, now called Sitka, in the island of Sitka, in 57° 3′ N. lat., and 135° 18′ W. long., was the seat of the Russian governor, and is the headquarters of the United States authorities. It contains about 1500 inhabitants, is the residence of a Greek bishop, and has fortifications, magazines, and a magnetic observatory. Of the other settlements, Fort Nicholas on Cook's Inlet, and Fort St. Michael on Norton Sound, are the more important. The admirable harbors on the coast and the great navigable river Yukon afford facilities for the formation of new settlements and the increase of trade by the Americans. At the junction of the Porcupine river and the Yukon a fort was established by the Hudson's Bay Company in 1847. (See Whymper, *Travels in Alaska and on the Yukon*, 1868; Dall, *Alaska and its Resources*, 1870.

ALA'TRI, an Italian town built on a mountain, 6 miles from Frosinone. Manufacture chiefly woollens. Pop. 11,400.

ALA'VA, one of the three Basque provinces of Spain, mountainous and rich in iron-mines. The chief town is VITORIA. Area, 1,082 square miles. Pop. 96,000. Lat. between 42° 20′ and 43° N.

ALBANI, EMMA, vocalist, is a French Canadian, being a native of Montreal, and her real name is Emma La Jennesse. She was trained in the study of music from early childhood, by her father who was himself a skilful musician. Losing their mother while still of tender age, she and her sisters were sent to the convent of the Sacré Cœur at Montreal to complete their education. Her father afterwards sent her to Europe for musical instruction not obtainable elsewhere. Under the care of Baroness Lafitte, she was two years at Paris, where she studied under the famous Duprez. She then became a pupil of the old *maestro* Lamperti at Milan. Several years of hard study followed till at length, in 1870, she made her *début* at Messina under her present name, with entire success. Immediatedly afterwards she was engaged for Malta. In the winter of 1871–72 she sang at the theater of La Pergola at Florence with great success. Her crowning effort was in the *Mignon* of Ambroise Thomas, already condemned in four theaters in Italy, but which in Madame Albani's hands obtained a complete success among the jealous Italians. She appeared at the Royal Italian Opera, London, in 1872, and since then has been a great favorite both in England and the United States. In Feb. 1883, Madame Albani was singing in opera at Washington with great success, appearing in *Faust* and *Rigoletto*. She closed her American operatic tour at Philadelphia, April, 16, 1883, in the *Flying Dutchman*.

ALBA'NIA, a county of Asia, between the Caspian Sea and Iberia. All the inhabitants are said to have blue eyes. Some maintain that they followed Hercules from Mount Albanus, in Italy, when he returned from the conquest of Geryon.—The Caspian Sea is called Albanum Mare, as being near Albania.

ALBANY, a city of the United States, capital of the state of New York and of the county of Albany, picturesquely situated in a beautiful and fertile country on the western bank of the Hudson, 145 miles from New York. It is, for an American city, irregularly laid out, and much of its architecture is poor, although it contains several very fine buildings, and many of its more recently made streets are broad and handsome. The old Capitol, a brown stone edifice, 115 feet by 90, built in 1807, faces a square called Capitol Park; and opposite it, on the eastern side of the square, are the State Hall and City Hall, both constructed of white marble. The legislature passed a bill in 1865 authorizing the building of a new Capitol, the corner-stone of which was laid in 1871. Annual appropriations have been made, the sum total of which has amounted to $14,000,000, and it is estimated that the entire cost of the structure when completed will be $20,000,000. It is built of New England granite, and covers more than three acres of ground, being 290 feet wide by 390 feet long. Its architecture is in the Renaissance style, and has a main tower 320 feet high. Among other noteworthy buildings are the Merchants' Exchange, the Museum, Music Hall, Leland Opera-house, Tweddle Hall, Kenmore Hotel, Delavan House, Stanwix Hall, and the new U. S. Government building, containing the post-office, customs offices, and U. S. courts.

Albany is divided into 17 wards, each ward electing two members of the board of aldermen annually on the second Tuesday in April. The city has an excellent police force, several infantry companies of the national guard of the state, and four independent companies. There are in all seventy-six places of worship: Baptist, 12; Congregational, 1; Episcopal, 9; Evangelical, 2; Friends, 1; Jewish, 3; Lutheran, 5; Methodist, 11; Presbyterian, 11; Reformed, 5; Roman Catholic, 12; Second Adventist, 1; Union, 2; Universalist, 1. The Roman Catholic cathedral of the Immaculate Conception and St. Peter's Episcopal church are considered handsome specimens of church architecture. All Saints' is the Episcopal cathedral, Albany being the seat of a diocese of that denomination, as well as of the Roman Catholic Church. The high school has 1 principal and 19 assistant teachers, and there are 25 other public schools, besides a state normal school founded in 1844. Instruction is also given in several charitable institutions. The Albany University was incorporated in 1852. Union University, located in Schenectady, has three departments in Albany—the law school, the medical college, and Dudley Observatory, which was opened in 1856. The latter (incorporated in 1852) has a 13-inch equatorial telescope, and a fine library. The State Library contains with the law department over 100,000 volumes, and the records of the State Agricultural Rooms are very valuable. The Albany Institute for the Advancement of Science was founded in 1791. The Young Men's Association was founded in 1835, and the Young Men's Christian Association in 1857. Among the benevolent institutions are—Albany Hospital, Child's Hospital, St. Peter's Hospital, City Homœopathic Hospital, and Eye and Ear Infirmary. Albany is an important center of trade, being situated at the point where the united Erie and Champlain canals join the Hudson, and possessing good railway communication with most cities of the United States. The principal railroads are—the New York Central and Hudson River; the New York and Harlem; the Boston and Albany; the Albany and Vermont; the Albany and Susquehanna; the Rensselaer and Saratoga, and the railroad along the west bank of the Hudson from New York, known as the 'West Shore road.' Steamers run to Troy, Poughkeepsie, New York, and other places. The river is spanned by

three bridges, and a number of ferries cross to East Albany on the opposite bank of the river.

The chief articles of commerce are timber, wheat, barley, wool, and tobacco, enormous quantities of which, especially of the first-mentioned, pass through the city annually. Besides its transit trade, its numerous foundries, its breweries, carriage and hat manufactories, and tanneries are of importance. There are four national banks, and 7 savings banks. The city has 8 daily newspapers, 2 semi-weekly, and 10 weekly newspapers, besides 3 monthly periodicals. There are street railways running through every part of the city, and extending to the principal suburbs. Albany was founded by the Dutch in 1623, and is thus one of the oldest European settlements in the United States, dating sixteen years after that of Jamestown in Virginia. It was captured by the British in 1664, who changed its name from Beaverwyck or Williamstadt in honor of the Duke of York and Albany. It received its charter in 1686, and became the capital of the state of New York in 1797. In 1790, the population of Albany was 3506; in 1850 it increased to 50,763, and at the census of 1880 it was 90,903. It is now (1884) estimated to have increased to 95,000, and ranks in population as the twenty-first city of the United States.

ALBANY, Duke of, Prince Leopold George Duncan Albert, K.G., Earl of Clarence, and Baron Arklow, Prince of Saxe Coburg and Gotha, fourth son of Queen Victoria, was born at Buckingham Palace, April 7, 1853. He matriculated at the university of Oxford in 1872, and was created a D.C.L. in 1876. Parliament voted him a grant of £15,000 a year on his attaining his majority, with an addition of £10,000 a year on his marriage. In May, 1881, he was created a peer of the realm with the title of Duke of Albany. His marriage with the Princess Frederica Augusta, daughter of His Serene Highness the Prince of Waldeck and Pyrmont, was celebrated at Windsor Castle, April 27, 1882. He died in Italy in March, 1884.

ALBATEGNI, an Arabian astronomer, who lived in Mesopotamia, and who wrote a book on the knowledge of the stars and the obliquity of the zodiac, which was printed at Nuremberg in 1537, 4to, and at Bologna in 1545. He was the first who substituted sines for chords, and who may be said to have determined the length of the tropical year. His contributions to astronomical science, in relation to the precession of the equinoxes, and the eccentricity of the earth's orbit, was very valuable. He is considered to have had a larger number of methods in spherical trigonometry than the Greeks, and to be the greatest of the Arabian school, which connects Greek science with that of our own times. Born at Batan, in Mesopotamia, about the middle of the 9th century; died, 929.

ALBEMARLE SOUND, an inlet in the United States, on the coast of North Carolina, in the N. E. part of the state. It is 60 miles long from E. to W. and 4 to 15 wide, may be considered as the estuary of the Roanoke and Chowan rivers, communicates with Pamlico Sound and the ocean by many narrow inlets, and with Chesapeake Bay by a canal cut through Dismal Swamp.

ALBERT EDWARD. See Prince of Wales in Chamb. Encycl.

ALBERTI, Leon Battista, distinguished as a painter, poet, philosopher, musician, and especially as an architect, was descended from the noble family of the Alberti of Florence. The place and date of his birth are variously given, but it is most probable that he was born at Venice about the year 1404. He was so skilled in Latin verse that a comedy he wrote in his twentieth year, entitled *Philodoxius*, deceived the younger Aldus, who edited and published it as the genuine work of Lepidus. In music he was reputed one of the first organists of the age. He held the appointment of canon in the metropolitan church of Florence, and thus had leisure to devote himself to his favorite art. He is generally regarded as one of the restorers of the ancient style of architecture, and has been called by some writers the Florentine Vitruvius. At Rome he was employed by Pope Nicholas V. in the restoration of the papal palace and of the fountain of Acqua Vergine, and in the ornamentation of the fountain of the Piazza de Trevi. At Rimini he designed the celebrated church of San Francesco, which is generally esteemed his finest work. On a commission from Rucellai, he designed the principal façade of the church of Santa Maria Novella in Florence, as well as the family palace in the Via della Scala, now known as the Palazzo Strozzi. In Mantua he was employed by the Marchese Ludovico Gonzaga to design several buildings, the most important being the church of Saint Andrea. Alberti wrote works on sculpture, *Della Statua*, and on painting, *De Pictura*, which are highly esteemed; but his most celebrated treatise is that on architecture, *De Re Ædificatoria*, which has been translated into Italian, French, Spanish, and English. A splendid edition of this work in English and Italian, by Leoni, was published at London in 1726, in 3 vols. folio. Alberti, being of an amiable and generous disposition, was highly esteemed by his contemporaries. He died at Rome in 1472, or, according to others, in 1484.

ALBERTINELLI, MARIOTTO, a pupil of Roselli, an imitator of Fra Bartolomeo, and one of the finest of the early Florentine painters. His *chef-d'œuvre* is in the Imperial Gallery of Florence, and is known as the Visitation of Elizabeth, mother of John the Baptist, to the Virgin. He was a man of singularly dissipated habits, to which he fell a victim at the early age of 45. Born at Florence, 1475; died 1520.

ALBINUS, Bernard, whose real name was Weiss, i. e. White, studied physic at Leyden, where, in 1702, he became professor in that faculty. He wrote several valuable treatises on medicine. Born at Dessau, 1653; died 1721.

ALBONI, Signora Marietta, a charming and popular contralto singer, who made her début in England, at the royal Italian Opera, as Arsace, in 'Semiramide,' in the spring of 1847. In 1882 she sang in opera and concert in the principal cities of the United States. In 1853 she married Count Peploi, an Italian nobleman. Retired from the stage 1863. Born at Forli, Italy, 1824.

AL-BORAK' (Arab., shining whiteness), the name given, in Mohammedan tradition, to an imaginary animal which was said to have carried Mahomet upon his journey from Jerusalem to the heavens.

ALBRECHTSBERGER, Johann Georg, German musician, one of the most learned composers of his age; organist to the Court of Vienna, and kapellmeister of St. Stephen's cathedral. Beethoven, Hummel, and Moscheles, were among his pupils. Author of treatises on composition. Born near Vienna, 1736; died 1809.

ALBRET, Jeanne d', Queen of Navarre, and mother of Henry IV. of France. She was a great supporter of the Reformation. It is supposed she was poisoned at Paris, whither she went to assist at the marriage of her son and Margaret of Valois. Born 1528; died 1572.

ALBUCA'SA, or ALBUCASIS, an Arabian physician, who composed many excellent works, excelled in surgery, and has described many instruments and operations. Lived in the 11th century.

ALBUMINURIA. See Bright's Disease in Chamb. Encycl.

ALCA'IC, name given to a kind of verse said to have been invented by the Greek poet Alcæus. It is formed of four feet, with a cæsura in the middle. The first foot is a spondee, rarely an iambus; the second an iambus; then the cæsura, followed by two dactyls; as—

Dūlce ēt | dĕcō | rum ēst | prō pătrĭ | ā mŏrĭ.
'It is sweet and glorious to die for one's country.'

Horace introduced this measure into the Latin language.

ALCAIDE', or ALCAYDE, a Spanish word, derived from the Arabic *kada*, to head or govern, and used by the Moors, Spaniards, and Portuguese for a governor, usually of a fortress or castle.

ALCAMENES, a famous Athenian sculptor, a pupil of Phidias, who is celebrated for his skill in art by Cicero, Pliny, Pausanias, Lucan, &c. He flourished from about 448 to 400 B.C., and appears as one of the great triumvirate of Greek sculptors, Phidias, Alcamenes, and Polycletus. He is said to have once competed with his master, the subject being a statue of Minerva. In this attempt the style of Alcamenes was exquisite in finish, but he had overlooked the consideration that the statue was to be placed on a high column, and there his work would not bear comparison with that of his great master. His statue of *Venus Urania*, in the temple of that deity at Athens, was reckoned his masterpiece.

ALCAVA'LA, in commerce, a custom-house duty paid in Spain, on imported goods, at the rate of 5 per cent. upon the value of the commodity.

ALCAZAR KEBIR, a city of Morocco, 80 miles N.W. of Fez. It was formerly of great importance, and the place where the expeditions of the Moors against Spain were prepared. The battle in which King Sebastian of Portugal was killed, was fought near the town in 1578. Pop. 6000.

AL'CIATI, Andrea, a famous lawyer, who in 1529 was chosen professor of law at Anjou. He subsequently removed to Bourges, to discharge the same office, at the desire of Francis I. The duke of Milan prevailed upon him to return to his native country, where he was created a senator. His most esteemed work is his *Emblems*. Born near Milan, 1492; died 1550.

ALCIN'OUS, a son of Nausithous, king of Phæacia, in the island now known as Corfu, praised for his love of agriculture. According to Homer, he was a grandson of Neptune, and entertained and listened to the wonderful adventures of Ulysses when shipwrecked on his coast; whence arose the proverb of the stories of Alcinous for improbability.

AL'CIPHRON, a Grecian sophist, whose epistles give a curious picture of Grecian manners. An English translation of them was published in 1791. Lucian is supposed to have imitated him.

ALCMÆ'ON was son of the soothsayer Amphiaraus and Eriphyle. When his father went to the Theban war, where, according to an oracle, he was to perish, he charged him to revenge his death upon Eriphyle, who had betrayed him. As soon as he heard of his father's death, he murdered his mother; for which crime the furies persecuted him till the river god Phlegens purified him, and gave him his daughter Alphesibœa in marriage. Alcmæon presented her with the fatal collar which his mother had received to betray his father, and afterwards divorced her and married Callirhoe, the daughter of Achelous, to whom he promised the necklace he had given to Alphesibœa. When he attempted to recover it, Alphesibœa's brothers murdered him, on account of his treatment of their sister, and left his body a prey to dogs and wild beasts. Alcmæon's children by Callirhoe revenged their father's death by killing his murderers.

ALCMÆ'ON, a philosopher of Crotona, and the disciple of Pythagoras. He was the first writer on natural philosophy, and believed in the theory that the stars were animated beings.

ALCME'NA, daughter of Electryon, king of Argos, by Anaxo. Her husband, Amphitryon, going against the Ætolians, Jupiter, who was enamored of A., resolved to visit her. The more effectually to accomplish this, he assumed the form of Amphitryon, declared that he had obtained a victory over A.'s enemies, and even presented her with a cup, which he said he had preserved from the spoils for her sake. The prophet Tiresias told Amphitryon of Jupiter's intrigue, when he returned to his wife, proud of the dignity of his rival. A. became pregnant by Jupiter, and afterwards by her husband; and the twins, Hercules the son of Jupiter, and Iphiclus the son of Amphitryon, were born. After Amphitryon's death, A. married Rhadamanthus, and went into Bœotia. This marriage, according to some authors, was celebrated in the island of Leuce. The people of Megara say that she was buried in their city, near the temple of Jupiter Olympus.

ALCOTT, Amos Bronson, teacher and philosopher, was born in Wolcott, Connecticut, November 29, 1799. After a brief mercantile experience he began teaching, at first in Connecticut, afterwards (1828), in Boston, and ultimately in Concord, Massachusetts, where he still resides. Mr. A.'s celebrity is founded not only on the success of his school and his methods of teaching, but also upon his fame as a philosophical thinker and conversationalist. In 1836 he published *Conversations with Children on the Gospels* (2 vols.); in 1868 *Tablets;* and in 1872 *Concord Days.* A description of his school may be found in E. P. Peabody's *Record of a School* (1834).

ALCOTT, Louisa May, daughter of Amos Bronson Alcott, born at Germantown, Pennsylvania, in 1833. She began to write at an early age, and her first book, *Fairy Tales*, was published in 1855. During the civil war she was a hospital nurse, and in 1863 published a volume of *Hospital Sketches*, made up from letters which she had written to her family. In 1863 she became a contributor to the *Atlantic Monthly.* She has published various novels, among which are *Moods*, 1864; *Morning Glories and other Stories*, 1867; *Little Women*, 1868; *An Old-Fashioned Girl*, 1869; *Little Men*, 1871; *Work: a Story of Experience*, 1873; *Cupid and Chow-Chow: and other Stories*, 1873; *Eight Cousins: or the Aunt Hill*, 1875; *Silver Pitchers and other Stories*, 1876; *Rose in Bloom*, a sequel to *Eight Cousins*, 1877; *Under the Lilacs*, 1878; *Jack and Jill*, 1880; and a series of short stories under the general title of *Aunt Jo's Scrap-Bag.*

ALCY'ONE, or HALCYONE, daughter of Æolus, married Ceyx, who was drowned as he was going to consult the oracle. The gods apprised A. in a dream of her husband's fate; and when she found, on the morrow, his body lying on the shore, she threw herself into the sea, and was, with her husband, changed into birds of the same name, who keep the waters calm and serene while they build, and sit on their nests on the surface of the ocean.

ALDAN, a river of Siberia, which rises on the confines of China, and joins the Lena in lat. 63° 12′ N., long. 129° 40′ E. There are several towns upon its banks, and, in a course of 500 miles, it is fed by various tributaries.

ALDAN MOUNTAINS, an E. Siberian chain of mountains, terminating at Behring Straits. Average height, 4,000 feet. A branch which traverses Kamtchatka reaches an elevation of 10,548 feet, and in Kliutshewskaja attains 15,763 feet. The lower limit of perpetual snow is at a height of 4,475 feet.

ALD'BOROUGH, or ALDEBURGH, a market-town and watering-place, in Suffolk, on the Alde, 9½ miles from Dunwich. Pop. of the parish, 1990. This town has a coasting trade, and many of its inhabitants are engaged in fishing. It is a sea-bathing resort, with a good hotel and many villas and lodging-houses. It was the native place of the poet Crabbe, who was born in 1754, and of whom there is a bust placed in the church, which is the largest in the county, and has been recently restored.

ALDEGONDE, Philip Van Marnix, Baron Von St., statesman and theologian. Studied at Geneva; resisted the introduction of the Inquisition into the Netherlands; fled to Germany, on the arrival of the Duke of Alva, 1566; returned on the establishment of the republic; professor of theology at Leyden. Born at Brussels, 1538; died at Leyden, 1598.

ALDEGRE'VER, Heinrich, a German painter and engraver, who was both a pupil and a successful imitator of the performances of Albert Durer. Born at Paderborn, 1502; died 1562.

ALDEN, James, rear-admiral U.S.N., born at Portland, Me., March 31, 1810. He was appointed midshipman April 1, 1828; lieutenant, February 25, 1841; commander, September 14, 1855; captain, January 2, 1863; commodore, July 25, 1866. He was a member of Wilkes's exploring expedition in 1839–42. During the Mexican war, he was at Vera Cruz, Tuspan, and Tobasco; commanded steamer *South Carolina* early in 1861; reinforced Fort Pickins; attacked the batteries in the rear of Galveston, and captured 13 schooners with valuable merchandise; commanded steam-sloop *Richmond* at the passage of Port Jackson and St. Philip and capture of New Orleans; commanded steam-sloop *Brooklyn* in the action with Forts Morgan and Gaines and rebel gunboats in Mobile Bay; and in the two attacks on Fort Fisher. He participated in nearly all the great naval battles of the war, and was honorably mentioned in the official reports. In April, 1869 he was appointed chief of the bureau of navigation, and rear-admiral, July, 1871.

ALDEN, John, Pilgrim, born in England, 1599; died at Duxbury, Mass., September 12, 1687. He was engaged as a cooper at Southampton, where *The Mayflower* victualed, and signed the compact in her cabin in 1620. He is said to have proposed marriage to Priscilla Mullens, in behalf of his friend, Miles Standish, whereupon the pilgrim lady replied: 'Prithee, John, why do you not speak for yourself?' In 1621, he accordingly led the fair Priscilla to the altar. Longfellow has made this incident the subject of a poem. He died at the age of 88, having been a magistrate of the colony for over half a century.

ALDEN, Joseph, D.D., LL. D., born at Cairo, N. Y., January 4, 1807. After graduating at Union College, in 1829, he studied theology for two years at the Princeton Seminary. He was ordained pastor at Williamstown, Mass., July 3, 1834; became professor in Williams College from August 1734 to 1852; professor of moral philosophy in Lafayette College, Pa., 1852–57; president of Jefferson College, Pa., 1857–67; and, since 1867, president of the New York State Normal School. Author of numerous Sabbath-school books, *Elements of Intellectual Philosophy*, *Science of Government in Connection with American Institutions*, and *Christian Ethics.* At one time editor, and for many years a contributor to the *N. Y. Observer.*

ALDEN, Timothy, D.D., Congregational clergyman and educator, born at Yarmouth Mass., August 28, 1771; died at Pittsburg, Pa., July 5, 1839. He graduated from Harvard in 1794. He was from November 20, 1799, to August 11, 1805, minister of Portsmouth, N. H., where he taught school from 1800 to 1808, and in 1810–17 taught in the academy at Newark, N. J. He prepared and published his collection of Epitaphs in 5 vols. 1814, and while teaching in Boston, in 1808–10, prepared a Catalogue of the Library of the New York Historical Society. He next removed to Meadville, Pa., where he founded Alleghany College, of which he was first president (inaugurated July 28, 1817), and for which he collected a valuable library. He withdrew from the college November 11, 1831; resumed his educational labors in Cincinnati in 1832, and in 1834 took charge of an academy at East Liberty, near Pittsburg, Pa. He published *An Account of Sundry Missions among the Senecas*, N. Y., 12mo, 1827; *New Jersey Register*, 1811 and 1812; *Alleghany Magazine*, 1815; *History of the Pine Creek Church*, 1839.

ALDENHOVEN, a town in Prussia, between Juliers and Aix-la-Chapelle. Near this town, in 1793, the Prince of Coburg defeated the French, inflicting immense loss.

AL'DERMAN. A magistrate or member of a town or city corporation, next in order to the mayor. In New York and other American cities the term is applied to the members of the city council, who are elected by the people.

ALD'HELM or ADELM, St., bishop of Sherborne, and consecrated at Rome by Sergius I. He is said to be the first Englishman who wrote in Latin, and the first who introduced poetry into England. The people in his time being extremely illiterate, paid little regard to prosaic discourses, which suggested to Aldhelm the idea of entertaining them with ballads of his own composition, in which he blended religious subjects with those of a lighter kind, and thus induced numbers to listen to his addresses. Born at Malmesbury 656; died 709.

ALDI'NI, Giovanni, a nephew of Galvani, the discoverer of galvanism. He was a Knight of the Iron Crown and Councillor of State at Milan. He delighted in philosophical pursuits, and at his death bequeathed his philosophical instruments and a large sum of money to found a public institution at Bologna, to instruct artizans in chemistry and physics. Born at Bologna, 1762; died at Milan, 1834.

AL'DOBRANDI'NI, Sylvester, a Florentine writer, who was appointed advocate of the treasury and apostolic chamber by Pope Paul III. He died in 1558.

ALDRICH, Thomas Bailey, born at Portsmouth, New Hampshire, Nov. 11, 1836. He entered the counting-house of his uncle, a New York merchant, where he remained three years, during which period he began to write for the journals, and was afterwards for a time proof-reader. He has contributed prose and verse to various periodicals, most of which have subsequently been published separately. Among the collected volumes are *The Bells*, 1855; *The Ballad of Baby Bell and other Poems*, 1856; *The Course of True Love never did Run Smooth*, 1858; *Pampinea and other Poems*, 1861; a volume of *Poems*, 1865; *Cloth of Gold and other Poems*, 1874; *Flower and Thorn*, 1876; *Lyrics and Sonnetts*, 1880; and *Friar Jerome's Beautiful Book*, 1881. Among his prose tales are *Daisy's Necklace and What Came of it*, 1857; *Out of his Head, a Romance in Prose*, 1862; *The Story of a Bad Boy*, 1869; *Margery Daw*, 1873; *Prudence Palfrey*, 1874; *The Queen of Sheba*, 1877; and *Stillwater Tragedy*, 1880. In 1881 he became editor of the *Atlantic Monthly*, Boston.

ALEANDRO, Girolamo, cardinal. He studied at Venice, and attained distinction as a Latin, Greek, Hebrew, Chaldee, and Arabic scholar; then taught the belles-lettres at Paris, where he became professor and rector of the university, and afterwards entered into the service of Pope Leo X., who appointed him librarian of the Vatican. At the diet of Worms he displayed his eloquence against Luther, causing the works of the great reformer to be burned, and himself proscribed. Clement VII. made him archbishop of Brindisi, and appointed him his nuncio to France. He was present with Francis I. at the battle of Pavia, in 1525, and shared his captivity, but in the following year returned to Rome. In 1531 he was despatched to Germany in the same capacity, and vainly endeavored to prevent Charles V. from making a truce with the Protestants. In 1538 he was made a cardinal by Paul III. Born at Motta, near Venice, 1480; died at Rome, 1542.

AL'EGAMBE, Philip, a Jesuit who took the religious habit in Sicily, and afterwards became professor of philosophy and divinity at Gratz, in Austria. In 1638 he went to Rome, and was retained there by the general of his order as secretary for Germany and president of spiritual affairs. He wrote various histories and biographies relating to the Jesuits. Born at Brussels, 1592; died at Rome, 1652.

AL'EMAN, Louis, a Roman cardinal, who, in 1422, being archbishop of Arles, was sent legate to Sienna by Pope Martin V. The object of his mission was to procure the removal of the council of Pavia to that city. Afterwards the Pope made him a cardinal, and he was appointed subsequently president of the council of Basil, in which he opposed Eugenius IV., who excommunicated him. Nicholas V. restored him to his dignities, and sent him as legate into Germany. Born at Bugey, 1390; died 1450; and was canonized in 1527.

ALES, Alexander, a Scotch divine, who, from being a zealous Catholic, became as zealous a Protestant. His real name was Alane, but he is known in Polemical literature as Alesius. In 1535 he visited England, and was greatly esteemed by Henry VIII. and Archbishop Cranmer; but soon after went to Germany, where he rose successively to the professorial chairs of Divinity in the universities of Frankfort and Leipsic. He wrote several books on theological subjects, particularly on the doctrine of the Trinity and the necessity of good works to justification. Born at Edinburgh, 1500; died 1565.

ALESHKI, a Russian town in the government of Tauride, opposite Kherson, on the estuary of the Dnieper. Pop. 1,500.

ALEXANDER, Archibald, D.D., a Presbyterian divine of America, was born of a family, originally Scotch, in Rockbridge county, Virginia, on the 17th April 1772; died 1851. After completing his preliminary education at Timber Ridge, he came under the influence of the religious movement known as the 'great revival,' and devoted himself to the study of theology. Licensed to preach in 1791, he was engaged for seven years as an itinerant missionary in his native state, and acquired during this period the facility of extemporaneous speaking for which he was remarkable. For a time president of Hampden Sidney College, he resigned that position in 1807 to become pastor of Pine Street Church, Philadelphia. In 1810 the degree of doctor of divinity was conferred upon him by the College of New Jersey, and in the following year he was appointed first professor in the newly-established Presbyterian theological seminary at Princeton. He filled the chair until his death in 1851. Dr. Alexander wrote a considerable number of works on theology, which have had a large circulation. Among these may be mentioned his *Outlines of the Evidences of Christianity* (1823), which has passed through several editions, and been translated into various languages; and his *Treatise on the Canon of the Old and New Testament* (1826). He was also a frequent contributor to the *Biblical Repertory*, edited by Professor Hodge.

ALEXANDER, James Waddell, D.D., a Presbyterian clergyman and author, born near Gordonsville, Louisa county, Virginia, March 13, 1804; died at the Virginia Springs, July 31, 1859. He was the eldest son of Dr. Archibald Alexander, and after graduating from the N. J. College in 1820, became a tutor in that institution in 1824. He was a minister in Charlotte county, Va., from 1825 to 1827; in Trenton, N. J., from 1829 to 1832, and of the Duane Street Church, New York City, from 1844 to 1851, when he was elected pastor of the Fifth Avenue Church. He became editor of the *Presbyterian* newspaper published in Philadelphia; professor of rhetoric and belles-lettres in New Jersey College in 1833–44; and from 1849 to 1851 professor of ecclesiastical history and church government in the theological seminary at Princeton. He published a volume of sermons entitled *Consolation; Thoughts on Family Worship; The American Mechanic and Workingman;* a biography of his father, Dr. Archibald Alexander; *Discourses on Christian Faith and Practice* (1858); a volume of *Sacramental Discourses*, and *Gift to the Afflicted; Geography of the Bible* (1830); *Plain Words to a Young Communicant*, 12mo.; *American Sunday School and its Adjuncts* (Phila. 1856); numerous contributions to the *Biblical Repertory* and *Princeton Review*, and some of the publications of the American Tract Society. He wrote for the *Literary World* under the signature of 'Cæsariensis.'

ALEXANDER, Joseph Addison, D.D., third son of Dr. Archibald Alexander, one of the most eminent biblical scholars of America, was born in Philadelphia in the year 1809. He studied at New Jersey, devoting himself specially to Hebrew and other Oriental languages. He graduated in 1826, and from 1830 to 1833 was adjunct professor of ancient languages and literature in his *alma mater*. In 1838 he was appointed professor of biblical criticism and ecclesiastical history in the theological seminary at Princeton. He was transferred in 1852 to the chair of biblical and ecclesiastical history, which he occupied till his death in January 1860. Dr. Alexander wrote several valuable works in his own department, the most important being a *The Psalms Translated and Explained. The Prophecies of Isaiah*, and an abridgment of the same work and a treatise on primitive church government. He also contributed numerous articles to the *Biblical Repertory* and the *Princeton Review*. At the time of his death he was engaged along with Dr. Hodge in the preparation of a commentary on the New Testament.

ALEXANDER, Stephen, LL.D., born at Schenectady, New York, September 1, 1806. He graduated at Union College, in 1824; and in 1834 was elected adjunct professor of mathematics in the College of New Jersey. In 1840 the professorship of astronomy was created, and he was assigned to it. In 1845 he was transferred to the chair of mathematics, but in 1854 exchanged it for the professorship of mechanics and astronomy, which he retained until he was retired in 1878. He has published numerous papers on astronomy, mathematics, physics, &c., which have attracted the attention of eminent astronomers in Europe and America. Among these are: *Physical Phenomena attendant upon Solar Eclipses, Fundamental Principles of Mathematics, On the Origin of the Forms and the present Condition of some of the Clusters of Stars*, and *Harmonies in the Arrangement of the Solar System which seems to be confirmatory of the Nebular Theory of La Place*. He has conducted two expeditions to make observations on solar eclipses, one to Labrador in July, 1860, and one to the West, to observe the solar eclipse of August, 1869.

ALEXANDER, William, Earl of Stirling, a Scotch statesman and poet, who received the honor of knighthood from James I. In 1621 the same monarch gave him a grant of Nova Scotia, which he intended to colonize, and Charles I. afterwards patronized the scheme by appointing him lieutenant of that country, and founding an order of knight-baronet in Scotland, each of whom was to contribute towards the settlement, and to have a portion of the same. The number for these baronets was limited to 150. Sir William afterwards sold Nova Scotia to the French. In 1626 he was appointed Secretary of State for Scotland; in 1630 created a peer, as Lord Alexander, of Tullibody, and Viscount Stirling, and the following year appointed judge in the Court of Session; in 1633 he was created Earl of Stirling, and in 1639 Earl of Dovan. Notwithstanding the great affluence of Alexander in powers of versification, he was very deficient in the poetic faculty. His poem entitled *Aurora* was published in 1604, and in 1607 a collection of his tragedies appeared. The title is now extinct, the last

of the male descendants having died in 1739. Born at Menshie, Scotland, 1580; died in London, 1640.

ALEXANDER BALAS, an impostor, who was employed by the Romans to personate the son of Antiochus Epiphanus, king of Syria, in order to take possession of that kingdom. He defeated Demetrius Soter, the lawful heir; but that prince, with the aid of Ptolemy, king of Egypt, afterwards gained a victory over the usurper, who fled into Arabia, where he was slain, 145 B.C.—There are in the British Museum many copper and silver coins with the head of Balas.

ALEXANDER JANNÆUS, king of the Jews, was the son of Hyrcan, and succeeded his brother Aristobulus, 104 B.C. Aristobulus had cast him into prison; whence he was taken at his death and placed on the throne. He began his reign by murdering one of his brothers, and entered into hostilities, which lasted long, with Ptolemy Lathyrus, king of Egypt. His cruelties irritated his subjects, and produced a civil war, which endured six years. Alexander, however, proved successful, and in one day caused 800 captives to be crucified, after their wives and children had been murdered before their eyes. Having secured the throne, he carried his arms into foreign countries, and made several important conquests. Died of intemperance, 79 B.C.

ALEXANDER OF APHRODISIAS, the most celebrated of the Greek commentators on the writings of Aristotle, and styled, by way of pre-eminence, *the Expositor*. He was a native of Aphrodisias in Caria, and taught the Peripatetic philosophy at Athens in the end of the 2d and the beginning of the 3d centuries of the Christian era. Commentaries by Alexander on the following works of Aristotle are still extant: The *Analytica Priora*, I.; the *Topica;* the *Meteorologica;* the *De Sensu;* and the *Metaphysica*, I.–V., together with an abridgment of what he wrote on the remaining books of the *Metaphysica*. His commentaries were greatly esteemed among the Arabians, who translated many of them. There are also several original writings by Alexander still extant. The most important of these are a work *On Fate*, in which he argues against the Stoic doctrine of necessity; and one *On the Soul*, in which he contends that the undeveloped reason in man is material, and inseparable from the body. He identified the active intellect, through whose agency the potential intellect in man becomes actual, with God. Several of Alexander's works were published in the Aldine edition of Aristotle, Venice, 1495–98; his *De Fato* and *De Anima* were printed along with the works of Themistius at Venice, 1534; the former work, which has been translated into Latin by Grotius and also by Schulthess, was edited by Orelli, Zurich, 1824; and his commentaries on the *Metaphysica* by Bonitz, Berlin, 1847. Nourisson has treated of his doctrine of fate, Paris, 1870.

ALEXANDER III. (ALEXANDROVITCH), EMPEROR AND AUTOCRAT OF ALL THE RUSSIAS, who succeeded to the throne on the murder of his father by Nihilist conspirators on March 13, N.S. 1881, was born March 10, 1845. He was educated at the Russian universities, trained in military affairs, and held a subordinate command during the Turko-Russian war. Since his elevation to the throne he has seldom appeared in public, but has lived in the closest retirement at Gatchina, being in constant dread of the machinations of the secret societies of Socialists. His coronation took place at Moscow, May 27, 1883. He married, in 1866, Mary-Féodorovna (formerly Mary Sophia Frederica Dagmar), daughter of Christian IX., King of Denmark.

The Nihilist conspiracy has confined the attention of the Czar's government to home affairs, and his aim has been to maintain amicable relations with foreign powers. Still, he represents the feeling that is intensely Russian, a sentiment which might give a more positive coloring to his foreign policy were he free from danger of domestic revolution. Nihilists are punished with unrelenting severity, and at times the Government's repressive measures seem on the verge of success, but it is only in appearance. The national strength is paralyzed by this internal malady. Only the dread of dynamite plots could have occasioned the unparalleled delay of the coronation ceremony for more than two years. And when the event had taken place, the Czar was credited with great courage in so far braving Nihilistic attacks as to be publicly crowned. It is believed, however, by many that Alexander III. may succeed eventually in suppressing these revolutionary demonstrations. It was said of him that he had his grandfather's energy and his father's humanity, while his private life has been free from scandal. He has no favorites of either sex, and he possesses a high sense of the sacredness of his mission. The coronation ceremonies were performed in Moscow with the utmost magnificence and splendor. Large sums of money were given to the poor, prisoners (not political, of course) were freed in honor of the day, food and drink were furnished to the multitude. Contrary to a very common fear, nothing occurred to mar the general festivity. The private property of the Emperor yields him a large annual revenue. He possesses a million square miles of cultivated land and forests, besides owning gold and other mines in Siberia, the vast revenue of which is not known, as, being the Emperor's personal estate, the amount never appears in the budget. The sum arising from all these sources is estimated, however, at over $12,000,000, of which sum $2,000,000 are expended in charities, schools, and theaters, leaving a net income of $10,000,000. Alexander III. has five children: Grand-duke Nicholas, heir apparent, born May 6, 1868; Grand-duke George, born April 28, 1871; Grand-duchess Xenia, born April 6, 1875; Grand-duke Michael, born Nov. 23, 1878; Grand-duchess Olga, born June 1, 1882.

ALEXANDER VI. (pope), a sketch of whom is given in another part of this cyclopædia, has become a myth, and his 'acts' are in some respects almost as legendary as those of the primitive saints and martyrs. The peculiar odium attached to his memory rests partly on the charge of incest, of which he must be acquitted; partly on that of secret poisoning, which is at least not established; partly on the confusion between his actions and Cæsar Borgia's. Nearly everything actually criminal in his pontificate is subsequent to the preponderance of the latter. Profligate alike in public and private life, he was no malignant tyrant,—affable, familiar, easy, he justly took credit for his moderation towards notorious malcontents, and his indifference to personal injuries. These virtues, however, as well as his family affection, were merely constitutional with him,—as the many beneficial acts of his administration were rather prompted by a sense of policy than a sense of duty. His ability as a ruler is evinced by the tranquillity he maintained in Rome, his effectual provision against dearth, the regular discharge of financial obligations, the energetic prosecution of useful public works. As a statesman he ranks high in the second class. He was too destitute of morality to have the least insight into the tendencies of his times; but from the point of view of political expediency, his policy was eminently sagacious and adroit. He cannot be accused of preparing the misfortunes of Italy, but he did not disdain to profit by them. His licentiousness and contempt of ecclesiastical decorum are partly palliated by the circumstances of his initiation into the Church. He was untrained to the ecclesiastical profession, never felt himself a priest, and was wholly regardless of the Church's interest as such. In this respect he is almost unique among the successors of St. Peter. Were controversies regulated by reason rather than by convenience, the parties to this would change sides,—Alexander's accusers would become his advocates, and his advocates his accusers. The Church in her secret heart must rate him the lowest of her chiefs; the world must feel that he deserves much better of it than many much better popes.

The principal contemporary authority for the reign of Alexander is the diary of the papal master of the ceremonies, Joannes Burcardus, a record replete with trivialities and not exempt from interpolations, but containing indisputable evidence of perfect candor. An excellent edition, commenced in 1855 by the Abbé Gennarelli, was discontinued after the publication of a few parts. The uncritical histories of Gordon and Tomasi are indebted to Burcardus for any value they possess. Among modern Roman Catholic apologists are Jorry, Favé, Cerri, and others. The Abbé Ollivier (*Alexandre VI. et les Borgia*, tom. i., Paris, 1870) excites respect by his good faith. Of late years the archives of the Italian courts have become accessible, and the transactions of Alexander's reign have been sagaciously investigated from this source by two German scholars, Von Reumont (*Die Stadt Rom*, Bd. 3, Abth 1, Berlin, 1868) and Gregorovius (*Rom in Mittelalter*, Bd. 7, Stuttgart, 1870). The latter is the more copious, but his general estimate of Alexander is much too low. By far the ablest English contribution to the history of Alexander is a notice of Gregorovius in the *North British Review*, vol. iii., entitled *The Borgias and their Latest Historian*.

ALFONSO XII. (ALFONSO FRANCESCO DE ASSISI FERDINANDO PIO JUAN MARIA DE LA CONCEPCION GREGORIO, &c.), King of Spain, eldest son of the ex-Queen Isabella II., was born Nov. 28, 1857. When his mother was driven from the throne by the revolution of 1868, he accompanied her to Paris, where he resided with her for some time, but subsequently he went to Austria, in order to prosecute his studies in the Theresianum, or nobleman's academy, at Vienna, to which he was admitted Jan. 20, 1872. He remained there three months. On June 25, 1870, Queen Isabella formally abdicated her right to the throne of Spain in favor of her son, but no open steps were taken at that time to secure for him the position which this abdication left open to him. His pretensions were, however, opposed by his cousin, the eldest son of the Duke of Montpensier, and his aunt the Infanta Luisa, but as so many pretenders were calculated to complicate matters, the claim of Louis Philippe's grandson was ultimately waived in favor of the heir of Isabella. Early in 1874 the Prince of the Asturias, as he was then styled, visited this country, was entered as a student at the Military College at Sandhurst, and witnessed the autumn manœuvres at Aldershot, Dartmoor, and other places in the fall of the year. On Dec. 29, 1874, General Martinez Campos proclaimed him King of Spain in Valencia, and a few days later Al-

fonso, who had gone over to Paris in order to spend the *Jour de l'An* with his mother, left France for Spain, arriving at Madrid Jan. 14, 1875. He was most enthusiastically received. On Feb. 16, 1876, he departed from Madrid to take the command of the troops operating against the Carlists, and on the 20th of the following month he returned in triumph to the capital at the head of 25,000 men, having subdued the Carlist insurrection. In the same year the ex-Queen Isabella returned to Spain, and was received by her son at Santander (July 29). King Alfonso married on Jan. 23, 1878, at Madrid, his cousin the Princess Maria de las Mercedes, Infanta of Spain, daughter of the Due de Montpensier. (She was born June 24, 1860). The ex-Queen Isabella was much opposed to this union, and to mark her disapproval she left Spain and went to Paris before the marriage ceremony took place. Queen Mercedes died on June 26, 1878. King Alfonso married secondly on Nov. 29, 1879 Maria Christina daughter of the late Archduke Charles Ferdinand of Austria. (She was born July 21, 1858.) On Oct. 25, 1878, King Alfonso was fired at in Madrid by Juan Moncasi, a workman, but escaped unhurt. On Dec. 30, 1879, as the King and Queen were driving in an open carriage through the palace gates at Madrid, a youth named Francisco Otero Gonzalez Igans fired two pistol shots at the royal pair, one passing between them, and the other through an attendant's hat; but fortunately without doing further damage. Otero was tried in Feb. 1880, and sentenced to death. King Alfonso was invested with the Order of the Garter, at Madrid, by the Marquis of Northampton, Oct. 11, 1881. Queen Christina has given birth to two daughters—Maria de las Mercedes, Princess of the Asturias (born Sept. 12, 1880), and the Infanta Maria Teresa Isabel, born Nov. 12, 1882.

AL GAZALI, Abu Hamed Muhammed, Arabian philosopher and theologian. Head of a theological college at Bagdad; but, being unsatisfied as to the truth of the doctrines he taught, retired for ten years to Damascus. He then returned to Bagdad, and resumed teaching for fifteen years, the remaining years of his life being devoted to meditation. He wrote a treatise against the teaching of Aristotle, and against the orthodox Islamites. He has been called the Oriental Descartes. Mr. Lewes and M. Renan have given much attention to his writings. Born at Tous, 1058; died there 1111.

ALGER, Horatio, jun., an American author, born at Revere, near Boston, Jan. 13, 1834. He graduated at Harvard College in 1852, and engaged in teaching and literary pursuits. Afterwards he spent a year in Europe, corresponding for several journals. Returning to America, he resumed teaching and writing for periodicals. In 1866, he took up his residence temporarily in New York, where he became deeply interested in the condition of the street boys, concerning whom he wrote two series of tales and sketches, *The Ragged Dick* series, and *The Tattered Tom* series. He has also contributed to various magazines, and published a a novel, *Helen Ford*.

ALGER, William Rounceville, cousin of the preceding, was born at Freetown, Massachusetts, in 1823. He graduated at Harvard College and the Cambridge Divinity School, and became pastor of a Unitarian church at Roxbury, near Boston. In 1855, he succeeded Theodore Parker as minister of the 'Liberal Christians,' who worship in Music Hall, Boston, where he still continues to conduct the services. He has published, *The Poetry of the Orient, or Metrical Specimens of the Thought, Sentiment, and Fancy of the East* (1856), *A Critical History of the Doctrine of a Future Life* (1861), *The Genius of Solitude, or the Loneliness of Human Life* (1867), and *Friendships of Women* (1870).

ALHAZEN (full name, Abu Ali al-Hasan Ibn Alhasan), a mathematician of the 11th century, was born at Bassora, and died at Cairo in 1038. He is to be distinguished from another Alhazen who translated Ptolemy's *Almagest* in the 10th century. Alhazen having boasted that he could construct a machine for regulating the inundations of the Nile, was summoned to Egypt by the caliph Hakem; but, aware of the impracticability of his scheme, and fearing the caliph's anger, he feigned madness until Hakem's death in 1021. Alhazen was, nevertheless, a diligent and successful student, being the first great discoverer in optics after Ptolemy. His researches were prosecuted under the greatest disadvantages, as he was compelled to eke out a livelihood by copying his own works and selling them. To him, and not to Ptolemy, is due the explanation of the apparent increase of heavenly bodies near the horizon. He correctly attributed the phenomenon to the fact that the eye compares these bodies with intervening terrestrial objects. He taught, previous to Vitello, that vision does not result from the emission of rays from the eye, and wrote also on the refraction of light, especially on atmospheric refraction, showing, e. g., the cause of morning and evening twilight. He solved the problem of finding the point in a convex mirror at which a ray coming from one given point shall be reflected to another given point. As a writer, Alhazen is remarkable for prolixity and scholastic subtilty. Only two of his works have been printed—his *Treatise on Twilight*, and his *Thesaurus Opticæ*. (See Casiri, *Bibl. Arab. Hisp. Escur.*)

A'LIAS, (Lat., otherwise) a word used to denote a name or title that has been assumed by, or accidentally given to a person; as, Smith, *alias* Jones. An alias may be assumed by any one, but does not absolve him from the responsibility of an act committed under his assumed name. It is also a second writ issued from the division of the High Court of Judicature, where the first has been issued, and returned without effect.

A'LI BEY, an adventurer, supposed to have been a native of the Caucasus, who, when young, was taken by robbers and conveyed to Cairo, where he was bought by Ibrahim, a lieutenant of the janissaries, who entered him among the Mamelukes. For his gallantry against the Arabs, he was created a bey. In 1758 his patron was murdered by a party headed by a person also called Ibrahim, a Circassian. In 1763 Ali attained the dignity of sheikecbalad, which was the first in the republic, and soon after slew Ibrahim, to revenge the murder of his patron. This raised against him numerous enemies, who obliged him to fly to Acre, where he was protected by the sheik Daher. In 1766 he was recalled by the people, and, after revenging himself upon his enemies, he declared war against the Arabs, and by the success of his achievements, encircled his name with renown. Having now risen to be the head of the government, Egypt, under his rule, began to revive; agriculture flourished, and the country seemed to bid fair to recover its former splendor. In 1768, war broke out between Russia and Turkey, and Ali sent 12,000 men to serve in the Ottoman army. His enemies reported at Constantinople that these troops were designed to assist the Russians; in consequence of which a capigi, and four attendants, were sent to take off his head. Ali being informed of this, seized these messengers of death and handed them over to the fate they designed for himself. He then declared war against the Porte, and for a time preserved his independence, and obtained several advantages. At last his principal commanders revolted with their troops, and in a battle which took place between Ali and the forces of one of his chief Mamelukes, he was taken prisoner, and died of his wounds. The object of Ali was to re-establish the independence of Egypt and to resuscitate some of the greatness of its former grandeur. Born 1728; died 1773.

ALIEN. An alien is a person born out of the jurisdiction of the United States, and not naturalized. An alien desiring to be naturalized must declare on oath his intention to become a citizen of the United States; two years afterwards must declare on oath his intention to support the constitution of the United States and renounce allegiance to every foreign power, including that of which he was before a subject; must prove residence in the United States for five years, and in the state where his application is made for one year, as a good citizen; and must renounce any title of nobility. Where a citizen of the United States removes to a foreign country, is married to a woman who is a native of that country, and remains an indefinite time, his child, in the absence of any law of the United States to the contrary, can inherit property as a citizen of the United States. But if their father is a citizen of a foreign country, and their mother a native of the United States who has married and settled abroad, then the children cannot inherit land in the United States. An alien cannot inherit land, but can hold land which he has purchased. If land is bequeathed to an alien, he holds it subject to the right of the state to forfeit it. Where an alien dies intestate, his land goes to the state, provided there are no heirs who are citizens. An alien can take and hold lands granted to him by the state, and his heirs, although they cannot inherit it. An alien cannot vote or hold any political office, but he can inherit personal property. An alien can sue or be made the defendant in a suit in the United States courts. If he is sued in a state court he can have the suit removed to the United States courts. See Naturalization in Am. Supp.

AL'LEGRI, Gregorio, a celebrated musician, whose compositions are still retained in the pontifical chapel. The chief is the *Miserere*, which is always sung on Good Friday. Clement XIV. sent a magnificent copy of the *Miserere* to King George III. The composer studied music under Nanini, the friend of Palestrine. He held a appointment in the choir of the Sistine chapel for more than 20 years, and was one of the composers for stringed instruments. Born at Rome, 1580; died 1652.

AL'LEINE, Joseph, a nonconformist minister, who, in 1655, became curate of Taunton. In 1662, he was ejected for nonconformity, but continued to preach privatly, for which he was imprisoned. His book entitled *An Alarm to Unconverted Sinners* has gone through numerous editions, and is still popular. Born at Devizes, 1634; died at Bath, 1668.

AL'LEINE, Richard, a nonconformist divine, educated at Oxford, and appointed rector of Batcomb, Somerset, 1641, but ejected in 1662. Author of the popular *Vindiciæ Pietatis*. Born at Dichet, Somerset, 1611; died at Frome Selwood, 1681.

ALLEN, Ethan, an American revolutionary soldier, born at Litchfield, Ct., Jan. 10, 1737; died Burlington, Vt., Feb. 12, 1789. His parents removed to Cornwall, and afterwards to Salisbury. Four of his brothers emigrated in 1772 to the territory west of the Green Mountains, where Ethan had preceded them in 1766, and where they became conspicuous in the border feuds and in the revolutionary conflict. This territory called 'The New-Hampshire Grants,' was claimed by New York; but the settlers under the leadership of Allen, repulsed their sheriffs and constables, until the Revolution turned their attention in another direction. New York state declared A. an outlaw, and offered a reward of $750 for his capture. After the battle of Lexington, a plan for the capture of Ticonderoga was devised in Hartford; and A. was given command of the expedition. He set out at once at the head of his 'Green Mountain Boys.' They arrived at the lake opposite the fortress, on the evening of May 9; and at daybreak, A., with 83 men, surprised Ticonderaga, summoning Captain Delaplace, who commanded the post, to surrender 'in the name of the great Jehovah and the continental congress.' In this manner 2 officers, 48 rank and file, and 120 pieces of artillery were captured. The capture of Crown Point by Col. Warner the same day, and of a sloop-of-war soon after, gave them the mastery of Lake Champlain. A.'s success as a partisan, occasioned his being twice despatched into Canada, during the fall of 1776, to win over the Canadians to the American cause. In the last of these expeditions, he undertook, with Col. Brown, the capture of Montreal. Crossing the river with 110 men on the morning of Sept. 25, he was attacked by a large force, before Col. Brown could come to his assistance, and made prisoner. He was put in irons, and treated with great severity by Gen. Prescott; he was then sent to England. After three weeks' confinement in Pendennis Castle, he was, in Jan. 1776, sent to Halifax; and, five months later, was removed to New York. He was treated with great kindness by the captain; and, while on the passage, he refused to join in an attempt to seize the vessel, which prevented the execution of the plan. In May 1778, he was exchanged for Col. Campbell, returned to Vermont, where he was received with honors, and accepted the command of the militia. He also received from Congress the commission of lieut.-col. in the Continental Army. A fruitless attempt was made by the British, through Beverley Robinson, to bribe him to lend his support to a union of Vermont, with Canada, the only result of which was, that by feigning negotiations, A. was able to secure the neutrality of the British towards his mountaineers until the close of the war. He was afterwards elected member of the State legislature and a special delegate to Congress, which afforded him the opportunity of carrying out his main object,—the ultimate recognition of Vermont as an independent state. Before the end of the war, he removed to Bennington, later to Arlington, and finally to the vicinity of Onion River, where he died. Two of his sons, graduates of West Point, became captains of artillery. Besides a narrative of his captivity, and several pamphlets on the controversy with New York, he published in 1784 'Allen's Theology or the Oracles of Reason.'

ALLEN, Ira, born in Cornwall, Conn., April 21, 1751, was a younger brother of Ethan Allen. He emigrated in 1772 to Vermont, where he became a prominent citizen. He did good service at the battle of Bennington as colonel of a militia regiment. He bore a conspicuous part in settling the early conflicts of Vermont with the neighboring states. In 1795 he went to France to purchase arms for his state, but was taken prisoner on the voyage home, carried to England, and there, after an eight years' lawsuit on the charge of attempting to supply the Irish with arms, the case was decided in his favor. In 1819 he was imprisoned in France, and returned to America in 1801. He wrote a *Natural and Political History of Vermont*. He died Jan. 7, 1814.

ALLEN, William, D.D., was born in Pittsfield, Mass., on Jan. 16, 1768. He graduated from Harvard in 1802. After being licensed in 1804, he preached in several places in the western part of New York, and then became a regent of Harvard College. He published the first edition of his *American Biographical and Historical Dictionary* in 1809. The second edition of this work appeared in 1832; the third, in 1857. In 1807, he prepared the lives of American ministers for Rev. David Bogue's *History of the Dissenters*. In October, 1810, he was ordained pastor of the church in Pittsfield, as his father's successor. In 1812, he married Maria M., daughter of President John Wheelock. He was made president of Dartmouth College in 1817, and from 1820 to 1839 was president of Bowdoin College. Among his works are contributions of *Words not found in the Dictionaries of the English Language*, to Worcester and Webster; *Baccalaureate Addresses*, 1823–29; *Junius Unmasked*, identifying Lord Sackville as the author of the famous Junius letter; *Accounts of Shipwrecks; Psalms and Hymns*, 1835; *A Discourse at the Close of the Second Century of the Settlement at Northampton, Mass.*, 1854; *Wunnisoo, or the Vale of Housatonnuk*, a poem, 1856; a *Dudleian Lecture* at Cambridge; *Christian Sonnets*, 1860; *Poems of Nazareth and the Cross*, 1866; *Sacred Songs*, 1867.

ALLEN, William, an eminent chemical and experimental professor, who lectured at Guy's Hospital. In his chemical investigations he demonstrated that the diamond was of pure carbon, and in conjunction with Mr. Pepys proved the proportion of carbon in carbonic acid. Mr. Allen, who was the son of a Spitalfields silk manufacturer, and an active member of the Society of Friends, carried on business for many years as a pharmaceutical chemist, in Plough Court, Lombard street. He was actively concerned in establishing the Pharmaceutical Society. Born in London, 1770; died at Lindfield, Sussex, 1843.

ALLEN, William Henry, an American scholar and educator, born at Manchester, Maine, March 27, 1808. He graduated at Bowdoin College in 1833, and became a teacher of the classics in the Academy of Cazenovia, New York, until 1836, when he was appointed Professor of Natural Philosophy and Chemistry in Dickinson College, Carlisle, Pennsylvania; and from 1846 to 1849 he was Professor of Philosophy and English Literature. From 1849 to 1862 he was president of Girard College, Philadelphia, and subsequently president of the Agricultural College of Pennsylvania. In 1867 he was recalled to the presidency of Girard College, a position he held till his death. In 1872 he was chosen president of the American Bible Society. In 1846 he received the degree of M.D. from the Philadelphia College of Medicine, and in 1850 that of LL.D. from Union College, New York, and from Emory and Henry College, Virginia. He has delivered numerous addresses and reports on education, and has contributed to reviews and magazines many articles on philosophical, literary, and educational topics. He died in 1878.

ALLESTRY, or ALLESTREE, Richard, a divine, who, in 1641, took up arms, with many other young men of the university of Oxford, in favor of Charles I. After serving some time in a military capacity, he returned to his studies, but afterwards again entered the army. At the end of the civil war he took orders, and in 1659 visited Charles II. in Flanders, and on his return was seized at Dover, but found means to secure his despatches. At the Restoration he was made canon of Christ church, and served one of the lectureships of Oxford, the salary of which he gave to the poor. In 1660 he took the degree of D.D., became chaplain to the king, and regius professor of divinity. In 1665 he was appointed provost of Eton. He was buried in the chapel of Eton College, where there is a monument to his memory. He erected at his own expense the West side of the outward court of Eton College and the grammar school in Christ Church College. Born at Uppington, Shropshire, 1619; died at Eton, 1681.

ALLIBONE, Samuel Austin, LL.D., born in Philadelphia, April 17, 1816. Early in life he acquired a high reputation for his attainments in English literature, and though engaged in mercantile pursuits, his favorite studies were not neglected. The first volume of his great work, *A Critical Dictionary of English Literature, and British and American Authors*, was published in 1858, and the third (the last) in 1871. The three large volumes contain notices of 46,499 authors, and 40 classified indexes of subjects. He has contributed articles to the *North American Review*, and other periodicals, and has published several tracts and religious essays. He was, for several years, the editor of the publications of the American Sunday School Union, and has published *Alphabetical Index to the New Testament*, 1869; *Union Bible Companion*, 1871; *Poetical Quotations from Chaucer to Tennyson*, 1873; *Prose Quotations from Socrates to Macaulay*, 1876; and *Great Authors of All Ages*, 1879. He is now connected with the Lenox Library, New York.

ALLINGHAM, William, a poet, born about 1828, at Ballyshannon, Ireland, where his father was manager of the Provincial Bank, was educated at a school in Ireland, and from an early age contributed to periodical literature. In 1850 he published his first volume of 'Poems,' dedicated to Leigh Hunt, who encouraged his early literary attempts, and afterwards befriended him in matters of more importance. In 1854 appeared *Day and Night Songs*, and in 1855 an enlarged edition of the same, illustrated by Millais and other artists. *Laurence Bloomfield in Ireland*, a modern poem in twelve chapters, appeared in 1864. Mr. A. holds an appointment in the Customs in England, and obtained a literary pension in 1864. He succeeded Mr. J. A. Froude in the editorship of *Frazer's Magazine* in 1874.

ALLIX, Pierre, divine of the French Reformed Church. Came to London after the revocation of the Edict of Nantes, and opened a church for French exiles. He received the degree of doctor of divinity from both the English universities, and in 1690 was made treasurer and canon of Salisbury cathedral. His works are chiefly of a controversial character. Born at Alençon, 1641; died in London, 1717.

ALLORI, Alessandro, a painter of Florence, who was instructed by his uncle Bronzino. He was in most repute as a portrait painter. Born at Florence, 1535; died 1607.

ALLORI, Christofano, son of the above, a better painter, and most skilful colorist. Some of his copies of the 'Magdalen' of Correggio have been taken to be duplicates of the original by Correggio himself. Born at Florence, 1577; died 1621.

ALLOUEZ, Claude, a Jesuit missionary, who visited Lake Superior in 1665–67, founded a mission at Green Bay in 1669, where he endured many hardships, and in 1687 was at St. Louis. While confined to his bed at that place by illness, he stole away on hearing of the approach of La Salle, whom he had injured. Born 1620; died 1690.

'ALL THE TALENTS,' a name applied externally to the second Grenville Administration, formed in January, 1816, which included several politicians of the very highest ability.

AL'MADEN, a town of Spain, in the province of Ciudad Real, 55 miles from Ciudad Real, with an excellent practical school of mines. It has very productive mines of quicksilver, which have been worked from very remote times. A depth of 1,000 feet has been reached, and the ore increases in richness. The mines belong to the Spanish Government. Pop. about 9,000.

AL'MAMON, caliph of Bagdad, was the son of Haroun-al-Raschid, and succeeded to the throne in 813.—He was a great encourager of learned men, founded an academy at Bagdad, calculated a set of astronomical tables, and caused the works of the most celebrated ancient authors to be translated into Arabic. His reign was much disturbed by revolts and hostilities with the Greek Theophilus. Born 786; died 833.

ALMANAC. The first Almanac in America was published at Cambridge in 1639 by John Day. Mr. Ainsworth R. Spofford, the Librarian of Congress, in his *Brief History of Almanacs*, published in the *American Almanac* for 1878, gives a list of almanacs which have been published in this country as follows: *Father Abraham's Almanac*, by Abraham Weatherwise, Philadelphia, 1759–99; Nathanael Low's *Astronomical Diary or Almanac*, Boston, 1762–1827; Isaiah Thomas's *Massachusetts, Connecticut, Rhode Island, New Hampshire, and Vermont Almanac*, Worcester, Mass., and Boston, 1775—1822; *Poor Will's Almanac*, Philadelphia, from 1770 till 1840; the *Virginia Almanac*, Williamsburg and Richmond, 1751—1829; the *South Carolina and Georgia Almanac*, Charleston, 1760—1800; and the following which are still published: R. B. Thomas's *Farmer's Almanac*, Boston, 1793; the *Massachusetts Register and Almanac*, Boston, 1767; Webster's *Calendar, or the Albany Almanac*, 1783; Bickerstaff's *Boston and New England Almanac*, Exeter and Concord, N. H., 1797; D. Robinson's *Maine Farmer's Almanac*, Hallowell, 1817; and Daboll's *New England Almanac*, New London, Conn., 1777. The *American Nautical Almanac* was founded by Admiral Charles Henry Davis in 1849, its present editor being Prof. Simon Newcomb. Peter Force's *National Calendar*, published at Washington from 1820 to 1836, was an official register of the government, with useful information and abstracts of public documents. The *American Almanac and Repository of Useful Knowledge* was published from 1830 to 1861 at Cambridge and Boston, containing astronomical and meteorological information, a valuable collection of statistics, a chronicle of events, obituary notices, etc.; the *National Almanac and Annual Record*, published at Philadelphia by George W. Childs, 1863—1864, was intended to supersede it. John Downes's *United States Almanac* was first published at Philadelphia in 1843, but only three issues were published. A single volume was published at Hartford, Conn., by David N. Camp in 1869—*The American Year-Book and Annual Register*. Mr. A. R. Spofford's *American Almanac*, begun in 1878, is the best American Almanac. The *Tribune Almanac*, began with the *Whig Almanac* issued by Horace Greeley in 1838. The New York *World Almanac* was issued from 1868—1876. The New York *Herald Almanac* was published from 1872 to 1878. The Albany *Evening Journal Almanac* was first issued in 1857, and the Albany *Argus Almanac*, 1874. The New York *Star* issues an almanac, and before the New York *Evening Express* was incorporated with the *Evening Mail* it published a statistical almanac. Of contemporary newspaper almanacs, those of the Philadelphia *Public Ledger*, first printed in 1870, and the Philadelphia *Times* (1876), are well known. The New York *Clipper Annual* is the representative of the sporting interest. The list of religious or denominational almanacs, and the date when they were first issued, is as follows: The *Church Almanac* (Protestant Episcopal), 1830; *Catholic Almanac and Directory*, 1833; *Methodist Almanac*, 1824; *Universalist Register*, 1836; *Baptist Almanac*, 1842; *American Universalist Register and Year-Book*, 1846; *Presbyterian Historical Almanac*, 1858; *Family Christian Almanac*, 1821. The Protestant Episcopal almanac is known as *Whittaker's Churchman's Almanac*. The *Catholic Almanac* has a large circulation. Among comic almanacs may be mentioned that issued by *Puck*. Vennor's *Weather Almanac*, the *Irish-American Almanac*, the *Farmer's Almanac*, and the *Catholic Family Annual* have an extensive circulation. Almanacs issued by patent-medicine dealers and for various other advertising purposes are not included in the above list.

ALMONDBURY, or ALMONBURY, a town and parish of England, in the West Riding of Yorkshire, situated on the river Calder, near Huddersfield. The town has a good church and a free grammar-school, founded by James I. Area of parish 28,092. Manufactures chiefly cloths for waistcoatings, shawls, fancy goods, and broad and narrow woollen fabrics. Pop. of the town, 11,659.—This place is supposed to be the *Cambodunum* of the Romans, and to have been the residence of some of the Saxon kings.

ALMQVIST, Karl Jonas Ludwig, Swedish author. Educated at the university of Stockholm, and after trying to establish an agricultural colony, devoted himself to literature, writing romances, poetry, philosophical, theological, and mathematical treatises, rapidly obtaining great reputation in almost every department of literature. In 1851, having committed forgery and murder, he fled to America, where, under an assumed name, he became the private secretary of Abraham Lincoln, after whose death he returned to Europe, to avoid the consequences of his malpractices. Born at Stockholm, 1793; died at Bremen, 1866.

ALOIDÆ, or Aloiadæ, the designation of Otus and Ephialtes, sons of Poseidon by Iphimedea, wife of Aloeus. They are celebrated for their extraordinary stature, being 27 cubits in height and 9 in breadth when only 9 years old. The story of their piling Pelion upon Ossa in their war with the Olympian gods is one of the best known of the early Greek myths. According to Homer's account, they were destroyed by Apollo ere their beards began to grow. (*Odyssey*, xi. 305; *Iliad*, v. 385.)

ALOM'PRA, a powerful chief, who, from being the head of a petty Asiatic village, became, by conquest and barbarity, the founder of the reigning dynasty of Burmah. He was a man of remarkable energy and ability, and made himself one of the most powerful monarchs of the East. Born 1711; died, near Martaban, 1760.

ALPI'NI, Prospero, a Venetian physician and botanist. He was first a soldier, but quitted that profession and went to Padua, where he made so great a progress in learning that he became deputy rector and syndic. In 1578 he took his degree of M.D., and in 1580 went to Egypt as a physician to the Venetian consul. He resided there three years, in which time he greatly improved himself in botany. He was the first who discovered the sexes and generation of plants, and published an account of the coffee plant. On his return to Venice, in 1586, Andrew Doria, prince of Melfi, appointed him his physician; and in 1593 he was called to the botanical professorship at Padua, which he held until his death. Born at Marostica, Venice, 1553, died at Padua, 1617.

ALSTED, Johann Heinrich, German divine. Professor of Philosophy and Divinity at Herburn and Weissenburg, and a very voluminous and learned writer. Born 1588; died 1638.

ALSTROEMER, John, an eminent patriotic Swede, who, after visiting England, returned to his own country, and became remarkable for the great improvements he there introduced into arts and manufactures. For his great efforts he was made a knight of the Polar Star, chancellor of Commerce, and a member of the Academy of Science. There is a statue to his honor in the exchange at Stockholm. Born at Alengsoes, 1685; died 1761.

ALTENSTEIN, a castle upon a rocky mountain in Saxe-Meiningen, on the south-western slope of the Thüringer Wald, not far from Eisenach. It is the summer residence of the dukes of Meiningen, and is surrounded by a noble park, which contains, among other objects of interest, a remarkable underground cavern, 500 feet long, through which flows a large and rapid stream. Boniface, the apostle of the Germans, lived and preached at Altenstein in 724; and near the castle is the place from which, in 1521, Luther was seized, to be carried off to the Wartburg. There used to be an old beech called 'Luther's tree,' which association connected with the Reformer, but it was blown down in 1841, and a small monument now stands in its place.

ALT'HEN, Ghan, or Jean, a Persian, who was the first to introduce madder (for dyeing) to France. He was the son of the governor of a Persian province, but with the exception of himself, all his family were massacred when the Persian empire was overthrown by the usurper Thamas-Kouli-Khan. A., during his life, was treated ungratefully, but, by way of atonement, after his death, a tablet was, in 1821, erected to his memory in the museum of Avignon. Born 1711; died at Caumont, in France, 1774.

ALT'KIRCH, a town of France, department of the Upper Rhine. Pop. 3,100. A station on the Eastern Railway of France.

ALVA'REZ, Francisco, a Portuguese divine, sent by Manuel, king of Portugal, on an embassy to Abyssinia, where he remained six years, and on his return a narrative of his mission was published. Born at Coimbra, about 1460; died about 1540.

ALZEY, a walled-town of Hesse-Darmstadt, on the Salzbach, 19 miles from Mainz. Has a trade chiefly in leather. Pop. 5,250.

AMADEUS, PRINCE, AMADEO FERDINANDO MARIA, DUKE OF AOSTA, formerly King of Spain, is the second son of the late Victor Emmanuel, King of Italy, and was born May 30, 1845. Entering the army, he became Captain of a Brigade of Infantry at Aosta, then Lieutenant-General and Chief of a Brigade of Cavalry. In 1869 he was also appointed Vice-Admiral. Marshal Prim, after the revolution of 1868, offered the Spanish crown first to the King of Portugal, next to the Duke of Genoa, and afterwards to the Prince Leopold, all of whom refused it. Finally, he fixed on the young Duke of Aosta, who, on Oct. 19, 1870, formally announced his candidature to the Regent Serrano. On the 16th of the following month the Cortes elected him King of Spain by 191 votes against 120; 64 deputies voting for the Republic, 22 for the Duke de Montpensier, 8 for Marshal Espartero, 2 for the Infant Alfonso, and 1 for the Duke de Montpensier's daughter, while 18 deputies abstained from voting. A deputation immediately proceeded to Florence to convey to the Duke of Aosta the offer of the crown, which he formally accepted Dec. 4, 1870. The young king landed at Cartagena on Dec. 30, the very day Marshal Prim expired from the wounds received at the hands of an assassin a few hours previously. His reign was a brief and troublous one. He was unpopular with the masses of the Spanish people, whose dislike to foreigners is a marked trait in their character; and his position, which had never been secure, became extremely dangerous in the summer of 1872, when a Carlist rising took place in the northern provinces, and an insurrection broke out almost simultaneously among the sailors and the workmen in the arsenal at Ferrol, who hoisted the red flag, and for some time set the government at defiance. On the 10th of July in that year an unsuccessful attempt to assassinate the King and Queen was made by five men, who posted themselves in the Calle Arnal in Madrid, and fired upon the carriage of their Majesties. At length Amadeo prudently resolved to abdicate. On Feb. 11, 1873, he addressed to the Cortes a message, in which he stated that in consequence of the incessant struggles of contending parties his efforts to give peace and prosperity to the country must prove futile, and that therefore he had determined to depose the crown. The very next day the Duke and his consort left Madrid, and proceeded first to Lisbon, and thence to Genoa, where they landed on the 9th of March. The Duke arrived in Florence on the 16th. Immediately on his return from Spain, he resumed the status of an Italian citizen. On March 14, 1873, his Royal Highness was again enrolled in the list of Senators; and in the Chamber of Deputies, Signer Sella, the Minister of Finance, presented a bill for restoring to him his allowance from the civil list, viz., 400,000 lire. The bill passed almost unanimous. At this period, also, King Victor Emmanuel conferred on the Duke of Aosta the rank of lieutenant-general. The Duke married, May 30, 1867, the Princess Mary (born Aug. 9, 1847), daughter of Prince Charles Emmanuel del Pozzo della Cisterna (she died Nov. 7, 1876); and has three sons, Emmanuel Philibert Victor Eugène Albert Genova Joseph Mary, Duke of Apulia, born Jan. 13, 1869; Victor Emmanuel Turin John Mary, Count of Turin, born Nov. 24, 1870; and Louis Amadeus Joseph Mary Ferdinand Francis, born Jan. 31, 1873.

AMAL'ARIC, or AMAURY, king of the Visigoths, was the son of Alaric II. He succeeded his grandfather Theodoric in 526. He married Clotilda, the daughter of Clovis, king of France, whom he used barbarously to make her embrace Arianism. At length she complained to her brother Childebert, king of Paris, who, in 531, marched against him and defeated him in a battle fought in Catalonia. He fled to a church where he was slain. Born 502; died 531.

AMALRIC, or AMAURI, of BENA, founder of a school of Pantheists. He lectured at Paris about 1200; but the university condemned his doctrines, and Pope Innocent III. ordered him to recant his errors, which he did, but shortly afterwards died from humiliation and grief. Ten of his followers were burnt, and his body was exhumed and burnt. The Lateran Council of 1215 formally condemned his doctrines. He died 1209.

AMALTHÆ'A, a daughter of Melissus, king of Crete, who fed Jupiter with goat's milk. Hence she has been called a goat, and some have maintained that Jupiter, to reward her kindness, placed her in heaven as a constellation, and presented one of her horns to the nymphs who had superintended his infant years. This horn was called the Cornucopia, or horn of plenty, and had the power of giving the nymphs whatever they desired.

AMA'TI, an Italian family, eminent as violin-makers. Their instruments are called Cremonas, from their having their residence and carrying on their business in that town. They lived in the 16th and 17th centuries.

AMAU'RI I., king of Jerusalem, succeeded his brother Baldwin III. in 1165. He was a courageous and enterprising prince; but these qualities were sullied by avarice and cruelty. He died 1173.

AMAU'RI II., king of Jerusalem, succeeded his brother Guy de Lusignan in 1194. His title was contested by Isabella, second daughter of Amauri I.; but on her becoming a widow, he married her, and was crowned. The Saracens having taken his capital, he applied for assistance to the European princes; but he died (1205) before they could come to his rescue.

AMAZI'AH, of Judah, succeeded his father Joash at the age of 25. He blended idolatry with the worship of God. With the assistance of the Israelites, he defeated the Edomites in the Valley of Salt; but afterwards commenced war on his allies, by whom he was taken prisoner. Slain by his own subjects, 810 B.C.

AMBALA, a division and district of British India, under the jurisdiction of the lieutenant-governor of the Punjaub The division comprises the districts of Ambala and Loodhiana in the plains, and Simla in the Himalayas. Pop. (1872) 1,652,728. The Ambala district stretches N.E. and S.W. along the lower face of the Himalayas. It consists almost entirely of an alluvial plain between the rivers Jumna and Sutlej. The Scinde, Punjaub, and Delhi Railway passes through the center of the district. Area, 2628 sq. miles. Pop. nearly 1,040,000, of whom about 690,000 are Hindoos, and 287,000 Mohammedans.—AMBALA, the capital of the above district. A large town, with about 51,000 inhabitants. An important railway station.

AMBI'ORIX, a king of the Eburones, in Gaul. He was a great enemy to Rome, and was killed in a battle with Cæsar, in which 60,000 of his countrymen were slain.

AMBLETEUSE, a seaport town of France, in the department of the Pas de Calais, on the English Channel, 6 miles north of Boulogne. From the accumulation of sand in its harbor it has lost its importance as a seaport, and the town is now almost deserted. It possesses an historical interest as the landing-place of James II. after his abdication in 1688; and Napoleon I. in 1804 attempted to improve the harbor for the flat-bottomed boats by means of which he was to invade England. Near Ambleteuse is the column which he erected to the grand army in 1805. Pop., about 700.

AMBRA'CIA, a city of Epirus, near the Acheron, the residence of King Pyrrhus about 295 B.C. The site of the modern Arta.

AMELOT DE LA HOUSSAYE, ABRAHAM NICHOLAS, French political writer. He wrote a history of the Government of Venice, and translated *The Prince* of Machiavelli, Socrates, and other authors. Born at Orleans, 1634, died at Paris 1706.

AMENDMENT. The term amendment is applied to an alteration of the Constitution of the United States. To render an amendment valid it must be first proposed by two-thirds of both houses of Congress, and must be ratified by the legislatures of three-fourths of the several States. A recent change of this character is the Fifteenth Amendment, which ordains that no man shall be disfranchised on account of color or race.

AMERICAN LITERATURE. See UNITED STATES, LITERATURE OF THE.

AMES, EDWARD, D.D., a bishop of the Methodist Episcopal Church in America, born at Amesville, Ohio, May 20, 1806. After studying at the Ohio University, he opened, in 1828, a high school at Lebanon, Illinois, which afterwards grew up into McKendree College. In 1830 he entered the itinerant ministry in the Indiana Conference. In 1840 he was chosen Corresponding Secretary of the Methodist Missionary Society for the South and West. From 1844 to 1852 he was a presiding elder in the Indiana Conference, and was chosen bishop in 1852. He was the first Methodist bishop who visited the Pacific Coast. During the civil war he was a member of several important commissions. Since 1861 he has resided at Baltimore, Maryland.

AMES, FISHER, an eminent American statesman and political writer, son of Nathanial Ames, a physician, was born at Dedham, in Massachusetts, on 9th April 1758. He studied at Harvard College, where he graduated in 1774. After practising the law for some little time, he abandoned that profession for the more congenial pursuit of politics, and in 1788 became a member of the Massachusetts convention for ratifying the constitution. In this assembly he bore a conspicuous part, and in the next year, having passed to the house of representatives in the state legislature, he distinguished himself greatly by his eloquence and sprightliness and readiness in debate. During the eight years of Washington's administration he took a prominent part in the national councils; and on Washington's retirement, he returned to his residence at Dedham to resume the practice of the law, which the state of his health after a few years obliged him to relinquish. He still continued his literary labors, and published numerous essays, chiefly in relation to the contest between Great Britain and revolutionary France, as it might affect the liberty and prosperity of America. Four years before his death he was chosen president of Harvard college, an honor which his broken state of health obliged him to decline. He died on the 4th July 1808, admired and respected by his countrymen from the brilliancy of his talents and his private

virtues. His writings, which abound in sparkling passages, displaying great fertility of imagination, were collected and published, with a memoir of the author, in 1809, by the Rev. Dr. Kirkland, in one large octavo volume. A more complete edition in two volumes was published by his son, Seth Ames, in 1854.

AMES, Joseph, author of a valuable work on the progress of printing in England, called *Typographical Antiquities* (1749), which is often quoted by bibliographers. He was born in 1689, and died in 1759. The best editions of his work are those published with the additions of Herbert (1785–90), and of Dibdin (1810–16). These both include a life of Ames written by Mr. Gough.

AMES, William, a Puritan divine. He was educated at the grammar school of Ipswich and Christ's College, Cambridge, and then went to Franeker, in Holland, where he was chosen professor of divinity. He afterwards settled at Rotterdam as associate with Hugh Peters, who had gathered a congregation of Brownists in that city. He was accounted one of the foremost theologians of his time, and, under the Latinized form of his name, 'Amasius,' gained a great influence by his learned writings.

AM'GA, a river of Siberia, rising in the mountains of Yablonoi Krebet; and after a course of 466 miles falling into the Alden in long. 135° E.

AMHERST, a post township of Hampshire county, Massachusetts, United States. It is the seat of one of the best colleges in America, founded in 1821, chiefly for the purpose of educating for the ministry. There are about 360 students. The town is intersected by the Connecticut River, the water power of which is available for several factories. Pop. about 5,000.

AMHERST, Jeffrey, Lord, a distinguished British general, who was descended from an ancient Kentish family. He entered the army 1731, and in 1741 was aide-de-camp to General Ligonier, under whom he served at the battles of Dettingen, Fontenoy, and Rocoux. In 1756 he was appointed colonel of the 15th regiment of foot; and in 1758 was made major-general, and went to America, commanding at the siege of Louisburg. Forts Duquesne, Ticonderoga, Crown Point, and Niagara, were afterwards reduced, and the British prestige, which had suffered considerable in Canada, was entirely restored. In 1763 he returned to England, having been previously made a Knight of the Bath, received the thanks of Parliament, and was appointed to the governorship of Guernsey, and in 1776 was created Baron Amherst of Holmesdale. In 1778 he was made commander-in-chief of the army in England, and was active but humane, in suppressing the London riots of 1780. A change of the ministry occurring, he lost his military appointments, but received them again, to voluntarily resign them in 1795, and a year afterwards he was made a field-marshal. Born at Sevenoaks, 1717; died 1797.

AMHERST, William Pitt Amherst, Earl, nephew of the above, who, having no child, procured the reversion of his barony for this gentleman. He was a pensioned politician and diplomatist of the Pitt administration, and in 1716 was sent out to Pekin to effect a treaty of commerce with the emperor of China; but as he would not prostrate himself before that sovereign, nothing was effected. On his return home he was wrecked in the Indian Seas, and suffered considerable hardships. He was governor-general of India from 1823 fo 1823, and created an earl in 1826. Born 1773; died 1857.

AMHERST COLLEGE, at Amherst, Mass., is one of the principal colleges in the United States. It was founded 1821 by the Orthodox Congregationalists, especially for the education of young men for the ministry; but its charter was not obtained till 1825. Its first president was the Rev. Zephaniah S. Moore, who in 1823 was succeeded by the Rev. Heman Humphrey, who contributed largely towards the success of the college. He held his office till 1845, when he was succeeded by the Rev. Edward Hitchcock; and, on the resignation of the latter, in 1854, the Rev. William A. Stearns, D.D., was elected president. His administration lasted till 1876, when he died suddenly at the age of 76. Dr. Seelye, the present incumbent, is an alumnus of the college. This institution has been the recipient of very large donations from private persons, and appropriations from the state amounting to upwards of $50,000. The college funds amount in the aggregate to more than $650,000. Its charity fund for the gratuitous education of clergymen amounts to about $70,000; and its fund for free scholarships is at least $100,000. The names of the principal donors to the institution are Dr. William J. Walker, to the extent of $240,000; Samuel A. Hitchcock, $175,000; Samuel Williston, $150,000; and a college church was erected several years ago from funds contributed for the purpose by W. F. Stearns, son of the president. This institution occupies twelve public buildings, besides the president's house, including an edifice for scientific instruction, and the college church. There are also a gallery of art, a cabinet of natural history, containing about 100,000 specimens, and an astronomical observatory. The college has also an extensive and well-appointed gymnasium; and, at a certain hour, each class is required to attend, and engage in exercise under the direction of the professor, who is a thoroughly qualified physician. The faculty includes twenty-three instructors, and there are several endowed professorships. The number of students in 1882 was 352. The college library contains more than 30,000 volumes; and those of the societies, about 10,000. There is a scientific as well as a classical course; also a post-graduate course, established in 1874, in history and political science, with especial reference to a 'science of statesmanship;' while any graduate may arrange to pursue a course of study in any department additional to the college course. The tuition fee is $90 per annum.

AMICI, Giovanni Battista, constructor of optical instruments. His microscopes have a great reputation. Professor of mathematics at Modena, and superintendent of the observatory at Florence. Born at Modena, 1786; died 1863.

AMIOT, Père Joseph, a learned Jesuit missionary, who resided for more than fifty years at Pekin, the author of a Chinese and French dictionary, a Life of Confucius, and an elaborate description of the arts and sciences as known and practised in China. Born at Toulon, 1718; died at Pekin, 1794.

AMMAN, Johann Conrad, a physician, and one of the earliest writers on the subject of instructing the deaf and dumb. Born at Schaffhausen, 1669; died 1730.

AMMAN, Jost, a celebrated designer and engraver of Switzerland. Very little is known of his life. He was a splendid draughtsman, and his productiveness was remarkable. Born at Zurich, 1539; died at Nurenberg, 1591.

AMMEN, Daniel, Capt. U.S.N., born in Ohio, July 7, 1819. He was made midshipman, July 7, 1836; lieutenant, Nov. 4. 1849; captain, July 25, 1866. He was attached to the coast-survey, 1848–62; commander of steamer *Seneca*, at the battle of Port Royal, Nov. 7, 1861; commander of monitor *Patapsco* at Fort McAllister, Mar. 1863. He was at the attack on Fort Sumter, April 7, 1863; suppressed a mutiny while on board the California steamer *Ocean Queen*, bound to Aspinwall, in May, 1864; commander of steam-sloop *Mohican*, in two attacks on Fort Fisher; and was made chief of bureau of yards and docks, 1869. He afterwards was appointed chief of the bureau of navigation.

AMNESTY, an act of oblivion of past misconduct granted by the government to those who have been guilty of some offence. It is usually granted to whole communities or classes of individuals who have taken part, or are supposed to have participated, in some movement against lawful authority; it may be granted either before or after conviction, and its effect is entirely to efface the crime and cause it to be forgotten by the law. In the United States a provision in the fourteenth amendment to the Constitution establishes certain disqualifications as to holding office by persons who have participated in rebellion, and at the same time allowing the removal of these disqualifications by a special vote of Congress, which is in the nature of an act of amnesty.

AMON'TONS, Guillaume, a French philosopher, inventor of a system of telegraphing, who, on becoming deaf, applied himself to the study of mechanics and practical mathematics. In 1687 he presented to the Academy of Sciences a new hygroscope, which was approved. In the following year he became a member of the Academy. In 1695 Amontons published a book on the construction of barometers, thermometers, &c., which is the only production of his in print, except some papers in the Memoirs of the Academy of Sciences. In 1699, on account of the merit of his discoveries, he was admitted a member of that learned body. He invented a method of telegraphing by signals. Born at Paris, 1663; died 1705.

AMORETTI, Carlo, Italian mineralogist and archæologist, at one time professor of Common Law at Pisa. Born at Oneglia, 1741; died at Milan, 1816.

AMPELOP'SIS, in Botany, a genus of plants belonging to the natural order *Vitaceæ*, the Vine family. The species constitute the climbing shrubs called Virginian creepers.

AM'PHIARA'US, a celebrated soothsayer, son of Oicleus, or, according to others, of Apollo, by Hypermnestra, was present at the chase of the Calydonian boar, and accompanied the Argonauts in their expedition. He married Eriphyle, the sister of Adrastus, king of Argos. Amphiaraus received divine honors after death, and had a celebrated temple an oracle at Oropios, in Attica.

AMPHI'ON, son of Jupiter, by Antiope. He was born at the same birth as Zethus, on Mount Cytheron, where Antiope had fled to avoid the resentment of Dirce; and the two children were exposed in the woods, but preserved by a shepherd. When Amphion grew up, he made such progress in music, that he is said to have been the inventor of it, and to have built the walls of Thebes by the sound of his lyre. Mercury taught him the art, and gave him the lyre. The fable of Amphion's moving stones and raising the walls of Thebes by his harmony, has been explained by supposing that he persuaded, by his eloquence, a wild and uncivilized people

to unite together and build a town to protect themselves against the attacks of their enemies.—Another, the son of Jasus, king of Orchomenos, who married Niobe, daughter of Tantalus, by whom he had many children; among whom was Chloris, the wife of Neleus.

AM'PHISBŒ'NA, a genus of animals belonging to the order of lizards, found only in South America and the West Indies, but having the general appearance of snakes or worms. They are about 20 inches long, burrow in the soft earth, and appear to move with equal facility in either direction. Their food consists of ants and other small animals.

AMPHIT'RYON, a Theban prince, son of Alcæus and Hipponome.

AMRAOTI, or AMRAVATI, a district of British India, in the Commissionership of East Berar. It consists chiefly of a plain about 8000 feet above the sea level. The chief towns are Amraoti, Karinja, and Badnera. The district is intersected by the Great India Peninsula Railway. Area, 2566 square miles. Pop. 407,500.—AMRAOTI, the chief town of the above district. Pop. 23,400.

AM'RU-EBN-AL'-AS, a famous Saracen general, at first a great enemy of Mahomet, but afterwards his zealous disciple. He conquered Syria and Egypt, whence he extended his victorious arms to Africa. He conquered and became governor of Egypt, which flourished greatly under his administration. He died 663.

AMRU-AL-KAIS, an Arabian poet of the 7th century, contemporary with Mahomet, and one of the authors of the Moallakat, or 'suspended' poems, in the Kaaba at Mecca. His poem has been translated by Sir William Jones.

AMSDORF, NICHOLAUS VON, Protestant Reformer. One of the first students at the Wittenberg University, where he became Professor of Theology. One of the most steadfast supporters of Luther. He took part in founding the University of Jena. A learned and very vigorous controversialist. Born near Wurzen, 1483; died at Eisenach, 1565.

AMSTERDAM, a post township of the United States, in Montgomery county, New York, 52 miles from Albany. Manufacture scythes, saws, and carpets. Pop. 3,400.—It is a station on the Utica Railway.

A'MURATH I., or MURAD, a sultan of the Turks, who succeeded his father Orchan in 1360. He was the first who led the Turkish armies into Europe, which he overran as far as the Balkan, fixing his residence at Adrianople. He completed the conquest of the Greek empire. He founded the corps of Janissaries, conquered Phrygia, and, on the plains of Cassova, defeated Lazarus, the despot of Servia. In this battle he was wounded by an Albanian soldier, and died the next day. Born 1326; died 1389.

A'MURATH II. succeeded his father, Mahomet I., in 1422. The beginning of his reign was disturbed by pretenders to his throne; but, after suppressing these, he abdicated in favor of his son Mahomet, and retired to a society of dervishes, whence he was soon recalled to engage against the Hungarians, who had invaded the Turkish dominions. He gained a great victory over the Christians at Varna, and, in 1446, quelled a revolt of the Janissaries; and succeeded in resisting the famous Scanderbeg in making advances upon his territories. He then turned his arms against the Hungarians with his wonted good fortune. Finding his son inadequate to the responsibilities of an imperial station, he sent him to govern Asia Minor, and resumed the throne. Born 1404; died 1451.

A'MURATH III. succeeded his father, Selim II., in 1574. He was a weak-minded, frivolous man, and in his reign the formidable Janissaries rose to power. Born 1545; died 1595.

A'MURATH IV. succeeded his uncle Mustapha in 1622. In 1638 he recovered Bagdad from the Persians, after which he put 30,000 of the enemy, who had surrendered at discretion, to the sword.—The excessive cruelty and debauchery of this prince have stamped him with the character of being one of the worst sovereigns that ever reigned over the Ottomans. He died early from the effects of his mode of life. Born 1611; died 1640.

AMYRANT, MOISE, French theologian and metaphysician. Exhibited unusual talent while a student at the university of Poictiers, and afterwards studied theology at Saumur, and became a minister of the French Protestant church, and professor of theology. Chosen by the synod held in 1631 to represent the Protestant grievances to the king, he refused to kneel, thereby claiming equality with the Catholic priests. His oration delivered on that occasion was much admired. He was one of the most eminent of French Protestants, and the author of numerous theological treatises and devotional manuals still very popular. Born in Anjou, 1596; died 1644.

ANACON'DA, an enormous snake, sometimes measuring 30 feet in length, frequenting the swampy districts of South America, and feeding on water animals. It is not venomous, but its great size makes it an object to terror. The color of the body is rich brown, with bright orange rings on each side, and two rows of large black spots along the back. An oil, prized by the natives, is obtained from the carcase.

A'NADYR, or ANADIR, a river of Siberia, rising in Lake Ivachno, and after a course of 600 miles falling into an inlet of the Sea of Anadyr (North Pacific), in longitude 177° E.—There is only one station on its banks, which is called Anadyrsk. Lat. 65° N., long. 167° E.

ANAL'CIME, a silicate of soda and alumina, remarkable for peculiar optical properties possessed by it.

AN'ANI'AS, a hypocrite in the primitive church at Jerusalem, who was struck dead, with his wife Sapphira, for lying.

AN'APA, a fortified town on Sundjik Bay, on the eastern shore of the Black Sea, 47 miles S.E. of Yenikale, built on a projecting crag, at the north-western extremity of the Caucasian mountains. The exports are tallow, butter, hides, honey, wax, &c. Pop. 8000, consisting of Tartars, Circassians, Greeks, Jews, Armenians, and Russians. Lat. 44° 54′ N., long. 37° 18′ E. As a military post it has been greatly prized by Russia. Its fort was built by the Turks in 1784, and taken by the Russians in 1791 and in 1807, and only given up with the greatest reluctance. In May, 1828, it was forced to surrender to the Russians, and at the peace of Adrianople was ceded to Russia, with all the coast towns and forts from the Kouban to Fort St. Nicholas. During the war of 1855, it, with other ports on the Circassian coast, was destroyed by the Russians, but in the following year was again occupied by them.

ANASTASIUS II., raised to the throne of Constantinople by election in 713. He was soon afterwards superseded by Theodosius, and became a monk in Thessalonica. He afterwards headed a revolt against Leo, the successor of Theodosius, but was taken prisoner and (721) put to death.

ANAXARCHUS, a Grecian philosopher, who accompanied Alexander the Great into Asia, and enjoyed his intimate friendship. To him is attributed the saying, 'Kings, like the gods, can do no wrong.' Born at Abdera early in the 4th century B.C.

ANAXIMENES, Greek historian, who accompanied Alexander the Great to Persia, and wrote histories of Philip and Alexander, and of Greece, and probably one of the treatises generally ascribed to Aristotle. Born at Lampsacus, in the 4th century B.C.

ANCHISES, a grandson of the founder of Troy, and father of Anchises.

AN'DELYS, LES, a town of France, in the department of the Eure, properly consisting of two, the Great and the Little Andely, situated on the Seine, 20 miles from Evreux. At Great Andely is a collegiate church, with remarkably beautiful painted windows. Manufactures: artificial pearls, cloths, thread, and leather. Pop. 5400.—The ruins of Château Gaillard, a fortress built by Richard Cœur-de-Lion, are in the neighborhood of Ltitle Andely, and in a neighboring village, called Villiers, the painter Poussin was born, in 1594.

ANDERSON, ALEXANDER, the first wood-engraver in America (1798), born in New York City, 1775; died in Jersey City, Jan. 16, 1870. He was originally a physician, having graduated M.D. at Columbia College, New York. In 1804, he published *A General History of Quadrupeds*, with wood-engravings. Among his best-known works are 40 illustrations of Shakspeare, and those in Webster's Spelling-book. Mr. B. J. Lossing prepared a memorial lecture of this pioneer engraver.

ANDERSON, JAMES, a Scotch antiquary, who edited for publication many of the public records of the kingdom of Scotland. Born at Edinburgh, 1662; died 1728.

ANDERSON, SIR EDMUND, an English judge, who was in the commission for trying Mary, Queen of Scots; and presided at the trial of Secretary Davison, for issuing the warrant by which that unhappy princess was executed. Born in Lincolnshire; died 1605.

ANDERSON, MARY, an American actress, born in Sacramento, Cal., July 28, 1859. Her parents went to Louisville, Ky., while she was an infant, and the death of her father took place when she was but four years old. She was educated at the Ursuline convent in Louisville, and commenced studying for the dramatic stage when she was thirteen years old. Three years afterwards she made her first appearance on the professional stage. This was on November 27, 1875, the theater being Macauley's, Louisville, Kentucky, and the character, Juliet, in Shakspeare's tragedy. Her success in the part was considerable, and, commencing on February, 1876, she played a week's engagement at the same theater, appearing as

Juliet, Bianca in *Fazio*, the heroine in *Fvadne*, and Julia in the *Hunchback*. In March she played Pauline, in *The Lady of Lyons*, at St. Louis, and Meg Merrilees, in *Guy Mannering*, at New Orleans. Her first appearance as Parthenia was made on September 11, 1876, in San Francisco, to the Ingomar of Mr. John McCullough. On January 5, 1877, she appeared as Lady Macbeth at the National Theater, Washington, and on November 11, 1878, she acted the heroine in a translation of *Berte, the Daughter of Roland*, then first produced in America. In the seasons of 1877–78, she made her first appearances in Philadelphia, Boston, and New York. Her first engagement at the latter place commenced on November 16, 1876, and, in consequence of Miss A.'s success, was extended from two into six weeks. In the spring of 1879, Miss A. made her first trip across the Atlantic, and stayed for a few days at Stratford-on-Avon, where she lingered near Shakspeare's home. During this visit she also witnessed some of Mr. Irving's performances at the Lyceum, and made the acquaintance of Sara Bernhardt and Madame Ristori. During the following season she added to her repertory the Countess, in Sheridan Knowles' drama, *Love;* the heroine, in Talfourd's *Ion;* and Galatea, in Mr. Gilbert's *Pygmalion and Galatea*. Miss A. made her first appearance on the English stage, at the Lyceum Theatre, on September 1, 1883, as Parthenia. This performance was followed, on October 27, by Pauline, and, on December 8, by Galatea. She has achieved great success in England both from a financial and artistic point of view.

ANDERSON, ROBERT, brigadier-general United States America, was born near Louisville, Ky., June 14, 1805. West Point, 1824. His father was Col. Joseph of the Revolutionary army, and his mother a cousin of Chief-Justice Marshall. He entered the army, and was appointed an instructor at West Point; was brevet-captain for gallantry in the Florida war, April 2, 1828; captain Oct. 23, 1841; brevet-major Sept. 8, 1847, for gallantry at Molino del Rey, where he was severely wounded; major 1st Artillery, Oct. 5, 1857; colonel May, 1861; and brigadier-general May 15, 1861. When the rebellion broke out, he held Fort Sumter, until April 14, when, after a heavy bombardment of two days, he was obliged to surrender. He was promoted, and assingned to the department of the Cumberland, but ill health caused him to withdraw from active duty. He translated from the French *Instructions for Field Artillery* and *Evoutions for Field Batteries*. Brevet major-general Feb. 3, 1865; retired October 27, 1863. He died at Nice, Oct. 26, 1871.

AN'DERSONVILLE, a town of Ga., on the South-western Railroad, during the civil war the site of a Confederate military prison for Union prisoners. The mortality at this prison was very great, 12,926 prisoners of war having perished here. One Henry Wirz, a Swiss adventurer, was the superintendent of the prison, and after the close of the war he was tried and convicted by a military commission on charge of excessive cruelty to the prisoners, and was executed Nov. 10, 1865. It is but just to state that this inhumanity toward Northern Soldiers was not by any means the pervading spirit of the Confederate authorities, who in two official reports attributed the extraordinary mortality to the mismanagement of the prison.

ANDOCIDES, one of the ten Attic orators whose lives were written by Plutarch. He was banished from Athens with Alcibiades, and three times afterwards; but subsequently filled offices of trust for the state. Born at Athens, 467; died 391 B.C.

ANDRADA, DIEGO PAYVA D', Portuguese theologian. Sent to the Council of Trent by King Sebastian. Wrote in favor of an extension of authority to the pope. In one of his works he discussed the subject of immaculate conception, since adopted as a dogma by the papal church. Born at Coimbra, 1528; died 1575.

ANDRADA E SYLVA, BONIFACIO SOZÉ D', Brazilian statesman and naturalist. Studied at Coimbra, where he became Professor of Geology, and afterwards inspector-general of Portuguese mines, and secretary of the Academy of Brazil. Returning to Brazil, took office in the ministry, but was dismissed on account of his democratic principles, and banished to France. Returned to Brazil in 1829, and passed the rest of his days in retirement. Born near Rio Janeiro, 1765; died at Nietherav, 1858.

ANDRASSY (COUNT), JULIUS, a Hungarian statesman, born at Zemplin, on March 8, 1823, the son of Count Charles Andrassy, whose efforts to promote the scientific and industrial progress of his country are well known. He succeeded his father (who died in 1845) as president of the Society for Regulating the Course of the River Theiss; and was returned by his native town to the Diet of 1847, where he rose to distinction in consequence of his oratorical powers and political tact. To the revolutionary movement of 1848 he lent all his influence; and, after the Hungarian government had fled to Debreczin, in 1849, he was despatched on a mission to the Porte. On the defeat of the revolution he went into exile, and resided in France and England until the general amnesty of 1857 enabled him to return to his native country. Being elected a member of the Hungarian Diet in 1850, he gave a hearty support to the Deack party, and was nominated vice-president. On the reorganization of the Austrian empire, and the constitution of a Hungarian ministry in 1867, he was appointed prime minister of Hungary, and charged with the department of the defence of the country. Among the principal events of his administration were the civil and political emancipation of the Jews, and the raising of a large sum of money to extend and complete the railway system in Hungary. At the general election of 1869 he was unanimously returned by the electors of Pesth to the Hungarian Chamber of Representatives. Count Andrassy succeeded Count Beust as minister for Foreign Affairs, November 14, 1871, when he retired from the post of president to the ministry at Pesth. The emperor of Austria conferred on Count Andrassy the Order of the Golden Fleece, January 1, 1878. He was the first plenipotentiary of Austria at the Congress of Berlin (June-July, 1878). Count Andrassy retired from public life in August 1879.

ANDREA, GIOVANNI, a canonist and professor of civil law at Padua and Bologna. He was a man of great learning, and of very ascetic habits. In stature he was so dwarfish that the pope on one occasion, thought he was kneeling, and bade him stand up. His daughter Movella, in his absence, read lectures to his pupils and a curtain was drawn before her, that the attention of the auditors might not be taken off by her beauty. His affection for her was so great, that he entitled his commentary on the decretals of Gregory X. the *Novellæ*. She married John Calderinus, a famous canonist. Born near Florence, 1275; died at Bologna, 1348.

ANDREANI, ANDREA, a famous engraver on wood, whose works are scarce and valuable. He made some fine copies from Dürer and Titian. Born at Mantua, 1540; died at Rome, 1623.

ANDRES, JUAN, a learned Jesuit, one of the most laborious writers of the 18th century, was born, 1740, at Planes, in Valentia, Spain. On the suppression of his order, he retired to Italy, and devoted himself to literary pursuits. He died January 13, 1817. His chief works are, an essay on Galileo's philosophy; a treatise on the origin, progress, and present state of every literature; and *Cartas familares con la noticia del viage a varias ciudadas de Europa*, 6 vols. quarto, Madrid, 1794.

AN'DREW I., king of Hungary, was the eldest son of Ladislaus the Bald. On the accession of Peter, in 1044, he and his brother Bala were obliged to quit Hungary; but on promising to abolish Christianity and to restore paganism, they were recalled. When Andrew, however, obtained the throne, he broke his engagement, and compelled his subjects to turn Christians. He was defeated and slain by his brother in 1050.

ANDREW, JAMES OSGOOD, D.D., bishop of the M. E. Church, South, was born at Augusta, Ga., May 3, 1794; died at Mobile, March 2, 1871. His father was a Revolutionary soldier and a Methodist minister. He was ordained deacon in 1814, and bishop in 1832 at Philadelphia. His marriage with a lady who owned slaves was one of the causes of the division of the church into two independent bodies in May 1845.

ANDREW, JOHN ALBION, LL.D., an American statesman, born at Windham, Me., May 31, 1818. He graduated at Bowdoin College, studied law, and was admitted to the bar of Boston in 1840. After he had become noted as an opponent of slavery, he was elected governor of Massachusetts by the Republicans in 1860. He was again elected governor in 1861, and was afterwards re-elected three consecutive times. During the civil war he rendered important services to the cause of the North, and gained great popularity by his attention to the welfare of the soldiers. He died October 30, 1867.

ANDREWS, JAMES PETTIT, historian, author of a history of Great Britain, notable as containing a contemporaneous history of Europe. Born near Newbury, 1737; died at Brompton, 1797.

ANDRISCUS, a man of mean birth, who pretended to be the natural son of Perseus, the last king of Macedonia, and for a short time contrived to occupy the throne, his reign being marked by cruelty and extortions. The Romans defeated him and took him captive to Rome, where he was put to death. He died 148 B.C.

AN'DROSCOGG'IN, a river of Maine, U.S., which rises in Umbagog lake, and falls into the Atlantic 20 miles from Portland. Length, 150 miles.

ANECDOTE signifies literally a thing not given out or published; and hence it is a term sometimes applied to *secret histories*. Procopius gives this title to his secret history of the emperor Justinian and his wife Theodora. It is also applied to works of the ancients that have not before been published, as the *Anecdota Græca* of Muratori. In common language, an anecdote is a detached incident or fact of an interesting nature, usually connected with the life of a distinguished individual. Many collections of anecdotes have been published.

ANEL, Dominique, a French surgeon, who attained considerable celebrity by his operations for aneurism and fistula lachrymalis. Born at Toulouse, 1678 or 1679; died about 1730.

ANGARI, a large river of Siberia, rising in lake Baikal, and after a course of 870 miles, falling into the Yenisei. For about 320 miles in the lowest part of its course, it is generally known as the Tunguska. It is navigable, but much obstructed by rapids.

ANGELI. Philip, a painter, native of Rome, but called, from his long residence in Naples, 'the Neapolitan.' In 1612 he was invited to the court of Cosimo, grand duke of Florence. His works are rarely to be met with, and realize high prices. Born 1600; died 1640.

ANGELL, James Burrill, LL.D., was born at Scituate, R. I., January 7, 1829. He graduated at Brown University in 1849, and in 1853 was appointed professor of modern languages and literature in Brown University, but resigned this position in 1860 to take editorial charge of the Providence *Journal*. In 1866 he was chosen president of the University of Vermont, and subsequently became president of the University of Michigan. In 1880 he was appointed minister to China; he resigned his diplomatic position in October, 1881, and returned to resume his post in the University of Michigan. He has written for the *North American Review*, *Bibliotheca Sacra*, and other reviews.

ANGELL, Joseph Kinnicut, was born at Providence, R. I., on April 30, 1794; and died at Boston, May 1, 1857. He was admitted to the bar about 1816; in 1820 he went to England, where he prosecuted unsuccessfully a claim to a large estate. From 1829 to 1831, he edited the *Law Intelligencer and Review;* was for some years reporter to the Supreme Court of R. I., and editor of the earliest volumes of *R. I. Reports*. He published jointly with Samuel Ames a *Treatise on Corporations*. Among his other publications are, the *Law of Watercourses*, *Law of Tidewaters*, *Limitations of Actions at Law and in Equity and Admiralty*, *Law of Carriers*, *Law of Fire and Life Insurance*, *A Practical Summary of the Law of Assignments*, 8 vols. 1837. His *Law of Highways* was completed after his death by Thos. Durfee.

ANGELS (Gr. ἄγγελος, a messenger), the name given by the Church to spiritual beings, superior to man, and created before him. The Council of the Vatican declares, after the Fourth Lateran Council, that God in the beginning created both the angelic and the material world. It does not specify whether the creation of angels preceded that of matter or the contrary. This question was much discussed by the early Greek and Latin Fathers, some of the latter holding that the material heavens were created first, and then the angels, whereas the Greek Fathers held that the angels were first called into being. St. Thomas Aquinas taught that matter was created before spirit, and this opinion has prevailed since in the schools of theology. The Council of Lateran as well as the Vatican Council has abstained from pronouncing on this question, although using the words 'at the same time from the beginning.'

The Lateran decree clearly indicates the purely spiritual nature of these angelic beings, applying to them the epithet 'incorporeal.' This is the present sense and teaching of the Church. But they have the power to assume a bodily form in their intercourse with mankind. The angelic intellect, being nearest to the divine, is most like to it in its power and operations. They know by intuition. Their will is coördinate with their intelligence, not requiring our deliberation and reasoning to make its choice. God also bestowed on them a freedom in harmony with such noble faculties. It is the teaching of Catholic theology before and since St. Augustine, that God in creating them raised them to a supernatural destiny, endowed them with supernatural grace, and put their fidelity, in the beginning, to a trial. What the precise nature of the test was the Church has not defined. Some fell away from grace, and were eternally banished from the supernatural bliss which rewarded their faithful companions. The fallen spirits are those who tempt man and endeavor to frustrate God's loving designs over him. The good angels are God's ministers toward the human race, helping men to reach their eternal destiny. Catholic teaching, based on St. Paul (Col. i. 16; Eph. i. 21) and other passages in Scripture, divide these angelic spirits into three hierarchies, each of which contain three orders, making nine degrees in all. This division has not been approved by any formal definition of the Church. In connection with this division, we may mention the opinion of the great medieval schoolmen that the Creator, not to have the material world surpass the spiritual in the number any more than the excellence of the beings it contains, made the angelic hosts more numerous than all corporeal substances. As to the honor and reverence paid to angels, they are in no wise like to the supreme adoration due to the sole Creator, the Infinite, and Eternal. He is honored in the beings whom he made so good and so great.

ANGILBERT, St., French poet; the secretary and son-in-law of Charlemagne; for a time Abbot of Centule. Charlemagne described him as the Homer of his time. He died 314.

ANGUS, Joseph, D.D., born Jan. 16, 1816, at Bolam, Northumberland, was educated at King's College, Stepney College, and Edinburgh, where he graduated in 1839, taking the first prize in nearly all his classes. He was appointed secretary of the Baptist Missionary Society in 1840, and president of Stepney College in 1849, which college was removed to Regent's Park in 1857. Dr. A., who was for several years English Examiner in the University of London, and to the Indian Civil Service, is the author of the *Handbook of the Bible*, *Handbook of the English Tongue*, *English Literature*, *Christ our Life*, and several other works. He has also edited Butler's *Analogy and Sermons*, with notes, and Dr. Wyland's *Moral Science*. He is a member of the New Testament Company for the Revision of the Scriptures, and was a member of the first London School Board.

ANGUISCIOLA, Sofonisba, a celebrated female portrait painter of Cremona. She was patronized by Philip II. of Spain, and Vandyck said that he was taught more by her conversation than he had learned from the study of the works of the great masters. She was twice married, and became blind in her old days. A portrait of her is said to be at Althorp, Northamptonshire, in which she is represented as playing on the harpsichord. Born at Cremona, 1533; died at Genoa, 1620.

ANIMALS, Cruelty to. In this country there are societies for the prevention of cruelty to animals in 33 of the 38 United States. The first society was chartered by the legislature of New York in 1866, chiefly through the efforts of Henry Bergh, who has been its president since that time. The society met with much opposition until a decision of the highest court affirmed its powers. It has now become the parent of similar societies in all the principal cities of the United States.

ANIMISM, a term used by writers on anthropology, to denote the general doctrine of souls and other spiritual beings.

ANJER, a seaport of Java, 18 miles W. of Batavia. Protected by a fort, and does a trade in Eastern curiosities. Pop. 5000. Lat. 6° 3′ S., long. 105° 57′ E.

ANNE of Britanny, Queen of France, and Duchess of Brittany, was daughter and heiress of duke Francis II. and Margaret de Foix. She was born at Nantes, Jan. 26, 1476. She had been promised to Maximilian of Austria, but the duke, her father, dying, she married Charles VIII., King of France. A. had a large share of sense, beauty, greatness of mind, and piety. She governed with great prudence during the absence of Charles VIII. in Italy. After his death she married Louis XII., who had been in love with her before her marriage to Charles. Died Jan. 9, 1514.

ANNE of Cleves, sister of William, Duke of Cleves, and fourth wife of Henry VIII., King of England. Her portrait, drawn by the flattering hand of Holbein, was not unpleasing to the king, but her ungraceful behavior shocked his delicacy at first sight, and he peevishly asked 'whether they had brought him a Flanders mare.' However, on Jan. 6, 1539–40, he completed his engagement by marrying her at Greenwich. His aversion increasing after marriage, he soon came to the determination of obtaining a divorce. This was proposed to Anne, and her sensibility of mind not being affected by it, an accommodation soon took place. In the following year she retired into privacy, with a pension of £3000 per annum. The reason which the king gave as a ground for the divorce was, that having espoused her against his will, he had not given an inward consent to the marriage. Anne died at Chelsea, July 16, 1557, and was buried in Westminster Abbey.

ANNI'HILATION, the act of destroying or reducing any created being into nothing. It is opposed to creation, which is the making of something out of nothing. Much difference of opinion has existed on the subject of annihilation. Some theological writers have held that this is the punishment implied in such passages of Scripture as that which declared that the wicked shall be punished with everlasting destruction; and such parables as those which compare the wicked to the tares which are utterly burned. Others maintain that the soul is not naturally immortal; that immortality was lost in the fall of man, and brought again to light by Jesus Christ, and that only those who believe in Him receive again the gifts of immortality. Isaac Watts believed that the children of ungodly parents are annihilated if they die in infancy; and Archbishop Whately was disposed to admit annihilation as a probable doctrine. The ancient philosophers, in effect, denied all annihilation, as well as creation, resolving all the changes in the world into new modification, without supposing the production of anything new or the destruction of anything old.

ANNIUS OF VITERBO, whose real name was John Nanni, a famous Dominican, born about 1432, at Viterbo, in the States of the Church. He became master of the holy palace under Alexander VI., and died Nov. 13, 1502. He published commentaries upon the Holy Scriptures, and seventeen books of antiquities, under the title *Antiquitatum variarum volumina seu libri XVII.*, fol., Rome, 1498; 8vo, 1458. This collection professes to contain the works of Berosus, Fabius Pictor, Myrsiles, and other writers of the highest antiquity. At first the learned were taken in by the publication; but it afterwards became known that these works were forgeries, which A. had credulously, though in good faith, inserted in his book.

ANQUETIL, LOUIS PIERRE, was born at Paris, Jan. 21, 1723, and entered, at an early age, the congregation of St. Geneviève. After having professed the belles-lettres, philosophy, and divinity, he applied himself especially to historical studies. He became master of the college of Senlis, and a member of the French Institute, and of the Legion of Honor. Died Sept. 6, 1808. Among his many works are a history of Rheims; *L'Esprit de la Ligue; Abridgment of Universal History; History of France;* and a biography of his brother, Abraham Hyacinthe Anquetil-Duperron.

ANNUN'CIATION (Lat. *annuntiari*, to announce), the name of a festival celebrated March 25th, in commemoration of the announcement made by the angel Gabriel to the Virgin Mary, that she was to become the mother of our Lord. It is also called Lady-day. The earliest authentical references to the festival are in a canon of the council of Toledo (656 A.D.), and another of the council of Tuello (692 A.D.).

ANO'LIS, or ANO'LIUS, a reptile peculiar to America, supplying in many respects the place which the chameleon occupies in the old world. The color of the skin, especially that about its loose baggy throat, assumes an endless succession of ever-varying hues, as the animal is disturbed by love or anger. The anolis, however, is more slenderly built than the chameleon, and more active in its movements. It varies from seven to eight inches to a foot in length, and is extremely tame and harmless. Its food consists of flies and other small insects. The head is long, straight, and flattened; the body and tail slender; and both are covered with small round scales, which give the skin the appearance of fine shagreen.

ANQUETIL, LOUIS PIERRE, a French historian, director of the Academy at Rheims, the Prior of the Abbey de Loc, in Anjou, and afterwards curate of La Villette, near Paris. He suffered imprisonment during the Reign of Terror. He wrote many historical works, but his style is defective. Born at Paris, 1823; died 1808.

ANSBACH, or ANSPACH, originally ONOLZBACH, a town of Bavaria, capital of the circle of Middle Franconia, and formerly of the margraviate of Ansbach, situated on the Rezat, 25 miles S. W. of Nuremberg, and 90 N. of Munich. It is a pleasantly-built place, containing a castle, once the residence of the margraves, and still noted for the gardens that surround it; several churches, the finest of which are those dedicated to St. John and St. Gunibert; a gymnasium; and a picture gallery. The chief manufactures of Ansbach are woollen, cotton, and half-silk stuffs, earthenware, tobacco, cutlery, and playing cards. There is a considerable trade in grain, wool, and flax. In 1791 the last margrave of Ansbach sold his principality to Frederick William II., king of Prussia; it was transferred by Napoleon to Bavaria in 1806, an act which was confirmed by the Congress of Vienna in 1815. Population of the town, 12,635.

ANSCHUTZ, KARL, a German musical director and composer, born at Coblentz, Germany, February, 1813; died New York City, December 30, 1870. He was educated by his father in his musical studies. He became Royal Musical Director at Coblentz; was afterwards a musical conductor in London; came to the United States in 1857; founded the German Opera of New York City in 1862, and established a conservatory of music there.

ANSDELL, RICHARD, R. A., a painter of animals, born in the neighborhood of Liverpool, about 1815, was educated in the Blue-coat-School of that town. He has exhibited at the Royal Academy since 1848, and was chosen A.R.A. about 1851. Among his best productions is *The Hunted Slave*, exhibited in 1863, and given in aid of the fund for the relief of the Lancashire distressed operatives. His more recent exhibits include: *Goatherds—Bay of Gibraltar*, 1874; *The Intruders, Quarrying in the Highlands, Loch Laggan; A Fete Day: Going to a Bull Fight at San Roque, Gibraltar*, 1875; *After a Spate, The Cattle are in the Corn*, 1876; *The Home of the Red Deer*, 1877; *Fifty Years Ago:* before the Salmon Act, 1878; *The Stray Lamb, A Storm in the Glen*, 1879; *The Farm of the Alhambra*, 1881; *Returning from the Fair at Seville, The Vega of Granada: returning from pasture; A Timid Visitor, Collecting Sheep for Clipping in the Highlands, A Warm Corner*, 1882; *The Vega of Granada: the Alhambra in the distance, The Scare, Water-carriers of the Alhambra*, and *Hunting the Boar*, 1883. Mr. Ansdell was elected a Royal Academician in 1870.

ANSELM, of LAON, a famous theologian, was born of very humble parents at Laon before the middle of the 11th century. He is said to have studied under St. Anselm at Bec. About 1076 he taught at Paris with great success, but not long afterwards removed to his native place, where his school for theology rapidly became the most famous in Europe. He died 1117. His greatest work was an interlinear gloss on the Scriptures, which has been frequently reprinted. Other commentaries apparently by him have been ascribed to various writers, principally to the great Anselm. A list of them, with notice of Anselm's life, is contained in the *Histoire Littéraire de la France*, x. 170—189.

ANSTED, DAVID THOMAS, M.A., F.R.S., writer on science; born in London 1814, graduated at Jesus College, Cambridge (B.A. 1836; M.A. 1839), of which he was elected a Fellow. He became Professor of Geology at King's College, London, 1840; Vice-Secretary of the Geological Society, 1844; Lecturer on Geology at the East India Military Seminary at Addiscombe, 1845; Professor of Geology at the College of Civil Engineers, Putney, in the same year; and Examiner in Physical Geography in the Department of Science and Art, 1868. For many year she was chiefly occupied in the application of geology to engineering, mining and other practical departments of science, and practised as a consulting mining engineer. Among his numerous works are—*Geology, Introductory, Descriptive, and Practical; Geologists' Text Book; The Ancient World; Gold-seeker's Manual; Elementary Course of Geology, Mineralogy, and Physical Geography; The Applications of Geology to the Arts and Manufactures; Physical Geography*, (fifth edition, 1871); and *The World we Live In* (twentieth thousand, 1877). Died May 13, 1880.

AN'STER, JOHN, D.C.L., an eminent German scholar, and regius professor of civil law in the university of Dublin. His translations from German literature, especially that of Goethe's *Faust*, have been received with great favor. He was also a large contributor to periodical literature in the leading magazines. Born at Charleville, Cork, 1793; died 1867.

ANSTEY, CHRISTOPHER, an English poet, born Oct. 31, 1724, being son of the Rev. Christopher Anstey, D.D., of Brinkley, Cambridgeshire. He was educated at Eton and King's College, Cambridge, of which he became a Fellow. In 1754 he succeeded to the estates of his maternal grandfather, whereupon he quitted the university and resided alternately at Bath and Trumpington, near Cambridge. He died at Harnage, Wilts, Aug. 3, 1805. His reputation rests upon the humorous poem entitled *The New Bath Guide.*

ANT'AEUS, the son of Neptune and Terra, a famous giant killed by Hercules.

ANT'ANACLA'SIS (Gr. *antanaklao*, I drive back), in Rhetoric, is a term denoting the repetition of a word in a different sense, or as a different part of speech, from that in which it has already been employed, in order to attract attention or give expressiveness to the phrase; as, 'Whilst we *live*, let us *live*.' It is also the returning to a subject after a long parenthesis, by repeating, in the same words, part of what went before.

ANTARC'TIC (Gr., *anti*, against, or opposite to, and *arktos*, the Bear, or northern constellation), an expression applied to the south pole and Southern Ocean, as opposite to the north pole and Northern and Arctic Ocean, and especially to the region which lies around the antarctic or south pole, with a circle distant 23° 28′ from that pole; corresponding to an area similarly circumscribed which surrounds the north or arctic pole.

ANTAR'ES, a bright double star in the constellation Scorpio, marked *a*, and known as *Cor Scorpii*, the Scorpion's heart. It is remarkable for its brilliant red appearance.

ANTE'NOR, a Trojan prince, who is credited with having been a friend of the Greeks. Various legends say he built a new town on the site of Troy, and founded Padua and other towns in Italy.

ANTHELMIN'TICS, a term applied to such medicines as have the effect of destroying worms in the stomach and intestines. They are of various kinds, but may be divided into three classes—those which, by increasing the peristaltic motion of the intestines, tend to displace the worms, and may thus occasion their expulsion—as purgatives of various kinds; those which tend to strengthen the stomach and intestines, and the system generally—as tonics or analeptics; and those which act specially upon the worms, dislodging, weakening, or killing them. These last are anthelmintics, properly so called. Of this class, the oil of turpentine is generally the best medicine that can be employed, and is, perhaps, the only one that unequivocally acts as a direct poison on the worms.

ANTHEMIUS, a Greek architect and mathematician of the 6th century, who designed the church of St. Sophia, Constantinople. He was one of five brothers, all of whom obtained eminence.

ANTHONY, Henry B., a well-known American editor and statesman, was educated at Brown University, graduating in 1833, edited the Providence *Journal*, one of the leading papers of his state, was elected governor of Rhode Island in 1849, and U. S. senator in 1859. Born at Coventry, R. I., April 1, 1815. Died in the fall of 1884.

ANTHONY, Susan Brownell, an eloquent advocate of the temperance, and anti-slavery causes, and also interested in the woman's suffrage movement. Since the termination of the civil war the last named has principally occupied her attention. Born at South Adams, Mass., Feb. 15, 1820.

ANTHROPOMORPHOUS APES, the name applied to the highest division at once of the Catharine monkeys, and of the order *Quadrumana*, including the gibbons (Hylobates), the orangs (Simia), the chimpanzee and gorilla (Troglodytes). These forms are thus denominated from their collectively exhibiting the nearest approach to the man-like or human type of structure.

ANTHROPOLOGY. The following are the leading and most accurate works upon the subject, to which the reader is referred for details: Calvin's *Institutes*, book ii; Usher's *Works*, vol. iii.; Neander's *Church History*, ii, 557—627; Guericke's *Church History*, § 91—93; Muller, *Christian Doctrine of Sin;* Aminins' *Works;* Jeremy Taylor, *On Original Sin;* Edwards, *On Original Sin;* Haggenbach's *History of Doctrine;* Shedd's *History of Doctrine;* Neander's *History of Christian Dogmas*. See Chambers' En.

ANTICHRIST. This term is employed by the apostle John alone, and is defined by him in a manner which leaves no doubt as to its intrinsic meaning. In regard to its application there is less certainty. John (1 John ii. 18) says, 'even now there have been many Antichrists.' Of the speculations as to the exact application of the term, there has been no end. The language of the apostles is intentionally obscure, and this obscurity has been deepened rather than removed by the conflicting interpretations of expositors. All that the dark hints of the apostles teach us is, that they regarded Antichrist as a power, whose influence was beginning to be felt even in their time, but whose full development was reserved till the passing away of the principle which hindered it, and the destruction of the power symbolized by the mystical Babylon. See Antichrist in Chambers' En.

ANTIETAM, Battle of. In the early part of the month of September, 1862, the Confederate forces, under the command of Gen. Robert E. Lee, crossed the Potomac, and occupied Frederick, Md., and the vicinage. On the 12th, by a skilful manœuvre, Gen. McClellan, commanding the Union forces, compelled Lee to leave Frederick, who marched towards Hagerstown. On the 15th, Gen. Jackson of Lee's army, captured Harper's Ferry, taking 12,000 prisoners of war. On the 14th, McClellan threw his army across Lee's way at the heights of South Mountain, thus compelling him to retreat to Sharpsburg. On the 16th, there was hard fighting between Hooker's division and the enemy, and on the morning of the 17th, the battle of Antietam was begun. At the close of the day the Union army had gained several advantages, but not a decisive victory. On the following day, at the request of Lee, an armistice was granted for burying the dead, and on that day and the day following, the Confederates retreated and crossed the Potomac. McClellan's army numbered 87,164, and that of Lee between 70,000 and 97,000. The Union loss was 12,469 killed and wounded, and that of the Confederates about the same.

ANTI-MASONIC PARTY, a political party of the United States, that flourished in the early part of the present century. In the year 1826, a Mason, named William Morgan, living at Batavia, N. Y., who was engaged in preparing a work intended to expose the secrets of Masonry, suddenly disappeared, and it was claimed that he had been abducted by Masons, imprisoned for a short time at Fort Niagara, and then drowned by them in Lake Ontario. This was however denied by the Masons, who claimed that Morgan was afterwards seen alive at several places, among others at Smyrna in Asia. The excitement over this alleged abduction ran so high that it resulted in the formation of a political party, the fundamental principle of which was opposition to Masonry. In the year 1830, it polled 128,000 votes in the State of New York. In the year 1832, William Wirt and Amos Ellmaker, its candidates for President and Vice-President, carried the state of Vermont. But as the excitement over Morgan died out, the party gradually fell to pieces and ceased to exist.

ANTIOCH COLLEGE, a non-sectarian educational institution, under control of the Unitarians, located at Yellow Springs, Ohio, and founded in 1852. The co-education of the sexes is one of its marked features. Hon. Horace Mann, LL.D., was its first president.

ANTI-RENTERS, the name of a party in the state of New York, opposed to paying rents and rendering feudal services to the lord-patrons, who were the owners of large tracts of land in the eastern part of the state. In 1846 a state constitutional convention abolished all feudal tenures, and the party, having accomplished its purpose, ceased to exist.

ANTI-SLAVERY SOCIETY, American, a society organized in Philadelphia, Pa., in the year 1833, for the avowed purpose of opposing slavery and the slave-trade. After the abolition of slavery, and the ratification of the thirteenth, fourteenth, and fifteenth amendments to the constitution, which endowed the negro with the full rights of citizenship, it disbanded, April 9, 1870.

ANT'LIA (Lat. *antlia*, a pump) the name applied to the elongated tube or proboscis forming a chief organ in the month of Lepidopterous insects (butterflies and moths), and by means of which they suck up the flower-jnices on which they subsist. This organ is formed by the modification of the *maxillæ* or lesser pair of jaws, seen in typical form in the biting or masticatory mouths of other insects.

AN'TRUM, a term used in anatomy to denote a space or cavity. The most important is the A. of Highmore in the superior maxillary bone, which communicates with the nose. This space is sometimes the seat of on abscess or of a tumor.

AOUDAD SHEEP (*Ammotragus tragelaphus*), a species of sheep, occupying an intermediate position between sheep and goats, found in the mountainous parts of N. Africa, from Barbary to Abyssinia. It does not possess the lachrymal sinuses of the sheep, but like the latter forms, it is provided with a gland placed between the hoofs. The body-color is reddish-brown, and the front of the body is covered with a quantity of thick hair, which gives to the fore parts a singular and massive appearance. It exists in small herds, and is of fierce disposition. The horns are of large size, and curved outwardly.

APA'CHES, a tribe of Indians, living in Arizona and New Mexico. They are noted for superior horsemanship, and have given the settlers of these sections much trouble by their frequent outbreaks. They are divided into several sub-tribes.

APHANIP'TERA, an order of *Holometabolic* ('complete metamorphosis') insects, in which the wings are of rudimentary nature, and exist in the form of scales or plates on the hinder thoracic segments. The mouth is suctorial in its nature. To this group the fleas (*Pulicidæ*) belong, and of this family the common flea (*Pulex irritans*) is a familiar species. The Chigoe (*Pulex penetrans*) of S. America and the W. Indian Islands burrow beneath the skin of the feet, and causes troublesome and painful sores. These insects live parasitically upon various animals.

APHRODIS'IACS are medicines which excite or increase the sexual powers. Many substances said to have this effect have no specific action on the sexual organs, but merely excite the imagination. Such substances are musk, castoreum, ambergris, the allyl oils, obtained from Cruciferous plants, such as the onion, leek, horse-radish, &c., and opium and Indian hemp. Cantharides and turpentine occasionally excite the genital organs; but the only true sexual stimulants are those which promote the healthy nutrition of the tissues, such as iron, quinine, phosphorns, nnx vomica, and strychnine.

APH'THÆ is the name given in medicine to the disease called *thrush*. It consists of small, round, white specks or elevations scattered over the tongue and mucous membrane of the mouth. The disease occurs specially in infants, but occasionally it may be seen in old persons, when it is usually associated with a grave disorder of the alimentary apparatus terminating in death. In some forms of A. minute filaments and spores of miscroscopic fungi are found—the *Leptothrix buccalis* and *Odium albicans*. The treatment consists of cleanliness, and the application to the lining of the mouth of borax mixed with honey or glycerine.

APLACEN'TAL MAMMA'LIA, a name applied to the two lower orders of mammals (*Monotremata*, represented by the ornithorhynchus and echidna; and *Marsupialia*, represented by the kangaroos, opossums, &c.) on account of the young of these forms being unconnected with the mother before birth, by means of a *Placenta* or 'after-birth.' All mammalia, other than those included in the two above orders, possess such a vascular connection with the mother, and are hence termed *placental* mammals.

APLANA'TIC LENS (Gr. *a*, without; *plane*, deviation) is a lens so constructed as to be quite free from spherical aberration.

APLYS'IA, a genus of Gasteropodous mollusca, popularly known as the 'sea-hares,' and forming the type of the family *Aplysiadæ*. This family belongs to the *Opisthobranchiate* Gasteropoda, or those in which the gills exist towards the rear of the body. In the *Aplysidæ* the animals are slug-like; the shell being rudimentary, and concealed beneath the mantle. The tentacles are very large, and are turned backwards like ears, whence the suggestion of the popular name of sea-hares. These forms feed upon seaweeds, and are common around the coasts of Britain. They emit a fluid, colored purple or violet, from the mantle, when they are irritated. This fluid was formerly thought, but erroneously so, to be poisonous in its nature; the ancients using these

forms in their spells. *A. depilans*, *A. inca*, &c., are familiar species.

APNŒ'A, is the name given to the sensation of want of breath. Its cause is probably due to the presence of an excess of carbonic acid in the blood, which acts on the nervous centers governing respiration. Great difficulty in breathing in disease is called dyspnœa, and if a patient can breathe only when the body is erect, the condition is termed orthopnœa.

AP'ODA, 'footless,' a term applied in zoology to various groups of animals to indicate the absence of the fore or hind limbs, or their homologies. Thus certain cirripedes (barnacles, &c.) among the Crustacea are termed A., from the absence of the cirri, which represent the limbs of other crustaceans. Certain fishes (*e.g.*, sand-eels, eels), in which the ventral fins are absent, are termed A. The blind worms or *Cæciliadæ* (Amphibia), in which feet are undeveloped, were formerly termed A.

APONOGETON, a genus of aquatic plants belonging to the order *Juncaginaceæ*, *A. distachyon*, common at the Cape of Good Hope, and called there water Uintjies, is a very handsome fragrant species. It is a favorite plant in garden-ponds in Britain. When first introduced, it was grown in hot-houses for many years, until the discovery was accidentally made that it could endure the open-air temperature of this country. The spikes of fragrant flowers, and the flat oblong leaves, float on the surface of the water. Its flowering tops are said to be used as a pickle, and as a substitute for asparagus at the Cape, and that its root (corm), which is about the size of a hen's egg, is roasted and eaten.

APOPH'YSIS is a prominent elevation jutting out from the surface of a bone. If such an elevation is slender, it is called a spine; if blunt, a tubercle; if broader at the base, a tuberosity. It is to be distinguished from an epiphysis, which is a prominence having a separate center of ossification.

APPALACH'EE Indians, a once powerful tribe of Florida, which has now ceased to exist.

APPOMAT'TOX COURT HOUSE, a small village in Virginia, and capital of the county of the same name, where Gen. R. E. Lee, on April 9, 1865, surrendered the Confederate army under his command, to Gen. U. S. Grant, commanding the Union army. The surrender of Lee virtually put an end to the civil war.

AP'SLEY, a river of New South Wales, Australia, enters the Pacific 40 miles N.E. of Port Macquarrie. A. is also the name of a strait, 48 miles long, and from 1½ to 4 broad, between Bathurst and Melville Islands, to the N. of Australia.

APTOR'NIS, the name of an extinct bird genus, the fossil remains of which occur in the Recent formations of New Zealand. These birds, like the apteryx, were wingless.

AQUEDUCT. The plans and specifications are now being prepared for a new aqueduct, for the city of New York, which will be the largest in the world. Work will be begun before the end of the present year (1885). It will tap the Croton River at a point near where the present aqueduct is supplied. It is purposed eventually to build a dam further down the river, which will be the largest in the world and will cost $8,000,000. Near Croton dam will be a gate house, 120 ft. × 120 ft., which will cost $500,000. The supply of water will be regulated by 34 iron gates, which can be worked by steam or water. The conduit will be about 14 feet in diameter, in many parts of the way will be 350 feet below the surface, and ninety per cent of the way will be through solid rock. With a velocity of 3 feet per second, this aqueduct will carry 320,000,000 gallons per day. The entire cost is estimated at $35,000,000. See AQUEDUCT in Chambers' En.

ARA, a genus of Scansorial or Climbing birds, popularly known as Macaws. The name *Macrocerus* is more frequently applied to indicate this genus; and the name A. is derived from the Indian name for these birds, which inhabit tropical America and the W. Indies.

ARACAJU', the capital of the Brazilian province of Sergipe, on the river Cotinguiba, about 5 miles from its mouth, and 150 miles N. of Bahia. It is the only port of the province opened to foreign commerce, and has considerable trade, chiefly in cotton and sugar, the latter of which is of superior quality. In 1872 the value of sugar exported was £369,938; and of cotton, £306,532. A bar at the mouth of the river, however, is a great hindrance to shipping, and has caused the transmission of two-thirds of the trade of Sergipe to the port of Bahia. Pop. over 20,000.

ARAUCARIOX'YLON, a genus of fossil trees found in the Carboniferous sandstone. In the neighborhood of Edinburgh specimens have been met with in the Granton, Craigleith, and Redhall quarries. One obtained from Craigleith is exhibited in the Edinburgh Botanic Gardens, which measures 30 feet 8 inches in length, and 6 feet across at the lower end of the trunk. Full details regarding this and other specimens of A. have been given by Sir Robert Christison, Bart., in *Transactions of the Royal Society of Edinburgh*, vol. xxvii. In structure and appearance A. resembles *Araucaria* of the present day.

ARBITRATION. In many of the states of the U. S., this proceeding is regulated by statute, with provisions that the award may be brought into court and a judgment entered thereon. In New York and some other states it is held that the statute does not entirely take away the common-law proceeding. In other states the statutory method is exclusive. In New York and many of the states, married women are now competent parties to an agreement of arbitration. See ARBITRATION in Chambers' En.

ARBORICUL'TURAL SOCI'ETY. The Scottish A. S. is the only society of the kind in Britain. It was instituted in 1854, and has now a membership of about 800, consisting of proprietors, nurserymen, factors, land-stewards, and foresters. The Queen is patron. The object of the society is the promotion of arboriculture in all its branches, by periodical meetings for the reading and discussion of papers, the offering of prizes for essays and reports on the practical operations of forestry, and the publication of these papers. The society has published 7 vols. of transactions.

ARCHÆOLOGY. The science of Archæology has been advanced chiefly through societies organized for that purpose, among which are the following: The Society of Antiquaries of London (1572); the Royal Irish Academy (1786). Both of these have fine museums of antiquities. The leading antiquarian collections of the World are those of the British Museum of London, the Museums of the Louvre and the Hotel de Cluny, in Paris and the Royal Museum at Naples. The reader is referred to the following works, Westropp, *Handbook of Archæology* (1867); Lubbock, *Prehistoric Times*; Baldwin, *Pre-historic Nations* (1869); C. C. Jones, *Antiquities of the Southern Indians* (1873); Foster, *Pre-historic Races of the U. S.* (1873). See ARCHÆOLOGY in Chambers' En.

ARCHIBIO'SIS is a term proposed by Dr. Charlton Bastian to designate the production of living forms from a non-living organizable fluid. It is synonymous with the words heterogenesis and spontaneous generation. Many naturalists deny the possibility of any such mode of origin, and hold that living forms must come from pre-existing living forms.

ARCHITECTURE. To the facts already recited under ARCHITECTURE are added the following, relative to the architecture of the Aborigines of America. Communism in living is a principle that runs through the architecture of this order from the most primitive hut to the palace of Mexican semi-civilization. Communism and hospitality were marked features of Indian life, and these became embodied in their architecture.

The most primitive edifice is a common hut from 10 to 16 feet in diameter and from 7 to 10 feet in height, constructed from splints and bark. The central part of the floor is devoted to the fire and immediately above it is an opening for the escape of smoke. Such a cabin will be occupied by two or three couples with their children. With numerous tribes a covering of skins is substituted for that of bark. The Iroquois Indians lived in long houses of sometimes more than 100 feet, consisting of a strong framework, covered with shingles of elm bark. One of these houses would be divided into numerous apartments, each of which would be occupied by a family. The Mandans and other tribes of the Upper Missouri lived in timber-framed houses of superior design. These houses were circular in form and sometimes as much as 40 feet in diameter. The architecture of the Central Americans was far in advance of that of the other tribes of North America. Next to these perhaps came the Aztecs. The Aztec houses were very large and were constructed of brick and stone, imbedded in mud mortar. In most instances they were 2 stories high and built in terraced form. The roofs were flat. In Central America are found extensive ruins of ancient habitations. The largest of these is at Uxmal. These structures were composed of soft limestone, which had undoubtedly been dressed with flint tools. The governor's house at Uxmal stands upon the upper of three platforms. The lowest of these is 575 feet long, 15 feet broad to the base of the middle platform, and 3 feet high; the second, 545 feet long, 250 feet broad, and 20 feet high; and the third is 360 feet long, 30 feet broad, and 19 feet high. This house is 322 feet long, 39 feet deep, and 30 feet high. It has 11 doorways with other small openings, and is divided into 24 rooms. Near Uxmal are the ruins of Zayi, which present other and interesting features in Central American architecture. See ARCHITECTURE in Chambers' En.

ARCTOSTAPH'YLOS, a genus of plants of the order *Ericaceæ*. There are only two species which properly belong to the genus, and both are natives of Britain. The red bearberry (*A. uvaursi*) is a small trailing evergreen shrub found in the northern parts of Europe, Siberia, and N. America. It ascends to 3000 feet in the Scottish mountains. The plant is astringent, and is occasionally used for tanning, as well as a valuable astringent in cases of excessive secretion in the human body. The black bearberry (*A. alpina*) has black berries about the size of the common sloe, which

have a peculiar taste. The plant, which is the badge of the Clan Ross, has a trailing habit similar to the other species, and is found on some of the Scottish mountains.

ARCTU'RUS, or α Bootes, a star of the first magnitude, in the same direction, and about twice as far from the Pole-star, as the end tail-star of the Great Bear.

ARE'OLAR TISSUE is a variety of connective tissue found in the animal body, by means of which various organs and parts of organs are connected together. A. T. consists of very soft fibres of various degrees of coarseness. These are often so close together as to form laminæ, which frequently cross and recross in all directions, leaving open spaces, or areolæ, between them. A. T. is found underneath the skin, forming a bed in which lie numerous fat-cells, also covering the muscles, blood-vessels, and nerves, and also connecting the lobes and lobules of glands. It is the most widely-distributed tissue of the body, and it may be traced uninterruptedly from one part to another.

ARGANIA, a genus of plants of the order *Sapotaceæ*. The argan-tree of Morocco (*A. sideroxylon*), yields an egg-shaped fruit, used for feeding cattle. From the seeds an oil is extracted of great value. Its wood sinks in water, and is very hard.

ARKANSAS POST, a small village on the Arkansas River, in the state of Arkansas, which was strongly garrisoned by Confederate soldiers during the civil war. It was captured on January 11, 1863 by the combined forces of Gen. McClernand and Admiral Porter, and a seizure made of military stores, and many prisoners taken.

ARMITAGE, Thomas, D.D., born in England, Aug. 2, 1819, came to the United States when a boy, first a Methodist minister, and now one of the leading Baptist ministers in America, and pastor of a church in New York.

ARMY WORM, a dark gray worm, with yellow stripes, from an inch to an inch and three-quarters in length, which has at times appeared in great numbers in the Northern States, and annihilated the crops of some localities. It is the grub of the night-flying moth (*Leucania unipuncta*). It is said, that it can be destroyed by water, slightly impregnated with carbolic acid.

AR'NIM, Harry, Count von, a member of the A. family, was born at Moitzelfitz, in Pomerania, in 1824, entered the service of the Prussian State 1847, and commenced his diplomatic career in 1851, when he was named secretary of legation, in which capacity he resided successively at Rome, Cassel, and Vienna. In 1862 he was appointed minister at Lisbon, created count in 1870, and in 1871, by imperial decree, minister extraordinary to the French Republic, and some time after raised to the rank of ambassador. Here he opposed the ecclesiastical policy of the German chancellor, and involved himself in such antagonism to his chief that his diplomatic career ended in one of the most remarkable state trials of late years. Recalled from Paris, 2d March 1874, he was left unemployed by the government. Irritated, it is supposed, by his humiliation and neglect, he made certain revelations to the public (2d April 1874) in the Vienna press relating to the policy of the Papal court. The discovery was then made that a large number of state papers had been taken from the archives at Paris during A.'s term of office, and failing to give a satisfactory account, of them, he was arrested, 4th October 1874. He was tried by the Tribunal of the city of Berlin (9th to 15th December), found guilty of removing public documents, and sentenced to three months' imprisonment. An appeal was made to the Kammergericht, which on the 25th June 1875 found A. guilty of removing state papers from the Paris Embassy, which he subsequently refused to give up, and sentenced him to nine months' imprisonment. See *Le Procès d'Arnim* by MM. Figurey and Corbier (Paris, 1875).

ARNOLD, Benedict, born at Norwich, Conn., Jan. 3, 1740, noted as a boy for his ungovernable disposition, and while a mere youth ran away from home and enlisted in the army, from which he soon after deserted. In 1775 he entered the service of Massachusetts with the rank of colonel, and marched with Gen. Montgomery against Quebec, where he behaved with gallantry, and was severely wounded in December of that year. In 1777 he was made brigadier-general, at the battle of Bemus Heights, Sept. 19, 1777, quarreled with Gen. Gates, and participated in the battle of Stillwater, Oct. 7, 1777, where he conducted himself with great bravery, and was seriously wounded. In 1778 he was placed in command of Philadelphia, Pa., where he lived extravagantly, contracted numerous debts, and began to plot treason. In April 1780 he became commander of West Point, and opened negotiations with Major John Andre of the British army, who represented Sir Henry Clinton, to betray it into the hands of the English. The plot, however, was thwarted by the capture of Major Andre, who was afterwads hung as a spy. Arnold, however, escaped on the sloop Vulture, and received for his treason £6300 from the British authorities. He afterwards led a British expedition into Virginia, and also one that burned New London, Conn. He spent the last years of his life in England, despised and shunned by all. His very name in America is synonymous with the word traitor. He died in London, June 14, 1801. See Sparks's *Life of Benedict Arnold*.

ARR'OWSMITH, Aaron, a celebrated geographer and constructor of maps, was born at Winston, Durham, July 14, 1750. At an early age he had to face the world, and in 1769 we find him in London in the employment of Cary, for whose large county maps he soon became the principal draughtsman. In 1790–98 he published his large map of the world on Mercator's projection, which greatly surpassed everything else that had yet been produced for clearness, accuracy, and excellence of engraving. He published altogether more than a hundred maps, all of the same admirable quality, the chief of which are the *Germany* (1813, seven sheets), *Turkey in Europe* (1801), *Asia* (1801, four sheets), and *United States of America* (1796, four sheets). He also wrote *A Companion to a Map of the World* (1814), *A Memoir relative to the Construction of a Map of Scotland* (1807), and a work on the *Geometrical Projection of Maps* (1825). Many of A.'s maps were reproduced in Paris by H. Langlois. He died in London, April 23, 1823.

ARR'OWSMITH, John, a Puritan divine, born at Gateshead, Newcastle, March 29, 1602, was educated at St. John's College, Cambridge. After some years' residence as a fellow of Catherine Hall, he settled at Lynn, in Norfolk, and in the great rebellion was appointed a member of the Westminster Assembly of Divines, in which capacity he took an active part in drawing up the 'Catechism.' He was a preacher for some time at St. Martin's, Ironmonger Lane, London, and subsequently held the respective posts of Master of St. John's College, Vice-Chancellor of the University of Cambridge, Regius Professor of Divinity and Master of Trinity College. The principal of his works, which are chiefly polemical, are *Tactica Sacra, sive de Milite Spirituali Pugnante, Vincente, et Triumphante Dissertatio* (Camb. 1665, Amst. 1700); *A Chain of Principles* (1622); *Theanthropos* (1660). He died in February 1658–59.

ARSENAL. At the outbreak of the Revolution there were no arsenals in the United States. Arms were at first gathered from the citizens and at an early period purchased from France. In 1777 Washington selected Springfield, Mass., as a site for a foundry. In the same year brass cannons were cast in Philadelphia and an arsenal founded at Carlisle, Pa. For the war of 1812 arms were provided by the arsenals at Springfield and Harper's Ferry. There were 23 arsenals and armories in the United States in 1860. That at Springfield could complete 1000 muskets per day. See Arsenal in Chambers' En.

ARTHRO'DIA, a term first employed by an anatomist called Winslow, to denote a joint admitting of only a very slight degree of movement.

ARTHROL'OGY is that department of anatomy which treats of the structure and functions of joints or articulations.

ARTHUR, Chester Allan. In 1884 he was a candidate for re-election before the Republican convention held at Chicago, and received strong support, but was defeated by James G. Blaine. See Arthur, Chester A. in Chambers' En.

ARTIFI'CIAL HORI'ZON is obtained by means of a perfectly calm and plane surface of a liquid (such as mercury) whose reflecting power is great. In obtaining the altitude of any object by this means, the sextant is brought as close as possible to the reflecting surface, and the true and *reflected* images of the object are made to coincide, so that the true angle is evidently half the observed angle.

ARTILLERY. The organization of the artillery of the United States army during the civil war was executed by Gen. William F. Barry. The entire number of field-guns employed was about 1500. To transport and work these there were required about 40,000 horses and 48,000 men. In 1873 the artillery of the United States regular army was organized as follows: 5 regiments, each consisting of 12 batteries. One of these batteries is required by law to be mounted. Guns of different calibres are never placed in the same battery. In active service each field-battery carries 400 rounds of ammunition per gun. See Artillery in Chambers' En.

AR'VE, a tributary of the Rhone, which it enters immediately below the Lake of Geneva, rises on Mont Blanc, and flows through the famous valley of Chamouni. It has a course of 50 miles, is a violent Alpine stream (according to Coleridge 'raves ceaselessly'), and is liable to sudden and destructive floods.

AS'BURY, Francis, one of the first bishops of the American M. E. Church, converted at thirteen, became a preacher three years later, and came to America in 1771 as a missionary. He was very active and successful in his work, and was made bishop in 1784. Born Aug. 20, 1745; and died at Spottsylvania, Va., March 21, 1816.

ASCENSION OF CHRIST. The ascension of Christ into Heaven took place on the fortieth day after the Resurrection, on a Thursday, therefore; He ascended from Mount Olivet in presence of His disciples. They, who were to be His witnesses in every part of the Roman Empire, beheld Him leaving our earth for that Heaven, which is the special abode of Blessed men and angels. The faith in His resurrection and the hope in the heavenly bliss into which He was entering, were to be sustaining principles among believers during the ages of persecution and the trials of all time. Hence Christ, in His glorified body, ascended into Heaven in the sight of all, blessing them as He receded from their sight, and drawing their hearts and minds after him. In what part of space, outside of our globe, that Heaven is, which the Almighty Rewarder of all merit has created for a dwelling place worthy of the manifestation of His own being, and of the magnificence of His fatherly love, to the élite of angels and of men, Scripture has not revealed, the Church has not defined, nor have her authorized teachers agreed upon. St. John, in the Apocalypse, unveils some of the splendors of the place itself, and allows us to see the Throne of the uncreated Majesty, and before it, the altar on which the Lamb of God seems to plead unceasingly for the needs of His brethren on earth, while receiving, equally with His Father, the adoration of the hosts of angels and multitudes of blessed men. Thus human nature exalted in him to the right hand of the Father, is evermore occupied with the dearest interests of His own here below. His sacrifice still pleads for us, and the voice of His blood still cries out in Heaven for the redeemed. Angels, when He had disappeared, bade the mourning disciples return to Jerusalem, the field of their labors, assuring them that the separation was not to be for ever. It is also a tradition, based on Scripture, that Christ was accompanied into Heaven not only by angels but by the spirits of the just, who had departed this life since the beginning of the world. Thus, 'ascending on high He led captivity captive,' and bestowed on the Saints of the Old Law the crowning 'gifts' of His justice and love.

ASH'ERA, a goddess referred to in the Old Testament, although the name is always translated 'grove' in the authorized version. In numerous passages 'grove' (i. e., holy wood) means a wooden object, generally close to the altar of Baal (Judges vi. 25; see 'grove' in authorized version); this was undoubtedly the linga or phallic symbol, represented by a tree stripped of its branches, or a tree-stem driven into the ground. But in several other passages it is evidently used as the proper name of a goddess. In Judges iii. 7, e. g., analogy requires it, thus: 'the baals and the groves,' = Baalim and Asheras; Manasseh, as well as the mother of Asa, made an *image* for A. (1 Kings xv. 13; 2 Kings xxi. 7); and in 1 Kings xviii. 19, mention is made of priests of A. along with those of Baal. A. represented the female side of Baal —Baaltis, or Mylitta, and therefore was served along with Baal (Judges vi. 25). She is not to be confounded, however, with Astarte or Ashtoreth (pl. Ashtaroth), notwithstanding Judges ii. 13; x. 6; 1 Sam. vii. 4; xii. 10, where the latter is put in conjunction with Baal. In all the other passages Ashtoreth and A. are kept distinct; and on closer investigation their characters are found to be quite distinct and even antagonistic. Astarte was the moon-goddess, as appears from Ashteroth-Karnaim, the name of a trans-Jordanic city (Gen. xiv. 5, and Deut. i. 4), meaning 'Ashteroth of the two horns,' i. e., of the crescent moon. She was at any rate a severely chaste goddess, probably the same as the 'queen of heaven,' whose worship by the Israelitish women was approved by their husbands (Jer. vii. 18; xliv. 15). The worship of A., on the contrary, was of the most unchaste description; the special service of her priests and priestesses being to prostitute themselves for hire to her worshipers (Deut. xxiii. 17, 18; 2 Kings xxiii. 7).

ASSEMA'NI, Jos. Simon, a celebrated Orientalist, born at Tripoli, in Syria, in 1687. He belonged to a Maronite family of Lebanon. In his travels through Egypt, Syria, &c., he collected numerous Oriental MSS. for the papal library, of which he was keeper. A. died 14th January 1768. His most important works are *Bibliotheca Orientalis Clementino-Vaticana* (4 vols. Rome, 1719–28), an edition of the *Opera Ephraëmi Syri* (6 vols Rome, 1732–46), *Kalendaria Ecclesiæ Universæ* (6 vols. Rome, 1755–57), and *Bibliotheca Juris Orientalis Canonici et Civilis* (4 vols. Rome, 1762–64).

ASSIGNMENT. This term is also employed of the transfer of his property by an insolvent debtor, to an assignee, for the benefit of his creditors. Such assignee is treated by the law as a trustee. The laws of many of our states, not only permit such an assignment, but permit the assignor to prefer certain claims above others. See Bankruptcy and Assignment in Chambers' En.

ASSUMPTION OF THE BLESSED VIRGIN MARY. Although the Church has not decreed by a solemn and definitive sentence, that the Mother of Christ was, after death, taken up into Heaven bodily, the early celebration of the feast commemorating the fact of such "assumption" or taking up, by all the Churches of the East and West, plainly indicates that she would have her children believe it. Our first parents, apart from the power of never dying conferred on them by special grace and attached to their perseverance in original justice, would have died in the course of nature; and then death would not, according to Catholic theology, have been a punishment of sin committed—since they would have lived sinless—but a fulfillment of the ordinary laws of organic nature. Christ, the Second Adam, having tasted of the bitterness of death, His Mother, the Second Eve, died in a good old age; and, never having been stained even by original sin, it was but consonant with the divine plan, that the mortal flesh received from her parents should not be tainted by the corruption of the grave. To her who had given birth to the Redeemer, it was meet that a privilege should be given not inferior to that bestowed on Enoch and Elias. The common tradition has ever been that the Blessed Virgin died in Jerusalem, where her sepulchre is still shown. St. Andrew of Crete, St. John Damascene, and all the earliest martyrologies and missals attest the fact of the reunion of the soul of the Blessed Virgin with her body soon after death, and of her being thus taken up into Heaven in body and soul. The tradition regarding this event is contained in the lessons of the Divine Office selected for Aug. 18, and taken from a homily of St. John Damascene, himself a native of Palestine and intimately acquainted with all the local traditions regarding Christ and His Mother.

ASTOR LIBRARY, founded by John Jacob Astor, who bequeathed $400,000 for that purpose. It is located on La Fayette Place in New York City, was opened in 1854, and contains nearly 200,000 volumes. It was greatly enlarged in the year 1883–4.

ATELEC'TASIS is a peculiar condition of the lungs of infants, in which a portion of the organs does not become filled with air. The lungs appear healthy, but they remain in the fœtal condition. Dr. Jörg of Leipzig, who has investigated this subject, regards the condition as a diseased state of the lungs. He points out that any circumstances likely to weaken the vital powers of the child before birth are liable to be followed by A. A child may live for several days with portions of the lungs in this condition. If the parts are not soon dilated, they become so consolidated that all trace of air-cells is lost. In some cases the ductus arteriosus, which during fœtal life carries blood from the pulmonary artery to the descending aorta, is not quickly closed, so that little blood passes to the lungs even after birth. In these circumstances A. occurs.

ATLAN'TA, the capital of Georgia, and one of the chief railroad centers of the South. It was settled about 1845 and was chartered as a city in 1847. In 1870 its population was 22,789, but it is now much larger. Here are located the Oglethorpe University, the North Georgia Female College, the Atlanta Medical College, the Atlanta University (colored), and other educational institutions. On Sept. 2, 1864, Atlanta was captured by Gen. W. T. Sherman, in command of the Union forces, on his famous 'march to the sea.' Before leaving the city on the 15th, he ordered the citizens to leave their homes, and caused it to be burned. In the fall of 1865 the work of re-building began.

ATTACHMENT, in many of the United States, the plaintiff, can, at the beginning of the action, upon presentation of affidavits, obtain an order from the court for an attachment against defendant's property. If judgment is afterwards obtained, the property so attached, can be sold in satisfaction. Such attachment will be granted however, only in special cases, as when the defendant is a non-resident, or there are allegations of fraud, or the defendant is removing or concealing, or about to remove and conceal his property, for the purpose of defrauding or delaying his creditors. The order of attachment can be served at the same time with the summons and complaint. The opposite party can, at any time, move, at Special Term, to have the attachment vacated upon counter affidavits. See Attachment in Chambers' En.

ATTAINDER. The United States Constitution forbids that attainder of treason shall work corruption of blood or forfeiture except during the lifetime of the person attainted. Otherwise American law is much the same as that of England. See Attainder in Chambers' En.

ATTICISM (Gr. *Attikismos*). Among all the Greek dialects, the Attic was the most finely developed, and as an instrument for the expression of poetic and philosophic thought, was most widely spread in Greece. After the rise of the Macedonian power, it became the language of literature and politics over the greater part of the known world, but its very extension exposed it to the corruption of foreign influences, and it soon began to lose its purity. Against this evil the grammarians strove hard, and sought by every means in their power to preserve the pure Attic of earlier times. This was the A. of the ancients, and those who distinguished themselves by the purity of their Attic style were Atticists. The term is now used to denote any refined and concise mode of expression.

ATTORNEY GENERAL, an officer of the United States and also of each of the states, who is the legal representative and adviser of the state, and whose position is much similar to that of the

Attorney-General in England. See ATTORNEY-GENERAL in Chambers' En.

ATTORNEY, LETTER OR POWER OF. This is a deed requiring legal execution and stamp. It may be either general or special. In the first case it empowers the agent of the granter to transact his entire business during absence, in the second case, the power of the agent is specifically restricted. The deed, until revoked, gives the agent the full power of his constituent.

ATTORNEY, WARRANT OF (English law term). This instrument is sometimes incautiously given by debtors who are pressed by their creditors. A. W. of A., as well as a cognovit authorizes the creditor to enter judgment and levy execution, either instantly or within a certain time specified in the deed. The granter is liable, when the judgment comes into operation, at any moment to have all his property taken from him and sold at a ruinous price. Moreover, the warrant or cognovit must be filed in a public office within twenty one days from its date; and this being done, credit is thereby ruined. The Debtors' Act of 1869 gives some protection to the unwary. It provides that no W. of A. or cognovit shall be effective unless the attorney of the granter be present to inform him of the nature and effect of the deed before execution, which attorney is to subscribe his name as a witness to the execution. A. W. of A. is also void against creditors unless filed in the Queeen's Bench.

ATWISHA, an Indian poison, supposed to be obtained from a species of aconite.

AUBURN THEOLOGICAL SEMINARY, located in the city of Auburn, N. Y., founded in 1820, and controlled by the Presbyterian Church in America.

AUDITOR, in the U. S., a person whose duty it is to examine and pass upon accounts. Under the U. S. government there are several such officers; and nearly every corporation, whether public or private, has its auditor. See AUDITOR in Chambers' En.

AUF'RECHT, THEODOR, one of the first Sanskrit scholars in Europe, was born at Leschnitz, Silesia, in 1822, and was educated at the University of Berlin. He came to England with a high reputation, and was employed at Oxford (1859–62) in compiling the catalogue of the Sanskrit MSS. in the Bodleian Library. In 1862 he was appointed Professor of Sanskrit and Comparative Philology in the University of Edinburgh, and in 1875 returned to Germany to become Professor of Sanskrit and Comparative Science of Langnage at Bonn. A.'s works are, *De Accentu Compositorum Sanscritorum* (Bonn, 1847); *Die Umbrischen Sprachdenkmäler* (Berl. 1850); *Zeitschrift für Vergleichende Sprachforschung* (Berl. 1850); *Ujjvaladatta's Commentary on the Unadisutras* (Bonn, 1859), from a MS. in the India House; *Halayudha's Abhidhanaratnamala: or, A Sanskrit Vocabulary, edited with a Sanskrit-English Glossary* (Lond. 1861); *The Hymns of the Rig-Veda transcribed into English Letters* (Berl. 1861); *A Catalogue raisonné of Sanskrit MSS. in Trinity College, Cambridge* (Camb. 1872); *The Anthology of Sarngadhara* (Leips. 1873); *Blüten aus Hindustan* (Bonn, 1873).

AU'ROCHS (*Bonasus* or *Bos Boison*), or EUROPEAN BISON, an ox or member of the family *Boridæ*, of large size, found at present in the Caucasian forests in a wild state, and also maintained by the Emperor of Russia in a Lithuanian forest—that of Bialoweiza. It formerly abounded wild in all the European forests, and has been regarded by some naturalists as the parent of our domestic breeds of cattle. The head is broad, and forehead arched; the hair of the forehead is long, and that of the chin and breast form a 'beard.' The tail is tufted. The color is a dark or dusky brown. These animals attain their full growth at the fifth year, and the females are smaller than the males.

AUSTIN was made the capital of Texas in 1839, is connected by rail with Houston and Galveston, has numerous fine public buildings, a well-organized fire department, several daily papers, and is the seat of large manufacturing interests. See AUSTIN in Chambers' En.

AUTUM'NAL FEVER, a name given in some parts of America to enteric or typhoid fever. It is sometimes also called *Fall fever*. Both of these terms indicate the fact that this fever is usually most prevalent in autumn, or the fall of the year.

A'VERYSBORO', BATTLE OF. On March 16, 1865, Gen. W. T. Sherman, while marching towards Goldsboro', came upon Gen. Hardee in command of a strong force of Confederates, entrenched before the village of Averysboro'. Gen. Hardee's object was to hold the Union forces in check until the Confederates could concentrate under Gen. Johnston. During the 16th there was hard fighting, and Hardee's men were driven back to a second line of entrenchment; and on the morning of the 17th it was discovered that during the night, the Confederates had evacuated their lines and retreated. The Union loss was 600, and that of the enemy less, although many prisoners were taken by Sherman.

AXILLA is the armpit. When the arm is extended at the shoulder-joint, the A. is a pyramidal space, the apex of which is situated between the clavicle and first rib, while the base is formed by the skin. It contains a large quantity of loose areolar tissue, fat, lymphatic glands, the axillary artery, veins, and numerous nerves. It is frequently the seat of abscesses and tumors.

AYO'RA, a town in Valencia, Spain, 50 miles S.-W. of Valencia, on the river A. Husbandry and the manufacture of oil are the chief industries. The ruins of an old castle crown the summit of a hill in the vicinity. Pop. 5412.

AYRSHIRE CATTLE. The characteristics of these cattle are a plentiful flow of milk, varying from twenty-four to thirty-four quarts daily. The head of a pure Ayrshire should be broad, gradually tapering downwards to the nostrils, which should be expanded, and dark.

AZADIRACH'TA INDICA, an Indian tree belonging to the order *Meliaceæ*. An acrid oil is obtained from its fruit, which is used in India for burning as well as for dyeing cotton. Its bark is a tonic, and its root has been used as a vermifuge.

B.

BAB'BITT, ISAAC, a distinguished goldsmith and manufacturer of the United States. He made the first Britannia ware produced in this country. A well-known alloy bears his name, for which he received a gift of $20,000 from Congress. Born July 26, 1779 at Taunton, Mass. Died May 26, 1862 from insanity.

BABBITT'S METAL, an alloy used in lining axles, and invented by Isaac Babbitt of Boston.

BABB'LERS (*Timalinæ*), a sub-family of Perching or Insessorial birds, included in the Dentirostral section of that order, and distinguished by the long bill with the ridge of the upper mandible curved, by the slightly-notched tip of the bill, by the nostrils being situated in a groove at the base of the upper mandible, by the rounded form of the wings, by the tapering tail, and by the larger size of the claw of the hinder toe. The B. are all of small size, and are confined to India, Australia, and the islands of the Eastern Archipelago. The best-known species are the LAUGHING THRUSH (*Pterocyclus cachinnans*) and LAUGHING CROW (*Garrulax leucolophus*) of India, the Indian BLACKFACED THRUSH (*G. Chinensis*), the Australian *Cinclosoma punctatum*) &c.

BABCOCK, ORVILLE E., born Dec. 25, 1825 at Berkshire, Vt.; graduated from West Point 1861; participated in the civil war; served on the staff of Gen. Banks on the upper Potomac; in 1864 was made aide-de-camp to Gen. Grant, under whom he served in the Wilderness, and until the surrender of the confederate forces under Gen. Lee. When Gen. Grant became President, Babcock became his Secretary.

BABILLARD, the term applied to an Insessorial bird (*Currucagurrula*), better known by the names of *white-breasted fauvette, lesser whitethroat*, and *nettle-creeper*.

BACCIOC'HI, MARIE-ANNE-ELISE BONAPARTE, born at Ajaccio, Corsica, in 1777, was the eldest sister of Napoleon I. At Marseille, when twenty years of age, she married Felicio Pasquale Bacciochi, a Corsican in the service of France, and rising with her brother's good fortune, in 1809 she was made Grand Duchess of Tuscany; but her administration was arbitrary and unpopular. She left Florence in 1814, on the fall of Napoleon, and died at Villa Vicentina, near Trieste, August 7, 1820. Her husband died 28th April 1841. Their daughter, NAPOLÉONE ELISE B. (born 1810), was remarkable for her devotion to Napoleon's son, the Duke of Reichstadt, whom she is said to have nearly carried off from Austrian custody. In June 1825 she married Prince Came-

rata, from whom she was separated in 1830, and died in Normandy, February 3, 1869.

BACHE, ALEXANDER DALLAS, LL.D., a well known scientist and educator, born in Philadelphia July 19, 1806. Having been appointed President of Girard College in 1836, he traveled extensively in Europe, devoting his time to a careful study of educational institutions, and upon his return home made a report that has largely influenced education in America. He also made valuable discoveries in connection with terrestrial magnetism. Dying without issue, he left his property in trust, the income to be devoted to scientific research. Died Feb. 17, 1867 at Newport, R. I.

BACHE, GEORGE M., an American naval officer, born Nov. 12, 1840 in the District of Columbia, and graduated from the Naval Academy in 1860. He commanded the iron-clad *Cincinnati* on the Mississippi until she was sunk at Vicksburg by the fire of the enemy, May 27, 1863. For his bravery in this action he received a letter of thanks from Gideon Welles, at that time Secretary of the Navy. He participated in the attacks on Fort Fisher, and led an assault upon the fort, where he was wounded in the shoulder, June 15, 1865. He became a lieutenant in 1862, and a lieutenant-commander in 1866.

BACHE, HARTMAN, a great-grandson of Dr. Franklin, and a distinguished American officer and engineer, born Sept. 3, 1798, at Philadelphia, graduated from West Point in 1818, and, after serving in various capacities, was made brevet brigadier-general, U.S.A., in 1865. Died Oct. 8, 1872, at Philadelphia.

BACHMAN, JOHN, D.D., L.L.D., a naturalist and Lutheran divine, born in Dutchess Co., N. Y., Feb. 4, 1790. He served as pastor of a church in Charleston, S. C., and assisted Audibon in the preparation of his great work on ornithology. His principal work was *Characteristics of Genera and Species, as applicable to the Doctrine of the Unity of the Human Race*. Died Feb. 25, 1874.

BACKUS, REV. ISAAC, a Baptist minister of large influence, born at Norwich, Conn., Jan. 9. 1724, for many years a trustee of Brown University, and a member of the Massachusetts convention which ratified the Federal Constitution in 1788. He is best known by his work entitled *A History of New England, with especial reference to the Baptists*.

BACON, EZEKIEL, LL.D., born at Stockbridge, Mass., Sept. 1, 1776, was one of the chief-justices of the court of common-pleas in Massachusetts in 1813, first comptroller of the U. S. treasury in 1813, and member of Congress from Mass. (1807—1813). Died Oct. 18, 1870 at Utica, N. Y.

BACON, LEONARD, D.D., LL.D., born at Detroit, Mich., Feb. 19, 1802, graduated from Yale College in 1820, and from the theological seminary at Andover in 1824. In 1825 he was called to the pastorate of the Center Congregational Church, New Haven, Conn., and remained its pastor until 1866, when he became professor of systematic theology in Yale Divinity School. In 1871 he was appointed lecturer on church polity and American church history in the same institution. Among his best known published works are *Select Practical Writings of Richard Baxter*, and *Slavery Discussed*. Died at New Haven, Conn., Dec. 24, 1881.

BACON, NATHANIEL, an Englishman who emigrated to Virginia in colonial times, practised law, gained much influence over the people, and headed what is known as 'Bacon's Rebellion,' in 1676. Under his command the people defeated Governor Berkeley, but Bacon died Oct. 1, of that year, and his followers were soon dispersed.

BAC'TRIAN CAMEL (*Camelus Bactrianus*), a species of camel distinguished from the Arabian camel or dromedary by the possession of two humps on the back. The native regions of this species lie to the S.E. of Arabia, and extend over Central Asia and China even to India. In Asia, its northernmost limit appears to extend to the 60° of latitude. It occurs in the Crimea, and extends from Arabia westwards to the territory between the Caspian and Black Seas.

BADEAU, ADAM, born in New York, entered the Union service as captain and aide-de-camp in 1862, and served on Gen. Sherman's staff. He was wounded at Port Hudson, served as military secretary to Gen. Grant, and was made lieutenant colonel, colonel, and brevet brigadier-general U. S. A. After the war he published a *Military History of General Grant*.

BADGER, OSCAR C., a naval officer who rendered distinguished services during the civil war, born at Windham, Conn., Aug. 12, 1823, entered the navy in 1841, and after various promotions was made captain in 1872. He commanded the iron-clads *Potapsco* and *Montauk* in their engagements with the forts at Charlestown in the year 1863, and was severely wounded in the attack upon Fort Sumter on Sept. 1, of that year.

BAILEY, GAMALIEL, M.D., an American anti-slavery agitator, born in New Jersey Dec. 3. 1807, and founded and edited the *Cincinnati Philantropist* and the *National Era*, both devoted to the anti-slavery cause. In the latter paper first appeared the celebrated anti-slavery novel, *Uncle Tom's Cabin*. Died June 5, 1859.

BAILEY, GUILFORD D., a colonel in the N. Y. volunteers who served gallantly during the civil war and was killed at the battle of Seven Pines, May 31, 1862. Born at New York, 1833, and graduated from West Point, 1856.

BAILEY, JAMES MONTGOMERY, known to the public as the 'Danbury News Man,' since 1865 has edited the *Danbury News* (Danbury, Conn.), in which position he has acquired widespread fame as a humorist. He has also published several humorous works which have been principally compilations of articles that had already appeared in his paper. He was born Sept. 25, 1841, at Albany, N. Y.

BAILEY, JOSEPH, an American officer who served during the civil war on the Union side. By the rapid construction of dams across the Red River, he saved a large part of the Mississippi fleet, which had become immovable owing to a rapid fall of the tide. For these services he received the thanks of Congress and was made a brigadier-general. On March 21, 1867, he was shot, while in Mo.

BAINBRIDGE, WILLIAM, an American naval officer who distinguished himself during the war of 1812. In the war against Tripoli he commanded the *Philadelphia*, with the rank of captain, and when that vessel was captured in Oct. 1803, because a prisoner of war, and was held by the enemy until peace was established in 1805. In 1812 he commanded the *Constitution*, *Essex*, and *Hornet*, and in Dec. of that year, after a severe struggle, captured the British vessel *Java*, a forty-nine-gun frigate. Died July 28, 1833.

BAIRD, ABSOLOM, born Aug. 20, 1824, at Washington, Pa., and graduated from West Point in 1849. He was appointed brigadier-general U. S. volunteers in 1862, and bore an active and gallant part in the civil war, participated in many of its most stubborn battles, such as Blackburn's Ford, Bull Run, Shelbyville, Chickamauga, Missionary Ridge, Pine Mountain, Renesaw, &c., marched with Sherman's army to the sea, and was present at the surrender of Johnston at Durham Station. For his gallant conduct he was brevetted major-general U.S.A. in 1865.

BAIRD, a Scottish family that has acquired extraordinary wealth during the present century. The father, Alexander B. of Lockwood, Old Monkland, began the celebrated mineral enterprises of the family in 1809 : a lease of Gartsherrie was taken in 1826, and the first furnace was put in blast in 1830. Coal and iron were near each other, the new railway system passed conveniently through the field, and skill, talent, and energy did the rest. The works now include Eglinton, Blair, Portland, Lugar, and Muirkirk. The father died in 1833, leaving two daughters and eight sons, William of Elie, Douglas of Closeburn, George of Strichen and Stitchel, David and Alexander of Urie, James of Cambusdoon, Robert of Auchmedden, and John of Lockwood. James of Auchmedden and Cambusdoon was born in 1803, sat as M.P. for Falkirk from 1851 to 1857, and died at Cambusdoon, Ayr, 20th June 1876. He was the munificent founder of the *B. Trust*. Fresh force and energy were imported into the vast business of the Bairds by a nephew, Alexander Whitelaw of Gartsherrie, who was elected M.P. for Glasgow in 1874 in the Conservative interest, but died in 1879. The B. family have become extensive landowners, the total rental of their estates reaching £81,000 a year.

BAIRD TRUST. James Baird of Auchmedden and Cambusdoon, founded, July 24, 1873, this trust, with a fund of £500,000 sterling. Its objects are to help in the work of spreading the gospel in connection with the Church of Scotland, of building churches, endowing parishes, augmenting stipends, spreading sound literature, promoting religious education, assisting divinity students, and maintaining the 'B. Lectnre.' The trustees must be members of the Church of Scotland, only one to be a clergyman; and the general design of the trust is to promote the territorial work of the National Church, and to maintain the great truths of the gospel as declared in the standards of the Church of Scotland.

BAIRD'IA, a genus of crustacea belonging to the order *Ostracoda*, and represented by living as well as by extinct species. The fossil forms occur in the silurian, carboniferous, and permian rocks, and in the mesozoic and cainozoic formations also.

BAIRD, ROBERT, D.D., an American divine and author. His principal work was a *History of the Waldenses, Albigenses, and Vaudois*. Born in Fayette Co., Pa., 1798, and died at Yonkers, N. Y., March 15, 1863.

BAKER, EDWARD D., born in London, England, Feb. 24, 1811, emigrated to the United States, member of Congress in 1848, U. S. senator from Oregon in 1860, entered the Union army as colonel at the outbreak of the civil war, and, while in command of a brigade, was killed at Ball's Bluff, Oct. 21, 1861.

BAKER, Osman, Cleander, one of the bishops of the American Methodist Church, born at Marlow, N. H., July 30, 1812, interested himself in the founding of Methodist theological schools, taught for a time in the Biblical Institute at Concord, in his native state, and was elected bishop in 1852. Died Dec. 20, 1871.

BAL'ANCE-FISH, a name applied to the *Zygæna malleus*, or hammer-headed shark, so named from the shape of the head, the eyes being placed at the extremities of the elongated head.

BALA'NOPHORA'CEÆ, an order of peculiar leafless plants found growing parasitically on the roots and stems of trees, principally in tropical countries, and having a fungus-like appearance. The *Fungus Melitensis* of Malta (*Cynomorium coccineum*) is celebrated for arresting bleeding. The famous Rafflesia of Java belongs to the order. The genus *Balanophora* is the type of the order. *Cytinus hypocistis* is a common parasite on the roots of species of *Cistus* in the S. of Europe, and contains gallic acid. Some authors make B. a sub-order of *Rhizantheæ*.

BALATA GUM, the milky juice which exudes from *Sapota Müllerі*, a large tree which grows in tropical America. The juice quickly hardens on exposure to the air, and, in its solid state, in appearance, properties, and uses it is similar to gutta-percha, for which it can be used as a substitute.

BALBUE'NA, Don Bernardo de, one of the most distinguished epic poets of Spain, was born at Valdepeñas in 1568, sailed for the New World at an early age, and completed his studies for the Church in a college of Mexico. Returning to Spain in 1608, he was soon after appointed provost of Jamaica, and in 1620 Bishop of Puerto Rico, where he died in 1627. Of his works we possess only three—*La Grandeza Mejicana* (Mex. 1609; Madr. 1829), a poetical description of the Mexican capital; *El Siglo de Oro* (Madr. 1608), a pastoral novel in prose and verse; and *El Bernardo, ó la Vittoria de Roncesvalles* (Madr, 1624, best ed. 1808), an epic poem in 24 books, the great merits of which have only recently been recognized. It is full of originality of design and execution; yet amidst all its fire and fancy there is a wonderful simplicity and naturalness.

BALD'WIN (Fr. *Baudouin*), the name borne by nine Counts of Flanders, the first of whom, Baldwin *Bras-de-Fer*, married Judith, daughter of Charles *le Chauve*, and died in 879; and the last, a contemporary of Philippe Auguste, took the cross in 1201. By far the most notable of the nine, however, was Baldwin V., surnamed of Lille, or *le Débonnaire*, who died in 1067. He carried on a bloody strife with the German emperor, Heinrich III., made the famous canal Fosse-Neuf, which separates Artois from Flanders, was Regent of France from 1060, during the minority of the French king, Philippe, and assisted the expedition which placed the crown of England on the head of his kinsman the Duke of Normandy.

BALDWIN, Matthias, W., an American inventor, who made several improvements in locomotives, and who, it is claimed, made the first locomotive constructed in America. Born in New Jersey in 1796, and died at Philadelphia, Pa., Sept. 7, 1866.

BALEEN', the term applied to the horny plates attached to the palate of the *Balænidæ*, or whalebone whales, and which constitute the 'whalebone' of commerce. The baleen-plates are arranged in a double row on the palate, and depend into the cavity of the mouth of the whale. The length of the largest plates averages from 10 to 14 feet; whilst in number about 200 plates exist on each side of the mouth. This huge fringe acts as a kind of sieve or strainer in serving to prevent substances of large bulk from gaining access to the throat, and also in entangling the minute forms upon which the whale feeds.

BALLOU, Hosea, one of the founders of the Universalist Church in America. He was self-educated and began to preach when about 21 years of age. He preached throughout New England, and was settled for a time at Portsmouth, N. H., and subsequently at Salem, Mass. (1815), and Boston, Mass. (1817). He edited *The Universalist Magazine* and published *Notes on the Parables* and an *Examination of the Doctrine of Future Retribution*. Born at Richmond, N. H., April 30, 1771, and died June 7, 1852.

BALLOU, Hosea (second), nephew of Hosea Ballou (first), a prominent Universalist clergyman, editor, and author, edited the *Universalist Magazine* and *Universalist Quarterly*, and published *Ancient History of Universalism* and Universalist hymn-book. Born at Halifax, Vt., Oct. 18, 1796, and died May 27, 1861.

BALL'S BLUFF, BATTLE OF. On the right bank of the Potomac River, about 33 miles from Washington, rises a precipitous bank, 150 feet above the river's level, known as Ball's Bluff, and from which the engagement there fought derives its name. On Oct. 20, 1861 Gen. Stone, commanded that portion of Gen. Mc Clellan's army which was opposite to the above bank and across the Potomac. By order of Gen. Stone, Col. Devens crossed the river with a force of about 650 officers and men. On the following day Col. Deven's command was attacked by the enemy in force, under Gen. Evans, C. S. A., and Col. Baker, with the First California volunteers was sent to their assistance. As senior officer Col. Baker took command, the force at his disposal amounting at this time to about 1900 men. The Confederates, protected by heavy woods, opened a galling fire upon the exposed Union troops, and after a desperate struggle for two hours, the latter began to waver. About 5 o'clock in the afternoon Col. Baker was killed, and the command fell upon Col. Cogswell of New York. Under the hot fire of the enemy the Union soldiers began to retreat, and orderly retreat soon degenerated into wildest rout. The boats in which an attempt was made to cross the river were either upset by the disorderly crowds that overloaded them, or sunk by the Confederate fire. A few escaped by swimming the river through a hail-storm of bullets, while some concealed themselves in the tangled brushwood that lined the river's bank. The Union loss was upwards of 1000, while that of the Confederates was only 155. Col. Baker was undoubtedly to blame for his reckless daring in the matter. Gen. Stone was shortly afterwards arrested and for a long period confined in Fort La Fayette. Eventually he was released and again given a command—who was primarily and principally to blame for this uncalled for disaster, resulting in the butchery of a thousand gallant men, and the loss of as brave an officer as ever donned uniform, is a question that must be left to military experts.

BALLSTON SPA, a village summer resort, and capital of Saratoga Co., N. Y. Its chief attraction lies in its chalybeate springs, which are unexcelled by any in the United States. It is on the Rensselaer and Saratoga R. R., and is about 30 miles north of Albany.

BALTIMORE. The following is additional to the matters contained in the article on the above in Vol. I. The natural advantages of the position of Baltimore were overlooked by the early settlers of the Chesapeake section of Maryland. In 1729 it was cultivated as a farm, and in 1752 it contained only about 25 houses, and only four of these were built of brick. From 1775 it rose rapidly in importance, and in 1780 it became a port of entry and a custom-house was opened. Baltimore contains about 200 churches, and has three universities, several colleges, 122 public schools, a state normal school, a manual labor school, besides numerous private schools and academies, an academy of art and science, an infirmary, hospitals, asylums, dispensaries, &c., three theaters, an opera house, a museum, and many fine public buildings. The most imposing building in the city is the new city hall, one of the finest structures of the kind in the country. It occupies an entire square of ground, an area of about 26,000 square feet, near the center of the city, and contains the various municipal offices. It was begun in 1867, and cost about $2,600,000. Another important building is that of the Peabody Institute, founded by the late George Peabody, Esq., of London, and endowed by him to the amount of $1,400,000. The largest of the monuments, for which the city is famous, is that erected to the memory of Washington. It stands on an eminence of 150 feet, and has, with its base, an altitude of 200 feet, and is constructed of white marble. Baltimore has a number of parks and public squares, chief of which is Druid Hill Park, a tract of 700 acres on the extreme north-west of the city, possessing more natural beauties than any other in the United States. The Abbot Iron-works, in the eastern part of the city, have the largest rolling mills in the United States. There are 26 banks, with a capital (in 1874) of $14,000,000, and seven savings-banks, seventeen fire, and marine, and three life insurance companies. The assessed value of taxable property of all kinds for the year 1875 was $231,242,313.

BANCROFT, Aaron, D.D., a Unitarian clergyman and author, was pastor at Worcester, Mass., for many years, and published a popular *Life of Washington*. Born at Westfield, Mass., Nov. 10, 1755, graduated from Harvard in 1778, and died Aug. 19, 1839.

BANGS, Heman, one of the founders of Wesleyan University, and a powerful Methodist preacher. Born at Fairfield, Conn., 1790, and died Nov. 2, 1869.

BANGWEOLO, or BEMBA, one of the largest lakes of Central Africa, lies about 200 miles S.W. of Lake Tanganyika, in lat. 11°—12° S., and long. 28° 20′—30° 35′ W. It is of somewhat oval shape, and extends in an E. and W. direction, being 150 miles long and 80 broad. Many rivers enter it on the N. and E., the chief of which are the Chambeze, Lopopussi, Luela, and Lolotikira. It also fed by innumerable smaller streams, and by the waters which in the rainy season flood the surrounding country to a distance of 40 miles. This margin of morass or 'sponge' is inhabited by numerous small tribes, and covered by aquatic vegetation, including the papyrus, arnus, lotus, rushes, and ferns. The lake is 3688 feet above the sea-level, and abounds in fish, while its waters are sweet, and of a dark sea-green color, probably due to the reflection of light by the fine white sand forming the bottom. It is drained by the great Luapula or Webb's River.

B. was discovered in 1868 by Dr. Livingstone, who revisited it for the purpose of further exploration, and died on its S. shore at Chitambo's village, May 1, 1873.

BANJALU'KA, a strong fortified town of Bosnia, Turkey, on the left bank of the Verbas, a branch of the Danube, in the N.W. angle of the kingdom. It has a gunpowder factory, several hot springs, and many Roman remains. Pop. 15,000.

BANKING. The first bank of the United States was chartered in 1791, and after its success had become established, as the result of political jealousy and opposition it ceased to exist in 1811. From that time until 1817 bank notes for a circulating medium were furnished by banks organized under state laws. In 1817 the second bank of the United States was established. It proved successful, but became a bone of political contention, and its charter was not renewed. There are now in the United States nearly 2000 national banks with bank bills in circulation to the amount of $354,000,000. These are secured by government bonds deposited at Washington. The principal profits of a bank arise from the non-interest paying funds deposited with it for safe-keeping. The profitableness of banking under the American system is shown by the fact that during the six months ending Sept. 1, 1873, the national banks of the United States paid in dividends upon a capital-stock of $488,100,951, the sum of $24,823,029. See BANKS in Chambers' En.

BANKS, NATHANIEL PRENTISS, an American soldier and statesman, first a mechanic and afterwards a lawyer, a member of the Massachusetts legislature in 1849, speaker of the House of Representatives of Massachusetts in 1851, member of Congress in 1854, and speaker of the House in 1856. In 1852 he separated from the Democratic party, of which he had been a member, on account of his opposition to the extension of slavery. From 1857 to 1859 he was governor of Massachusetts, and in 1861 entered the Union army as major-general of volunteers. After various services with the army of the Potomac, in 1862 he was appointed commander of the Department of the Gulf in place of Gen. Butler, and was in command of the Union forces which captured Port Hudson, July 9, 1863, taking over 6000 prisoners of war. He was elected to Congress in 1864, 1866, 1868, and 1870.

BANKS' PENIN'SULA is situated in the province of Canterbury, on the E. coast of the Middle Island of New Zealand, between 43° 37′ and 43° 55′ S. lat., and 172° 40′ and 173° 9′ E. long. Its area is estimated at 250,000 acres. B. P. is deeply indented with bays, the chief of which is the splendid inlet of Akaroa, on the S. The surface of B. P. consists of sharply defined mountain ranges and peaks, containing abundant evidence of volcanic action, and covered with forests. These ranges end abruptly on the W. in the great Canterbury Plains,and the curious Lake Ellesmere.

BANK'SIAN COCKATOO' (*Calyptorhynchus Banksii*), a species of cockatoo, occurring in Australia, the plumage being black or brown, variegated with spots of red or orange, with which colors the tail-feathers are also banded.

BAPTISTS. This name was given to the denomination generally known by it, about 200 years ago, during the Commonwealth in England. Prior to that time they had been called Anabaptists. The German Anabaptists while admitting only professed believers to baptism, practised pouring more frequently than immersion. The Baptists of the early period of the Reformation were poor and obscure, and were subjected to persecution at the hands of both Protestants and Catholics. From 1525 to 1530 nearly all the leaders had been put to death or banished from Switzerland and Germany, and the membership of the churches dispersed by the persecutor. In the Netherlands the Baptists were called Mennonites from their leader Menno Simons, a Romanist Priest, who had been converted to evangelical doctrines. Early in the settlement of America, Baptists came hither, but soon met with persecution at the hands of the Puritans. Roger Williams, a Baptist, persecuted in Massachusetts, fled with a small company, and founded the state of Rhode Island. During the nineteenth century the Baptists have rapidly increased in numbers, wealth, and influence. See BAPTISTS in Chambers' En.

BARANTE', AMABLE GUILLAUME PROSPER BRUGIERE BARON DE, a French statesman and author, born at Riom, in Auvergne, 10th June 1782, entered the service of the state in 1802, was a prefect under Napoleon, opposed the reactionary policy of the restoration, and zealously supported the government of Louis Philippe. He was French ambassador at Turin and at St. Petersburg, but withdrew from public life after the revolution of 1848, and died in Paris, 23d November, 1866. His chief literary performance, *Histoire des Ducs de Bourgogne de la Maison de Valois* (1824–26, 8th ed. 1858), is a learned and pictorial, but not very critical work. Other writings of B.'s are *Histoire de la Convention Nationale* (1851–53); *Histoire du Directoire de la République Française* (1855); *Le Parlement et la Fronde* (1859). He also translated Schiller's dramas into French.

BARBERI'NI, a princely Roman family, originally called Tafani, but which took the name of B. from the Tuscany village from which it sprung. The noted poet and philosoper FRANCESCO DA B., who wrote in the first half of the fourteenth century *Documenti d'Amore*, is supposed to have belonged to this family, which at an early period removed to Florence. ANTONIO B. (died at Florence 1571) had three sons, CARLO, MAFFEO (born 1568), who became pope under the title of Urban VIII., and ANTONIO (born 1569, died 1646), cardinal-librarian of the Church. The greatness and splendor of the house of B. dates from the time of Urban, who during his long pontificate of twenty-one years lost no opportunity of advancing the interests of his kinsmen. Of the three sons of his brother Carlo, the eldest, FRANCESCO (born 1597), was elected a cardinal in 1623, possessed great influence with his uncle, and died, 1679, dean of the Sacred College. The second, TADDEO, married Anna Colonna of Paliano, great-grand-daughter of the hero of Lepanto, and purchased from the elder Roman line of the Colonna the principality of Palestrina (anc. Prænestе), along with other possessions of the Colonna family. The growing power and influence of the B. excited the jealousy of the Medici, Este, and Farnese families, and during the pontificate of Urban's successor, Innocent X., Taddeo and his brothers were forced to seek refuge in France, where the former died in 1647. ANTONIO, the third son (born 1608), was a restless character, fond of tournaments and display, but at the same time a patron of Latin and Italian poetry. In 1631 he too was made a cardinal, and after his retreat to France received from Louis XIII. the bishopric of Poitiers, and in 1657 the archbishopric of Rheims. Subsequently he was reconciled to the Pope, and returned to Italy, were he died at Remi in 1671. Through him the property of the Frangipani family came to the B. About a century after the death of Urban VIII., the male line of the B. became extinct. CORNELIA, the grand-daughter of Taddeo and Anna, married in 1728 Giulio Cesare Colonna Prince of Carbognano and Duke of Bassanello (died 1787).

BARCELO'NA, earlier *Neueva Barcelona*, a seaport of Venezuela, at the mouth of the Aragua, on an open bay of the Caribbean Sea, 165 miles E. of Caracas. It has considerable trade, chiefly in maize, coffee, and indigo. Pop. (1873) 7674. B. was founded in 1671, thirty-three years after the establishment of the first town of this name at the foot of the Cerro-Santo mountains, and first rose into importance about the close of the 18th c., through a smuggling trade carried on with the W. Indies.

BAR'GAIN, in law, usually signifies a contract which may be completed without writing, such as a sale of goods. In mercantile affairs, a B. of great importance may be proved by letters of correspondence, or even by less formal writings.

BARKER, FORDYCE, M.D., an eminent physician of New York City, who has published numerous valuable papers upon obstetrical subjects. He has been professor of obstetrics and midwifery in the New York Medical College and in Bellevue Hospital, N. Y. Born at Wilton, Me., May 2, 1819, and educated at Bowdoin College.

BAR'LEYCORN, an old measure of length, equal to about the third of an inch.

BARNARD, FREDERICK AUGUSTUS PORTER, S.T.D., LL.D., L.H.D., a distinguished American scholar and educator, born at Sheffield, Mass., May 5, 1809, and graduated from Yale College, 1828. From 1830 to 1861 he was engaged in teaching in the South, and in 1864 was made president of Columbia College, New York. Among his publications are the following: *Letters on College Government* (1854), *Art Culture* (1854), *History of the American Coast Survey*, *Undulatory Theory of Light* (1862), and *Metric System of Weights and Measures* (1871).

BAR OF DOWER, a widow's right to Dower may be barred or defeated by certain delinquencies on her own part, or substitution of jointure. In Scotch law the corresponding term to dower is Terce. It may be similarly barred or excluded.

BARR, a town of Alsace-Lorraine, Germany, 18 miles S.W. of Strasburg, at the foot of the Vosges, and at the entrance of the picturesque valley of Ulricht. It carries on a trade in wine, brandy, timber, cattle, and iron, and has some woollen and cotton manufactures. B. is much resorted to on account of the beauty of its neighborhood. Over the town rises the Odilienberg to a height of 2450 feet, with its once famous cloister, built, it is said, by a Saint Odilia, daughter of a Duke of Alsace, in the latter part of the 7th c. Pop. (1873) 5655, with the suburb La Vallée.

BARRA DO RIO NEGRO, capital of the province of Amazonas, Brazil, on the river Amazon, not far from the mouth of the Rio Negro, is a flonrishing place of trade, with a pop. of 6000.

BARRAMUN'DA the native name of the *Ceratodus Fosteri*, a curious fish which occurs in the rivers of Queensland in Australia, and which appears to be most nearly related to the singular mudfishes or *Lepidosirens* of American and African rivers. It varies from 3 to 6 feet in length, and possesses a covering of cycloid

scales. The skeleton is cartilaginous. The operculum or gill-cover is well developed. The tail is homocercal. The heart consists of a single auricle and ventricle, with a contractile *arterial bulb*. The intestine has a spiral valve. No pyloric cæca are developed. The swimming-bladder communicates with the mouth by a pneumatic duct and glottis, and is of cellular or lung-like structure internally. The B. is the 'native salmon' of the Queensland rivers. It appears to be a slowly-moving fish, and feeds on the decaying vegetation of rivers.

BARRETO DE RESENDE, Pedro, a Portuguese historian, born towards the close of the 16th c., died at Lisbon in 1651. He has left a splendid work on India, which has never been published, and of which the *Bibliothèque Republicaine* of Paris contains what is probably the original MS. The work gives colored plans of all the Portuguese fortresses in India and Africa, with portraits of all the governors and viceroys, from Vasco de Gama to Linhares.

BARTHOLOMEW'S (St.) DAY. The literature upon the subject, to which the student is referred for details, is as follows: Sismondi, *History of France;* H. Martin, *History of France;* and Henry White, *The Massacre of St. Bartholomew*. See Bartholomew's (St.) Day in Chambers' En.

BASCOM, John, LL.D., born at Genoa, N. Y., May 1, 1827, and graduated from Williams College in 1849. In 1855 he became professor of rhetoric in Williams College, and was made president of Wisconsin University in 1873. His principal works are, *Political Economy* (1861), *Rhetoric* (1865), *Science, Philosophy, and Religion* (1871), and *The Philosophy of Religion*.

BASOCHES' (a corruption of *Basilica*, the palace of the king), a corporation of law-clerks connected with the procurers who attended the Parliament of Paris after it had ceased to be the King's Council. Created by Philip the Fair about 1303, the B. had many privileges: a king, wearing a cap like that of the French king, a blue and yellow standard, many officers, a legal jurisdiction in disputes of members, a right to issue currency, the curious right of 'plantation d'arbre,' &c. Every July they held a grand review, followed by a dramatic representation. This last was a species of morality, farce, or *sotie*, half-way between the *Religious Mysteries* (played by the Brotherhood of the Passion), and the *Feasts of Fools*, and the modern drama. The B. began with abstract moralities, in which the characters had names, such as *Honte-de-dire-ses Péchés, Espérance-de-longue-vie*, &c. They soon introduced allusions to passing events, and being found politically troublesome in the early disputes of the 15th c., these farces or satires were suppressed till the reign of Louis XII., who licensed their performance in the grand saloon of the Palais. They were again suppressed in 1540, but it is said the B. received about the same time a royal grant of the Préaux-clercs. *L'avocat Patelin*, although sometimes described as a *sotie* of the *Enfans Sans Souci*, was probably a favorite farce of the B. The B. undoubtedly represent an original and fertile tendency of the French mind, which did not get fair play under the Rénaissance.

BASS'A, Great, a port of the Liberian Republic, Upper Guinea, Africa, with a considerable export trade in pepper, coffee, cotton, and cocoa. The vicinity is rich in tropical fruits, such as lemons, bananas, and oranges. Pop. about 5000.—Little B., 20 miles N.W., is a maritime village of some size.

BAS'TIAN, Henry Charlton, M.D., F.R.S., a distinguished English Scientist, born at Truro, England, April 26, 1837. He is an ardent advocate of the doctrine of the spontaneous generation of living organisms.—His published works are, *Modes of Origin of Lowest Organisms* (1871), and *The Beginnings of Life* (1872).

BATH, a city of Main, on the west bank of the Kennebec River, and connected by steam-boat lines with Portland and Boston. Its chief enterprise is ship-building. Pop. 7371.

BATH-BRICK, a yellow, friable brick of siliceons material, largely used for metal polishing, especially in domestic economy. It is manufactured at Bridgewater from a very fine siliceous sand.

BAT-HORSES (Fr. *bât*, a pack-saddle) are horses used in military service for carrying the regimental baggage, such as books, tents, stores, medicine-chests, &c. Those who manage the horses are termed bât-men, and the money set aside for providing this commodity is known as bât-money.

BATHYB'IUS, the name applied to undefined masses of protoplasm existing in the beds of the oceans, and having imbedded in their substance minute calcareous bodies known as coccoliths. These coccoliths are frequently found associated together in the form of spherical masses termed *coccospheres*. The living protoplasmic B. has been assumed to be a Foraminiferous or animal organism allied to those which inhabit the sea-beds, whilst the coccoliths are presumed to be unicellular *Algæ* or low sea-weeds, the coccospheres being the sporangia or seed-cases of these Algæ. Their presence in B. would in this view be of an accidental kind. It has recently been asserted that B. has no real existence as an organism; the protoplasmic appearance being probably derived from the decomposing sarcode matter of other organisms.

BAT'IDES, a division of *Elasmobranchiate* fishes, represented by the *Skates* and *Rays*, in which the mouth and gill-openings are situated on the under surface of the body, which is generally greatly flattened and broadened. This broad appearance is given to those forms by the large size of the pectoral or breast fins, which are concealed beneath the skin, and thus add to the breadth of the body. The upper surface of the body bears the eyes and *spiracles* or apertures of tubes by which water may be admitted to the gills.

BATSCH, August Johann Georg Karl, a German naturalist, born at Jena, 28th October 1761, studied medicine under Gruner, Loder, and others, established himself as a physician at Weimar in 1781, and devoted his leisure to researches in natural history. After 1787 he successively filled at the University of Jena the functions of interim professor of natural history and medicine, titular professor of philosophy, and director of the society for the advancement of natural science. He died 29th September 1802. B.'s works are numerous and valuable. The principal are *Elenchus Fungorum* (Halle, 1783); *Versuch einer Anleitung zur Kenntniss und Geschichte der Pflanzen* (Halle, 1787–88); *Versuch einer Historischen Naturlehre* (Halle, 1789–91); *Blumenzergliederung aus verschiedenen Gattungen der Pflanzen* (Halle, 1790), a work remarkable for its new and original observations; and *Tabulæ Affinitatum Regni Vegetabilis* (Weim. 1802), in which one finds the first attempts at classification by natural families.

BAUMGARTNER, Gallus Jakob, a Swiss statesman, born 18th October 1797 at Altstätten, in the canton of St. Gall, and died in July 1870. He was noted among his countrymen for his devotion during the greater part of his career to the *parti prêtre*, vindicated the Jesuits, opposed the armed suppression of the *Sonderbund*, and displayed in a variety of political offices great oratorical and much administrative power.

BAUMGÄRTNER, Karl Heinrich, a distinguished physiologist of Germany, was born at Pforzheim, 21st October 1798, and in 1824 was made Professor of Clinical Therapeutics at Freiberg. He may be considered the originator of the cell-theory, subsequently worked out and expounded by Schwan. Among his writings are *Über die Natur und die Behandlung der Fieber* (Freib. 1827); *Handbuch der speziellen Krankheits- und Heilungslehre* (2 vols. 1835, 4th ed. 1840); *Dualistisches System der Medicin* (Stuttg. 1835–37); *Lehrbuch der Allgem. Pathologie und Therapie* (1837, 3d ed. 1854); *Schöpfungsgedanken* (1856–59).

BAYLOR UNIVERSITY, an educational institution of Texas, situated at Independence. It was chartered in 1845 by the Republic of Texas. It has an endowment of over $60,000, buildings valued at $30,000, a library of about 4000 volumes, and 700 acres of land. It has collegiate, law, and medical departments.

BAY RUM, a spirit prepared in the West Indies from the berries of *Eugenia acris*, used for toilet purposes and as a liniment in rheumatic affections.

BEALE, Lionel Smith, F.R.S., an eminent English scientist, and opponent of the Darwinian hypothesis, born in 1828, and graduated from the University of London in 1851. His best known works are, *How to work with the Microscope* (1858), and *Protoplasm* (1870).

BEATIFIC VISION,—the state of the Blessed in Heaven, which enables them to see God clearly as He is in Himself. This immediate and unclouded knowledge of the Infinitely Perfect Being, corresponds to the trial of Faith by which both Angels and men had to believe in God without seeing Him in His essence, and to be satisfied, during their period of probation, with knowing Him imperfectly and mediately through His creatures. Vision, therefore, corresponds to Faith, as the reward to the trial; and the Beatific Vision with its possession and fruition of the Supremely True and Fair and Good, is the goal toward which all rational creatures tend, and in which is their everlasting beatitude. The Council of Florence (1439—1442), in which the Emperor of Constantinople with his prelates was present, decreed that 'the souls of those who have incurred no stain of sin after their baptism, or who, having sinned have been cleansed of the stain in the body or out of the body, are forthwith admitted into Heaven, and clearly see God Himself as He is, in the Three Persons and the one substance, some, however, more perfectly than others, according to the diversity of their merits.' The bliss of a rational nature is in the possession by the will of the Highest Truth and in the enjoyment by the intellect of the Supreme Good. This knowledge and fruition is, in each spirit, proportionate to its capacity. And in the life to come the justice of God requires that the joy and bliss derived from the Beatific Vision by two different persons should be in a measure proportioned to the depth of their faith and the intensity of their charity, respectively, while laboring in this life. St. Paul contrasts both stages of our existence by saying: 'We see now through a glass in a dark manner; but

then face to face. Now I know in part; but then I shall know even as I am known. And now there remain faith, hope, charity, these three; but the greater of these is charity' (1 Cor. xiii. 12, 13). St. John declares the supernatural rank and duties of Christians together with their supernatural reward: 'Dearly beloved, we are now the sons of God; and it hath not yet appeared what we shall be. We know that when He shall appear, we shall be like to Him; because we shall see Him as He is. And every one that hath this hope in him, sanctifieth himself, as He also is holy' (1 John iii. 2, 3). Catholic theologians teach that the Creator, in order to fit the created spirit for this clear knowledge of the Divine Essence as it is in itself, adds to it a new power, which the schoolmen call 'the light of glory.' This expression, which was adopted by the Œcumenical council of Vienne, must not be understood of a material light, or of any substance outside of the intellect itself, but of a superadded degree of energy enabling the created faculty to penetrate the dazzling depths of the Infinite Being. St. Gregory the Great compares the privilege of just souls in the Old Law with that enjoyed by those under the New. The former, after death, had to wait for the coming of the Redeemer and the accomplishment of His atonement before they could see God, whereas the latter, when 'their earthly house of this habitation is dissolved' are put in possession of 'a house not made with hands, eternal in the heavens.'

BECHE, Sir Henry Thomas de la, an English geologist, born in London, 10th February 1796, educated at the military schools of Great Marlow and Sandhurst, entered the army in 1814, founded the Geological Survey of Great Britain, which was afterwards taken up by Government, and of which he was appointed director-general, and subsequently became director of the Metropolitan School of Science. He died 13th April 1855. B. was the author of a treatise *On the Discovery of a New Fossil Animal*, the Pleiosauros (1823), *Geology of Jamaica* (1826), *Classification of European Rocks* (1828), a *Geological Manual* (1831), *Researches in Theoretical Geology* (1834), *The Geology of Cornwall, Devon, and West Somerset* (1839), and *The Geological Observer* (1851, 2d ed. 1853).

BECK, the name of several eminent Germans, of whom the following are the most important:—1. Christian Daniel B., historian and philologer, born at Leipsic, 22d January 1757; became professor of Greek and Latin in the university of his native city, and died there, 13th December 1832. Among his numerous editions of the classics may be mentioned his Pindar, Aristophanes, Euripides, Apollonius Rhodius, Plato, Cicero, and Calpurnius. Besides these, B. wrote an *Anleitung zur Kenntniss der allgemeinen Welt- und Völkergeschichte* (4 vols. Leips. 1787–1805); *Grundriss der Archäologie zur Kenntniss der Geschichte der alten Kunst* (Leips. 1816), &c.—2. Johann Tobias B., an able Protestant theologian, born at Bahlingen, in Würtemberg, 22d February 1804; studied at Tübingen, became professor at Basel in 1836, whence he was called to Tübingen in 1843, and acquired a great reputation as a preacher and teacher. B. was one of the first to oppose, on the basis of independent scholarship, the conclusions of the critico-speculative school of Baur, and endeavored to introduce a more exact study of the New Testament literature. His chief works are, *Einleitung in das System der Christl. Lehre* (Stuttg. 1838; *Die Christl. Lehrwissenschaft nach den Biblischen Urkunden* (Stuttg. 1841); *Die Geburt des Christl. Lebens* (Basel, 1840); *Umriss der Biblischen Seelenlehre* (Stuttg. 1853, 2d ed. 1862); *Gedanken aus und nach der Schrift* (Frankf. 1859, new ed. 1868); *Christliche Reden* (six collections since 1834).—3. Karl B., a lively, picturesque, and musical poet, born 1st May 1817, at Baja, in Hungary, was the son of a Jewish merchant converted to the Protestant religion; studied at Vienna, and after some time settled in the Austrian capital. He has written *Nächte. Gepanzerte Lieder* (Leips. 1838); *Der fahrende Poet* (Leips. 1838); *Stille Lieder* (Leips. 1839); *Saul*, a drama (Leips. 1841); and *Janko, der Ungar. Rosshirt* (Leips. 1842, 3d ed. 1853), a metrical romance. His *Gesammelten Gedichte* appeared in 1844, and again in 1854. Since then B. has written, among other things, *Lieder vom armen Manne* (Berl. 1846, 4th ed. 1861); *Aus der Heimat* (Dresd. 1852, 4th ed. 1862); *Mater Dolorosa* (Berl. 1853); *Jadwiga* (Leips. 1863); and *Still und Bewegt* (1870).

BECKER, Nikolaus, the author of the famous German Rheinlied, was born 15th January, 1810, at Geilenkirchen, in Rhenish Prussia, and in 1840, when the war-party in France threatened the seizure of the left bank of the sacred river, set the patriotism of his countrymen on fire by his *Sie sollen ihn nicht haben*, which, though not a wonderful poem, was everywhere sung with enthusiasm. The French were stirred into a jealous rage, and Alfred de Musset wrote a witty but rather ignoble answer, *Nous l'avons eu votre Rhin Allemand*. B. died after a lingering illness, 28th August 1845. A collection of his Gedichte was published at Cologne in 1841.

BED-BUG (*Cimex lectularius*), an offensive insect, infesting beds, houses, certain kinds of birds, and particularly bats. Their vitality is great, and it is said that one has been kept alive for more than a year without food of any kind. There are several compounds and insect powders that will destroy them, but it is to be borne in mind, that they will seldom invade a thoroughly clean house.

BEDD'A NUTS, the fruit of a species of myrobalan, *Terminalia Bellerica*, largely imported into this country from the E. Indies for the use of the tanner and to produce a very permanent black dye employed by calico printers. They are also called *bastard* and *belleric myrobalans*. The seeds are eaten by the natives in some parts of the E. Indies, but they possess narcotic poisonous qualities. The fruits of *T. Chebula*, under the name of *Chebulic myrobalans*, are also used in dyeing. The flowers are used in Travancore as a dye, and the fruits are purgative.

BEDFORD, Gunning S., M.D., an eminent American physician, was professor at Charleston, S. C., and in the Albany Medical College, and removed to New York in 1863, where he became professor of midwifery in the University of New York. Among his publications are, a work on Obsteterics and *Lectures on the Diseases of Women*. Born at Baltimore, Md., 1806; and died in New York, Sept. 5, 1870.

BEE, Barnard E., an American general, who served during the Mexican war with gallantry, and was wounded at Cerro Gordo. At the ontbreak of the rebellion he joined the Confederate forces, and was killed at the first battle of Bull Run, July 21, 1861. He was born in South Carolina in 1824, and graduated from West Point in 1845.

BEECHER, Charles, a son of Rev. Lyman B., was born at Litchfield, Conn., 1815. He was a minister in Newark, N. J., and afterwards in Georgetown, Mass. He traveled in Europe with his sister, Mrs. Stowe, wrote part of her *Sunny Memories*, edited a *Life* of his father, and wrote several other works.

BEECHER, Henry Ward. In his theology B. is of the most liberal school, denying much that is held by the more orthodox of Congregationalists, and holding out as the aim of true religion the building up of moral character after the pattern of Jesus Christ. His preaching has been devoted very largely to practical themes and the discussion of the topics of the day. After the failure of the jury to agree in the famous case of Tilton vs. Beecher (an action for *crim. con.*), a council of Congregational churches was called, which met in Plymouth Church, and, after a careful investigation, pronounced B. innocent of the charges preferred against him by Theodore Tilton. Shortly after this the Pilgrim Church of Brooklyn (R. S. Storrs, D.D., pastor) and the Clinton Avenue Church (W. J. Buddington, D.D., pastor) withdrew their fellowship from Plymouth Church. The result of this was a division of the Congregational churches of New York, Brooklyn, and vicinity into two parties, some of the churches remaining with Plymouth Church in the New York and Brooklyn Association, and others, with the two above named, organizing the Manhattan Association. This division continues down to the present time (1885). Besides his pulpit duties and numerous lectures on various themes, B. has actively engaged in politics. At first an ardent opponent of slavery, he became a member of the Republican Party, at the time of its organization in 1856. He has not only spoken frequently at political meetings, but has often discussed political matters in the pulpit. In 1884 he refused to support James G. Blaine, the candidate of his own party for the presidency, and strongly advocated the election of Grover Cleveland, in whose election he was largely instrumental. Although now (1885) in his seventy-second year, B. is as vigorous and eloquent as at any period of his life, and Plymouth Church continues to be overcrowded with its vast congregation of fashionable and thoughtful people. See Beecher in Chambers' En.

BEECHER, Thomas Kennicutt, son of Lyman and brother of Henry Ward, has been for many years pastor of the Congregational Church of Elmira, N. Y., and is one of the leading ministers of that denomination. Born Feb. 10, 1824.

BEECH'WORTH, a town in Victoria, 185 miles N.E. of Melbourne. It is the chief center of population on the Ovens goldfield, and is a thriving place. Pop. 3167; of the shire, 6222. The mining plant in the B. district was valued in January 1874 at £50,160. Oxide of tin is found throughout the district, and is worked to some extent.

BEE-PAR'ASITE, the name given to the *Stylops*, a curious insect, distinguished by possessing twisted filaments in place of the front pair of wings, and forming of itself the sole example of the order *Strepsiptera*. The males alone are winged as above described, the females existing as soft maggot-like creatures, which live within the bodies of bees and wasps, and protrude their heads from between the abdominal segments of the infested animals. The young or larvæ are hatched within the body of the female, the young males developing wings and living a free existence, whilst the females pass from the body of their parent, and seek fresh hosts wherein to reside. *Stylops Dalii* and *S. Spencii* are familiar species.

BEHAIM, MICHAEL, a German meister-singer of the 14th c., was born at Sülzbach, near Weinsberg, in 1416, and died in 1475. By none of his contemporaries was he excelled in fertility. His chief works are his *Buch von den Wienern*, on the insurrection of the Viennese against Friedrich III., in 1462 (Karajar., Vien. 1843); *Leben des Pfalzgrafen Friedrich 1. bei Rhein* (1459. unpublished); *Gedicht von der Liebhabung Gottes; Geistliche Gedichte*, &c.

BEJET'LAN, LANGSAT, LANSEH, or AYER AYER, the edible fruits of the genus *Lansium* (natural order *Meliaceæ*, natives of the E. Indian Archipelago.

BELFAST, a city of Maine, on Penobscot Bay; has an excellent harbor, and is largely engaged in commerce, shipbuilding, and fisheries. Pop. 5278.

BELGIOJOSO, CRISTINA, PRINCESS OF, an Italian lady distinguished for her patriotism, the daughter of the Marchese Geronimo Isidoro of Trivulzio, was born 28th June 1808, married in 1824 to Prince Emilio of Barbiano and B. She took an active part in the revolutionary movement of 1830, and raised a corps of volunteers at her own expense in 1848. After the occupation of Rome by the French, she went first to Athens, and afterwards to Constantinople, but returned to Italy on the proclamation of the amnesty of May 1856; received back her property, and, abandoning the extreme views of the Mazzinists, worked for Cavour's policy after 1858. She died at Milan, 5th July 1871. The Princess was also an authoress of some merit.

BELL ANIMAL'CULES, the popular name of a genus of Infusorian animalcules, scientifically known as *Vorticellæ*. Each animalcule consists of a bell-shaped body or *calyx*, borne on a stalk, which is rendered contractile by the presence of a spiral fibre. By aid of this structure the Vorticella can quickly contract itself upon its stem when alarmed or irritated. These animalcules occur in groups, and are generally found attached to aquatic plants. The margin of the bell or calyx is fringed with vibratile filaments termed *cilia*. These animalcules reproduce themselves by *fission*, by *gemmation* or *budding*, and by a process of *encystation*, allied in many points to the sexual generation of higher animals.

BELLAMY, JOSEPH, D.D., a renowned American theologian, and eloquent Congregational preacher. His works are numerous, and were published in three volumes in 1811. Born at North Cheshire, Conn., 1719, graduated from Yale College in 1735, and died March 6, 1790.

BELL, BENJAMIN, author of *A System of Surgery*, born at Dumfries, 1749, studied medicine at Edinburgh, where, after visiting the medical schools of Paris and London in 1770, he established himself in 1772,, and entered upon an extensive practice. B. died April 4, 1806. His *System of Surgery* has passed through seven editions.

BELL, JOHN, an American politician and statesman, educated at Nashville University, elected to Congress in 1827, and remained in that body for fourteen years. In 1833 he joined the Whig party, and became a strenuous advocate of protection. He was elected U. S. senator in 1847 and again in 1853, and in 1860 was nominated for president by the Constitutional Union party, but received only thirty-nine electoral votes. Born near Nashville, Tenn., Feb. 15, 1797; and died Sept. 10, 1869.

BELLEISLE, CHARLES LOUIS AUGUSTE FOUQUET COMTE, afterwards Duc de, a French marshal and diplomatist, was born at Villefranche (Rouergne), 22d September 1684. He entered the army at an early age, distinguished himself at the siege of Lille (1708), took part in the Spanish campaign of 1719, and in 1732 had risen to the rank of Lieutenant General. Under Marshal Berwick he captured Treves and Trarbach in 1734, and signalized himself at the siege of Philippsburg. The peace of 1735, by which Lothringen fell to France, was mainly B.'s work. Cardinal Fleury had boundless confidence in his capacity. Before the outbreak of the Austrian war of succession, B. visited the chief courts in Germany in the interest of the Bavarian elector, whom France desired to succeed to the imperial throne instead of Maria Theresa. Along with Broglie, at the head of a French army he invaded the Austrian territories, captured Prague 26th November 1741, but, owing to the policy of Prussia, was forced to retreat to the Eger, 17th December 1742. In 1744, while on a diplomatic journey to Berlin, he was made prisoner at Elbingerode in Hanover, and sent to England, where he was detained for a year. Appointed commander-in-chief of the French army of Italy in 1746, he successfully defended the French frontier against the Austrians and Sardinians, and was in consequence made a Duke and Peer of France. In 1755 he was placed at the head of the war administration, and remained there till his death, 26th January 1761. B. was certainly a man of considerable gifts, but his reputation was more shining than his merit. Carlyle, in his *Friedrich* (vols. iii. and iv.), is grimly sarcastic upon this 'sun-god' with his 'effulgences' and 'wide-winged plans,' &c., but his estimate is in the main just.

BELLENDEN (BALLENDEN, BALLANTYNE, or BANNATYNE. SIR JOHN, of Auchinvole, was secretary to the Earl of Angus, and alone stood by that noble when tried in 1528 for high treason. The Earl was banished, but restored in 1543, when B. was knighted, and became Lord of Session, Director of Chancery, and Justice-Clerk of Scotland. Unlike his cotemporary, the Archdeacon, B. attached himself to the Reformation party. He was mixed up in the intrigues of Queen Mary, Darnley, and Bothwell; but the belief that he was concerned in the Rizzio murder seems to have been unfounded. B. died in the year 1577.

BELLEVILLE, capital of St. Clair county, Illinois, fourteen miles S.-E. of St. Louis, possesses many manufactories and several good public buildings. Pop. (1880) 10,642.

BELL'MANN, KARL MIKAEL, a popular Swedish lyrist, born at Stockholm, 24th February 1741, became court-secretary in 1775, and died 10th February 1795. The first effusions of his muse were religious, but he was soon drawn away into a dissolute career, and his later and more brilliant pieces are chiefly bacchanalian, idyllic, or humorous songs, for which he also furnished original melodies. The best specimens of his genius, which is of a rare order, are to be found in the collections prepared by himself: *Bachanaliske Ordenskapitlets Handbibliothek* (1783), *Fredman's Epistlar* (1790), and *Fredman's Sanger* (1791). Numerous editions of his *Samlade Skrifter* have been published in Sweden, of which the most splendid is that by Carlen (4 vols. Stock. 1861). A monument was erected to his memory at Stockholm, 26th July 1829, and ever since the anniversary of its erection has been kept as a popular holiday. B.'s German translator, Winterfeld (1856), has happily described him as 'The Swedish Anacreon.'

BELLOWS-FISH. A popular name applied to those *Acanthopterous* fishes known as sea-snipes, &c., from the extended pipelike form of the jaw-bones. The sea-snipe (*Centriscus scolopax*) exemplifies this group; this species being found in the Mediterranean Sea.

BELLOWS, HENRY WHITNEY, S.T.D,, LL.D,, a prominent Unitarian clergyman, became pastor of the leading church of that denomination in New York in 1838, and remained its pastor until his death. He was the first president of the U. S. Sanitary Commission, established in 1862. He published *Lectures on the Treatment of Social Diseases* (1857). and *The Old World in its New Face* (1868), &c. Born at Walpole, N. H., June 10, 1814, graduated from Harvard in 1832, and died at New York, 1882.

BELL-PEPPER. the fruit of *Capsicum grossum*, a native of India.

BELMONT, AUGUST, an American financier and politician, born at Alzey, Germany, 1816, came to America in 1837, representing the Rothschilds, and took up his residence in New York. He has been for many years actively identified with the Democratic party. From 1853 to 1857, he represented the U. S. as Minister to the Netherlands. He has amassed a large fortune, and is one of the most brilliant financiers of the New World.

BELOIT COLLEGE, an educational institution, located at Beloit, Wis., and chartered in 1846. Its finest building is Memorial Hall, erected in honor of its alumni who fell during the civil war.

BENCH-MARK, a mark of any kind (in the Ordnance Survey an arrow) made upon a stone, a wall, or in any other suitable situation, to indicate the position of a station in a survey.

BENEDETT'I, VINCENZIO, a French diplomatist, was born at Bastia, Corsica, April 29, 1817. He was first chancellor of the French consulate in Alexandria; in 1848 consul at Palermo; on the establishment of the empire, secretary to the French embassy at Constantinople; and, after the Crimean war, director in the office of the Minister of Foreign Affairs. In 1861 he went as ambassador to Turin, and in 1866 arranged the armistice of Nikolsburg between the Austrians and Prussians. From this date he remained at Berlin as extraordinary ambassador till the outbreak of the Franco-Prussian war of 1870. During these years he carried on frequent conversations (if not negotiations) with Count von Bismark, concerning the rectification of the frontiers of their respective countries, in which the subtle Italian was completely outwitted by the crafty Teuton, who got him to put upon paper proposals of a highly unscrupulous character. At Ems, in July 1870, B. demanded of the Prussian king, in the name of his master, not only the withdrawal of Prince von Hohenzollern from his candidature for the Spanish throne, but also a promise that this German candidature would never again be supported. King Wilhelm held it beneath his dignity to bind himself for the future. His refusal led to a declaration of war by the Emperor in less than a week, and before two months had passed France was utterly crushed, the Napoleonic dynasty overthrown, and a republic proclaimed. B. has written a vindication of his Prussian diplomacy, *Ma Mission en Prusse* (1871), which has not added to his reputation either for ability or honesty.

BEN'FEY. THEODOR, one of the ablest philologists of Germany, was born at Nörten, 28th January 1809. He attended the

gymnasium of Göttingen from 1816 to 1824, studied classical philology first at the university of the same city under the direction of Ottfried Müller and Dissen, and afterwards at Munich under Ast and Thiersch. From 1830 to 1834 he devoted himself at Frankfurt and Heidelberg to Sanscrit. In the latter of these years he was appointed a professor at Göttingen, where he has since remainded. Excellent as are his *Ueber die Monatsnamen einiger alten Völker* (Berl. 1836). *Griechisches Wurzellexikon* (2 vols. Berl. 1839–42). *Uber das Verhältniss der Ægypt. Sprache zum Semit. Sprachstamm* (Leips. 1844), what has given him celebrity in the learned circles of Europe is his profound series of works on the Sanscrit language and literature: *e. g.*, his edition of the Hymns of the *Samaveda* (with translation and glossary, Leips. 1848); the *Vollständige Grammatik der Sanskritsprache* (Leips. 1852); a *Chrestomathie* (with glossary, Leips. 1853–54); a *Kurze Grammatik der Sanskritsprache* (Leips. 1855); a *Practical Grammar of the Sanscrit Language* (in Eng. Berl. 1863; 2d ed. 1869; a translation of the *Pantschatantra* (2 vols. Leips. 1859), the original of the 'Seven Wise Masters,' famous during the middle ages in Western Europe; a *Sanscrit English Dictionary* (1866); and a *Geschichte der Sprachwissenschaft* (Berl. 1869).

BENGAL HEMP, the fibre of *Crotalaria juncea*, called also Sunn, Sun, Shuntun, Taag, &c., used in Bombay and Madras along with jute for making gunny bags. Jubbhulpore hemp is obtained from *C. tenuifolia*, a variety probably of *C. juncea*.

BENGAL KINO, or BUTEA GUM, an astringent substance obtained from *Butea frondosa*, and resembling Kino in its properties. In India it is used in tanning, in diarrhœa and similar diseases, &c.

BENJAMIN, Park, an American journalist and poet, born at Demarara, Guiana, Aug. 14, 1809, and graduated from Trinity College, Hartford, Conn., 1829. For many years B. was associated in the editorship of the New York *World*, and was the author of many lyrical poems. Died Sept. 12, 1864.

BENNETT, James Gordon, one of the most successful journalists in the United States, and founder of the *New York Herald*, was born at Newmill, Keith, Scotland, about the year 1800. He studied with a view to the priesthood at a Roman Catholic seminary at Aberdeen, but gave up this aim, and came to America in the year 1819. B. first went to Halifax, N. S., where he taught a school; and afterwards became a proof-reader in Boston. In 1822 he was engaged on a newspaper in Charlestown, S. C. He soon returned to the North, engaged in newspaper-work in New York, and sometimes lectured. His earlier attempts were not always successful, but at length he found his career when he started the *New York Herald*, the first number of which appeared May 5, 1835. The paper soon attracted notice by its lively reports of the money and stock market, its startling personalities, sensational descriptions, and fresh news; and it ultimately yielded a large fortune to its adventurous editor and owner, who died June 2, 1872. The *Herald* is now (1885) owned and conducted by James Gordon B., son of the elder B., and still maintains its reputation as one of the leading journals of America.

BENNINGTON, Battle of, an important revolutionary battle, fought near the village of Bennington, Vt., Aug. 16, 1777. In this village were valuable public stores belonging to the American army. Colonel Baum, in command of a force of Hessians, was sent by Gen. Burgoyne to seize these stores. He was met by a detachment of 'Green Mountain Boys' under Gen. Stark and after a severe struggle entirely routed. Six hundred British prisoners were taken by Stark's men. Coming at a time when the revolutionary cause was very much depressed it contributed to revive the spirits of the people, and dispel the gloom of the hour.

BEN'TINCK, the name of an historical family, which, as early as the 14th c., was settled in Gelderland, and was afterwards transplanted to England and Oldenburg. The *elder* or *English* branch was founded by Jan Willem van B. (born 1648), third son of Hendrik B. of Diessenhan, in Overyssel. From his boyhood Johann was a friend and favorite of William of Orange, was repeatedly employed by him in affairs of state, and in 1689 was raised to the English peerage as Baron of Cirencester, Viscount Woodstock, and Earl of Portland. His eldest son, Henry B., obtained in 1716 the title of Duke of Portland and Marquis of Litchfield, and in 1721 was appointed Governor of Jamaica, where he died, 14th July 1726. His son and heir, William B., born 1st March 1708, married Margaret Cavendish, sole daughter of the Earl of Oxford, and heiress of the Duke of Newcastle.—William Henry Cavendish B., eldest son of the preceding, born 4th April 1738, succeeded to the dukedom 1st May 1762. During the North American war he steadily adhered to the opposition. In 1783 he became first Lord of the Treasury, but on the 27th December of the same year had to give way to the Pitt administration, and remained in opposition till 1792, when he began to support the Government against the French Revolution. In 1794 he was appointed Home Secretary, and held this office till Pitt's resignation in 1801. On the dissolution of the Whig ministry in 1807, he was again placed, in spite of his great age and mediocre abilities, at the head of the Government, and died prime minister, 30th October 1809.—William Henry Cavendish Scott B., fourth Duke of Portland, born 24th June 1768, was made president of the Privy Council in 1827, and died 27th March 1854. By his marriage with a daughter of General Scott, a sister-in-law of George Canning, he had four sons, of whom, owing to the death of the eldest in 1824, the second, William John Cavendish Scott B., born 17th September 1800, succeeded to the ducal dignity.

BENTON, Thomas Hart, a distinguished American lawyer and statesman, born in North Carolina, March 14, 1782. In early life he removed to Tennessee and began the practice of law at Nashville. During the war of 1812 he served under Jackson, with the rank of colonel. Having taken up his residence in Missouri, in 1820 he was elected U. S. senator from that state and for thirty years was a prominent member of the Senate. In 1856 he was nominated for governor of Missouri, but was defeated by that wing of the Democracy which favored the doctrine of States' Rights. In the years 1854–56 he published a *Thirty Years' View, or a History of the Working of the American Government for Thirty Years*, 1820–50, devoted very largely to reminiscences of his public life. Died April 10, 1858.

BERGH, Henry, an American philanthropist, born in New York in 1823. In his early life he wrote several books and sketches, but is best known to the world by his earnest and successful endeavors to ameliorate the condition of dumb animals. In 1866 he, with others, incorporated the 'American Society for the Prevention of Cruelty to Animals,' since which kindred societies have been organized in nearly every state, territory, and considerable city of the Union. The work effected by these societies in relieving dumb animals from cruelty and abuse, can scarcely be estimated. In this work Mr. Bergh has been the leader. His efforts have been unceasing and courageous.

BERGK, Theodor, a German philologist, was born at Leipsic, 22d May 1812, studied under Beck, Hermann, and Dindorff, and after many changes of residence, finally settled as professor at Bonn in 1869. B.'s services to the criticism and elucidation of the Greek poets are of great value. His chief works are the *Poetæ Lyrici Græci* (Leips. 1843; new ed. 3 vols. 1853–67); *Commentationes de Reliquiis Comœdiæ Atticæ Antiquæ* (Leips. 1838); his edition of *Aristophanes* (2 vols. Leips. 1852; 2d ed. 1857), and of *Sophocles* (Leips. 1857); but he has also executed numerous smaller works displaying fine scholarship and familiarity with all contemporary research.

BERIBERI, or BAD SICKNESS OF CEYLON, is a name given to a serious disease, unknown in this country, but not unfrequent in Ceylon and India. The name B. is a reduplication of a word signifying *weakness*, and means great weakness. B. is characterized by great prostration, poverty of the blood, numbness of the surface of the body, and general dropsy, not only in the limbs, but into most cavities of the body. The disease often breaks out among troops and convicts. It is generally a fatal disease. Treatment consists in warm clothing, good diet, purgatives, and diuretics. It is stated that a residence of eight or twelve months is necessary before the disease manifests itself.

BERTHLO'TIA (*B. lanceolata* or *indica*), a genus of Composite plants, natives of India and Senegambia, the leaves of which are aperient, and used as substitutes for senna.

BESS'EMER, Henry, engineer and inventor, was born in Hertfordshire in 1813, and is chiefly known in connection with the celebrated process for making steel which bears his name—a process which has effected an entire revolution in the steel trade. Mr. B. has distinguished himself by many other inventions and scientific improvements. In 1875 considerable attention was attracted by what was known as the B.-saloon steamer, which was designed to counteract the unpleasant motion of the sea by means of a swinging cabin, to be kept in position by an ingenious arrangement of machinery. But after several experiments in the English Channel with a large steamer built for the purpose, the invention has apparently failed. In 1871 Mr. B. was appointed president of the Iron and Steel Institute.

BE'TELGEUSE, a star of the first magnitude in the right shoulder of Orion, forming with Procyon and Sirius a magnificent subequilateral triangle.

BETHEL COLLEGE, an American educational institution, located at McKenzie, Tenn., and founded in 1850. It is controlled by the Cumberland Presbyterian Church.

BETHLEHEM, a town of Pa., on the left bank of the Lehigh River, fifty miles north of Philadelphia, founded by the Moravians in 1741. It contains several excellent schools, and is the seat of large manufacturing interests. Pop., 2230.

BETH ROOT, or BIRTH ROOT, the root of the purple *Trillium erectum*, used in the United States as an astringent, tonic, and antiseptic. It is used especially in menorrhagia.

BEVEL-WHEEL, a wheel (generally furnished with teeth), of which the 'pitch surface' is the frustrum of a cone. B.-wheels are used to communicate rotation between shafts which lie in the same plane, but are not parallel.

BHAD'LEE, a name applied in India to a species of millet (*Panicum pilosum*).

BHEWN'DY, or BHIWAN'DI, a town in the district of Tanna, province of Bombay, British India. Pop. (1872) 11,970.

BIEL, BEL, BIA'LO, are forms of a Slavonic word signifying 'white,' and entering into the composition of innumerable names of persons and places in the various Slavonic regions of Europe, such as Eastern Germany, Poland, Austria, Russia, Servia, &c. We may recall two conspicuous examples—*Beli-Tsar* (Gr. *Belizarios*), 'the white prince,' and *Belgrade*, 'the white fortress.'

BIE'LA'S COMET, discovered by Biela, an Austrian officer, February 28, 1826, has a period of 6·61 years. It appeared, according to prediction, in the years 1832, 1839, 1845, and 1852. In the years 1859 and 1866 it was not observed as expected, but reappeared in 1872 at a time of meteoric display.

BIER'STADT, ALBERT, a distinguished modern painter, born in Germany in 1829, and came to the U. S. in childhood with his parent. His reputation is based very largely upon his magnificent Rocky Mountain scenes, the most notable of which is *The Domes of the Yosemite*.

BIG BETHEL, BATTLE OF, a battle fought between Confederate forces under Gen. Magruder and Union forces under Gen. Butler, near Big Bethel, Va. The Confederates who were strongly entrenched compelled the Union troops to retreat. The losses, which were slight, were principally on the Union side.

BIG SANDY CREEK, a navigable river of the United States, rises in the Pallachians, and flows N. for some distance in two branches, forming the boundary between Kentucky and Virginia, and joining the Ohio after a course of 150 miles.

BILBER'GIA (*B. tinctoria*), a beautifully-flowered genus of *Bromeliaceæ*, from the roots of which a coloring material is got in Brazil.

BILL'ING, a noble family of Old Saxony, and from 961 to 1106 the ruling dynasty in the Duchy of Saxony, which under it attained great territorial strength and independence. The first Duke was HERMANN B., originally perhaps a simple gentleman, but raised by the Emperor, Otho I., through a succession of dignities to the governorship of Saxony. B. was celebrated in his time for his valor, boldness, sense of justice, and loyalty. He died at Quedlingburg, 27th March 973. His successors in regular order were Bernhard I., died 9th February 1011; Bernhard II., died 29th June 1059; Ordulf, died 28th March 1071; and Magnus, died 23d August 1106, with whom the male line became extinct, when the Duchy reverted to the emperors. The first traditions of the Billings are mythical rather than historical, but it is not improbable that the name was originally that of an old Teutonic clan or tribe, some of whose members may have been among the Low German adventurers who conquered Britain and made it England. The conjecture, if accepted, would historically explain such names as Billingsgate, Billingshurst, Billington, Billingley, &c.—viz., the homes or settlements of the Billings.

BINNEY, HORACE, an eloquent American lawyer, born at Philadelphia, Pa., Jan. 4, 1780, and graduated from Harvard College in 1797. He rapidly rose to distinction in his chosen profession, and was elected to Congress during Jackson's administration, where he produced a marked impression by his oratorical abilities.

BI'OPLASM, a term originated by Dr. Lionel Beale, which has been used synonymously with *Protoplasm* to indicate the albuminous substance of which the bodies of all living beings are principally composed, and which exists in its simplest and most primary form in the Protozoa or lowest animals, and *Protophyta* or lowest plants. The name *Sarcode* is also used to indicate this substance.

BI'ON, a Greek idyllic poet, who flourished in the 3d c. before Christ, was a native of Smyrna, and a contemporary of Theocritus. From the elegy written on his death by his friend and brother bard Moschus, we learn that he spent the last part of his life in Sicily, and perished by poison. The most important of his extant writings is a *Lament for Adonis* (edited by Ahrens, Leips. 1854). His other pieces are merely fragments, but are distinguished by delicacy of expression, purity of feeling, and a simple and natural delineation of pastoral life. They have often been printed and translated with the poems of Theocritus. Separate editions of B. in modern times have been published by Jacobs (Gotha, 1795), Wakefield (Lond. 1795), and, along with Moschus, by Hermann (Leips. 1848). Good translations into German have been executed by Voss (1808) and Mörike (1869).

BIRD-LICE, the name applied to the insects of the order *Mallophaga*, a group of lower or apterous insects undergoing no metamorphosis, and which are destitute of wings. These forms are chiefly parasitic upon birds, and eat the feathers of their hosts by means of their strong masticatory mouths. They frequently destroy the entire plumage, and otherwise affect the health of the bird. They are classified in two families—the *Philopteridæ* and *Liotheidæ*.

BIRD-PEPPER is made from the powdered fruits of *Capsicum baccatum* of the West Indies.

BIRNEY, JAMES G., an eminent American opponent of slavery, born at Danville, Ky., Feb. 4, 1792, and entered the law, after his graduation from Princeton College in 1812. Becoming convinced of the injustice of slavery as an institution, he liberated his own slaves, and established *The Philanthropist*, an anti-slavery journal, at Cincinnati. Here he was mobbed, and his press destroyed and thrown into the Ohio River. In 1836 he became secretary of the American Anti-Slavery Society and removed to New York. Died Nov. 24, 1857.

BI'RON, a title assumed by an ancient and distinguished French family, DE GONTAUT, of which the following are the most conspicuous members: 1. ARMAND DE GONTAUT, BARON, afterwards DUC DE B., born about 1524, secretly favored the Huguenots, but took part against them in the religious wars of the times, and was one of the negotiators of the peace of St. Germain in 1570. On the night of the massacre of St. Bartholomew, B. was in the arsenal of Paris, and protected the Hugnenots who were with him. Charles IX. appointed him to the command of La Rochelle, but the inhabitants successfully resisted the appointment. He was made a marshal of France in 1577; and at the death of Henri III., in 1589, was one of the first to welcome Henri of Navarre, under whom he distinguished himself at the first siege of Paris, and at the battle of Ivry. He was killed at the siege of Epernay, July 26, 1592.—2. CHARLES DE GONTAUT, DUC DE B., son of the former, was born in 1562; at the death of his father was made an admiral, and two years later a marshal of France. He stood high in the esteem of Henri IV., who heaped favors upon him. Daring and brave in battle, he was at the same time indifferent to both sides of the religious struggles of the time, vain, presumptuous, and always in want of money. This last circumstance induced him to intrigue against the king, who twice spared him, but at last was forced to send him to the Bastille. He was tried and condemned to death, a sentence which was put in execution, July 31, 1602.—3. ARMAND LOUIS first DUC DE LAUZUN, and subsequently DUC DE B., born April 15, 1747, brought himself into notice by a tract *Sur l'Etat de Défense de l'Angleterre et de toutes les Possessions dans les Quatre Parties du Monde*, owing to which he was put in command of an expedition against the British possessions on the W. coast of Africa. Arriving at Cape Blanco, he took the fort there, January 30, 1779, and sent a portion of his fleet towards the Gambia, which was successful in seizing some of the British possessions on the coast. After returning to France, B. crossed the Atlantic, and took part in the American War of Independence in 1780. Coming back to France, he was sent to the States-General as a deputy of the nobles; was appointed in 1791 to the command of the army of the north; in 1792, commander-in-chief of the army of the Rhine; in 1793, commander-in-chief of the army of the *Côtes de la Rochelle*, distinguishing himself greatly in all these positions. But he had the misfortune to excite the suspicions of the Committee of Public Safety, and after what was called a 'trial,' was guillotined, December 31, 1793. See *Mémoires de M. le Duc de Lauzun*, (Par. 1822).

BISANAGAR', a town in the Gaikwar's territories, India, situated on the route from Mhow to Deesa, 44 miles S.E. of Deesa. It has considerable trade with Marwar in iron and other heavy goods, and also a considerable manufacture of cotton cloths. Pop. 18,000.

BISH, a celebrated Indian drug and poison, obtained from the dried roots of various species of aconite (*Aconitum ferox*, *A. luridum*, *A. Napellus*, and *A. palmatum*).

BISMARK, or BIS'MARCK (as some branches spell the word), the name of an ancient and noble family of Brandenburg, believed to be of Wendish or Bohemian origin. At a very early period it appears to have founded the village of Burgstall and the petty town of B., in the circle of Stendal, district of Magdeburg, Prussia. In the 12th and 13th c. several members of the family figure as burghers at Stendal and Prenzlow. In 1494 the town of B. was acquired by the lords of Alvensleben, but in 1562 Burgstall was exchanged by Friedrich von B., *Landhauptmann* in the Altmark, for Schönhausen, Fischbeck, Crevese, Briest, &c., belonging to the Brandenburg Elector, Joachim II., and, on account of this barter, is called in the family history *Permutator* (the 'Exchanger'). Friedrich von B. became through his two sons the ancestor of the

two still flourishing houses of B., that of Schönhausen in the Magdeburg region, and that of Crevese in the Altmark. Both lines have produced men notable in their day as statesmen and soldiers. CHRISTOPH FRIEDRICH VON B. (died 1704), lord of Schönhausen, was a Prussian general and commandant of Küstrin. LEVIN FRIEDRICH VON B. (died 1774) was a privy-councilor and minister of justice under Friedrich the Great from 1746 to 1764. His son, AUGUST WILHELM VON B. (died 1783), was also a Prussian privy-councilor, minister of war, president of the Board of Trade and Manufactures, and head of the Excise Department. To a Rhenish branch of the Schönhausen line belonged FRIEDRICH WILHELM VON B., who in 1816 was raised to the rank of count in the peerage of Würtemberg. His elder brother, Freiherr LUDWIG VON B., died 31st March 1816, *Oberhofmarschall* and lieutenant in the service of the Duke of Nassau, and left four sons, all of whom received the rank of count in the Würtemberg peerage, 13th September 1831. To the Schönhausen line also belongs the world-famous statesman Karl Otto von B.-Schönhausen.

BISS'UNPUR, or BISH'ANPUR, a town of British India, in the district of Bankora, division of Burdwan, province of Bengal, on the left bank of the river Bankora, 45 miles W. of Burdwan, and 83 N.W. of Calcutta. It has considerable manufactures of silk and indigo, and an active trade in metal wares, cotton, jute, and fibres. Pop. (1872) 18,047.

BITES OF RABID ANIMALS. These are very dangerous, not only on account of the local effects, but more especially on account of the constitutional effects which may arise afterwards, as Hydrophobia. The treatment consists in tying, where that is possible, a ligature above the seat of injury, or applying compression. This to some extent prevents absorption of the poison. The parts around the wound should be excised as soon as possible; the wound should now be well washed, and afterwards some caustic freely applied. Attention must be paid to the general health until the wound heals. It is only when the animal is really *rabid* that such severe treatment is necessary. Bites from animals not rabid are best treated by soothing applications, as poultices.

BITES OF VENOMOUS REPTILES. The general arrangement of their poisonous fangs will be described in connection with the serpents possessing them. The bite of the common adder is seldom fatal in man. The bites of some foreign species are fatal in a few minutes. Among the most deadly serpents of the United States is the rattlesnake, which is common in nearly all our mountain ranges, and in many parts of our western territory. Its bite is almost invariably fatal. Treatment consists in *sucking* the wound freely. This is quite safe if there be no broken skin in the mouth. This may be done by the person bitten, or by a friend. At the same time a ligature is to be tied above the injured part where that is possible. The part may be cut out, and some strong caustic applied to the wound. Internally, stimulants are to be given freely, such as ammonia or brandy.

BITTER CUCUMBER, or BITTER APPLE (*Citrullus* [*Cucumis*] *Colocynthis*), supposed to be the *wild vine* or *wild gourd* of the Old Testament (2 Kings iv. 39). The fruit furnishes the drastic hydragogne cathartic known as Colocynth. Two kinds are known —*Peeled Colocynth*, from Smyrna, Constantinople, Alexandretta, Italy, France, and Spain; and *Mogadore or Unpeeled Colocynth*, which is obtained from Mogadore. The first is the best, and the kind generally employed in medicine (Bentley).

BJÖRN'SON, BJÖRN'STERNE, a distinguished Norwegian novelist and dramatist, was born at Kvikne, Oesterdal, December 8, 1832, entered the university of Christiania in 1852, and produced his first drama, *Valburg*, while still a student. Dissatisfied with the state of the theater at Christiania, he withdrew his play from the managers before they put it on the stage, and devoted himself for a time to vigorous dramatic criticism, by which he did a great deal to improve the national stage of Norway. In 1856 B. went to Copenhagen, where he wrote the greatest part of *Synnöve Solbakken*, a novel which placed him in the foremost rank of Scandinavian writers, and may be said to have begun a new era in the literary life of Norway. From Copenhagen he returned to his native country, where he was for some years manager of the theater at Bergen, and later of that in Christiania. He edited for a short time, at Christiania, the *Aftenbladet*, one of the leading Norwegian journals. Other novels, each of striking merit, published by B., are *Arne* (1858, translated into English 1866), *A Blithe Boy* (1860), *The Fisher Girl* (1868). They are all vivid pictures of peasant life in Norway. Among B.'s dramas are *Between the Battles*, *Hulda*, *King Sigurd*, and *Mary Stuart in England*.

BLACK-BOY GUM, or the red resin of New Holland, is obtained from a Grass Tree—*Xanthorrhœa Hastile*. The yellow or Botany Bay resin is probably the product of *X. arborea*. Both resins exude spontaneously from the trunks of the trees, and have a fragrant balsamic odor.

BLACK BULLY, or BALLY-TREE WOOD (*Achras sapota*), a S. American tree, belonging to the natural order *Sapotaceæ*, the wood of which is greenish and very hard, and is used for shipbuilding, &c. Its bark is febrifugal, and its seeds diuretic and aperient.

BLACK CUMMIN of the Scriptures (Isa. xxvii. 25–27), believed to be the seeds of *Nigella sativa*, natural order *Dilleniaceæ*, or of a closely allied species, the seeds of which are used by the Afghans for flavoring curries.

BLACK'WOOD, one of the commercial names for E. Indian rosewood (*Dalbergia latifolia*, natural order *Leguminosæ*).

BLADD'ERLOCKS, HENWARE or HONEYWARE, a local name applied to *Alaria esculenta*, a species of seaweed found abundantly on the shores of Great Britain. It is sometimes eaten.

BLAINE, JAMES GILLESPIE, an eminent American statesman, born in Washington Co., Pa., Jan. 31, 1830, sent to school in Lancaster, Pa., in 1841, and graduated from Washington College in 1847, with first honors in a class of thirty-three. From 1847 to 1850 he taught in the Western Military Institute, at Blue Lick Springs, Ky., and in 1851, married Miss Harriet Stanwood of Augusta, Me. He taught in the Pennsylvania Institution for the Instruction of the Blind, at Philadelphia, 1852–54, and, in the latter year, removed to Augusta, Me., where he began his career as an editor. From 1854 to 1857 he edited the *Kennebec Journal*, in 1856 was a delegate to the National Republican Convention, and edited the *Portland Daily Advertiser*, 1857–58. In 1859–62 he was a member of the Maine Legislature, where he made a strong speech in opposition to the annexation of Cuba, which was sought by the Democratic Party, in the interests of slavery; was a delegate to the National Republican Convention of 1860, where he actively supported Mr. Lincoln, and was made speaker of the Maine House of Representatives in 1861. In 1862 he was elected to Congress and continued a member of that body until 1876. While in Congress Mr. Blaine strongly supported Mr. Lincoln, and was an earnest advocate of active war measures. From 1869 to 1875 he was Speaker of the House of Representatives, and in 1876 was a candidate for the Republican presidential nomination, but was defeated by R. B. Hayes, a compromise candidate, and was U. S. senator from Maine 1876–81. In 1881 he was appointed Secretary of State by President Garfield, but resigned the position upon the accession of Vice-President C. A. Arthur to the presidency, after the death of Garfield. In 1884 Mr. Blaine was nominated for the presidency by the Republican Party, having as his opponents Grover Cleveland of the Democratic Party and B. F. Butler of the People's Party. In this contest B. was defeated, Mr. Cleveland being the successful candidate. Mr. Blaine is universally recognized as a man of remarkable ability, but as to the wisdom of his statesmanship, there are wide differences of opinion.

BLAIR, ROBERT, a noted Presbyterian divine, was the son of John B. of Windyedge in Ayrshire, and was born at Irvine in 1593. He studied at Glasgow, was licensed to preach in 1616, and, after several vicissitudes, was settled at St. Andrews. In 1640 he accompanied the Scottish army to England, was conspicuous in the prosecution of the adherents of Montrose after Philiphaugh, was appointed one of the divines who were sent (1645) to Newcastle to reason King Charles out of Episcopacy, and in 1648 was employed by the Church to treat with Cromwell for uniformity of religion throughout the island. At the Restoration he was deprived of his parish, and forbidden to preach. B. died at Meikle Couston, near Aberdour, 27th August 1666. He was a man of considerable force, but altogether too narrow to be remembered with much pleasure.—Robert B., the author of the *Grave*, was his grandson, and Hugh B. was a great-grandson.

BLAST, HOT. In 1828, Mr. James Beaumont Neilson, then manager of the Glasgow Gasworks, discovered that great benefit would arise from heating the air used to support the combustion in Blast Furnaces, and he took out a patent for his discovery. The ironmasters ridiculed it at first, then adopted it everywhere, and then in some cases made a discreditable attempt to evade payment of any royalty to the inventor. The action against Messrs. Baird of Gartsherrie, in 1843, has become almost historical. That firm admitted to have made a profit of £260,000 in ten years on H.-B. iron, but refused to pay his royalties to the man through whose invention they had been able to make this money. After a ten days' trial, in which the defendants' conduct was severely censured by the judge, the validity of Mr. Neilson's patent was fully established. As an instance of the value of the H.-B., it may be noted that by its use the Clyde Ironworks, which in 1829 were using 8 tons 1 cwt. of coal made in coke for the manufacture of 1 ton of iron, were enabled in 1831 to double their turn-out, and use only 2 tons 5 cwt. of coal in its raw state per ton of iron. The temperature of the blast is from 500° to 800° Fahr., or even more, and its pressure about 3 or 4 lbs. per sq. in.

BLASTOI'DEA, an order of extinct *Echinodermata*, the fossil remains of which are exclusively confined to rocks of the oldest or palæozoic period of geology. They are most commonly found in the Carboniferous rocks, and the typical genus is *Pentremites*. *P. pyriformis* and *P. conoideus* are familiar species. The body was fixed to the sea-bed by a short, slender, and jointed stalk or column, and was of oval or globular shape. It was composed of limy plates, united together, and arranged in five *ambulacral* and five *inter-ambulacral areas*. No distinct *arms*, as seen in the *Crinoids*, appear to have been developed in the *Blastoidea*.

BLEEK, FRIEDRICH, one of the most learned of modern German theologians, was born at Arensbök, in Holstein, 4th July 1793, studied first at Kiel and afterwards at Berlin under De Wette, Schleiermacher, and Neander. After holding several minor appointments, he was appointed Professor of Theology at Bonn in 1829, where he labored till his death, 27th February 1859. B., whose writings embrace the whole field of biblical exegesis, is notable alike for his clear and acute criticism, his exegetic skill, and his warm enthusiasm for Christianity. His masterpiece is *Der Brief an die Hebräer* (Berl. 1828–40). In his *Beiträge zur Evangelienkritik* (Berl. 1846) he sought, among other things, to vindicate the genuineness of the Gospel of St. John against the destructive criticism of the Tübingen school. After B.'s death appeared his *Einleitung in das alte Testament* (Berl. 1860). and *Einleitung in das Neue Testament* (Berl. 1862), both of which display in a high degree his fine intellectual scholarship, reverence, and love of truth. The same qualities are visible in his *Synoptische Erklärung der drei ersten Evangelien* (Leips. 1862) and *Vorlesungen über die Apocalypse* (Berl. 1862).

BLEEK, WILHELM HEINRICH IMMANUEL, son of the foregoing, an able linguist, was born 8th March 1827, studied at Bonn and Berlin, and at an early period chose for his specialty the S. African languages. His thesis, when he took his degree, was *De Hominum Generibus Linguarum Africæ Australis* (Bonn, 1851), in which he sought to prove the N. African origin of the Hottentot tongue. In 1855 he went out to Natal along with the newly-appointed Bishop Colenso, and in the course of extensive journeys into the interior and the neighboring Caffre lands, made himself acquainted with the languages, manners, and customs of the natives. In 1856 he obtained an appointment at Cape Town, which gave him an opportunity of prosecuting further his lingnistic studies, especially in reference to the languages of S. Africa, Australia, and Polynesia. B. is the chief author of the *Handbook of African, Australian, and Polynesian Philology* (Cape Town and Lond. 1858–63), a work which not only embraces all the literature extant in these tongues, but attempts also a classification and characterization. Of his other productions, besides a *Vocabulary of the Mozambique Languages* (Lond. 1856), may be mentioned his *Comparative Grammar of South African Languages* (Cape Town, 1862); *Reynard the Fox in S. Africa, or Hottentot Fables and Tales* (Lond. 1864, Ger. ed. 1870); *Über den Ursprung der Sprache* (1868), &c. He died 17th August 1875.

BLET'TING, from the Fr. *blessé*, a term applied by Lindley to that intermediate stage between the maturity and decay of a fruit. It is the first change after the sugar in the ripe fruit has commenced to oxidise. Accordingly, if fruits like pears and apples be kept in close vessels free of oxygen, they will preserve for a much longer period than they would otherwise do.

BLIMBING, the acid fruits of *Averrhöa Bilimbi* and *A. carambola*, two plants belonging to the natural order *Balsaminaceæ*. They are eaten by the natives of India, and are used as pickles by the Europeans.

BLIND, KARL, was born at Mannheim, September 4, 1820, studied at Heidelberg and Bonn, and early became known as an impetuous advocate of German freedom and unity. He played a leading part in Hecker's rising in Baden in 1848, for which he was subsequently exiled. Later he headed the second republican insurrection in the Black Forest, when he was captured, tried and sentenced to eight years' imprisonment. Liberated by the people, he was sent by the Provisional Government on a diplomatic mission to Paris, where he was arrested on a charge of implication in Ledru Rollin's movement in favor of the Roman Republic. After much public discussion, B. was finally banished from France. He has since resided in Belgium and England, actively engaged in a democratic propaganda. B. is an honest enthusiast, who is ready to turn the world upside down in the interests of humanity. Politically he belongs to the order of 'Irreconcilables.'

BLOOM (Old Eng. *bloma*), originally a mass of malleable iron obtained by direct reduction of the ore in a hearth or bloomery. The word is now used in ironworks for the spongy mass of iron taken from the puddling-furnace.

BLOOM'INGTON, a flourishing city and railroad center of McLean Co., Ill. It has large manufactories, fine educational institutions, and is one of the most beautiful cities of the state. Pop. 14,590.

BLUE GRASS, a species of grass very common in Central Kentucky, and especially adapted to stock-raising. The reputation of Kentucky stock is very largely due to the abundance of this grass within its borders.

BLUE-JOHN', the name given by miners to a rich violet-blue variety of Fluor-spar, found abundantly in Derbyshire, and manufactured into vases, &c.

BLUE SHARK (*Carcharias glaucus*), a genus of true sharks common in the Mediterranean, but sometimes occurring on the southern coasts of Britain. The head is pointed and flattened, the teeth being sharp and notched at the edges. No spiracles or breathing-holes, placed on the top of the head, exist in this form. These sharks attain a length of eight feet or more, and are of voracious disposition, feeding chiefly upon fish. The B. S. is said to manifest a close attachment to their young. The common or white shark (*C. vulgaris*) is a nearly allied form.

BLU'MENTHAL, LEONHARDT VON, a distinguished Prussian general, was born at Schwedt on the Oder, July 30, 1810, educated in the military academies of Culm and Berlin 1820–26, and received the appointment of lieutenant in 1827. After holding various minor posts, he was raised (1849) to the general staff, and appointed to the command of the Slesvig-Holstein army. He was twice subsequently employed to convey to England special military propositions. In the Danish war of 1864, however, came his first great military success, when his strategical ability was so decidedly shown in the taking of Missunde, the storming of the trenches at Duppel, and in the passage to the island of Alsen. In acknowledgment of these services, he was raised to the rank of major-general. B. afterwards greatly distinguished himself in the Austro-Prussian war of 1866, and on the outbreak of the Franco-Prussian war was appointed chief of the general staff of the army of the Crown Prince. To the skillful operations of B. in the latter campaign were in great part due the catastrophe of Sedan and the capture of Paris.

BLUNT'SCHLI, JOHANN KASPAR, a distinguished Professor of Political Science in Germany, was born at Zürich 7th March 1808. He studied at Berlin (1827) under Savigny, and afterwards at Bonn under Hasse and Niebuhr. In 1833 he was appointed a professor in the newly-founded university of his native town, went to Münich in 1847, and accepted a call to Heidelberg in 1861, where he has since remained. B.'s career has been active and patriotic. Averse to the narrow and schismatical Radicalism of the German democrats, he has labored unwearyedly to create a national party which should be at once liberal in politics and conservative in spirit. Of his numerous writings we may mention *Staats- und- Rechtsgeschichte der Stadt und Landschaft Zürich* (Zür. 1838, 1839; new ed. 1856); *Geschichte des Schweizer. Bundesrechts* (Zür. 1846–52); *Allgemeines Staatsrecht* (Mün. 1852; 4th ed. 1869); *Deutsches Privatrecht* (Mün. 1853; 3d ed. 1864); *Die neuen Rechtschulen der Juristen* (2d ed. Zür. 1862); *Geschichte des Allgemeinen. Staatsrechts und der Politik* (Mün. 1864); *Das moderne Kiregsrecht* (1866); *Das moderne Völkerrecht als Rechtsbuch* (1868).

BOAT'-TAILS, a name applied to the Insessorial birds forming the family *Quiscalinæ*, represented by American birds allied to the starlings. Of these birds the *Quiscalus ferrugineus*, and the *Q. versicolor*, or 'Crow Blackbird,' are good examples. The tail is long and tapering, and the edges are curved upwards like the sides of a boat, this conformation suggesting the above familiar name. *Q. versicolor* is about 12 inches in length, and is colored entirely black, with metallic tints and lustres. These birds feed on insects, but they also damage the crops of Indian corn.

BOCH'UM, a town of Prussia, province of Westphalia, 5 miles E.N.E. of Essen by railway. It has large manufactures of cloths, iron, and steel wares (notably coffee-mills), tobacco, and tapestry. There is a chamber of commerce, a royal technical school, a municipal high school, and various other public institutions. Pop. (1872) 21,192.

BOGONG', a mountain range in the N.E. of Victoria. Several of its peaks exceed 6000 feet in height. The loftiest are Mount B. (6588 feet), and Mount Feathertop (6303 feet). The range derives its name from a large moth found in elevated regions, and highly relished as food by the blacks.

BOIELDIEU, FRANÇOIS ADRIEN, 'the French Mozart,' born at Rouen, 15th December 1775, received his first instructions in the cathedral of his native city, and was, with Auber, a pupil of Cherubini. After a busy and prolific career, he died, 8th October 1834. His opera of *La Dame Blanche* (the 'White Lady of Avenel,' in Sir Walter Scott's *Monastery*) has been extremely popular in France, but none of his works have become well known in America. His principal operas are *Le Calife de Bagdad* (1799), *Jean de Paris* (1812). *Le Nouveau Seigneur* (1813) and *Le Chaperon Rouge* (1817). His son, ADRIEN B. (born 1816), is also a composer, and produced the opera *La Halte du Roi* at Rouen on his father's centenary in 1875.

BOIS-TAN, the name applied to the fruits of *Byrsonima spicata*, a tree of the natural order *Malpighiaceæ*, which are used in dysentery. In Brazil the bark is also used for tanning.

BOL'DO, or BOL'DU, a small tree, *Boldoa fragrans*, growing in Chili, the leaves of which yield an essential oil, and an alkaloid termed *boldine*. They are employed for medicinal use in liver complaints. The bark of B. is available for tanning.

BOMBARD'ON, a bass brass instrument of the Bugle class used in military bands.

BONE BEDS, the name applied in geology to deposits or formations of varying age, which contain organic remains of various kinds. Thus in the Upper Silurian rocks and in the Tilestones strata, one of the bands, containing the remains of fishes and Crustacea, have received the name of B. B.; whilst in the Triassic system, and beneath the White Lias strata, the Phœtic B. B. occur. These contain scales, teeth, and coprolites or excreta of fishes and reptilia. The name B. B. thus appears to be applied to formations more from the general appearance of their contained fossils, than from these consisting always of definite osseous structures.

BON'GO, a people of Central Africa, inhabiting a country in the Upper Nile district, to the S.W. of the basin of the Bahrel-Ghazal, between 6°–8° N. lat. and 27°–28° E. long. Estimated area, 9000 sq. miles; pop. 10,000. The country is flat and ferruginous, and is abundantly watered by five large tributaries of the Gazelle, and by many smaller streams. The chief natural products are sorghum, maize, beans, bamia, tobacco, and various tubers. *Parkia terminalia*, the butter-tree, and funguses abound, while there have been collected as many as 700 flowering plants. The rainy season extends from April to November. Formerly a great field for elephant-hunting, Bongoland has now only antelopes, ichneumons, civets, genets, wild-cats, and caracals. Its domestic animals are poultry, goats, and dogs. The B., who believe in witchcraft, and speak a harmonious language of simple structure (Dr. Schweinfurth, *Linguistische Ergebnisse einer Reise nach Central Afrika*, Berl. 1873), live by agriculture, and occasional hunting and fishing. They have a red-brown complexion, not unlike the color of the soil, and are muscular and compact in limb, with an average height of 5 feet 7 inches. Almost without tools, they produce beautiful ironwork, besides rude musical instruments, and a variety of wooden articles. About the year 1853 the Nubian slave-dealers began their raids upon the B., whom they found living in petty communities, and therefore incapable of combined defence. The B. soon became much prized as slaves, being docile and industrious, and within ten years there were eighty slave seribas or forts scattered over the country, while half the natives had been kidnapped, and great numbers had taken to flight. The country is still under vassalage to the Khartoom slave-dealers, and forms a convenient base for further slave operations in the lands of the Niam-Niam, Mittoo, &c. See Dr. Schweinfurth's *Heart of Africa* (2 vols. Lond. 1873).

BONNER, ROBERT, an American editor, born in Ireland, April 28, 1824, came to America when young, and bought the New York *Ledger* in 1844, which he has succeeded in making one of the leading papers of its kind in the U. S. Mr. Bonner has accumulated a large fortune, and has made munificent gifts for religious and charitable objects.

BOOK-TRADE. It is to be borne in mind that the book-trade of America is scarcely a century old. The primitive life of the early settlers was not adapted to the cultivation of literary pursuits. But with an increase in wealth, and the multiplication of higher educational institutions, literature and book-making received a marked impetus. Now (1885) there are not only large publishing-houses in the eastern sea-board cities, but also in all the larger western cities, such as Chicago, Cincinnati, St. Louis, and San Francisco. If the progress of the next fifty years is as rapid as that of the past fifty, America bids fair to lead the world in book-making. See BOOK-TRADE in Chambers' En., and PUBLISHERS, AMERICAN, in AM. SUPP.

BOOTH, JOHN WILKES, an American actor, and the assassin of Abraham Lincoln, born in Maryland in 1838. During the civil war, his sympathies were with the South, and early in the year 1865, he formed a conspiracy with others, to murder Mr. Lincoln and the principal officers of the government. On the evening of the 14th of April, he entered Ford's Theater at Washington, where Mr. Lincoln was sitting in a private box, and shot him. He shouted '*Sic semper tyrannis*,' leaped upon the stage below, breaking his leg by the fall, and in the confusion escaped through a back door, mounted a horse that was held in waiting for him, and fled to Virginia. Here he was concealed for a time by rebel sympathizers, but on April 26 was discovered in a barn near Bowling Green, and refusing to surrender, was shot.

BO'RER, the name given to certain beetles of the genus *Anobium*, to which genus the familiar 'Death-watch' belongs. The latter insect, indeed, in its caterpillar or larval state, bores into wood, and thus destroys furniture of all kinds. They belong to the tribe *Pentamera*, the members of which possess five joints in their tarsi. The jaws in these larval insects are of strong make, and constitute the boring organs; and the larvæ reside in the burrows thus formed during their pupa state, emerging therefrom as the perfect beetle or *imago*. One species, *Lymexylon navale*, burrows into and destroys oak timber, and thus does great damage in dockyards. It is chiefly found in N. Europe.

The name 'B.' is also applied to certain *Lamellibranchiate* shell-fish or *Mollusca*, which bore into rocks by means of their shells. Of these latter forms, the *Pholas* or Piddock, the *Teredo* or Ship-worm, &c., are familiar examples.

BORT, or BOART, dark-grey or black lusterless diamonds found in the Brazilian mines. They are also called *carbonado* or anthracitic diamonds, and possessing the hardness of the precious mineral, they are used for diamond rock-boring drills, for machines used to dress millstones, and other stone-cutting apparatus.

BOSTON. Among the many public buildings of Boston, the following are worthy of special note: Faneuil Hall was presented to the city by Peter Faneuil in 1742. It is one hundred feet long, and eighty feet wide, is known as the 'cradle of liberty,' and is a building of large historic interest. The new custom-house was erected at a cost of more than $1,000,000. It is surmounted by a stately dome, and rests upon a foundation of 3000 piles. In 1866 a new city hall was erected of granite. Music Hall is one of the finest and largest concert halls in the U. S. Its organ cost $60,000, and has 6000 pipes. The Free Library is one of the largest and finest in America. It cost $363,633 and contains nearly 300,000 volumes. In 1872 there occurred in Boston one of the largest conflagrations ever known in the U. S. It broke out on the night of Nov. 9th. It raged with increasing violence until morning, when an attempt was made to check its progress by blowing up buildings with gunpowder, but it was not until 2 P.M. of that day that it was brought under control. Seven hundred and seventy-six buildings were consumed, and property was destroyed to the amount of more than $70,000,000. Boston is celebrated for its culture, and is sometimes called the Athens of America. See BOSTON in Chambers' En.

BOTH'Y, the name given to houses on a farm in which unmarried men are lodged throughout the year, and to outhouses in certain counties of Scotland where women are accommodated during the time of potato-hoeing. Mr. Stephens, in his *Book of the Farm*, makes the sweeping assertion that the B. system is a bad one, and that in his opinion 'it ought to be entirely abolished.' Mr. Robb, in his little book entitled *The Cottage, the B., and the Kitchen*, while from personal experience declaring that occasionally bothies are not fit for habitation, asserts that many of them are healthy and comfortable. He adduces various instances in Fife, Forfar, and Perth, where he found bothies with a general feeding-room, and with separate apartments for the various individuals. But there can be little doubt, that where the utmost care is not taken to secure cleanliness and comfort, the B. system is exceptionally pernicious to the moral habits of the peasantry.

BOTTLE-TIT, a name given to the long-tailed titmouse (*Parus caudatus*), a familiar species of *Dentirostral Insessores*, or Perching Birds, forming the sub-family *Parinæ*. The color is gray on the head, throat, and cheeks, a band of black passing over the eye, extending over the shoulders and back; whilst the central tail-feathers are black. The wings are black, and the shoulders and lower back are reddish. The average length is 5½ inches. The eggs are usually very numerous, raging from eight to sixteen in number.

BOTTS, JOHN MINOR, an American statesman, born in Prince William Co., Va., September 16, 1802. He was several times elected to Congress, opposed the repeal of the Missouri Compromise, and supported the Union during the Civil War. In 1866 he published *The Great Rebellion*. Died January 8, 1869.

BOUNTY, MUTINY OF THE, one of the most remarkable mutinies on record, took place 28th April 1789, on board H.M.S. *Bounty*, 215 tons, under Captain Bligh, bound from Otaheite to the W. Indies, with some 1015 bread-fruit trees. It arose seemingly out of discontent on the part of the crew with the strict discipline of the ship after a long and delightful stay at Otaheite. When fourteen days out from the island, according to a concerted scheme, twenty-five of the men, headed by Fletcher Christian, mutinied, cast Bligh and eighteen others adrift in the ship's launch, and returned to Otaheite. Here sixteen of the men took up permanent residence, while the others, fearing pursuit, sailed to Pitcairn Island, where, after a period of mad debauch, they founded a flourishing colony. Meantime, Bligh and his comrades, after a dreadful voyage of 3600 nautical miles, reached the island of Timor, to the east of Java. On his return to England, Bligh published a *Narrative*, which roused a storm of excited feeling. The frigate *Pandora* was sent in search of the recreants, and succeeded in capturing ten of the number, who were brought

to England and tried by court-martial, seven being acquitted and three being hanged, October 1792. See Sir J. Barrow, *The M. of the B.* (Lond. 1835); Lady Belcher, *The Mutineers of the B., and their Descendants in Pitcairn and Norfolk Islands* (Lond. 1870).

BOUR'BON TEA, or FAHAM, the dried leaves of the *Angræcum fragrans*, an orchid so called from being used as a substitute for tea in the Mauritius or Isle of Bourbon. It produces a soothing effect without causing sleeplessness, but is not much esteemed in London and Paris, into which it has been introduced.

BOUTWELL, GEORGE SEWALL, LL.D., an American lawyer and prominent politician, born at Brookline, Mass., Jan. 28, 1818, was elected Governor of Massachusetts in 1852, member of Congress 1863–69, Secretary of the Treasury under Grant 1869–73, and U. S. senator 1873.

BOUVIER, JOHN, an American law writer, born in France in 1787, came to the U. S. in 1802, and began to practice law in Philadelphia, Pa. He is best known by his *Law Dictionary*, published in 1839, and everywhere recognized as a standard authority. Died Nov. 18, 1851.

BOWDOIN COLLEGE, located at Brunswick, Cumberland Co., Me., and founded in 1802. The college was named after Governor Bowdoin of Massachusetts, whose son James bestowed upon it a valuable endowment in both land and money, besides a valuable library. It has also been assisted by the state, and is now a most flourishing institution. A Medical College was established in connection with it in 1820.

BOWLES, SAMUEL, a distinguished American journalist, was born at Springfield, Massachusetts, February 9, 1826, and since 1844 has been sole editor of the *Springfield Republican*, founded by his father. Under his management the paper has become one of the foremost journals in the country, and is noted for its extensive news, its literary taste, and its intelligent views of public affairs. In recent years it has labored to free the press from the bias of political party. B. is author of *Across the Continent* (1865), *Our New West* (1867), and *The Switzerland of America* (1869). Died 1879.

BOYD, ROBERT, of Trochrig, an eminent Scotch divine, was the son of James B., *tulchan* Archbishop of Glasgow, and was born in that city in 1598. Educated in Edinburgh and France, he commenced teaching in the latter country at Tours, was ordained pastor at Verteuil in 1604, professor at Saumur in 1606, and was afterwards called by King James to the Principalship of Glasgow University, where he taught Hebrew, Syriac, and theology, and also preached every Sunday in Govan. He died 5th January, 1627. Of B.'s works, the least unknown is his *Prælectiones in Epistolam ad Ephesios*. He was a fine Latin scholar of the old type, and had a genius for Latin verse which he did not sufficiently cultivate.

BOYLE'S LAW, also known as Marriott's Law, expresses that at constant temperature the volume of a gas is inversely proportional to the pressure. It was first proved experimentally by Robert Boyle.

BRACHIA'LIS AN'TICUS is a broad muscle covering the front of the elbow-joint and lower half of the Humerus. It arises from the middle of the humerus, and is inserted into the Ulna. Its chief action is to flex the elbow-joint, which it does in conjunction with the biceps muscle. The B. A. helps also to protect the elbow-joint.

BRACHYU'RA ('short tailed'), a division of the *Decapodous* order of Crustacea, represented by the various kinds of crabs. These forms possess a rudimentary abdomen, which is tucked up beneath the broad body or *cephalothorax*, consisting of the united head and chest. The rudimentary abdomen is not provided with appendages, and is used, in the case of the female animals, to carry the ova or eggs. The B. generally undergo a metamorphosis —the common crab first appearing as a tailed form (*Zoea*), next as a *Megalopa*, and lastly as the perfect crab, with a rudimentary abdomen.

BRADBURY, WILLIAM B., an American composer of sacred music, born at York, Maine, 1816, but resided during the greater part of his life in New York. He published numerous works for church choirs and Sunday-schools, which met with enormous sales. Died Jan. 7, 1868.

BRAD'FORD, WILLIAM, second governor of Plymouth Colony, was born at Austerfield, Yorkshire, 1588. He had a good patrimony, and is one of the few early pilgrims who can be clearly shown to have had a gentle ancestry in England. B. came with the first colonists in the *Mayflower*, 1620, was the second governor of Plymouth Colony, New England, and died May 9, 1657. He is the author of a *History of the Colony*.

BRADLAUGH, CHARLES, an eminent English atheist, and demagogue, born in London, Sept. 26, 1833. He attended school but little, owing to the extreme poverty of his parents, and very early in life became a skeptic. He edited and published the *Investigator*, which failed from lack of support, but met with greater success with the *National Reformer*. In 1873, he came to the U. S., and delivered addresses at numerous places and invariably to large audiences. He is a Radical of the most advanced type, and seeks in England the establishment of a Commonwealth similar to that of the United States. Mr. Bradlaugh has been elected to Parliament several times, but has never been permitted to take his seat, owing to his refusal to take the required oath.

BRAGG, BRAXTON, an American officer, born in North Carolina in 1817 and graduated from West Point in 1837. He served with gallantry during the Mexican war, and upon its termination became a sugar planter in La. Upon the outbreak of the civil war, he entered the confederate service, was promoted to general in 1862, was defeated by Buell at Perrysville, commanded the confederate forces at Chickamauga, and was removed from his command after his defeat at Mission Ridge. At the close of the war he resumed sugar planting in La. Died at Galveston, Texas, Sept. 27, 1876.

BRAHMS, JOH., a distinguished living pianist and composer, born at Hamburg, 7th May 1833, where his father was contrabassist at the theater. On a professional journey in 1853, he met Schumann at Düsseldorf, became his enthusiastic admirer, and is now his greatest living follower. In 1863 B. became Director of the Sing-Akademie at Vienna, in which city he has since lived. His compositions are numerous in all departments except the dramatic, but they are more popular in N. than in S. Germany. B.'s greatest work is probably his *Ein Deutsches Requiem*, by which also he is best known in this country.

BRAILS, a nautical term, meaning small ropes for gathering up a yard to the bottom and skirts of its sail, preparatory to furling. The sail is 'brailed up' when the brails are hauled taut.

BRAINARD, JOHN GARDINER CALKINS, an American poet, born at New London, Conn., Oct. 21, 1796, and graduated from Yale College in 1814. An edition of his poems was published in 1825. Died Sept. 26, 1828.

BRAKE, an apparatus by which the energy of a moving body may be absorbed by friction, in order either to stop or retard its motion, as in the B. upon a train, or to use up surplus energy, as in the testing of engines 'on a B.'

BRANCH'IAL ARCHES, the name applied to the bony arches of fishes, which exist on each side of the throat, and are attached superiorly to the under surface of the skull. They support the gills or *Branchiæ*, and each arch is composed of two distinct pieces, known as the *cerato-branchial* and *epi-branchial* bones. The B. A. grow successively smaller as they recede from the mouth, and in many fishes may support teeth.

BRANCH'IAL HEART, the name applied to the heart in fishes, for the reason that its sole function consists in driving the venous or impure blood to the *branchiæ* or gills for purification. This name is used in contradistinction to the name *systemic heart*, which (as in Gasteropodous Molluscs) drives the *pure* blood through the sytem. In *Cephalopoda* or cuttlefishes, a B. H. exists at the base of each gill in addition to the systemic heart; and by means of these branchial hearts the venous blood is propelled to the gills to be ærated.

BRANCH'IAL SAC, the term applied to the breathing chamber of the *Tunicate* molluscs or 'sea-squirts,' which consists of a sac, the walls of which are composed of a network of blood-vessels, in which the venous blood is exposed to the oxygen contained in the water admitted to the sac.

The name is also applied to the pharyngeal dilatation or sac seen in the *Amphioxus* or Lancelet—the lowest member of the fish-class —and which is also used for respiration.

BRANCHIA'TA, the name given to various groups of animals from the fact of their possessing *branchiæ* or *gills*. Thus the *fishes* and *amphibians* (as frogs, &c.) together form the *Branchiate Vertebrata* from the fact that they possess gills at some period of life— the fishes during the whole of life, and the amphibia always in *early* life; the breathing, in the latter case, being afterwards carried on partly or entirely by lungs. The *Branchiate Gasteropodous* mollusca include the whelks, &c., which breathe by gills, as distinguished from the snails or land gasteropods, which respire by means of pulmonary or lung-sacs. The name *Abranchiate* is used in opposition to the foregoing term.

BRANT, JOSEPH THAYENDANEGA, a distinguished Indian chief of the Mohawk tribe, born in 1842. During the Revolutionary war he assisted the British armies in several enterprises.— Brant was well educated, an eloquent orator, and a man of considerable literary attainments. He published the Gospel of Mark in the language of his people. Died Nov. 24, 1807.

BRAY, EDWARD ATKYNS, B.D., F.S.A., was a poet and theological literateur, and was born at Tavistock, Devonshire, 18th December 1788. He studied at Cambridge, and was called to the bar in 1806. But law not proving congenial, he took

orders, and obtained the vicarage of Tavistock, where, after an industrious literary career, he died, 17th July 1857. B. wrote *Arcadian Idylls, Lyric Hymns, Discourses on Protestantism,* and published a variety of selections from eminent divines. His *Poetical Remains, Social, Sacred, and Miscellaneous,* with a memoir, were edited by his widow (2 vols. Lond. 1859).

BREAKING JOINT is an arrangement used in construction in iron and other materials, analogous to bonding in brickwork and masonry. The phrase implies that the joints in contiguous strakes, or layers of plates, should not be in line with, or over each other, in order that the structure may be as little weakened by them as possible.

BREAKING OF PRISON is the crime of escape by one lawfully imprisoned, whether effected by violence or by corruption.

BREAKSTONE, an old name for the *lady's mantle* (*Alchemilla vulgaris*), derived from the popular belief in regard to its action in stone and gravel. It is somewhat tonic and astringent.

BREAST-WHEEL, a vertical water-wheel in which the water enters the buckets at some little distance below the highest part of the periphery, and which is fitted with a casing, or *breast*, extending downwards from the point where the water enters to the tail-race, nearly fitting the outside of the wheel, and so preventing the water leaving the buckets too soon.

BRECKENRIDGE, John Cabell, an American statesman and soldier, born in Kentucky, Jan. 21, 1821, began to practice law at Lexington, Ky., and was elected to Congress in 1851. He was elected Vice-President, 1856, with James Buchanan as President, and was nominated for the presidency in 1860 by the pro-slavery wing of the Democratic party. His competitors were Abraham Lincoln (Republican), John Bell (Constitutional Union), and Stephen A. Douglas (Democrat). Mr. B. carried nearly all the southern states, and received seventy-two electoral votes. Mr. Lincoln was the successful candidate. Mr. B. was elected to the U. S. Senate in 1861, but soon after resigned that position and entered the Confederate army, in which he served until Jan. 1865, when he was made secretary of war of the Confederacy. Died May 17, 1875.

BRE'DOW, Gabriel Gottfried, a German historian, born at Berlin, 14th December 1773, educated at the Joachimsthal Gymnasium and at Halle, and in 1796 became schoolmaster at Cutin. Here he devoted himself with great earnestness to a study of the geography and astronomy of the ancients. The fruits of this labor were his *Handbuch der alten Geschichte, Geographie und Chronologie* (Alt. 1803; 6th ed, 1837), and his *Untersuchungen über einzelne Gegenstände der alten Geschichte, Geographie und Chronologie* (Alt. 1800–2). In 1804, B. was appointed Professor of History at Helmstedt, where he published for some years the *Chronik des 19. Jahrh.*, but afterwards returned to his favorite studies, and planned a great work on the history of all systems or conceptions of geography, from Homer down to the middle ages, only a small part of which he executed. In 1809 he was called to the University of Frankfurt-on-the-Oder, and in 1811 to Breslau, where he died, 5th September 1814. B.'s schoolbooks are very widely used in Germany; as his *Merkwürdige Begebenheiten aus der Allgemeinen Weltgeschichte* (Alt. 1810; 26th ed.), and his *Umständliche Erzählung der merkwürdigsten Begebenheiten aus der Allgemeinen Weltgeschichte* (Alt. 1810; 13th. ed. 1852). See Kunisch, *B.'s Leben und Schriften* (Berl. 1816).

BREVILING'UIA, the name applied to those *Lacertilia*, or Lizards, in which the tongue is thick, fleshy, and protrusible, or capable of being protruded only when the mouth is open. This name is used in opposition to the term *Fissilinguia*, which denotes those lizards in which the tongue is bifid or cleft or sheathed, and capable of protrusion through a notch in front of the jaws, even when the mouth is closed. The B. (or *Pachyglossa*) are represented by the geckos, iguanas, &c.

BREWSTER, William, the leader of the *Mayflower* Pilgrims, was born at Scrooby, 1566, and educated at Cambridge. He left the Established Church, and founded a separate society in his house. In 1608 he went to Holland, and opened a school at Leyden. He was made ruling elder, and conducted the Pilgrims in the *Mayflower* to Plymouth, Mass., in 1620. B. was their only spiritual teacher for some years, but he did not administer the sacraments. He died April 16, 1644, and is venerated as the ruling spirit in the earliest New England colony.

BRIDGE. The following are among some of the more remarkable bridges of the U. S. The Niagara bridge, spanning the Niagara River, just below the falls of the same name, has a span of 821 feet, 4 inches, and is one of the most remarkable structures of its kind. The Cincinnati and Covington bridge over the Ohio River, has a total length, including approaches of 2252 feet. The bridge over the Missouri at Omaha, is divided into 11 spans, and is 2800 feet in length; and that over the Hudson, at Albany, has 15 spans, and is 1740 feet long. One of the most remarkable structures of this kind is the Brooklyn bridge, joining that city and New York. The description of this bridge and its construction may be briefly given as follows:

Construction commenced Jan. 3, 1870; length of river span 1995 feet, 6 inches; length of land spans 930 and 1860 feet; length of Brooklyn approach 971 feet; length of New York approach 1562 feet, 6 inches; total length of bridge 5989 feet; width of bridge 85 feet; depth of tower foundation below water, Brooklyn 45 feet; depth of tower foundation below water, New York 78 feet; height of towers above high water 278 feet; clear height of bridge in center of river span, above high water 136 feet.

The cost of this bridge was about $15,000,000, and it was opened to the public in May 1883. See Bridge in Chambers' En.

BRIEVE, or BREVE, is in Scotch law a writing issuing from chancery in the name of the sovereign, addressed to a judge, ordering trial to be made by a jury of certain points stated in the B. These writs seem at one time to have been the foundation of almost all civil actions in Scotland; but it is in the appointment of tutors to minors, in inquiries as to lunacy, in ascertainment of widow's terce, and in dividing property among heirs-portioners, that brieves are now chiefly in use. There was also the B. of Inquest, the object of which was judicially to ascertain the heir of a deceased person; but for this purpose the form of procedure is now by petition of service.

BRISTOL-BOARD is a kind of card-board used in sketching, and formed by pasting together two or more thicknesses of white paper.

BRITT'LESTAR, a genus of starfishes (*Echinodermata*) included in the order *Ophiuroidea* of that class. They are distinguished from common starfishes by the fact that the viscera or organs of the body are confined to the central disc or body, and do not extend into the rays; whilst the ambulacral or 'walking' system of tube feet is rudimentary, and not adapted for locomotion. The brittlestars form the genus *Ophiocoma*, and the familiar species are the common B. (*O. rosula*), *O. neglecta* (the 'grey B.'), *O. punctata*, and *O. filiformis*. They derive their popular name from their curious habit of breaking off their rays when irritated or touched; and, from this peculiarity, it is a rare occurrence to secure a perfect specimen. The arms are five in number, and of simple form.

BRODIE, William, born at Banff, 22d January 1815, commenced modeling in Aberdeen in 1840, went to Edinburgh in 1846, and studied at the art schools there. He exhibited first in 1847, was elected Associate in 1852, and Academician in 1859. In his statues, busts, and imaginative subjects he has shown fine fancy and delicacy of treatment. Among his ideal statues are 'Corinna,' in the possession of Mrs. Baird of Stitchell; 'Œnone,' belonging to Lady Ashburton; 'Hecamede,' executed for Lord Taunton; 'Summer and Winter,' for J. Young, Esq. of Kelly, &c. Among his public statues are those of the late Prince Consort at Perth, Sir David Brewster and Sir James Y. Simpson at Edinburgh, the late Master of the Mint (Dr. Graham) at Glasgow, &c.; while among his busts and portrait-statues are those of Her Majesty the Queen, Lady Kinnaird, Lord Barcaple, Sir Robert Christison, Dr. Guthrie, and Principal Candlish.

BROGL'IE, an ancient French family, originally from Quiers in Piedmont. It has produced many distinguished men, among whom may be reckoned several archbishops, bishops, governors and three marshals of France. It was composed of four branches.—Alberic de Broglio, a famous captain of his time, after having captured the city of Assisi, left Turin, and fixed himself at Rimini, where he founded the first branch.—Simon de Broglio (dead before 1394) is the father of the three other branches, of which the first established itself in Provence, the second in Paris, and the third in Piedmont. To the last belongs the present Duc de B., though his family has been settled in France for some centuries.—Albert, Duc de B., son of Achille Léonce Victor Charles, Duc de B., a politician of note in the reign of Louis Philippe, and grandson of Claude Victor, Prince de B., who was guillotined in 1794, was born at Paris, 13th June 1821, and at an early age made a name for himself as a political writer. He commenced as a contributor to the *Revue des Deux Mondes*, and was afterwards one of the chief writers in the *Correspondant*. Equally opposed to the one-sided doctrines of mediæval papistry and modern rationalism, autocracy, and democracy, he has been an able defender of Catholic interests and of moderate constitutional liberalism. His principal literary work is *L'Église et l'Empire Romain au 4me Siècle* (2 vols. Par. 1856). Two other works may be regarded as continuations of it, *Julien l'Apostate* and *Theodose le Grand*. He became the head of the family on the death of his father, January 25, 1870, and a political career was opened to him by the fall of Napoleon III. In 1872 he was appointed by M. Thiers French ambassador to London during the negotiations on the treaty of commerce, a post which he held only for two months.

BROKER. In America there are brokers engaged in nearly every branch of trade. Their transactions are practically regulated by the same laws as in England. Where there are not special laws or customs, they are governed by the laws relating to Principal and Agent. In many of the larger American cities, are great corporations composed entirely or largely of brokers. As examples may be mentioned the 'New York Stock Exchange' and the 'New York Mining Exchange.' See BROKER in Chambers' En.

BROOKLYN. The population of Brooklyn (then Brenckelen) was 509 in 1698; in 1800, 3298; in 1830, 15,292; in 1840, 36,233; in 1850, 96,850; in 1860, 266,661; in 1870, 396,350; and is now (1884) probably nearly 700,000. Brooklyn has a fine system of public schools and a Central Grammar School under the control of a Board of Education, appointed by the mayor. Besides these there are the Packer Collegiate Institute for young ladies, the Brooklyn Collegiate and Polytechnic Institute for young men, and the Adelphi Academy for both sexes. There is a flourishing medical college connected with the Long Island College Hospital. The largest library of the city is the Mercantile, with more than 50,000 volumes, which number is rapidly being increased. The Long Island Historical Society has a fine library of 30,000 volumes. The principal buildings of the city are the Mercantile Library building (cost $219,932), the Williamsburg Savings Bank (cost $450,000), the King's County Court House (cost $550.000), and the Academy of Music (cost $200,000). The principal park of Brooklyn is Prospect Park, which contains 522 acres, and for natural beauty is unsurpassed by any in the U. S. See BROOKLYN in Chambers' En.

BROOKS, REV. PHILLIPS, an American clergyman of the Episcopal church, born at Boston, Dec. 13, 1835, and graduated from Harvard College in 1855. He was ordained in 1859, was for several years rector of the Church of the Advent in Philadelphia, Pa., and in 1862 was called to the Church of the Holy Trinity in Boston, where he still is (1885). He has attained high rank as a thoughtful, eloquent preacher.

BROTHERS OF THE CHRISTIAN SCHOOLS (*Frères des Ecoles Chrétiennes*), a religious congregation founded at Rouen, France, in 1684, by Abbé John Baptist de la Salle. A great movement in favor of educating the sons of the laboring poor was started in France about 1680. In this a number of zealous priests and laymen took a leading part, foremost among whom was a M. Nyel of Rouen, who, devoting himself entirely to this good work, succeeded in organizing a band of lay teachers, whom he trained himself, and sent to labor wherever the generosity of the municipal authorities or that of private individuals provided school edifices and salaries. The fact, however, that the teachers were bound together by no permanent tie, that their methods were imperfect, and their future uncertain, detracted greatly from the efficiency of M. Nyel's efforts. Fortunately, when the most critical moment came for him, he found in the Abbé de la Salle, then a prebendary of Rheims, a trusty friend, counselor, and fellow-worker. The latter, resolving to devote himself exclusively to the apostleship of education, and to bind his associates to himself and together by the example of perfect self-sacrifice, gave up his prebend, sold his patrimonial estates and distributed the proceeds to the poor. Bent on laboring exclusively for God in educating the sons of the poor and the laboring classes, he threw himself and those who joined him in his purpose on the bounty of Divine Providence and the generous support of the people. He and his associates bound themselves together by the ordinary monastic vows, the founder infusing into the rule which he drew up for their common guidance a spirit of lofty abnegation and self-sacrifice. The teaching of Christian Doctrine and the inculcating by word and example the love and practice of Christian morality were to be foremost in their endeavors. Latin ceased to be obligatory in the schools of the new society, the native language, with such branches as fitted boys for skilled labor and business habits in every walk of life, becoming the subject-matters taught in the schools of the Christian Brothers. They thus aimed at revolutionizing and christianizing national primary education. Their success was extraordinary, the principal cities of France vieing with each other in founding schools for the associates of John Baptist de la Salle. —They bound themselves by vow to make such teaching their life-work. Hence, from the beginning the saintly and far-seeing founder took every possible means to perfect his methods and the training of his masters. A normal-school, the first known in the history of modern education, was established, and in it the novices, after their first period of religious probation was over, were thoroughly formed and their education completed. It was a strong moulding of the moral and mental faculties, such as a life of indefatigable labor and austere self-restraint require. The Brothers of the Christian Schools were favored by the first Napoleon and by all succeeding governments down to the anti-christian regime inaugurated in 1880 by triumphant Freemasonry, the atheistical Freemasonry of Jules Ferry and Paul Bert. At the close of that year the Brothers had still under their care 2048 schools, with 325,558 pupils, of whom 286,004 were educated gratuitously. Of this grand total of 325,558 France and her colonies claimed 261,000, Belgium about 19,000, America (North and South) 36,000, and England upward of 2000. The staff of active teachers numbered 17,000 assisted by 2500 novices. Unhappily the avowed purpose of the French government is to secularize thoroughly both primary and secondary education, and to eliminate from the national schools all religious teaching and religious teachers, so that, unless some unforeseen change occurs, the work of John Baptist de la Salle in France is doomed to perish. This holy man died in 1719. In 1725 Benedict XIII. gave the Brotherhood the rank of an approved Congregation. Long before his death—in 1699—the Abbé de la Salle followed the example given in Milan, even before the sixteenth century, and opened in the Church of Saint Sulpice, Paris, a Sunday School (*une école dominicale*) for the purpose of secular instruction.

BROUGHAM, JOHN, a distinguished actor and play-writer, born at Dublin, Ireland, in 1810. He wrote many plays, some of which met with great success. Mr. Brougham won his greatest successes on the stage in comedy. He was a man of genial temperament and kindly heart. Died at New York, June 7, 1880.

BROUSONET'IA, a genus of plants belonging to the natural order *Moraceæ*. *B. papyrifera* (the paper mulberry) is used in China, Japan, &c., for the manufacture of paper. From its inner bark the South Sea Islanders make a kind of cloth.

BROWNE. WILLIAM, a pastoral poet, was born at Tavistock, Devonshire, in 1590. He studied at Oxford and at the Temple, became tutor to the Earl of Carnarvon, and died at Ottery-St.-Mary, Devonshire, in 1645. His works consist of *Britannia's Pastorals* (1613 and 1616), *The Shepherd's Pipe*, from which Milton is said to have borrowed in *Lycidas*, and *The Inner Temple Masque* (1620). B. was a follower of Spenser, whom he resembles in sensuous richness of description and diffuseness of style. In *Britannia's Pastorals*, which are written in heroic couplets, B. excels nearly all his contemporaries as a pleasing and truthful painter of English scenery. His works were edited by Davies (Lond. 1772), and are found in Anderson's *English Poets*. For a critical estimate of B., see Leigh Hunt's *Jar of Honey from Mount Hybla*.

BROWN, FORD MADOX, an English painter, at one time an ally of the pre-Raphaelites, born at Calais in 1821, was educated on the Continent, and exhibited two cartoons at Westminster Hall in 1844. His 'King Lear,' a work of wonderful power, feeling, and technical dexterity (1849), was followed by 'Chaucer at the Court of Edward III.' (1851), and 'Christ Washing Peter's Feet' (1852), both of which received the Liverpool prize of £50. An exhibition of B.'s works, which was opened in London in 1865, included, among many other pictures, 'The Last of England' (a work of fine pathos and humor, representing character and incident on board an emigrant ship passing the Dover cliffs), 'The Autumn Afternoon,' 'Work,' and 'Wilhelmus Conquæstor;' and since that time his chief works have been 'The Coat of many Colors,' 'Romeo and Juliet,' 'Cordelia's Portion,' 'Don Juan,' and 'Jacopo Foscari.' His son OLIVER MADOX B., author of *Gabriel Denver* (1873), and a painter and *litterateur* of great talent and promise, died in 1874. His *Literary Remains* were published, with an accompanying memoir, by William Rossetti (2 vols. Lond. 1876).

BROWN UNIVERSITY, an educational institution, principally patronized by Baptists, located at Providence, R. I. It was originally established at Warren, R. I. (1764), but in 1770 was removed to its present place. It took its name from Nicholas Brown, who gave liberally towards its endowment. It has a fine library and property valued at more than $1,200,000, besides invested funds of more than half a million.

BRUMM'EL, BEAU, a consummate dandy, who took society by storm in the early part of the present century, was born in 1778. He resolved to be the best-dressed man in London, devoted the most assiduous care to his toilet, and saw the fashionable world bow before his creaseless coat and artistic arrangement of cravat. For a time he rivaled in celebrity Lord Byron, who sarcastically pronounced him to be a very great man. He was intimate with the Regent, and was courted as an authority on matters peculiar to polite society; but, after ten years of social success, was ruined by gambling, and died in poverty and imbecility at Caen, 29th March 1840. He fully realized Carlyle's description of a dandy—'a man whose trade, office, and existence consists in the wearing of clothes.' His life was written by Captain Jesse (1844), and is a valuable satire on his times.

BRU'SA, BRUSA, or BURSA, capital of the vilayet of the same name, at the base of the Mysian Olympus. It is a clean town, with channels of water running through many of its streets. A mountain stream divides the Turkish from the Armenian quarter, while a ravine separates the latter from the Greek quarter. There are good bazaars, well stocked with Manchester and other European goods. Many of the houses are of wood, but there are

several handsome buildings, the most remarkable of which is the great mosque. The environs are beautiful, the city standing on a slope facing a plain, variegated with mulberry plantations, gardens, clumps of cypress, kiosks, baths, &c. Its hot springs, famous in antiquity, are still used. Pop. estimated at 60,000, mostly Turks, though there are many Armenians, besides Greeks, Jews, and Franks. B. has an extensive trade in raw silk, and a striped satin is manufactured here, from which the under-garments of the Easterns is made. There is an important trade in corn, opium, and meerschaum clay, and its commerce is increasing. Its port is Gemlik. B. is the ancient *Prusa*, and is said by Strabo to have been built by Prusias, who carried on a war against Crœsus; but according to Pliny it was built by Hannibal. Its importance commenced after its capture, in 1326, by Orcan, son of Osman I., who made it the capital of the empire of the Osmanlis, which it remained for fully a century. The vilayet of B. has an area of 28,870 sq. miles; and a pop. of upwards of 1,000,000.

BUCKNER, Simon Bolivar, an American officer, born in Kentucky, in 1823, and gradnated from West Point in 1844. He served gallantly during the Mexican war, participating in the battles of Vera Cruz, Cerro Gordo, Cherubusco, Molino del Rey, and Chapultepec, in the last two being wounded. At the outbreak of the civil war, he entered the Confederate service, and as commander of Fort Donelson, surrendered to Gen. U. S. Grant, Feb. 16, 1862, with 16,000 men and a large quantity of stores. With the rank of major-general, he commanded the third grand division of the Confederate army, and was engaged at the battles of Murfreesboro' and Chickamauga.

BUDDING, or GEMMA'TION, in zoology, a name applied to the asexual process of reproduction, whereby new animals are produced by a process analogous to that of B. in plants. B. in animals may be *continuous* or *discontinuous*. In the former case (seen in *Hydrozoa* or zoophytes, sea-mats, or *Polyzoa*, &c.), a complicated and connected animal colony, made up of numerous separate animals or zooids, is produced. In the latter case, buds are detached, and form the beginnings of new colonies, or live a separate and single existence. B. occurs in *Protozoa*, *Cœlenterata*, *Echinozoa*, in a few *Annulosa*, and in lower *Mollusca*.

BUELL, Don Carlos, an American officer, born near Marietta, O., March 23, 1818, and gradnated from West Point in 1841. He participated in the war with Mexico, and was present at the battles of Palo Alto, Resaca de la Palma, Monterey, Vera Cruz, Cerro Gordo, and Cherubusco, where he was severely wounded, and for gallantry promoted brevet-major. In the year 1862 he commanded the Union army of the Ohio, was present at the battle of Shiloh, and at the siege of Corinth, and drove the army of Braxton Bragg out of Kentucky. He resigned from the army June 1, 1864.

BUENA VISTA, Battle of, a severe battle fought between the U. S. forces under the command of Gen. Zachary Taylor and the Mexican army under Gen. Santa Anna, Feb. 22–23, 1847, near the hamlet of Buena Vista from which the battle takes its name. Gen. Taylor being convinced that the enemy was before him in force, on Feb. 21st, fell back from Agua Nueva, and occupied a strong position before Buena Vista. On the morning of the 23d Santa Anna summoned him to unconditionally surrender, which he declined to do. On the 22d there was sharp skirmishing, and on the 23d a fierce attack was made upon Gen. Taylor's lines which was continued with slight intermissions during the entire day, with the continued repulse of the Mexican forces from the assailed lines. During the following night Santa Anna retreated and left the field in possession of his foe. Gen. Taylor's army numbered 5200, and that of the Mexicans 20,000. The loss of the former was 746 and that of Santa Anna 2000.

BU'GLE, a wind instrument, similar in principle to the trumpet, cornet, &c. Its special peculiarity is that the tube increases in diameter very gradually through a great part of its length, while in the trumpet the tube is nearly parallel throughout, swelling suddenly at the bell. The form of the tube modifies the quality (or klang) of the notes produced, making them (in this case) more mellow and round, and less brilliant and piercing than in the trumpet.

BULAK', a town of Egypt, on the right bank of the Nile, in the neighborhood of Cairo, of which it is the port. It is connected by railways with Suez and Alexandria, and has a custom-house, a bazaar, a central college of dervishes, a medical school, a military hospital, an engineering college, and some silk and cotton manufactures. It has also a Government printing-house, the first ever introduced into the East by a native ruler. This was founded by Mehemet Ali in 1829–30, and still flourishes, the Khedive taking a deep interest in its prosperity. Books are issued from it in Arabic, Turkish, Persian, French, and English. There are at present (1875) 300 persons employed in it and in the paper-mills adjoining, which supply paper for the press. Pop. of B. about 20,000.

BULL, the name given to the males of the Bovidae or oxen which are distinguished from the female animals by their usually larger size and more ferocious disposition. The bulls of some varieties of oxen possess horns, whilst the females are hornless.

BULL RUN, or BULL'S RUN, a stream in Virginia, U.S., on the banks of which the Confederates gained two well-known victories during the civil war, the first under Generals Beauregard and Johnston, July 16–19, 1861, and the second under Generals Lee, Longstreet, and 'Stonewall' Jackson, August 30, 1863.

BÜLOW, Hans Guido von, the greatest, with perhaps one exception, of living pianists. He was born at Dresden in 1830, but did not show any aptitude or liking for music until after recovery from a long illness which he had as a child. Although intended for the law, he fortunately received early musical instruction, and as a young man embraced heartily the ideas (political as well as musical) of the Romantic school. His first hearing of Wagner's *Lohengrin* (under Liszt, at Weimar), in 1850, decided him to leave law and take to music as his profession. Since that time he has been one of the foremost in the great movement with which the name of Wagner is more intimately associated. Two of Wagner's operas—*Tristan and Isolde* (in 1865) and *Die Meistersinger* (in 1868)—were brought out under his baton, for he is as great a conductor as performer. B.'s memory is of astonishing power; he plays invariably without music before him, and on one occasion actually conducted *Die Neistersinger*, which occupies over four hours in performance, by heart. His compositions, which are not very numerous, are not known in this country, as he does not play them himself.

BULRUSH OF THE NILE (*Papyrus antiquorum*), is famous on account of the soft cellular tissue in its stem having been used by the ancients for making ropes, mats, &c. The Sicilian *P. siculus* has also been used for making paper, and at the present day *P. corymlosus* is used in India for the manufacture of India matting.

BUNCHGRASS (*Elymus condensatus*), a valuable pasture grass found extensively over the open country to the W. of the Rocky Mountains, and remarkable for the great size to which it grows and its fattening properties. Cattle can be driven from the coast to the Rocky Mountains, living on nothing else than this grass, and will arrive fatter than when they started. The droves of cattle and horses which winter in that region live entirely upon it and will scrape it up under the snow. It is accounted superior to hay. It grows in 'bunches,' hence the name.

BUN'COMBE, a slang political expression. During the delivery of a speech in Congress, by a member who came from Buncombe Co., N. C., many of the members became weary and left the room. Turning to those who remained, the speaker told them they too might go, as he was "only talking for *Buncombe*."

BURGESS, George, D.D., born in Rhode Island in 1809, graduated from Brown University, and afterwards pursued his studies in Germany. He entered the ministry of the Episcopal Church, and in 1847 was made Bishop of Maine. Died in 1866.

BURLINGAME, Anson, LL.D., an American lawyer and statesman, born at New Berlin, Chenango Co., N. Y., was in Congress from 1854 to 1860, in 1861 was sent by the government as ambassador to China, and in 1867 came west, representing the Chinese government. Died Feb. 23, 1870.

BURNSIDE, Ambrose Everett, an American officer and statesman, born at Liberty, Ind., May 23, 1824, graduated from West Point in 1847, served during the Mexican war, and in 1853 became a manufacturer of breech-loading rifles, at Bristol, R. I. He entered the civil war with the rank of Colonel, and in 1861 Aug. 6, was promoted major-general. He was in command of the army of the Potomac when it was defeated at Fredericksburg, afterwards was in command of the department of Ohio, and commanded the Ninth army corps in the Richmond campaign of 1864. He was governor of Rhode Island 1866–71. Died at Bristol, R. I. Sept. 13, 1881.

BURR, Aaron, third Vice-President of the United States, was born at Newark, New Jersey, Feb. 6, 1756. He was a grandson of Jonathan Edwards. After studying at Princeton, he entered the Revolutionary army, but siding with the faction opposed to Washington, he was compelled to leave headquarters. In 178[illegible] he began the practice of law in Albany, was made Attorney-General of New York in 1789, and U. S. senator in 1791. B. now became a leader of the Democratic party, and was made Vice-President, 1801, Jefferson being President. A bitter contest for the governorship of New York, in which he was defeated, led to the notorious duel with Alexander Hamilton (July 11, 1804), in which the latter was mortally wounded. B. next entered into a reckless scheme for the establishment of an empire in the S.W., including Mexico. He was apprehended, and tried for treason in Richmond in 1807, and though acquitted, never regained his former influence. He died at Staten Island, Sept. 14, 1836.

BURR'UM, a town of India, N.W. Province, executive district of Boolundshuhur, about 40 miles N.W. of Delhi. Pop. (1871) 15,284.

BURU', one of the Molucca Islands, lying E. of Celebes. Its greatest length from N. to S. is 50 miles, from E. to W. 90 miles; its area is estimated at 2500 sq. m., and its pop. at nearly 20,000. The country is mountainous but fertile, producing, among other produce characteristic of these regions, cajeput oil, rice, sago, dyes, and aromatic woods. On the N.E. coast is the fine sheltered Cajeli Bay, on the S. shore of which lies the Dutch station, Fort Defence.

BUSH'NELL, Horace, was born in New Preston, Conn., in 1802, graduated at Yale College, 1827, and was for a time editor of a newspaper, but was ordained minister of a Congregationalist church in Hartford, Conn., in 1833. He resigned in 1858. B. early became famous both as a thinker and speaker. In 1847 he published *Christian Nature;* in 1849, *God in Christ*, for which he was tried for heresy, but acquitted; in 1851, *Christ in History;* in 1858, *Nature and the Supernatural;* and since then, *Sacrifice, Law, and Forgiveness*, and other works. B. was one of the most subtle thinkers and able theologians of New England. He died at Hartford, Feb. 17, 1876.

BUTLER, Benjamin Franklin. In 1882 he was elected governor of Massachusetts by a combination of the Democratic and Greenback parties, over Bishop, republican; and in 1883 when renominated by the same parties, was defeated by Robinson, republican. In 1884 he was a delegate to the National Democratic Convention at Chicago, but refused to support its nominee for the presidency, Grover Cleveland, because the views of its platform were not sufficiently pronounced against monopoly and in favor of protection. In the same year, he was nominated for the presidency by the Peoples' Party. See Butler, Benjamin F., in Chambers' En.

BYRE (a form of *bower*), is the name used in Scotland to denote a house for dairy cows, but also employed in many localities to designate the place where neat and fattening cattle are accommodated. Till within the last dozen years, not half the attention that ought to have been given was bestowed upon the B., and even now (1876) there is great need for improvement. There can be little doubt that not a small proportion of the diseases cattle suffer from are induced and fostered by uncleanly and ill-ventilated byres. The B. should be placed in the immediate neighborhood of the root and straw-stores, so as to avoid unnecessary carriage. Dairy cows should have, if practicable, a stall each, and this should not be less than 4 feet wide—indeed, 5 feet is better. In a single-stalled B. Mr. Henry Stephens recommends a width of 18 feet, giving 2 feet for the manger, 8 feet for the length of the cow, a foot for the gutter draining off the fluid refuse, and 7 feet for passage for removal of dung, conveyance of food, &c. Perhaps 20 feet would be preferable, as giving more convenience for dairy cows, although the spaces mentioned are sufficient for feeding cattle. Ventilators should be placed at intervals of every five or six cows, and so arranged in the ceilingless roof as to supply fresh air without causing draughts. Light should come in through windows in the wall behind the cattle. In the case of feeding oxen, two may well stand in a stall together provided it be 9 feet wide, but it is better in all cases to have each animal stalled by itself. Dairy cows do not, as a rule, agree very well with each other, and the consequence is that they sometimes do not yield so much milk as they would do if alone; and in feeding cattle it is frequently noticed that one robs the other of its due share of food. In the best-appointed byres the food is run along in a waggon on rails in front of the cattle. The mangers are best placed about 20 inches in height above the ground, and they should be wide enough to keep long-horned animals from injuring the tops of their horns against the walls. The gutter should drain itself into a liquid-manure tank, and the pavement of the floor should not be carried further than the hind posts, as the stones in front hurt the knees of the animals, and not unfrequently produce permanent swelling.

BYRSON'IMA, a genus of plants of the natural order *Malphighiaceæ*, some species of which have edible fruits. They are, however, very astringent. The bark of various species is used in tanning; and American Alcornque bark, which is imported into Britain for the tanner's use, is said to be derived from *B. laurifolia, B. rhopaldefolia*, and *B. coccolobæfolia.*

C.

CABALLE'RO, Fernan, is the *nom de plume* of Cecilia Böhl von Faber, the daughter of a German merchant, who died at Cadiz in 1836. She was born, during a visit of her parents to Switzerland, at Morget in 1797, was educated in Germany, returned to Spain in 1813, and has had a somewhat chequered career. She has been thrice married, and, although inheriting literary tastes from her Spanish mother, who was an authoress of note, only commenced her career as a writer in 1849, at the mature age of fifty-three. It is scarcely less remarkable that one who began so late should have almost at once attained a foremost place in the works of Spanish novelists. In keen perception of the peculiarities of the national life, in genuine national feeling, in originality of treatment, and in a fine idyllic grace of description, she is unsurpassed. Her first work was *Gaviota* (1849). It was followed by *Elia, Clemencia, La Fumilia de Alvareda, Cuadros di Costumleres Populares Andaluces*, and many others. She has published a collected edition of her works (*Obras Completas*) in 17 vols. (Mad. 1860–66). She died 7th April 1877.

CAB'ANEL, Alexandre, a French painter, born at Montpellier, 28th September 1823. He traveled to Rome, and gained prizes at Paris in 1845, 1852, and 1855. Among his works are 'The Agony of Christ in the Garden of Olives,' 'The Death of Moses,' 'The Christian Martyr,' 'Othello relating his Battles,' 'Michael Angelo,' 'Aglaia,' 'Velleda,' and a series of designs representing the twelve months of the year, 'The birth of Venus,' and 'Adam and Eve.' He was made a member of the Académie des Beaux Arts in 1863, and an officer of the Legion of Honor in 1864.

CABOMBA'CEÆ, the Water-shield order, a natural order of plants belonging to the class *Dicotyledonous*. They are mostly aquatic, with floating peltate leaves. There are only three species in the order, found in America, Australia, and India. They have no important properties—*Cabomba* and *Hydropeltis* are the only genera.

CACA'LIA, a genus of plants of the natural order *Compositæ*, natives of the warmer parts of America, Middle Asia, and Eastern Africa. The Chinese employ the leaves of *C. procumbens* as food, and those of *C. ficoides* of the Cape of Good Hope are also wholesome.

CACH'IBOU, or CHIBOU RESIN, a fragrant gum resin, obtained from *Bursera gummifera:* that from *B. acuminata* is known in commerce as the resin of Carana.

CACHŒI'RA, a town of Brazil, in the province of Bahia, on the river Paraguassu, and about 60 miles N.W. of Bahia, the capital of the province. There are in the neighborhood of C. extensive sugar and tobacco plantations. Pop. 25,000.

CACH'RYS, a genus of plants of the natural order *Umbelliferæ* (*Apiaceæ*), natives of the S. of Europe, Siberia, &c. The Cossacks chew the seeds of *C. odontalgica* as a remedy for toothache, the effect being probably owing to the salivation produced. Several species are cultivated.

CADA'BA, a name applied to a genus of plants of the natural order *Capparidaceæ*, natives of Africa, India, and Australia. The roots of *C. indica* are aperient and anthelmintic.

CADA MOSTO, or CA DA MOSTO. Alvise or Luigi, a famous voyager and discoverer on the W. coast of Africa, was born at Venice about 1432. Entering the service of Dom Henriquez, the Infanta of Portugal, he sailed from Lagos on March 22, 1455, visited the river Senegal, and traded along the coast of that region in gold and slaves till, after being joined by two other Portuguese ships at Cape Verde, he sailed southwards and discovered the Gambia. C. then returned to Portugal. In the following year (1456) he discovered the Cape Verde Islands, and the rivers Cazamanza and Rio Grande, after which he returned to Portugal, where he remained till the death of the Infanta in 1463.

C. died about 1480. The first account of his voyages, now a very rare book, was published at Vicenzo in 1507, under the title *El Libro de la Prima Navigazione per Oceano a le Terre de Nigri de la Bassa Æthiopia*. See ZURIA, *Dei Viaggi e delle Scoperte Africane di Cada Mosto* (Ven. 1815).

CADWALLADER, JOHN, born in Pennsylvania in 1743, and served in the Continental army during the Revolution, with the rank of brigadier-general, participating in several important engagements. Died in 1786.

CÆNAN'THIUM, a term applied to the peculiar inflorescence of *Dorstenia*, *Ambora*, and the common fig, in which the receptacle expands, and encloses the flowers, within a hollow, almost completely, as in the fig, and partially so, as in *Dorstenia*.

CAF'TA, KAT, or KHAT, the slender young shoots, with the attached leaves, of *Catha edulis*, a plant belonging to the natural order *Celastraceæ*, which are chewed by the Arabs to produce exhilaration of spirits and wakefulness. It is also used as a decoction. The leaves and shoots of *C. spinosa* are also applied in the same way.

CAIRO, a city of Alexander Co., Ill., at the junction of the Ohio and Mississippi rivers, 175 miles below St. Louis. It is the terminus of several railroads, carries on a large trade, and has several important manufacturing interests. It is a supply center for Southern Illinois, Southeast Missouri, and Western Kentucky. Pop. 11,000.

CAJA'NUS (from *Cajang*, the Malayan name of one of the species), a genus of plants of the natural order *Leguminosæ*, section *Papilionaceæ*. *C. Indicus*, a native of the E. Indies, is now cultivated in the W. Indies, tropical America, and Africa, and on some of the Pacific islands. In Jamaica it is called the Congo pea. In India the pulse or seed is called *dhal* or *dhol*, or *urhur*, and forms a large portion of the food of all classes. In the W. Indies the pulse is called pigeon-pea, and is used as a substitute for English peas, also for feeding pigeons and other fowls. The variety known as No-eye pea is most esteemed. The Congo pea is harder and coarser. Horses and cattle are very fond of the young branches and leaves, either in a fresh or a dried state. It is one of the most generally useful of tropical plants.

CAKE-BREAKER. Within the last quarter of a century, the increasing demand for animal food has rendered it imperative, in England, that the natural supplies of hay and roots should be supplemented by artificial feeding stuffs, in order that cattle and sheep should be ripened at an earlier age, and brought up to heavier weights. Oil-cake, cotton-cake, and a variety of other condimental substances are employed in fattening. It has been found that much cake is wasted when given in a whole state, and a machine was invented for the purpose of breaking it into pieces of from 1½ to 2 inches square. The machine consists of a box set upon iron legs; within the box revolve in opposite directions two iron-teethed rollers, which speedily disintegrate the cake to the required size. The machine is not costly, and the economy very great. There are many good machines in the market.

CALABASH NUTMEG, the seeds of *Monodora Myristica*, a plant of the natural order *Anonaceæ*, the Custard-apple order, having aromatic properties similar to the true nutmeg. They are commonly known as Jamaica or American nutmegs.

CALABO'SA, or CALABO'ZO, a town in the state of Caracas, Venezuela, on the left bank of the river Guarico, a tributary of the Apure, and 185 miles S.W. of Caracas. It was formerly an Indian village, and is now the residence of many wealthy proprietors of cattle-farms (*hatos*) in the surrounding llanos. Pop. 4000. Since 1813 C. has been the scene of several battles; Bolivar and Paez here defeated the Spaniards under Morales, Feb. 3, 1820, and again under La Torre, June 24, 1821.

CALAGUA'LA, the rhizome of *Acrostichum Huacsaro*, or 'little cord,' which is used in Peru as a sudorific, diuretic febrifuge, and anti-venereal. The rhizome of *Polypodium C.*, the slender or genuine C., and those of *P. crassifolium*, the thick C. or deer's-tongue, are also reported to have the same properties.

CALAIS, a city of Washington Co., Maine, on the St. Croix River, at the head of navigation, and on the St. Croix and Penobscot Railroad. It carries on a large trade with the up-river counties, and is extensively engaged in ship building and the lumber traffic. Pop. 6112.

CAL'EA, a genus of plants belonging to the natural order *Compositæ*, natives of tropical America from Southern Brazil to Mexico. About thirty species are described. *C. Zacatechichi*, the 'Jaralillo' of the Mexicans, yields in the fresh state a considerable quantity of camphor; the powdered leaves are applied to wounds, and the plant is used generally as a febrifuge. The leaves of *C. Jamaicensis*, when steeped in wine and brandy, are said to be used as a bitter stomachic in the W. Indies. Perhaps this account applies better to *Neurolæna lobata* (*Treasury of Botany*).

CALENDU'LA, a genus of plants belonging to the natural order *Compositæ*. It gets its name from the fact that the species may be in flower on the *kalends* of every month. They are natives of the Mediterranean region. One (*C. officinalis*, or pot marigold) has been long cultivated, and was at one time famous as a diuretic remedy.

CALIFORNIA, UNIVERSITY OF, an American educational institution, chartered in 1868, and located at Berkeley, Cal., distant nine miles from San Francisco. It is a non-sectarian, state institution, has well equipped buildings, and is well supported.

CALIX'TUS, the name of three popes and of one anti-pope.—C. I., ST. C., or Callistus, is said to have been born a slave at Rome about the middle of the 2d c. He was elected Bishop of Rome in the year 217, and held that office till the year 222, when he died a martyr. The character of C. has been the subject of keen discussion during recent years, on account of the abuse heaped on him in a Greek MS. found at Mount Athos in 1842, published in 1851 at the expense of the University of Oxford, under the title *Philosophumena*, and ascribed by Bunsen to Hippolytus. C. was a zealous opponent of the doctrine of the Trinity, and took mild views of Church discipline, allowing priests to marry after ordination.—C. II., Guido, Count of Burgundy, pope from 1119 to 1124, was, before his elevation, Archbishop of Vienne, and papal legate in France. In the year 1122 he concluded a treaty with the Emperor Heinrich V., by which he succeeded in reserving for the pope the right of Investiture, and in 1123, the year before he died, held the first Œcumenical Council of the Lateran. C. acted as mediator in the dispute between Henry I. of England and Louis VI. of France regarding Normandy, paid the ransom for which Baldwin II., King of Jerusalem, was delivered from the Turks, repressed the tyrannous excesses of the petty Italian princes, and added to the adornments of the principal churches at Rome.—C., THE ANTI-POPE, Giovanni Unghieri, Cardinal-Bishop of Tusculum, was set up in 1168 by the Emperor Friedrich I. as a rival to his enemy, Pope Alexander III. Abandoned by the Emperor and his partisans after the peace of Venice in 1177, C. submitted to Alexander, who pardoned him, and appointed him governor of Benevento.—C. III., Alfonso Borgia, a Spaniard, Bishop of Valencia, was elevated to the papal dignity in 1455. Before this event he had been long a trusted councilor of Alfonso, King of Aragon and the Two Sicilies, and had negotiated a peace between Castile and Pope Eugenius IV. A skillful diplomatist and subtle lawyer, he yet failed signally as a pope. Great efforts put forth by him to organize a grand crusade against the Turks ended in the capture of three useless islands. The open favor he showed his nephew, Rodrigo Lenzuoli, afterwards Pope Alexander VI., lost him the esteem of King Alfonso, and aroused the hostility of his Roman subjects. The *Office of the Transfiguration* in the Roman Catholic service is ascribed to him. C. died August 6, 1458.

CALLIAN'DRA, a genus of Leguminous plants, natives of America, from Buenos Ayres to California. Many are in cultivation, and in all about eighty species are known, all more or less ornamental. The Peruvian women deck their hair with the flowers of *C. trinerva* (the 'Seda sisa' or silk-flower).

CALLIA'NO, a town of Austria, in the Tyrol, on the Adige, 10 miles S. of Trient, in the strongly fortified pass of Castel della Pietra, notable for the defeat of the Venetians by the Archduke Sigismund in 1487, and the storming of the place by Napoleon, September 4, 1796.

CALUMET, a city of Houghton Co., Mich., on the Mineral Range Railroad. The surrounding country is rich in copper ore, and mining is the principal industry. Population, 9,500.

CALVERT, LEONARD, born in 1582. He led the first expedition to Maryland, and was the first governor of that colony. Died in 1647.

CALYSACC'ION, a genus of plants belonging to the order *Guttiferæ* or *Clusiaceæ*, which along with those of *Mesua ferrea*, the dried flower-buds of *C. longifolium*, form the *Nagasar*, *Nag-Kesar*, or *Nag-Kassar* of the Indian bazaars, so highly esteemed for their fragrance, and in Bengal as an antidote to snake-bites. *Nag-Kassar* is also used to dye silks.

CAM, in machinery, an irregularly-shaped revolving disc, used for imparting motion with definitely varying velocity.

CAMASS'IA, or GAMASS'IA, the Camass, or Quamash (as it is sometimes erroneously written), a genus of plants belonging to the natural order *Liliaceæ*, natives of open prairies and grounds in N.-Western America, from California to the northern parts of British Columbia, and from the sea to the Rocky Mountains. The only known species is *Gamassia esculenta*, the bright blue flowers of which give the open country a gay appearance in spring. The plant is about a foot or a foot and a half in height, and has been introduced into our gardens. But it is the bulbous roots that render the plant of most interest. They are collected

and stored by the Indians for winter food, and are nourishing from the amount of starch which they contain. The bulbs are dug up with a sharp-pointed stick as soon as the flowering is over. The camas-gathering is one of the Indian festivals. Numbers gather for this purpose from far and near, and encamp in the woods and plains close by. The work is chiefly done by the women, and, from early morning to dusk, they are busy at it. The young men meanwhile look on, and the hard-working squaw has the best chance of a husband. The roots are cooked by being put into a hole in the ground paved with large stones, in which previously a fire has been lit. The roots are then piled layer upon layer in it, the different layers being separated by leaves and branches, until the hole is full. Earth is then spread over it, and a fire lit on the surface. After they are cooked, they are either pounded into cakes, or more frequently dried for winter use. They are then, by the conversion of the starch into sugar, sweet tasted. There is also a white-flowered variety.

CAMBRIDGE PLATFORM, a system of Congregational church government, adopted by a synod of churches, held at Cambridge, Mass., in 1648. At that time there was wide diversity of usages among the churches of the colony, and the object of this gathering was to attain, if possible, greater uniformity. The doctrinal statements of the Westminster Catechism were accepted, and a system of church polity adopted, much the same as that in vogue to-day among Congregationalists.

CAMDEN, a village of Kershaw Co., S. C., 33 miles N.-E. of Columbia. The principal importance attaching to the place, arises from the battles fought here, or near by. During the war of the Revolution, Lord Cornwallis here defeated Gen. Gates, on Aug. 16, 1780, and Lord Rawdon defeated Gen. Green, on April 25, 1781, at Hobkirk's Hill, near Camden. During the civil war, Camden was captured by Gen. Sherman, Feb. 24, 1865, and large quantities of property and stores destroyed.

CAMELI'NA, a genus of plants belonging to the natural order *Cruciferæ*, containing two or three European and N. American species. *C. sativa*, the 'Gold of Pleasure,' is the most interesting species. It is a native of Central and Southern Europe and temperate Russian Asia. It is cultivated on the Continent for the sake of its seeds, which are a valuable food for cattle, for the oil which they contain, and on account of the fibre which is obtained from its stems. The seeds are sometimes erroneously called 'dodder seeds.' The origin of the English name is unknown.

CAMERON, JAMES DONALD (known in politics as DON CAMERON), was born in Pennsylvania, in 1833, and, after graduating from Princeton College, engaged in commercial pursuits. He was an active member of the Republican Party for years; in 1876 was made Secretary of War; and in 1877 was elected U. S. Senator from Penn., upon the resignation of his father, Simon C.

CAMERON, SIMON, an American politician, born in Lancaster Co., Pa., in 1799. He was at first a Democrat, but joined the Republican party subsequently, and in 1856 was re-elected U. S. Senator by that party, having previously been elected to the same position by the Democrats in 1845. For many years he almost absolutely controlled the Republican party in his state. He was made Secretary of War in 1861, Minister to Russia in 1862, was elected U. S. Senator in 1866, and again in 1873. In 1877 he retired from public life, and was succeeded by his son in Congress.

CAM'PLI, a town in the province of Teramo, Central Italy, has a cathedral, an abbey, several convents, and manufactures of straw hats. Pop. 7500.

CANADA SNAKE-ROOT, or WILD GINGER, the rhizome of *Aristolochia Canadensis*, a plant belonging to the birthwort order (*Aristolochiaceæ*), used in Canada and the United States as a 'tonic diaphoretic and aromatic stimulant.'

CAN'AGONG, or PIG'S FACES (*Mesembryanthemum æquilaterale*), a plant of the order *Mesembryaceæ*, the fruit of which is eaten in Australia.

CANALS, INTERCELLULAR. In most cases cells are united to the contiguous ones so closely as to leave no appreciable spaces between them (the 'perfect parenchyma' of Schleiden), yet in various plants the cells only touch each other at one or two points, leaving, as in the green pulpy parenchyma, spaces between them, known as I. C. In shape they vary much. Most probably they only contain air.

CANAVAL'IA, a genus of plants of the order *Leguminosæ*. About twelve species are known, mostly shrubby climbing plants. *C. gladiata* of the West and East Indies, Mexico, tropical Africa, Brazil, &c., is called the 'Overlook' by the West Indian negroes, who plant it on the edges of their 'provision grounds,' under the belief that it exercises some mysterious power in watching or protecting their property from being plundered.

CANBY, EDWARD RICHARD SPRING, LL.D., an American general, born in Kentucky, in 1817, and graduated from West Point in 1839. He served throughout the Mexican war, and was present at Vera Cruz, Cerro Gordo, Contreras, Churubusco, and the city of Mexico. For gallantry in these actions he was brevetted major, and then lieutenant-colonel. During the Civil War, he was in command of the expedition that captured Mobile, and rendered other valuable services. In 1864 he was made major-general U. S. Volunteers, and in 1866 brigadier-general U. S. A. In 1869 he was placed in command of the department of the Columbia, which at that time was disturbed by a violent outbreak of the Modoc Indians. On April 11, 1873, while holding a conference with several of the chiefs of this tribe, he was treacherously shot by Chief 'Jack,' and killed.

CANDLE-TREE (*Parmentiera cerifera*), a tree of the natural order *Crescentiaceæ*, the fruits of which are shaped like a candle (hence the name), and are devoured by cattle in the Isthmus of Panama.

CANELLA'CEÆ, a natural order of *Dicotyledonous* plants, containing only three species, natives of the W. Indies and the adjoining continent of America. They are aromatic, stimulant, and tonic. *Canella alba*, the laurel-leaved C., or wild cinnamon, &c. *Cinnamodendron axillare*, *C. corticosum*, a native of Jamaica, &c., have also aromatic bark similar in properties to *C. alba*. *C. corticosum* yields 'Winter's bark' as now found in commerce.

CANON CITY, a city of Fremont Co., Col., on the Arkansas River, 45 miles from Pueblo and 90 from Denver. It has hot and cold soda springs; and coal, oil, sandstone, and lime abound. Population, 2300.

CANONICUS, a chief of the Narragansett Indians, noted for his warm friendship towards the early settlers of New England. From him was purchased the territory now contained in the State of Rhode Island. Died in 1647.

CAN'THIUM, a genus of plants belonging to the natural order *Cinchonaceæ*. *C. parviflorum* is used for making fences in India, and the leaves as an ingredient in curries.

CANTON, a beautiful city of Ohio, at the junction of the East and West branches of the Nimishillen Creek. It has flourishing manufactories, and the adjacent county is well stocked with coal and extremely fertile. Population, 22,000.

CANTON, a city of Fulton Co., Ill., on the Chicago, Burlington and Quincey, and the Wabash, St. Louis, and Pacific railroads, 210 miles from Chicago, and 28 from Peoria. It is engaged in manufacturing and coal mining, and has extensive plow and car-wheel works. Population, 4500.

CAPE, or properly VAUNKS, RIVER, in Central America, after a course of nearly 300 miles, falls into the Caribbean Sea near Cape Gracios-a-Dios, whence its popular name. It is navigable for some distance from its month.

CAPE ELIZABETH, in Cumberland Co., Maine, on the Eastern Railroad, one mile from Portland. It has a rolling mill, oil-works, the Eastern Railroad repair shops, and a number of small manufactories. Population, 5000.

CAPEL, THOMAS JOHN, a learned priest of the Roman Catholic Church, born in England in 1835. At the early age of 21 he became president of a normal college, for the education of teachers. He is an eloquent preacher, and has made many converts from Protestantism. He now holds the rank of 'monsignor,' and has recently (1884) visited the United States, where he attracted much attention by his polished manners and logical discourses.

CAPERS, WILLIAM, D.D., an American divine, born in South Carolina, Jan. 26, 1790, studied at South Carolina College, and entered the ministry of the Methodist Church in 1809. In 1844 he was elected bishop of the M. E. Church, South. He was noted for his eloquence and Christian piety. Died at Anderson, S. C., Jan. 29, 1855.

CAPE MAY, a well-known seaside resort in the southern part of New Jersey. It has an excellent beach for bathing and numerous elegant hotels.

CAPE WEED (*Rocella tinctoria*), a lichen from the Cape Verd Islands, from which a dye is obtained. C. W. is also a name given in New Zealand to the European cat's ear (*Hypochæris radicata*), which has been introduced into that colony, and in the vicinity of Dunedin, Otago, is taking the place of the cultivated grasses in the pastures. The name is also applied in Australia to *Cryptostemma calendulacea*.

CARAGA'NA, the Siberian pea-tree, belonging to the natural order *Leguminosæ*. *C. arborescens* is a small tree, with hard wood and tough bark. The seeds are used to feed poultry, and the leaves contain a blue dyeing matter. *C. spinosa* is a thorny shrub, the branches of which are stuck plentifully on the tops of the clay walls about Pekin, in China, for the same reason that broken bottles are strewed on the tops of garden walls.

CARAI'PA, a genus of plants of the natural order *Ternströmiaceæ*, containing about eight species, natives of tropical America. *C. fasiculata* is the tree from which the balsam of Tamacoari is

obtained. This balsam is of the color of port wine and the consistence of oil. A single application will cure the most inveterate attack of the itch in twenty-four hours (Spruce, *Journ. Linn. Soc.*, v. 63).

CARBON, Bisulphide of, is obtained by dropping sulphur into red-hot charcoal in an earthenware retort provided with a good condensing apparatus. It is a colorless, mobile liquid, highly refractive and volatile (boiling point, 48° C.), and possesses a peculiar aromatic odor, which is not disagreeable if the bisulphide be quite pure, but is usually disagreeable from the presence of impurities. B. of C. is an excellent solvent of oils, fats, resins, caoutchouc, phosphorous, sulphur, &c., and is employed in the manufacture of vulcanized india-rubber.

CARBONDALE, a city of Lackawanna Co., Pa., on the Lackawanna River, about 17 miles from Scranton. It is in a region filled with rich mines of anthracite coal. Pop. 7719.

CARDIADAE, a family of *Lamellibranchiate* molluscs, represented by the Cockles and by the genus Conocardium. The shell is equivalve, heart-shaped, the mantle being open in front, and the foot large and curved. The family is represented by cockles on the Devonian rocks; whilst the genus *Conocardium* is represented by Palæozoic shells, which have the anterior side of the shell conical and gaping, and a siphonal tube placed near the beak of the shell.

CAR'DIOGRAPH. This is an instrument used in practical medicine and in physiological research for observing and recording the impulse of the heart on the wall of the chest. In man and in the lower mammalia, the heart is situated in an irregularly wedge-shaped space, the posterior wall of which is formed by the diaphragm. When the ventricles of the heart contract, they push against the wall of the chest with more or less violence. This push is termed the *cardiac impulse*. Various cardiographs have been employed, but the one most in favor was devised by Burdon Sanderson. It consists of a hollow disk, the rim and back of which are made of brass, while the front is made of thin india-rubber. This box is called the tympanum. To the brass back a flat steel spring is secured, which is bent twice at right angles in the same direction, in such a way that it overhangs the india-rubber membrane. The extremity of this spring, which is exactly opposite the center of the face of the tympanum, is perforated by a steel screw, the point of which rests on the membrane, while its head is surmounted by an ivory knob. The tympanum is further provided with three adjusting screws, by which, when in use, it rests on the wall of the chest, with its face parallel to the surface, and can be approximated or withdrawn at will. It is evident that when the screws are so adjusted that the spring presses on the chest, whatever movements of expansion or retraction are made by the surface to which it is applied are communicated to it, and by it to the india-rubber membrane with which its point is in contact. The cavity of the disk communicates by a vulcanized india-rubber tube with a second tympanum in such a way that the two tympana and the tube enclose an air-tight cavity. The result of this arrangement is that whatever movement is performed by the first is simultaneously reproduced, but in the reverse direction, by the second. If the tympana are of equal aera, the extents of the primary and secondary movements are equal. When, as is usually the case, the areas are unequal, the extent of movement is approximately inversely proportional to the areas. The movement of the second tympanum is magnified and inscribed on a registering cylinder by means of a lever. By this apparatus a tracing is obtained, which is an exact representation of the movements of the surface against which the spring is applied, so that, if the instrument is graduated, it may be used not only for the purpose of estimating the relative duration of those movements, but for measuring their extent. See *Handbook for Physiological Laboratory* (Lond. 1873), p. 255.

CARDIOSPER'MUM, a genus of plants of the natural order *Sapindaceæ*, contains about twelve species, mostly natives of S. America, but also found in every tropical country. The leaves of *C. Halicacabum*, the winter cherry (a name also applied to *Physalis*) or heart-pea, are cooked and eaten in the Moluccas, and on the Malabar coast are taken internally with castor oil for lumbago, &c. The root is laxative, diuretic, and, owing to the quantity of mucilage in it, demulcent, but slightly nauseous in taste. It is also used in rheumatism.

CAREY'A, a genus of plants of the Myrtle order (section *Barringtoniæ*), mostly found in India, though one species is found in N. Australia. *C. sphærica*, of the Malayan Peninsula, has a tough bark fit for cordage. *C. arborea* is used for making boxes, hoops, &c.; but the timber splits up when exposed to the sun, and is pervious to rain. The drums of the Sepoys in India were formerly made of it. The bark is manufactured into cordage, and when prepared is used in some parts of India as a slow match for firelocks. In Scinde the fleshy calyx is said to be good for curing colds (Black).

CARINATE BIRDS, or CARINATÆ, is Huxley's name for one of the three great divisions into which he divides the class *Aves* or Birds. The *C. B.* include by far the vast majority of birds, distinguished by the fact that the breast-bone or sternum possesses a prominent ridge or 'keel' (*Carina*). The ostriches, and other *Cursores* having flat or raft-like sterna, are named *Ratitæ;* whilst Huxley's third division, *Saururæ*, includes but a single bird, the extinct *Archæopteryx*.

CARLISLE, Frederick Howard, Earl of, was born 28th May 1748, and succeeded to the earldom at the age of ten. His mother, Isabella Byron, was a sister of the famous admiral and navigator. C. was educated at Eton and Oxford. In 1780 he was appointed Viceroy of Ireland, and was for a time an opponent of Pitt in parliament, but changed his politics after the outbreak of the French Revolution. He died 4th September 1825. C. was an able politician, but is best known by his contributions to literature, which were published in a collective form in 1801 under the title of *Tragedies and Poems*, and gave occasion to a recklessly bitter note in Byron's *English Bards and Scotch Reviewers*.

CAR'LO ALBER'TO AMEDE'O, King of Sardinia, born 2d October 1798, a son of Prince Carlo Emanuele of Savoy-Carignan, who died in 1800. C., connected through his mother with the house of Saxony, married in 1817, Maria Theresa, daughter of Ferdinand of Tuscany, and on the Piedmontese revolution of 1821, became for a short time Regent of Sardinia, introducing a constitutional government, which was repudiated by Carlo Felice, the successor of Vittorio Emanuele on the throne. After acting for two years as Viceroy of Sardinia, C. succeeded, his title having been previously recognized by the Congress of Vienna. At first, Austrian influence and the fear of Carbonarism, thwarted the essentially liberal intentions of the new king, but after the accession of Pio Nono, the army was nationalized, the press laws modified, and, when the year of revolutions came, C. was able to assist Lombardy against the Austrians with a large and enthusiastic army. The superior numbers under Radetzky were victorious at Villafranca, Milan, and Novara (1849), and C., abdicating in favor of his son, Vittorio Emanuele II., retired to Oporto, where he died, 28th July 1849. C. patronized the fine arts.

CARLO EMANUE'LE I., called 'the Great,' Duke of Savoy, born at Rivoli, 12th January 1562, succeeded his father, Filiberto Emanuele (Iron-head), and married in 1585 Catherine, the youngest daughter of Philip of Spain. His favorite policy was to gain a footing in Provence and Saluzzo by playing the part of a Catholic liberator; he even laid claim to the French crown on the death of Henri III., whose cousin he was; but in 1597 the Protestant leaders, Lesdiguières and La Valette, forced him to withdraw from Provence. Compelled in 1601 to give up several districts in the department of Ain, and unsuccessful in his attacks on Geneva, C. at last became the ally of France, and for several years was in the field against the Spanish power in N. Italy, where he obtained the territory of Montferrat. C. was put forward by the Protestant Union as a candidate for the empire at the death of Matthias. The league against the action of Spain against the Protestants of Valtellina, a war with Geneva about the territory of Zuccarello, and the invasion by Louis XIII. of Savoy and Piedmont, fill up the rest of C.'s life. He died at Savillan, 26th July 1630, leaving a military reputation which was not founded on military success.

CAR'LYLE, Alexander, D.D. (born January 26, 1722; died August 25, 1805), for fifty-seven years minister of the parish of Inveresk (Musselburgh), is chiefly known as the contemporary and friend of Hume, Home, and Robertson, and as one of the leaders of the Moderate party in the Church of Scotland. He was a man of singularly fine presence, being popularly known as *Jupiter C.*, and described by Sir Walter Scott as 'the grandest demigod I ever saw.' His autobiography, containing *Memorials of the Men and Events of his Time*, was published in 1860 under the editorship of Mr. (now Dr.) John Hill Burton. It is admitted to be one of the best books of the autobiographical kind, and its shrewd, lively sketches of the men and manners of the period in which he lived are invaluable for historical purposes.

CARNATIONS, (Lat. *caro*, 'flesh') in painting, are the parts of a picture in which the nude form appears, and in which the texture and glow of the body is sought to be realized by flesh-tints. Among the old masters the practice of painting from the nude was more general than in later times, and the C. of the works of the great colorists of the Venetian school are consequently more brilliant and truthful than those of modern artists.

CARPENTER, SHIP'S, the third warrant officer on board a man-of-war, whose duty it is, in conjuncture with his mate and crew, to attend to the necessary repairs of the hull, masts, and spars. He sees after the condition of the boats and pumps, and during battle looks after the plugging of shot-holes.

CARPI'NI, Giovanni de Plano, an Italian traveler of the order of the Franciscans, born in Capitanata, Naples, about 1220, was sent in 1246 by Innocent IV. as a sort of papal legate to the Mongol Emperor, whose devastations in the N.E. of Europe were alarming Christendom. He was present at the election of a new emperor in the capital of Genghis-Khan. After a month's residence at the Mongol court, and a visit to Tourakina, the Emperor's mother, C. returned to Europe. He was the first who gave a trustworthy account of the Mongols and of their country. An English translation of a Latin abridgment of his travels, which appeared in the *Speculum Historicum* of Vincent de Beauvais, is attributed to Hakluyt or Purchas. The exact date of C.'s death has not been ascertained, but the latter portion of his life was spent in missionary efforts in Bohemia, Hungary, Denmark, and Norway. See Peschel's *Geschichte der Erdkunde*, pp. 150–207, and an article by Dora d'Istria in the *Revue des Deux Mondes* (Feb. 15. 1872).

CARPOL'OGY, the division of botanical science which concerns itself with the study and classification of the forms of fruits.

CARPOMA'NIA, or PHYTOLITHES, an affection of quinces, pears, &c., in which, by the deposition of layer after layer in the cells of the fleshy fruit, they become gritty. It is, however, scarcely a disease, as it occurs naturally in pears, melons, &c., and the gardener's efforts are directed, by means of cultivation, to reduce it to a minimum, by creating a condition which is not natural to the fruit.

CARPOPTO'SIS, a term applied to the disease in plants which causes the fruit, after it has begun to 'set,' to have its progress suddenly arrested and to fall off. It is frequently owing to more fruit being formed than the tree is capable of nourishing, or from the tree being covered with so many shoots that the sap which should go to the fruit is diverted to nourish the foliage. In Italy the rice crops are often so affected.

CARRAJAL', Tomas José Gonzalez, a Spanish statesman and author, was born at Seville, 21st Dec. 1753, studied at the university of his native city, and in 1785 went to Madrid, where he devoted himself to politics and philology with equal zeal. From the outbreak of the French Revolution to the reactionary war of 1823, except for a short period (1815–20), he was constantly engaged in public affairs, and showed both ability and patriotism. After repeated affronts and persecutions by the Absolutist party, he was finally received into the royal favor, and became a member of the Supreme Military Council in 1833, but died 9th Nov. 1834. As an author, C. has obtained a great reputation in Europe by his metrical translation of the poetical books of the Bible, begun in his fifty-fourth year, and heroically persisted in amid the din of arms, the distractions of campaigns, and even the fatigues of a march. The fruits of this labor are seen in *Los Salmos* (5 vols. Val. 1819), and *Los Libros Poeticos de la Santa Biblia* (6 vols. Val. 1827). His original compositions are contained in the *Opusculos ineditos en Prosa y Verso* (13 vols. Mad. 1847).

CARROLL, Charles, of Carrollton, an American patriot, born at Annapolis, Md., Sept. 20, 1737. His parents were wealthy, and he received a liberal education, pursuing his studies both in England and France. He was educated for the law, in 1776 was a member of the Continental Congress, and was one of the signers of the Declaration of Independence. He was a man of sterling worth, and rendered valuable assistance to the Continental cause throughout the Revolutionary War. Died Nov. 4, 1832.

CARROLL, John, D.D., LL.D., a distinguished prelate of the Roman Church, born in 1735, and educated in Europe. After teaching for a time at Bruges, he returned to America, and, in 1789, was made the first bishop of the Catholic Church in America. A short time prior to his death, in 1815, he was elevated to the rank of archbishop.

CARTHAGE, a city of Jasper Co., Mo., near Spring River, 316 miles S.W. of St. Louis. It is an important railroad center, has extensive manufactures, and carries on a large trade with the surrounding country. Pop. 7000.

CARTHAGE, Battle of, a battle of the Civil War, fought near Carthage, Mo., July 5, 1861, between a Confederate force, commanded by Gen. Price, and a Union force, under the command of Gen. Sigel, which resulted in the latter being compelled to retire. The losses were slight (150 Confederates and 50 on the Union side), and Sigel's retreat was conducted in perfect order.

CARUS, Julius Victor, a well-known German anatomist and zoologist, was born at Leipsic, August 25, 1823. After acting for a time as conservator of the Oxford Anatomical Museum, he was elected Professor of Comparative Anatomy in his native town in 1853. He lectured in Edinburgh University in the room of Professor Wyville Thomson, who was absent on the *Challenger* expedition, during the summers of 1873–74. He is a strong Darwinian, pushing the claims of natural selection even further than its great originator. His chief works are *System der Thier. Morphologie* (Leips. 1853); *Icones Zootomicæ* (Leips. 1857); *Bibliotheca Zoologica*, with Engelmann (2 vols. Leips. 1862); *Handbuch der Zoologie* (1868); and with Gerstäcker, *Geschichte der Zoologie* (Munich, 1878).

CARTWRIGHT, Peter, D.D., a famous American preacher, born in Virginia, in 1785, and early in life entered the ministry of the Methodist Church. His eloquence was that of the common people, and he labored among the backwoodsmen of Kentucky with marked success. He is said to have baptized more than 12,000 converts. Died in 1872.

CAR'VER, John, the first governor of the Plymouth colony in the New World, was born in England in the second half of the 16th c., and went to Leyden, then a refuge for the Puritans. He was an elder in the Church, and in 1620 sailed with the Pilgrims in the *Mayflower*. C. was a prudent and firm ruler, but did not long survive his arrival in New England, dying at Plymouth, April 5, 1621.

CARY, Alice and Phœbe, sisters and poets. Alice was born near Cincinnati, O., April 26, 1820, and Phœbe at the same place, September 4, 1824. Their educational opportunities were limited, but both, at an early age, began to develop remarkable literary genius. Among the published works of Alice are *Clovernook; Hagar, a Story of To-day* (1852); *Married, not Mated* (1856); *Pictures of Country Life* (1857); *The Lover's Diary* (1867); and *Snowberries* (1869); and among those of Phœbe, *Poems and Parodies* (1854), and *Poems of Faith, Hope, and Love* (1868). At the age of 17 Phœbe wrote the favorite hymn 'One sweetly solemn thought comes to me o'er and o'er,' &c. Alice died at New York, February 12, 1871, and Phœbe at Newport, R. I., July 31, 1871. A beautiful monument was erected to their memory, in Greenwood, by Horace Greeley, who had been an intimate friend during their lives.

CASEA'RIA, a genus of plants of the natural order *Samydaceæ*. *C. ulmifolia*, is a native of Brazil, and is highly esteemed in that country as a remedy for snake-bites. The Brazilians make a drink of the juice of the leaves, and also apply them to wounds. Nearly a hundred species, many of which have medicinal properties, are known. *C. esculenta* of India has purgative roots, but other species are poisonous. For example, the resin surrounding the young flowers of *C. resinifera* is used to kill dogs and cats.

CASEM'BE (*i. e.*, 'general'), the title of a sovereign in the interior of Africa, whose territory, called the country of C., has been made known to Europeans by Dr. Livingstone. It is partly upland, and is 'generally covered with forest, well watered by numerous rivulets, and comparatively cold. The soil is very rich, and yields abundantly wherever cultivated.' The chief river is the Luapula, which connects Lakes Bangweolo and Moreo, entering the latter about 19 miles N.-W. of C.'s town. The climate is in some districts unhealthy. The town of C., near the N. end of the small lake Mofwe, at an elevation of 3319 feet above the level of the sea, consists of huts interspersed among cassava plantations, and covers one sq. mile. Each governor builds a new capital for himself. See the *Last Journals of David Livingstone* (2 vols. London, 1874).

CASS'AREEP is the inspissated juice of the bitter cassava root, *Jatropha manihot*, largely prepared in British Guiana as a basis of various sauces, and particularly of the famous W. Indian pepper-pot. It possesses remarkable antiseptic powers, and meat boiled with the addition of C. is found to keep very much longer than by ordinary boiling. C. was originally a 'buck' or native Indian preparation. The juice of which it is prepared is highly poisonous when newly expressed, but the heat of boiling entirely dissipates the volatile poisonous matter.

CASSYTHA'CEÆ, a natural order of plants, by some considered a section of the *Lauraceæ*, consisting alone of the genus *Cassytha*, of which there are nine species, all leafless parasitic twiners, resembling the dodders in habit. In Australia, some of them are called scrub-vines, and in places grow so thickly as to make travel almost impossible. The white drupes of *C. cuscutiformis* of N. Australia are edible. *C. filiformis* of India is used by the Brahmins for seasoning their butter-milk, and also, when mixed with sesamum oil, for strengthening the hair. In medicine it is employed to cleanse inveterate ulcers; and the juice, mixed with sugar, is considered an infallible remedy for inflamed eyes. All the species are tropical, but are found both in the New and Old Worlds.

CAS'TEL, a town in the Hesse-Rhine province, on the right bank of the Rhine, nearly opposite Mainz, of which it forms a fortress of defence, and with which it communicates by a floating bridge. It is on the Wiesbaden Railway, and has an active trade in cattle. Pop. (1871) 5245. C., as its name indicates, is of Roman origin, and occupies the site of a place called *Castellum Mattiacorum*, which forms the subject of one of Becker's works (Wiesb. 1863). C. is the name of several other small towns and villages in Germany.

CASTELFIDAR'DO, a town in Italy, province of Ancona, near Loretto, among low-lying hills between the rivers Aspis and Musone. It was brought into prominence by a crushing defeat inflicted on the Papal troops under General Lamoricière by the Piedmontese under General Cialdini, on September 8, 1860. Pop. 6275.

CA'SUS AMISSIO'NIS, in Scotch law, denotes the accident by which a legal instrument is supposed to have been lost or destroyed. This accident, or C. A., must be set forth, if an action be brought for proving the tenor of the lost document.

CATAL'PA, a genus of *Bignoniaceæ*, containing four or five species of trees, natives of the W. Indies, N. America, Japan, and China, but which also thrive in the open air in the S. of England, France, and Germany. The wood is fine-grained, durable, and capable of receiving a good polish. The bark is tonic, stimulant, and antiseptic, but the honey from the flowers is poisonous (*Treasury of Botany*).

CATARHI'NA (Gr. 'oblique-nosed'), the section of the order *Quadrumana* which includes those monkeys—exclusively confined to the Old World—in which the nostrils are oblique and closely set. The thumbs and great toes are invariably present (with one exception), and the thumb always opposable to the other fingers, so as to convert the hand into a prehensile organ. The teeth are arranged as in man, and thus number thirty-two. The incisors and canines are prominent, especially in the males. The tail is never prehensile, and may be rudimentary. Cheek-pouches and natal callosities are developed. The *Semnopitheci*, macaques, baboons, mandrills, gibbons, orangs, gorillas, &c., represent this group, which is the highest in the order.

CATAW'BA, GREAT, a river of the United States, rises in Blue Ridge, waters N. and S. Carolina, and unites with the Congaree to form the Santee, after a course of 250 miles. It gives name to a light sparkling wine, originally made from a wild vine found (1801) near its source, and now extensively produced in Ohio, near Cincinnati. This wine, which has a rich Muscadine flavor, and rivals French wine in delicacy, is much used as a substitute for champagne.

CATHELECTROTO'NUS is the physiological condition of a nerve in the neighborhood of the *negative* pole, when it is stimulated by a constant current of electricity.

CATHETOM'ETER (from the Gr. *kathetos*, 'perpendicular,' and *metron*, 'a measure'), an instrument for measuring the change in the height of an object situated at some distance off, especially with reference to a column of liquid in a tube. It consists essentially of a tripod stand and an upright brass rod, to which a telescope is so attached at right angles that it is capable of being fixed at any part of the rod, and of being pointed in any direction. The rod is adjusted to a true perpendicular position by means of spirit-levels and screws, and this secures the perfectly horizontal position of the telescope.

CATLIN, GEORGE, an American artist, born in Pennsylvania in 1796. He practised law for a short time in his native state, but in 1832, becoming interested in the Indians of America, he devoted the remainder of his life to the study of their manners and institutions, and traveled extensively among them, in both North and South America. Among his published works are the following: *Manners, Customs, and Condition of the North American Indians* (1841), *North American Portfolio of Hunting Scenes* (1844), *Eight Years' Travels and Residence in Europe* (1848), and *Last Rambles among the Indians of the Rocky Mountains and the Andes*. Died in 1872.

CAU'CHY, AUGUSTINE LOUIS, a distinguished French mathematician and physicist, was born at Paris, August 31, 1789. He entered L'Ecole Polytechnique in 1805, where, in 1816, he became Professor of Mechanics. At the revolution of 1830, C. resigned his position, and soon after accepted the chair of Mathematical Physics in the University of Turin. In 1838 he returned to Paris, succeeded M. Biot as Professor of Physical Astronomy in 1849, and died at Sceaux, 23d May 1857. C. published numerous memoirs in the *Comptes Rendus*, and in Lionville's *Journal de Mathematiques*. His best works are his *Cours d'Analyse* (1821), his *Leçons sur le Calcul Différentiel* (1826), and his *Présumés Analytiques* (1833).

CAU'DEX (Lat.), the axis of a plant consisting of stem and root. It is, however, generally applied as a synonym of the stipe or woody stem of monocotyledons, especially palms—*Yucca*, *Dracæna*, *Pandanus*, &c.

CAULER'PA, a fine genus of 'green-seeded' (*chlorospermous*) seaweeds of the W. Indies. They form a large portion of the food of turtles; and it is said that the color of the 'green fat' of these reptiles—so dear to gastronomes—is due to this kind of food.

CAVENDISH, THOMAS, one of the great navigators of the Elizabethan age, was born in Suffolk in 1560, and studied at the University of Cambridge. He first accompanied the expedition to Virginia, and soon after his return fitted out three ships in July 1586, to levy contributions on the Spaniards on the W. coast of America. After touching the coast of Patagonia, he rounded Cape Horn, sailed N. to California, where he captured a Spanish galleon loaded with treasure, and returned by the Cape of Good Hope to England, where he landed, 9th Sept. 1588. His voyage is chiefly remarkable as being the shortest round the world that had up to that time been made. A second voyage was not so successful; his crew mutinied, and C. died of vexation in 1592, on the coast of Brazil. From him 'Cavendish' tobacco takes its name.

CAVICOR'NIA ('hollow horned'), the family or group of *Ruminant* mammalia, including the oxen (*Bovidæ*), sheep and goats (*Ovidæ*), and antelopes (*Antilopidæ*). The upper jaw in all is destitute of incisors and canine teeth, and the lower incisors bite against the hardened gum in the front of the upper jaw. The lower jaw has six incisors, two canines, and twelve molars; the latter separated by a wide interval from the canine teeth. Both sexes (as generally in sheep and goats), or the males only (as in some genera of antelopes), may possess horns. These horns, it is to be noted, are hollow structures, consisting each of a hollow sheath of horn surrounding a central bony core. They are not deciduous or shed, as in the *Cervidæ* or deer, but permanent. The feet are cleft, and provided with two accessory hoofs at the back.

CAYUGA LAKE, a beautiful lake in Central New York, between Cayuga and Seneca counties. It is 38 miles long, and from one to three miles wide, and is 387 feet above the sea level.

CEDAR CREEK, BATTLE OF, a battle of the civil war, fought near a creek of the same name, in the Shenandoah Valley, Oct. 19, 1864. During the absence of Gen. Sheridan, the Union forces were commanded by Gen. Wright. On the morning of the 19th they were attacked by the Confederates in force, under the command of Gen. Early, and compelled to retreat. By the time that Wright had succeeded in reforming his lines, Sheridan arrived from Winchester. His presence proved a new inspiration to the discouraged men of his command, and resuming the battle, they drove the Confederates from the field, capturing large quantities of arms and 2000 prisoners. So decisive was the battle that it virtually ended Earle's Shenandoah campaign.

CEDAR MOUNTAIN, BATTLE OF, a battle of the civil war, fought in Culpeper Co., Va., Aug. 9, 1862. The Confederate forces were under the command of Gens. Pope and Jackson, and the Union forces under the command of Gen. Banks. The conflict was fierce and bloody, and resulted in the defeat of the Union army with a loss of nearly 2000 men. The Confederate loss was 1300.

CEDAR RAPIDS, a flourishing city of Linn Co., Ia., on the Cedar River. It has extensive manufactories, and is an important railroad center. Pop. 12,000.

CEL'SIUS, the name of a Swedish family, several members of which have attained celebrity. Among these may be reckoned: 1. MAGNUS C., born 16th January 1621, in Helsingland, died Professor of Astronomy, 5th May 1679. He is the discoverer of the Helsing runes.—2. OLOF C., his son, born 1670, died 1756, was Professor of Theology, and Provost of the Cathedral at Upsala. He was a great student of botany and Oriental languages, of which his *Hierobotanicon* (Ups. 1745–47) is evidence, and was the first to recognize the genius of Linnæus, whom he liberally aided. —3. ANDERS C., nephew of the latter, and the most distinguished of the family, was born 27th November 1701, at Upsala, where he became Professor of Astronomy in 1730, and died 25th April 1744. His chief works are *Nova Methodus Distantiam Solis a Terra Determinandi* (1730), and *De Observationibus pro Figura Telluris Determinanda in Gallia Habitis* (1738); but he is best known as the constructor of the centigrade thermometer.—4. OLOF VON C., son of the Cathedral Provost, born 1716, became Professor of History at Upsala, 1747, was raised to the rank of a noble in 1756, made Bishop of Lund in 1777, and died in 1794. He founded (1742) the first literary society in Sweden, *Tidningar-om de Lärdas arbeten*, and wrote a *Svea-rikes Kyrko-Historia* (Stockh. 1767), besides histories of Gustavus I. (2 vols. 1746–53) and of Eric XIV. (1774).

CENTENNIAL EXHIBITION, a world's fair, held at Philadelphia, Pa., in 1876, on the centennial year of the declaration of the independence of the United States. It was opened in the month of May, and nearly all the nations of the world were represented by an exhibit of their national products. It continued open for six months, and was visited by nearly ten million people.

CENTRAL FALLS, a manufacturing town of Providence Co., R. I., on the Blackstone River and the Providence and Worcester Railroad, 5 miles from Providence. It has thread mills, hair-cloth factory, tanneries, and several cotton mills. Pop. 8500.

CENTRALIA, in Marion Co., Ill., on the Illinois Central Railroad, and at the terminus of the Jacksonville and South-eastern Railroad, 112 miles from Cairo, and 253 from Chicago. Railroad

repair shops are located here which employ a large number of men. Pop. 5000.

CENTRAL PROVINCES, THE, a province of British India, in the heart of the Peninsula, lying between the N.-W. Provinces on the north and the dominions of the Nizam of Hyderabad on the south. Roughly speaking, it occupies the upper valley of the Nerbudda, and is throughout mountainous and overgrown with jungle, the home of wild beasts and aboriginal tribes. Area, 84,078 square miles; pop. (1872) 8,201,519. Native states cover an additional area of 28,834 square miles; pop. (1872) 1,049,710. The administration is conducted by a Chief Commissioner, whose residence is at Nagpur. The total revenue is about £940,000, of which £614,000 is derived from land. The total external trade is valued at about seven millions sterling, chiefly conducted by rail with Bombay. The chief crops are rice, wheat, millets, cotton, oilseeds, and tobacco. Iron is largely smelted by native methods. In 1853 the last portions of the Mahratta kingdom lapsed to the British on failure of heirs, and in 1861 the C. P. were constituted.

CENTRE COLLEGE, an American educational institution, at Danville, Ky., chartered in 1819. Its affairs are under the control of the Presbyterian Church. It has suitable buildings and a growing library.

CER'BERA, a genus of trees belonging to the natural order *Apocynaceæ*, natives of tropical Asia. The seeds of most of them are poisonous. The bark of *C. Odollam*, of the Malabar coast, is purgative, and the unripe fruit is used to destroy dogs, the teeth of the animals being, it is reported, 'loosened so as to fall out after masticating it.'

CER'EBROL. This has been described as an oily substance, of a reddish-color, obtained by the action of alcohol and ether on brain-matter. It is probably composed of oleo-phosphoric and cerebric acids and cholestrin.

CER'EBRO-SPI'NAL AXIS. This term is usually applied to the central part of the nervous system, as distinguished from the nerves or peripheral part. The C.-S. A. consists of the brain and spinal cord. The brain is contained in the cavity of the cranium, and the spinal cord or marrow in the bony canal formed by the vertebræ. Both structures are surrounded by three membranes as follows:—1*st*, and most externally, a strong fibrous membrane termed the *dura mater;* 2*d*. and in the middle, a serous membrane called the *arachnoid;* and 3*d*, and directly covering the brain and cord, a vascular membrane named the *pia mater*. The C.-S. A. consists of a right and left half, exactly symmetrical, which are united together by commissures or connecting masses of white or grey matter. The spinal portion of the C.-S. A. is well developed in all vertebrate animals, but the cranial portion in the skull presents many degrees of development in different genera, from the imperfect condition of the *Amphioxus lanceolatus* to the highly complex cerebrum of man.

CER'EBROTE. Alcoholic extracts of brain-substance yield a deposit; this deposit treated with ether is C. It is no doubt a complex substance, similar in nature to cerebrol and cerebrin.

CEROPE'GIA, a genus of herbaceous plants and shrubs, comprising about fifty species, natives of India and Africa, belonging to the natural order *Asclepiadaceæ*. Several species are eaten either as a salad, or the leaves, stems, and tubers are boiled as potherbs.

CERR'O DE PASCO, a mining city of Peru, the capital of the province of Pasco, department of Junin, 140 miles N.E. of Lima, and 14,100 feet above the level of the sea. The pop., a mixture of all races and nationalities, fluctuates with the state of the mines, being sometimes as high as 14,000, and sometimes much less. The silver-mines, discovered by an Indian in 1630, are the richest in the republic, and coal is found in the vicinity.

CESNOLA, DI'LUIGI PALMA, COUNT, born near Turin, Italy, July 29, 1832. He received a military education, participated in the war of Italian independence, and served in the Crimean War on the staff of General Ansaldi. In 1860 he came to America and entered the Union army with the rank of colonel. He served with gallantry, and at the battle of Aldie, Gen. Kilpatrick presented him his own sword upon the field. At the close of the war he became a citizen of the U. S., and was appointed consul at Cyprus. He conducted extensive excavations on the island of Cyprus, and made a valuable collection of antiquities, which was sold to the New York Metropolitan Museum of Fine Art. In 1879 he was made a director of that institution.

CESPEDES, MANUEL CARLOS, a Cuban patriot, born April 18, 1819, and educated for the law at the University of Havana. In 1868 he became the leader of an insurrection, which had for its object the liberation of Cuba from Spanish authority, and in 1869 was elected President of the Republic. The movement proved unsuccessful, and Cespedes was killed by the Spaniards, Feb. 27, 1874.

CEYLON. MOSS, a seaweed sometimes imported, under the name of *Agar-agar*, for the sake of the nutritive, emollient, and demulcent jelly or decoction which can be made of it for the food of invalids and children. It is the product of *Gracilaria lichenoides* (*Plocaria candida*), *Gracilaria confervoides*, and other species of *Gracilaria*.

CHAIR, an article of furniture used as a seat, differing from a stool in having a rest for the back, and occasionally with supports for the arms. In a dwelling-house chairs are usually designed to harmonize with the other furnishings of the apartment in which they are placed, and therefore they vary very much in form and constructive materials. The chairs of the ancients were often of the most costly description, and their elegant forms have been frequently reproduced and varied by modern cabinetmakers. Numerous examples of antique seats are preserved in national European collections. Of the Egyptian chairs in the British Museum, one is formed of ebony, inlaid with ivory, except the seat, which is of plaited cane, as in modern chairs. The Romans, as well as the Greeks and Egyptians, constructed seats long enough to suit two persons. Two such *bisellia* in bronze, discovered at Pompeii, are now in the *Museo Borbonico* at Naples, and reproductions of them may be examined in the South Kensington Museum. Among other ancient and interesting chairs meriting notice may be mentioned that of St. Peter, formed of wood overlaid with carved ivory work and gold, preserved in the Church of St. Peter at Rome, and that of Dagobert, King of France in the 7th c. (now in the Louvre at Paris), made of bronze, partially gilt, and beautifully chased and chiseled. The chief English seat of the C. trade is at High Wycombe and neighborhood, where extensive beech-woods supply material for common chairs. For the finer kinds of chairs, walnut, rosewood, mahogany, birch, oak, sycamore, and cherry are employed.

CHAMÆDO'REA, a genus of palms containing upwards of forty species, natives of the forests of tropical America. The reed-like stems are used for walking-sticks, and the other unexpanded flower-spikes by the Mexicans as a potherb, under the name of *Tepejilote*.

CHAMBERLAIN, JOSHUA L., LL.D., an American soldier and statesman, born in Maine, in 1828. He served gallantly throughout the civil war, and was promoted to the rank of major-general. From 1866 to 1870 he was governor of Maine, and in 1871 was made president of Bowdoin College.

CHAMBERS, PRACTICE BEFORE A JUDGE OR VICE-CHANCELLOR AT. This term of English law is applied to the arrangement of certain minor matters by the summary decision of a single judge at chambers. The term has a similar meaning in American law.

CHAMBERSBURG, in Mercer Co., N. J., a suburb of Trenton, on the Delaware and Raritan Canal, and on the Pennsylvania, and Philadelphia & Reading railroads, 30 miles from Philadelphia. It has iron, woollen, and cotton factories. Pop. 29,910.

CHAMBERSBURGH, a city of Franklin Co., Pa., on the Cumberland Valley Railroad, 52 miles from Harrisburg and 150 from Philadelphia. It is a center of trade, being surrounded by a fertile and populous agricultural district. Pop. 6743.

CHAMBE'ZE, an important river of Central Africa, forming the headwaters of the Luapula, rises in the Kitwette Mountains, 75 miles S. of Lake Tanganjika, flows S. and S.W., and enters the W. end of Lake Bangweolo, after a course of 100 miles. It is 1200 feet broad before entering the lake, and has numerous tributaries, of which the chief are the Lokutu, Mansia, Lokischa, and Mapampa. The C. was confounded with the Zambeze till Livingstone explored the region in February 1867. See *The Last Journals of David Livingstone* (2 vols. Lond. 1874).

CHAMELEON MINERAL is the name sometimes given to manganate of potash (K_2MnO_4) on account of the curious changes of color which take place in its aqueous solution if left to itself. These changes in the tint of the solution are caused by the gradual decomposition of manganate of potash (solution of which is green) into permanganate of potash (solution of which is carmine colored).

$$\underbrace{3(K_2MnO_4)}_{\text{Manganate of Potash.}} + \underbrace{2H^2O}_{\text{Water.}} = \underbrace{2KMnO_4}_{\text{Permanganate of Potash.}} + \underbrace{MnO_2}_{\text{Binoxide of Manganese.}} + \underbrace{4KHO}_{\text{Caustic Potash.}}$$

C. M. is readily obtained by fusing together equal weights of binoxide of manganese and caustic potash.

CHAMPAIGN, a city of Champaign Co., Ill., on the Illinois Central Railroad, at its junction with the Bloomington and Western, 128 miles from Chicago. It is surrounded by a fertile agricultural country, and contains the State Industrial University. Pop. 5106.

CHAM'PIGNON, the French name for mushrooms, but in Britain only applied to *Agaricus* (*Marasmius*) *Oreades*—the 'Scotch Bonnets'—which is one of the edible species.

CHAMPION HILLS, Battle of, a battle of the civil war, fought midway between Jackson and Vicksburg, Miss., May 16, 1863. Gen. Grant, marching towards the latter place, was here met by a Confederate army, commanded by Gen. Pemberton. After a desperate struggle of five hours duration, the Confederates were compelled to retire.

CHANCELLORSVILLE, Battle of, an important action of the civil war, fought near the village of the same name in Virginia, near the Rappahannock River. In the latter part of April 1863, Gen. Hooker, then in command of the Army of the Potomac, crossed the Rappahannock, and moved towards Chancellorsville for the purpose of attacking the Confederates under Gen. Lee. On May 1 the armies confronted each other and there was sharp skirmishing. During the 2d, 3d, and 4th there was desperate fighting, with success generally on the side of the Confederates. On the 5th Hooker retreated across the Rappahannock and thus ended the struggle. The Union loss was 18,000; that of the Confederates 13,000.

CHANDLER, Zachariah, an American statesman, born in New Hampshire, in 1813, and early in life settled at Detroit, Mich., where he engaged in mercantile pursuits. He was actively engaged in politics, first as a Whig, and afterwards as a Republican. In 1856 he was elected to the U. S. Senate, and was one of the most vigorous supporters of the prosecution of the civil war. In 1865 he was made Secretary of the Interior. Died at Chicago, Ill., in 1879.

CHANDRAGIRI ('Hill of the Moon'), a town in N. Arcot District, Madras, British India, pop. (1871) 4235. During the 16th century C. was the residence of the Rajahs of Vijayanagar, the most powerful princes in S. India. In the citadel was signed the treaty of 1640, by which the site of Madras city was granted to the English.

CHAN'GI, the juice of *Coriaria thymifolia*, of a reddish color, but which in a few hours after exposure turns black. In S. America, during the Spanish *régime*, state documents were written with it. It is said that it does not corrode steel pens, and that the writing made with it is more indelible than that with ordinary artificially-made ink.

CHANTILLY, Battle of, an engagement of the civil war, near the village of the same name, in Fairfax Co., Va., Sept. 1, 1862. The right wing of the Union army under the command of Gen. Pope, was attacked by a Confederate force under 'Stonewall' Jackson, and a fierce struggle resulted. Gens. I. I. Stevens and Phil. Kearney of the Union army were killed.

CHAPIN, Edwin Hubbell, D.D., a distinguished American clergyman of the Universalist church, born at Union Village, Washington Co., N. Y., Dec. 29, 1814, educated at Bennington, Vt., and began to preach in 1837. In 1848 he became pastor of the Fourth Universalist Church in New York, one of the wealthiest churches of that denomination. This position he continued to hold up to the time of his death. He was an eloquent pulpit orator and lecturer. He published *Moral Aspects of City Life* (1853), *True Manliness* (1854), and several volumes of sermons and lectures. Died in New York City, Dec. 27, 1880.

CHAPTER (Fr. *chapitre*, old Fr. *chapitle*, from Lat. *capitulum*, a dim. of *caput*, 'the head'), the society of canons and prebendaries in a cathedral, of which the dean is the head, and which forms the council of the bishop. Prior to the time of Henry VIII., the election of a bishop rested with this body; but now its power is merely nominal in England.

CHAPULTEPEC, a Mexican fortress, stormed by the American forces, under Gen. Scott, Sept. 13, 1847. Situated about two miles from the city of Mexico, it guarded one of the approaches to it, and was regarded as well-nigh impregnable. The conflict was for a short time very fierce, but eventually the Americans overcame every obstacle, and were completely victorious.

CHARLES IV. (*Le Bel*), the last of the Capetians, born in 1294, third son of Philippe le Bel, succeeded his brother Philippe V. (*Le Long*) in 1322, excluding Jeanne, Duchess of Burgundy, in virtue of the Salic law which Philippe V. had just established. C.'s second wife was his cousin-german, Maria, daughter of the Emperor Heinrich VII., and sister of King Johann of Bohemia. Although he relaxed the persecution of the lepers and the Jews, C. allowed Pope John XXII. (then at Avignon) to wreak his fury on the mendicant orders (whose vow of poverty was declared heresy) and on the sorcerers. He also helped Count Louis of Flanders to interfere by tolls with the commercial rights of his subjects. After the battle of Mühldorf C. became a candidate against Ludwig of Bavaria for the empire, which was finally divided between Austria and Bavaria. The disputes about the feudal rights in Guienne estranged C. and Edward II., and the former assisted his sister Isabella and the Lancastrians in the Harwich expedition, which placed Edward III. on the throne. C. died 31st Jan. 1328, leaving Philippe de Valois (who succeeded him on the throne) as tutor to his daughter by his third wife, Jeanne d'Evreux.

CHARLESTON, a city of Kanawha Co., W. V., and the capital of that state, on the Great Kanawha River and the Chesapeake & Ohio, and the Ohio Central railroads. The river is navigable for 25 miles above this point. Charleston carries on a large trade, and is surrounded by coal and iron mines, and there are salt works near by. Pop. 6,000.

CHARLESTON, in Coles Co., Ill., at the junction of the St. Louis & Indianapolis, and the Toledo, Cincinnati & St. Louis railroads, 46 miles from Terre Haute. It is surrounded by a fine agricultural country, carries on a thriving trade, and has extensive railroad machine shops. Pop. 3,000.

CHARLOTTE, a city of Mecklenburg Co., N. C., on the Sugar Creek and the Carolina Central Railroad, and the terminus of several railroads. It carries on a large trade with the surrounding country. Pop. 7,094.

CHARTER OAK, an oak tree in Hartford, Conn., in the hollow of which the colonial charter was hidden, when Governor Andros, by the order of James II., sought to deprive the colonists of it. The tree was blown down in 1856.

CHARTRES, Duc de, Robert-Philippe-Louis-Eugene-Ferdinand d'Orleans, younger son of the late Duc d'Orleans, was born in Paris, November 9, 1840, and at the Revolution of 1848 passed into exile with the rest of the family. He was educated at Eisenach, resided for some time at Richmond, and served along with his brother in the Federal army during the campaign of the Potomac (1862) in the American civil war. In 1863 he married his cousin, the eldest daughter of the Prince de Joinville, and in 1870 returned incognito to France, entering the army of Gen. Chanzy under the name of Robert le Fort. After the German war, the National Assembly having revoked the law of banishment against the Orleans family, he was named commander of a squadron by M. Thiers, and served in Algeria in 1872.

CHARTS are the maps used in navigation, and in which are specially noted the depth of soundings, the position of rocks and sandbanks, and the direction of currents and prevalent winds. The English Admiralty Office expends a large sum annually on the preparation of elaborate C. on a large scale, and these are sold at nominal prices, ranging from 3s. to 6d. each. At various places, as Gibraltar and Cape Town, there are depôts for the supply of C., which are now in almost universal use.

CHASE, Salmon Portland, an American jurist and statesman, born at Cornish, N. H., Jan. 13, 1808, and graduated from Dartmouth College in 1826. He studied law at Washington, D. C., under William Wirt, and in 1830 began to practice in Cincinnati, O. From the beginning of the conflict regarding slavery, he took strong anti-slavery grounds, asserting as a primary principle that 'slavery is sectional, freedom is national.' In 1849 he was elected to the U. S. Senate by the free-soil wing of the Democratic party, where he took a firm stand in opposition to all measures, having for their object the extension of slavery. He was one of the organizers of the Republican party, and was a prominent candidate for the nomination for the Presidency before the convention of 1860. In 1861 he was made secretary of the treasury by President Lincoln, which position he held during the civil war, and it was at his suggestion that greenbacks were issued and made a legal tender for the payment of all debts. During this trying period in our national affairs, Mr. C. rendered invaluable services to his country. In 1864 he was made chief-justice of the Supreme Court of the U. S., which position he continued to fill until the time of his death. In 1868 he presided over the deliberation of the Senate during the trial of President Johnson, who had been impeached by the House. Died at New York, May 7, 1873.

CHATEAU-MARGAUX, a beautiful castle near the village of Margaux, in the department of the Gironde, E. of Castelnau de Medoc, on the left bank of the river Gironde, 14 miles below Bordeaux. It is famous for its vineyards, which yield one of the finest class of clarets.

CHATTANOOGA, a city of Tennessee, on the Tennessee River, about 150 miles S.-E. of Nashville, near which was fought an important battle of the civil war. The Confederate forces were commanded by Gen. Bragg, and the Union forces by Gen. Sherman. The Confederates, who were strongly entrenched, were attacked on Nov. 23, 1863, and there was fierce fighting all along the line on the 24th and 25th. The result was that Missionary Ridge and Lookout Mountain were carried by the Union troops, and the Confederates were utterly routed. Many cannon and great quantities of small arms were captured by the victorious army. The Union loss was between 6 and 7 thousand. The Con-

federates lost in killed and wounded 2500, and 6000 prisoners. Population of the city of Chattanooga, 20,666.

CHAUN'CEY, CHARLES, the second President of Harvard College, was born in England in 1592, and educated at Westminster School and Trinity College, Cambridge. In 1627 he was made vicar of Ware, became a Puritan, and after being imprisoned and fined, emigrated to New England in 1636, and in 1654 was appointed President of Harvard. In 1659 he published twenty-six sermons on 'Justification.' He died 19th February 1672. C. is the ancestor of all the American Chaunceys, who form a pretty numerous body.—CHAUNCEY, CHARLES, D.D., great-grandson of the above, was born January 1, 1705. He was minister in Boston in one parish for sixty years, and is the author of various theological works which are still in repute in America. He died February 10, 1787. See *C. Memorials*, by Professor Fowler.

CHAUNCEY, ISAAC, an American naval officer, born in 1772. He served for some time in the merchant service, but in 1799 entered the navy, with the rank of lieutenant. He served with gallantry in the expedition against Tripoli, and was promoted to the rank of captain, in 1806. During the war of 1812, he rendered valuable services, as commander of the naval forces on the great lakes; and was afterwards, for several years, in command of the Brooklyn navy-yard. Died in 1840.

CHAV'ICA, the dried unripe fruit of *C. Roxburghii*, one of the Pepper order, and known in commerce as *long pepper*. It contains an acrid resin, a volatile oil, and an alkaloid—*piperine*. C. is used in much the same way as black pepper, which in its properties it resembles. In India dried slices of it are in repute as a stomachic. *C. officinarum* of the Malay Islands also yields a similar long pepper. C.-betel is betel-pepper. *C. Siraboa*, mixed with betel-nut and a little lime, is chewed.

CHEBOYGAN, in Cheboygan Co., Mich., on the Cheboygan River, at the foot of the Straits of Mackinac, on the Jackson, Lansing & Saginaw Railroad, 150 miles from Bay City and 270 from Detroit. It is surrounded by a fine farming country, and is largely engaged in lumbering. Pop. 5000.

CHEESE-MITE (*Acarus domesticus*), a species of *Acaridæ*, or true mites, belonging to the class *Arachnida*, and so named from its being mainly found in cheese and like substances. It possesses an oval-shaped body covered with prominent bristles, eight legs, and a mouth provided with mandibles or jaws. In decaying cheese the C.-M. is sometimes found in immense numbers. Reproduction is effected very quickly. No defined circulatory or respiratory organs exist in the animal, in which also the eyes are of simple character.

CHEI'RON, represented by Homer (Il. xi. 831) as the wisest and most humane of the Centaurs; the instructor of Achilles, Jason, and Æsculapius; skilled in hunting, music, medicine, and prophecy; and throughout life and in his death a splendid example of self-sacrifice. The young Achilles, and sometimes the Erotes, or Loves, appear in existing representations riding on his back.

CHELSEA, a city of Suffolk Co., Mass., on the Eastern Railroad, an important suburb, and formerly a part of Boston, and the residence of a large number of business men of that city. It is on the harbor front; is connected with Boston by a ferry, two bridges, and the Eastern Railroad; and has extensive manufacturing interests. Pop. 21,785.

CHÉN'IER, ANDRE-MARIE DE, a French poet and political writer, was born October 29, 1763, at Constantinople, where his father was consul-general for France. He came to France at an early age, and studied at the Collége de Navarre, in Paris, there evincing poetic talent and acquiring a passion for ancient literature. In 1784 he traveled on account of his health in Switzerland, Italy, and Greece, and in 1787 he visited England as secretary to the embassy of M. Luzerne. Returning to Paris in 1790, while the Revolution was raging, he joined the brilliant 'Society of '89,' and volunteered to assist the infirm Malesherbes in the defence of Louis XVI. C. stood as far apart from despotism as from anarchy, and in prose and verse proclaimed at once his love of liberty and his detestation of violence. He was at last brought before the Revolutionary Tribunal, was condemned, along with forty-five others, and was guillotined, July 25, 1794. When in prison C. burst forth in a beautiful ode, *La Jeune Captive*, of which the subject was his fellow-prisoner, the celebrated Comtesse de Coigny. His *Elégies* are exquisite in their mingling of classical spirit with an original boldness and vivacity. Only a tithe of his projected poems were finished, still the influence of C. is clearly visible in the early works of Chateaubriand, Barthelémy, Lamartine, and Victor Hugo. Of the many editions of his *Poésies*, the best are those of Delatouche (Par. 1840), and Becq de Fougières (1862); and of his *Œuvres en Prose*, there is a selection by Hugo (1840).—MARIE-JOSEPH DE C., brother of the former, was born at Constantinople, August 28, 1764, and became famous as the principal dramatist of the Revolution, and as a member of the Legislative Assembly from 1792 to 1802. He is also the author of the *Chant du Départ* and other songs. His dramas, of which the chief are *Charles IX.* (1790), *Jean Calas* (1792), *Henri VIII.* (1793), and *Timoléon* (1795), are full of republican declamation, and of the wild sentiments of the time. C. died January 10, 1811. His *Œuvres Complètes* were published in 8 vols., with a memoir by Daunou (1823–26).

CHEROKEES, a tribe of North American Indians, originally located in Georgia and Alabama, but in 1838 removed to the Indian Territory. They cultivate the soil, are industrious, and maintain schools. They number from 18,000 to 20,000.

CHERRY VALLEY, a small village of Otsego Co., N. Y., made famous by a brutal massacre, perpetrated by the Tories and Indians, Oct. 11, 1778. Thirty-two of its inhabitants, most of whom were women and children, were murdered in cold blood, together with 16 continental soldiers; and all the buildings of the settlement were burned.

CHESTER, a city of Pennsylvania, on the Delaware River, about 15 miles from Philadelphia. It has large shipyards and other extensive manufactures. Pop. 17,000.

CHICKAMAUGA, an important action of the civil war, fought between a Confederate army under Gen. Braxton Bragg, and a Union army under Gen. W. S. Rosecrans, on Sept. 19 and 20, 1863. Repeated efforts to dislodge the Union left, commanded by Gen. Thomas, were unsuccessful, although the right and a portion of the center were completely routed. But on the 21st Thomas withdrew from the position he had so gallantly held, and the Confederates were nominally victorious, although they made no important gains. The Union loss was 16,000 and that of the Confederates 18,000. The latter, however, captured large quantities of arms and accoutrements.

CHICO, a city of Butte Co., Cal., on Chico Creek and the Oregon Division of the Central Pacific Railroad, 96 miles N. of Sacramento. It is the center of a farming community, and conducts a large trade with surrounding mining districts. Population, 3300.

CHILDS, GEORGE WASHINGTON, an American journalist, born at Baltimore, Md., in 1829. In 1864, he became proprietor of the *Philadelphia Ledger*, which, under his able management, has become one of the leading journals of America. He is a man of superior culture, and is noted for his generous gifts towards literary and charitable objects.

CHIMAN'GO (*Milvus C.*), a species of Raptorial birds, belonging to the *Polyborinæ* or *Caracaras*, found in S. America, and, according to Darwin, commonly associated in its habits of feeding on garbage with the Carrancha (*Polyborus Brasiliensis*). It possesses all the distinctive characters of the *Polyborinæ*, and by Darwin is said to be 'generally the last bird that leaves the skeleton' of its prey. He adds, that it 'may often be seen within the ribs of a (skeleton) cow or horse like a bird in a cage.

CHIN'CHA ISLANDS, three in number, belonging to Peru, and situated about 12 miles from the coast, in Piseo Bay, lat. 13° to 14° S. They have since 1840 been famous in Europe for their great guano deposits, which, since 1836, have formed the principal source of Peruvian wealth; but which are now becoming rapidly exhausted. They are named respectively N., Middle, and S. Islands, have an aggregate area of about 400 acres, are rocky and precipitous on the landward side, destitute of water, and without a trace of vegetation. From time immemorial they have been the resort of vast flocks of penguins and other seafowl, the droppings from which, covering the surfaces and filling the crevices of the rocks, have formed immensely valuable stores of guano. The first cargo of guano was shipped to England in 1840.

CHIN-CHIN, a gummy varnish used in China and Japan, and believed to be derived from *Plocaria tenax*.

CHI'NESE GREEN INDIGO, or *Lo-Kao* of the Chinese, a green dye now much used in Europe, prepared from two species of buckthorn, viz., *Rhamnus chlorophorus* (*globosus*) and *Rhamnus utilis*.

CHI'NESE WAX, a substance produced by an insect (*Coccus Pe-la*) which feeds on the Chinese ash (*Fraxinus chinensis*).

CHIPMAN, NATHANIEL, LL.D., born at Salisbury, Conn., Nov. 15, 1752. He served in the Continental army during the revolutionary war, and, in 1779, entered upon the practice of the law in his native state. He held during his career the offices of U. S. Senator (1797) and Chief-justice of Vermont (1791, by appointment of Washington; and again in 1813, by election); and was for many years professor of law in Middlebury College. He published several law works of merit.

CHIPPEWA FALLS, a city of Chippewa Co., Wis., on the Chippewa River. It is an important railroad center, has extensive water power, is engaged in the lumber trade and agriculture, and in its vicinage are numerous saw-mills. Pop. 8000.

CHLO'RATE OF POTASH is the potassium salt of chloric acid ($HClO_3$), and has become of importance in the manufacture of fireworks, of oxygen gas for the Lime Light and of Safety Matches. Its composition is represented by the formula $KClO_3$. It is prepared commercially by acting upon a warm solution of chloride of potassium, in which slaked lime is suspended, with chlorine gas, when in addition to C. of P., chloride of calcium is produced—

$$\underset{\text{Chloride of potassium.}}{KCl} + \underset{\text{Chlorine.}}{3Cl_2} + \underset{\text{Slaked lime.}}{3CaH_2O_2} = \underset{\text{Chlorate of potash.}}{KClO_3} + \underset{\text{Chloride of calcium.}}{3CaCl_2} + \underset{\text{Water.}}{3H_2O.}$$

The solution containing the two salts is evaporated, and when sufficiently concentrated, allowed to cool. C. of P. being far less soluble than chloride of calcium, crystallizes out and leaves the latter salt in solution. C. of P. gives up the whole of its oxygen when heated, a reaction which is turned to account in the preparation of that gas.

$$\underset{\text{Chlorate of potash.}}{2KClO_3} = \underset{\text{Chloride of potassium.}}{2KCl} + \underset{\text{Oxygen.}}{3O_2.}$$

Mixed with charcoal, sulphur, or other oxidizable substances, it forms explosive or combustible mixtures largely used in pyrotechny. C. of P. is also employed in medicine.

CHOATE, RUFUS, LL.D., an American orator and lawyer, born at Essex, Mass., Oct. 1, 1799, educated at Dartmouth College, and began the practice of law at Danvers, Mass., but subsequently removed to Salem, and afterwards to Boston. He rapidly rose to highest distinction, not only as an advocate, but also as an orator. Died at Halifax, July 13, 1859, while on his way to Europe for his health.

CHOCTAWS, a tribe of North American Indians, originally located in Mississippi, but subsequently removed to the Indian Territory, where they till the soil, have a code of written laws, and are partially civilized. They number about 13,000.

CHOR'DADORSA'LIS, a name given to a delicate, semi-transparent thread, at first cellular, but afterwards cartilaginous, which appears beneath the primitive groove in the early embryo. It is seen in the chick as early as three to eighteen hours after incubation. It ultimately contributes to the formation of the bodies of the vertebræ, part of it remaining persistent in the form of the intervertebral discs. It remains persistent in its cartilaginous condition in the lowest or Myxenoid fishes, such as in the lancelet or *Amphioxus lanceolatus*, the lamprey, the sharks, rays, and the *Chimæra*.

CHOR'DÆ VOCA'LES are the true vocal chords found in the larynx or organ of voice. They are the superior *thyroanytenoid* ligaments. Attached by one border to the side of the larynx, the other border is free, and by its vibrations, caused by the current of air forced upwards through the trachea by the lungs, voice is produced.

CHO'RION. At an early period of development of the mammalian ovum, the surface is found clothed with a covering having numerous villi or shaggy tufts upon it. This is the C. A description of its further development will be found under EMBRYO and PLACENTA.

CHORIS'IA is a genus of small prickly-stemmed trees of S. America, belonging to the natural order *Sterculiaceæ*. The silky hairs which cover the seeds of *C. speciosa* are used in Brazil (where it is known as *Arvore de Paina*) for stuffing cushions, pillows, &c. The tough bark of *C. crispiflora* is used in the same country for making cordage.

CHOR'OID, a term applied in anatomy to various textures characterized by a shaggy appearance and a rich supply of blood-vessels. There is the C. plexus and the C. coat of the eye.

CHRISTIAN I., son of Dietrich, the Lucky, Count of Oldenburg and Delmenhorst, born in 1426, became king of Denmark in 1448, and was King of Sweden from 1457 to 1467. He founded the University of Copenhagen in 1478, and died 22d May 1481.

CHRISTIAN BROTHERS, a religious congregation founded at Waterford, Ireland, in 1804, by Edmund Ignatius Rice. This gentleman, a wealthy retired merchant and a native of Callan, County Kilkenny, resided in Waterford since 1780. In 1795, while still engaged in business, he felt strongly impelled to give up all worldly pursuits and devote himself to a life of religious seclusion. He had resolved to go to Rome and there enter a contemplative order, when an accident revealed to him the abject state of ignorance and moral destitution to which the long reign of the Penal Laws had reduced the children of the laboring classes in Ireland. 'It occurred to him that an Institution which would impart a sound religious and secular education to this class of children, would be not only a work of great merit to the founder, but a source of countless blessings to the community at large.' It was an inspiration from above, and Mr. Rice at once acted upon it. Under the direction of Dr. Lanigan, bishop of Ossory, he gave up the design of going to Rome; and, encouraged by Dr. Hussey, bishop of Waterford, he purchased a favorable site on the south side of Waterford city, erected on it the parent house of the Congregation of Christian Brothers, and there opened his first school, May 1, 1804. This spot, thenceforth known as Mount Sion, saw Mr. Rice and two associates thus beginning an enterprise destined to be crowned with such marvelous success. The founder wished to adhere as closely as possible to the Institute of John Baptist de la Salle; but the circumstances of the country and the times compelled him to seek a new path and new methods. The revolution which the Mount Sion School effected immediately in Waterford not only drew to Mr. Rice a supply of zealous and able fellow-laborers, but induced other bishops to ask for colonies of these admirable teachers. Following in the footsteps of De la Salle, Mr. Rice was careful to bestow on his novices a thorough mental as well as a thorough religious training. Carrick and Dungarean were the first places outside of Waterford to be blessed with the labors of the Christian Brothers. Cork asked for them in 1811, and Dublin in 1812. Archbishop Murray became thenceforth Mr. Rice's most efficient helper in the episcopal body. He moved his brother bishops to memorialize the Holy See in 1818 for the purpose of obtaining the papal sanction for the new institute. On Sept. 5, 1820. Pius VII., by his Brief *Ad Pastoralis*, confirmed the congregation, The Superior General resides at Marino near Dublin; three assistants aid him in the government of the congregation. It possesses at present (1885) 90 houses in Ireland, 3 in Gibraltar, 4 in Melbourne, Australia, others at Geelong, Adelaide, Ballarat, Brisbane, Dunedin (New Zealand), and St. John's, Newfoundland. The pupils number in the aggregate between 30,000 and 40,000; the Congregation itself counts upward of 600 members.—The Irish, like the French Institute, aimed before and above all things to impart a thoroughly Christian education, while seeking, by the most improved methods, to give to its pupils an instruction in every way fitted to their place in society and the requirements of the age and country. At the introduction in Ireland of the system of National Education, in 1832, they were induced to make trial of the facilities and advantages the Board held out to Catholics. But they soon discovered that its promoters and managers were anything but favorable to the religion of the majority of Irishmen. They preferred renouncing their share of the pecuniary grant, severed all connection with the National Board, prepared an admirable graduated series of school-books of their own, and continued to give to the sons of the laboring and middle classes a truly national education, animated alike by religion, patriotism, and the ardent pursuit of knowledge through the best methods. On the establishment of the Board of Intermediate Education, in 1878, the Christian Brothers' Schools gave instant and most satisfactory proof of the excellence of their systems and the proficiency of their pupils. The yearly 'Results Book' shows that in spite of the enormous advantages possessed by the numerous and richly 'Endowed Schools' (Protestant), the Brothers' Schools, mainly supported by the voluntary offerings of the impoverished Irish Catholics, are outstripped in the race by none. The pupils they send forth compete successfully with the best in the University matriculation examinations, and in those which are preparatory to the Civil Service, and every department of professional life, or to the industrial career.

CHRISTIAN DOCTRINE, FATHERS AND CONFRATERNITY OF THE, a Sunday-school association founded at Milan about 1560. This admirable confraternity was the fruit of the joint labors of Marco Cusani, a noble Milanese, and of St. Charles Borromeo. Its real title was: *Campagnia dei Servi di carità, che insegna le feste ai puttini e puttine a leggere e scrivere e li beconi costumi gratis et amore Dei*, 'Association of the Servants of Charity, for teaching on Feast Days (and Sundays) boys and girls reading, writing, and good manners, gratis and for the love of God.' Marco Cusani and his associates—priests and laymen—were only following the path opened to them half a century before by another Milanese devoted to the instruction of poor children, and who had been wont to assemble these on Sundays and Feast Days in the Cathedral, there to teach them Catechism with reading and writing. St. Charles Borromeo, who only obtained his degree of Doctor in Law at Pavia in 1559, had been an active member of this band of Sunday-school teachers when his maternal uncle was raised to the papal chair as Pius IV. in 1560. St. Charles was thereupon called to Rome, created a Cardinal, and made the new pope's minister. To Rome Cusani followed his saintly young friend, establishing there a branch of his Confraternity under Borromeo's powerful protection. When the latter returned to Milan, of which he was archbishop, the teaching of Christian Doctrine became one of the chief cares of his pastoral administration. He had learned from his masters, the Jesuits, that the salvation of Christendom depended on thoroughly instructing the people in the Gospel truth and moral-

ity, and in giving to the masses with the knowledge that became their condition an enlightened love of their religion.

St. Charles had also been mainly instrumental, in furtherance of this purpose, in pushing forward the reformatory measures in the Council of Trent, and in composing and publishing, under the authority of the Holy See, the Catechism bearing the name of that Council, and destined to be for all pastors of souls a manual of doctrine in catechising their flocks. Marco Cusani's confraternity flourished throughout Lombardy and all Upper Italy, thanks to the zeal of the Archbishop of Milan. Cardinal Frederick Borromeo, who became archbishop in 1595, emulated the enlightened zeal and heroic virtues of his great relative. The Sunday-School Sodality received from him a more perfect form and was spread all over Italy. Cardinal Frederick had a popular Catechism and a form of instruction drawn up to assist the Sodalists, who now saw noble and pious ladies claiming a place in their ranks and a share in their labors.—In Rome St. Pius V., by a bull issued in 1571, enjoined on all parish priests the establishment of similar sodalities, bestowing special indulgences on the members and the performance of their pious labors. Several churches were placed at their disposition by the popes, and Cardinal Bellarmine was instructed to draw up for their use a short catechism. Thus in Rome and Milan, as the two chief centers, the children of the laboring poor were, for several hours on Sundays and Holy Days, taught the elements of secular knowledge as well as the elements of Gospel truth. At first this Confraternity was only a voluntary association, the priests being designated by the popular title of 'Fathers,' the lay members being called 'Brothers.' In course of time, in Rome particularly, they assumed a corporate form, and their obligations once assumed became permanent. Paul V. raised them to the rank of an Archconfraternity. At length the priests formed themselves into a regular congregation, distinct and separate from the Archconfraternity. But these latest transformations only marked the decay of the sodality itself, and the decrease of that lay fervor which at one time found means to instruct the poor children of nearly all Italy. The revival of this association throughout the Peninsula would be one of the most powerful means of saving Italy from the spread of materialism and communism.

CHRIS'TIANSSUND (Norw. *Kristiansund*), a town frequently confounded with Christiansand, is situated in the amt or bailivik of Romsdal, in the north of Norway, and has an export trade in wood and fish. It was a flourishing place of trade in the 17th c., and bore the name Lille-Fosen till 1742. Pop. (1876) 7489.

CHROME ALUM is the double sulphate of chromium and potassium, analogous in composition to the double sulphate of aluminum and potassium, or alum.

Chrome alum, $Cr_2(SO_4)_3K_2SO_4.24H_2O$
Ordinary alum, $Al_2(SO_4)_3K_2SO_4,24H_2O$

It may be obtained in large violet octahedra by the spontaneous evaporation of its solution, prepared by boiling a solution of bichromate of potash to which oil of vitriol has been added with alcohol, as long as the smell of aldehyde is perceptible. Solution of C. A., if prepared in the cold, is violet colored, but when heated becomes green, and from this green solution no crystals separate; on standing for some weeks, however, the green solution becomes violet, and deposits the salt.

CHROME GREEN (the sesquioxide of chromium) is a beautiful dark-green pigment used in painting porcelain and as an ingredient in green glass and enamel.

Chrome Red (a basic chromate of lead), of various shades of red and orange, is used in calico-printing and the arts generally.

Chrome Yellow (chromate of lead) is most useful in the arts, and exhibits distinct shades according to the mode of its preparation, known as *lemon yellow*, *Paris yellow*, *Leipsic yellow*, &c.

CHRO'MOTISM, or CHROMISM, a disease of plants consisting of an unnatural coloring of leaves, such as when they become red, variegated, &c.

CHRYSOCHLO'RIS, a genus of Insectivorous mammalia, represented by the *C. holosericea* or *aureus*, or golden mole of South Africa. The C. resembles the common mole in form, but is somewhat less in size. Its peculiarity consists in the iridescence of its fur; the beautiful play of metallic tints and lustres exhibited by this form procuring for it its names of golden, changeable, or shining mole. The *setæ* or bristles of the *Aphrodite* or sea-mouse amongst the worms or *Annelida* exhibit the same iridescent lines. The front feet have four toes, and the hinder ones are five-toed. No outer ears or tail are developed. The teeth of both jaws fit exactly into each other, and the food consists of insects and worms.

CHURCH, FREDERICK EDWIN, an American artist, born at Hartford, Conn., in May, 1826. Among his most famous paintings are the 'Heart of the Andes.' and the 'Horse-shoe Fall, Niagara.' He has produced other works of the highest merit.

CHURCH, SANFORD E., LL.D., a distinguished American jurist, born in Milford, Otsego Co., N. Y., April 18, 1815, entered upon the practice of law, and rapidly rose to eminence in that profession. He was successively Lieutenant-Governor of New York (1850 and again in 1852), Comptroller of the State (1857), and Chief-justice of the Court of Appeals (1870). He held the last position until his death in 1880.

CHURUBUSCO, BATTLE OF, an engagement of the Mexican war, between an American army, commanded by Gen. Scott, and a Mexican army, commanded by Gen. Santa Anna, near a village of the same name, about 6 miles south of the city of Mexico, on August 20, 1847. The army of Santa Anna numbered about 27,000, and that of Scott about 8000. After desperate fighting, the Mexicans were completely routed, with heavy losses of prisoners and arms.

CICC'A, a genus of plants of the natural order *Euphorbiaceæ*, consisting of small trees and shrubs, natives of tropical India, Africa, and America. *C. disticha*, the 'Otaheite gooseberry,' is a native of India, but is cultivated in that and in many other countries for the sake of its fruits, which are used either raw or cooked in various ways. The Europeans pickle or preserve them, or bake them in tarts. In Java they are sold in the market for about threepence per gallon. A decoction of the leaves causes perspiration, and the roots are a violent emetic. The wood of *C.* (*Prosorus*) *Indicus*, of Bombay and Ceylon, is white and tough, and is used for shipbuilding in the latter country. Its light-blue seeds constitute a favorite food of the green pigeon.

CIMICIFU'GA, or BUGBANE, a genus of plants belonging to the order *Ranunculaceæ*, natives of Eastern Europe, Siberia, and N. America. The European *C. fœtida* is extremely fetid, and is used to drive away bugs and other vermin—hence the specific name ('bug-fleer').

CIN'CHONINE and CINCHON'IDINE are isomeric alkaloids contained, along with the quinine alkaloids, in the bark of the different varieties of Cinchona. Pale Peruvian bark is richest in C. and its isomer; yellow Peruvian bark in quinine. Another alkaloid called *Cinchonicine*, isomeric with C. and C., is obtained under certain conditions by heating the latter substance. The composition of these bodies is represented by the formula $C_{20}H_{24}N_2O$; that of quinine and its isomers by the formula $C_{20}H_{24}N_2O_2$. Sulphate of C. is used in medicine, and is similar in its physiological action to sulphate of quinine. See QUININE.

CINCINDE'LA, a genus of *Coleoptera* or Beetles, forming the type of the family *Cincindelidæ*, and popularly known as 'Tiger-beetles' or 'Sparklers,' from their carnivorous habits, and from the brilliant hues and lustres of their bodies. The tiger-beetle (*C. campestris*) is a familiar British species, and is noted for its voracious habits, feeding on other insects, and being able to pursue its prey into the air. It exudes a powerful odor or scent, like that of a crushed verbena leaf. The Indian tiger-beetle (*C. octonotata*) is another well-known species. These insects have five-jointed tarsi; the head is wider than the chest, and the mandibles are large, sharp and toothed.

CIRCLEVILLE, a city of Pickaway Co., O., on the Scioto River and the Ohio Canal, and on the Scioto Valley and the Pittsburg, Cincinnati & St. Louis railroads, 25 miles from Columbus and 64 from Zanesville. The Scioto River furnishes water-power, which is employed in manufacturing. It is surrounded by a rich agricultural country, and is an important trade center. Population, 6000.

CIRCUMDUC'TION OF THE TERM, in Scotch law, is the sentence of a judge declaring the time elapsed for leading proof in a case, after which no further evidence can be adduced.

CITIES OF REFUGE were six Levitical cities—namely, Kedesh, Shechem, and Hebron on the W. side of Jordan, and Bezer, Ramoth, and Golan on the E. side—appointed as a refuge to which the manslayer might flee from the Avenger of Blood and where he was protected till he could be tried by the authorities of his own city. If it was found on his trial that the deed had been involuntary, he was taken back to the C. of R., and on the death of the high priest, could return in safety to his home. The right of sanctuary was also possessed by many Greek and Roman cities—especially Ephesus, and by many churches in the middle ages—a privilege which was often too much abused, by letting real criminals escape.

CITTA', the Italian form of *city*, enters into the composition of many names of places in Italy.

CIVIL ENGINEER, strictly every engineer not connected with the army—every engineer, that is, not a military engineer—but in common usage a man who makes or designs railways, docks, roads, canals, &c., as distinct from a *mechanical engineer*, a man who makes engines, boilers, and machinery in general.

CLADODYSTROPH'IA (Gr. *klados*, 'a branch,' and *dustrophos*, 'hard to rear') a disease of aged oaks and other trees grow-

ing in a light soil, in which the upper branches are more imperfectly nourished than the lower, and therefore sooner decay —in other words, become what is called 'stag-headed'. It has been supposed that this is in consequence of the decay of the tap root, possibly from the attacks of fungi, but Mr. Berkley considers this mere conjecture.

CLADOPTO'SIS (Gr. 'a falling away of the twig'), a disease of oaks, willows, and other forest trees, in which the small branches snap off with a regular circular fissure, leaving a cup-shaped scar, somewhat similar to that which takes place when a leaf or fruit separates at the stalk. It appears to be somewhat similar to the disease to which vine branches are subject after a cold summer, and which is known as *Phriganoptosis*. The branches fall off, 'a process facilitated by the peculiar formation of the stem, there being a transverse layer of cellular tissue at each bud' (Berkley).

CLARKE, James Freeman, D.D., an American clergyman and author, born at Hanover, N. H., April 4, 1810. Since 1841 he has been the pastor of a Unitarian church in Boston. He has published *Christian Doctrine of Forgiveness* (1852), *Christian Doctrine of Prayer* (1854), *Orthodoxy* (1866), *Steps of Belief* (1870), *Ten Great Religions* (1871), and others.

CLARKSVILLE, in Montgomery Co., Tenn., on the Cumberland River and the Louisville & Nashville Railroad, 199 miles from Memphis. It is surrounded by a tobacco-raising district and is one of the largest tobacco markets in the West. It has eight tobacco stemmeries, and is a shipping point for tobacco and other produce. It carries on an extensive trade with the surrounding country, and is the seat of the Southwestern Presbyterian University. Pop. 6,000.

CLASSIFICA'TION OF ANIMALS. Two principles may be employed in classifying animals. One of these, forming the *artificial* method, has for its essential feature that of founding its characters upon resemblances between animals of a more or less external and superficial kind. Thus the savage employs an artificial method of classification when he classifies together fishes and whales from their outward appearance, or birds and bats because both fly. Such a procedure resembles the practice of arranging the books in a library solely by their outside resemblances or styles of binding—a method this, which could give no one any reasonable idea of the true nature of the volumes, any more than the classification of the savage expresses any definite relation between the animals he thus classifies. In opposition to this artificial method, which characterized the earlier history of zoology, we have the *natural* method. By means of this latter we group together only animals that are like in the *details of their structure*, and this method, therefore, is the expression of a true structural relationship between the organisms which it brings together. It is, in other words, a convenient expression of the facts and laws of morphology and physiology. The whale would, therefore, in this classification, be placed among the mammals, from a consideration of its structure, and not with the fishes, which it somewhat resembles in outward appearance. The animal kingdom is divided through the consideration of the morphological *type*, or broad features of structure, into five or six sub-kingdoms, which, beginning with the highest, are named respectively *Vertebrata*, *Mollusca*, *Annulosa*, *Annuloida* or *Echinozoa*, *Cœlenterata*, and *Protozoa*. Each sub-kingdom admits of division into *classes*, the classes are divided into *orders*, the latter into *families* and *genera*, and the genera into *species*.

CLAV'ICHORD, or CLAV'ECIN, one of the older forms of the piano, used frequently until about a century ago. Its strings were struck by pins attached to the ends of the keys, and were damped by pieces of cloth so as to produce a very soft sound.

CLAVIJA, a genus of *Myrsinaceous* plants, of tropical S. America, named in honor of J. Clarijo Faxardo, a Spanish botanist. The fruits of some of them are eatable, and the roots of others are emetic.

CLEAR DAYS, an English law-term. In a lawsuit there are several steps in the proceedings which must be taken within a specified number of C. D. In reckoning these, the day on which the process is served and the day of hearing are not counted.

CLEM'ENS, Samuel Langhorne, better known by his *nom-de-plûme* of 'Mark Twain,' an American humorist, was born in Florida, Missouri, Nov. 30, 1835. He worked first as a printer, but afterwards, in Nevada, as a journalist, when he developed a fresh phase of American humor, extravagant, surprising and grotesque. In 1867 C. published *The Jumping Frog*, and in 1869, as the results of his travels in Egypt and the Holy Land, *The Innocents Abroad*, an amusing travesty of lofty and serious things—e.g., in his weeping over the tomb of Adam, his blood-relation, in the Church of the Holy Sepulchre. His other works are his *Autobiography* (1871), *Roughing It* (1872), *The Gilded Age* (1873), by C. and Warner.

CLEM'ENT VII. (Giulio de Medici), who, as cardinal under Popes Leo X. and Adrian VI., had devoted himself to the Spanish cause in Naples and Milan. On his election as Pope in 1523, however, C. attempted to organize a national Italian party against Karl V., whose increasing power he dreaded. This led to the capture of Rome in 1527 by 'Bourbon's black banditti.' The growth of the Reformation after the Diet of Spires and the peace of Kadan was equally alarming to C., who sought the help of François I. and Henry VIII. He died in 1534, having by a secular policy reduced the influence of the Church to the lowest point. He founded the 'Monte della Fede,' or system of public credit, in which the creditors were associated in the management (*dogana*). —Clement VIII. (Cardinal Ippolito Aldobrandini) was elected 20th Jan. 1592. Although belonging to the Ecclesiastico-Spanish party, he is chiefly remembered in connection with the return of Henri IV. to the Church (which enabled C. to wrest Ferrara from Cesare d'Este), the readmission of the Jesuits to France, and the peace of Vervins. He died in 1605.—Clement XI. (Cardinal Giovan Francesco Albani), was elected 16th Nov. 1700. At first a warm supporter of the French claim to the Spanish succession, he was compelled after the victories of Marlborough to acknowledge Charles III. as the Catholic King. By the peace of Utrecht, Sicily and Sardinia, which C. regarded as his own fief, were bestowed on the House of Savoy, with whom he soon had a bitter dispute as to *di Monarchi* (a Sicilian tribunal which encroached on Papal privileges). In 1713 C. published the Bull 'Unigenitus,' condemning the 101 propositions in Father Quesnel's book; this irritated the French Jansenists and Nationalist clergy against Rome. C. was also connected with the great Jesuit missionary movement in China, the Stuart rebellion of 1715, and the expedition of Prince Eugene against the Turks in 1716. He died in March 1721.—Clement XII. (1758–69). His rule is marked by the suppression of the Jesuits by Choiseul in France, Wall and Squillace in Spain, Fanuci in Naples, and Carvalho in Portugal. C. refused to abolish the order, and thus lost nearly all influence in Europe.

CLEOME, a genus of plants of the order *Capparidaceæ*, found in the tropical regions of America. Most of the species are annuals—one, *C. pungens*, attaining the height of 4 or 5 feet. Among other species may be mentioned *C. spinosa* and *C. speciossima*, one of the handsomest of the genus, several of which are cultivated for the sake of their beautiful flowers.

CLERICAL ERROR is, in law, an error accidentally committed in the transcription of a deed or other instrument. Where the error is not *in substantialibus*, it is not fatal to validity.

CLERK, is strictly a person in holy orders; but the term is now generally applied to any one whose chief occupation is writing as a subordinate. In English law, a C. is regarded as a superior servant.

Clerk of the Assize is he that records all things judicially done by the judges of the circuits.

Clerk of the Crown is an officer in Chancery, whose function it is to attend on the Lord Chancellor. He makes out writs for the election of members of Parliament. All returns are made to him. These he cannot alter, except by order of the House, under a penalty of £500—*toties quoties*.

Clerk of the Parliament Rolls is the name of an officer in each House of Parliament, who records the proceedings, and engrosses them on rolls for preservation.

Clerk of the Peace is an officer belonging to the Quarter Sessions, whose duty it is to read the indictments, enroll the proceedings, draw the processes, and transact other business incident to the Quarter Sessions.

Clerk of Session.—The clerks of the Court of Session in Scotland are so called. There are four principal clerks and five deputies. Each principal and depute has an assistant C. The duty of the principal clerks is to attend upon and assist the Judges of the Inner House. The deputies attend upon and assist the Lords Ordinary. The principal clerks and deputies have no fees. They are paid by fixed salary. The former have £1000 a year each, the latter £550. Each assistant C. has £475 a year, and no fees.

Clerks of the Bill Chamber.—There is one C. of the Bill Chamber of the Court of Session. He is responsible for the reputed solvency of cautioners and for consigned money. There is also an assistant C. and two ordinary clerks. They are all paid by salary.

Clerk to the Court of Teinds.—There is one principal and one depute C. of the Teind Court in Scotland.

Clerk of Justiciary.—There is one principal, one depute, and one assistant C. of the Justiciary Court of Scotland.

Every court of law has necessarily a C., whose duty it is to write out the judgments and extract the decrees of the court.

CLERODENDRON, a genus of plants of the natural order *Verbenaceæ*, one of which, *C. Thomsonæ*, of W. Africa, is cultivated for the beauty of its flowers. *C. infortunatum*, an Indian species, is bitter and sub-astringent, and possesses anti-periodic

and tonic properties. These plants are chiefly natives of Tropical Asia, but they are also found in Africa and America.

CLEVELAND, Charles Dexter, LL.D., an American author and scholar, born at Salem, Mass., Dec. 3, 1802, and graduated from Dartmouth College in 1827. He taught Latin and Greek in Dickinson College, and afterwards in New York University; and, in 1861, was made U. S. consul at Cardiff, Wales. He published *Lyra Americana; The Moral Characters of Theophrastus; Compendium of Classical Literature; Compendium of Grecian Antiquities; English Literature of the Nineteenth Century; Compendium of Grecian Literature;* and *Hymns for Schools.* Died Aug. 18, 1869.

CLEVELAND, Grover, an American statesman, born at Caldwell, N. J., March 18, 1837, and in early life removed to Fayetteville, N. Y. He studied law in Buffalo, N. Y., and was admitted to the bar in 1859. He soon gained distinction in his profession, and in 1863 was made assistant district attorney of Erie Co. In 1870 he was elected sheriff of Erie Co., and upon the expiration of his term of office, resumed his law practice, in which he remained engaged until 1882. In 1881 he was elected Mayor of Buffalo, as a reform candidate, being supported by both Democrats and Republicans, in opposition to the long continued rule of a corrupt ring. In 1882 he was nominated for Governor of the State of New York, by the Democratic party, and was elected to that office by the unprecedented majority of 192,854, over Judge Folger, the Republican candidate. It must be explained, however, that this large majority was the result of dissatisfaction in the Republican ranks, over the manner in which Mr. Folger's nomination had been secured. In July, 1884, Mr. Cleveland was put in nomination for the Presidency of the U. S., by the convention of the Democratic party, held in the city of Chicago, during that month. The campaign that followed was one of great excitement and bitter personalities, which it is not fitting to enumerate in this brief article. Mr. Cleveland was opposed by James G. Blaine, the candidate of the Republican party, and B. F. Butler, the candidate of the Peoples party. His only formidable adversary was Mr. Blaine, over whom he was victorious in the November election. He was inaugurated President of the U. S. on March 4, 1885.

CLIFFOR'TIA, a genus of S. African bushes, belonging to the natural order *Rosaceæ*. The holly-like leaves of *C. illicifolia* are used by the Cape Boers (farmers) as an emollient and expectorant in coughs. The name *Cliffortiaceæ* is sometimes given to the *Rosaceæ* proper (including *Sanguisorbeæ*, as distinguised from *Amygdaleæ* and *Pomaceæ*).

CLINK'ER, a firm mass of ash and other matters which is apt to form upon the bars of a furnace in which strongly caking coal is burnt, and which in this case, by impeding the access of air to the fuel, impairs the combustion, and allows the bars to be destroyed.

CLINTON, a city of Clinton Co., Ia., on the Mississippi River, 42 miles above Davenport. It is an important railroad center; is extensively engaged in the manufacture of lumber and other articles; contains extensive railroad repair shops; and has a rapidly increasing trade. Pop. 9068.

CLINTON, a city of Worcester Co., Mass., on the Nashua River, at the junction of the Nashua & Worcester and the Old Colony Railroads, 45 miles from Boston and 16 from Worcester. It is largely engaged in manufacturing. Pop. 10,000.

CLINTON STATE PRISON, a penal institution at Dannemora, Clinton Co., N. Y., built in 1844–45. Usually there are about 500 prisoners confined here, who are kept at work in iron and nail works.

CLINTON, George, an American statesman, uncle of De Witt C., born in Ulster Co., N. Y., July 26, 1739. He served during the French war in the expedition against Frontenac, and at the outbreak of the Revolution, was made brigadier-general in the Continental army. He was governor of the State of New York for 21 years, and, in 1804, was chosen vice-president of the United States. Died April 20, 1812.

CLITO'RIA, a large genus of plants of the order *Leguminosæ* (sub-order *Papilionaceæ*), widely distributed over tropical Asia, Africa, and America, but more particularly in the latter country on the eastern side of the Andes. *C. Ternatea* is originally from the island of Ternata, one of the Moluccas, but now common in most tropical countries and in European conservatories. The corollas of the blue variety yield a dye which is used in Cochin-China, though it is not permanent, and in Amboyna it is employed to color boiled rice. The root is powerfully purgative, and in India is administered to children to promote sickness and vomiting. The butterfly-pea (*C. Mariana*) is remarkable on account of its curious geographical distribution. It is found in the southern American states and Mexico, and in the Khassia Hills in India, without being found in any intermediate place.

CLIT'ORIS is a small body found in the external female generative organs. It is the homologue of the penis in the male. About an inch and a half long, it is concealed in the mucous membrane. Unlike the penis, it is not perforated by a canal resembling the urethra, and it has no spongy structure resembling the *corpus spongiosum* of the penis. It is a rudimentary organ in the female, and has no known function except that it becomes excited and turgid during the sexual act.

CLOUGH, Arthur Hugh, an English scholar and poet, was born at Liverpool, 1st January 1819, educated at Rugby under Arnold, passed to Balliol College, Oxford, and was elected a Fellow of Oriel in 1842. The theological fever was strong at the time, and for a moment it seemed as if C. would catch it; but his spirit was too exquisitely susceptible of living impressions, and his mind too speculative, or rather too critical, to be long enthralled by 'archæological formulas.' The result was that he went the other way, and his brief career was mainly shaped by his antagonism to the 'form of thought which Oxford exacted of her children.' In 1848 he resigned his fellowship, and in the same year, a little earlier, published the *Bothie of Tober-na-Vuolich*, a 'true long-vacation pastoral,' in classical hexameters, instinct with the finest aroma of elegant culture, the bright joys of college friendship, the humor, sympathy, sarcasm, and luminous talk of youth, relieved by picturesque descriptions of Highland scenery and delineations of Highland character. The work is imperfect in art, and is now beginning to fade from the memory; but at the time it was thought to indicate a new poet. Next year (1840) appeared his *Ambarvalia*. After leaving Oxford, C. traveled in France, Italy, and America, was appointed an examiner in the Education Department of the Privy Council in 1853, and in 1856 secretary to the Commission of Report on Military Education. His health now gave way; after visits to Greece and Constantinople, and a short return to England, he was again ordered to the continent; but was carried off by malaria fever at Florence, 13th November 1861. C.'s nature was singularly pure, tender, and strong, and his talent incomparably greater than his fame is likely to be. See *Poems by A. H. C. with a Memoir*, by F. T. Palgrave (Lond. 1862).

CLUB-GRASS, a common name for *Corynephorous*, a grass belonging to the oat tribe (*Avenæ*), by some not considered distinct from *Aira*. Though rare in England, it is generally diffused throughout the continent of Europe.

CLUB-HOUSES, IN LONDON, Law Regarding. It is now settled (Fleming *v.* Hector) that these have no legal character similar to commercial partnerships or joint-stock companies, and that the members are not liable for the acts of their secretaries, stewards, or committees.

CLU'THA, or MOL'YNEUX, the largest river in New Zealand, issues from Lake Wanaka, in the province of Otago, in 44° 35′ S. lat., 169° 20′ E. long., and after a S.E. course of 200 miles, falls into the S. Pacific in 46° 18′ S. lat., 169° 38′ E. long. Its principal tributaries are the Kawarau (draining Lake Wakatipu), Manuherikia, and Pomahaka. The C. is a very deep and rapid river, and was computed by the late Mr. Balfour, colonial marine engineer, to discharge 1,690,000 cubic feet of water per minute.

CLYDESDALE HORSE, a breed which originally belonged to Lanarkshire and Ayrshire, but whose great strength, fine action, noble form, and substance have made it much appreciated in England, on the Continent, in America and Australia. It is the best workhorse in the world, and as much as £1500 has been given for one. See Horses.

CNIDOS'COLUS, a genus of *Euphorbiaceæ*, consisting of shrubs or herbaceous plants belonging to Africa. *C. stimulans*—a native of the Southern States of America—on account of the lacerated segments of the leaves, which are covered with spreading hair, stinging the naked feet of the negroes, is well known as 'Tread Softly.' Its tuberous roots are eaten like those of cassava. *C. quinquelobus* stings even more terribly, and on this account is shunned as a cultivated plant. In some cases the persons so stung will fall down, and remain quite unconscious for some time. In every case an excruciating pain is experienced, which, according to Mr. Black, from whom we take this account, 'lasts for some days, and the parts swell, and sometimes continue swollen, accompanied by an itching sensation, for months.'

COAI'TI (*Nasua*), a genus of Carnivorous mammalia, included in the family *Ursidæ* or Bears, and belonging solely to the New World, being found in Surinam and Brazil. In this genus the molar teeth are small, and the canines compressed and sharp. The muzzle is very elongated, proboscis-like, and extremely mobile. The claws are long, and of curved, compressed shape, and the tail is also of considerable length. The red C. (*N. rufa*), or C.-Moudi, has a fur of reddish-chestnut color, the ears and legs being black, the tail banded with maroon color, and the lower jaw white. It is fond of climbing trees. The brown C. (*N. Narica*), or *Narica*, has a brown-colored fur, which is sometimes mottled

with black, and tinted with chestnut. The under parts are colored grey. The fur is thick and coarse. The C. feed on both animal and vegetable matters, and although shy, may yet be domesticated with success.

COAL. See COAL in Chambers' En.

COBB, HOWELL, an American statesman, born in Georgia, Sept. 7, 1815. He was successively member of Congress, speaker of the House, and governor of Georgia, and in 1857 was made secretary of the treasury by President Buchanan. Towards the close of 1860 he resigned, and in 1861 was president of the Confederate Congress. During the civil war he served in the Confederate army with the rank of major-general. Died at New York, Oct., 9, 1868.

COCCIN'IA, a climbing cucurbitaceous shrub, common in the hedges in India, the ripe fruits of which are used by the natives in their curries, and the leaves and other portions are also used medicinally.

COCC'ULUS, a genus of plants of the natural order *Menispermaceæ*. A decoction of the roots of *C. villosus*, an Indian species, is used in cases of rheumatism, &c., and the fruits supply a kind of vegetable ink.

COC'CYX is the inferior or posterior terminal portion of the vertebral column. In man it consists commonly of four rudimentary vertebræ, sometimes of five, rarely of three. These unite together, and in advanced life the C. unites with the sacrum.

COCHLOSPER'MUM, a genus of small trees and shrubs indigenous to tropical India, Africa, America, and N. Australia, belonging to the natural order *Flacourtiaceæ* (*Bixineæ*). The stem of *C. Gossypium* of India yields kuteera gum, used as a substitute for gum and tragacanth. The cottony substance which adheres to the seeds is used to stuff pillows, &c. A decoction of the roots is used in Brazil as a cure for abscesses, and for pains which are the result of falls and other accidents. *C. Planchoni* is a native of Western Africa; its roots yield a yellow dye. *C. tinctorium* of Senegambia also furnishes a yellow dye, as well as a medicine used in amenorrhœa.

COCK OF THE ROCK (*Rupicola aurantia*), a Dentirostral (*Incessores*) bird, belonging to the Manakin family (*Piprinæ*), and so named from its possessing a singular double crest of feathers rising from the sides of the head, whilst the upper tail-coverts give the bird the appearance of a cocklike tail. It inhabits Guiana. Its color is a fine orange, with the wing-gills and tail black. Another species (*R. Peruviana*) is found in Peru.

CO'DEINE is an alkaloid present in opium, and was first extracted from that substance by Robiquet in 1832. It is a colorless crystalline body possessing a bitter taste and a powerfully alkaline reaction, combines with acids to form crystalline salts, and is a narcotic poison. The composition of C. is represented by the formula $C_{18}H_{21}NO_3$.

CODIÆ'UM, a genus of Spurgeworts (*Euphorbiaceæ*) indigenous to the Moluccas and islands to the N. of Australia. *C. pictum* of the Moluccas is often cultivated about houses in that country, and used for fences. The leaves are strewed on the ground on festive occasions, and are also used to decorate triumphal arches. When chewed, both bark and roots excite a burning sensation in the mouth.

COEL, a town of British India, in the N.W. province, district of Allyghur, 2 miles S. of Allyghur and 80 S.E. of Delhi. It is a station on the East Indian Railway, and the residence of the civil authorities of Allyghur, with which town it is connected by a fine tree-shaded avenue. Pop. (1872) 48,403.

CŒNÆSTHE'SIS, a term designating undue susceptibility to external impressions. Some persons are susceptible of slight changes in the circumstances of their lives, while others are not so. To some individuals freedom from anxiety, good digestion, a bright sun and a dry bracing air, is the cause of cheerfulness, exhilaration, or even of joy; while some mental cause of depression, a slight disorder of digestion or of excretion, or a dull day, may cause gloominess and even despair. (Carpenter's *Mental Physiology*).

CŒ'RULEIN is a dye recently introduced for dyeing and calico-printing, and is obtained by treating gallein with concentrated sulphuric acid at 200° C. (392° Fahr.). A beautiful green color is produced by dissolving C. in an alkaline solution. In calico-printing this solution and the mordant alumina yield a rich green, while iron mordants produce a brown color; both dyes are fast. On treating a hot aniline solution of C. with alcohol and acetic acid, an indigo-blue color results, which may be communicated to wool.

COGGIA'S COMET. This comet appeared in the summer months of 1874 in the northern hemisphere. The nucleus was bright and well-marked, and the tail could be traced for a considerable distance in the sky. Tietjen, Schulhof, and Geelmuyden have given calculations which all agree in assigning to it a great length of revolution, the period deduced by the last being 10,445 years.

COLBY UNIVERSITY, an American college, located at Waterville, Me., and first known as Waterville College. In 1867 it received a large endowment from Gardner Colby, Esq., of Boston, and its name was changed to that which it now bears. It is controlled by the Baptist denomination.

COLDE'NIA, a genus of plants of the natural order *Ehretiaceæ*, consisting of shrubs and trees from India and Ceylon. *C. procumbens* is used in India in a powdered state, mixed with the seeds of the fenugreek (*Trigonella Fœnugrœcum*), for the purpose of promoting suppuration.

COLD HARBOR, a battle of the civil war, fought in Hanover Co., Va. It really consisted of a series of fierce struggles from May 28th, 1864, to June 3d. After severe fighting for several days, on the morning of June 3d a fierce assault was made on the Confederate lines, and after a half hour of desperate fighting was repulsed. The total Union loss in this series of engagements was about 13,000, while that of the Confederates is not known. The Union forces were commanded by Gen. U. S. Grant, the Confederates, by Gen. R. E. Lee.

COLDWATER, in Branch Co., Mich., on the Coldwater River, and on the Lake Shore & Michigan Southern Railroad, 133 miles from Detroit. Population, 5000.

COLE, THOMAS, an American artist, born in Lancashire, England, Feb. 1, 1801, and removed to the United States, in 1819. Having neither money nor influence, he was compelled to be his own educator; but, notwithstanding these adverse circumstances, he persevered, and eventually attained high fame as a painter. In 1825 he opened a studio in New York. Among his most noted works are the following, 'Course of Empire,' 'Dream of Arcadia,' 'Voyage of Life,' 'L'Allegro,' 'Il'Penseroso,' and 'The Cross and the World.' C.'s most popular work is perhaps the 'Voyage of Life,' an allegorical design, executed in four paintings. His life has been written by L. L. Noble (1855). Died at Catskill, N. Y., Feb. 11, 1848.

COLEORHIZ'A (Gr. *koleos*, 'sheath,' *rhiza*, 'root'), the cellular sheath which covers the radicle (and afterwards the fibrillæ) of Dicotyledons, as it pierces the lower part of the embryo.

COLERIDGE, THE REV. DERWENT C., was born at Keswick, Sept. 14, 1800. He was educated at Cambridge, served as a tutor in Plymouth, and was from 1841 to 1864 Principal of St. Mark's College, Chelsea. He afterwards became rector of Hanwell, Middlesex. He is author of a *Memoir* of his brother, H. C., whose poems and prose remains he edited; of a work on *The Scriptural Character of the English Church*, and of a Life of Winthrop Mackworth Praed. In 1861 he addressed two letters on Education to his cousin the Right Hon. Sir John T. C.—HENRY NELSON C., was born in 1800. He wrote a work entitled *Six Months in the West Indies*, and an *Introduction to the Greek Classic Poets*, but is best known for his *Specimens of the Table-Talk of S. T. C.*, which he published in 1835. He contributed to various periodicals, and died Jan. 26, 1843.—THE RIGHT HON. SIR JOHN TAYLOR C., was born at Tiverton, Devon, July 9, 1790. He was educated at Oxford, where he became a fellow of Exeter College, was called to the bar at the Middle Temple in 1819, was appointed sergeant-at-law in 1832, judge of King's Bench in 1835, and privy councilor in 1858. He was made D.C.L. of Oxford in 1852, and was editor of the *Quarterly* after Gifford's death, published an edition of *Blackstone's Commentaries* in 1825, and a *Memoir of Keble* in 1869. He died Feb. 11, 1876.—LORD C., THE RIGHT HON. JOHN DUKE, son of the above, was born Dec. 3, 1820, educated at Eton and Oxford, and called to the bar at the Middle Temple in 1846. He was made Recorder of Portsmouth in 1858, and a Queen's Counsel in 1861. After contesting Exeter unsuccessfully in 1864, he was elected for that city in 1865; was made Solicitor-General in 1871, and in 1873 was appointed Lord Chief-Justice, and raised to the peerage, with the title of Baron C. of Ottery St. Mary's, Devon. He is a man of fine literary as well as legal acquirements, and at one time contributed to various periodicals.

COLFAX, SCHUYLER, an American statesman, born in New York City, March 23, 1823, and in early life removed with his mother to Indiana, where he studied law. Originally a Whig, he joined the Republican party at the time of its formation. He was a member of Congress from 1854 to 1869, and speaker of the House for three terms. In 1868 he was elected Vice-President of the U. S., with Gen. U. S. Grant as President. Died suddenly at Mankato, Minn., Jan. 13, 1885.

COLICODENDRON, a tropical American genus of *Capparidaceæ*, all of which have acrid properties. *C. Yeo* of Brazil possesses the acrid principle to such an extent as to be dangerous to horses and mules (Von Martius).

COLL'EY, or COLLIE, the name given to a Scottish shepherd's dog. The origin of the name is not at all clear. Probably it comes from *colly*, 'grimy, black,' or it may have been called after the name of a person, C., its first breeder. The C. is one of the most sagacious of dogs. For shrewdness it is not excelled by the Newfoundland or the St. Bernard. It seems to combine the merits of both. It can take the water and retrieve like the former; it can gallop up precipices and descend into crevices after man or sheep with as sure a step, as keen a scent, as undaunted intrepidity and gentle carefulness for the lost, as the latter. The stories told about the acute and accurate knowledge of a C. dog are very numerous—indeed, they surpass those recorded of the St. Bernard. Hogg, the Ettrick Shepherd, says that at one time he had several hundred lambs, which he was taking to the fold. They scampered off over the hills in three separate divisions in different directions, defying all efforts to find them. Night came, and the search had to be given up. The dog remained at his task, and in the morning he was found in a gorge standing watch over the whole of the lambs. The C. is an ornamental as well as a useful dog, and is now much sought after in London as a pet. As much as fifty guineas has been refused for one. The general character of the head of the C. resembles that of a fox, the nose pointed, the eye rather small, but full of intelligence, mingled with sagacious craft, the ears half prick, the tips falling over somewhat, neck long and taper, shoulders and brisket deep, back rather short, coat thick and long, tail long, full feathered, and curling well over the back. The backs of the fore-legs should be feathered, the hind ones bare from the hocks, the hips wide and prominent, and the hocks well separated. The color varies from bluish-grey and tan to lightish grey, from black and white and fawn to black and tan; the latter is now held in most esteem. An absolute necessity to the shepherd, the C. makes also a capital watchdog. Its size varies from about 18 inches to 2 feet in height.

COLLIERS AND SALTERS. The workmen at coal-pits and salt-works in Scotland were formerly under servitude. They became bound, independent of agreement, merely by entering the works, to perpetual service there; and in the event of sale or alienation of the ground in which the works were, the right over the workmen passed to the purchaser without express grant. This slavery was abolished by Act of Parliament 15 Geo. III. c. 28; made more effectual by another Act passed in the thirty-ninth year of the reign of Geo. III.

COLLIMATION, LINE OF, the straight line which passes through the center of the object-glass of a telescope and the intersection of the wires placed at the focus. The difference between the actual line and the true axis of symmetry of the telescope is termed the *error of C.*

COL'OBUS, a genus of Old World or Catarhine monkeys, in which alone, of all Catarhina, the thumbs are absent or at most very rudimentary. This genus is allied to *Semnopithecus*, and the *C. Ursinus*, *C. Satanas* and *C. Guereza* are familiar species. These monkeys exclusively inhabit Africa.

COL'ONIES, LAWS OF ENGLAND REGARDING. All persons charged in any colony with an offence committed on the sea, may be dealt with as if the offence had been committed within the jurisdiction of the colonial court, and shall receive the same punishment as would have followed on conviction in England. The term *colony* includes all possessions abroad in which there is a legislature, except the Channel Islands and the Isle of Man. Colonial law is void if contrary to Act of the Imperial Parliament; but mere inconsistency with instructions from the Home Government will not make it void. Since 2d August 1858, all powers previously exercised by the Board of Control and by the East India Company over the territories and revenues of India, have been exercised by the Secretary of State and Council for India.

COLORADO SPRINGS, a city of El Paso Co., Col., on the Denver & Rio Grande Railroad, 76 miles from Denver. It is a favorite resort for invalids, and is in the midst of a wool-growing section. Population, 4279.

COLORIM'ETER, an apparatus of great value in the art of dyeing for ascertaining the strength of dye-stuffs. A known weight of the coloring matter to be tested is suitably dissolved, and the color it produces compared with a standard solution. The colorimetric test is generally applied by the intensity of color produced by an ascertained depth of the solutions in two different graduated test-tubes.

CO'LORS, METALS, and FURS, are the three tinctures in Heraldry. The metals, which are *or*, gold, and *argent*, silver, represent yellow and white, and always take precedence of the C., unless the contrary is specified. The five C. are *azure*, blue; *gules*, red; *sable*, black; *vert*, green; and *purpure*, purple; their abbreviations being az., gu., sa., vert, purp. *Tenne* or *tawny*, an orange color, and *murrey* or *sanguine*, a dark crimson, are sometimes used, but very seldom now in English heraldry. In French heraldry vert is called *sinople*. C. and metals, when engraved, are represented by a very convenient system of dots and lines: *or*, by dots; *argent*, is left plain; *az.*, is indicated by horizontal lines; *gu.*, by vertical lines; *sa.*, by horizontal and vertical lines, like a small check; *vert*, by diagonal lines from dexter to sinister, or heraldic right to left; and *purp.* the reverse of the latter. *Tenne* is represented by vertical lines down through those of *purp.*; and *murrey* or *sanguine* by diagonal lines from both dexter and sinister, crossing each other.

COLT, SAMUEL, inventor of the C. revolver, was born in Hartford, Conn., July 19, 1814, and in early life was successively a sailor and a 'lecturer.' In 1835 he took out a patent for the invention which gave him fame and wealth. In 1837 his revolver was used successfully in the Florida war, and still later in the Mexican war. C. erected large works in Hartford, on the banks of the Connecticut river, reclaiming a great deal of waste land for this purpose. He died January 10, 1862.

COLUMBIA, in Boone Co., Mo., on the Columbia branch of the St. Louis, Kansas City & Northern Railroad. It carries on an active trade and is the seat of the State University, Christian Female College, and Stevens Female College. Population, 4000.

COLUMBIA, in Lancaster Co., Pa., on the Susquehanna River and on the main line of the Pennsylvania Railroad at its junction with the Reading & Columbia, the Baltimore & Frederick, and the Columbia & Port Deposit railroads. It is a lumber and coal depot, and is extensively engaged in the manufacture of iron and stoves. Population, 8312.

COLUMBUS, a city of Bartholomew Co., Ind., on the White River, and on the Jeffersonville, Madison & Indianapolis Railroad, 41 miles from Indianapolis. It is surrounded by a fertile agricultural region, and is an important trade center. Pop. 6500.

COLUMBUS, in Lowndes Co., Miss., on the Tombigbee River, 140 miles from Jackson. The river is navigable for steamboats to this point, which makes it an important place for shipping cotton. Pop. 4500.

COLUMELLIA'CEÆ, a small order of Dicotyledonous plants, consisting of *Columella*, a genus of plants from the Andes, comprising two or three species. It is most nearly allied to the *Saxifragaceæ*, among which it may probably in time be allowed to take its place.

COMANCHES, a tribe of North American Indians, occupying portions of Texas and Mexico. They are exceedingly warlike, and have occasioned white settlers much trouble by their inroads for purposes of murder and plunder. They number about 4000.

COMM'ERCE, OFFENCES AGAINST. The commercial code of Great Britain has undergone material alterations in late sessions of Parliament, and many regulations founded on mistaken notions of the public interest, and which interfered with the general principle of commercial freedom, have been repealed. One of the most noteworthy of these reforms is the repeal throughout the United Kingdom of all the Acts against usury. By this repeal the capitalist is as unfettered in the employment of his money as the landlord is in the disposal of his land and the laborer in the disposal of his industry.

COMMISSIONER OF POLICE, for London and neighborhood, is appointed under 19 and 20 Vict., c. 2. The C. of P. and the constables are empowered to enforce regulations of the Police Acts respecting houses of public resort, driving vehicles and cattle, nuisances in thoroughfares, &c. They have also power to act on the river Thames, and they may at any time go on board vessels, and take cognizance of the conduct of persons on board. Most American cities have a similar officer, or Board.

COMMIX'TION, a term of Scotch law, indicating the mingling of two or more substances. C. may produce a new subject, as where wine is mixed; or it may not alter the nature of either substance, as where grain is mixed. This distinction is of some legal weight in questions which sometimes arise as to right of property.

COMM'ODATE, in Scotch law, is a gratuitous loan, the borrower being bound to restore the subject lent in the condition in which he received it.

COMMUNIS ERROR, a term of Scotch law, denoting the prevalence of an erroneous practice, which practice has been relied on. The Court of Session in case of C. E., generally pass an Act of Sederunt requiring observance of correct practice for the future, but without decision which might disturb past judicial procedure.

COMMUN'ITY. Voluntary associations have no *persona standi in judicio*, but by special statute it is made lawful to establish societies for raising funds to relieve and maintain members during sickness, and to provide burial.

COMMUTA'TION OF SMALL PENALTIES. The Act 28 and 29 Vict. c. 127, provides a scale of equivalent terms of imprisonment for failure to pay penalties between 10*s.* and £5.

COM'PASS PLANT (*Silphium laciniatum*), a plant of the western prairies of America, so called because it is said to turn the faces of its leaves uniformly in a N. or S. direction; 'the leaves on the developed stems of the flowering plants taking rather an intermediate position between their normal arrangement on the stem and their peculiar meridional position. The settlers, when lost on the prairies on a dark night, get their bearing by feeling the direction of the leaves' (Brown). The reason of this is, that owing to the stomata being more equally distributed on both sides of the leaf than is usual in other plants, both sides are equally sensitive to light.

COMPEAR'ANCE, a term of Scotch law, denoting the appearance made for a defender in an action.

Compearer.—Any one not called in an action in Scotland may *compear* and claim to sist himself on the ground of having an interest in it. If his claim is sustained he is called a C.

COM'PETENT AND OMITT'ED, a Scotch legal phrase denoting pleas which might have been maintained in a suit, but which have not been stated. The Court of Session may reduce their own decrees on the emerging of any new fact or writing, unless statement or production has been willfully omitted to protract litigation.

COM'PROMISE, in English law, is understood to be a mutual promise of parties to submit matters in dispute to arbitration. In Scotland the analogous terms are *Submit* and *Refer*. The word arbitration is employed in American law.

COMPTO'NIA, a genus of Deciduous bushy shrubs belonging to the natural order *Myricaceæ*, natives of N. America, and named in honor of Henry Compton, Bishop of London, about the year 1714, and the introducer of many exotic plants into England. *C. asplenifolia*, known as the 'sweet fern,' is employed as an astringent and tonic in diarrhœa. In France it is sometimes called *Liquidambar à feuilles de Ceterach*, though it has no connection with the true Liquedambar (*L. Styraciflua*).

CONCORD, a pretty town in Massachusetts, near the Concord river, 18 miles N.-W. of Boston. On the 19th of April 1775, the first skirmish of the Revolution took place here, and a monument, on the banks of the river, marks the spot where two English soldiers fell. C. is famous as having been the residence of Ralph Waldo Emerson; and it has, at different times, been a favorite residence of American *literati*, as Hawthorne, Thoreau, Alcott, and Hoar. Pop. about 2500.

CON'COURSE, a term of Scotch law.—*Concourse of Actions* means the privilege, not usually allowed, of bringing more than one action on the same ground of right.—*Concourse of the Lord Advocate* means the necessary concurrence of the Lord Advocate in a criminal prosecution, at the instance of a private individual.

CONDE, Louis-Joseph de Bourbon, Prince de C., born at Chantilly, 9th August, 1736, was the son of the Duc de Bourbon, minister of Louis XV. He first distinguished himself at Johannisberg (1762), and other engagements in the Seven Years' War. Army and financial reform and a splendid hospitality occupied his attention till the Revolution, when he emigrated. The corps which C. then formed served in the campaigns of Wurmser, in the Austrian service; in the English service at Ober-Kamlach and Biberach (1796); and in the Russian service at Constance (1799). It was discharged in 1801, and C. came to England, where he remained at Malmesbury till the Restoration. He died 13th May 1818. C. was the grandfather of the Duc d'Enghien, whose official murder so much injured Napoleon's reputation. He was concerned in the Pichegru conspiracy. See *Vie du Prince de C.* (3 vols. Par. 1819–20), by Chambelland, and Muret's *Histoire de l'Armée de C.* (Par. 1844). For the entire family, see Sévelinges' *Mémoires de la Maison de C.* (Par. 1820).

CONDIC'TIO INDIBITI is a term of Roman law for the reclaiming of money paid under an erroneous belief of its being due. It has been decided by the House of Lords (Wilson *v.* Sinclair, 7th December 1830), that when a person pays money under an error, he has no right to recover unless the error be as to fact. Error as to law is not a valid ground for recovery.

CONDITIONAL OBLIGATION. An obligation depending on a condition has no force until the condition exist, but the grantor cannot revoke the ground of hope which he has given. Contracts are null if illegal or impossible conditions are annexed. But such conditions, or frivolous conditions, annexed to a legacy, are merely held *pro non scriptis*, and non-compliance does not affect the right of the legatee.

CONDITIONAL INSTITUTE, a Scotch legal term. Under destination of real property, the immediate disponee of the grantor is called the *institute*. Those to whom the property is destined, failing the institute, are called *substitutes*. When the destination to the immediate disponee is conditional, he is called a C. I.

CONDUCTIV'ITY, thermal or electric, of a given substance, is the amount of heat or electricity which flows through a cube of unit volume in unit time, the difference of the temperature or potentials of the opposite sides being unity. The late Principal Forbes has shown that the thermal C. of pure metals is probably inversely proportional to the temperature from absolute zero, and the same law seems to hold in the case of electric conduction. This law is deducible from theory, upon the hypothesis that heat, during its conduction, arranges itself exactly as it would do if let down from the hotter to the colder part by a perfect engine, *i. e.*, so disposes itself that the least possible amount of work can be got from it during the operation. Non-metallic substances are in general bad conductors of heat, and frequently non-conductors of electricity; and these increase in conducting power as their temperatures rise. Liquids are of small conducting power as compared to solids, and the experimental determination of their C. is a matter of considerable difficulty, in the one case owing to the disturbing effects of the thermal convection currents produced, and in the other, if the liquid be a chemical salt or compound, to the electrolytic action and polarization which generally supervene. The C. of gases is still more difficult of determination, radiation and convection playing by far the most important part. See Electricity, Heat.

CONEY ISLAND, a famous summer resort, on the southern side of the westerly end of Long Island, and distant about 11 miles from the city of New York. Many elegant hotels have been erected here, among the more prominent of which are the Oriental, Manhattan Beach, and Brighton Beach. During the summer season, open air concerts are given at nearly all the principal resorts, and thousands flock thither, to enjoy the music and the cool breezes that sweep inland from the sea. There are mammoth bathing pavilions, and the surf is as fine as can be found anywhere on the Atlantic coast. The island is connected with New York and Brooklyn by numerous railroads, and lines of boats run from the former city and land at the great iron piers, that have been built out into the sea. It is sometimes visited by as many as 30 or 40 thousand people in a single afternoon.

CONFEC'TIONERY. Under this name are included the various manufactures of sugar for use as sweets, or *bonbons*, as they are called by the French. The simplest form in which sugar is prepared for eating is when it is crystallized from a solution into candied sugar. It is generally prepared from raw sugar, and has a brown color; but when tinted, refined sugar is employed, and the coloring material added to the solution. The crystallization takes place around thin slips of wood or pieces of twine, which are always found in the core of the material. Sugared almonds, cloves, caraways, corianders, &c., and sweets having a core either of fruit or backed sugar, as in the case of 'pan drops,' all of which are included in the French *arages*, are thus prepared. The cores of fruit or sugar are placed in a large copper pan, revolving at an angle of about 45°, heated by steam admitted to circulate between its outer and inner surface. The revolution of the pan at this angle causes the materials within it to be in constant motion tumbling over each other. A gentle stream of sugar solution is allowed to trickle continually into the pan, and the continual motion of the materials secures a proportion to each separate piece, and at the same time keeps them from adhering to each other, while the heat dries off the superfluous moisture. Thus the cores become gradually and uniformly encrusted in pure sugar, and the longer the process continues, the thicker becomes the coating. Ordinary lozenges (*trochisi* of druggists) are prepared from loaf-sugar broken, and ground to a fine powder. This is baked up into a stiff cake with a pure solution of gum arabic, rolled out to the required thickness, and the lozenges cut out by hand or machine. They are then put aside to harden and dry in trays. The paste may be tinted with any coloring material, and flavorings such as peppermint, ginger, clove, rose, musk, &c., are introduced in the baking. Medicated lozenges are an elegant and pleasant form of administering minor remedies for coughs, children's ailments, &c., when suitable ingredients are introduced into the paste; but the use of lozenges containing morphia, codeia, and other narcotic substances should be carefully guarded. Pastilles are preparations containing a large porportion of gum, in which the sugar is wholly dissolved, and they are usually tinted and flavored with fruit essences. Preparations of boiled sugar form a distinct class by themselves, and occur in a variety of forms, such as 'drops,' barley-sugar, rock, balls, &c., variously tinted and flavored. The sugar is dissolved by heat over a fire, care being taken to keep it from burning, and when poured out in thin layers, it is worked up into its various forms, after it has acquired such a plasticity as enables it to be handled. Toffee or butter-scotch is made by boiling up sugar, honey, and butter together, but frequently the honey is altogether omitted from the preparation. The French excel in the preparation of various sweets, and their *fondants* have often an exquisite flavor, and are manufactured in a very attractive manner.

CONFU'SION, a term of Scotch law, denoting the extinction or suspension of an obligation by the debt and credit devolving on the same person.

CONI'INE is an alkaloid contained in hemlock (*Conium maculatum*), and is a volatile liquid, boiling at 168° C. It possesses a powerful, pungent odor, like that of tobacco, and is very poisonous. C. is a strong base, and forms crystalline salts with acids. Its composition is represented by the formula $C_8H_{15}N$. It has been prepared artificially.

CONJOIN'ING OF PRO'CESSES, a term of Scotch law. Where two or more processes in the Court of Session relate to the same matter and affect the same parties, the court may conjoin them. They are then discussed together as one group.

CON'JUNCT PERSONS. Under the Bankruptcy Statutes of Scotland, all those who, by their relationship to one who is insolvent, would be legally incapable of being witnesses or judges in a cause in which he might be concerned, are termed C. P. Deeds in favor of any conjunct person by the insolvent, if granted without adequate consideration, are, under statute, reducible.

CONKLING, ROSCOE, a prominent American statesman, born at Albany, N. Y., Oct. 30, 1829, and began to practice law in Utica. He was four times elected to Congress, and was elected U. S. Senator in 1867, again in 1873, and again in 1879. In 1881 he resigned from the Senate, owing to differences with President Garfield, since which time he has conducted a large and lucrative law practice in the city of New York.

CONNECTIVE TISS'UE. This name is given by modern histologists to a number of tissues which originate from the same primary structures in the middle layer of the embryo. Although widely different from each other, both chemically and histologically, in the mature condition, yet on account of this primary relationship they are usually grouped together under the name of C. T. The members of the group are cartilage, mucoid tissue, reticular C. T., ordinary C. T., usually known under the name of white fibrous, or areolar tissue, fatty or adipose tissue, bone, and one of the principal substances entering into the composition of tooth, called dentine. A description of the histological characters of these various tissues will be found under their appropriate headings. The reasons for grouping these tissues together are—(1) *Embryological.* They are formed from the same layer of the embryo. (2) *Comparative histological.* In the bodies of lower animals these tissues frequently replace each other; thus what in one animal is ordinary C. T., in another is reticular C. T., or cartilage, or bone—or bone may be replaced by dentine. (3) *Pathological.* It is found that in morbid changes nearly every member of the C. T. group may be replaced by nearly any other, either by metamorphosis or by reconstruction from the offspring of the original tissue. The C. T. group form a framework for supporting the other tissues, such as vessels, glandular cells, muscular fibres, and nerves. In disease, as has been shown by Virchow, the great German pathologist, the C. T. group is often the most active tissue of the body, and many luxuriant growths and tumors may be traced to it. According to Frey, an authority in matters relating to minute structure, the histological characters of the group of connective tissues are—The embryonic rudiments consist of aggregations of spheroidal formative cells, having no membrane, and enclosing nuclei. A soft, homogeneous intercellular matter of albuminous character is formed between these cells. In course of time the cells as well as the intercellular substance undergo changes. The intercellular matter divides into fibrous masses or fibrillæ, while the cells become short and stunted, or may unite together by long processes so as to form a delicate network. Sometimes calcification, or a deposition of earthy salts, chiefly those of lime, occurs in the intercellular substance. Coincidently with those histological changes, chemical metamorphoses also occur—the albuminous matter of an early period giving place to mucin, chondrin, or elastic matter.

CONNERSVILLE, in Fayette Co., Ind., on the White Water River, at the junction of the Cincinnati, Hamilton & Indianapolis and the Fort Wayne, Muncie & Cincinnati railroads, 65 miles from Cincinnati. It is extensively engaged in manufacturing, and is the center of a large local trade. Population, 4500.

CONSOL'IDATED FUND. The aggregate produce of the branches of the public revenue of the United Kingdom is paid into the Bank of England to the credit of what is called the C. F. It is chargeable with the interest of the national debt, and it is mortgaged for payment of a yearly sum to maintain the Civil List.

CONSTABLE, JOHN, an English landscape-painter, was born in the village of East Bergholt, England, in 1776. The son of a proprietor of several mills, he was engaged about his sixteenth year in learning the miller's business, but his father's scheme that he should inherit the mills was frustrated by his desire to become a painter. After receiving lessons from Reinagle, he was admitted a student at the Royal Academy, 4th February 1799. Many years elapsed before the charming simplicity, freshness, and fidelity of his art met with appreciation, but eventually the tide of fame set in, and he was elected an Academician in 1829. He resided latterly at Hampstead Heath, and died suddenly at 35 Charlotte Street, Fitzroy Square, 30th March 1837. Three of his finest works are 'The Corn-Field' (National Gallery), 'The Glebe Farm' and 'Dedham Vale.' His art, says Ruskin, is 'original, honest, free from affectation, and manly in manner.'' See *Life*, by C. R. Leslie, R.A. (Lond. 1843), and a letter by C. G. Constable, son of the painter, in the *Academy*, January 20, 1877.

CONSTANCE, COUNCIL OF, was held at the town of C. during the years 1414–18. Its professed purpose was to bring to an end the 'great schism' in the Church, and to make a clean sweep of all ecclesiastical abuses. The council, reluctantly summoned by Pope John XXIII., who foresaw the fate that awaited him, was attended by an immense number of dignitaries. Besides the Pope himself and the Emperor Sigismund (the famous *super-grammaticam*), there were present 26 princes, 140 counts, more than 20 cardinals, 7 patriarchs, 20 archbishops, 91 bishops, 600 other prelates and doctors, and about 4000 priests. The three rival Popes of the time—John XXIII., Gregory XII., and Benedict XIII.—were deposed, and a new Pope, Martin V., was elected. Before this election, however, took place, the council formally declared itself the supreme judicial and legislative authority in the Church, but its projected 'reforms' were indefintely postponed; for Martin V., a few months after his election, dissolved the council in alarm, lest his power should be lessened by its pretensions. The discussion of ecclesiastical reforms was first resumed at the Council of Basel. How little this splendid—or perhaps one had better say *showy*—assembly really cared for the advancement of learning or the cause of truth, is seen in the iniquitous trial of John Huss and Jerome of Prague on charges of heresy. Among their bitterest enemies were some of the leaders of this *quasi*-reforming council, which is more likely to be remembered with abhorrence for the burning of the Bohemian Reformers, than with respect for its insincere and impotent schemes for the purification of the Church.

CONSTITUTION, DECREE OF, a term of Scotch law usually applied to those decrees which are requisite to found a title in the person of the creditor in the event of the death of the debtor. But every decree by which the extent of a debt or obligation is ascertained is a D. of C.

CONSTITUTIONS, PROVINCIAL, were decrees made in the provincial synods held under various Archbishops of Canterbury, from Stephen Langton under Henry III. to Henry Chichele under Henry V. The last were adopted by the province of York in the reign of Henry VI.

CONSTITUTION, OF THE U. S., AMENDMENTS TO. The system of government contained in the Constitution of the U. S. will be found outlined under the title UNITED STATES in Chambers' En., and it is purposed here to add only those amendments that were the immediate result of the war between the North and South. They are as follows:

ARTICLE XIII., *Section* 1.—Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

Section 2.—Congress shall have power to enforce this article by appropriate legislation.

ARTICLE XIV., *Section* 1.—All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States, and of the state wherein they reside. No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any state deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

Section 2.—Representatives shall be apportioned among the several states according to their respective numbers, counting the whole number of persons in each state, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, representatives in Congress, the executive and judicial officers of a state, or the members of the legislature thereof, is denied to any of the male inhabitants of such state, being twenty-one years of age, and citizens of the United States, or is in any way abridged, except for participation in rebellion or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such state.

Section 3.—No person shall be a senator or representative in Congress, or elector of President and Vice-President, or hold any office, civil or military, under the United States, or under any state, who, having previously taken an oath as a member of Congress, or as an officer of the United States, or as a member of any state legislature, or as an executive or judicial officer of any state, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may, by a vote of two-thirds of each house, remove such disability.

Section 4.—The validity of the public debt of the United States authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion shall not be questioned. But neither the United States nor any state shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations, and claims shall be held illegal and void.

Section 5.—The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

ARTICLE XV., *Section* 1.—The right of the citizens of the United States to vote shall not be denied or abridged by the United States, or by any state, on account of race, color, or previous condition of servitude.

Section 2.—The Congress shall have power to enforce this article by appropriate legislation.

The preceding amendments were adopted as follows: the 13th in 1865, the 14th in 1868, and the 15th in 1870. See UNITED STATES in Chamber's En.

CONTRABAND GOODS are goods imported or exported without paying legal duties—against the 'ban' or proclamation of law. When the buyer of C. G. knows them to be contraband, he has no claim for delivery, nor action of damages for breach of contract. Nor is an action competent on a bill of exchange granted for C. G. in the hands of a drawer, or of his trustee.

CONTRACTILITY is a vital property manifested by certain living substances both in the vegetable and animal kingdoms. By virtue of this property, these substances change their form, push out and retract processes, and they may also move from place to place. It is manifested by all living protoplasm, whether obtained from vegetable or animal living forms. It is seen in many of the humbler forms of life among the protozoa, in the colorless blood corpuscle, in the spermatozoon, in the cilium, in muscular fibre, and in minute capillary vessels. At one time it was supposed that the C. of muscular fibre depended on the nervous system. The old view of Haller, however, is that generally adopted by physiologists—namely, that C. is a property inherent in the ultimate elements of muscular tissue.

CONTRIBU'TION, in its legal sense, is generally applied to contributions made for equalizing loss incurred by sacrifice made for the common safety in a sea-voyage.

CONULAR'IA, an extinct genus of Pteropodous mollusca, remarkable for its large size as compared with living Pteropods. Specimens of the fossil shells of C., of which eighty-three species are enumerated by Barrande, chiefly from Palæozoic rocks (beginning with Silurian formations), may attain a length of a foot, and a breadth of over an inch. The genus also extends into the Mesozoic rocks, and seems to die out in the Lias. The shell is straight, tapering at the end, of four-sided form, with its surfaces striated. Occasionally its cavity may be divided internally. *C. ornata* from the Devonian rocks is a familiar species.

CONVEN'TIONAL OBLIGA'TION is, in Scotch law, an obligation resulting from agreement. The term is generally used in contradistinction to *natural* or *legal* obligation, which arises from the operation of law independently of contract.

CONVEN'TION OF ESTATES. In Scotland, before the Union, a C. of E. of the kingdom used to be summoned to impose taxes in any emergency. These conventions were formed by any members of the three Estates of the Kingdom who could be quickly assembled, and without the formal citation required in summoning a regular Parliament. The power of the Convention was limited to the disposal of the special business for which it was convened. Regularly the Estates could be convened only by royal authority; but when necessary, they met without it, as in the Convention for settling the government at the Revolution of 1688.

CO-OB'LIGANTS, though each bound to a creditor for the whole of a debt, are liable proportionably amongst themselves; and any one paying more than his share is entitled to relief from the rest.

COOK, CLARENCE CHATHAM, an American writer, born at Dorchester, Mass., Sept. 8, 1828, and graduated from Harvard College, in 1849. He has attained high reputation as a journalist and art-critic, and has published *The Central Park* and other works.

COOK'IA, a genus of plants of the natural order *Aurantiaceæ*, named in honor of Captain Cook. The fruit of *C. punctata*, the *wampee* of China and the Indian Archipelago, is greatly esteemed.

COOK'S INLET, a gulf on the N.W. coast of N. America, territory of Alaska, about 60 miles wide at its entrance, and penetrating 200 miles into the interior. It is named after Captain Cook, who explored it in 1778.

COOPER, PETER, an American philanthropist, was born in New York, Feb 12, 1791. About 1828 he engaged in the business of glue and isinglass, and in 1845 he erected large mills in Trenton for iron-rolling. The fortune which C. acquired in business he has liberally used for the public good. Feeling a deep interest in the welfare of the working classes, he erected the *C. Institute* in a central part of New York city. It cost $400,000, and this building, with all its profits and rents, is devoted to the education of the people. It includes a free reading-room, school of design, galleries of art, and evening classes. Died in N. Y. city, April 4, 1883.

CO'PING, in building, the capping or covering course of a wall, which may be flat, or it may be sloping or round, to throw water off. The term *cops* is sometimes applied to the merlons, or rising parts of battlements.

COPROS'MA, a genus of shrubs belonging to the natural order *Cinchonaceæ*, deriving their name from their very fetid odors. The leaves of *C. fœtidissima* are used in diving the will of the gods by the New Zealand (Maori) priests. See Bennett's *Gatherings of a Naturalist in Australasia*.

COR'ALLIN, a red coloring matter, first obtained in 1861 by the German chemists Kolbe and Schmitt, by heating phenol with sulphuric and oxalic acids, and now extensively prepared as a commercial product, under the names of *Aurin* or yellow C., and *Peonin* or red C. The constitution of these dyes is complex and slightly different. Aurin yields peonin on being heated with alcoholic ammonia. Yellow C. forms a stable lime-lake with excess of lime, and is employed largely by paperstainers. Red C. is much used for printing fabrics and dyeing wool, but the color fades into yellow in contact with acids, unless an alkaline body be mixed with the dye. By the use of calcined magnesia in an alcoholic or aqueous solution of red C., a rich and durable Turkey red is obtained.

CORAL ROOT, the common name for *Corallorhiza*, though sometimes applied to *Dentaria bulbifera*.

COR ANGLAIS, a species of bass oboe, not now used in the orchestra.

COR'DIA, a genus of plants comprising nearly all of the *Cordiaceæ*, and containing upwards of 180 species, mostly trees or shrubs. The fruits of *C. latifolia* and *C. Myxa* of India are succulent, mucilaginous, and emollient, and are accordingly eaten. Under the name of *Sebestens* or *Sebesten-plum* they have been employed in chest-complaints as pectoral medicines, a use to which those of *C. Abyssinica* (Wanzey) are also applied in Abyssinia. Those of *C.* (*Varronia*) *rotundifolia* are used to fatten cattle. The bark of *C. Myxa* is used in India as a tonic, and for making astringent gargles. Its wood is said to have been that employed by the Egyptians to make their mummy cases. That of *C. Rumphii* is brown veined with black, and smells of musk. From *C. Gerascanthus* is obtained the dark-brown-veined and fine-grained timber known in commerce as Spanish elm, Prince wood, or *Bois de Chypre* of the W. Indies. Anacahuite wood, imported a few years ago as a tonic, &c., is obtained from *C. Boissieri*.

COR'DICEPS, a genus of fungi which grows on dead leaves, decaying branches, ergoted seeds, and upon the pupæ and larvæ of insects. *C. Robertsii* grows upon the caterpillars of a species of New Zealand *Hepialus*. One species attacks wasps in the W. Indies, and attains a considerable size before the insect dies. The Chinese sell *C. Sinensis* in little bundles, under the belief that it is a drug possessing medicinal properties.

COREOP'SIS (Gr. 'maiden's eye'), a genus of American Herbaceous plants, belonging to the order *Compositæ*, containing several species. The flowers of *C. verticillata*, a shrubby perennial species, are used in N. America to dye cloth red.

CORIAR'IA, a genus of shrubs, by some considered the type of a separate order (*Coriariaceæ*), consisting of eight species. It is most nearly allied to *Ochnaceæ*, but its affinities are by no means well understood. They are natives of the S. of Europe, Chili, Peru, New Zealand, and one (*P. Nepalensis*) is found in Nepal. The fruits of the latter species, as well as those of *C. sarmentosa* of New Zealand, are eaten, but the genus generally is regarded with suspicion, the seeds of *C. sarmentosa* (the 'wine-berry' shrub) being poisonous, though the pericarp of the fruit is wholesome. An agreeable 'wine' is made from it, which tastes like that made from elder-berries. The seeds, however, cause convulsions and delirium, which often end fatally. Sheep are frequently poisoned by eating the plant. The fruit of *C. myrtifolia*, a European species, is said to have proved fatal to some French soldiers who partook of it in Catalonia. The leaves have been used to adulterate senna, and have caused tetanic convulsions in those who have partaken of the adulterated drug. They owe their poisonous properties to a glucoside called *coriamyrtine*. C. is also used in dyeing black.

CORINTH, BATTLE OF, an engagement of the civil war, on Oct. 3 and 4, 1862, between a Confederate force under Gen. Van Dorn, and a Union force under Gen. Rosecrans, near the village

of Corinth, Alcorn Co., Miss. There was severe fighting on the 3d, and on the 4th a desperate but unsuccessful assault was made all along the Union lines. The Union loss was about 2000, and that of the Confederates much greater.

CORK, KORKER, or KORKALETT, a name applied in the Highlands of Scotland and in Shetland to a lichen *Lecanora tartarea*, which, according to Dr. Lauder Lindsay, is made into a domestic dye 'by macerating the powdered lichen for some weeks in putrid wine, with the addition of kelp or salt, and when the requisite crimson or purple tint is obtained, forming the paste into balls or lumps with lime or burnt shells, and hanging it in bags to dry. When used, it is powdered, and then boiled in water with a little alum' (Berkeley).

CORN BRUISER, a machine for bruising oats and other grain for horses, cattle, sheep, and pigs, consisting of an iron frame, underneath which encased is a fluted barrel, the edges of whose grooves are sharp. These, when turned, press the corn against a resisting iron surface, and speedily bruise it to any form desired.

CORNELL COLLEGE, an American education institution, at Mount Vernon, Ia., under the control of the Methodist Church. It was founded in 1850, has a small endowment, and co-education of the sexes is practised.

COROLLIFLO'RÆ, a subdivision of Dicotyledonous plants, in which the stamens are usually inserted (or seem to be inserted) in the corolla, and in which the corolla is gamopetalous, and inserted below the ovary. The heaths, *Labiatæ*, &c., are examples.

COROMAN'DEL, a peninsula in the N. island of New Zealand, 30 miles E. of the town of Auckland. It is traversed by a rocky range of hills in which gold is found, and has been worked for a number of years. The yield is fluctuating, but has reached 16,000 oz., worth £50,000, in a year. Kapanga, the principal township, is a thriving little place.

COR'ONACH, properly *Coranaich* (Gael. *Co-ranaich*, 'roaring or howling together'), a term now applied almost exclusively to a wild lament, consisting partly of inarticulate wailing, with which the Irish and the Scottish Highlanders gave expression to their sorrow for the death of a friend. It was chanted, like the Latin *ululatus*, over the dead body, but the custom is now abandoned. The word C. has long been familiar to the Lowland literature of Scotland—*e.g.*,

> 'Cryand for you the cairfull *corrinoch*.'—Lyndsay.
> 'Be he the *correnoch* had done shout.'—Dunbar.
> 'The *cronach's* cried on Bennachie.'—Scott, *Antiquary*.

It is now passing into English. Thus Tennyson, speaking of the wild-swan's death-song—

> ——'The coronach stole.
> Sometimes afar and sometimes anear.'

COR'PORA LU'TEA, a name given to peculiar appearances seen in the ovary after the extrusion of an ovum from a Graafian vesicle.

CORPUS CHRISTI, a town of Nueces Co., Tex., on a bay of the same name, near the mouth of the Nueces River, 230 miles S. of Galveston. It is the terminus of the Mexican National Railway; has a good harbor and carries on a considerable commerce. Population, 3500.

CORR'EA, a genus of Rutaceous shrubs, natives of Southern and Eastern Australia, where they are known as 'native fuchsias.' The leaves of some of them are used as a substitute for tea.

CORSICANA, in Navarro Co., Tex., at the junction of the Texas & St. Louis and the Houston & Texas Central railroads. It is in the heart of a great cotton and wheat belt, and carries on an extensive trade with the surrounding country. Population, 5500.

CORSICAN MOSS, a name applied to *Gracilaria* (*Plocaria*) *Helminthocorton*, a species of seaweed which has been used as a vermifuge, though it is dubious whether its virtues have not been over-estimated. According to Mr. Berkley, *Laurencia obtusa*, another seaweed, forms the greater part of what is sold in the shops as C. M.

CORTI, ORGAN OF, one of the delicate apparatuses found in the internal ear in connection with the terminations of the auditory nerve, discovered by the Marquise di Corti, an Italian nobleman, and hence named after him.

CORTLAND, a beautiful town of Cortland Co., N. Y., on the Syracuse, Binghampton & New York Railroad, at its junction with the Utica, Ithaca & Elmira and the New York, Ontario & Western railroads, 37 miles from Syracuse. Population, 5500.

CORWIN, THOMAS, a distinguished American statesman, born in Kentucky, July 29, 1794, and early in life removed to Ohio, where he began to practice law, in which profession he rapidly rose to distinction. He was elected to Congress in 1830, Governor of Ohio in 1840, and to the U. S. Senate in 1845. He was Secretary of State under President Fillmore in 1850, and was subsequently Minister to Mexico. He was a member of the Whig party during the greater part of his life, and was distinguished for brilliancy in debate. Died Dec. 18, 1865.

CORYNOCAR'PUS, a genus of New Zealand trees, belonging to the natural order *Myrsinaceæ*, one of which, *C. levigatus*, is cultivated in Great Britain. The fruits and seeds of this tree are valued as articles of food by the natives. The seeds contain a farinaceous substance which renders them nutritious, but if eaten before being steamed for at least twenty-four hours, and then being either buried in the ground or allowed to soak in water for some days, they are poisonous, producing partial paralysis, spasmodic pains, and giddiness.

COSCIN'IUM, a small genus of plants belonging to the natural order *Menispermaceæ*. The wood, bark, and roots of *C. fenestratum* of Ceylon are valued as stomachics and tonics. The wood has been imported and sold as the true Calumba-root (Bentley); it contains *berberia*, and yields a yellow dye.

COSMORA'MA (Gr. *kosmos*, 'order,' 'ornament,' and *horao*, 'I see'), an exhibition of pictures of different parts of the world, which are placed horizontally on a table, reflected by mirrors leaning diagonally opposite them, and looked at through a convex lens in front of each mirror. The pictures are illuminated by lights so placed as not to be reflected by the mirrors.

COTTON-SEED OIL, a secondary product of the cultivation of cotton, of considerable value, is found in the oil obtained by expression from the seeds. The seeds are treated in the same manner as linseed, and yield a brownish fluid oil used for general purposes. The oil-cake of cotton-seed is a valuable cattle-feeding substance.

COTTON-WEED (*Diotis maritima*), a plant belonging to the natural order *Compositæ*, a native of the S.-E shores of Europe and of N. Africa. It gets its name from its leaves being clothed with dense greyish hairs, which look like wool.

COUE'PIA, a genus of plants of the natural order *Chrysobalanaceæ*, comprising about a dozen species, all natives of S. America. The fruits of many of them are eaten—*e.g.*, that of *C. Chrysocalyx*, planted near the villages of the Amazonian Indians. The Indians use the bark of *C. Guianensis* in the manufacture of pottery.

COUNCIL BLUFFS, a flourishing city of Western Iowa, about four miles E. of Omaha. It has fine public buildings, extensive manufactures, and is rapidly growing in population and importance. Population 22,000.

COURT OF JUDICATURE, SUPREME, ACTS 1873 and 1875 (ENGLAND). The statute of 1875 is to amend and extend the Act of 1873, and is to be construed along with it, the Acts together totally changing the constitution of the supreme law courts of England. The new law came into partial operation on 1st November 1875. The constitution of a *High C. of Justice* is declared. All actions which have hitherto been commenced by writ in the superior courts of Common Law at Westminster, or in the C. of Common Pleas at Lancaster, or in the C. of Common Pleas at Durham, and all suits which have hitherto been begun by a bill or information in the High C. of Chancery, or by a cause *in rem* or *in personam* in the High C. of Admiralty, or by citation or otherwise in the C. of Probate, shall be instituted in the High C. of Justice by a proceeding to be called an *action*. There are to be divisions of the C. called the Queen's Bench, the Common Pleas, the Exchequer, the Chancery, the Probate, Divorce, and Admiralty divisions. Her Majesty's C. of Appeal is also constituted by the Acts.

There are to be five *ex officio* judges, and as many other judges, not exceeding three, as her Majesty shall from time to time appoint. The *ex officio* judges are to be the Lord Chancellor, the Lord Chief Justice of England, the Master of the Rolls, the Lord Chief Justice of the Common Pleas, and the Lord Chief Baron of the Exchequer. The Lord Chancellor may, by writing addressed to the president of any one or more of certain divisions of the High C. of Justice, request the attendance at any time, except during the spring or summer circuits, of an additional judge from such division or divisions (not being *ex officio* judge or judges of the C. of Appeal), at the sittings of the C. of Appeal, and a judge to be selected by the division from which his attendance is requested shall attend accordingly. The London C. of Bankruptcy is not to be transferred to the High C. of Justice. No appeal on a final decree is to be pleaded before fewer than three judges. If the subject of appeal is an interlocutory decree or order, it may be pleaded before two judges, but not before fewer. New regulations are made respecting circuits, and the fixing and collection of fees in the High C. and C. of Appeal. There is to be no local Venue for the trial of any action, but when the plaintiff proposes to have the action tried elsewhere than in Middlesex, he shall in his statement of claim name the county or place in which he proposes the action shall be tried, and the action shall be tried in the place named, unless the judge order otherwise.

CONTAREA. a genus of Cinchonaceous trees of Guiana, &c., the bark of one of which, *C. speciosa* (*Portlandia hexandra*), is used as a substitute for cinchona.

COV'ERTURE is a term of English and American law denoting the legal status of a woman during her marriage.

COWBIRD (*Coccyzus Americanus*), also called the American yellow-billed cuckoo, belongs to the family *Cuculidæ*, of the order Scansores, and gets it name from its note, which resembles the word *cow*. It is found in the United States, and migrates northwards in spring. Stragglers have been found in Britain. It feeds chiefly on caterpillars, but also eats various berries. The color of this bird is dark-brown with green hues. The quills of its wings are of cinnamon color, and the under parts pure white. Its average length is 12 inches.

COXE, ARTHUR CLEVELAND, D.D., a bishop of the American Episcopal Church, born at Mendham, N. J., May 10. 1818, and graduated from the University of New York in 1838. He entered the ministry in 1841, and in 1865 was made bishop of Western New York.

CRA'NIA. A genus of Brachiopodous mollusca, forming the type of the family *Craniadæ*, exemplified by many extinct and by some existing species. In this family, the animal is fixed to submarine objects by the ventral or lower valve of the shell. The arms are fleshy, and coiled spirally. No hinge or articulating processes exist. The upper valve is limpet-shaped. The shell may be smooth or striped or spinous. The genus C. is first represented in a fossil state in the Silurian rocks. *C. personata* is a living species, while *C. Ignabergensis*, of the Chalk rocks, is a typical fossil form.

CRA'NIAL NERVES. These nerves, nine in number on each side, originate in some part of the base of the brain or upper portion of the spinal cord, and pass through apertures in the floor of the skull, to be distributed to the organs of sense and other structures in the head. They are named numerically from before backwards, but certain of them have additional names, given on account of their supposed functions. They are as follows: 1st pair. *The olfactory*, distributed to the nose, and connected with the special sense of smell. 2d pair. *The optic*, passing to the eyeballs, and connected with the special sense of sight. 3d pair. Sometimes termed *motores oculorum*, nerves of motion, distributed to all the muscles which move the eyeballs, with the exception of the external rectus and superior oblique muscles. 4th pair. Termed the *pathetici*, nerves of motion, distributed to the superior oblique muscles of the eyeball. When these muscles act, the eyeball is rotated upwards and outwards, so as to give a pathetic expression; hence the name. 5th pair. *Trifacial* or *trigeminal* nerves, both motor and sensory, conferring sensibility on the skin of the face and side of the head, month, lips, cheeks, and teeth; also sending a special branch, the *lingual* of the 5th, to the anterior part of the tongue (connected probably both with taste and tactile sensibility), and, lastly, supplying the muscles of mastication. 6th pair. *Abducens*, a motor nerve supplying the external rectus muscle of the eyeball. 7th pair. Divided into two portions—(1) *The facial*, or *portio dura* of the 7th, being the motor nerve of the muscles of expression; and (2) *The auditory*, or *portio mollis* of the 7th, being the nerve of the special sense of hearing, distributed to the ear. 8th pair. This consists of three nerves—(1) *The glosso-pharyngeal*, the special nerve of taste, distributed to the posterior third of the back of the tongue. (2) *The pneumogastric*, or *par vagum*. so termed on account of its wide distribution in the neck, chest, and abdomen. This important nerve supplies both motor and sensory branches to the pharynx, motor and sensory branches to the larynx, branches to the heart, which exhibit an inhibitory or restraining action over the contractions of that organ, sensory branches to the lungs, motor and sensory branches to the æsophagus, and motor and sensory branches to the stomach. (3) *The spinal accessory*, a motor nerve, distributed to the sterno-cleido, mastoid, and trapezius muscles in the neck. 9th pair. *The hypoglossal*, a motor nerve, supplying motor power to the muscles of the tongue both intrinsic and extrinsic. Each cranial nerve has an *apparent* origin from the base of the brain, and a *deep* or real origin from grey matter in the substance of the organ. The *deep* origins of the C. N. are still imperfectly known. Details regarding these may be found in *Gray's Anatomy*, p. 495, *et seq.*

CRATÆ'VA, a genus of tropical shrubs or trees of the Cape order (*Capparidaceæ*). *C. Nurvala*, of the Malabar and Society Islands, is planted in burial-grounds as a sacred tree. Its leaves and other parts of the tree are aromatic, bitter, and stomachic. The bark of the root of the garlic pear (*C. gynandra*), so called on account of its strong smell of garlic, blisters the skin like Spanish flies.

CRATOX'YLON, a genus of bushes or small trees of the St. John's wort order (*Hypericaceæ*), natives of China, the Malaya Peninsula, Java, and neighboring islands. About ten species are described, but only one—*C. Hornschuchii* of Java, which is slightly astringent and diuretic—is known to have medicinal properties.

CRAWFORD, THOMAS. an American sculptor, born at New York, March 22, 1814. He traveled abroad, and studied under the famous Thorwaldsen. His principal works are, 'Orpheus Entering Hades in Search of Eurydice,' 'The Hunter.' 'The Babes in the Woods,' 'The Dancers,' 'Sopplio,' and 'Hebe and Ganymede.' He also executed numerous busts of distinguished men and the bronze doors of the Capitol at Washington. Died in London, Oct. 10, 1857.

CRAWFORD, WILLIAM HARRIS, an American statesman, born in Virginia, Feb. 24, 1772, removed early in life to Georgia, and began the practice of law in Lexington of that state. He was secretary of war in 1815, and secretary of the treasury from 1816 to 1825. He was a prominent member of the Democratic party throughout his entire life. Died in London, England, Oct. 10. 1857.

CREMAS'TER is a slender muscle found in the human being, investing part of the testicle and spermatic cord. It derives importance in surgery from forming one of the coverings of an oblique inguinal hernia, where a portion of bowel passes obliquely through the ring or opening through which in early life the testicle passes from the abdominal cavity into the scrotum.

CRESTON, a city of Union Co., Ia., on the Burlington & Missouri Railroad, and at the junction of the Chicago, Burlington & Quincy, the Creston & Northern, and the Kansas City, St. Joseph & Council Bluffs railroads. It contains large stock yards, an extensive railroad machine shop, and coal shoots. Pop. 9,000.

CRIS'TA, a term used in anatomy to denote a crest or ridge. Thus we have the *C. galli*, or cockscomb of the ethmoid bone, the *C. ilii*, or ridge round the rim of the iliac or hip bones, &c., &c.

CRITTENDEN, JOHN JORDAN, an American statesman, born in Kentucky, Sept. 10, 1786. Early in life he entered upon the profession of the law, and soon became prominent in politics. He was made attorney-general, by Harrison; but resigning, was, in 1842, elected to the U. S. Senate. Having resigned from the Senate, he was chosen governor of his native state, in 1848. He was again attorney-general, during Fillmore's administration, and in 1855 was once more elected to the U. S. Senate. He was an earnest opponent of the doctrine and right of secession. Died July 26, 1863.

CROCID'OLITE (Gr. 'woolly stone'), a silicate of iron, composed of separable flexible fibres like asbestos, found chiefly in S. Africa. It has a pale-blue, green, or yellowish-brown color, and when cut and polished *en cabochon*, it shows a chatoyant lustre.

CROCKETT, DAVID, born in Tennessee, Aug. 17, 1786. He became a famous hunter, and was the hero of many thrilling adventures. He served in the war against the Creek Indians, and served three terms in Congress, 1827, 1829, 1831. When Texas declared her independence, he entered her service, and was captured at the taking of Fort Alamo and, with others, brutally massacred by the Mexicans, March 6, 1836.

CROFT, WILLIAM D.MUS., one of the greatest English cathedral composers, was born in 1657, and educated under Dr. Blow, whom he afterwards succeeded (1708) in his office at the Chapel Royal, and as organist at Westminster Abbey. He received the degree of Doctor of Music from the Univerity of Oxford in 1715, and in 1724 published *Musica Sacra*, a collection of anthems,—the first music printed from engraved plates. He died in August 1727, and was buried in Westminster Abbey. His compositions are almost all anthems, very many of which are still sung frequently in English churches. In their own department they have seldom, if ever, been surpassed.

CROP. in Scotland, the landlord has a hypothec over the C. for the rent of the year of which it is the C.; and the right continues in force so long as the C. remains in the tenant's possession.

CROPP'ING, a term of the agricultural law of Scotland indicating stipulated or implied conditions of farming under a lease. What is called the *clause of management* is now generally inserted in leases. It provides, among other things, for a variety or rotation of crops. This rotation varies according to the soil, climate, and other circumstance of the farm. Even in the absence of such a clause, there is an implied obligation on the tenant to cultivate according to the rules of good husbandry. By common law a tenant is restrained from such gross mismanagement as will injure or overwork the soil. It is generally provided that white corn crops (*i.e.*, crops which are allowed to ripen) shall never be taken from the same land in immediate succession, and that a certain proportion shall be under turnips, or plain fallow, every year, and be sown to grass with the first corn crop after turnips or fallow. The clause is generally enforced by penalty in case of contravention, as to which the law is, that the tenant is not entitled to pay the penalty and to infringe the clause.

CROSBY, Howard, D.D., LL.D., an eminent American divine of the Presbyterian Church, born in New York, Feb. 27, 1826, and graduated from the University of New York in 1844. After filling various positions as teacher and pastor, he became in 1863 pastor of the Fourth Avenue Presbyterian Church in New York City, which position he continues to hold. Among other works he has published *Lands of the Moslem*, *Oedipus Tyrannus*, *Notes on the New Testament*, *Bible Manual*, and *Life of Jesus*.

CROSSOPTERYG'IDÆ, a division of Ganoid fishes, so named from the fin-rays of the pectoral and ventral fins being arranged so as to form a *fringe* around a central lobe. The living Barramunda, or *Ceratodus* of Australian rivers, shows this arrangement of the fins; whilst the *Polypterus* of the Nile, and the extinct genera *Osteolepis*, *Megalichthys*, *Holoptychius*, &c., are good fossil illustrations of the 'fringe-finned' ganoids.

CRO'TAPHITE, the name given by the older anatomists to the temporal muscle on the side of the head, from *krotaphos*, 'the temple.' The term was also applied to the temporal bones and arteries.

CROWN AGENT is the agent or solicitor in Scotland who, under the Lord Advocate, takes charge of criminal proceedings. The appointment lies with the Lord Advocate for the time and is not held *ad vitam aut culpam*.

CROZOPH'ORA, a genus of annual or perennial low-growing plants (natural order *Euphorbiaceæ*), found in tropical and Northern Africa, and extending as far as India. *C. tinctoria*, a native of the Mediterranean countries, is cultivated for the sake of the dye called *Turnsole*, which is obtained from it by grinding the plants (little herbs seldom more than a foot high) to a pulp in a mill, when they yield about half their weight of a dark-green juice, which becomes purple by exposure to the air or under the influence of ammonia. It is chiefly exported to Holland, and is prepared for exportation by soaking coarse linen rags or sacking with it, the rags being previously washed clean. After soaking they are allowed to dry, and are exposed to the influence of ammonia by being suspended over heaps of stable manure. They are then packed in sacks, and ready for shipping to Holland. Not much is known of the use the Dutch put the dye to, but it is supposed to be chiefly employed as a coloring matter for cheese, and perhaps confectionery, wine, &c. (Black in *Treas. of Botany*). It has been confounded with Litmus.

CRU'RA, a term used in anatomy to designate the roots or peduncles or supports of any structure. Thus we have the *C. cerebri*, or peduncles of the brain, the *C. cerebelli*, or peduncles of the cerebellum, the C. of the diaphragm, the C. of the *corpora cavernosa* of the penis, &c., &c.

CRURÆ'US. The great muscle in front of the thigh, which extends the leg on the knee-joint, called the *quadriceps extensor*, is a large fleshy mass which covers the front and sides of the femur, and is usually divided by anatomists into four parts: (1) One occupying the middle of the thigh, the *rectus femoris;* (2) one portion occupying the outer side of the femur, *vastus externus;* (3) a third portion covering the inner aspect of the femur, *vastus internus;* and (4) the remainder covering the middle of the femur, between the two last named—the *C.*

CRUS'TA PETRO'SA, a substance found covering the fangs of human teeth, and forming layers in some examples of more complicated teeth, as those of the elephant or horse. It is identical in structure with bone, except that in C. P. we find no Haversian canals.

CRY'ING, Physiol'ogy of. This is a modification of the ordinary movements of respiration excited by a mental emotion. Though excited by a contrary emotion, it is nearly related physiologically to the act of laughing. Frequently an individual may be between a 'laugh' and a 'cry.' In both, the muscles of expiration are convulsed, and the breath is sent out in a series of jerks through the open glottis. C., unlike yawning, coughing, sneezing, never originates in the respiratory system, but is always an expression of an emotional state, though it must be confessed that in states of great general weakness, C. may sometimes occur without any very definite emotional antecedent.

CRYPSOR'CHIS (from *krupto*, 'I conceal;' *orchis*, 'a testicle'), a condition sometimes met with, in which the testicles have not descended from the abdominal cavity into the scrotum.

CRYPT, a term used in anatomy to denote a pit or tubular depression in a mucous membrane. Thus there are the crypts of Lieberkühn, in the intestinal mucous membrane.

CU'BOID BONE, one of the bones forming the arch of the foot. It is placed on the outer side of the foot, in front of the *os calcis*, and behind the fourth and fifth metatarsal bones. Its name indicates its shape.

CUCULLA'RIS, an old term, still sometimes used, to denote the *trapezius muscle*.

CUDRA'NIA, a genus of climbing spiny shrubs of the natural order *Artocarpaceæ*, natives of the Moluccas, Philippines, India, and tropical E. Africa. The heartwood of an E. African species yields a light-yellow dye.

CUL-DE-SAC, a term used in anatomy to denote a pouch formed by the infolding of a membrane. Thus we have the *culde-sac* of the pleura, or the pouch formed by the membrane projecting into the root of the neck, so as to cover the apex of the lung in that region.

CUN'EIFORM BONES. These are three bones in the tarsus or arch of the foot, so named on account of their wedge-like shape. With the cuboid bone they form the anterior row of the tarsal bones. They are termed from their position, internal, middle, and external.

CUNONIA'CEÆ (*Ochranthaceæ*), a natural order of Dicotyledonous plants closely allied to the saxifrages. About a hundred species and twenty genera, natives chiefly of tropical regions and of the southern hemisphere, and especially of Australia, are known. *Weinmannia*, *Callicoma*, *Ceratopetalum*, and *Caldcluvia* are examples. They have astringent properties, and some have been used for tanning, while others exude a gummy excretion.

CUPA'NIA, a genus of trees and shrubs of the natural order *Sapindaceæ*, numbering about fifty species, found in most tropical countries, but most abundantly in S. America. *C. edulis*, or *Blighiá sapida*, is the Akee-tree of the W. Indies, where the negro women use the distilled water of the flowers as a cosmetic. The seeds are surrounded by a succulent, slightly acid aril, which is much esteemed as an article of food. A decoction of the seeds is said to be efficacious in diarrhœa. The lofty tulip-tree of eastern tropical Australia (*C.* or *Harpulia pendula*) has a light-colored wood, interspersed with darker-colored patches, and is valued by the cabinetmaker from its being susceptible of a high degree of polish. Dr. Sprnce mentions the curious fact that the embryos of *C. cinerea*, a Peruvian species, 'fall out of the seeds, while the outer coating or husk of the seeds, with their aril contained in the burst capsules, still remain on the trees.' The 'Loblolly woods' of Jamaica also belong to this genus.

CU'POLA, a small blast-furnace used for the re-melting of raw pig-iron, in order that it may be cast into suitable forms in the foundry.

CURA'TELL'A, a genus of small Dillineaceous trees from tropical Africa, the rough leaves of one of which (*C. Americana*) are used in Guiana for polishing.

CURCU'LIGO, a genus of herbaceous plants of the natural order *Hypoxidaceæ*, natives of S. Africa and tropical Australia and India. The roots of *C. orchioides* are used in Travancore as a native cure for gonorrhœa, menorrhægia, &c., and the fleshy roots of some species (like *C. stans* of the Ladrone Islands) are eaten. Most of the genus is bitter and aromatic.

CURD (casein of milk) is a composition similar to the fibrin of wheat, the legumen of bean and pea, and the albumen of egg. It has been suggested by Mulder—and the suggestion is generally accepted—that the cheesy matter in milk is derived directly and without much change from the food upon which the animals live. From a gallon of new milk 1 lb. of C. is produced on the average, but Alderney and Guernsey cattle will give more. According to Dr. Voelcker, the ultimate elements of C. are carbon 53·57, hydrogen 7·14, nitrogen 15·41, oxygen 22·03, sulphur 1·11, and phosphorus 0·74 per cent. Curds-and-cream form a delightful dish, for which Devonshire is specially famous.

CURIA ROMANA, or Roman (Papal) Court. Even under the Pagan Emperors the Roman Pontiffs were burthened not only with the care of the spiritual concerns of the remotest churches, but with that of their temporal necessities. Gibbon in his work on the Roman Empire, dwells at length on the solicitude shown by the Bishops of Rome in the sufferings brought by famine, scarcity, or pestilence on the Christian communities in various parts of the Empire. Diocletian, he informs us, having been applied to for a decision regarding the use of certain revenues, referred the whole matter to the pope. The administration of the Church of Rome itself, in the days when that city counted several millions of inhabitants, required a large staff of priests, deacons, and minor ministers. The Apostles during the infancy of the Church in Jerusalem and before they set forth on their separate missions, were obliged to appoint the Seven Deacons to relieve them of the mere temporal cares of the growing community. Much more must such a necessity have been felt in Rome, even under Nero and his immediate successors, and while Peter and Paul were still living or their memory was yet green in the hearts of their persecuted disciples. In Rome but little comparatively, even in these early times, was left to oral tradition. The body of Notaries or official annalists, charged with recording not only the acts (or sufferings) of the martyrs, but the principal events in the administration of each successive pontiff, continued to exist when the era of persecution had passed away, and are even now, like every institution

belonging to the Roman Church, a living corporation with well defined duties and functions. The deacons who presided in the various districts of Imperial Rome over the distribution of alms and the treasury in which were kept the voluntary offerings in favor of the poor, are perpetuated in the Cardinal-Deacons. The Priests who were at the head of the lowly churches of the great city are perpetuated in the Cardinal-Priests, and the Bishops of the suburban sees who in the age of Diocletian and Constantine beheld the superb capital extend her glittering ranks of palaces to Ostia and even to Preneste are still Cardinal-Bishops of the shrunken towns, and form the Council of the Popes to-day as they did in the evil days of old. In the time of Pope St. Damasus, as in that of St. Gregory the Great, cotemporary writers describe the immense labors incurred by the Pontiffs and the officers of their court in attending to the administration of the universal church.

As one barbarous nation after another, during the middle ages, was brought into the fold of Christianity, and elevated to such civilization as Barbarian Feudalism permitted, the responsibilities and labors of the Pontiffs went on increasing. Christian Rome was the center of missionary activity; there resided those, who, in the name of the Vicar of Christ, directed the apostolic efforts of bishops and priests in the remotest regions both in spreading the faith among the Heathen and in resisting the spread of heresy or Mohammedanism.

In Rome was also the great court of conscience to which every member of Christ's flock had access in every difficulty or doubt. There resided the successor of Peter to whom alone the Keys had been given, with the power to confirm his brethren in the apostleship, and to feed both the lambs and the sheep, the faithful and their guides. It was the seat of the teaching, the legislative, the judicial, the disciplinary authority for the whole of God's people. He who was given power to rule them in all things pertaining to salvation, must share with many every part of a solicitude which extended, in the divine plan, to the entire human race. For, even to this day, the duty of preaching the Gospel to every one of the tribes of earth, is an essential duty of the Apostolic See. And what the Pontiff endeavors, in this respect, to do through the Congregation or Board of Propaganda, he does for the other functions of his supreme office through other like Congregations or Commissions. The duties fulfilled by the various departments of State, by the legislature, the judiciary, the police, the military and civil administrations of the largest empire, kingdom, or republic on earth, fall short of the burthen imposed on the shoulders of the Pope and the Roman Curia.

The College of Cardinals comes first in order: it is the Supreme Council of the Pope, and the electoral body on whom devolves the duty of selecting the occupant of the papal chair. It contains, as such, representatives of the principal Catholic peoples. But the majority, belonging to Italy, must be near the Pope, to aid him in governing the universal church as well as the dominions, which by right belong to the Holy See, and by securing its sovereignty and independence, also guarantee the free exercise of its spiritual authority, and the free intercourse with it of every member of the wide-spread Christian family. Even the Cardinals who do not reside in Rome, are assigned to various Congregations or Boards in this vast administration, and have to perform, though at a great distance from Rome, the specific duties belonging to such Congregation.

In Rome itself every day and hour of the Holy Father, of the Cardinals residing near him, and of the necessarily great number of prelates and officials subordinate to them in the various departments, is taken up with an incessant and strictly regulated round of duties. It will be sufficient to glance at the division of labor in the Curia Romana, that army of workers who constitute the staff of the supreme shepherd of souls. The Congregations which are first in importance, because to them the Vicar of Christ commits the principal share of his office of Universal Teacher and Judge of Doctrine, are: first, the Congregation de Propaganda Fide; and next, the three Congregations of the Inquisition, Index, and Council. The Propaganda, as its name indicates, is charged with promoting the missionary work of the Church in every land, and with fostering the growth of Catholicity in non-Catholic countries. The Inquisition is the supreme court of appeal in all matters of doctrinal discussion. The Congregation of the Index watches over the dissemination of error through the press and warns the faithful against the reading of pernicious books. Auxiliary to this Congregation is the office of the Master of the Sacred Palace, whose sanction is necessary for the publication in Rome of works treating on religious subjects. The Congregation of the Council of Trent is only authorized to interpret the disciplinary decrees of that Council. Intimately connected with the functions of universal teacher are those of supreme judge and director of consciences. In the discharge of the latter the Pope is aided by the Roman Penitentiary, at whose head is the Cardinal Grand Penitentiary, who wields the pontifical authority in the court of conscience, and absolves from all cases specially reserved to the Holy See. He commutes or releases from vows and oaths, and exercises towards all the power of loosing and binding. The functions of the Congregation of Indulgences are akin to those of the Penitentiary. As Supreme Governor of all Churches throughout the world, as 'Bishop of Bishops,' the Pope is assisted by three different Congregations—those of the Consistory, of Bishops and Regulars, and of Regular Discipline. The first deliberates and decides, under the Holy Father, on the erection of bishopricks, the appointment of bishops and their proclamation; the second discusses and decides all controversies between bishops and the religious orders or regulars belonging to their respective dioceses; the third keeps watch over the religious orders themselves, judges, and checks all breaches of regular discipline, all departures from the constitution and rule of each order. Connected with the exercise of this supreme governing power in spirituals, is the Congregation on Immunities (*Congregatio Immunitatis Ecclesiæ et Controversiarum jurisdictionalium*).

This court judges all disputes regarding the right of Asylum and Clerical Immunities. But as these have almost entirely disappeared in practice, the Congregation at present busies itself with disputes between the ecclesiastical and the civil power. As to the organs of the Pontifical jurisdiction and the seats of Christian jurisprudence, the foremost is the Rota Romana, the supreme court of appeal for all spiritual causes in the Church, and the supreme court of justice and appeal for the States of the Church in particular. Its decisions were admired and respected by lawyers of every race and country. Connected with the Rota are the two Boards, the Segnatura di Giustizia and the Segnatura di Grazia. The former is a court of first instance with respect to the Rota, and takes cognizance of suits of competence, causes of nullity of marriage, demands for restitution, &c. The Dean of the Rota, the Regent of the Chancery Office, and two members of the Papal Court of Exchequer (Camera) sit on this Board. The Pope signs every sentence with his own hand. The Segnatura di Grazia hears appeals made from the preceding courts to the favor or clemency of the Pope. He always presides in person.—Public Worship is, naturally, one of the most important departments in this vast administration. Two Boards of Cardinals are charged with this matter—the Congregation of Rites and that on Ceremonies. To the former is intrusted all that relates to the proceedings for beatification and canonization. Special commissions superintend all that pertains to St. Peter's and the other great churches of Rome. The *Capella Pontificia* or the official staff which regulates the papal chapels and the worship therein together with the order of precedence in which, on solemn occasions, all the dignitaries of the universal church are placed around the Great High Priest, is another important department in the Curia.—Foremost in dignity and the veneration of Christian peoples as the Papacy has been since the formation of Christendom, the men who represented the Holy Father in his twofold supremacy of honor and jurisdiction, always had precedence of all others in foreign courts. The personage who stands next to the Pope in the Roman Court, and in the eyes of the world, is his Secretary of State, who fills the post of prime minister both in the temporal and in the spiritual administration. It is through him that the Holy See conducts all affairs of the greatest importance. For 'extraordinary ecclesiastical affairs' there is a special Congregation of 22 Cardinals, with a council of the most learned prelates in the church.

The Roman Chancery with its numerous staff of officials is closely connected with the Secretariat of State. The Chancery drafts and publishes bulls, encyclicals, &c., and is thus the organ by which the Holy Father speaks to the church. The Cardinal presiding in this department is called Vice-Chancellor of the Roman Church: it is he who governs the temporalities of the Holy See during the vacancy of the papal chair. With the Chancery is connected the Dataria, a board especially intrusted with all that concerns benefices and dispensations. The Camera Apostolica is the Treasury Department in the pontifical administration. As to the Pope's own diocese of Rome, its government is intrusted to a Cardinal Vicar, who has under him a large official staff. Besides these branches, there are special Congregations or Boards for the affairs, ritual literature of the Oriental churches, a congregation for the regulating and promoting of studies, &c., and even for the examination in theology and canon law of candidates for the episcopal office.—Most numerous on this long roll-call of the Curia, are those belonging to the Pontifical Household (*Famiglia Pontificia*), either in active service, or as honorary dignitaries. They embrace many hundreds of prelates and laymen of all nationalities. This is only a natural consequence of the place which the Bishop of Rome, as Christ's vice-gerent on earth, holds toward all peoples, and of the reverence and affection which they entertain toward him.—The ceremonial observed in the Court of Rome, the hierarchical gradation and titles of its officials, and the very costumes they wear, are of remote origin. They seem to partake of the stability and perpetuity of the Papacy itself, which existed in the Catacombs, endured Napoleon's insults at Fontainebleau, outlived empires, kingdoms, and dynasties, and can afford to wait

patiently for the changes with which the present is big. Centuries count for little in the life of the Church.

CURL, a destructive disease in potatoes—a variety of chlorosis—in which the tubers 'produce deformed curled shoots of a pallid tint, which are never perfectly developed, and give rise to minute tubers. It is supposed C. arises from the tubers being overripe.' It is a local disease, and quite unknown in many districts (Berkley).

CURSO'RES, the order of Running birds represented by the *Struthionidæ* or ostriches, rheas, emeus, and cassowaries, and the *Apterygidæ* or New Zealand *Apteryx*. This order is distinguished by the flat nature of the breastbone or sternum, by the rudimentary wings, by the length of limbs, and by their muscularity, adapting them for running. The hinder toe is wanting in all but *Apteryx;* the ostriches have two toes only, while the others have three toes. The claws are blunt nails, and the under surfaces of the toes are broadened to form soles in running. The barbs of the feathers are unconnected and loose. The pelvis (as in the ostriches) is unusually strong and firm, and in these latter birds the pubic bones unite to form a *symphysis*—a conformation seen in no other bird. The C. correspond to Huxley's division *Ratitæ*, or those birds with flat shield-like breastbones.

CURTIS, GEORGE WILLIAM, a well-known American writer and public speaker, born at Providence, R. I., Feb. 24, 1824. He studied in Europe, and returning to America, devoted himself to literary pursuits. For a number of years past he has been editorially connected with the publications of the Harpers in New York. Among his published works are the following: *Nile Notes of a Howadji* (1851), *The Howadji in Syria* (1852), *Lotus Eating* (1852), and *Potiphar Papers* (1854). Mr. Curtis is a polished writer and a brilliant orator.

CURTIS'IA, a genus of *Cornaceæ*. *C. faginea* of S. Africa furnishes the wood from which the natives make their spear or *assagay shafts;* hence the tree is usually called Assagay-tree or Hassagay-wood.

CUR'WEN, THE REV. JOHN, founder of the Tonic Sol-fa method of teaching music, was born at Heckmondwike, Yorkshire, in 1816, and educated at Coward College and University College, London. He became an Independent minister in 1838, and a few years afterwards his attention was called to the subject of teaching children music in connection with his Sunday-school. In 1841 he visited Miss Glover's school at Norwich, and afterwards tried her system with some success. His own notation and system he developed gradually from this time, without any idea at first of the revolution it would effect in the matter of musical education. C. became pastor of the Congregational church at Plaistow, Essex, in 1844, and retained his charge until failing health and the growing cares of his musical work, which he felt it his duty to carry on, compelled him to resign it in 1865. He became (1876) President of the Tonic Sol-fa College, an institution founded by him in 1862 to grant certificates of proficiency in music and promote musical culture. C. devoted most of his time to the duties of this office, to the publication of the *Tonic Sol-fa Reporter*, and to spreading the knowledge and love of music among the people.

His works include a *Grammar of Vocal Music*, a number of courses of lessons and exercises in choral singing adapted to different classes, a book on analytical harmony, *How to Observe Harmony*, *Commonplaces of Music*, *Lectures on Psalmody*, &c.

CUSHING, CALEB, LL.D., an American orator and jurist, born at Salisbury, Mass., Jan. 17, 1800, and educated at Harvard College. He allied himself with the Whig party, and soon gained distinction as an eloquent debater. In 1835 he was elected to Congress, and was three times re-elected. In 1841 he left the whigs and joined the Democratic party. Raising a regiment at his own expense, he served during the Mexican war with the rank of colonel. From 1853 to 1857 he served in the cabinet of President Pierce as Attorney-general. In 1871 he was appointed with two others to represent the U. S. government before the Alabama-claim arbitrators, at Geneva, Switzerland, and in 1873 was made minister to Spain. Died at Newburyport, Mass., Jan. 2, 1879.

CUSHMAN, CHARLOTTE SAUNDERS, an American actress, born in Boston, July 23, 1816. She at first appeared before the public as a singer, but, in 1835, losing her voice, she began her dramatic career. In the character of 'Lady Macbeth,' she met with great success, and soon became famous as a *tragedienne*. C. was also noted for the purity of her private life and her general culture. She moved in the most refined social circles and was respected by all. Died at Boston in 1876.

CUSTER, GEORGE A., an American general, born in Ohio in 1840, and graduated from West Point in 1861. He served with gallantry during the civil war, participating among others in the following engagements: Bull Run, Yorktown, South Mountain, Antietam, Gettysburg, Wilderness, Cold Harbor, Opequan, Cedar Creek, and Appomattox. He was rapidly promoted from position to position, and at the close of the war was brevet major-general, and in 1866, lieutenant-colonel U.S.A. In 1873, he commanded the Yellowstone Expedition. On June 25, 1876, in an attack on the Sioux Indians, on the Little Big Horn River, he was killed with his entire detachment, including 13 officers and more than 200 men. He wrote *Life on the Plains* (1875).

CUTIS VERA, the true skin, covered by the epidermis, and resting on close connective tissue, in the meshes of which there are often numerous fat cells.

CUYLER, THEODORE LEDYARD, D. D., a distinguished American clergyman, born in Aurora, N. Y., Jan. 10, 1822, and graduated from Princeton College in 1841, and from Princeton Seminary in 1846. After filling pastorates in Trenton, N. J., and New York, he was called to the La Fayette Avenue Presbyterian Church in Brooklyn, which under his ministrations has grown to be one of the largest churches of that denomination in the world, and where he still remains. He has published several works of devotional character, and has written much for the religious press.

CYCLO'PIA, a genus of S. African shrubs of the order *Leguminosæ*. The leaflet of *G. genistoides*, a plant cultivated in greenhouses, is called the 'bush tea,' from its agreeable tea-like smell. A decoction of it is used as an expectorant in chronic catarrh and consumption.

CYM'OPHANE (Gr. *kuma*, 'a wave,' and *phaino*, 'I appear'), a variety of Chrysoberyl, which shows a milky opalescence or 'wave of light,' and is much prized, when cut *en cabochon*, by jewelers, who call it *opalescent chryosolite*.

CYM'RIC, or KYM'RIC, LANGUAGE AND LITERATURE. The Cymric, as well as the Gaelic branch of the Celtic language, shows the peculiar characteristic, the *differentia*, of the Celtic—*i. e.*, changes on the beginning as well as on the ending of its words; but though these changes differ so much in each of the dialects into which Cymric is subdivided as to warrant their being classed separately, the general resemblance of the laws which regulate them is sufficiently strong to prove them all to be of one family. See Rhys's *Lectures on Welsh Philology* (Lond. 1877).

The Cymric is divided into three branches—Welsh proper, Cornish, and Breton or Armoric. The English public knew almost nothing of any literature contained in these languages until Edward Lhuyd, an accomplished scholar, published in 1707 his *Archæotogia Britannica*, showing that in Welsh many ancient treasures were preserved. His work excited very little attention at the time. In 1764 the Rev. Evan Evans, and twenty years later E. Jones, Esq., published specimens of the old poems of Wales, accompanied with English translations. Two Scotchmen, Laing and Pinkerton, who had taken a very prominent part in denouncing the Gaelic Ossian as a forgery, denounced the Welsh bards in the same style, and were listened to, although they were profoundly ignorant both of Gælic and of Welsh. Sharon Turner answered them with considerable ability in his *Vindication of the Genuineness of Ancient British Poems* (1803). In 1801 Owen Jones, a native of Myvyr, in Wales, who devoted much time and money to the illustrating of his country's literature, published a collection of great extent and value under the title of *The Myvyrian Archæology of Wales*. Two accomplished writers, Mr. Stephens (*Literature of the Kymry*, 1840), and Mr. Nash (*Taliesin, the Bards and Druids of Britain*, 1858), labored hard to prove that the great majority of poems published by him are spurious, while they admitted a few to be genuine and ancient.

The question, however, has been conclusively disposed of by Mr. W. F. Skene, who in 1868 published the *Four Ancient Books of Wales*, with a translation and a learned and exhaustive dissertation. He assigns the poems ascribed to the four great bards, Taliesin, Aneurin, Llywarch Hen, and Myrddin, to the 7th c., and considers that they were written down at various periods from the 12th to the 15th centuries. There are no traces of poetic composition from the 7th to the 12th centuries preserved, but during the next two centuries great literary activity manifested itself both in N. and S. Wales, and the writings of no fewer than seventy-six authors are handed down in circumstances which forbid any question of their genuineness.

It is worthy of remark that, in the old poems, Arthur is spoken of without romance or extravagance as the Guledig, or war-leader, who fought many successful battles against the enemies of his country, while in the later ones the popular romances concerning him are found full-blown. Much of the Welsh literature is of great historical value, and the Welsh deserve praise beyond any of their Celtic cousins elsewhere for still publishing newspapers and periodicals in their native tongue.

Little need be said of the Cornish dialect of the Cymric. It was spoken in Cornwall until after the middle of last century. The English has, however, entirely displaced it, and it is chiefly through the *Archæologica Cornu-Britannica* of Dr. Pryce, published in 1790, that a knowledge of it must now be sought.

The Armoric or Breton is still spoken by a numerous people in the N. of France, and is much better known.

CYST'OLITHES (Gr. 'bladder-stones'), clusters of crystals found in the superficial cells of nettles and some other species of the order *Urticaceæ*, and various genera of *Acanthaceæ*, &c. They are globular or club-shaped and of various other forms, usually hanging by a short stalk in an enlarged cell; their principal mass is found to be cellulose, but their surface is studded with crystalline points of carbonate of lime.' The crystalline contents of the cells are enclosed by the general cell-wall, and by a very delicate organic covering closely applied to every part.

CYT'OPLASM is a semi-fluid molecular material in which cells may originate or grow.

D.

DACTYLORHIZ'A, a disease of carrots, turnips, and other agricultural plants, in which the root divides and becomes hard and worthless. It is commonly called 'fingers and toes.' Mr. Berkley thinks that it is not properly a disease, but only a tendency in the plant to revert to the wild state, and can only be remedied by a careful selection of seed. It must be distinguished from 'anbury,' which is caused by the attacks of insects.

DAG'OBERT, I., surnamed the Great, one of the Merwing kings of France. He was born about 600; succeeded his father, Hhlotar II., in 628; warred successfully against Gascons, Bretons, Saxons, and Slavonians; first opposed and then favored the clergy; reformed the Frankish laws; died at Epinay, and was buried at St. Denis, in 638. He was an able but a cruel and licentious king. He is said, after conquering the Saxons, to have caused all those whose stature was greater than the length of his sword to be slain.

DAHLGREN, JOHN A., an American naval officer, born at Philadelphia, Pa., Nov. 13, 1809, and entered the U. S. Navy in 1826. At the outbreak of the civil war, he had attained the rank of commander, and in 1862 was made captain. In 1863 he was placed in command of the South Atlantic squadron, engaged in blockading the Confederate ports of that section. In connection with the land forces, under Gen. Gillmore, he captured Morris Island, silenced Fort Sumter, secured an anchorage for Union vessels in Charleston harbor, and checked the blockade-running that had been carried on from that port. In 1863 he was made rear-admiral. Died at Washington, D. C., July 12, 1870.

DAILLÉ (Lat. *Dallæus*). JEAN, a Frence Protestant theologian, born at Chatelherault, 6th January 1594. After finishing his studies at Saumur, he was intrusted in 1612 with the education of the grandsons of Duplessis-Mornay. In 1625 he was appointed pastor and professor at Saumur; the following year he was translated to Paris, where he was a pastor for forty-three years. D. died April 15, 1670. Among his warmest friends were Conrart and Balzac. His masterpiece is his *Traité de l'Emploi des Saints Pères pour le Jugement des différends qui sont Aujourd' hui en la Religion* (Gen. 1632; Eng. trans. 1651), in which he did much to shatter the authority of the fathers. Among his other writings may be mentioned his *Apologie pour les Églises Réformées* (1633; Eng. trans. 1653, and *La Foy fondée sur les Saintes Écritures* (Char. 1634), and 20 vols. of sermons. Even his adversaries admit his important services to the history of the Church by his learned researches into church antiquities. See *Abrégé de la Vie de Daillé, avec le Catalogue de ses Ouvrages*, by his son, Adrien Daillé (Gen. and Par. 1670).

DAILY COUNCIL was the court which, in Scotland, immediately preceded the institution of the College of Justice, and from which the present court derives its title of 'Council and Session.'

DALHOU'SIE, FOX MAULE RAMSEY, EARL OF, was born at Brechin Castle, April 22, 1801. He entered the 79th Highlanders in 1819, and, after serving in Canada under his uncle the Earl of Dalhousie, retired as captain in 1831. In 1835 he entered Parliament for Perthshire as a Whig, and sat for this county for two years, and subsequently for the Elgin Burghs (1830–41) and for the city of Perth (1841–52). In 1852 D., hitherto known as Fox Maule, on the death of his father became Baron Panmure, and filled in succession the offices of Under-Secretary for the Home Department, Vice-President of the Board of Trade, President of the Board of Control, and Secretary at War (1855–58). His conduct in the latter post, during the war with Russia, excited a good deal of criticism. D. retired from political life in 1858, when Lord Palmerston resigned. In 1860, on the death of his cousin the Marquis of D., he succeeded to the title of Earl.

DALLAS, ALEXANDER JAMES, an American statesman, born in the island of Jamaica, June 21, 1759. Early in life he removed to Philadelphia, Pa., where he entered upon the practice of law. He was secretary of the treasury under Madison, and was the projector of the U. S. Bank. Died Jan. 16, 1817.

DALLAS, a city of Dallas Co., Tex., on Trinity River, 215 miles N.-E. of Austin. It is the central commercial city of Texas; is surrounded by a wheat and cotton growing country, containing mines of coal and copper; and carries on manufactures. Pop. 20,000.

DAL'TONISM. Certain individuals are more or less deficient in the power of discriminating colors. This is D., from the name of the distinguished chemist who was himself the subject of it. It is sometimes termed color-blindness. The most common form of D. is an inability to distinguish red from green,—thus ripe cherries can be distinguished from the leaves of the tree only by their form. In other cases blue and green are confounded. In most cases, the color-blindness is for the red rays. Frequently low tones of color give rise to the same sensation as certain mixtures of black and white—producing grey. D., in all probability, depends on some peculiarity of the structure of the retina. It is well-known that the periphery of the retina shows defective perception of the different colors—red appearing grey; green, blue; green, yellow, &c.; and it would appear that D. is 'only an extension of the want of perceptivity, normal in the periphery of the retina.'

DALY, CHARLES P., LL.D., an eminent American jurist, born in New York City, Oct. 31, 1816, and began the practice of law in 1839. In 1845 he was made a judge of the Court of Common Pleas in New York, and in 1857, was made chief judge of that court, which position he still continues to hold. He has been for a number of years president of the American Geographical Society.

DALZIEL', THOMAS, of Binns, W. Lothian, a Scottish general, born about 1599. He took the royal side in the civil war, and held the town of Carrickfergus for the King; was a major-general at Worcester, where he was captured, but escaping from prison, he entered the service of the Czar of Muscovy, and distinguished himself in the wars against the Turks and Tartars. In 1665 he returned to Scotland, and was appointed commander-in-chief of the forces there. On the 28th of Nov. 1666 he suppressed a rising of the Covenanters at Pentland, with more humanity than might have been expected from a man of his ferocity of temper, intensified by Russian service and a fanatical loyalty to his King. After the execution of Charles I. he never shaved his beard, which grew down to his middle, and this, coupled with his antique dress, never failed to gather round him a crowd of boys when he appeared in London. D. died in 1685.

DAM'AGING MANUFACTURES, MACHINERY, or MINES. The Act 24 and 25 Vict. c. 97, enacts special penalties, ranging from two years' imprisonment to penal servitude for life, for these offences.

DAMNUM, in Roman law, signified any loss sustained in person or property. In Scotch law, *damnum absque injuria* denotes losses for which the sufferer has no legal right of compensation against the person causing his loss. Thus, where a new school is established to the detriment of one previously established, the latter sustains *damnum absque injuria*.

Damnum Fatale, a term of Scotch law denoting inevitable accident.

DAN (Heb. 'judgment') was the fifth son of the patriarch Jacob. The tribe was the most numerous of all (62,700, Num. i., 64,400, Num. xxvi.) except Judah, although the territory it received in the land of Canaan was the smallest. It was, however, the most fertile part of the country, and tempted the Canaanite

neighbors to seek to possess it, during which contest Samson appears on the scene. Perhaps on this account the tribe migrated to the N. and took possession of the town of Laish, which, under the name of D., was afterwards the northern extremity of the country.

DANA, CHARLES ANDERSON, an American editor, born at Hinsdale, N. H., Aug. 8, 1819, and was educated at Harvard College. In 1858, he became editor of the New York *Sun*, which, under his management, has become one of the leading metropolitan journals.

DAN'AVIRKE, a long wall in Slesvig, about 8 miles long, from 24 to 40 feet high, ascending from the Slei to the river Trene. Tradition says it was built in the 10th c. by King Gorm and his wife Thyra. It was restored and strengthened in 1850, but was captured by the Austro-Prussian troops in the Danish war of 1865.

DANBURY, a flourishing manufacturing town of Fairfield Co., Conn. In 1777 it was burned by the British. It has extensive hat-factories, and other important manufactures. Pop. 11,669.

DANEMO RA, a town in the province of Gothland, Sweden, 22 miles N. of Upsala, famous for its extensive iron-mines. There are seventy-nine shafts in the neighborhood, of which seventeen are worked. The iron is of the best quality, and large quantities of it are exported to England. Pop. (1874) 1089.

DANVERS, a town of Essex Co., Mass., on branches of the Boston & Maine and Eastern railroads, 16 miles from Boston. It is largely engaged in the manufacture of leather, shoes, and brick. Pop. 7000.

DANVILLE, in Montour Co., Pa., on the N. branch of the Susquehanna River. Three railroads pass through the town. It has iron works and other manufactures. Pop. 8346.

DANVILLE, in Pittsylvania Co., Va., on the Danville River, 141 miles from Richmond, and is the terminus of several railroads. It is engaged in tobacco raising, and has flour and cotton mills. Pop. 8000.

DANVILLE, in Boyle Co., Ky., on the Cincinnati, New Orleans & Texas Pacific Railroad, 113 miles from Cincinnati. It is an educational center of Kentucky, and contains one male and two female colleges, a Presbyterian theological seminary, and an institution for the deaf and dumb. It is surrounded by an agricultural district. Pop. 3074.

DANVILLE, in Vermillion Co., Ill. Three railroads pass through it, and it is the terminus of four others. It is 112 miles distant from Springfield and 125 from Chicago. It is actively engaged in coal mining, manufacturing and agriculture. Pop. 7735.

DARES, the reputed author of a pseudo-history of the fall of Troy, popular in the middle ages, and even in the 16th c. Chaucer places D., with Homer and others, on the highest pedestal in the house of fame, and refers to D., not to Homer, for the deeds of Troilus. The Greek version of D., at one time attributed to the D., priest of Hephæstus, mentioned in the *Iliad*, is supposed to have been the work of a Sophist, and was extant in the 3d c. B.C., but is now lost. A Latin prose work, *Daretis Phrygii de Excidio Trojis Historia*, has been preserved. This is either a fabrication of the 5th, 6th, or 7th centuries, or perhaps an abridgment from the Latin epic by Joseph of Exeter, who flourished about the 12th c. It was translated into French verse in the 12th c., and was first printed at Cologne in 1470. This work, which is of no value, was said to be a translation, by Cornelius Nepos, from the original Greek. It is generally printed along with Dictys' Cretensis. The best edition is by Diederich (8vo, Bonn, 1837).

DARTMOUTH COLLEGE, New Hampshire, was chartered in 1769. It grew out of an earlier Indian school, and received its name from Lord Dartmouth, president of the original trustees. In 1815–19 the college became the subject of litigation, a result of which was that the United States Supreme Court decreed the inviolability of chartered property. D. C. comprises an arts, medical, and scientific school, with an observatory. In 1870 there were 29 teachers and 289 students; in the medical department, 14 teachers and 52 students; income from endowments, $9000; other sources, $20,000.

DARTOS, a thin layer of involuntary muscular fibre, endowed with contractility, found immediately beneath the skin of the scrotum. By its contractile action the testes are drawn up, and the skin of the scrotum is wrinkled.

DAVENPORT, REV. JOHN, a distinguished Puritan divine, was born at Coventry, in England, 1598. He was educated at Oxford, became minister of St. Stephen's, London, and came over the sea with the first Puritan settlers of New Haven, Connecticut, in 1638. He remained their minister for thirty years, and died in Boston in 1670.

DAVIDSON COLLEGE, located in Mecklenburg Co., N. C., established in 1837, and controlled by Presbyterians. It maintains two courses, classical and scientific.

DAVIES, CHARLES, LL.D., an American educator, born at Washington, Conn., Jan. 22, 1798, and graduated from West Point, in 1815. He was professor of mathematics at West Point, in Trinity College, Hartford, Conn., in the University of New York, and in 1857 was made professor of higher mathematics in Columbia College. He wrote and published a complete series of mathematical text-books, which have been widely used. Died Sept. 18, 1876.

DAVIS, ANDREW JACKSON, an eminent American Spiritualist, born at Blooming Grove, Orange Co., N. Y., Aug. 11, 1826. He has published several works on Spiritualism, many of which he claims were written under the influence and by the dictation of spirits. The following are his leading works: *The Principles of Nature*, &c. (1845), and *The Great Harmonia* (1850–59).

DAVIS, DAVID, LL.D., an American jurist and statesman, born in Maryland, March 9, 1815, educated at Kenyon College, O., and in 1836 began to practice law at Bloomington, Ill. In 1848 he was elected judge of the Eighth Judicial Circuit of Illinois, and was re-elected in 1855, and again in 1861. In 1862 he was appointed to a seat on the bench of the U. S. Supreme Court by President Lincoln, and in 1880 was elected U. S. Senator.

DAVIS, NOAH, a well-known American jurist, born at Haverhill, N. H., Sept. 10, 1818, removed with his parents, while a child, to Albion, N. Y., and began the practice of law in 1841. He was twice elected to Congress, and in 1873 was elected a justice of the N. Y. Supreme Court, which position he still holds.

DA'VISON, JOHN, the author of the well-known *Discourses on Prophecy*, was born at Morpeth, 28th May 1777, and educated at Oxford, where, between 1810 and 1817, he was tutor of his college (Oriel), public examiner, and preacher at Whitehall. In 1826 he was made prebendary of Worcester, and shortly after rector of Upton-upon-Severn. He died 6th May 1834. D. had great learning and clearness of judgment. His *Discourses* were published in 1812.

DAW'SON, JOHN WILLIAM, LL.D., naturalist, was born at Picton, Nova Scotia, in October 1820. After studying for some years at Edinburgh University, he returned home, and has since wholly devoted himself to the study of natural science. He has greatly increased our knowledge of the palæontology of Canada, and is the discoverer of the oldest known form of organic life, the *Eozoön Canadense*, which belongs to the Laurentian formations. D. is Vice-Chancellor of the M'Gill University at Montreal, and a member of many scientific societies of Europe and America. Among his principal works are his *Archaia, or Studies of the Cosmogony and Natural History of the Hebrew Scriptures* (1858), his *Acadian Geology* (2d ed. 1868), and, most important of all, his *Devonian and Carboniferous Flora of Eastern N. America* (2 vols.), published by the Geological Survey of Canada. His latest works are *The Story of the Earth and Man* (1872), in which he combats Darwin's views on the origin of man, and his *Dawn of Life* (1875).

DEANE, SILAS, an American statesman, born at Groton, Conn., Dec. 24, 1737, and graduated from Yale College in 1758. In 1774 he was a member of the Continental Congress, and in 1776 visited France as the financial agent of the U. S. Various charges of dishonesty were brought against him by his enemies, and in 1777 was recalled in disgrace. There is now, however, no doubt but that these aspersions were false, and that Mr. Deane was a sincere and honest patriot. In 1842 his accounts were investigated by Congress, and it was found that a large sum of money was due to his heirs. Died in England, Aug. 23, 1789.

DEARBORN, HENRY, a general of the revolutionary war, born at Hampton, N. H., Feb. 23, 1751. He began the practice of medicine, but at the outbreak of the war for independence, he entered the Continental army. He participated in the battle of Bunker Hill; marched with Arnold, to Quebec, where he was taken prisoner; and served under Gates, in the campaign which terminated in the surrender of Burgoyne. He was also present at Monmouth and Yorktown. He was a member of Congress from Mass., 1793–97, and was made Secretary of War, by Jefferson, in 1801. He served during the war of 1812, with the rank of major-general, and commanded the expedition which captured York, Canada, in 1813. He was appointed Minister to Portugal in 1815. Died June 6, 1829.

DE BE'NE ESS'E, a term of English law, signifying the admission that something done may be allowed to stand for the present; but that it must ultimately stand or fall by the result of future examination.

DEB'ITUM FUN'DI is in Scotch law a debt attached to land, and having a *lien* over it. A *Feu-Duty* and arrears of feu-duty are *debita fundi*. Rents, tithes (*teinds*), and similar burdens, though dues connected with land, are not *debita fundi*. Debts constituted by this title may be made effectual by Poinding of the Ground.

DECAP'OLIS (Gr. 'the region of the ten cities'), a district of Palestine, lying chiefly E. of the Jordan, but including a small part of Galilee, was so named from containing ten cities, which are generally given as Damascus, Philadelphia, Raphana, Scythopolis, Gadara, Hippos, Dios, Pella, Gerasa, and Canatha. These cities probably held privileges from the Roman Senate, and seem to have been free from Jewish authority. D. was fully 200 miles long, with a breadth of 60.

DECATUR, a city of Macon Co., Ill., about 39 miles E. of Springfield. It has street railways, numerous churches and factories, and is an important railroad center. Pop. 9548.

DECATUR, STEPHEN, an American commodore, born at Sinnepuxent, Md., Jan. 5, 1779, and entered the navy in 1798. During the war with Tripoli, he led a small party, which burned the *Philadelphia*, an American vessel, which had been captured by, and was in the possession of the enemy. For his bravery on this occasion he mas promoted to the rank of captain. In 1815 he led a squadron against the Algerines, captured several of their vessels, and compelled the Dey to seek peace. He was killed by Commodore James Barron, in a duel, on March 22, 1820.

DECAZES', ÉLIE, DUC, a French statesman, born at St. Martin-du-Laye, Gironde, September 28, 1780. After holding various civil offices, he was made a cabinet-councilor by Napoleon in 1807; in 1814 became a captain in the National Guard, and fought at the siege of Paris; held office under Louis XVIII.; was made Comte in 1816, and in 1818 Minister of the Interior, in which capacity, he gave great attention to commerce and manufactures. In 1819 he was made President of the Council, and shortly afterwards Duc D. After the Revolution of 1830 he devoted himself to the advancement of manufactures and art. He died 24th October 1860. D. was sagacious and tolerant, free from the intense party spirit of most French politicians.—His eldest son, LOUIS CHARLES ÉLIE AMANIEU, DUC D., was born May 19, 1819, served as French Minister and Envoy at the courts of Spain and Portugal, and was elected to the Conseil Général in 1867, and to the Assembly in 1871. In 1873 he was appointed Minister of Foreign Affairs. Formerly a leading member of the Right Center, he greatly contributed to the wise and moderate foreign policy of his country.

DECEB'ALUS, a title of honor among the Dacians, probably equivalent to the English *king*. The D. mentioned by Dion Cassius was, during the reigns of Domitian and Trajan, a dangerous enemy of Rome. Between 86 and 90 A.D. he defeated the Roman generals in Mœsia, and frightened Domitian into purchasing a dishonorable peace. Trajan, however, restored the honor of the Roman arms, and after suffering several disastrous defeats D. committed suicide, A.D. 105.

DECID'UA, a membrane formed in the interior of the pregnant uterus from the mucous membrane of that organ. At first single, it ultimately forms to layers—(1) the *D. vera*, which lines the uterus, and (2) the *D. reflexa*, which covers the exterior of the ovum.

DEC'IMÆ GARBALES, the tenth sheaf of the cut corn, which the rector of the parish had a right to take from the ground.

Decimæ Inclusæ, teinds which have never been separated from the stock, and which are not demandable by the titular or minister.

Decimæ Restoriæ, parsonage tithes, due from all kinds of grain produced by culture.

Decimæ Vicariæ, vicarage tithes, due only, according to use and wont, from certain articles—wool, grass, fish, eggs, &c.

DECI'SION. The D. of a court is its pronounced judgment in a cause. In Scotland, the word is usually applied to the printed reports of cases decided in the Court of Session. In England the decisions of courts of law carry greater authority in determining the law than they do in Scotland; though in the latter country, two or more consecutive decisions of the Court of Session, not changed by the House of Lords, are held to determine the law.

DECUSSA'TION, a term used in anatomy to denote the crossing of fibres from one side to the other. Thus we have the D. of the fibres of the optic nerves, and the D. of the motor fibres of the spinal cord in the *Medulla oblongata*.

DEDHAM, in Norfolk Co., Mass., on the Charles River, 10 miles from Boston. Several railroads connect it with Boston, and it is extensively engaged in the manufacture of woollen goods, loom pickers, brooms, cocoa, chocolate, and gold leaf. It is surrounded by an agricultural district. Pop. 6400.

DEEMS, CHARLES F., D.D., a prominent American clergyman, born at Baltimore, Md., Dec. 4, 1820, educated at Dickinson College, and entered the ministry of the M. E. Church. After filling several important educational positions in the South, he became the pastor of the Church of the Strangers in New York City, which position he still holds (1885). He has written voluminously for the religious magazines, and has published, among other works, the following, *Life of Dr. Clark. Devotional Melodies*, *Home Atlas*, *Triumphs of Peace*, and *Life of Christ*.

DE FACTO, is, in law, a thing actually done or existing. A king *de facto* is one in possession of sovereignty. A king *de jure* is one who is considered to have a right to a crown, but is not in possession.

DEFÆCA'TION, the act of voiding the fæces by the anus, is accomplished by the combined contraction of the abdominal muscles, and the simultaneous opening of the sphincter or ring-like muscle which keeps the anal opening closed. Previous to the action of the abdominal muscles, the glottis is closed so as to prevent the upward motion of the diaphragm, and thus the abdominal wall presses with advantage on the bowels. These actions are assisted by the contraction of the walls of the rectum. The anal opening is controlled by a ganglionic nerve-center situated in the lower part of the spinal cord, subject, to a certain extent, to the control of the will. Thus D. may be delayed by powerful efforts of the will, but if the fæces press firmly on the inner surface of the *sphincter ani*, the effort of the will is soon of no avail. According to most authorities, the desire for D. is the result of the sensation caused by the descent of the fæces from the sigmoid flexure of the colon into the rectum. In some circumstances, however, the rectum may be loaded with fæces without any desire to void them.

DEFEN'DANT. In English law, he who begins an action is termed the *plaintiff*; the person against whom it is brought is termed the *defendant*. In Scotch law, the name used is *defender*.

DEFIANCE, a town of Defiance Co., O., at the confluence of the Maumee and Auglaize rivers, and on the Wabash and Erie canal. Two railroads pass through the town, and it carries on an extensive trade with the surrounding country. It is also engaged to a considerable extent in manufacturing. Pop. 5907.

DEFRAUD'ING OF CREDI'TORS. Creditors may be defrauded by the funds of their debtor being concealed, by their being conveyed to favorite creditors, or by the undue increase of debts against the estate of the debtor. Creditors have redress by common law and under the bankruptcy statutes of England and Scotland. Similar laws prevail in the U. S.

Defrauding the Revenue.—Any contrivance by which an imperial tax or duty is evaded constitutes this offence. By the treaty of Union between England and Scotland, the law regarding it is the same in the two countries.

DE KALB, JOHN, BARON, born in Bavaria, June 29, 1721, and in early life entered the French army. In 1777 he came to the United States, and was made a major-general by Congress. He rendered gallant and valuable services throughout the war of the Revolution. Died Aug. 19, 1780, from the results of a wound received at the battle of Camden.

DELABEC'LEA, a genus of north-eastern Australian trees belonging to the natural order *Sterculaceæ*. *D. rupestris* is the bottle-tree, so called on account of the middle of the trunk being bulged out like a barrel. It yields a mucilaginous gum like gum-tragacanth, which is nutritious, and used by the aborigines in times of scarcity. The wood is remarkably loose in texture.

DELAWARE, in Delaware Co., O., on the Olentangy River. Several railroads pass through the town and it carries on a large trade with the surrounding country. It contains the Ohio Wesleyan University and the Wesleyan Female College. It is engaged in the manufacture of hemp, jute, woollen goods, agricultural implements, wagons, and cigars. Pop. 6894.

DELPHOS, a town of Van Wert Co., O., 90 miles from Toledo, on the Miami & Erie Canal. It is a railroad center; has fine water power, which is employed in manufacturing; and is surrounded by a fine agricultural district. Pop. 5000.

DEMET'RIUS, the name of three kings of Syria.—1. D. SOTER, grandson of Antiochus the Great, spent his early years at Rome as a hostage, whence he fled, partly through the help of Polybius, when twenty-three years old, and established himself on the throne of Syria. He conciliated the senate and secured his recognition as king, but acted so despotically towards his neighbors, that the Jews under Judas Maccabæus took up arms and defeated his general. D. fell in battle (B.C. 150) against an impostor named Balas, whose claims were supported by the Romans, the Jews, and Attalus, King of Pergamus.—2. D. DICATOR, son of the preceding, after remaining in exile for some years, recovered the kingdom from Balas by the assistance of Ptolemy Philometer, but the infant son of Balas being set up as a pretender against him, D. lost Antioch and a great part of Syria, and withdrew to Babylon. His army was soon after destroyed by the Parthians, and himself taken prisoner (B.C. 138). After a captivity of ten years he was re-established on the throne, but his soldiers and subjects having become disaffected, he was assassinated at Tyre, B.C. 125.—3. D. EUCÆRUS, grandson of the preceding, held with his brother for a time the whole of Syria. War, however, broke out between the

brothers, and Philip, having blockaded D. in his camp compelled him to surrender at discretion. He remained in honorable captivity with Mithridates, King of Parthia, until his death. His coins bear date from 218 to 224 of the era of the Seleucidæ, *i.e.*, from 94 to 88 B.C.

DEM'ODEX, a peculiar genus of mites (*Acarina*), represented by the species *D. folliculorum*, which inhabits the sebaceous follicles of the human skin, especially near the nose. This parasite is of minute size and thoroughly harmless.

DENDROGRAP'SUS, an important fossil genus of *Hydrozoa* or Zoophytes, exclusively found in the Upper Cambrian and Lower Silurian rocks. The species of this genus have been referred by palæontologists to the modern order of the *Sertularidæ*, or 'sea-firs,' as well as to the extinct order of the *Graptolitidæ*, or Graptolites. *D. Hallianus* is a familiar species, and exists in the form of a plant-like organism, springing from a stout footstalk, which was probably attached to some fixed object, like our modern zoophytes. The branches bear on one side a series of cups or *cellules*, resembling the 'thecæ' of living sea-firs, each of which cups must have contained a little *polypite*, or single member of the zoophytic colony. In D. the cups, like those of graptolites, partially overlap each other.

DENDROPHYLL'IA, a genus of compound *Sclerodermic* corals belonging to the *Zoantharia Sclerodermata*, and ranked among the 'deep-sea' corals and reef-building forms. The species of D. derive their name from their branching tree-like shape. *D. nigrescens* is a familiar species. It is regularly branched, possesses deep cells, and the tentacles of the polypes are cleft or divided in a longitudinal manner. It is found in the tropical seas.

DENEB', a brilliant star of the first magnitude, in constellation Cygnus, forming with Vega and Polaris an evident right-angled triangle. Near it is the small double star 61 Cygni, interesting as having a large proper motion, and being one of the nearest stars to our system—according to Bessel 650,000 times more distant than the sun is from the earth.

DENISON UNIVERSITY, established by the Baptists, at Granville, O., in 1831. It was originally known as Granville College, but the name was changed to that which it now bears in 1845. It has valuable buildings, and maintains a preparatory department and classical and scientific courses.

DEN'IZEN (Old Fr. *deinzein*, one who is *deins;* Mod. Fr. *dans;* Lat. *de intus*, 'from within,' i. e., 'the city') is an alien born who has obtained letters of denization, which entitle to purchase and transmit lands, though not to inherit them. The right to grant letters of denization is a prerogative of the crown.

DENTA'TUS MANI'US, according to some MARCUS CURIUS, the most famous of the Curii, was said to have derived his surname of D. from having been born with teeth. He was of Sabine descent. After holding the office of tribune of the people, he was elected consul in 290 B.C., and compelled the Samnites to sue for peace after they had waged war against Rome for forty-nine years. Immediately after he subdued the Sabines, and thus celebrated two triumphs in his first consulship. In his second consulship (B.C. 275), D. defeated Pyrrhus, King of Epirus, near Beneventum, as he was returning from Sicily, and obliged him to quit Italy. His triumph was distinguished by four elephants, the first ever seen at Rome. The booty taken from Pyrrhus was wholly given up to the republic. Elected consul for a third time (274 B.C.), he brought the final war with the southern Italians to a successful issue. In B.C. 272, during his censorship, D. built an aqueduct which brought the water of the Arno into Rome. He also dug a canal, by which the waters of Lake Velinus were precipitated into the river Nar from a height of 140 feet. This is the famous Caseata del Marmore, which inspired the splendid stanzas of Byron (*Childe Harold*, Can. iv. st. 69–72). He then retired to his Sabine farm, to devote the rest of his life to agriculture. D. is the type of the old Roman simplicity and valor, and many anecdotes finely flavored with a spirited patriotism and unselfish honor are recorded of him.

DESCHAM'PS, EUSTACHE, a French poet, was born at Vertus, in Champagne, about 1340. He studied at Orleans University, traveled into Italy, Germany, and Hungary, and, according to his own statement, was for some time captive among the Saracens. He was a great court favorite, but always poor, and his property in Champagne was pillaged by the English, whom he heartily abuses in his ballads. He died about 1409. 'He is,' says Besant, 'the most *real* French poet of his century.' His works, comprising 90,000 verses, display grim humor and fierce satiric energy, and give a valuable picture of his times. He resembles Jean de Meun, from whom he occasionally borrows. Professor Morley suggests that Chaucer may have taken the idea of the *Flower and the Leaf* from one of D.'s ballads. See *Poésies Morales de D.*, edited by M. Crapelet (Par. 1832), Besant's *French Humorists* (Bentley, 1873) and *Early French Poets*, and Gidel's *Histoire de la Literature Française* (Par. 1875).

DES MOINES, a city of Polk Co., Iowa, and the capital of that state. It is situated on the Des Moines River, and is about 357 miles W. of Chicago. The state capital was removed here in 1855, and a new state house has been erected at a cost of over $3,000,000. Here are also located the state arsenal, and the state library. It has numerous churches, several daily and weekly papers, well-equipped public schools, and an abundant water supply by means of the Holly system. There are large manufactories, and extensive coal mines are worked. Pop. in 1860, 3965; in 1870, 12,035; present pop. 22,408.

DESTRUC'TION OF REC'ORDS, WILLS, AND WRITINGS. In England, by 24 and 25 Vict. cap. 96, if any person steal, or for any fraudulent purpose take away or injure any writing belonging to any public office, or belonging to any civil or criminal law process, he is liable to penal servitude for three years. By the same Act any one who fraudulently conceals, cancels, or destroys any testamentary writing is guilty of felony, and liable to penal servitude for life.

DETAIN'ER, in English law, the name of a writ which lay against prisoners in the Marshalsea or Fleet Prison, directed to the marshal or the warden, directing him to detain the prisoner until lawfully discharged.

DEVIA'TION OF A SHIP. Under the contract of affreightment, if a vessel be compelled by weather, by an enemy, or by accident, to deviate from the appointed line of voyage, no claim arises to the freighter against the owners; and it is now held that the master may detain the cargo, though formerly the rule was that he was bound to forward it in another ship. An unnecessary D., being an alteration of risk, discharges the underwriter. The *onus probandi* lies on the person alleging D.

DEWEY, ORVILLE, D.D., LL.D., a distinguished American Unitarian minister, born at Sheffield, Mass., March 28, 1794, and graduated from Williams College in 1814. He assisted Dr. Channing for two years, and afterwards preached in New Bedford, and then in New York city. In 1858 he was called to the pastorate of the New South Church in Boston, Mass. Dr. Dewey was noted for originality of thought and impressive eloquence. Among his works are the following, *The Unitarian Belief* and *The Education of the Human Race*. Died in March, 1882.

DEXTER, HENRY MARTYN, D.D., a distinguished American clergyman of the Congregational Church, born at Plympton, Mass., Aug. 13, 1821, and educated at Yale College and Andover Seminary. After filling pastorates at Manchester, N. H., and Boston, Mass., he became, in 1867, editor-in-chief of the *Congregationalist*. He has published several works, the best known of which, is, perhaps, his *History of the Congregationalism of the Last Three Hundred Years, as seen in its Literature*. This work is a standard authority on Congregationalism. D. is a scholar of broad attainments, and has been a critical student of the workings and history of the Congregational polity.

DEYSTER, LOUIS DE, a Flemish painter, born at Bruges in 1656. He studied under Jean Maas, resided for six years in Rome, and also for some time in Venice, after which he returned to his native place. Of a deeply religious disposition, he rarely went into society, and somewhat of the gloom of his life is reflected in his works. Of these, the principal are 'The Death of the Virgin,' 'The Resurrection of Christ,' 'The Appearance of Christ to the Three Marys,' and the 'History of Judith,' in several parts. His manner is bold and large, evincing a strong Italian taste, while his color is bright, warm, and pure. To give prominent effect to the work, on the chief parts of his subject, he occasionally slurs and sacrifices the setting. In later life D. abandoned his art for music. He died at Bruges in 1711. His daughter ANNIE D. (died 1746), won considerable reputation both in music and painting. She wrote a Life of her father. See Deschamps, *Vies des Peintres Flamands*, vol. iii.

DIANA MONKEY (*Cercopithécus Diana*), a species of Catarhine monkeys, found in Guinea, Congo, and other parts of Africa, and attaining a length of about 4½ feet. It is distinguished by a long white beard, and by a crescentic white line on the forehead. The fur is generally chestnut, the lower parts being bright orange. The hands are black. The D. is intelligent and of cleanly habits.

DIAPEDE'SIS (Gr. 'a leaping through'). Under certain abnormal conditions, both red and colorless corpuscles of the blood may leave the blood-vessels without rupture of their walls. This is D. The red corpuscles sometimes escape during venous congestion, when, in consequence of the high pressure, the plasma is first squeezed out, and afterwards the red corpuscles. The colorless corpuscles leave the vessels by virtue of their power of amœboid movement in inflammation. When the web or mesentery of a frog is seen under the microscope in a state of inflammation, the colorless corpuscles may be observed clinging to the walls of the vessels, and actually passing through these into the surrounding tissues. The conditions seem to be sufficient slowness of the blood

stream, and a peculiar adhesiveness of the colorless corpuscles, the result of inflammation.

DIAPHAN'OSCOPE (Gr. *diaphanos*, 'transparent,' and *skopeo*, 'I see'), a box, with or without a lens, for exhibiting transparent photographs or other pictures. It is frequently combined with a Stereoscope.

DIARTHRO'SIS, a term used in anatomy to denote a particular form of joint, such as that of the elbow. Here we have plates of cartilage covering the articular surfaces of the bones. The joint is lined in every part by a membrane, termed a *synovial* membrane, which secretes a fluid which lubricates the joint. The bones are held together by strong fibrous ligaments, constituting membranous capsules, bands, or cords; and they are likewise kept in apposition by the tension of surrounding muscles and by the pressure of the atmosphere.

DIAS'TOLE is dilatation of the heart and arteries when the blood enters their cavities. It is the opposite to *systole*, when the heart and arteries contract to send forth the blood. See HEART.

DIBRANCHIA'TA (Gr. 'two-gilled'), the name applied to an order of Cuttlefish distinguished by the possession of two branchiæ or gills, and not more than eight or ten arms; by the arms being provided with suckers; by the presence of an inksac, and by the shell being internal, or, if external, not chambered. In this order are the paper nautilus or *Argonaut*, the *Octopi* or *Poulpes*, the *Squids*. *Spirula*, the extinct *Belemnites*, &c. The companion order, *Tetrabranchiata*, is represented by the pearly nautilus alone.

DICEN'TRA, a genus of Fumariaceous plants (the *Diclytra* or *Dielytra* of De Candolle). *D. Cucullaria* is the 'Dutchman's Breeches' of the United States; *D. Canadensis*, the squirrel-corn; *D. farinosa*, a species from Virginia and N. Carolina, much cultivated in our gardens; but the best-known species is *D. spectabilis* of Northern China and Siberia, one of the most beautiful of the genus, introduced into Britain in 1846. It can be grown in the open air, but requires the protection of the house in most situations before it can attain to full perfection. It is one of the favorite plants of the Chinese.

DICKINSON, ANNA ELIZABETH, an American social reformer, born at Philadelphia, Pa., Oct. 28, 1842. Her parents belonged to the Society of Friends and she received her education in the schools of that sect. In 1860 she appeared before the public as an advocate of women's rights, and soon acquired distinction by the grace and eloquence of her oratory. During the war she delivered many patriotic addresses, and since then has delivered many lectures and addresses on social themes. She has recently appeared upon the stage, but failed to meet with success.

DICKINSON, DANIEL STEVENS, LL.D., an eminent American lawyer and statesman, born at Goshen, Conn., Sept. 11, 1800, and entered the legal profession. In 1842 he was elected lieutenant-governor of the State of New York by the Democratic party; and in 1844 was elected U. S. Senator. After his retirement from the Senate he settled at Binghampton, N. Y., where he resumed the practice of law, and in 1861 was elected attorney-general of that state. During the civil war he was an ardent supporter of the Union cause. Died April 12, 1866.

DICKINSON COLLEGE, an educational institution, at Carlisle, Pa., established in 1783. It was named in honor of Hon. John Dickinson, who gave liberally towards its endowment. At first it was controlled by the Presbyterians, but in 1833, owing to the division of that church into the Old and New Schools, it was transferred to the Methodists, who still control its affairs. It has superior buildings and an excellent library.

DICK'SON, DAVID, a noble Scottish divine, born in 1583, at Glasgow, was minister of Irvine from 1618 to 1641, when he was elected Professor of Divinity in his native town; helped to draw up the Confession of Faith, and was ejected from the Church for nonconformity in 1662, the year of his death. D.'s works comprise commentaries on Hebrews, Matthew and the Psalms, *Therapeutica Sacra*, and a *Treatise on the Promises*.

DICKSO'NIA, a genus of Ferns, mostly arborescent. The silky hairs from the caudex of *D. Culcita* of Madeira and of *D. chrysotricha* of Java are used in Holland and Germany as a styptic, and for stuffing beds, cushions, &c. The hairs of the latter species is imported under the name of *Pakoe Kidang*. *D. antarctica* of Australia is now a common ornament of our greenhouses, while others are found in Juan Fernandez, Brazil, St. Helena, Columbia, and Java.

DIC'TYS CRETEN'SIS, the alleged author of a Latin history of the Trojan war, which differs widely from Homer, chiefly in excluding all supernatural agency. It is asserted in the preface that the original was composed by D. of Cnossus, who accompanied Idomeneus to the Trojan war, that it was buried in the author's grave till exhumed by an earthquake in the time of Nero, that it was then brought to Rome by one Eupraxis and translated into Greek, from which Greek translation the Latin version was made by Q. Septimius Romanus. All that is actually known about it is, that a Greek work under the name of D. is frequently quoted by the Byzantine writers, which was probably written in Greek about the time of Nero, and afterwards translated into Latin. The chief literary value of the work consists in its being the principal channel through which the legendary lore of Greece flowed into the romances of the middle ages, passing thence into popular tales and ballads. D. is generally printed along with Dares (q. v.). The best edition is that by Diederich (Bonn, 1837).

DIDO, the name of a beautiful genus of *Lepidoptera* or Butterflies, belonging to the family *Nymphalidæ* of that order, and found in Brazil and Guiana. The wings are blackish-brown above, with markings of pale-green, whilst the under surface is chocolate colored, with green patches bordered with silvery white. The caterpillars are green, with red and white stripes. The wings in the D. (*Cethosia D.*) have a stretch of 4 or 5 inches.

DIELEC'TRIC, the name given by Faraday to the medium which separates two conductors of electricity, and through which induction acts. Faraday discovered that the charge induced upon a conductor, placed at a given distance from a charged conductor, varied with the D. employed, being dependent upon what he termed the specific inductive capacity of the D. He was thus led to the conception of the theory of action through a medium. Specific inductive capacity is the induction across any surface due to unit normal charge, and is therefore unity for air, since in this case the induction is equal to the charge. A complete discussion of the theory of the D. and of action through a medium will be found in Clerk Maxwell's *Electricity and Magnetism* (2 vols., Clarendon Press, Oxf. 1873).

DIG'BY, a seaport in the Dominion of Canada, province of Nova Scotia, on the Bay of Fundy. It has an active industry in the curing of pilchards, which are prized on account of their flavor, and are known as *Digbies* in the fish trade. There are also valuable herring and mackerel fisheries, and some shipbuilding and lumbering. Pop. (1871) 1300.

DI'GEST, the name given to the Pandects of the civil or Roman law, as containing *Legalia præcepta excellenter digesta*.

DILKE, CHARLES WENTWORTH, a well-known English critic and journalist, was born 8th December 1789, served in the Navy Pay-Office, took to literature, contributed to the *Westminster Review*, &c., became (1830) editor and proprietor of the *Athanæum*, and established the *Daily News* in 1846. He edited *Old English Plays* (6 vols. Lond. 1814), wrote ably on Junius and other curious questions of literary history, and died at Alice Holt, Hampshire, 10th August 1864. See *The Papers of a Critic, Selected from the Writings of the late C. W. D., with a Biographical Sketch by his Grandson* (2 vols. Murray, 1875), containing original letters from Charles Lamb, Keats, Hood, Haydon, Lord Lytton, Dickens, Savage Landor, &c.—SIR CHARLES WENTWORTH D., eldest son of the former, was born in London, 18th February 1810, studied at Westminster School and Cambridge, and was one of the active originators of the Industrial Exhibition of 1851. A member of the Society of Arts from 1844, he received a baronetcy in 1862. He died at St. Petersburg, 11th May 1869.—His son, SIR CHARLES WENTWORTH D., was born at Chelsea, September 4, 1843, graduated at Cambridge in 1866, and traveled round the world, giving his experiences in *Greater Britain, a Record of Travel in English-Speaking Countries* (2 vols. 1868), in which he traces the influence of race on government, and of climate upon race. D. was elected member of Parliament for Chelsea in 1868, and was re-elected in 1880, when he was appointed Under Secretary of Foreign Affairs in Mr. Gladstone's ministry.

DILOLO, LAKE, in the interior of S. Africa, Muati Janvo's kingdom, 475 miles W. of Bangweolo, is an expansion of the Leeba, a branch of the Zambesi, and is 10 miles long, and has an extreme breadth of 4 miles. It was discovered by Livingstone in 1856. See his *Missionary Travels and Researches in South Africa* (new ed. Lond. 1875).

DIMOR'PHISM. Of late years, chiefly owing to the observations of Charles Darwin, it has been discovered that in several plants belonging to different orders two forms are found, the one form having long stamens and a short pistil, the other a long pistil and short stamens, and with different-sized pollen grains, but differing in no appreciable way. Such plants are called *Dimorphic*. The common primrose is an example. These two forms act towards each other almost exactly as if they were separate species, instead of merely forms of the same species, with no difference appreciable to the ordinary observer. In such a case, the pollen of the long stamened form must be carried attached to the bodies of insects to fertilize the long pistiled form, and that of the short-stamened form to fertilize the short-pistiled form; otherwise it acts like so much inert dust. The object of this and similar arrangements for cross fertilization seems to be to prevent too close interbreeding.

DING'ELSTEDT, Franz von, a German poet and novelist, born 30th June 1814, at Halsdorf near Marburg, studied at Marburg, and was for some time teacher in the Gymnasium at Fulda. In 1843 he was appointed librarian and reader to the King of Würtemberg, in 1850 manager of the Court Theater at Munich, in 1857 general superintendent of the same at Weimar, in 1867 director of the Court Opera at Vienna, and in 1871 of the City Theater there. D.'s chief works are *Lieder eines Kosmopolit. Nachtwächters* (1840), *Gedichte* (2d ed. 1858), *Nacht und Morgen, Neue Zeitgedichte* (1851), the novels *Heptameron* (2 vols. 1841), *Unter den Erde* (1840), *Novellenbuch* (1850), *Die Amazone* (1868), the tragedy *Das Haus des Barneveldt* (1850), *Studien und Kopien nach Shakespeare* (1857), and translations of several plays of the great English dramatist. Delicacy of sentiment, pictorial beauty, and epigrammatic terseness of reflection are D.'s most conspicuous merits.

DIN'KA, a pastoral people of Central Africa, in the Upper Nile district, to the S. of the confluence of the Bahr-el-Ghazal and the White Nile, and occupying an area of from 60,000 to 70,000 sq. miles. They are one of the most extensive and unique of African races, peculiar alike for their cleanliness, their civilized tastes and pursuits, and their ferocity in war. Very dark in color, they are taller than the English, and have thick lips, contorted features, and shallow foreheads. Their hair is cut short, and is adorned with ostrich feathers, in imitation of the heron. No covering is worn except by the women, who are scrupulously clad, and who wear heavy iron rings on their wrists and ankles. Both sexes break off the lower incisors, a practice that renders their language inarticulate. The dwellings of the D. are conical, well-built huts, and are scattered in clusters over the cultivated plains. Nearly the whole of their vast territory is a steppe of dark alluvial clay, unbroken by a single hill, mass of rock, or large tract of forest. Of the cultivated plants the chief are sorghum, penicillaria, beans, earth-nuts (*archis*), earth-peas, sesame, yams, and Virginian tobacco. The domestic animals are the ox (of the zebu race), the sheep, goat, and dog. A village of a few huts has seldom less than 2000, and sometimes as many as 10,000 cattle. An estimate of the total number of cattle gives three for each inhabitant. The ox, which is never killed, is the object of exclusive, almost religious care. Whatever of religion the D. has, centers in an institution called the Cogyoor, which embraces a society of necromancers and jugglers. There is much tribal disturbance. Since about 1855 the various efforts of the Khartum slave-dealers to subdue the Dinkas have completely failed, and it is even at some risk that parties venture through their territory to reach Bongo, Niam-Niam, Mittu, &c. All the early captives taken to Egypt were converted into soldiers, and still form a conspicuous element in the ranks. See Dr. Schweinfurth's *Heart of Africa* (2 vols. Lond. 1873).

DIN'MONT, the name given in Scotland to a wether or gelded hogg after its first fleece has been cut.

DIONYSIUS, surnamed PERIEGE'TES, from his being the author of a *periegesis* (Gr. 'geographical description of the earth') in Greek hexameters, was a native of Africa, and lived probably in the latter part of the 3d or beginning of the 4th c. His work, which is still extant, is written tersely, and was translated into Latin by Rufus Festus Avienus, and also by the grammarian Priscian. There still exist a commentary upon it by Eustathius, and a Greek paraphrase and Scholia. The *editio princeps* appeared at Ferrara in 1512, with a Latin translation. It was also printed at Venice by A. Manutius in 1513, but the best edition is that of G. Bernhardy (Leips. 1828).

DIONYSIUS THRAX, or the Thracian, was a celebrated Greek grammarian, who taught at Rome about B.C. 80. He is remembered for the merit of his grammatical works, and for his explanations and criticism of Homer. His grammatical treatise was used in schools for many centuries.

DIOSCOR'IDES, the author of thirty-nine epigrams in the Greek Anthology, is thought to have lived in Egypt in the time of Ptolemy Euergetes. His epigrams, chiefly on the ancient poets, were included in Meleager's *Garland*.

DIPH'YES, a beautiful genus of oceanic *Hydrozoa*, or Zoophytes, belonging to the order *Calycophoridæ*, and consisting of a delicate thread-like *cœnosarc* or connecting medium, bearing the various polypites, or individual animals of which this compound organism is composed. At its proximal end the cœnosarc expands to form two mitre-shaped *Nectocalyces*, or 'swimming-bells,' by means of which the organism is supported in the water. Each of the polypites is protected by a glassy 'bract,' or hydrophyllium. *D. appendiculata* is a familiar species of this genus of *Calycophoridæ*, and occurs in the Mediterranean and warm seas.

DIP'LOE, the cellular bony structure between the two plates or tables forming the flat bones of the skull. These cells are filled with a reddish pulpy substance, similar, when examined microscopically, to the marrow of bones.

DIPLOGLOSS'US, a genus of *Lacertilia*, or Lizards, found in Cuba. The color of the best-known species (*D. sagræ*) is grey with bronze tints, whilst a black streak marks each side. The D. is an active little creature, and inhabits dry localities.

DIP'TERYX, a genus of Leguminous plants. The seeds of *D. odorata* of Guiana, owing to the presence of Coumarine, are very pleasantly scented, and under the name of *Tonquin, Tonga*, or Itonka beans, are used for perfuming snuff, &c. The Eboe nuts of the Mosquito Coast (*D. Eboensis*) are also fragrant, and yield a fatty oil much used for anointing the hair of the natives. The timber is heavy and yellow colored.

DIS'CINA, a typical genus of Brachiopodous mollusca, represented by living forms, and also by fossil species, which begin in the Silurian period. The family *Discinidæ* is recognized by the shells being attached to fixed objects by a fleshy stalk or pedmncle, which passes through the ventral valve. The characteristic arms of the *Brachiopoda* are fleshy in *Discinidæ*, and the valves or halves of the shell are not articulated by any distinct hinge. The shell in D. is circular, its upper valve being limpet-shaped, the lower valve being flat or convex. *D. circe*, and *D. pelopæa* are well-known fossil species from Silurian rocks.

DISCIPLES OF CHRIST, also known as Campbellites, and calling themselves Christians. This Christian sect was founded through the labors of Alexander Campbell and his father, Thomas Campbell, in the U. S. in the beginning of the present century. Originally in fellowship with the Baptists, they ultimately (1827) became a separate denomination. They agree with the Baptists in many respects, and although rejecting the Trinitarian terminology, are evangelical in their conceptions of Christ's person and work. They are numerous in the central parts of the U. S., and have several educational institutions under their control.

DISCLAIM'ER, in English law, is a plea of denial or of renunciation.

DISCLAMA'TION, in Scotch law, signifies the disavowal by a vassal of some one who is, or claims to be, his superior. The penalty of D. on frivolous grounds is forfeiture of the fee. But any reasonable excuse will exempt the vassal from the penalty.

DISCOPH'ORA (Gr. 'disc-bearers'), a name given in modern zoology to a subclass of Hydrozoa, represented by the true *Medusidæ*, or sea-bubblers and jelly-fishes. These organisms may be defined as possessing a free, oceanic body (*hydrosoma*), consisting of a single *nectocalyx*, or swimming-bell, from the roof of which a single zoöid or *polypite* hangs. A system of canals runs through the swimming-bell. Many forms at one time regarded as *Medusæ* are now known to be merely the free-swimming reproductive bodies of zoophytes.

DISCRE'TION. According to English law, if an agent or trustee is instructed to act according to his D., he must act according to law and reason. The law of Scotland recognizes the same rule, as does also American law.

DIS'CUS PROLIGERUS, a small heap of granular cells found within a graafian vesicle, and on which the ovum rests.

DISDIACLASTS, minute doubly-refracting molecules, which, according to Brücke, form part of the ultimate structure of muscle.

DISEASE, Acts Respecting. By 29 and 30 Vict. c. 35, and 32 and 33 Vict. c. 96, provision is made for the prevention of contagious D. in certain towns which are military stations. By the Sewage Utilization Act, the sewer authorities in England are in boroughs the municipal corporation; in other towns, those intrusted with cleansing or paving. Several amending Acts have been passed. By the Sanitary Act of 1866, a house-owner may be called on to remedy deficient draining within reasonable time. If water supply is inadequate, the authorities may dig wells, make reservoirs, &c. The Act defines a *Nuisance*, and provides against infection. Cattle-plague is dealt with by the last Act. Cattle may be slaughtered to ascertain the nature of a D. No animal is to be moved alive from any infected place. Local authorities are to appoint an inspector, who, when plague is found to exist, is to make an official declaration of the place infected. In America, nearly every city and town has its Board of Health or health officers, to whose charge the enforcement of sanitary ordinances is committed, and special study is being everywhere devoted to sanitary affairs.

DISIN"TEGRATOR, a machine for pulverizing, or disintegrating various soft or hard materials. The patent D. of Mr. Thomas Carr, Montpelier, Bristol, held in much favor for breaking up ores, rock, asphalt, artificial manures, peat, fireclays, oilcake, also for mixing moist sugars, the ingredients of mortar, &c., is here described. It consists of a pair of circular metal discs, fixed to two separate shafts on one side of the machine, the shaft of the right-hand disc working through the tubular shaft of the left-hand one without touching it; an arrangement which leaves the hopper, by which the machine is fed with materials, unob-

structed with driving-belts. The inside faces of the discs are studded with four concentric rings, or cagers, of very strong projecting bars, or beaters, the rings of beaters in one disc occupy the opposite alternate interstices of the other, and the discs are driven in opposite directions at a high speed, varying from 350 to 500 revolutions per minute. The material to be ground being introduced through the hopper, is beaten, in its passage through the machine, with great violence by the beaters of the successive cages revolving in opposite directions, so that disintegration is thoroughly effected before the particles reach the end of their zigzag course to the circumference of the discs. A mineral D., 4½ feet in diameter, can pulverize from 5 to 15 tons of material per hour, according to the hardness of the material and the degree of fineness required. The disintegrating flourmill of the same inventor has a similar construction, and its efficiency may be judged from the fact that one seven feet in diameter produces as much flour, of a superior quality, as thirty pairs of millstones, and at a less cost.

DITTELASMA, a genus of *Sapindaceæ*. The berries of *D.* (*Sapindus*) *Rarak* of the Malay Peninsula and S. China have marked saponaceous properties, 'making a lather even with salt water; used as a lotion, they are useful in skin-diseases, and when eaten produce giddiness.'

DIX, John Adams, LL.D., an American statesman, born at Boscawen, N. H., July 24, 1798, and in 1812 entered the army, but soon afterwards resigned, studied law, and settled at Cooperstown, N. Y. In 1833 he was elected secretary-of-state by the Democratic party, and in 1845 was chosen U. S. Senator. For a short time in 1861 he was secretary of the treasury of the United States, and while holding this position issued the frequently quoted order: 'If any man attempts to haul down the American flag, shoot him on the spot.' He served during the civil war with the rank of major-general, was minister to France in 1867–68, and was elected governor of New York in 1872 by the Republican party. Died April 21, 1879.

DIX, Morgan, S.T.D., son of John A., a distinguished American clergyman of the P. E. Church, born in New York, Nov. 1, 1827, and educated at Columbia College and the general theological seminary of the P. E. Church. In 1862, he was made rector of Trinity Church, New York, which position he still holds (1885). He has published several commentaries and numerous essays and sermons.

DOANE, George Washington, D.D., LL.D., born at Trenton, N. J., May 27, 1799; entered the ministry of the Protestant Episcopal Church, and, in 1832, was made Bishop of New Jersey. Died April 27, 1859.—His son, William C., was made Bishop of Albany in 1869.

DOCKING HORSES. When young work-horses are sent to grass, they are docked, *i. e.*, six joints of their tails are amputated, the object being to keep the naturally long tails from being incommoded in the trams of a cart. The cutting is accomplished by aid of a machine similar in form to a pair of nutcrackers.

DODD, Charles, the assumed name of Hugh Tootel, an English Roman Catholic historian, who was born near Preston 1672, studied at Douay and at St. Gregory's, Paris, entered the priesthood, and settled (1697) as a preachor in Lancashire. He wrote a *Church History of England from* 1500 *to* 1688, which contains much curious and valuable information drawn from original papers, letters, &c. This work was published in Brussels in 3 vols. folio (1737–39–42), and a new and corrected edition was begun by the late M. A. Tierney, but only five vols. appeared (1839–43). D. wrote many other works. He died February 27, 1742–43.

DODD'ED CAT'TLE are animals without horns. The name is also given to cattle which, naturally having horns, have had them cut off to prevent them goring their neighbors in the field or fold.

DODGE, Mary Abigail (better known as Gail Hamilton), a popular American writer, born at Hamilton, Mass., in 1830. She was for some time engaged in teaching, but of late years has devoted her time entirely to literary work. She has published *Woman's Worth and Worthlessness; Country Living and Country Thinking; The Battle of the Books;* and other works.

DODGE, William Earl, born at Hartford, Conn., Sept. 4, 1805. He removed to New York, where he became a successful merchant. He was a public-spirited citizen, interested himself in all the philanthropic movements of the day, and gave liberally in the cause of charity. Died Feb. 9, 1883.

DOL'ERITE, a term given by geologists to a group of igneous rocks of a dark green or gray color, and composed of felspar (triclinic) with magnetic iron and olivine. The typical D. is a 'crystalline-granular mixture of labradorite and angite with magnetic iron.' It often contains small quantities of the carbonates of iron and lime.

DOLICHOCEPH'ALIC, a term first introduced by Retzius to denote human skulls which are much elongated from before backwards, as distinguished from those termed *brachycephalic*, which have nearly as great breadth as they have length.

DON, an Italian and Spanish contraction of the Lat. *dominus*, 'lord' or 'master.' The Portuguese form is *dom*, the Old Eng. *dan* or *daun*. In Spain and Portugal the word is applied as a title to all persons of noble birth, including kings and princes, but it is also bestowed in courtesy on those who are not grandees. The Latin form was originally assumed by the popes, and descended from them to all ecclesiastics and scholars. Hence the 'dons' of English colleges, and the 'dans' of old English poetry.—*Dan* Chaucer, *Dan* Lydgate, &c. Tennyson has restored the word to modern English in his *Dream of Fair Women*.

DON'DA-NDU'GU (Kisuaheli, from *donda*, 'ulcer,' and *nduga*, 'brother' = brother-ulcer), a peculiar form of ulceration, confined to the lower extremities, endemic in Zanzibar and Eastern Africa. This formidable disease is common in inter-tropical Africa, more especially after the rainy seasons, and it probably depends on the development of larvæ from eggs deposited by some species of insect. The ulcer is always situated on those parts exposed while the natives are traveling, with bare feet and legs, through mud and water, and most generally on the shin-bones, the gastrocnemius muscle or its insertion, the instep, and the toes. On the first appearance of the disease there is not, generally, very severe pain; the skin is smooth and glazed, and the sub-lying tissues have a boggy feeling, and not fluctuating as in abscess; in the center there is a small spot, like an abraded pimple, exuding a little serous matter. An incision made at this stage reveals an extensive, deep-seated, slough; but if left to itself the glazed skin soon separates as a slough. In severe cases the sloughing proceeds with great rapidity; tendons are laid bare, and the bone is denuded of periosteum; joints are opened, and the toes or foot may be separated from the limb. The disease is of the most loathsome description, both in appearance and odor; it is very fatal, and those who recover are generally permanently lamed. Death results from purulent absorption, from extreme exhaustion, and occasionally from hæmorrhage. This disease seems to be allied to the ulcer Yemenensis, common in Arabia. The late Dr. Livingstone was confined to his hut at Bambarré, in Central Africa, for eighty days with this disease. The antiseptic is the only mode of treatment of any avail. The disease was first described by Dr. Christie (*Chotera Epidemics in E. Africa*, Macmillan, 1876).

DONELSON, Fort, a strong fortification, two miles below Dover, on the W. bank of the Cumberland River. It was erected by the Confederates shortly after the outbreak of the civil war. On Feb. 16, 1862, it was surrendered by Gen. Buckner, in command, to Gen. U. S. Grant, together with 8000 prisoners of war.

DONK'EY ENGINE, a small auxiliary engine used on board ship for filling up the boilers and doing other work when the main engines are not in motion.

DO'RA D'IS'TRIA, the pseudonym of Helena Ghika, Princess Koltzoff-Massalsky, a Wallachian authoress, born of a noble family at Bucharest, January 22, 1829. Her early studies and travels made her an accomplished linguist, and at the age of fifteen she undertook to translate the *Iliad* into German. She composed several dramas when very young; became famous for her beauty and acquirements; and in 1849 married Prince Koltzoff-Massalsky, whom she accompanied to the Russian court. After further travels she published *La Vie Monastique dans l'Église Orientale* (Paris, 1855), under the pseudonym D. d'I., in allusion to the Ister or Danube. Among her other works are *La Suisse Allemande* (Geneva, 1856); *Gli Eroi della Rumenia* and *I Rumenied il Papato*, both in Italian; *Les Femmes en Orient* (Zurich, 1860); *Des Femmes par une Femme* (1864); *La Vénitienne* (1864); *Au Bord des Lacs Helvétiques* (1864), &c. Her works are pervaded by ardent love of freedom and Christianity. She has produced numerous articles in French, Italian, and German journals, has attempted painting with success, and been chosen a member of learned societies which had never before admitted a woman.

DOR'ISLAUS, Isaac, a Dutchman who removed to England in the early part of the 17th c., and was made lecturer on history in Cambridge University by Fulke Lord Brooke in the beginning of the reign of Charles I. He lost this post for his avowed republicanism, became judge-advocate in the royal army, embraced the cause of the Parliament, helped to draw up the accusation against the king, and was murdered by several exiled royalists, May 2, 1849, at the Hague, where he had been sent as ambassador.

DOUGLAS, Stephen Arnold, an American statesman, was born at Brandon, Vermont, April 23, 1813. He began life as a cabinetmaker, but afterwards studied law and settled in Jacksonville, Illinois, where he was known by the sobriquet of the 'Little Giant.' D. was chosen State Secretary in 1840, a judge in 1841, entered the House of Representatives in 1843 as a Democrat, and was a senator from 1847 to 1861. He advocated *Popular Sover-*

eignty in the Territories, and in 1854 his Kansas and Nebraska Bill, repealing the Missouri Compromise, let loose a torrent of political passion over the whole country. D. was the presidential candidate of the Northern Democrats in 1860, when Lincoln was elected. He died 3d June 1861. D. was idolized as a leader in the Western States. A splendid monument, costing $80.000, was erected to his memory at Chicago, on the banks of Lake Michigan.

DOUGLASS, Frederick, an American orator, was born of a negro mother and white father at Tuckahoe, in Maryland, about 1817. He was a slave, first on a plantation and afterwards in Baltimore, but having taught himself to read and write, escaped from bondage at the age of twenty-one. For a time he worked on the wharfs of New Bedford, Mass., but soon attracting notice by his gifts, was employed as an agent of the Anti-Slavery Society. In 1845 he published his *Autobiography*, and soon after visited England, where the thrilling story of his life, and his manly oratory, excited much sympathy. For some years he was editor of a paper in Rochester, N. Y., and in 1855 wrote *My Bondage and Freedom*. In 1870 D. became an editor in Washington, and in 1872 was the first in the list of presidential electors chosen by the Republicans of New York State.

DOVER, the capital of Delaware, U. S., is situated on a rising ground, 5 miles W. of Delaware Bay, and 65 miles S.S.E. of Philadelphia by railway. It has a handsome state-house, a library of 30,000 volumes, and six churches, while the streets run at right angles, and are lit with gas. There are large steam flour and saw mills, and a trade chiefly with Philadelphia in flour and fruit. Pop. (1880) 2811.

DOW, Lorenzo, a zealous, but eccentric American preacher, born in Coventry, Conn., Oct. 16, 1777. He entered the ministry of the Methodist Church, and, although a man of but limited education, preached with an eloquence which everywhere drew large congregations. He twice visited England and Ireland. Among his writings are the *History of a Cosmopolite; A Short Account of a Long Travel;* and *The Stranger in Charleston, or the Trial and Confession of Lorenzo Dow.* Died Feb. 2, 1834.

DOW, Neal, an American temperance reformer, born at Portland, Me., in 1803. While a member of the legislature (1851) of his native state, he was instrumental in securing the passage of the 'Maine Law,' a strict enactment, prohibiting the sale of ardent liquors. He served in the Union army during the civil war, with the rank of brigadier-general.

DOW'LAIS, a town in Glamorganshire, and a station on the Brecon, Merthyr, and Rhymney railways, 1½ miles N.E. of Merthyr Tydvil, is the seat of one of the largest ironworks in the world, the property of the Guest family. These works, which, with the collieries, employ 11,000 men, comprised (1876) 19 blast-furnaces, 140 puddling-furnaces, and 10 rolling-mills, and produce 150,000 tons of iron annually. Steel-making is also extensively carried on by Siemen's and Bessemer's processes. The town has a public library and literary institute. Pop. (1876) 19,000.

DOWN-TREE, a name given in the W. Indies to *Ochroma Lagopus*, one of the *Malvaceæ* (sub-order *Bombaceæ*), the cork-wood of Jamaica, on account of its downy seeds being used to stuff beds, &c.

DRAKE, Joseph Rodman, an American poet, born in New York, N. Y., Aug. 7, 1795. His best known poem is *The American Flag*. He also wrote *The Culprit Fay*. Died Sept. 21, 1820.

DRAVIDIAN LANGUAGES AND PEOPLES. The term D. has been applied by philologists to a group of cognate languages, whose present home is almost entirely confined to the S. of India. The name itself is derived from *Dravira*, the Sanscrit appellation for the Tamil country, the most ancient and powerful of the Southern Indian kingdoms; and the name Tamulian has been sometimes used for the entire group. The D. L., which all conform to a common type, belong to the more highly-developed stage of the so-called Turanian family of speech. They are agglutinative in the fundamental portions of their grammar; but they also exhibit incipient inflections, which can for the most part be reduced to separate words incorporated with the roots. Their alphabet is manifestly derived from some prototype of the Devanágarí character; but it differs from the Sanscrit proper in being rounded rather than angular, and cursive rather than either inscriptional or capital. The D. group of languages, which comprises five chief members, has been subdivided by Professor Wilson into the two following branches:—(1) Telugu, Carnata or Canarese, and Tuluva; (2) Tamil and Malayálam. Telugu is spoken by about 14,000,000 people in the N.E. of the Madras Presidency; this language is the sweetest of the five, but its literature is composed of translations from the Sanscrit. Carnata is spoken in the Carnatic and the State of Mysore by about 5,000,000; its literature, though recent, is partly original. Tuluva, which is largely mixed with the Carnata, is spoken by only some 150,000 persons, living on the western coast between Cochin and Goa. Tamil is spoken by about 10.000,000, who live in the tract between Madras city, Cape Comorin, and Mysore; it boasts an indigenous literature, cultivated as early as the 9th c., and the Tamil race is by far the most civilized and energetic of the D. peoples. Malayálam is spoken by about 2,500,000, inhabiting what is known as the Malabar coast, which runs up on the W. from Cape Comorin; nearly two-thirds of this language is said to be of Sanscrit derivation. Besides these five languages, it has lately been discovered that certain barbarous tribes in the middle of the peninsula use dialects which can certainly be referred to a D. type. Among these are the Gondhs of Central India, the Kandhs of Orissa, the Uraons of Chota Nagpore, and the Rajmahalis bordering on the Ganges; these number collectively nearly 3,000,000. It has also been conjectured that other tribes, dwelling as far N. as the slopes of the Eastern Himalayas, are D. in origin, though no longer so in language. It is probable, therefore, that one-sixth of the total population of India is D. See *A Comparative Grammar of the Dravidian and South-Indian Family of Languages* by the Rev. R. Caldwell, LL.D. (2d ed. Lond. Trübner & Co. 1875).

DREW, Daniel, a well known American speculator, born at Carmel, N. Y., in 1797. Beginning life poor, he accumulated a large fortune through steamboat and railroad enterprises. He gave liberally towards the educational institutions of the Methodist Church and in the cause of charity. By a series of unfortunate speculations, he lost his fortune shortly before his death. Died in 1879.

DREW THEOLOGICAL SEMINARY, an institution of the Methodist Church, at Madison, N. J., founded in 1868, and endowed by Daniel Drew, in honor of whom it was named, to the amount of half a million dollars.

DREY'SE, Johann Nicolas von, the inventor of the needle-gun, was born at Sömmerda, near Erfurt, November 22, 1787. From 1809 to 1814 he worked in the imperial armory, Paris. Thenceforth he devoted himself to the manufacture of fire-arms, and in 1827 produced the first model of a needle-gun, an invention which he afterwards developed, and which, in 1840, was adopted in the German army. D. was placed at the head of a large manufactory of fire-arms in Sömmerda, and appointed a privy-councilor. He died December 9, 1867.

DROMATHE'RIUM, an extinct genus of Marsupial mammalia, the remains of which (consisting of the lower jaw) are exceedingly interesting as forming one of the earliest traces of mammalian existence on our globe. The D. remains occur in the Triassic rocks of N. America. D. was a mammal of small size, and appears to have been very nearly related to the little *Myrmecobius fasciatus*, or banded ant-eater of New South Wales. *D. sylvestre* is the name which has been given to the D. remains. The lower jaw contains 'ten small molars in a continuous series, one canine, and three conical incisors—the latter being divided by short intervals' (Owen).

DRONE-FLY (*Eristalis tenax*), a genus of *Diptera* or Flies belonging to the family *Tabanidæ*, and noted for its close resemblance to the hive-bee. The larvæ are known as 'rat-tailed maggots,' and are found in mud.

DRO'VERS ('drivers,' *i.e.*, of cattle) are those who buy cattle in one market to sell in another. They are traders subject to the bankrupt laws. The name is also commonly applied to those whose busines is to drive cattle to or from the markets. In the English metropolis they are classified as *country*, *butcher*, and *London* D. They are required, under a penalty of 40s., to wear a ticket, to take a yearly license, and to use no stick which has not been marked by the clerk of the market.

DROY'SEN, Johann Gustaf, a German historian, born at Treptow, in Pommern, July 6, 1808; studied at Stettin and Berlin; became professor in Berlin in 1835, and Professor of History at Kiel in 1840; was elected to the National Assembly in 1848; appointed professor in Jena in 1851, and again in Berlin, 1859. His writings include *Geschichte Alexanders des Grossen* (Berlin, 1833); *Geschichte des Hellenismus* (Hamb. 1836–43); *Vorlesungen über die Geschichte der Freiheitskriege* (Kiel, 1846); *Leben des Feldmarschalls Grafen York von Wartenburg* (Berlin, 1851, 2d ed. 1854); *Ueber Preussen und das System der Grossmächte, Actenmässige Geschichte der Dänischen Politik* (Hamb. 1850). Later works are his *Geschichte der Preuss. Politik* (10 vols. 1855–70); *Urkunden und Actenstücke zur Geschichte des Grossen Kurfürsten* (1864–65); and translations of Æschylus (3d ed. 1868) and Aristophanes (2d ed. 1869).

DRUM-FISH, a general name given to those fishes which, like the maigres, make a kind of grunting noise, but applied more specially to the *Pogonias chromis* or bearded D.-F. of the N. American coasts, which produces a noise close resembling the beating of a drum. In this Teleostean fish, which is included in the family *Sciænidæ*, the chin is provided with many small *barbules* or fil-

aments. The first dorsal fin is provided with ten spines, whilst the anal fin is two-spined.

DRUMMER (*Blatta gigantea*), a large species of cockroach common in the West Indies, and named from the noise it makes during the night, chiefly by knocking its head against wood.

DU'CAS, MICHAEL, a Byzantine historian, who flourished towards the middle of the 15th c. After the capture of Constantinople in 1453 by the Turks, D. sought a retreat in Lesbos, and was employed by the tributary prince of that island in various diplomatic missions to the Turkish sultans. On the annexation of Lesbos to the Ottoman Empire in 1462, he retired to Italy, and there composed his *Historia Byzantina*, commencing with the creation of the world, and ending with the taking of Lesbos. D.'s history is a valuable authority for the reigns of Joannes Paleologus and his successors Manuel, Joannes, and Constantine. It also contains a reliable account of the siege and sack of Constantinople, and has been largely used by Gibbon, who remarks that D. 'writes with truth and freedom; but the style is a barbarous obscure jargon, full of Turkish words and strange constructions.' A folio edition of the *History* was published in Greek and Latin at Paris (1649). It was also edited by Bekker (1834) for the Bonn series of Byzantine historians, along with an early Italian translation found at Venice by Ranke. It has been translated into French by Cousin.

DUCLOS, CHARLES PINEAU, a witty French writer of memoirs, romances, essays, &c., was born at Dinan, February 12, 1704. In 1746 he was made a member, and afterwards perpetual secretary, of the Academy. He died at Paris, March 26, 1772. His chief works are his *Considérations sur les Mœurs de ce Siècle* (1750), *Mémoires pour servir à l'Histoire du Dix-huitième Siècle*, and *Mémoires Secrets sur le Règne de Louis XIV., la Régence et le Règne de Louis XV.* (1791). See his *Œuvres Complètes* (10 vols. Par. 1806).

DUCROT, AUGUSTE-ALEXANDRE, a French general, was born at Nevers in 1817, served in Algeria, and in the Italian campaign of 1859, and was made general of division in 1865. On the outbreak of the German war he was placed at the head of the first division of the first army corps, under Marshal MacMahon. He fought well at Sedan, and refused to sign the capitulation treaty. Escaping from prison at Pont-à-Mousson, he took an active part in the defence of Paris, and subsequently became a member of the National Assembly (1871), and was appointed commander-in-chief of the eighth corps in 1872. He is the author of *La Journée de Sedan* (1871), *De l'État-major et des Différentes Armes* (1871), and *La Vérité sur l'Algérie* (1871). &c. D. is strongly opposed to democracy.

DUCT, an anatomical term signifying the tube which conveys the secretion away from a gland. Thus we have the D. of the liver, the D. of the parotid gland, &c.

DUNG, the excrement of animals, and the most necessary of all articles in fertilizing a farm. Restricting the word to its ordinary sense, horse, cow, sheep, pig, and pigeons' D., the preference for securing growth may be given to the last, if applied to barley or wheat, but its limited production makes it of little account in ordinary farm-management, although doubtless it is quite equal in plant-nutritiveness to that of the birds which left guano deposits in Peru. Horse-D. is much appreciated, and, mixed with cow and sheep D., makes an excellent manure. All artificial substances are inferior, everything considered, to that which is made in the stable, byre, or shed; and the only regret farmers have is that they cannot obtain a sufficient quantity of it. The quality of D. purchased from towns or made on the homestead is not preserved as well as it ought to be. It should not be exposed to sun and wind, which rob it of its virtue, but should be put up in heaps, mixed with earth, as then its savor and fructifying powers are preserved for months. Some farmers are of opinion that D. is best made in covered courts, and carried direct from thence to the fields. Dunghills should be frequently turned, and not placed in proximity to drains, as the liquid percolates through the earth downwards, and tends to choke the drain. See Stephen's *Book of the Farm;* Gent's *Systema Agriculturæ* (published 1669); Mechi's *Profitable Farming;* Kames's *Gentleman Farmer;* and Hoskin's *Chronicles of a Clay Farm.*

DUNKIRK, a city of Chautauqua Co., N. Y., and port of entry on Lake Erie. It is an important railroad and commercial center, and has direct railroad communication with the oil, coal, and iron regions of Pennsylvania. The surrounding country is a fine dairying district. Pop. 9000.

DUPAN'LOUP, FELIX-ANTOINE-PHILIBERT, a French churchman, was born at St. Felix, Savoy, January 3, 1802. He studied theology at Paris, became a priest, and won notice as an excellent preacher and catechist. After refusing various charges in Paris, he was appointed Professor of Sacred Eloquence in the Sorbonne in 1841, and Bishop of Orleans in 1849. In 1848 he attended the deathbed of Talleyrand. In 1854 he was made a member of the Academy, and since 1850 he has taken part with considerable energy and keenness in politics, arguing for the rights of the Pope as a temporal sovereign against Edm. About. He was returned to the National Assembly in 1871, and voted with the Right. He died Oct. 11, 1878. Among his most important works are *Manuel des Catechismes* (1838); *Des Associations Religieuses. De la Pacification Religieuse* (1845); *Souveraineté Temporelle du Pape* (1849); *Lettres sur l'Éducation Particulière* (1849); *Œuvres Oratoires* (1873).

DUPIN, LOUIS ELLIES, a French historian, born of an old Norman family, at Paris, 17th June 1657. He studied at the Collége d'Harcourt, entered the Church, and was through life persecuted for his liberal opinions, being accused of treating the Virgin and the Fathers with disrespect. His favorite scheme was to unite the Roman Catholic, Greek, and English Churches. He died at Paris, June 6, 1719. Among his voluminous writings are *Nouvelle Bibliothèque des Auteurs Ecclésiastiques* (Par. 58 vols. 1686–1704); *Histoire des Juifs depuis Jesus Christ jusqu'à Présent* (Par. 1710), *Histoire Profane* (Par. 6 vols. 1714). &c. See Niceron's *Mémoires.*

DU PONT, SAMUEL FRANCIS, an American naval officer, born at Bergen Point, N. J., Sept. 27, 1803, and entered the navy in 1815. In the early part of the civil war he led an expedition against Port Royal, which he captured after a severe engagement of four hours duration, and afterwards prosecuted the work of blockading the Confederate ports with great vigor. The order of his promotion was as follows: lieutenant in 1826, commander in 1842, captain in 1855, and rear-admiral in 1862. Died June 23, 1865.

DURHAM, SIMEON OF, an English chronicler of the 12th c., who taught at Oxford, and wrote Latin annals of England to the reign of Henry I. His book is specially valuable for the history of the N. of England, and was continued by John of Hexham.

DU'ROC, GERAUD-CHRISTOPHE-MICHEL, DUC DE FRIULI, was born at Pont-à-Mousson, October 25, 1772. He served as aide-de-camp to Bonaparte in the Italian and Egyptian campaigns. His services to the Consul in 1799 procured him a generalship, several important embassies, and the post of Grand Marshal of the Palace. He carried through the peace with Saxony (1806), the cession by Charles IV. of his rights to the throne of Spain, and the armistice of Znaim (1808). The scene between the Emperor and D. on the field of Markersdorf (where the latter was killed, May 22, 1813) is well known.

DUST-BALL, a disease in horses, provoked by too much food composed of corn and barley-dust. The disorder affects chiefly the intestinal canal. Its presence is made known by a haggard countenance, a distressed eye, distented belly, and hurried respiration. The ball is sometimes about four inches in diameter, and as hard as iron.

DUVAL', ALEXANDRE VINCENT PINEU, was born at Rennes, 6th April 1767. He was from 1792 to 1815 one of the leading dramatic authors in France in comedy, legitimate drama, and opera-comique. His works (ed. 1822–23, in 9 vols.) show skill in plot, effective dialogue, and comic situations. His most successful piece was *Édouard en Écosse, ou la Nuit d'un Proscrit.* He had a bitter controversy with Victor Hugo and the Romantic School, whom he accused of ruining the stage. He died at Paris, January 1842.

DUVAU'CEL, ALFRED, a French savan, born in 1793, was the son-in-law of Cuvier, who instructed him in natural history. In 1817, as royal naturalist, D. undertook an expedition to Chundernagore, Sumatra, Malacca, and the valleys of the Ganges and the Brahmapootra. He made large collections, which were transmitted to Paris. He was a constant correspondent of the Asiatic Society of Paris. He describes his travels in a graphic style, without losing scientific precision. His visit to the King of Cossya and the 'Cavern of the Devil' is of especial interest. He died at Madras in August 1824.

DUYCKINCK, EVERT AUGUSTUS, born in New York, N. Y., Oct. 17, 1823, and graduated from Columbia College in 1835. His entire life was devoted to literary pursuits. With his brother, George L., he published a *Cyclopædia of American Literature*, a work of great value. He also published *History of the War for the Union*, and other works. Died in 1878.

DWIGHT, THEODORE, an American author, born at Hartford, Conn., March 3, 1796, and graduated from Yale College in 1814. Among his works are the following: *Tour of Italy. History of Connecticut, Life of Garibaldi, A School Dictionary of Roots and Derivatives, The Northern Traveler, The Tour of New England, The Father's Book, First Lessons in Modern Greek, The Roman Republic of* 1849, and *The Kansas War.* Died Oct. 16, 1866.

DWIGHT, THEODORE WILLIAM, LL.D., an American lawyer and teacher of law, born at Catskill, N. Y., July 18, 1822, graduated from Hamilton College in 1840, and studied law in Yale University. He established a law school in connection with Ham-

ilton College in 1846, and in 1858 was called to the professorship of municipal law in Columbia College, New York City, which position he continues to hold. Under his management Columbia Law School has become one of the leading institutions of its kind in America. Besides his work as an instructor, Dr. Dwight has written largely for the press, and has held several judicial positions.

DYNACTINOM'ETER (Gr. *dynamis*, 'power;' *actis*, 'a sunbeam;' and *metron*, 'a measure'), an instrument for measuring the intensity of the light-rays of the sun and comparing the powers of object-classes. See Claudet's paper in the *Philosophical Magazine* for June 1851, and Hunt's *Photography*.

DYNAM'OMETER, an instrument for measuring the effort exerted or the work done by a machine. There are three classes of dynamometers, viz.—(1) Those which merely indicate the effort exerted, leaving the distance and time through which it is exerted to be separately noted. Some machines of this class record the effort on paper by self-acting mechanism, as well as indicate it. (2) Those which record both effort and distance, generally in the form of a curve, of which the ordinates represent the magnitudes of the efforts exerted or resistances overcome, and the abscissæ the distances moved through,—the area consequently giving the product of these two, i. e., the work done. (3) Those which, by means of suitable apparatus, record the work done; the product, that is, of the effort (or resistance), and the distance through which it is exerted. These are called integrating dynamometers. In Class 1 the ordinary friction brake and some kinds of spring-balances are used for the purpose of measuring effort; to Class 2 most dynamometers used for measuring traction belong, and the steam-engine indicator; to Class 3, Ashton and Storey's power meter, &c.

DYOOR ('men of the woods'), a race of Central Africa, in the region of the Upper Nile. The Dyoors are of a noble negro race, with small development of jaw and graceful slimness of limb. They occupy a small territory, and are not over 20,000 in number. Occupying a ferruginous district, they are famed for their skill in ironwork, and provide the coin which circulates in the whole Upper Nile region—i. e., spades and spear-heads. Like the Shillooks of the N., from whom they are derived, and whose dialect they use, the Dyoors can gain a livelihood in various ways. Besides working in iron, they farm, hunt, and fish, and are quick and ingenious in constructing wickerwork and pottery. The Nubian slave-dealer has greatly injured the prosperity of the Dyoors. The river D. traverses the country of the same name, and is a large tributary of the Ghazal, which it joins about 150 miles S.W. of the confluence of the latter with the Nile.

E.

EAD'GAR (mod. *Edgar*), an English king, the second son of King Eadmund, was born about 940, and in 956 was chosen king of Mercia and Northumberland in place of his brother Eadwig, who had enraged the churchmen, and especially Dunstan, by an uncanonical marriage. In 960 Wessex yielded to his rule. Under E., whose policy was solely moulded by Dunstan, civil strife and the Danish descents ceased, and the English kingdom was consolidated. Among his titles was *Anglorum Basileus*, and it is said that once eight kings rowed his barge on the Dee. He is reported to have freed Wales from wolves by imposing an annual tribute of 300 wolves' heads on the Welsh.

EADGAR THE ÆTHELING, a grandson of Eadmund Ironside, chosen king by the English in 1066, after the battle of Hastings. His chief supporters, Eadwine and Morkere, Earls of Mercia and Northumbria, being forced to retreat before the Duke of Normandy, E. headed the deputation which offered William the crown, but afterwards fled to Scotland, where his sister Margaret married Malcolm Canmore. The Northumbrians, in league with Sweyn of Denmark, proclaimed E. king of England, but were unable to cope with William, and E. again sought refuge with Malcolm. He was afterwards a dependent at William's court, and became a friend of Robert, Duke of Normandy. On Malcolm's death, in 1097, he drove Donald Bain from the Scottish throne, on which he placed his nephew Edward as an English fendatory. He is said to have accompanied Duke Robert to the Holy Land, and in the struggle between Robert and Henry I. was taken prisoner, but shortly freed by Henry. William of Malmesbury says he lived to an old age, but the date and manner of his death are unknown.

EAGLE HAWK, a town in Victoria, 4½ miles from Sandhurst, and 105 miles N.W. of Melbourne. It is in the heart of a very important gold-mining district. Pop. (1875) 6590.

EARLY, Jubal A., born in Virginia, in 1818, and graduated from West Point in 1837. He resigned from the army and became a lawyer, rapidly rising to distinction in that profession. He served in the army during the Mexican war, and, at the outbreak of the civil war, entered the Confederate service. He participated in the battles of Bull Run and Gettysburg, and was promoted to the rank of major-general. In 1864 he led an expedition through the Shenandoah Valley, into Pennsylvania; but was subsequently defeated by Sheridan, and compelled to retire. At the close of the war, he resumed the practice of law in his native state.

EAR-SHELL (*Haliotis*), a genus of Gasteropodous molluscs, belonging to the family *Haliotidæ*, in which the shell is ear-shaped, with small whorls, and a large aperture. The outer lip is perforated for a siphon, and in ear-shells new holes are successively formed with the growth of the shell. No operculum exists. These shells are much used in inlaying work, on account of the beautiful tints of their nacreous or mother-of-pearl lining. They abound at the Channel Islands, and familiar species are the *Haliotis tuberculatus*, the Ormer or Guernsey E.-S., and the *H. asininus* or Ass's E.-S.

EARTH-CLOSET SYSTEM. This system of disposing of human excreta has attracted much attention during the past seventeen years, and was originally proposed as a substitute for the pestiferous cesspool and the wasteful and defective system of water-drainage, and as a simple method of enriching the land with valuable manurial matter, commonly carried to the sea or diverted into our rivers to their pollution. The principal of the E.-C. S. is based upon the fact that *dry earth* is one of the best known disinfectants and deoderizers, and that when it is applied in detail to fresh excrement it renders the fæcal matter at once inodorous and innoxious. Moreover, a compound is formed that is valuable as manure, and capable of easy application to the soil. The introduction of the system, which is in successful operation in many parts of England, as well as in India and America, is chiefly due to the zeal, energy and mechanical talent of the Rev. Henry Moule, vicar of Fordington, Dorsetshire. Mr. Moule's patent earth-closet resembles in outward appearance an ordinary water-closet. Under the seat is a watertight vault bedded in cement, or a movable pail or tank, and at the back is placed a hopper or chamber for holding dry sifted earth. On using the closet for the first time a charge—1½ lbs. by weight, or 1½ pints by measure—of earth is thrown into the receptacle, and after use a second charge is cast down either automatically, on the sitter removing his weight from the seat, or by his pulling a plug-handle. The simple mechanical arrangements of Moule's earth-closet admit of easy modification to meet special wants, and the vault may be emptied or the pan removed either from the outside or inside as desired. The night-soil need not be removed till the vault or other receptacle is filled, as it remains altogether inoffensive. If desired, the earth-manure may be redried, and used over again two or three times, the manurial value of the product increasing with each time it is passed through the closet. The organic matter is disintegrated and absorbed by the earth, and it is only when the earth is saturated with liquid and vapor that it fails as a deodorizer. It is essential that the earth be dry and sifted, and that no slops be thrown into the receptacle. Of the advantages of the E.-C. S. in agricultural districts and small communities there can be but one opinion. Wherever dry earth is obtainable, and facilities exist for the ready disposal of the manure, there the system is eminently practicable. In large centers of population its adoption can scarcely be expected, especially where the water-drainage system, with all its defects, is in operation. The labor and expense of preparing and storing large

quantities of earth, and of its subsequent removal, even if facilities existed for the disposal of the manure, render the system impracticable for large cities. The most zealous advocates of the E.-C. S. do not even recommend it as practicable in towns of over 10,000 persons. The system, however, has been found to work well in jails, barracks, factories, hospitals, and schools in England and in prisons and military stations in India.

EARTH'WORK, in engineering construction, consists chiefly of cuttings and embankments for railways, roads, reservoirs, &c. The engineer who projects and lays out a railway has the 'quantities' of E. in cubic yards, both of excavation and embankment, calculated in detail in his office; and finds, by boring or otherwise, the nature of the ground in which the cuttings have to be made, and upon which the embankments are to rest. The work is executed by a contractor, whose price is based upon the quantities and information supplied by the engineer. Before the E. of a railway is commenced, its center line is staked and nicked out (or marked by a little trench on the surface of the ground), its levels having been previously fixed, so that the quantity of land excavated in the cuttings may be, in general, equal to the amount required for making the embankments, in order that no soil may have to be excavated specially for this purpose. This is called 'equalizing E.' The slope or nature of the soil, the nearness of water, and other causes, occasion the special difficulties which occur in the construction of E.

EAST LIVERPOOL, a town of Columbiana Co., O., on the Ohio River and a division of the Cleveland & Pittsburg Railroad, 48 miles west of Pittsburg. It is situated in an agricultural country, and is extensively engaged in the manufacture of white, granite, and yellow ware. With the exception of Trenton, N. J., it produces more pottery than any other place in the United States. Pop. 5568.

EAST NEW YORK, a city of Kings Co., N. Y., and suburb of Brooklyn, with which it is connected by steam and horse cars. Pop. 20,000.

EAST ORANGE, a town of Essex Co., N. J., on the Delaware, Lackawanna & Western Railroad, 40 minutes from New York. It is composed largely of the private residences of New York business men. Pop. 8349.

EAST SAGINAW, a city of Michigan, in Saginaw Co., on the Saginaw River, at the junction of the Flint & Pere Marquette and the Michigan Central railroads. It is a business center and has a large and flourishing trade. The Saginaw Valley is noted for its manufactories of lumber and salt, the annual shipments of which reach 700,000,000 feet of lumber and 800,000 barrels of salt. For a distance of 20 miles the Saginaw River is occupied by over 100 saw-mills and an equal number of salt works. Pop. 26,000.

EAST ST. LOUIS, in St. Clair Co., Ill., on the Mississippi River, directly opposite to St. Louis, Mo. It is the terminus of 13 railroads, has extensive stock-yards and packing-houses, and is connected with St. Louis by bridge. Pop. 9662.

EAU CLAIRE, a city of Eau Claire Co., Wis., at the junction of the Eau Claire and Chippewa rivers, 95 miles E. of St. Paul. It has railroad connections with St. Paul, Milwaukee, and Chicago. It manufactures annually 250,000,000 feet of lumber, besides large quantities of shingles; and is said to be the largest lumber manufacturing city in the West. It is a center of trade for a radius of 75 miles. Pop. 16,000.

E'BERHARD is the name of several members of the Würtemberg dynasty, of whom the first, EBERHARD THE NOBLE (*erlauchte*), ruled from 1279 to 1325, and greatly extended the territorial possessions.—EBERHARD IV., THE QUARRELSOME (*der Greiner*), grandson of the former, became Count of Würtemberg in 1343, distinguished himself in the wars of S. Germany towards the end of the 14th c., and died March 15, 1392.—EBERHARD IM BART, first Duke of Würtemberg, was born in 1445, eight years after the division of the territory between his father, Ludwig the Elder, and his uncle, Ulrich, the founder of the Stuttgart line. He succeeded, with the help of the Elector Friedrich, in consolidating the family inheritance, which he rendered indivisible by the Compact of Münsingen in 1482. The established constitution of Würtemberg is his work, and he also founded the University of Tübingen (1477). E. was the head of the Swabian Bund, and was raised to the ducal rank by the Emperor Maximilian I. at Worms, 1495. He died childless in February 1496. See Pfister, *Eberhard im Bart, erster Herzog in Würtemburg* (Tüb. 1822).

ECBAL'IUM OFFICINAR'UM (*E. agreste; Momordica elaterium;* Fr. *concombre sauvage*), commonly called the squirting cucumber, an annual plant of the natural order *Cucurbitaceæ*, is a native of the hotter parts of Europe, where it grows wild on rubbish-heaps. It is cultivated as a medicinal plant in some parts of Northern Europe, and a few acres are grown at Mitcham in Surrey. It is a trailing plant, without tendrils, rough, and covered with stiff hairs. The fruit, like a small oblong melon, is covered with soft prickles, and is filled with a succulent tissue containing numerous black seeds, which, when the fruit is ripe, are forcibly expelled through the aperture where the stalk is attached to the fruit. This remarkable phenomenon is ascribed by Dutrochet to osmotic action within the fruit. The active principle of the plant is contained in the thick green mucus surrounding the seeds, from which is prepared the drug *Elaterium*.

ECH'ARD, LAURENCE, an English historian, was born at Cassam, Suffolk, about 1671; held two livings in Lincolnshire; became archdeacon of Stowe in 1712; was presented to several benefices in Suffolk; and died August 16, 1730. His chief works are *General Ecclesiastical History* (1702); *History of England* (1707–18); *A Gazetteer; A Description of Ireland*, &c.

ECHINORHYN'CHUS, a genus of intestinal worms found in the digestive organs, and sometimes in the abdominal cavity of vertebrated animals. The body is round, sometimes elongated, and often shortened to a kind of sac. The proboscis is armed with hooks, by which they attach themselves to the coats of the intestines. *E. gigas* is the largest known species; it is found in the hog and the wild boar, and the females are sometimes fifteen inches long. *E. hæruca* is a smaller species, and has been found in the liver of the cat.

ECKH'A, the name for the most common-wheeled conveyance in India. It is a light two-wheeled cart, without springs, drawn by a pony, and covered with a cloth awning on a wooden framework. The E. is rarely used by Europeans, but natives will take long journeys in it. A good pony has been known to take a loaded E. 60 miles in twelve hours.

EC'LOGUE (Gr. *ekloge*, 'a selection'), was at first the name of a poem, or series of poems, chosen on account of their beauty from an author's work; afterwards the term was applied to Virgil's *Bucolics*, or pastoral poems, and hence has become synonymous with a pastoral idyll.

EC'TASIS (from the Gr. *ekteino*, 'I stretch out'), a term used to indicate aneurismal distension of the walls of the pulmonary artery or capillaries, as seen in the air-cells.

EDG'ING IRON an implement of crescent form, with a spade-handle, used for cutting the sides of drains.

EDISON, THOMAS ALVA, a distinguished American inventor, born in Ohio, in 1847. Beginning life a poor boy, he learned telegraphy, and became an expert operator. In 1876 he located at Menlo Park, N. J., and since that time has devoted himself to a series of experiments in electricity. The result has been a series of brilliant discoveries and inventions. He has perfected a system of electric lights, and has invented the carbon telephone, the phonograph, and numerous other apparatus for the useful employment of electricity. He has also invented a system of telegraphing by means of which several messages may be sent over the same wire at once.

EDMONDS, JOHN WORTH, a distinguished American jurist, born at Hudson, N. Y., March 13, 1799, and graduated from Union College in 1816. In 1820 he began the practice of law at Hudson, and rapidly gained high rank in that profession. After holding various important positions of public trust, he was in 1845 made circuit judge; in 1847, a judge of the supreme court; and in 1852, he was elevated to a seat upon the bench of the court of appeals. In 1851, Mr. Edmonds was converted to Spiritualism, and from that time forwards was its ardent advocate. He believed himself to be a medium and in almost constant communication with spirits. He published *Spiritualism* and several other works upon the subject. Died April 5, 1874.

EDMUNDS, GEORGE F., an American statesman, born at Richmond, Vt., Feb. 1, 1828. Early in life he began the practice of law, and soon became eminent as a lawyer. After filling various political positions in his own state, he was, in 1866, made a member of the U. S. Senate, of which body he has continued to be a member down to the present time (1885). In 1884 he was a prominent candidate for the presidential nomination, before the convention of the Republican party, but was defeated by James G. Blaine.

EDWARDES, SIR HERBERT, a distinguished lieutenant of the Lawrences in their administration of the Punjaub, and a hero of the Indian Mutiny, was born 12th November 1819. In 1857 he was Commissioner of Peshawur, perhaps the most important military post in India, where he not only maintained order throughout the Sepoy war, but was able to send down reinforcements, both of Europeans and staunch native troops, to the camp before Delhi. To him, as much as to any single man, was due the tranquillity of the Punjaub in this crisis, and thus directly the safety of India. He died in England, 23d December 1868.

EDWARDS, BELA BATES, D.D., born at Southampton, Mass., July 4, 1802; graduated from Amherst College in 1824; and pursued his theological studies at Andover. He was secretary of the

American Educational Society, editor of the *American Quarterly Observer*, and afterwards of the *Bibliotheca Sacra;* and, in 1837, was made professor of Hebrew at Andover. In 1848 he became professor of biblical literature in the same institution. A memoir of his life has been published by Dr. E. A. Park. Died April 20, 1852.

EGGLESTON, EDWARD, D.D., an eminent American divine and author, born at Vevay, Ind., in 1837, and began to preach in the Methodist Church when only 19 years of age. In 1866 he became engaged in literary work, and in 1870 removed to New York City and became one of the editors of the *Independent*. He was for several years pastor of the Church of Christian Endeavor, Brooklyn, N. Y., but was compelled to resign on account of ill-health. Among his best known works are the *Hoosier Schoolmaster, End of the World, The Mystery of Metropolisville*, and *Roxy*. Dr. Eggleston's works have had a large circulation, and their literary merit entitles him to high rank as an author.

ELAMBAZAR', a trading town in the district of Birbhum, province of Bengal, on the navigable Ajai, and is noted for its manufacture of lac ornaments, and has an extensive trade in rice. Pop. 3000.

ELASTICITY, in physiology. Many of the structures of the body possess the property of E., by which movements are effected without the expenditure of force in muscular contraction. Thus there is a strong elastic band termed the *ligamentum nuchæ* in the back of the neck of the large ruminants and pachyderms, stretching from the spinous processes of the dorsal vertebræ to the occiput, by which the heavy head is sustained without muscular fatigue. The larger arteries of the body possess a highly elastic coat, by the agency of which the jet-like pulsation communicated by the heart to the blood is converted into a continuous uniform motion. The lungs and walls of the chest, by their E., assist in ordinary expiration without any muscular action. Muscles are highly elastic, so that after contraction they return to their former length. Finally, elastic structures are found in the neighborhood of all joints, so as to break the shock in such movements of the body as walking, running, leaping, &c.

ELAT'ERITE, or ELAS'TIC BITU'MEN, is a flexible or elastic mineral substance allied to bitumen, possessed of a blackish-brown color and a resinous lustre. It burns readily with a yellow flame, giving out a bituminous odor, and as it effaces pencil-markings, it has been called mineral caoutchouc. It was found originally in an old lead-mine in Derbyshire, but it is nowhere abundant.

ELECTROTO'NUS, in Physiology, is the condition into which a living nerve passes while it is traversed by a continuous electrical current. While in this condition its properties are changed, so that in the neighborhood of the positive pole its irritability and rate of conductivity are diminished, and its power of producing a current of electricity is increased, while in the neighborhood of the negative pole the reverse is the case. The part near the positive pole is said to be in an *anelectrotonic*, and that near the negative pole in a *cathelectrotonic* state.

ELEPHANT FISH, a name given to the *Callorhynchus antarctica*, an Elasmobranchiate fish, nearly allied to the *Chimæra* or 'king of the herrings,' and included in the division *Holocephali* of the above order of fishes. It derives its name from its long snout, the tip of which is bent backwards like a hoe.

ELEPHANT-GRASS (*Typha elephantina*), a species of bulrushes belonging to the *Typhaceæ* or Bulrush order. This plant affords a large quantity of pollen which in Scinde is used for making a kind of bread, to which the name of *boor* or *booree* is given. The familiar name of the grass is derived from the fact of elephants feeding largely upon it.

ELEPHANT HAWK-MOTH (*Deilephila elpenor*), a genus of Lepidopterous insects belonging to the *Sphingina* or hawk-moths, which are distinguished by the antennæ being thickened in the middle or at their tips. The wings are long and narrow, and the trunk or proboscis is well developed. This moth has the body tinted rosy red, varied with light-green. The light green of the wings is prettily contrasted with rose-colored bands; and the hinder wings have a black base fringed with white. The E. H.-M. is known in France as the 'vine sphinx.' It produces two broods annually, the larvæ making a cocoon on the ground by binding mosses and leaves together.

ELEPHANT'S EAR, a name popularly applied to the species of *Begonias*—plants belonging to the natural order *Begoniaceæ*—from the appearance of their oblique stipulate leaves. These plants occur in the E. and W. Indies and in S. America.

ELEPHANT-TUSK SHELL (*Dentalium*), a genus of Gasteropodous mollusca belonging to the family *Dentalidæ*, in which the shell is tubular and curved, shaped like an elephant's tusk, open at both ends, and possessing a circular aperture. The foot is pointed, and has symmetrical side lobes, from the presence of which Huxley inclines to place the *Dentalium* among the Pteropodous molluscs. The head is rudimentary, and the intestine has a neural flexure. *Dentalium arcuatum* is a familiar species.

ELEPHANT, WHITE, an ancient and exclusive Danish order of knighthood, in which the number of knights, other than those of the Danish royal family, was only thirty.

ELGIN, a city of Kane Co., Ill., on the Fox River, 38 miles from Chicago. It has fine water-power, which is employed in various manufacturing enterprises. It contains the works of the Elgin National Watch Company, and a milk condensing factory. It is the center of a fine dairy district, and carries on a large trade in butter and cheese. It is the seat of the Northern Insane Asylum. Pop. 12,000.

ELIOT, JOHN, the 'Apostle of the Indians,' was born at Nasing, Essex, in 1604, educated at Cambridge, and emigrated to Massachusetts in 1631. He became pastor of the church in Roxbury near Boston, and applied himself to the Indian languages. In 1646, with a few friends, he went to a company of Indians and explained to them the Christian religion. Encouraged by the interest they evinced, he obtained a grant of land from the colonial government on which the Indians might settle and become civilized. By 1674 there were fourteen such settlements, to all of which E. preached. Though still pastor of Roxbury, he regularly traveled through forests and swamps to visit his dusky converts. In 1660 the important Indian church of Natick was formed. About this time E. published the New Testament in the Indian language, and three years after the Old Testament, the first Bible printed in America—a work of great philological interest. E. also instituted schools and wrote school books for the Indians. He died May 20, 1690. See biography by Small, prefixed to facsimile of his *Indian Primer* (Edinb. 1878).

EL'IOT, SIR JOHN, an eminent English statesman and orator, in whom it has been well said 'centers the earlier struggle for parliamentary liberty,' was born of an old Devonshire family (since ennobled by the title of Earl of St. Germains) in Cornwall, 20th April 1592. From an early age he showed a high and fearless spirit, and a vehement temper. After a careful education at Oxford he traveled for some time, and in 1614 entered public life as member for St. Germains. E. obtained the favor of Buckingham, and from 1619 to 1623 held the office of Vice-Admiral of Devonshire, receiving the honor of knighthood. E.'s activity, however, in the suppression of piracy, out of which Buckingham wished to make profit, caused him to lose ground with his patron, and he was even thrown into prison. Early in the reign of Charles I. E., now member for Newport, became prominent as the leader of the Parliamentary or Country party, and the uncompromising opponent of Buckingham. Fixing upon the responsibility of the king's ministers to Parliament as the leading principle of constitutional government, he led the House of Commons by a series of remarkable speeches to impeach the minister, and in this course he persisted, although he was thrown into prison for ten days. He was the prime mover of the first Grand Remonstrance on the 'state of the realm,' which preceded the assassination of Buckingham, and in the third Parliament of Charles denounced the dissolution which the infatuated monarch had determined on, saying, 'Some have gone about to break Parliaments, but in the end Parliaments have broken them.' In 1629 he was, along with two other leaders of his party, thrown into the Tower on the charge of disobedience to the royal commands, and ordered before liberation to pay fines of £2000, £1000, and £500. He refused, and his confinement was so rigorous that his health broke down, and he died 27th November 1632. He had spent his time in prison in corresponding with his family and political friends, and in writing—among his works being a fragmentary *Memoir*, and an *Apology for Socrates*. The only complete biography of E. is that by the late Mr. John Forster (2d ed. 1872).

ELIZABETH OF VALOIS, QUEEN OF SPAIN, born at Fontainebleau 13th April 1545, was the daughter of Henri II. and Catherine de Médicis. 'The Princess of Peace' was promised in marriage first to Edward VI. of England, then to Don Carlos, but was ultimately married to Philip II. in 1559, the Duke of Alva appearing as proxy at Notre Dame. She met her husband at Guadalavara, and Brantôme says stared at him so much that Philip said, 'What are you looking at? Is my hair white?' After a short and unhappy life E. died at Madrid, 3d October 1568. See Brantôme's *Vie des Dames Illustres*.

ELIZABETH, QUEEN OF SPAIN, born 22d November 1602, was the daughter of Henri IV. and Marie de Médicis. She married Philip IV. of Spain in 1615, the Infanta Anna Maria of Austria being at the same time given to Louis XIII., a proceeding most distasteful to the Huguenots. E. had an enemy in the Minister Olivarez. She displayed political energy, and a strong love of her adopted country. She died 6th October 1644.

ELIZABETH CHRISTINE OF BRUNSWICK-WOLFENBÜTTEL, born 28th April 1691, was the daughter of Ludwig-

Rudolf of Brunswick-Blankenburg. Her grandfather, Anton Ulrich, who wrote novels—'six vols. in 4to'—brought about her marriage with the Archduke Karl, who had been previously refused by Caroline of Anspach. This event in 1707 caused the elder Brunswick family to become Catholic. E. was proclaimed Queen of Spain at Barcelona, and after her husband's election as Emperor acted as regent there till the Peace of Utrecht (1713). She was then crowned at Presburg Queen of Hungary. On her husband's death in 1740, E. devoted herself to the cause of her daughter, the famous Marie-Theresa. She founded the order of the Red and White Star, to be conferred by the Aulic Council of War on twenty-one superior officers, who should have served Austria for thirty years. E.'s sister Charlotte married Alexius, the Czarovitch, and had a 'fabulous end.' Her sister Antoinette married Ferdinand Albrecht of Brunswick-Bevern, and became the mother of Friedrich the Great's wife. E. died 21st December 1750.

ELIZABETH FARNESE, Queen of Spain, born 25th October 1692, was the daughter of Odoardo II. of Parma. She was ill-treated by her parents, and was a singularly ugly and obstinate child. In 1714, on the suggestion of Alberoni and the Princess des Ursins, *camarera mayor* or first maid of honor at the Spanish court, she married Philip V., then a widower. Her first act was to drive Des Ursins from Spain. Her active mind at once assumed the mastery over Philip, whom she reconciled with the Duc d'Orleans. She supported the Inquisition, and substituted D'Aubenton for Robinet as the King's confessor. The Spaniards resented the increase of Italian influence at the court. The temporary abdication of the jealous and hypochondriac Philip and the reign of her stepson Louis interrupted her schemes, pursued in the European alliances, the Congress of Cambrai, the Congress of Soissons, &c.; for securing the Two Sicilies and the Duchies of Parma and Piacenza to her son Carlos, who became King of Naples in 1734 and Charles II. of Spain in 1759. E. survived her husband until 1766. The 'tenacious termagant,' as Carlyle calls her, had great political ability; she spoke fluently in Spanish, Latin, German, and French. Among her younger children were Maria Anna, married to Joseph, King of Portugal, and Marie-Antoinette, married to Victor Amadeus, King of Sardinia. E.'s *Memoirs* were published in 4 vols. at London, 1746. See also Peralla, *Historia Civil*, and the innumerable private memoirs of the time (Noailles, Saint Simon, Duclos, &c.).

ELIZABETH, Queen of Hungary and Poland, the daughter of Stephen, Ban of Bosnia, married in 1363 to Louis the Great, King of Hungary and Poland. After her husband's death E., as regent, assisted by the Palatine Nicolas of Gara, oppressed her subjects until the arrival of a Neapolitan prince, Charles of Durazzo, who was crowned in 1385, and soon after was murdered. E. was herself murdered in 1387 by the Ban of Croatia.

ELIZABETH OF POLAND, Queen of Hungary and Transylvania, born in 1518, daughter of Sigismund I. of Poland, married to John Zapolski, whose death in 1540 left her in a difficult position between Ferdinand I. on the one hand, and the Sultan Solyman, who took possession of Hungary, on the other. E. offered to cede Transylvania to Ferdinand for Ratibor and Oppelu in Silesia, but the bargain was not carried out, and the Turks helped her to drive the Austrians from Transylvania. She died 20th Sept. 1558, leaving a son Stephen, or John Sigismund.

ELKHART, in Elkhart Co., Ind., on the St. Joseph's River. It is the terminus of the Cincinnati, Wabash & Michigan Railroad, and two other railroads pass through it. It has good water power, which has been partially developed for manufacturing. Pop. 9000.

ELLESMERE, Lake, in the province of Canterbury, New Zealand, 20 miles S. of Christchurch, has an area of 125 sq. miles. It receives the Selwin, but has no outlet, except in wet seasons, when it overflows into the sea.

ELL'ICHPOOR, the chief town of the Berars, or assigned districts of the Nizam, 275 miles N. of Hyderabad, and 100 E. of Nagpur. It is a walled cantonment, and has a beautiful well and many fine tombs, surrounded by gardens. The trade is in local products. There are manufactures of cotton and silk fabrics, carved articles, lac ornaments, &c. Pop. (1867), 27,782.

ELL'IOT, an ancient Scottish border family, which has produced several distinguished men. The first really notable E. was Gilbert, 'the laird of Stobbs,' in Roxburghshire, who married a daughter of Scott of Harden, and was the grandfather of the Gilbert E. who was made a baronet in 1666. From the latter's younger son are descended the Earls of Minto; while his elder son was father of George Augustus E., the defender of Gibraltar, who was born in 1718, entered the army at the age of fifteen, and distinguished himself at the battle of Dettingen and in the Seven Years' War. After the peace, he was made lieutenant-general, and having being appointed Governor of Gibraltar in 1775, he, in 1782, repelled the prolonged attacks of a Franco-Spanish force of 30,000 men, supported by ten floating batteries, and compelled the enemy to change the siege into a blockade, which ended in the Peace of Versailles, 20th Jan. 1783. E. received the Order of the Bath, and afterwards the title of Lord Heathfield. He died 6th July 1790.—Sir George E., brother of the first Earl of Minto, was born 12th Aug. 1784, entered the navy, rose rapidly in the service, and in 1837 was appointed one of the Lords of the Admiralty, and Commander of the Fleet at the Cape of Good Hope. In 1840 he was appointed to the chief naval command in Chinese waters, and on the 5th of July he captured the island of Chusan. He was promoted vice-admiral in 1847, admiral in 1853, and died at Kensington, 24th June 1863.—Sir Charles E., K.C.B., nephew of the preceding, was born in 1801, entered the navy in 1816, served in India, on the African coast, and in the W. Indies. In 1835 he was appointed Chief Commissioner and Plenipotentiary in China. He was in the center of the diplomatic operations leading up to the ransom of Canton in Aug. 1841, and was subsequently in succession Chargé d'Affaires in Texas (1842–46), Governor of Bermuda (1847–52), of Trinidad (1853–56), of St. Helena (1863–69). He died at Withycombe, Devon, Sept. 9, 1875.—Sir Henry Meiers E., son of John E. of Pimlico, was born in 1808, educated at Winchester, and entered the Indian civil service, the first of the competition set, in 1827. He became Secretary to the Government of India in the Foreign Department, and died at the Cape of Good Hope in 1853. His chief work was his posthumous *History of India as told by its own Historians* (6 vols. Lond. 1867). He also wrote a *Supplement to the Glossary of the Indian Terms*, from which was compiled *Memoirs on the Races of the North-Western Provinces of India* (Lond. 1859).

ELLIS, George, F.R.S., F.S.A., one of the earliest, soundest, and most tasteful of the scholars who have devoted themselves to Early English Literature, was born in London in 1745. He was educated at Westminster school and at Cambridge, was one of the authors of the *Rolliad*, a satire on Pitt, with whom he afterwards became reconciled; accompanied Lord Malmesbury as secretary to Lisle in 1797; became a contributor to the *Anti-Jacobin*, and died April 15, 1815. Walter Scott said E. was the best converser he had known. E.'s works are *Specimens of the Early English Poets* (3 vols. 1790); *Specimens of English Metrical Romances; Essay on the Formation and Progress of the English Language;* and a preface, notes and appendix to Le Grand's *Fabliaux*. E. renders the quaint language of mediæval poets into modern English with a graceful ease which is made doubly charming by a curious combination of genuine sympathy with mocking humor. He was a worthy forerunner of the new school of critics and historians who have revived an interest in our early literature.—William E., born in London, 29th August 1794, worked as a missionary in the South Sea Islands from 1816 to 1824, when he returned to London. He was Foreign Secretary of the London Missionary Society from 1838 to 1840. In 1853 he visited Madagascar to examine the state of Christianity there. The results of this journey were embodied in his *Three Visits to Madagascar, 1853–56, with Notices of the People, Natural History, &c.* (1859), an excellent work, from which our knowledge of Madagascar has been mainly derived. His other works are—*Narrative of a Tour through Owhyhee* (1826); *Polynesian Researches* (1829; *History of Madagascar* (1839); *Vindication of the South Sea Missions* (1831); and *Madagascar Revisited* (1867). E. died June 9, 1872.—Sarah Stickney E., born about 1800, married William E. in 1837. She is the authoress of many well-known works, among which are *Women of England* (1838); *Daughters of England* (1842); *Wives of England* (1843); *Hearts and Homes* (1848); *Mothers of Great Men* (1859); and several tales, *The Sons of the Soil, Family Secrets*, &c.

ELL'WOOD, Thomas, a Quaker writer, born at Crowell, Oxfordshire, in 1639, now remembered for his relations with Milton, to whom he became reader in 1661. In 1665 he visited Milton at Chalfont, St. Giles, Buckinghamshire, and the poet gave him the MS. of *Paradise Lost*, asking him to criticise and return it. E. tells us he read the poem, and took it back to Milton:—'He asked how I liked it and what I thought of it, which I modestly but freely told him; and after some further discourse about it, I pleasantly said to him, "Thou hast said much here of paradise lost; but what hast thou to say of paradise found?"' Milton, says E., sat some time musing, then changed the subject, but on E. visiting him after the Great Plague, he showed him *Paradise Regained*, and said, 'This is owing to you; for you put it into my head by the question you put to me at Chalfont, which before I had not thought of.' E. died in 1713. See his *Autobiography* (2d ed. 1714).

EL'PHINSTONE, Mountstu'art, an East Indian statesman and administrator, the fourth son of the eleventh Baron E., was born at Edinburgh in 1779. He entered the East India Company as a cadet (1796), and after some diplomatic service under the Duke of Wellington was nominated first envoy to Cabul in 1808. On the apprehension of a Franco-Russian invasion of British India he concluded a treaty of alliance with Shah Sujah, which was the

first step in England's eventful relation to Afghan affairs. He published an *Account of the Kingdom of Cabul* (Lond. 1815. 3d ed. 1842). In 1816 he took up his residence at the court of the Peishwa, and in 1817 was actively engaged in the battle of Kirkee—the deathblow of the Mahratta power. He was governor of Bombay from 1820 to 1827, and his rule was marked by great public works and vast reforms, and was crowned by the enactment of 'the E. Code,' which, for comprehensive clearness and brevity, is comparable to the *Code Napoleon*. The E. College in Bombay was founded in his honor (1827). On his return to Europe he devoted his leisure to his *History of India, the Hindu and Mohammedan Periods* (2 vols. Lond. 1841, 4th ed. 1864), a work which has gained him the title of the Tacitus of Indian history. He died at his estate of Hookward, in Surrey, 29th November 1859. See Colebrooke's *Memoir of E.* (Lond. 1861), and Sir J. W. Kaye's *Lives of Indian Officers* (Lond. 1867).

ELYRIA, in Lorain Co., O., on the Black River, 25 miles from Cleveland. It has two railroads, and is engaged in manufacturing shears, screens, &c. Pop. 6000.

EMBURY, PHILIP, an eminent preacher of the Methodist Church in America, born at Ballygarane, Ireland, in 1728; came to America in 1760; and a few years later organized a Wesleyan society in New York, and began to preach. He subsequently labored in and about Troy, N. Y., where he died in 1775. He has sometimes been called the 'founder of American Methodism.'

EMERALD HILL, a town in Victoria forming one of the suburbs of Melbourne, but under distinct municipal government. It occupies very nearly the site of the 'Canvas Town' of the early days of Victorian gold-discovery. Pop. 19,500.

EM'ERSON, REV. WILLIAM, a descendant of a chaplain in the Army of Independence, was born at Concord, Massachusetts, May 6, 1769, graduated at Harvard College in 1789, became minister of a Unitarian Church in Boston, published several discourses, a *Selection of Psalms and Hymns* (1808), and a *History of the First Church of Boston* (1812), and died May 12, 1811.

EMM'ETT, THOMAS ADDIS, son of a physician, was born at Cork, 24th April 1764. He was educated for the law, which he abandoned to become a leader of the 'United Irishmen.' On the Irish insurrection of 1796–98 being suppressed, he was arrested; but his sentence of imprisonment was commuted to exile, and removing to New York, he became a distinguished lawyer. He died November 14, 1827.—ROBERT E., younger brother of the above, was born in Dublin 1778; was intended for the bar, but joined the Irish insurgents; was captured, and executed September 20, 1803. His death and his love for Miss Curran are the subjects of two of Moore's *Irish Melodies*,

EMMONS, NATHANIEL, D.D., an American theologian, born at East Haddam, Conn., April 20, 1745, graduated from Yale College in 1767, and entered the ministry of the Congregational Church in 1773. From this time until the time of his death he remained pastor of the Congregational Church at Franklin, Mass. His discourses were very logical, and dealt largely with the most abstruse themes of theology. His works have been published in an edition of six volumes. Died Sept 23, 1840.

EMORY COLLEGE, an educational institution at Oxford, Newton Co., Ga., organized in 1837, and under control of the Methodist Church. It maintains classical and scientific courses, and special attention is devoted to the evidences of Christianity.

EMPORIA, a city of Lyon Co., Kan. It has three railroads and is a commercial trade center. It has growing manufacturing interests; the Holly system of water works, and gas works. Pop. 7,000.

EM'YDIN, a substance found in the yolk of turtles' eggs. It is probably derived from the decomposition of some more complex albuminous substance. A somewhat similar substance called *ichthin* has been found in the eggs of fishes.

ENCEPHALI'TIS, or CEREBRI'TIS, inflammation of the brain substance, or of the structures generally within the cranium, is often associated with *meningitis*, and followed by softening or induration. There are two varieties of softening of the brain—(1) Inflammatory *red softening*, or acute ramollissement; and (2) *white softening*, the result of an atrophic process. Red softening is frequently followed by abscess, and is essentially a fatal disease. In induration, the texture of the brain resembles the white of egg boiled hard, the convolutions being flattened, and there is an absence of blood and serum in the encephalon. Causes:—Morbid poisons, associated with zymotic or constitutional diseases; intemperance; *coup de soleil;* great mental excitement, and uncontrolled moral feelings, &c. E. may be *traumatic*, resulting from injury; or *idiopathic, acute* or *chronic*. In acute E. there is usually delirium, followed by a loss of mental power terminating in dementia. In chronic E. the mental symptoms may be slight; but there is always loss of intellectual vigor, failure of memory, confusion of ideas, and irritability of temper. The disease often ends in general paralysis, or death from apoplexy. Treatment:—General measures must be adopted to remove the exciting cause, and the brain must have perfect rest. Hygienic measures and a change of scene are of primary importance.

ENCEPH'ALON, a term sometimes applied to that part of the nervous system within the skull.

ENDICOTT, JOHN, one of the early colonial governors of Massachusetts, born at Dorchester, England, in 1589, and came to America in 1628. He was elected governor of the colony for several terms. He was a zealous Puritan, and during the period when he was governor, four Quakers were executed in Boston. Died March 15, 1665.

ENDOCAR'DIUM (Gr. *endon*, 'within,' and *kardia*, 'the heart'), the lining membrane of the heart.

ENG'LISH BAZAR' (Angrazabad), the chief town of Maldah district, province of Bengal, British India, on the Mahanunda river, close to the ruins of Gaur, and 188 miles N. of Calcutta. E. consists of a series of trading villages lining the river bank. It has some silk-weaving industry, and the vicinity is very productive in the silkworm mulberry. Pop. (1872) 12,859.

ENGLISH, GEORGE BETHUNE, an American author and adventurer, born at Cambridge, Mass., March 7, 1787. After graduating from Harvard College, in 1807, he studied law, and afterwards divinity. After editing a paper for a short time at New Harmony in the West, he entered the U. S. marine service, as lieutenant, and, going to the Mediterranean, there resigned, abjured Christianity, became a Mohammedan, and entered the Turkish army. In 1827 he returned to America. He published, among other works, *Grounds of Christianity Examined*, and *Narrative of the Expedition to Dongola*, &c. Died at Washington, D. C., Sept. 20, 1828.

ENGLISH, WILLIAM H., an American lawyer, born in Indiana, in 1822. He studied law and soon became prominent in the Democratic party. He has held numerous positions of public trust, and in 1880 was nominated for vice-president, by his party, but was defeated.

ENSILAGE, a prepared fodder for cattle. A pit, or silo, is prepared, as nearly air-tight as possible; into this green fodder (corn, oats, rye, grass, or millet) is tightly compressed; and then the silo is securely sealed. By this process green food-stuffs are kept in a juicy condition. E. is highly relished by cattle, and is said to be an excellent fodder.

EPHE'LIS (Gr. 'a sun-freckle'), is the scientific name for sunburn. E. can be removed when recent by an emulsion of bitter almonds with spirits of wine, or the benzoated oxide of zinc, beaten into a cream with orange or elder-flower water, and when chronic by a lotion of bichloride of mercury, or nitro-muriatic acid.

EPIG'ONI (Gr. *Epigonoi*, 'the afterborn'), the term used in mythic story to denote the sons of the seven heroes—Adrastus, Polynices, Tydeus, Capaneus, Parthenopæus, Amphiaraus, and Hippomedon—who, with the exception of the first named, perished in the war against Thebes. To avenge the death of their fathers, the E., ten years thereafter, under the leadership of Alcmæon, who had collected a band of Argives, marched against Thebes. The Thebans, under Laodamas, were routed near Glissas in Bœotia, while Ægialeus, on the side of the E., was slain. Thebes was at last taken by the E., and leveled with the ground. The common list of the E. contains Ægialeus, Alcmæon, Diomedes, Euryalus, Promachus, Sthenelus, and Thersander. The war of the E. was the subject of many epic and tragic poems, not one of which has survived.

EP'ISODE (Gr. *epi*, 'besides,' and *eisodos*, 'a coming in'), an incidental narrative introduced by writers to give variety to their subject. In epic and didactic poetry, the E., if fitly chosen and skillfully introduced, affords a pleasant relief to the reader. The parting of Hector and Andromache in the Iliad, of Aristæus and his bees in the Georgics, of Dido in the Æneid, of Ariadne in the *Peleus and Thetis* of Catullus, of Francesco da Rimini in Dante's *Inferno*, of Pastorella in Spenser's *Faery Queene*, of Damon and Musidora in Thomson's *Seasons*, of Margaret in Wordsworth's *Excursion*, and Glaucus in Keat's *Endymion*, are familiar examples of the E. in ancient and modern poetry.

EPISTAX'IS, or bleeding from the nose, is very common in children and young people, and usually depends on congestion of the mucous membrane. Cold applications to the forehead and bridge of the nose, with a brisk purgative, generally arrest E. In severe cases it may be necessary to plug the nose with a pledget of lint, or a sponge soaked in some astringent, as muriate of iron. When E. is copious, caused by the rupture of a vessel from violence, it may be necessary to plug both the posterior and anterior nares, but this can only be done by a surgeon.

E'QUAL TEM'PERAMENT, in music, the system of tuning by which the octave is divided into twelve equal semitones, as in the pianoforte, &c.

EQUATIONS, CHEMICAL. These represent by means of symbols and formulæ chemical reactions. Thus $2H_2 + O_2 = 2H_2O$ represents the reaction which takes place when hydrogen and oxygen combine to form water.

E'RATO ('the lovely'), in Greek mythology, one of the Nine Muses. She presided over erotic poetry and mimic invention, and is sometimes represented as the Muse of the lyre.

EREC'TILE TISS'UE, a kind of tissue found in certain organs which are sometimes rendered turgid by distension with blood. It consists of a network formed of fibrous, elastic, and perhaps contractile bands, called *trabeculæ*, in the meshes of which there are numerous blood-vessels, chiefly veins. These veins communicate with small arteries, and under certain nervous conditions, become distended with blood, causing the organ to swell and to be erected.

ER'IACH. By the Irish Brehon Law, in a case of murder, the brehon or judge caused the murderer to give the wife or child of the murdered man a recompense, called an E. The term corresponds to the ancient *were* in England.

ERIE, LAKE, BATTLE OF, an important naval engagement on Lake Erie, between an American fleet, commanded by Com. Perry, and an English fleet, commanded by Barclay, on Sept. 10, 1813. The result was a brilliant victory for Perry, and the capture of the entire British fleet. It was the occasion of Perry's famous dispatch to Harrison, 'We have met the enemy, and they are ours.'

ERIE CANAL, a water route, connecting the Hudson River with Lake Erie. It extends from Troy, N. Y., to Buffalo, N. Y., and was begun in 1817, and finished in 1825. This gigantic enterprise cost over seven million dollars, and its construction was largely due to the energy of De Witt Clinton, at that time governor of New York. Providing a cheap commercial route through the central part of the 'Empire State,' it has proved of inestimable value to trade.

ERRAN'TIA, an order of *Annelida*, or worms, represented by such genera as *Nereis*, *Eunice*, *Aphrodite*, &c. This group includes those forms which typically represent the *Annelida*, and which comprise the greater number of large active marine worms. The sides of the body are well provided in E. with the lateral appendages, consisting of *setæ*, or bristles, &c., which assist locomotion. Each joint or segment of the body bears two pairs of appendages, known respectively as *notopodia* and *neuropodia*. The gills or breathing organs are borne on the back or dorsal aspect of the segments. These animals are unisexual. The integument is soft.

ERSKINE, HARRY, son of the tenth Earl of Buchan, and elder brother of Lord Chancellor E., was born at Edinburgh 1st Nov. 1746, and called to the Scotch bar in 1768. Though not a great lawyer, his other gifts soon put him in the front rank of his profession, and made him one of the most popular men in Scotland. He was honorably distinguished for the attention he gave to the cases of poorer clients, and by the independence and consistency of his political principles. He acted as Lord Advocate under the short-lived Rockingham administration, and again under the Grenville ministry of 1806. In 1812 he retired from public life to Ammondell, in W. Lothian, where he died on 8th Oct. 1817.

ER'SKINE, JOHN, BARON OF DUN, a Scottish theologian, born near Montrose in 1508 or 1509. He was educated at Aberdeen University, and was the first to encourage the study of Greek in Scotland. Buchanan called him 'a man of great learning.' He early embraced Protestantism, was both a preacher and soldier, and was one of the commission appointed in 1577 to arrange the scheme of Church government known as the *Second Book of Discipline*. E. died March 21, 1591.

ERSKINE, THOMAS, OF LINLATHEN, born 13th Oct. 1788, was the grandson of John E. of Carnock, and nephew of the Evangelical leader the Rev. John E. He was called to the Scotch bar, but did not practise. His life, which was private but not retired, was spent chiefly at Linlathen and Edinburgh with occasional visits to Paris and Geneva. He died in March 1870. E.'s first literary effort was assisting in the Scotch editions of the works of Richard Baxter and John Gambold (1822). In his *Remarks on the Internal Evidence of Revealed Religion* he represents the incarnation as something contrived to produce a certain vivid effect, not otherwise producible, on the human mind, viz., a perception of God's infinite love. From this follows salvation, or the conscious habitual surrender of the human will to the divine. His *Unconditional Freeness of the Gospel*, a book warmly praised by Dr. Chalmers, is still much read. He insists on the universality of the offer of pardon through Christ, which on the stricter Calvinistic view is inconsistent with election. Hence in his *Doctrine of Sacrifice*, he represents that the quickening Spirit of God has passed into every corrupt soul of man, and that there is a real freedom, or power of choice, to follow or to resist its suggestions. E.'s latest meditations are contained in a posthumous volume, *The Spiritual Order*. What attracted men towards E. was his sweet and earnest simplicity of religious faith. He formed a link between Scotland and the finer minds in the English Church. See Dr. Hanna's *Letters of T. E.*, 1800–40 (Edinb. 1877).

ESCH'WEILER ('Ash-tree dwelling'), an important manufacturing town in Rhenish Prussia, on the Inde, 9 miles E.N.E. of Aachen. Pop. (1871) 15,490. The principal industries are the manufacture of iron and tinned ware, machines, needles, iron-wire, silks, ribbons, leather, and waxcloth. E. has besides breweries, rolling-mills, copper forges, and lead and coal mines. Some of the coal-mines are 200 fathoms deep. In 1872 there were forty-eight pits with 5700 workmen, who produced 1,050,000 tons. Tin and silver are also found.

ES'CUAGE (Old Fr. *escut*, 'a shield,' from Lat. *scutum*), in English feudal law, meant service of the shield, a kind of service by which the tenant was bound to follow his lord to war at his own charge. It also denoted compensation for military service.

ES'CULIN, an alkaloid obtained from the capsules of the fruit of *Æsculus hippocastanum* (horse-chestnut). E. is slightly bitter, almost insoluble in cold water, soluble in 12 parts of boiling water, and more soluble in alcohol. E. has been introduced in Lyon for the cure of ague and periodic neuralgia, in place of quinine. Dose, 15 grains twice a day. The bark was used for the same purpose in 1720, and during the wars of the French Republic, when the importation of cinchona was interrupted.

ESDRAE'LON is the Greek form of the Hebrew Jezreel, occurring only twice in the Apocryphal Book of Judith, iii. 9 and iv. 6. In Judith i. 8 the form is Esdrelom, and in chap. vii. 3, Esdraelom. The Plain of E. is triangular in shape, the mountains of Gilboa on the E. forming the base, the mountains of Galilee on the N. the one side, and Mount Carmel on the S.W. the other. Owing to its natural features it has been from time immemorial the battlefield of Syria, and from its position between Asia Minor and Egypt almost the battlefield of the East. It was the scene of the battle between Barak and Jabin (Judges iv.), Gideon and the Midianites and Amalekites (Judges vi., vii.), Saul and the Philistines (1 Sam. xxix. 1), Ahab and Benhadad (1 Kings xx.), and between Josiah and the Egyptians (2 Kings xxiii., where it is called Megiddo, from the town of that name which stood on its southern border). Here the Assyrians and Persians, the Crusaders and Saracens, the Egyptians and Turks, the Arabs and Franks have fought, and here Bonaparte gained one of his victories.

ESS'LING, a village of Austria, 5 miles E. of Vienna, together with Aspern the site of a fierce but indecisive battle between Napoleon and the Austrians, May 21–22, 1809. From it Massena got his title of 'Prince of E.'

ETH'EREGE, SIR GEORGE, one of the Restoration Dramatists, was born about 1636 in Oxfordshire. He was educated at Cambridge, traveled on the Continent, and on his return became the associate of Sedley, Rochester, Villiers, and other courtiers of Charles II. He was knighted about 1683, and sent as English minister to Hamburg and Ratisbon, where he died about 1694, from falling down stairs after a carouse. E. has left three comedies—*The Comical Revenge, or Love in a Tub* (1664); *She would if she could* (1668); *The Man of Mode, or Sir Fopling Flutter* (1676). Dryden (*Epistle to E.*) speaks of his terse comic wit, but his characters are flimsy, his dialogue generally trifling, and his plays only interesting from the swift succession of incidents. E. was imitated by Cibber. See Ward's *English Dramatic Literature*, vol. ii.

ETHERS are compounds of hydrocarbons, or of hydrocarbon radicals with elements or acids. Compounds of hydrocarbons and their radicals with elements are called *simple* E., while their compounds with acids are called *compound* E. Many of the latter occur in nature, and of these the fats and many fruit essences are important examples.

ETSCHMIAD'SIN, a fortified monastery in the Russian government of Erivan, on a tableland 20 miles N. of the town of E., ceded to Russia by Persia in 1828. Famous as the seat of the Armenian Katholikos or patriarch since 1441, and the meeting-place of the synod of the Armenian Church, it has been called the 'Rome of Armenia.' It has splendid buildings and gardens, several churches, a library (once much richer in Armenian literature than it is now), and some notable relics; among others a bit of Noah's ark, the point of the spear which pierced the Saviour on the cross, the hand of Jacobus of Nisibis, and of St. Gregory himself.

EUGLE'NA, a microscopic organism occurring in infusions of decayed organic matter, and generally believed by naturalists to

be an infusorian animalcule. Some authorities consider it to be a lower plant-form. The body is provided with a single lash-like filament or *flagellum* used for locomotion, and a pigment-spot is also developed in the body. The E. may be colored green with the same substance (*chlorophyll*) which imparts the green color to plants. *E. viridis* is a familiar species.

EU'LENSPIEGEL ('Owlglass') TYLL, the hero of a great number of German popular stories, who, as a wandering journeyman, travels over the country, indulging, under the guise of a simpleton, in knavish tricks and wild frolics. E. is most probably an imaginary character, but some assert that he was born at Kneittingen, Brunswick, that he roved through the N. of Germany, visited Rome and Poland, finally settled at Mölln, near Lübeck, and died there in 1350. A tombstone is shown at Mölln, with a looking-glass (*spiegel*) and an owl (*eule*) on it; but Damme, in Belgium, also claims to be the place where E. was buried. It is not known when or in what dialect the jocose tales in which E. figures were first written. Most probably they were composed in Low German, and from this were translated into High German by the Franciscan Thomas Murner, who collected and edited them in 1519. There is a new edition by Lappenberg in 1859. The stories are very indecent, but have been popular not only in Germany but in other parts of Europe, and have been translated into French, English, Latin, Dutch, Danish, and Polish.

EU'NICE, a large genus of Errantia or marine worms, the species of which live in the sand of our own and other coasts. One of the largest is *E. gigantea*, measuring 4 feet or more. These worms possess prominent side bristles or *setæ*, and the mouth is provided with a protrusible proboscis, armed with several pairs of horny jaws. The gills or branchiæ are large.

EUPHO'NIUM, a bass instrument of the bugle class, used in brass bands.

EUREKA, a town of Humboldt Co., Cal., on Humboldt Bay, 7 miles from the sea, and 225 N. of San Francisco. It is engaged in agriculture and the lumber trade. Pop. 5000.

EUREKA SPRINGS, a town of Carroll Co., Ark. It contains famous healing springs, which form the chief source of the prosperity of the town. At the height of the season, the population reaches 25,000. Pop. 5,000.

EURO'PA is the ancient name of the continent of Europe. It is commonly supposed to have been derived from E., the daughter of Agenor, king of Phœnicia, but Hermann has plausibly suggested its derivation from two Greek words, meaning the 'broad land.' The E. of the ancients at no time equalled in extent the modern continent. The primitive E. of Homer was comprised within very narrow dimensions, and at its greatest size the E. of the Greeks was bounded by the chain of mountains N. of Thrace, Italy and Iberia, and did not comprehend more than a third of modern Europe. The geographical knowledge of Southern E. was obtained by the successive victories of the Roman arms, especially by the Gallic campaigns of Cæsar. The traders who followed the advancing legions of the Empire penetrated beyond the Elbe, the Weser, and the Vistula, but the conquerors possessed little, if any, knowledge of the races who roamed through the remoter regions of the N. Subsequent additions to the geography of E. are chiefly due to the Scandinavian pirates, to the Christian missionaries who explored Scythia and Sarmatia, and to Karl the Great, Ælfred the Great, and the Teutonic knights, by whom, in the annexation of Prussia, the long series of geographical discoveries was completed.

EURO'TAS, the classic name of the modern *Basilipotamo*, a famous river of Greece, which flows through the ancient Laconia, down a beautiful vale with dark gorges, and through a fertile plain into the Gulf of Kolokythia, the ancient *Laconicus Sinus*. Sparta stood upon the right bank of the E., near its confluence with its only important tributary, the Œnus.

EURYALE, a genus of starfishes (*Echinodermata*) belonging to the order *Ophiuroidea*, which also includes the sand-stars and brittle-stars. In E. the body exists in the form of a globose disc, with five obtuse angles, from which the prehensile arms are given off. The arms are long and contorted, but are even more so in the nearly-allied *Asterophyton*, or 'Medusa-head' starfish.

EUTAW SPRINGS, BATTLE OF, an engagement of the war of the Revolution, between a British force, commanded by Col. Stewart, and an American force, commanded by Gen. Greene, on Sept. 8, 1781, in South Carolina. The former were compelled to retreat with a loss of over 600. Gen. Greene's loss was nearly as great.

EVANS, AUGUSTA J., a popular American novelist, born near Columbus, Ga., in 1835. In early life she removed, with her father, to Texas, and in 1868 was married to L. M. Wilson, Esq. Her works have had an extensive circulation. The following are among the best known: *Inez, a Tale of the Alamo; Beulah; Macaria; St. Elmo;* and *Vashti.*

EVANS, FREDERICK WILLIAM, born in England, in 1808. In early life he came to the United States, with his father, where he learned the hatter's trade. He became interested in socialism, and eventually joined the Shakers, among whom he at once became prominent as a preacher and thinker. He has published numerous works relative to the doctrines and practices of Shakerism and *Life of Ann Lee.*

EVANS, OLIVER, born at Newport, Del., in 1755. In 1772 he was led to seek a substitute for animal power in moving wagons. The result of these investigations was two of the most important inventions of the world, the automatic flour-mill and the high-pressure steam-engine. The former was first introduced in the Ellicott Mills, near Baltimore, Md., and is now employed throughout the world. In 1801 his high-pressure engine was perfected, the essential principle of which is now used in all locomotives and road engines. Mr. Evans prosecuted his work in the face of many obstacles and discouragements, but lived to see its full utility recognized. Died in New York, April 25, 1819.

EVANSTON, a town of Cook Co., Ill., on the Chicago & North-Western Railroad, 11 miles from Chicago. It is the seat of the North-Western University and the Garret Biblical Institute. Pop. 6707.

EVARTS, WILLIAM MAXWELL, LL.D., a distinguished American statesman and lawyer, born at Boston, Mass., Feb. 6, 1818, and graduated from Yale College in 1837. He studied law and began the practice of that profession in New York City in 1840. He rapidly gained distinction by his legal acumen and eloquence. When President Johnson was impeached before the U. S. Senate, Mr. Evarts, assisted by others, successfully conducted his defence. During parts of the years 1868–69, he was Attorney-General of the U. S., and in 1871 he was one of three, appointed by President Grant, to represent the United States before the Alabama Claims tribunal at Geneva, Switzerland. He still resides in the city of New York, where he conducts a large practice, and has the reputation of being one of the most brilliant advocates in the U. S. In Jan., 1885, he was chosen U. S. Senator from New York.

EWELL, RICHARD STODDARD, a Confederate general, born in the District of Columbia, in 1816, and graduated from West Point in 1840. He served with distinction during the Mexican war, and was engaged at Vera Cruz, Cerro Gordo, Contreras, Churubusco, Molino del Rey, and Chapultepec. At the outbreak of the civil war, he resigned from the U. S. army, and entered the Confederate service. During 1861–62 he participated in numerous engagements, and in 1863 was made lieutenant-general, and succeeded Stonewall Jackson, upon the latter's death. He commanded the Second Corps at Winchester, Gettysburg, and the Wilderness. Died at Spring Hill, Tenn., Jan. 25, 1872.

EWING, THOMAS, LL.D., an American statesman, born in Virginia, Dec. 28, 1789. By his own exertions he acquired an education, and removing to Ohio, was admitted to the bar, and began to practice law. He soon became eminent in his profession, and in 1831 was made U. S. Senator. In 1841 he was appointed Secretary of the Treasury by Harrison. He held other positions of public trust, and in 1850 was again made U. S. Senator. E. retired from public life in 1851, and died Oct. 26, 1871.

EXCHANGE, STOCK. In former times the business now carried on in the S.-E. of London was transacted in the Bank of England; but about the year 1700 the dealers in public securities changed their place of meeting to what is now called *Change Alley.* In 1773 some of the brokers hired rooms for business purposes in Sweeting Alley. To these they gave the name of *S. E.* Subscriptions were subsequently raised to erect a building for the special purpose of dealing in stocks. The site chosen was Capel Court, so called after William Capel, Lord Mayor of London, who had resided there. Admission to the society of the brokers, which had formerly been free, was now appointed to be by ballot and subscription. The old building was removed and the present one opened in 1854. Members are governed by a committee, who have power to suspend or expel any member 'guilty of dishonorable or disgraceful conduct.' A member is not allowed to transact business with any one who is not a member, and all transactions must be according to the custom of 'the house.' Members of the E. are either 'jobbers' or 'brokers.' A jobber deals on his own account. A broker acts for a client, deals with the jobber, and is paid by commission. A 'bull' buys for settlement at a future date on the speculation of a rise in price in the interval. A 'bear' sells for future settlement, on the speculation of a fall in price in the interval. Hence what are called *bull* transactions and *bear* transactions are speculations for the 'rise' or 'fall' of stocks. What is called the 'making-up' price of stocks is their average prices during the day, and the difference between this and the prices at which business is actually done is received and paid by the bulls and bears, or accounts are carried over on this principle. Such is the nature of what are called *time bargains.*

Stock exchanges have been organized in many of the leading cities of America, and that of New York is one of the largest of the world. Their method of business is much the same as that of the London Stock Exchange, the general principles of business being of course essentially the same. There are some slight differences in terminology.

EXONERATION (Lat. *ex*, 'out of,' and *onus*, 'a burden'), in law, signifies the legal act which frees one from an obligation.

EXOPHTHALMIA (Gr. *ex*, 'out,' and *ophthalmos*, 'the eye'), protrusion of the eyeball, may be caused by disease of the eye, or by any kind of growth within the orbit. If the case is left to itself, the protruded eye sometimes inflames and bursts.

EXOSTO'SIS (Gr. *ex*, 'out of,' and *osteon*, 'a bone'), an unnatural protuberance or morbid enlargement of a bone. E. is predisposed to by syphilis, scrofula, and cancer, and is sometimes hereditary; but in general, it occurs without any distinct or appreciable exciting cause.

EX PAR'TE. In judicial proceedings a step is said to be taken *ex parte* when the opponent, by neglect or refusal to appear, has not been heard in opposition.

EXPLO'SIVES, the name given to substances which, under the influence of heat, electricity, or percussion, are suddenly converted from a solid or liquid state into a gaseous form, producing an explosion whose force is proportional to the volume of the gas and its rapidity of disengagement. These substances are either chemical compounds or intimate mechanical mixtures. In the former the explosion results from the violent dissociation of the combined elements, as, for example, when the liquid chloride of nitrogen is resolved into its two component gases, chlorine and nitrogen; and in the latter the explosion arises from the combination or rearrangement of the elements composing the mixture, of which gunpower is the type.

Gunpowder and analogous preparations have long been used for purposes of war and pyrotechnic display, but the bulk of the substances embraced under the term E. have only of late years been discovered, and already their manufacture and utilization in mining and blasting operations have made wonderful progress. In their respective places in this work, the composition and character of the most important E. have been dealt with; here we only can enumerate those kinds which have been commercially prepared, or practically used, and for convenience of arrangement we shall classify them as mixtures and compounds. In mechanical mixtures a nitrate or a chlorate is the predominant ingredient, and with heat it freely gives off oxygen, which in a nascent condition combines with the other ingredients, generally carbon and sulphur, forming gaseous products. The nitrate mixtures embrace gunpowder, pyrolithe (nitrate with carbonate of soda, sulphur, and sawdust), and poudre-saxifragine (nitrate of baryta, saltpetre, sulphur, and charcoal). The chlorate mixtures comprehend Horsley's blasting-powder (chlorate of potash, charcoal, powdered nutgalls, &c., soaked with nitro-glycerine), Brain's blasting-powder (resembling that of Horsley), Ehrhardt's powder (chlorate and nitrate of potash, powdered coal and tannin), teutonite, chlorated gun-cotton, &c. The chief chemical compounds constituting E. are—nitro-glycerine, and bodies prepared from it—dynamite, dualine, lithofracteur; glyoxiline (gun-cotton pulp and saltpetre saturated with nitro-glycerine and methylic nitrate), gun-cotton, cotton-gunpowder, Schultze's powder (woody fibres treated with nitric and sulphuric acid and hot alkalies, and afterwards saturated with nitrate of potash solution), nitro-mannite, picric powder, the chloride and the iodide of nitrogen, and the fulminates of mercury, silver, &c.

EX POST FAC'TO is a legal term denoting an act done to affect a right previously questioned or a demand previously made. An *ex post facto* law operates retrospectively. It is only in extraordinary circumstances that this effect is given to a penal measure.

EXTRAJUDI'CIAL. The term is usually applied in law in contradistinction to *judicial*. E. matter is that which is not intended to form any part of the record, or of the judicial pleadings, or admissions of the parties, such as communings or correspondence with a view to a private settlement of the case.

EXTRIN'SIC EV'IDENCE is evidence beyond (Lat. *extra*) that of the deed or document under consideration. The general rule of law is that it is incompetent to contradict or modify the terms of formal writings unless fraud be alleged and proof offered; but in certain circumstances, as where there is ambiguity in the writing, such evidence is admitted in explanation.

EXUDA'TION (Lat. *ex*, 'out,' and *sudatio*, 'a sweating') is the escape of a portion or constituent of the fluids of the living body from their vessels, and is not necessarily the result of disease or injury. E. never results from the rupture of a vessel, and in this respect it is distinguished from extravasation. When E. occurs, the vessels may be entire, or their coats may be in a relaxed condition, or a part may be weakened from disease or injury; and the effusion takes place by mechanical filtration.

EYE-AG'ATE, the name applied to any banded agate with a prominent central spot like the pupil of the eye. The name *eyestone* is given to stalactitic limestone, which presents a similar appearance.

EYE'MOUTH, a market-town in Berwickshire, Scotland, is situated on the river Eye, and is a sub-port to Leith. It is 7½ miles N.N.W. of Berwick-on-Tweed, is irregularly built, and the only buildings of note are the churches. It has profitable herring and haddock fisheries. Windbound vessels resort to the harbor, which is sheltered from all winds except the N. and N.E. Pop. (1881) 2296.

EZZELI'NO, or ECCELI'NO, DA ROMANO, an Italian family, of German origin.—E. I. came to Italy about the middle of the 11th c., in the suite of Konrad II., from whom he received the castle of Romano near Padua, and several fiefs.—E. II. enlarged the family's lands, and commanded the forces of the Lombard league against Friedrich I. He died about 1183.—E. III. son of E. II. became podesta of Vincenza about 1150, and was a conspicuous Ghibelline chief. He died in 1135.—E. IV., surnamed the Tyrant, was born April 25, 1194, supported the Ghibelline cause, and in 1236, being hard pressed by the Marchese d'Este, sought aid from Friedrich II., was made captain of the imperial party, and extended his authority over Verona, Vicenza, Padua, Feltre, and Belluno. He contributed greatly to the Ghibelline victory at Cortenuova; in 1238 he married Selveggia, the emperor's natural daughter; and finally spread his power from the Adriatic to the neighborhood of Milan. He consolidated his tyranny by horrible atrocities; and in 1252 he was excommunicated, and a league made against him by the chief Lombard towns, but without success. His career of aggrandizement continued until 1256, when, Alexander IV. having preached a crusade against him, a new alliance, joined by Venice, was formed to oppose him. In 1259, when marching on Milan, he was defeated and captured, whereupon he refused food, tore the dressings from his wounds, and died. His son Alberico was shortly afterwards killed, and E.'s lands were shared among his enemies. E. was a man of rare energy, ability, craft, and monstrous cruelty. Indifferent to pleasure, he was possessed by a lust for murder which has made him the center of hideous legends. His barbarities, says Mr Symonds, 'laid a deep hold upon the Italian imagination, and proved in the end contagious.' See Verci's *Storia degli Eccelini* (1844), and Symonds's *Renaissance in Italy* (1875).

F.

FABRICIUS LUSCI'NUS, CAJUS, figures in Roman history as a model of antique simplicity, courage, and patriotism. When consul in B.C. 282, he delivered the city of Thurii, which was besieged by the Lucanians and Bruttii, and subsequently defeated the Samnites. When Pyrrhus came over from Greece to assist the Tarentines, F. was sent to confer with him, after the defeat at Heraclea (280), about a ransom of captives. The Greek monarch offered him gold if he would try to induce the senate to make peace, but F. was proof against both his bribes and his threats. Pyrrhus was so much impressed with his patriotic fidelity that he restored the prisoners without ransom. During F.'s second consulship, in 278, the physician of Pyrrhus secretly paid him a visit, and treacherously offered to poison his master for a reward. F. indignantly handed him over to the king, who again expressed his thanks by setting free all his Roman prisoners. While Pyrrhus was absent in Sicily, F. was victorious over the peoples of Lower Italy. He died poor, about 250, but the state charged itself with the upbringing of his only child.

FA'BYAN, Robert, an English chronicler, born of a good Essex family in London, in the second half of the 15th c. He was a member of the Drapers' Company, and took an active part in civic affairs, becoming sheriff and alderman, and afterwards assessor of the London wards to Henry VII. He died February 28, 1512. He wrote a *Concordance of Histories* (first printed in 1516), compiled from monkish annalists, and marked by a strong ecclesiastical bias. It gives the history of Britain from Brut to 1504, in English prose, and has a prologue and seven episodes in verse.

FAIDHERBE, Louis Leon Cesar, a French general, born at Lille, June 3, 1818, served in Algeria, and as Governor of Senegal; commanded the *Armée du Nord* in the Franco-Prussian war, and was beaten, greatly through the want of artillery, at St. Quentin, January 17, 1871. He joined Gambetta's party, and was elected by the central canton of Lille to the National Assembly in 1871, but retired into private life on the success of the Thiers government. Besides proving himself an able soldier, F. has written valuable scientific articles—a *Notice sur la Colonie du Sénégal* (1859), and *Campagne de l'Armée du Nord* (1871).

FAILL'Y, Pierre-Louis-Charles-Achille de, a French general, born at Rozoy-sur-Serre, Aisne, January 21, 1810. He served in Algeria, distinguished himself in the Crimean war, and in 1867 won unenviable notoriety as the conqueror of Mentana. He held a command in the Franco-Prussian war, and was captured at Sedan. F. was severely censured for incapacity by his countrymen.

FAIRBAIRN, Robert Brinkerhoff, D.D., an eminent scholar and clergyman of the Episcopal Church in America, born in the city of New York, May 27, 1818, and graduated from Trinity College, Conn., in 1840. He entered the ministry in 1843, and after filling the pastorate of several churches, became, in 1862, professor of mathematics and natural philosophy at St. Stephen's College, Annandale, N. Y. He was subsequently made warden of the college. He has published numerous sermons and essays of much merit.

FAIRBANKS, Erastus, LL.D., an American manufacturer, born at Brimfield, Mass., Oct. 28, 1792. In 1825 he entered into partnership with his brother, and the firm erected extensive works at St. Johnsbury, Vt., for the manufacture of Fairbanks' scales. He held various political positions, and was twice Governor of Vermont. F. accumulated a large fortune, and gave largely for charitable and religious objects. Died at St. Johnsbury, Vt., Nov. 20, 1864.

FAIRCHILD, James H., D.D., an American educator, born at Stockbridge, Mass., in 1817, entered Oberlin College, O., in 1834, and has been connected with that institution ever since. He was first student, then tutor, then professor, and in 1866 became its president. He has published a valuable *Moral Philosophy*, and numerous essays.

FAIRFIELD, Sumner Lincoln, an American poet, born at Warwick, Mass., June 25, 1803, and was educated at Brown University, Rhode Island. In 1825 he traveled abroad, and, returning to the U. S., became principal of Newton Academy, near Philadelphia, Pa. The following are among his publications: *Lays of Melpomene* (1824), *Cities of the Plain, Percè la Chaise, Westminster Abbey, The Sisters of St. Clara* (1826), *The Heir of the World* (1829), *Abaddon*, and *The Last Night of Pompeii* (1832). Died at New Orleans, La., March 6, 1844. His life has been written by Mrs. Fairfield, 1846.

FAIR OAKS, Battle of, an important engagement of the civil war, at and near a locality of the same name, in Henrico Co., Va. The Union army under Gen. McClellan, having crossed the Chickahominy, and moved southward, was attacked by the Confederates, under Gen. Johnston, May 31, 1862. There was desperate fighting all along the line, and at the close of the day, the results were slightly in favor of the Confederates. Gen. Johnston, having been seriously wounded, the command of the Confederates devolved upon Gen. G. W. Smith. On the morning of June 1, the attack upon the Union lines was fiercely renewed, but at every point was repulsed, and the Union forces assuming the offensive, the Confederate lines were broken, and Smith's army fled in confusion towards Richmond. The Union loss in killed, wounded, and missing was 5739, and that of the Confederates was probably greater. It is generally believed that if McClellan had followed up his advantage, and had sharply pressed the defeated army of his opponent, he might have captured the city of Richmond. As it was, the victory was undecisive, and had no appreciable effect upon the war.

FANFISH, or SAILFISH, the name given to the *Histiophorus immaculatus*, a species of Teleostean fishes belonging to the family *Hiphiidæ* or swordfishes. The name is derived from the great height and size of the dorsal fin, which the fish appears to raise or depress at will. The ventral fins are very small, and the tail is deeply forked, its lobes being of equal size. The F. inhabits tropical seas, and is common around the coasts of Ceylon.

FAN'TI or FANTEE, a country of W. Africa, on the Guinea coast, lies between the rivers Sakuru on the E., and Kaku on the W., and is separated from Ashanti on the N. by dense forests. It is a rich strip of coast-land, yielding much gold-dust, and supporting a numerous people. The Fantis are closely allied in race to the Ashantis, who conquered them and greatly destroyed their country in 1807. See Captains Brackenbury and Wilson, *Fanti and Ashanti* (1874).

FARAI'ZI, a name derived from the Arabic *farz*, 'a command,' and applied in India, and especially in Bengal, to the reformed sect of Mohammedans who are generally known as Wahabs. About the year 1827, a pilgrim from Mecca, on returning to his native village in the district of Furreedpore near Dacca, taught the new faith to his neighbors. It is supposed that the majority of the Mussulmans in Eastern Bengal, who there outnumber the Hindus, now belong to the F. sect. In 1831 the propagandism gave rise to serious riots, and again in 1870 the villagers of the Gangetic delta were found to be carrying on intrigues with the armed rebels on the frontier of the Punjaub; but at the present time there is no reason to doubt the loyality of this portion of the Indian community.

FARGO, a city of Cass Co., Dakota. It is an important railroad center, and is at the head of navigation of the Red River. It is a shipping point and a center of trade of the Red River Valley. Pop. 8000.

FARIBAULT, a town of Rice Co., Minn., 65 miles from St. Paul. It has 3 railroads, several institutions of learning, and the State School for the Deaf, Dumb, Blind, and Feeble-minded. The surrounding country is engaged in agriculture. The town has seven flouring mills and other manufactories. Pop. 5415.

FARNHAM, Eliza Woodson, Mrs., an American writer and philanthropist, born at Rensselaerville, N. Y., Nov. 17, 1815, went to Illinois, and became the wife of Thomas J. Farnham, Esq. During her life she was interested in prison reform, the assistance of destitute women, and the amelioration of the condition of the blind. She published *Life in Prairie-Land; California Indoors and Out; My Early Days*, and *Woman and her Era*. Died in New York City, Dec. 15, 1864.

FARN'WORTH, a town of Lancashire, 12 miles S.E. of Liverpool, and a station on the Manchester and Bolton Railway. It has a chapel of the 15th c., a free grammar-school, and manufactures of watches, canvas, and iron tools. Pop. (1871) 9226.

FARR'AR, The Rev. Frederic William, M.D., F.R.S., son of a clergyman, was born at Bombay in 1831, and studied at Trinity College, Cambridge, of which he was made a Fellow in 1856. He was appointed assistant-master at Harrow in 1855, master of Marlborough School in 1869, and chaplain in ordinary to the Queen in 1873. F. has been a prolific author. Among his works are *Eric, or Little by Little*, and *Julian Home*, successful tales; *The Fall of Man* (1865); and *The Life of Christ* (1874). Also *Life and Epistles of St. Paul* (1882).

FA'SA, a town in the province of Fars, Persia, 77 miles E.S.E. of Shiraz. It has manufactures of silk, wool and cotton. The pop. has been estimated at 18,000. The *district* of F. is 45 miles long by 9 to 15 broad, and is generally known as the *Garm Sar*, or 'warm region.' It produces rice, Indian-corn, millet, cotton, and fine tobacco, and contains thirty-three villages.

FAU'CIT, Helen, an English actress, born in 1816, made a successful *début* as Julia in the *Hunchback*, at Covent Garden, London, in 1836. She soon rose to the summit of her profession, became a member of Macready's companies at Covent Garden and Drury Lane, and won wide repute for her refined, powerful rendering of Juliet, Beatrice, Imogen, Rosalind, Lady Macbeth, and other Shakespearian characters, and as the heroine in various pieces by Lytton, Browning, and Westland Marston. Her representation of Antigone was a remarkable success, and called forth an eloquent tribute from De Quincey. After her marriage with Theodore Martin, in 1851, this gifted actress continued to appear at intervals on the stage, from which she has now retired.

FAVOSPON'GIA, a well-known genus of fossil sponges occurring in the Upper Silurian rocks. This genus belonged to the section *Calcarea*, or that of the calcareous or limy sponges.

FEATHER STAR (*Comatula* or *Antedon rosacea*), a species of *Crinoid Echinodermata*, which in its earlier stages exists in a stalked condition, but in the adult state is met with as a free starfish form. The F. S. derives its name from its ten arms or rays being provided with numerous little *pinnæ* or processes, which give the arms a feathered appearance. The F. S. was formerly included in the order *Asteroidea* with ordinary starfishes, its early history being then unknown to naturalists. When first discovered in its young and attached state, it was thought to be a new form of *crinoid*, and as such was named *Pentacrinus Europæus*. But when

this new crinoid was observed throughout its entire history, the star-like head was seen to detach itself from its stalk, and afterwards (as the F. S.) to live a free existence. The discovery of its early and attached condition at once showed that the F. S. was a true crinoid, and not an ordinary starfish, which is free and unattached throughout its entire existence. The arms are used by the F. S. as locomotive organs; and the internal organs are confined to the central body or *disc*, and do not, as in ordinary starfishes, send prolongations into the rays. The young or larva of the F.S. is an ovoid creature with four ciliated and transverse bands, and a small mouth and anus. The young F. S. is developed within this primitive embryo, or *pseudembryo* as it is called. The F. S. is widely distributed; it occurs in certain localities on the British coasts.

FECH'NER'S PSYCHO-PHYSICAL LAW. This is as follows:—'Sensations increase proportionately to the logarithms of the strength of the stimulus.'

FECIA'LES, an order of priests among the Romans appointed to proclaim war and to negotiate peace. The *jus feciale* was the only principle recognized by the Romans corresponding to modern international law.

FELICIANS, the adherents of Felix, Bishop of Urgelles, in the Adoption Controversy.

FELLATA' (also called by the various tribes Fula, Fellani, Fulbe, &c.), the most intelligent of all the African races, now occupies a wide area in the W. of the Sudan, and includes many powerful states, as Flausse, Futa-Djalon, Senegal Futa, Massina, &c. The F. advanced from Senegal in an easterly direction, and already in the 16th c. had spread beyond the Niger and comprised several large tribes. It was only, however, in the beginning of the 19th c. that they were stirred to conquest and to the spread of the Mohammedan religion by the Imam and reformer, Othman of Benue, on whose death (1816) the F. territory had increased to an area of 327,140 sq. miles. The people, who are of a reddish color, and of great variety of type, are industrious and clever, but they are oppressed by a grasping aristocracy. The pop. is estimated at about 8,000,000.

FEL'TON, Cornelius Conway, LL.D., a distinguished American scholar, was born at West Newbury, Mass., November 6, 1807. He graduated at Harvard in 1827. In 1832 he became Professor of Greek in Harvard, and in 1860 President of the College. In 1853 he paid a visit to Europe, and published his *Familiar Letters from Europe* in 1865. He died February 26, 1862. F.'s chief works are—*Homer* with English notes (1833), a translation of Menzel's *Deutsche Literatur* (3 vols. 1840), *Panegyricus* of Isocrates (1849), *Birds* of Aristophanes (1852). Along with Sears and Edwards he published *Ancient Art and Literature* (1843).

FENTON, Reuben E., an American statesman, born at Carroll, Chautanqua Co., N. Y., July 11, 1819. After studying law, he engaged in mercantile pursuits. He was a member of Congress from 1857 to 1865, governor of New York from 1865 to 1869, and in that year was chosen U. S. Senator. He has been a member of the Republican party since the time of its organization, and was for many years its recognized leader in his own state.

FER DE LANCE (*Craspedocephalus lanceolatus*), a well-known and most virulent species of Viperine snakes, included in the Rattlesnake family (*Crotalidæ*). It inhabits Brazil and some islands of the W. Indies, and is commonly found in sugar plantations. A large pit exists in each side of the head between the eye and nostril, as in other members of the family *Crotalidæ*. The usual length is 5 to 6 feet. The color is olive above, with cross markings of darker hue, and whitish grey below, the head being of a brown color. The tail has no 'rattle,' but is provided with a spinous process. The bite of the snake is fatal usually within a few hours; and even where recovery takes place, the effects of the poison may persist for long periods.

FERDINAND I., the Upright, King of Aragon and Sicily, the son of Juan I., of Castile, was born in 1373. His disinterested treatment of his nephew, Juan II. of Castile, and his successes against the Moors (especially in taking the city of Antequera), secured his election from a number of competitors to the throne of Aragon in 1412. His intervention in Sicily on behalf of Blanca, widow of Martin I., was marked by the same spirit of justice and courage; and in the Church he exerted himself on the side of peace, entreating Benedict XIII. to retire, and so end the schism. F. died in 1416, and was succeeded by his son, Alfonso V. the Wise. *Castile.*—Ferdinand I., the Great, was a son of Sancho III., King of Navarre, who first liberated Castile from the rule of Bermuda, or Veremund, III. of Leon. F. afterwards annexed Leon and Asturias to Castile. He confirmed the ancient *fueros* of the people, and collected the code of Visigothic law. A victory gained over his brother on the 'Field of Murder' confined the power of Navarre to a territory beyond the Ebro. F. then made a brilliant campaign against the Moors. He was the founder of Castile, and styled himself Emperor. This alarmed Heinrich the Swart, German Emperor, and the Pope was called in. The 'Cid' belonged to this reign. F. died in 1065.—Ferdinand III., the Pious, was born in 1199, succeeded his mother as sovereign of Castile in 1217, and his father, Alfonzo IX., as King of Leon in 1230. He suppressed the revolt of the Lara family in Castile, and then attacking the Moors in Andalusia, captured Cordova in 1236. Twelve years later Seville fell, and the Emir of Granada was compelled to pay tribute. F. died in 1252. He burned the Albigenses who had fled to him for protection, but did much to check lawlessness and founded the famous University of Salamanca. The Archbishop Rodrigo Ximenes of Toledo wrote his biography, *Cronica del Santo Rey Don. F. III.*—Ferdinand IV., the son of Sancho IV., the Brave, reigned over Castile from 1295 to 1312. A great war with Portugal and Aragon, each supporting a claimant to the crown, in which the heroic Perez de Guzman fought for F., was ended by double royal alliances. In his Moorish campaigns, (1305–6) F. captured Gibraltar. He was on good terms with Pope Clement V., who gave him the right to levy a tithe on Church property, and to confiscate the property of the Templar order.

Ferdinand I., of Naples, born in 1423, was the natural son of Alfonso V. the Magnanimous, of Aragon, who bequeathed Naples to F., Sicily with Aragon going to Juan. Though Pope Nicholas V. had bound himself to recognize F., Calixtus III. refused the investiture on the ground that F. was born of adultery. By a bull he also forbade recognition by any other state. The next pope, Pius II., was, however, bribed to keep his predecessor's word by the gift of the town of Beneventum. The turbulent barons, the Count Piccinino, Jean d'Anjou, Duke of Calabria (whom Charles VII. of France had made Governor of Genoa), and the Prince of Tarentum, made war on F. in 1460, and gained a decisive victory near Nola in that year. This was compensated by the victory of Troja in 1462, for which F. was indebted to Scanderbeg of Albania. In 1480 F. retook the town of Otranto from Mohammed II. He died 25th January 1494.—Ferdinand II. was the son of Alfonso II., and the grandson of the preceding. When Charles VIII. marched into Italy, F., deserted by Trivulzio, was beaten at Faenza and San Germano (1495) by D'Aubigny and Armagnac, and compelled to retire to Sicily. Next year the influence of F. the Catholic in the Holy League caused the French evacuation of Naples, and the re-entry of F. He died 7th October 1496.

FERGUS FALLS, in Otter Tail Co., Minn., on the Red River of the North, 200 miles N.W. of Minneapolis. It has excellent water power, and is surrounded by forests of pine and hardwood lumber. It is the center of the 'Park Region' of Minnesota. Pop. 7000.

FERGUSSON, Sir William, Bart., F.R.S., a distinguished surgeon, was born at Prestonpans, East Lothian, March 20, 1808. Educated at Lochmaben grammar-school and at the High School and University of Edinburgh, he became assistant to Dr. Knox and Dr. Turner in the Edinburgh College of Surgeons, of which institution he was made a Licentiate in 1828 and a Fellow in 1829; began to lecture on surgery in 1831, was made Assistant-Surgeon in the Royal Infirmary in 1836, Fellow of the Royal Society, Edinburgh, in 1839, and Professor of Surgery in King's College, London, in 1840. F. was for five years Examiner in Surgery at London University, was made a baronet in 1865, and President of the Royal College of Surgeons of England in 1870. He was a Fellow of the Royal Society of London, and Sergeant-Surgeon to the Queen. F. wrote several treatises on lithotomy, aneurism, &c., and an admirable *System of Practical Surgery*, and invented many surgical instruments. He died 10th February 1877.

FERNAN'DO DE NORONHA, a wooded island, about 8 miles long, in the S. Atlantic, 220 miles N.E. of Cape St. Roque. It belongs to the empire of Brazil, and is used as a convict establishment. In one place the surface attains an elevation of 1000 feet.

FEROZ SHAH, an Indian emperor of the Toghluk dynasty, reigned at Delhi from 1351 to 1388. In his reign the administration was improved and public works were lavishly undertaken. Of these last, the Feroz-Canal is the most celebrated; but F. is said to have constructed altogether 50 dams across rivers, 30 reservoirs, 100 caravanserais, as many hospitals and public baths, and 150 bridges. See the chronicle *Tarikh-i-Firoz Shahi* in Elliot's *History of India*, vol. iii. (Lond. 1871).

FERR'ALUM, a mixture of the sulphates of iron and alumina, carbolic acid and terebine, has recently been introduced for crude deodorizing purposes, where the coarser results of decomposition, such as sulphuretted hydrogen and ammonia, have to be neutralized, as in purifying drains, sewers, cesspools, urinals, stables, &c. See article by Dr. Bond, *On Some New Forms of Disinfectants* (*British Medical Journal*, February 20, 1875).

FESSENDEN, Thomas Green, an American author, born at Walpole, N. H., April 22, 1771, educated at Dartmouth College, and studied law, but soon renounced the legal profession to devote himself to literary pursuits. His principal work, a satire on the medical profession, was *Terrible Tractoration*. For many

years he edited the *New England Farmer*. Among his works are *Democracy Unveiled* and *The Ladies' Monitor*. Died at Boston, Mass., Nov. 11, 1837.

FESS'ENDEN, WILLIAM PITT, was born at Boscawen, N. H., October 16, 1806. He graduated at Bowdoin College in 1823, established himself as a lawyer in Portland, Maine, in 1829, and soon acquired a high reputation in his profession. F. entered political life as a Whig, and was elected to the state legislature in 1832. In 1841 he was sent as representative to Congress; entered the United States Senate in 1854, and signalized himself by an able speech against the Nebraska bill. He became a leading Republican, and as chairman of the finance committee rendered invaluable service during the war. In 1864 he became Secretary of Treasury, but returned the following year to the Senate, where he voted for the acquittal of President Johnson. After suffering long from ill-health, he died September 8, 1869. F. was an eloquent debater, a skillful tactician, an able statesman, and a man of strict probity and honor.

FESZ'LER, IGNAZ AURELIUS, a Hungarian novelist and historian, born at Czorendorf in July 1756, joined the Capuchins, but afterwards became a Protestant, was reader to the Emperor Joseph in 1784, and from 1785–87 Professor of Oriental Languages at Lemberg. Being accused of atheism, he betook himself to Silesia, and finally to St. Petersburg, where he received the chair of Eastern languages in 1809, and died December 15, 1839. He wrote various novels, treatises, &c.; but his chief works, which are all in German, are *Marc-Aurel*, a romance (1790–92), *Mathias Corvinus* (1793), *Attila* (1794), and *Geschichte der Ungarn* (Leips. 1812–25). F. was a deep scholar and graceful writer. See his interesting autobiography, *Rückblicke auf meine 70 jährige Pilgerschaft* (Bresl. 1826).

FEUILL'ET, OCTAVE, a French novelist, was born at St. Lô in Manche, 11th August 1812. He was educated at the college of Louis-le-Grand in Paris, and appeared for the first time as a writer in the columns of the *National* (1845). Since then he has sent forth an incredible number of tales, of which the best known are *Rédemption* (1849), *Bellah* (1850), *Le Cheveu Blanc* (1853), *La Petite Comtesse* (1856), *Le Roman d'un Jeune Homme Pauvre* (1858), *Histoire de Sibylle* (1862), *M. de Camors* (1867), and *Un Mariage dans le Monde* (1875). These are mainly distinguished by skillfully entangled plot, somewhat ambiguous morality, richly poetical descriptions, and lively satiric sketches of Paris society, not omitting its undercurrent of intrigue. F. is also the author of many successful comedies. In 1862 he was made a member of the Academy in place of Eugène Scribe, and in the following year officer of the Legion of Honor.

FI'BRO-SE'ROUS, a term used in anatomy to denote certain membranes, such as the pericardium, which are double, being composed of a layer of fibrous tissue lined by a layer of endothelial cells constituting a serous coat.

FIELD, DAVID DUDLEY, D.D., father of Cyrus W., David D., and Henry M., a Congregational minister, who preached at Haddam, Conn., and Stockbridge, Mass. He was the author of several local histories. Born in 1781, and died in 1867.

FIELD, DAVID DUDLEY, an American lawyer and brother of Cyrus W., born at Haddam, Conn., Feb. 13, 1805, and educated at Williams College. In 1828 he was admitted to the bar and began to practice law in New York City, where he soon rose to prominence in his profession. He early turned his attention to the question of codifying the English common law. In 1847 he was appointed one of a commission, by the New York legislature, to codify the practice of that state. The code presented was adopted by the state, and subsequently by many of the states and territories of the Union. He was afterwards appointed one of a commission to codify the entire law of the state, and the result of the labors of this commission was three codes, a civil, a political, and a penal code. Besides these labors he has conducted a large and lucrative law practice.

FIELD, CYRUS WEST, a brother of David Dudley, born at Stockbridge, Mass., Nov. 30, 1819, and at an early age removed to New York and engaged in business, in which he was very successful. In 1854 he organized a company for the purpose of establishing telegraphic communication between Europe and America by means of ocean cables. Applying to the legislature of Newfoundland, he was granted the exclusive privilege for 50 years of landing cables from Europe and America upon that island. In 1856 he went to England and organized the Atlantic Telegraph Company, contributing largely towards the capital himself. Vessels for this enterprise were provided by the British and American governments. An attempt was made to lay a cable in 1857, and two were made in 1858, all of which resulted in failure. In 1865 the attempt was renewed, and the Great Eastern had laid 1200 miles, when the cable parted, and was lost. On the following year a cable was laid, and that of 1865 was picked up and completed. Through this and other enterprises, Mr. Field has accumulated a vast fortune. He now resides in New York.

FIELD, HENRY MARTYN, D.D., born at Stockbridge, Mass., April 3, 1822, and graduating from Williams College, entered the ministry of the Presbyterian Church. He was pastor of churches at St. Louis, Mo., and West Springfield, Mass. In 1854 he became editor of *The Evangelist*, and is now both editor and proprietor of that paper. He has traveled extensively, and has published several works descriptive of the countries he has visited.

FIELD BUG (*Pentatoma*), a genus of Hemipterous insects belonging to the Heteropterous section of the order. These insects occur in fields and amongst grass, and possess mouths adapted for biting and suction.

FILE-FISH, the name given to various Teleostean fishes belonging to the order *Plectognathi*, and to the genus *Balistes*, *Diodon*, &c. Their bodies are covered with numerous spines, the presence of which has suggested their popular name. They are also known as 'trigger-fishes,' 'urchin-fishes,' and 'globe-fishes,' the latter name being given on account of their power of distending their bodies at will with air.

FILIO'QUE is a word which was subsequently added to the Nicene Creed, and formed a bone of contention between the Latin and Greek Churches. The Nicene Council (325), being chiefly concerned to establish the deity of the Son in opposition to the Arians, merely affirmed the existence of the Holy Spirit, without defining the nature and relations of the third person of the Trinity. Macedonius, Bishop of Constantinople (342), and many others, maintained the Holy Spirit to be a created being, as the Son was regarded by the Arians, and subordinate to the Son, as the Son was to the Father. By the Council of Constantinople (381) the simple phrase of the Nicene Creed, *and in the Holy Ghost*, was expanded into *and in the Holy Ghost, the Lord and giver of life, who proceedeth from the Father, who with the Father and the Son together is worshiped and glorified, who spake by the prophets*. But as this only affirmed that the Spirit proceeded from the Father, room was left for doubt whether the Council denied the procession from the Son. If it were meant that the Spirit did not proceed from the Son as well as the Father, this favored the notion that the Son was subordinate to the Father; if the Spirit proceeded from both the Father and the Son, this seemed to be placing the Spirit in still greater dependence, namely, on two persons instead of one. Accordingly, the Greek fathers merely taught the procession of the Spirit from the Father, without denying the procession from the Son. The Latin fathers, on the contrary, taught the procession of the Spirit from both the Father and the Son, and at the third Council of Toledo (589)—or, according to Bingham, at Bracara (411)—inserted in the Creed of Constantinople the phrase *F.*, making it run :—'and (I believe) in the Holy Ghost, . . . who proceedeth from the Father *and the Son*,' &c. The Churches of the East refused to accept this as an addition to the faith of the Church, or to alter a single word of the Nicene Creed. This led to a schism between the two Churches, which was never thoroughly healed up, although a formal union was effected at Florence, 1439. See Blunt's *Dict. of Doctr. and Hist. Theology* (1872); *Pearson on the Creed*; Neale's *Hist. of the Holy Eastern Church*.

FIN'GAL, more properly FIONN, the great hero of Gaelic, as Arthur is of Cymric romance. It is impossible to determine whether he belonged to Ireland or to Scotland, or what was the exact period in which he lived, while some even maintain that he existed in name only. But if every national hero is a real person, however much his attributes be exaggerated by popular imagination, then perhaps the historical reality of F. may be conceded. In the *Book of Deer* (12th c.) we have mention of the *Féine, i. e.*, the followers of Fionn; he is represented as frequenting both the N. of Ireland and the N.W. of Scotland. There are many old heroic ballads, belonging alike to Ireland and to Scotland (see Mr. Campbell's *Book of the Féine*, 1872), in which F. is celebrated both as a great warrior and as a generous man; but in Ossian (Macpherson) the Gaelic muse has adorned him with every quality which can raise admiration or call forth affection.

FINN'ER WHALE, a name given to various kinds of whales belonging to the family *Balænidæ* or whalebone whales, and derived from their possessing a soft dorsal fin. Finner whales are of large size—the *Physalus Boops* or rorqual sometimes attaining a length of 90 or 100 feet. They are represented by the genera *Megaptera*. *Balænoptera*, in addition to *Physalus*. They are also named 'furrowed' whales, from the fact that the skin is plaited or folded. The whalebone plates are very small and commercially unimportant.

FINNEY, CHARLES G., an American educator and divine, born at Warren, Conn., Aug. 29, 1792. He at first studied law, but in 1822 entered the ministry. He was a man of great eloquence, and met with great success in revival work. He was one of the promoters of Oberlin College, O., and in 1852 became its president.

This position he held until 1866. The following are among his publications: *Guide to the Saviour*, *Lectures to Professing Christians*, *Lectures on Revivals of Religion*, *Sermons on Important Subjects*, *Skeleton of a Course of Theological Lectures*, and *Lectures on Systematic Theology*. Died Aug. 16, 1875.

FIR BHOLG, signifying 'men of the quiver,' a name given to one of the various tribes who invaded Ireland in prehistoric times. The S. of Ireland is sometimes called Bolga, and it is sought to identify the people with the Belgæ.

FIRE-FISH, the name given to certain Teleostean fishes from their brilliant coloration. The best known species is the red F.-F. (*Pterŏis volitans*) of tropical seas, which belongs to the family *Triglidæ* or gurnards. The body is scaly, and has many spines and rays. The dorsal and pectoral fins are especially large, and their rays are prominent. The color is a pinky brown with dark-brown markings. The average length is 8 or 9 inches. The flesh is eaten on the Ceylon coasts.

FISH, HAMILTON, LL.D., an American statesman, born in New York City, Aug. 3, 1808, graduated from Columbia College in 1828, and was admitted to the bar in 1830. He was a member of Congress (1843–45), lieutenant-governor of New York (1847–49), governor (1849–51), U. S. Senator (1851–57), and in 1869 was made Secretary of State by President Grant. He originated the commission that met in 1871 to settle the differences between Great Britain and the United States relative to the Alabama claims.

FISHER, GEORGE PARK, D.D., born at Wrentham, Mass., Aug. 10, 1827. He was educated at Brown University and pursued theological studies at Yale and Andover seminaries and in Germany. Since his return to America he has been connected with the faculty of the Yale theological school. Among his works are *Essays on the Supernatural Origin of Christianity*, &c., and *History of the Reformation*.

FISK, JAMES, JR., born at Pownal, Vt., April 1, 1835. He began life as a peddler, and afterwards accumulated a fortune through steamboat and railroad investments. For several years prior to his death he had entire control of the Erie railroad. F. was shot by Edward S. Stokes, Jan. 6, 1872.

FISK, WILBUR, D.D., an American divine, born at Battleborough, Vt., Aug. 31, 1792, and graduated from Brown University in 1815. He first studied law, but afterwards entered the ministry of the Methodist church. In 1831 he became president of Wesleyan university, Conn. He published several works of a theological character. Died at Middletown, Conn., Feb. 22, 1839.

FIVE FORKS, a district in Dinwiddie county, Virginia, where a Union force, under General Sheridan, won a decisive victory over the Confederates, April 1, 1865.

FIVE POINTS is a name given to the five articles of doctrine which the Arminians presented to the States of Holland (1611), as embodying their views on predestination and grace, on which alone at that time they differed from Calvinists.

FLAMINI'NUS, T. QUINTIUS, the most distinguished representative of a family of the Quintian gens, was born about B.C. 230. He was elected consul B.C. 198, and obtained Macedonia as his province. He threw himself with great ardor into the war with Philip, and in the course of the struggle both achieved military successes and displayed great diplomatic skill. After the complete defeat of the Macedonians at Cynosephalæ, B.C. 197, terms of peace were concluded, by which Philip relinquished all his Greek possessions in Europe and Asia; and during the Isthmian games of B.C. 196, F. proclaimed the freedom of Greece. He took leave of the Greeks B.C. 194, and on his return to Rome celebrated a splendid triumph of three days' duration. Peace was soon disturbed by the war in which the treacherous Nabis, tyrant of Sparta, was subdued. The most notable event in the subsequent career of F., was his connection with the death of Hannibal, who took poison, fearing lest he should be delivered up to the Romans by Prusias of Bithynia. F. died B.C. 174.

FLAMIN'IUS, CAIUS, was tribune of the Roman people B.C. 230, and carried by popular support an agrarian law for the distribution of the recently conquered territory of the Cis-Alpine Gauls. When consul (223), F. gained a great victory over the Insubians. His censorship (220) was distinguished by the two great works that bear his name, the *Circus F.* and the *Via Flaminia*. He was elected consul for a second time (217), and immediately marched against Hannibal, who was advancing southwards. F., with the greater part of his army, perished in the battle on the shores of Lake Trasimenus, B.C. 217.

FLATBUSH, in King's Co., and a suburb of Brooklyn, which it adjoins. It is the seat of the county institutions, and contains numerous fine residences. Pop. 7634.

FLEU'RY, ANDRE HERCULE DE, CARDINAL, a French statesman and ecclesiastic, was born at Lodève, in Languedoc, June 22, 1653. He studied at the Jesuits' College, Paris, was made almoner to the queen of Louis XIV., and, in 1699, Bishop of Fréjus. He gave up his bishopric in 1715, became tutor to Louis XIV.'s grandson, afterwards Louis XV., and insinuated himself into that prince's favor. He was elected into the Academy in 1721, was admitted to the Council of State in 1723, and in 1726 became a cardinal and prime minister of France. His administration was tolerably successful. He strove to economize and lighten taxation, and at first sought to maintain peace at almost any cost, but sacrificed the freedom of the Gallican Church to Ultramontanism, and was nerveless and vacillating in his foreign policy. In 1733 the court party forced him into the war of the Polish succession, on behalf of Stanislaus Leczinsky, Louis XV.'s father-in-law. The struggle ended in 1736, and in 1741 F. was compelled by court influence to take part in the war of the Austrian succession. He died at Paris, January 29, 1743. F. was a well-meaning, benevolent, and peace-loving minister, but had not the energy needful in his position. He patronized learning, and added several valuable MSS. to the royal library. See St. Simon's *Mémoires*.

FLIED'NER, REV. THEODOR, D.D., a philanthropic clergyman, born at Eppstein, near Wiesbaden, January 21, 1800, studied at Göttingen, and in 1821 became pastor of a small Protestant community at Kaiserwerth, near Düsseldorf. F. is memorable as the founder of the Evangelical Deaconesses, who, though not a monastic body, correspond partly to the Catholic Sisters of Charity, visiting the sick and poor in their homes and in public institutions. F. labored with great practical ability to organize these deaconesses, who have proved a boon to Germany, *e. g.*, in the Austro-Prussian war of 1866. Institutions modeled on F.'s establishment at Kaiserwerth have been founded at London, Paris, Berlin, Alexandria, &c. F. died at Kaiserwerth, October 4, 1864. See F.'s *Buch der Martyrer der evangel. Kirche* (1852), and Catherine Winkworth's *Life of F.* (Eng. trans. Lond. 1867).

FLINT, in Genesee Co., Mich., on the Flint River. It has two railroads, and is distant 64 miles from Detroit. It has fine water power, which is employed in various manufactories. It is surrounded by a fertile agricultural country, and carries on an extensive trade. Pop. 8418.

FLINT, AUSTIN, M.D., a distinguished American physician and medical author, born at Petersham, Mass., Oct. 20, 1812, and graduated from the medical school of Harvard University in 1833. He taught in medical colleges at Buffalo, N. Y.; Chicago, Ill.; the University of Louisville, Tenn.; the New Orleans School of Medicine; and in 1859, was called to Bellevue Hospital Medical College. He is the author of numerous medical works, that are highly regarded by the profession, among which are *Diseases of the Heart* and *Principles and Practice of Medicine*.

FLORENCE OF WORCESTER, a monkish chronicler, belonging to Worcester monastery, where he died 7th July 1118. He wrote a chronicle from the Creation to 1117, compiled chiefly from the *English Chronicle* and the work of Marianus Scotus, with additions from Bede, the so-called 'Asser,' and the Lives of the Saints. His chronicle deals mainly with English history, but also notices events abroad. It was brought down to 1141 by others of the brethren.

FLORID'IA, a town of Sicily, province of Noto, near the Alfeo, 7 miles W. of Syracuse. It has some trade in grain, wine, and olives. Pop. 7030.

FLOTOW, FRIEDRICH VON, a German composer, born at Teutendorf, in Mecklenburg-Schwerin, 26th April 1812. He received his musical education in Paris, where also his first successful opera, *Le Naufrage de la Méduse*, was produced in 1839. His compositions are all operatic; they are pleasant and melodious, and in many ways more like the work of a musician than those of his Italian and French contemporaries. While extremely popular, however, both in Germany and France, they are not yet, with the exception of *Martha*, so much known in this country as they deserve to be. The principal are *Stradella*, *Die Grossfürstin*, *Rübezahl*, *Indra*, *Albin*, *Hilan*, and *L'Ombri*.

FLOUR-MITE (*Acarus farinæ*), a species of *Acaridæ* or mites which belong to the spider class (*Arachnida*). They exist among flour, and resemble in form the cheese-mite or *A. domesticus*. The body is oval, has eight legs, and is covered with bristles. The female flour mites are larger than the males.

FLOYD, JOHN BUCHANAN, born in Virginia, in 1805, and graduated from South Carolina College in 1826. He studied law, was a member of Congress (1847–49), Governor of Virginia (1850–53), and in 1857 was made Secretary of War by President Buchanan. He was in full sympathy with the secession movement, then being planned in the South, and, in the exercise of his power, scattered the army as much as possible, and sent large quantities of government stores and arms to various points in the South, that they might be seized by rebels, when open hostilities should be begun. Upon President Buchanan's refusing to withdraw the U. S. troops from Charleston harbor, after the secession of South Carolina, he resigned his position. He became a

brigadier-general in the Confederate army, but, as a military man, did not meet with success. Died at Abingdon, Va., Aug. 26, 1863.

FLYING DUTCH'MAN, THE, like many other mediæval legends, is a growth by accretion rather than a single independent creation. It is traceable to the 16th c., and is typical of a time of rude religious feeling and of wild seafaring adventure. The germ of the story, in its varied forms, is akin to that of Odysseus and the Wandering Jew. For some great sin an accursed mariner is doomed to perpetual and aimless cruisings. In modern forms of the legend he is rescued from his fate by some holy interposition—a religious amulet or a faithful woman's love. According to a late version, the F. D. was an Amsterdam vessel, the master of which, Van der Decken, swore on a certain tempestuous night to make the Cape or to be 'eternally damned,' and 'though he should beat there till the day of judgment;' and there he is still to be seen, with crowded sail, tearing along in the wildest weather. Heine has made the legend the subject of a beautiful tale; Wagner weaves it into one of his finest operas, treating it as symbolical of the universal longing for rest from the storms of life.

FOGARASY, JANOS, a Hungarian scholar and lawyer, was born at Käsmárk in 1801. He gained considerable reputation from his works on jurisprudence, filled several public offices, and in 1848 was made a member of the financial council of Pesth. F. has zealously studied the Magyar tongue, and made important contributions to philology. Among his writings are *A' Magyar nyelo' metaphysicája* (1834), *A' Magyar nyelo szelleme* (1845), a Magyar-Latin dictionary (1835), and various legal and linguistic works. F. and another eminent Hungarian scholar, Czuczor, are the authors of the Dictionary of the Hungarian Academy.

FO'LEY, JOHN HENRY, R.A., a sculptor of rare force of genius and artistic accomplishments, born in Dublin, 24th May 1818, distinguished himself in the drawing and modeling schools of that city, and removing to London, entered the Royal Academy at the age of sixteen. He was elected Associate in 1849, and R.A. in 1855. He first exhibited in 1839, when his two models, 'Innocence' and 'Death of Abel,' attracted favorable notice. His 'Ino and Infant Bacchus' (1840), purchased by Lord Ellesmere, his 'Death of Lear' (1841), 'Lear and Cordelia' (1842), 'Venus rescuing Æneas' (1843), bear witness to the industry with which he followed up his first success. He afterwards produced 'Prospero and Miranda,' 'The Mourner,' 'Egeria,' &c. His fame, however, most securely rests on his fine marble statue of 'Hampden' in Westminster Palace, his 'Lord Hardinge,' now at Calcutta, and the magnificent equestrian statue of 'Sir James Outram'—a work inspired with vigor and heroic feeling, and the artist's masterpiece. Like the 'Hardinge,' the 'Outram' is now in Calcutta. F. died in London, 27th Aug. 1874.

FOOT, SOLOMON, an American lawyer and statesman, born at Cornwall, Vt., November 19, 1802, and educated at Middlebury College, Vt. He taught for several years, and in 1831 became a lawyer. After holding several positions of public trust in his own state, he was elected to Congress in 1843, and again in 1845. In 1850 he was made U. S. Senator, and continued to hold that office until his death at Washington, D. C., March 28, 1866.

FOOTE, ANDREW HULL, rear-admiral in the American navy, was born at New Haven, Connecticut, May 4, 1808. He entered the navy December 4, 1822, became a commander in 1852, and a captain in 1861. In February 1862 he received the command of the western flotilla, took Fort Henry, attacked Fort Donelson, where he was wounded, and on April 7 took Island No. 10. He received the thanks of Congress, and was made rear-admiral June 16, 1862. F. was appointed to relieve Admiral Dupont at Charleston, but died at New York, June 26, 1863. Admiral F. was not only a gallant, chivalrous naval officer, but a man of singularly strong moral character.

FORE'CASTLE (pron. *foks'le*), in a ship, strictly an elevated foredeck above the maindeck or the spardeck. Vessels are not frequently built with such a F. now, and the name is generally given to that portion of the forepart of the ship which constitutes the quarters for the crew.

FORR'EST, EDWIN, a celebrated American actor, born in Philadelphia, 9th March 1806, first appeared on the public stage at the age of fourteen as Douglas (November 27, 1820). After playing in the chief western cities during a long professional tour, he appeared at the Park Theater, New York, as Othello, in 1826, and at once achieved reputation. He visited England in 1835, again in 1837, when he married Catherine Sinclair, and a third time in 1845. On the third visit to England the friendly relations that had previously subsisted between F. and Macready were severed; and on the occasion of the professional tour of the latter in America, F.'s partisans were the cause of a riot, 10th May 1849, from which the English tragedian barely escaped with his life. F. continued to play till 1871, after which he gave a few Shakspearian readings. He died at Philadelphia, December 12, 1872. F. added a fine presence to a distinct and even powerful histrionic genius. See W. R. Alger's *Life of E. F., the American Tragedian* (Lond & Philad. 1877).

FORT DODGE, a town of Webster Co., Ia., on the Des Moines River, 90 miles N. from Des Moines. It is an important railroad center, and the surrounding country abounds in coal, gypsum, sandstone, limestone, and fire-clay. Pop. 5000.

FORT FISHER, a strong Confederate fortification, near the mouth of the Cape Fear River, N. C. In 1864 it was determined to close the port of Wilmington, N. C., and this could only be effected after the capture of Fort Fisher. On Dec. 13, 1864, a large expedition set forth from Hampton Roads, with this fort as its objective point. The land forces of this expedition were under the command of Gen. Butler. After an ineffectual attempt to injure the fortress by blowing up a vessel laden with powder as near by as it could be towed, on the morning of Dec. 24, the fleet opened fire, and after a bombardment of an hour and a quarter, silenced the guns of the fort. On the following day, the bombardment was renewed, and Gen. Butler landed a part of his forces, but deciding not to attempt an assault, re-embarked and returned. In January of 1865 a second expedition was sent against Fort Fisher under the command of Gen. Terry. On Jan. 15, after a severe bombardment by the fleet, the fort was carried by assault, and captured after a desperate and bloody defence. Gen. Terry took 2083 prisoners, and large quantities of arms. The Union loss in killed and wounded was 646.

FORT MADISON, in Lee Co., Ia., on the Mississippi River, 24 miles above Keokuk. Considerable manufacturing is carried on, and large quantities of produce are shipped from the surrounding farming district. Pop. 4900.

FORT MONROE, a fortification at Old Point Comfort, Va. It was begun in 1817 and has cost nearly $3,000,000. It was designed by Simon Bernard.

FORT SCOTT, in Bourbon Co., Kan., on the Marmaton River. It is engaged in agriculture, manufacturing, and coal-mining, and is a place of considerable trade. Pop. 7600.

FORT SMITH, in Sebastian Co., the most important town of Western Arkansas, on the Arkansas River, and the terminus of the Little Rock & Fort Smith Railroad. It is said to have the second largest cotton compress and oil seed mills in the world, and exports large quantities of wheat, flour, corn, fruit, cotton, stock, and lumber. Pop. 8000.

FORT SUM'TER, a celebrated stronghold of the Confederates during the War of Secession in S. Carolina, on the S. side of the entrance to Charleston inner harbor, and 3 miles from the city. It was built in 1829, and at the time of secession it mounted seventy-eight guns, and was held by a small body of troops under Major R. Anderson. Occupying a commanding position in the harbor of Charleston, it early became the center of interest. The civil war was begun here by the Confederate batteries of General Beauregard on the 12th of April 1861, and the fort was surrendered on the following day. It was held undisturbedly for two years, repulsed a force of nine Northern iron-clads, August 17, 1863, was partly demolished by the land batteries, but was not evacuated till the final surrender of Charleston, February 18, 1865.

FORTU'NY, MARIANO, a modern Spanish painter, was born of poor parents at Reus, near Barcelona, 11th June 1839. His first experience in art was gained by assisting his grandfather, a showman, to paint wax figures. Later he studied at Madrid, and made two journeys through Morocco during the Spanish war, producing a vast number of oil and water-color drawings. On his return he painted, on commission of the Spanish Government, his great picture, 'The Battle of Tetuan,' which procured for him a high reputation as a bold, original draughtsman, and a master of sunny, scintillating color. He eventually settled at Rome, where he founded a school which sought inspiration from nature, and threw discredit on the 'Masters.' His splendid studio latterly became one of the public sights on account of its rare collection of enamels, ceramics, tapestries, &c. He died 21st November 1874. Among his best-known works are 'The Beach at Portici' (sold for $19,760), 'The Siesta,' 'Academicians of Arcadia,' 'Marriage in the Cathedral of Madrid,' 'Snake-charmers,' and 'Madrid Procession Caught in the Rain.' He mainly held to Southern or Oriental *genre* painting. 'Le joli F,' was a perverted genius, cynical and frivolous, whose theatrical subjects lack the genuine feeling of humanity, and whose execution is always more or less feverish and flashy. He was influenced banefully by the artistic necromancy of his brother-in-law, Madrazo, and fell under the weird spell of Gérôme. The criticism of Théophile Gautier greatly helped to raise to a fabulous height the price of F.'s pictures. The unfinished works alone left at his death brought over $80,000. See *F., sa Vie, son Œuvre, sa Correspondance*, by Baron Davillier (Par. 1875).

FORT WORTH, an important trading center of Tarrant Co., Tex., on Trinity River. Four railroads center here, and 8 papers are published. The surrounding country is engaged in agriculture and stock-raising. Pop. 16,000.

FOSTER, BIRKET, an English artist, was born at North Shields in 1812. He was educated at Hitchin Herts, and after practising wood-engraving for some time with Landells, became a draughtsman, in which capacity he early showed an aptitude for the sympathetic treatment of rich pastoral and river landscape. His illustrations of the poetical works of Goldsmith and Scott, of Beattie's *Minstrel, of Evangeline*, &c., are artistic gems, crisp yet fluent in drawing, and in chiaroscuro singularly brilliant and true. Of late years F. has won a high reputation for water-coloring, but his lush bosky dells and bright sunny glades leave an impression more of airy daintiness than of great artistic strength or study. He was elected a member of the Water Color Society in 1860.

FOSTER, JOHN GRAY, born at Whitefield, N. H., May 27, 1823, and graduated from West Point in 1846. He served during the Mexican war, and was wounded at Molino del Rey. At the outbreak of the civil war, he was made brigadier-general of volunteers, and for meritorious conduct in that struggle, was promoted major-general. At the close of the war he returned to the corps of engineers, with which he had formerly been connected. Died at Nashua, N. H., Sept. 2, 1874.

FOSTER, LAFAYETTE SABINE, LL.D., an American statesman, born in Franklin, Conn., Nov. 22, 1806, educated at Brown university, and began the practice of law in 1831. He held numerous political positions in his own state, and in 1855 was chosen U. S. Senator, and again in 1861. After the assassination of Pres. Lincoln, he was, for two years, acting vice-president of the United States. Died in 1880.

FOSTER, STEPHEN COLLINS, an American song-writer, born at Pittsburg, Pa., July 4, 1826. He wrote *Nellie was a Lady; Old Uncle Ned; Camptown Races; Old Folks at Home; Old Dog Tray;* and *Come where my Love lies Dreaming*. All of these attained great popularity. Died at New York, Jan. 13, 1864.

FOSTORIA, in Seneca Co., O. It is an important railroad and trade center; is in the midst of a fine agricultural region; and is engaged to a considerable extent in manufacturing. Pop. 5000.

FOU'CAULT, JEAN BERNARD LÉON, a French savant, was born at Paris, Sept. 18, 1819. Though educated as a physician, he devoted his life to experimental research in the physical sciences, and had charge of the scientific section of the *Journal des Débats* from 1845 till his death, which took place at Paris, Feb. 13, 1868. He is widely known for the calculation of the velocity of light by means of a revolving mirror, and the establishing by direct comparison of the velocities of light in air and water, the undulatory theory over the emission theory; for his invention of the gyroscope, and the application of it, as well as of the simple pendulum, to render the diurnal rotation of the earth evident to the bodily eye; and for his electric light apparatus, with the electro-magnetic regulator. F.'s memoirs are published in the *Comptes Rendus*, and some popular scientific treatises appear in the *Bibliothèque d'Instruction Populaire*.

FOUR'CHAMBAULT, a town in the department of Nièvre, France, near the right bank of the Loire, 5 miles N.W. of Nevers by railway. It has large iron-foundries, forges, and smelting furnaces, and an extensive manufacture of arms. The Loire is here crossed by a suspension bridge. Pop. (1872) 5835.

FOVEAUX' STRAIT separates the South or Middle Island of New Zealand from Stewart's Island. At its narrowest point it is 17 miles in width.

FOX-BATS (*Pteropidæ*), the name applied to a family and section of *Cheiroptera* or bats. They are so named from the resemblance of the head to that of the fox. They are Frugivorous or fruit-eating, and possess a long pointed snout. The ears are of moderate size, and destitute of appendages. Incisors and cutting canine teeth are developed in both jaws. The F.-B. feed chiefly on vegetable matters, but they also subsist on small birds and mammals. The molar teeth have blunt tuberculate crowns. The tail is short or absent. Of the F.-B. the best-known species is the Kalong bat (*Pteropus edulis*) in the Eastern Archipelago, which attains an expanse of wing from 4 to 5 feet. The F.-B. are absent from the New World.

FRANCIS, ST., OF PAULA, born at Paula, in the kingdom of Naples, 1416, was named after St. Francis d'Assisi, to whose intercession his parents believed they owed the birth of the child. Having manifested strong ascetic tendencies even as a child, he was sent at twelve years of age into the Franciscan monastery of St. Mark, in Calabria, where he surpassed all the friars in obedience to their *rule*. On the expiry of his year of probation, after making a pilgrimage with his parents to Rome and other holy places, he took up his abode in a cave on the sea-coast, and devoted himself to a life of extraordinary asceticism. The fame of his sanctity soon attracted to him a number of followers, who built for themselves a chapel and cell in the neighborhood, and he gave to the new order he had thus founded the name of the Eremites of St. Francis. In 1436 the Archbishop of Cosenza sanctioned the building of a cloister and church, and monasteries of the new order soon sprang up in Spain, France, and Germany. In 1474 the *rule* was confirmed by Pope Sixtus IV., and Pope Alexander VI. changed the name of the order to Fratres Minimi. Louis XI. in his last illness summoned F. to France, where in a monastery at Plessis-le-Tours, the saint died, 2d April 1507. He was canonized by Leo X., 1519.

FRANCIS, ST., OF SALES, a bishop and prince of Geneva, was born at the château of Sales near Annecy, 21st August, 1567. He studied rhetoric, theology, and Hebrew in the College of the Jesuits at Paris, and law at Padua, passed advocate at Chambery, and was strongly pressed by his father to become a jurist. But his heart was set on a sacred career, and in 1593 he entered the priesthood. The fame which he won by his first sermons pointed him out as a fit missionary for the district of Chablais, then filled with Protestants. In spite of great opposition, the brilliant young Catholic made numerous conversions, and inspired the Pope with the belief that he might perhaps succeed in winning over Beza himself, then the leader of French Calvinism. Three ineffectual conferences were held in 1597. In 1602 F. visited Paris, preached before Henri IV., who greatly admired him, and signalized himself by the miraculous conversion of courtiers. In the same year he succeeded to the bishopric of Geneva, and in 1607 founded the Florimontane Academy, and published his *Introduction à la Vie Dévote*, a work which excited a prodigious interest, was translated into several languages, and in less than half a century had gone through forty editions. Next year he again visited Paris, where his pious oratory once more brought the city to his feet. Every distinguished person sought his friendship or acquaintance. Cardinal Retz begged him to become his coadjutor and successor, but nothing could induce the modest bishop to abandon his Alpine diocese. Between 1610 and 1614 F. established the orders of the Visitation of the Barnabites at Annecy, and of the Carthusians at Ripaille. Two years later appeared his famous *Traité de l'Amour de Dieu*, which may be said to have evoked the admiration of Christendom. He now thought of resigning his episcopal functions, and passing the remainder of his days in some calm retreat, when the Duke of Savoy required his services at Avignon. On his return he fell ill, and died at Lyon, 28th November 1622. As a writer F. almost equals Montaigne in originality of style and the charm of diction. His *Œuvres Complètes* have been repeatedly published; the best edition is that of Blaise (16 vols. Par. 1835). F.'s letters in particular are exquisitely naïve and graceful. See Hamon's *Vie de Saint François de Sales* (2 vols. Par. 1854).

FRANKFORD, a suburb of Philadelphia, Pa., from which it is six miles distant. It contains important manufactures of cotton and woollen goods, chemicals, carriages, and steel works and iron foundries. Pop. 15,000.

FRANKFORT, the capital of Kentucky, in Franklin Co., on the Kentucky River, 60 miles from its mouth, and on the Louisville & Nashville Railroad, 65 miles from Louisville. It is principally engaged in manufacturing lumber and whisky, and has an extensive trade in coal. Pop. 6958.

FRANKLIN, a town of Venango Co., Pa., on French Creek, near the Alleghany River, 28 miles from Meadville. It has three railroads, and is in the center of the oil regions of Pennsylvania. Pop. 5010.

FRANKLIN, BATTLE OF, an engagement of the civil war between a Union force, commanded by Gen. Schofield, and a Confederate force, commanded by Gen. Hood, near Franklin, Tenn., a small town about 18 miles south of Nashville, on Nov. 30, 1864. Schofield, who was retreating towards Nashville with 17,000 men, was pursued by Hood with 40,000, and at Franklin was forced to halt and give battle. After severe fighting Schofield's men succeeded in repulsing the assault of the enemy, and during the night retired towards Nashville unmolested. The Confederate loss was about 6000, that of the Union army about 2400.

FRANKLIN, WILLIAM BUEL, an American general, born at York, Pa., Feb. 27, 1823, and graduated from West Point in 1843. He served during the Mexican war on the staff of Gen. Wool, and was afterwards professor of philosophy at West Point. He served in the Union army during the civil war, and rose to the rank of major-general of volunteers. In 1866, he resigned from the service.

FRASER, CHARLES, an American portrait painter, born in Charleston, S. C., Aug. 20, 1782; and died at the same place, Oct. 5, 1860.

FRAZIER'S FARM, BATTLE OF, an engagement of the civil war. On June 30, 1862, the Union army of the Potomac, under Gen. McClellan, was retreating towards the James River. It had been pursued by a Confederate force under Generals Jackson and

Longstreet. The Confederate force had been divided, and Longstreet had made a detour, with the intention of intercepting McClellan's retreat. Jackson reaching White Oak Creek, found the bridge across that stream destroyed, and his attempt to force a passage was repulsed. Longstreet, in the meantime, had reached a position where he could attack the Union forces. At 3 P. M. a fierce assault was made upon the Union lines, but after severe fighting along the entire line, the Confederates were driven back. At the close of the struggle, McClellan resumed his retreat, without opposition. Jackson could hear the sounds of battle, but was unable to reach the field of action. This engagement is sometimes known as Glendale. The Union loss was 1800, that of the Confederates 2000.

FREDERICKSBURG, a town of Spottsylvania Co., Va., on the Rappahannock River. It is connected by railroad with Washington and Richmond. Manufactures are carried on; and it is a trade center. Pop. 5010.

FREDERICKSBURG, Battle of. On November 7, 1862, Gen. A. E. Burnside was placed in command of the Union army of the Potomac, in place of Gen. McClellan, removed. He at once consolidated the army into three grand divisions, the right under Gen. Sumner, the center under Gen. Hooker, and the left under Gen. Franklin. The plan of his campaign was to cross the Rappahannock at Fredericksburg, and then follow the line of the railroad to Richmond. On the 17th Sumner's division reached a point opposite Fredericksburg, and found that position occupied by a small force of Confederates. Sumner applied to Burnside for permission to cross the river and take the town, but the latter determined to wait until his communications were fully established. Preparations for crossing were not completed until December 10th, and the 11th and 12th were consumed in crossing the river. In the meantime the Confederates had concentrated in great force under Lee, and had taken up a strong defensive position on the Fredericksburg Heights. On the morning of the 13th a general attack was made on the Confederate line. There was desperate fighting all day, and although the Union forces under Howard, and Hooker, and Humphrey again and again assaulted the enemies' lines, they were unable to dislodge them from their strong position. During the night the Confederates slept on their arms, expecting a renewal of the attack on the following day. Burnside would have renewed the conflict had it not been for the earnest remonstrance of Sumner and his other corps commanders. As it was, the two forces remained confronting each other until the 15th, when Burnside re-crossed the Rappahannock, in the night and during a severe storm. The Union loss was 12,321, and that of the Confederates 5309. Eight days afterwards Burnside was removed from the command of the army of the Potomac. It must be said in Gen. Burnside's defence, that he strenuously objected to his appointment over the army of the Potomac when it was made, alleging, as a reason, his unfitness to command so large a body of men.

FREEDMEN'S BUREAU, established in 1865, as a branch of the war department, to protect the interests of the freedmen and loyal refugees from the States in rebellion against the general government. It provided food, medical care, and education; and was of inestimable value as a humane institution. It was disorganized in 1870.

FRELINGHUYSEN, Frederick, born in New Jersey, April 13, 1753, graduated from Princeton College in 1770, and entered upon the legal profession. He was a member of the Continental Congress (1775); served with distinction in the revolutionary war; served against the Indians, with the rank of major-general (1790); was made U. S. Senator (1793); and died April 13, 1804.

FRELINGHUYSEN, Frederick Theodore, a nephew of Theodore, born at Milltown N. J., Aug. 4, 1817, educated at Rutger's College, and became a lawyer in 1839. He was twice attorney-general of his own state; in 1866 was appointed to the U. S. Senate, and in 1870 was elected to that office. F. was Secretary of State under President Arthur.

FRELINGHUYSEN, Theodore, LL.D., son of Frederick, an American lawyer and statesman, born at Millstone, N. J., March 28, 1787, and graduated from Princeton College in 1804. He served in the war of 1812, and, after holding various political positions in his own state, was made U. S. Senator in 1829. In 1844 he was nominated by the Whig party for the vice-presidency. In 1850 F. became President of Rutger's College. Died at New Brunswick, N. J., April 12, 1862.

FREE'MAN, Edward Augustus, D.C.L., LL.D., one of the first of English historians, was born at Harborne, England, in 1823. He is the son of John F. of Redmore Hall, Worcestershire, was elected scholar of Trinity College, Oxford, in 1841, and fellow in 1845. F. was examiner in the School of Law and Modern History in 1857–58 and 1863–64, and in the School of Modern History in 1873. He contested Mid-Somerset unsuccessfully in 1864; was made D.C.L. of Oxford in 1870, and LL.D. of Cambridge in 1874. He is a prolific author as well as a profound scholar. His works include *Church Restoration* (1846); *History of Architecture* (1849); *Architectural Antiquities of Gower* (1850); *Window Tracery in England* (1850); *Landaff Cathedral* (1860); *History of the Saracens* (1856; new edit. 1876); *History of Federal Government* (vol. i. 1863); *History of the Norman Conquest* (5 vols. 1867–76); *Old English History* (1869); *History of the Cathedral Church of Wells* (1870); *Growth of the English Constitution* (1872); *General Sketch of European History* (1872); *Historical Essays* (1st series, 1871); *Historical Essays* (2d series, 1873); *Comparative Politics and the Unity of History* (1873); *Historical and Architectural Sketches* (1876); *The Ottoman Power in Europe* (1877).

FREEPORT, a town of Stephenson Co., Ill., 121 miles W. of Chicago. Three railroads pass through it, and it is an active business place, with considerable manufacturing. It is in the midst of a farming community. Pop. 8516.

FREE-SOIL PARTY, an American political party resulting from a union of Democrats and Whigs who were opposed to the introduction of slavery into the territories of the U. S. In 1848 they assembled in convention at Buffalo, N. Y., and nominated for President and Vice-President, Martin Van Buren and Charles Francis Adams, but failed to carry any of the states, and polled only a small popular vote. In 1852 they held their convention at Pittsburg, Pa., and nominated for the same offices, John P. Hale and George W. Julian, and were again defeated. In 1856 the Free-Soil party was merged into the Republican party.

FREE'THINKERS, as an historical name, is an epithet applied in England to the Deists of the 17th and 18th centuries. Otherwise it might be used to designate the great school of Rationalists who are to be found among all classes of Christians, and whose attitude towards Christianity is to represent its spirit and ideal without its dogmatic system and supernatural narratives.

FRE'GENAL DE LA SIERR'A, a picturesque town in the province of Badajoz, Spain, in the wild valley of the Martiga, 30 miles S.E. of Badajoz. It has a quaint old castle, with a bull-ring, and industries in leather, linen, &c. Pop. 6948.

FREI'RINA, a seaport of Chili, in the S. of Atacama, on the Huasco, with some export trade in copper. Pop. 10,000.

FREMONT, a town in Ohio, on the Sandusky river, and a station on the railway from Cleveland to Toledo, 30 miles E. of Toledo. It has three newspapers, good schools, a public park, and libraries, and carries on manufactures of cars, engines, boilers, and blinds. Pop. (1880) 8451.

FRERE, John Hookham, was born in London in 1769, entered Parliament in 1796, and became Under Secretary of State for Foreign Affairs in 1799. He was one of the founders of the *Quarterly Review*, and the author of *Translations of Several Plays of Aristophanes* (1840), *Theognis Restitutus* (1842), and other writings, chiefly humorous. In 1808 he was appointed Minister to Spain, married the Countess of Erroll (1816), and removed to Malta, where he died at Pieta, 7th Jan. 1846. His works were published with a memoir in 1872.—Sir Bartle Edward F., nephew of the preceding, was born in 1815, educated at Haileybury College, and entered the Indian Civil Service in 1834. He was made British Resident in Scinde in 1856, and Chief Commissioner in 1860, and for his conduct during the Mutiny twice received the thanks of Parliament, and was created a K.C.B. From 1862 to 1867 he was Governor of Bombay, and in the latter year was made a K.G.C.S.I., and returned to England, where he became Vice-President of the Royal Geographical Society. As special British commissioner he brought about the abolition of slavery by the Sultan of Zanzibar in 1873. Returning to England, he became a member of the privy council, and in 1877 was appointed governor of the Cape of Good Hope. In the same year and the year following, he successfully conducted wars with the Kaffers and other tribes, which resulted in large annexations of territory to the British domain.

FRESNILL'O, a town of Mexico, state of Zacatecas, on a branch of the Santiago, 30 miles N.-W. of Zacatecas. It has a good mining school, and in the vicinity are rich copper and silver mines. Pop. 7015.

FREU'DENSTADT ('town of joy'), a town of Würtemberg, Germany, in the circle of the Black Forest, near the Murg, 40 miles S.-W. of Stuttgart. It has some cotton-spinning, weaving, and smith-work, and a trade in wood, cattle, and fruit. Pop. (1872) 5145. F. was founded in 1559, and its first inhabitants were Lutheran refugees from Austria.

FREY'STADL (Hung. *Galgocz*), a town of Hungary, on the banks of the Waag, 84 miles N.-W. of Pesth, and nearly opposite the fortified Leopoldstadt. It has a castle, a tower of supposed Turkish origin, some manufactures of wooden articles, and a trade in cattle. Pop. (1869) 6098.

FRID'ERICIA, originally FRED'ERIKS-ODDE, a fortified seaport of Denmark, on the E. coast of Jutland, occupies the

peninsula of Skandse-Odde. It is the port where are collected the dues of the Little Belt, and it has twenty-two factories and an active manufacture of tobacco. Pop. (1873) 7186.

FRIEDRICH, Karl Nikolaus, imperial prince of Germany, eldest son of Prince Karl, second brother of the emperor, was born March 20, 1828, commanded in the Danish war of 1864, led the first army through Saxony against Austria, and won the battle of Königgratz with the aid of the Crown Prince in 1866. In the Franco-Prussian war he commanded the second German army, defeated General Froissart at Speichern, and invested Metz until Bazaine capitulated. He then drove back the Army of the Loire, retook Orleans, and forced General Chanzy to retire. F. was made a field-marshal October 28, 1870.

FRIEDRICH WILHELM, Crown Prince of Prussia, and son of King Wilhem I., was born 18th October 1831. He took part in the Slesvig-Holstein war (1864) under Wrangel, and in the war with Austria (1866) received the command of the second army, and fought at Nachod, Trautenau, Skalitz, Soor, Schweinschädel, Königinhof, and Königgratz. In the Franco-Prussian war of 1870 he was in command of the third army, and took part in the battles of Weissenburg, Wörth, and Sedan.

FRONT'LET is the name in the Old Testament (Exod. xiii. 6; Deut. vi. 8, xi. 18) for the article worn by the Jews which in the New Testament is called Phylactery.

FROST, John, LL.D., an American teacher and author, born at Kennebunk, Me., Jan. 26, 1800, and educated at Harvard College. His life was largely devoted to teaching. He published numerous works of educational and historic character. Died at Philadelphia, Pa., Dec. 28, 1859.

FROTHINGHAM, Octavius Brooks, an American divine and author, born in Boston, Nov. 26, 1822, graduated from Harvard College in 1843, and entered the Unitarian ministry in 1847. After filling pastorates at Salem, Mass., and Jersey City, N. J., he became pastor of a Unitarian church in New York City. Here he became the acknowledged leader of the extreme radical wing of Unitarianism, and ultimately an out-and-out rationalist. He subsequently retired from this position, and has since been engaged in literary work. Among his published works are the following: *Stories from the Lips of a Teacher*, *Stories of the Patriarchs*, *A Child's Book of Religion*, *The Religion of Humanity*, *The Life of Theodore Parker*, and *The Safest Creed*.

FRUIT-CROW, the name applied to several species of Conirostral *Insessors* belonging to the sub-family *Gymnoderinæ*. Of this group the *Gymnoderus fœtidus*, or bare-necked F.-C. of Brazil and Guiana, is a typical example. It attains a size averaging that of a common jackdaw, and derives its name from the naked state of the upper part of the head, neck, and throat. The bald F.-C. (*Gymnocephalus calvus*) is another example, and belongs to a different genus. It is common in Cayenne, Guiana, and other parts of S. America: the entire front of the body is destitute of feathers. This species is also named the 'capuchin baldhead.' The fruit-crows eat snails, worms, &c., in addition to their vegetable diet.

FUER'TE DE ANDAL'GALA, a town in the province of Catamarca, Argentine Republic, near which are rich copper-mines. Pop. 5000.

FUNAR'IA, a genus of Mosses, and the type of a small natural order, characterized by its vesicular calyptra, which becomes sabulate above. *F. pygrometrica* is very common on charred and burned soils in this country, and occurs all over the world.

FÜNF'HAUS, a town of Austria, 2 miles N. of Vienna by railway, with manufactures of silks, satins, woollens, red leather, &c., and a population (1869) of 27,065.

FURRUCKNUGG'UR, a walled town in the district of Gurgaon, Punjaub, British India. Pop. (1868) 10,631. Along with the surrounding country, it formerly belonged to a chief who was hanged for rebellion in 1857. F. is the emporium of the important trade carried on in salt, manufactured in the district by evaporation from wells.

FURRUCK SHERE (Farakh Siyyar), an emperor of Delhi of the Mogul dynasty, who succeeded to the throne by murdering his uncle, Jehander Shah, in 1713, and was himself assassinated in 1718. His reign is memorable for the privileges granted to the British East India Company at Calcutta through the court influence of an English surgeon.

FUSARO, LAGO DEL (anc. *Acherusia Palus*), the supposed harbor of Cumæ in the province of Naples, on the peninsula of Baiae, 11 miles W. of Naples. It is believed to be the crater of an extinct volcano, having emitted volumes of mephitic gas as late as 1838. In its center is a pavilion erected by Ferdinand I. At the S. end an outlet of Roman construction (*Foce de F.*) connects it with the sea, and in the vicinity is the vast ruined villa of Servilius Vatia, with many other relics of antiquity. The lake is still, as in ancient times, famous for its oysters.

G.

AG'ERN, Hans Christoph Ernst, Freiherr von, a German writer and statesman, born at Klein-niederheim, near Worms, January 25, 1766, became Chief Minister to the House of Nassau in 1814, represented the Low Countries at the Vienna Congress, opposed the scheme of German federation, and died at Hornau, October 22, 1852. Among his works are *Die Fürsten* (Frankf. 1808); *Aristokratie* (Vienna, 1812); *Demokratie* (Frankf. 1816); *Politik* (Stuttg. 1818); *Die Nationalgeschichte der Deutschen* (2d ed. Frankf. 1825–26); his Memoirs, under the title *Mein Antheil an der Politik* (5 vols. Stuttg. and Leips. 1823–44); *Civilization* (1847), &c.—Friedrich Baldwin G., son of the above, born at Weilburg, October 24, 1794, joined the Austrian army, fought at Dresden, Kulm, Leipsic, &c., became a general, afterwards entered the Dutch service, and was killed at Kardern, April 20, 1848.

GAINES'S MILL, an action of the civil war, on June 27, 1862. McClellan retreating with the army of the Potomac, to the James River, was pursued by Lee, and taking position near Cold Harbor, Va., gave battle. Fierce assaults were repeatedly made upon the Union lines, and at last they were broken. McClellan has been severely blamed for the manner in which he conducted this engagement, in permitting the bulk of his army to remain inactive before a small force under Gen. Magruder, while only 27,000 men were compelled to resist the attack of Lee's entire army. The Union loss was 6000 and that of the Confederates 9000.

GAINESVILLE, a town of Cooke Co., Tex., on the Missouri Pacific Railroad, a few miles from the Red River, and 270 miles N. of Austin. It is a center of trade for the surrounding country and a depot for supplies for drovers. Large droves of cattle pass northward every spring and fall. Pop. 5000.

GALIGNA'NI, Jean-Antoine and Guillaume, celebrated French publishers, were born in London, the former 13th October 1796, the latter 10th March 1798. Their father, who was a native of Brescia, and a skilled linguist, opened an English library at Paris in 1800, and established a *Monthly Repertory of English Literature, Arts, and Science* (1808), and the well-known *G.'s Messenger* in 1814. On his death (1821) the *Messenger* was greatly improved and enlarged by the brothers, who subsequently raised it to a highly-honored position, adopting as its chief object the advocacy of a cordial political relationship between England and France. They each received the cross of the Legion of Honor from Louis Philippe, and were presented with a splendid silver épergne by the English Government (1866) through Lord Cowley in recognition of their efforts to promote the well-being of British subjects, and more especially for having erected the G. Hospital for distressed Englishmen, near Paris. The brothers also built the large hospital of Corbeil at their own expense. Jean-Antoine died December 1873.

GALIZ'YN (spelt also Galitzin and Golizyn) is the name of one of the most distinguished princely families of Russia. From the time that the Princes Dmitrij and Michael commanded Russian

armies in 1514 down to the present day, members of this house have at all times been prominent in Russian diplomacy or in Russian campaigns.—WASSILIJ, 'the Great G.', born 1633, was the favorite of Sophia, Peter the Great's sister, and strove, not without success, to import Western civilization into Russia. For aspiring to marry Sophia, he was banished to a prison on the shores of the Arctic ocean, where he died of poison. His cousin Dmitrij headed the party which wished to restrict the authority of the Czar, and died in the dungeons of Schüsselburg.—DMITRIJ ALEXEJEVITCH G. (born 1735, died 1803), was the ambassador of Catharine II. at Paris and the Hague, a friend of Voltaire and the Encyclopédists. His wife, AMALIE, PRINCESS G., born 21st March 1748, was the daughter of a Prussian general, Graf von Schmettau, who gathered round her at Münster a circle of brilliant authors, including Jacobi, Hamann, and Hemsterhuis, the last of whom addressed to her his *Lettres sur l'Athéisme* (1785). She was not less distinguished for accomplishments than for intense devoutness. Her own influence and that of the circle in which she moved was mainly influential in producing the extravagant religious sentimentality which for a time characterized large sections of cultured German society. She died 24th August 1806. A son of the Princess, DMITRIJ, born in 1770, died as a Catholic missionary in N. America, 6th May 1840.

GALLARA'TE, an old walled town in the province of Milan, N. Italy, 24 miles N.W. of Milan by railway. It lies at the S.-E. base of the Somma Hills, and on the margin of a vast plain reaching to Milan, and yielding maize, mulberries and vines. G. has large steam cotton-mills. Pop. 5200.

GALLAUDET, THOMAS, D.D., born at Hartford, Conn., June 3, 1822, and graduated from Yale College in 1842. He was for many years a teacher in the New York Asylum for the Deaf and Dumb and in 1850 became rector of an Episcopal church in New York. Here he established a service for deaf mutes, for the amelioration of whose condition as a class, he has expended the best energies of his life.

GALLAUDET, THOMAS HOPKINS, LL.D., father of the preceding, born at Philadelphia, Pa., Dec. 10, 1787, and graduated from Yale College in 1805. He studied for the ministry, but devoted his life to the education of the deaf and dumb. Died at Hartford, Conn., Sept. 9, 1851. His life has been written by H. Humphrey (1858).

GALLIA'TE, a town in the province of Novaro, N. Italy, 4 miles E.N.E. of Novaro by railway. It has an old castle, silk and cotton mills, &c. Pop. 6700.

GALLIPOLIS, a town of Gallia Co., O., on the Ohio River, 200 miles above Cincinnati, and on the Columbus, Hocking Valley and Toledo Railroad. It has a large furniture factory, machine shops, and foundries; manufactures brooms, carriages, and other articles; is a trade center for a large farming, coal, and mineral region; and is a headquarters for numerous steamboats. Pop. 5000.

GAM'BIER, JAMES, LORD, a British admiral, born in the Bahamas, October 13, 1756. He entered the navy when very young, became a post-captain in 1778, was engaged in the repulse of the French at Jersey in 1781, and was the first to break the French line with his ship the *Defence* in the action off Brest, June 1, 1793. He was made rear-admiral in 1795, vice-admiral in 1799, and Governor of Newfoundland in 1801. In 1807 he bombarded Copenhagen, and captured the Danish fleet of nineteen ships of the line, and many smaller vessels. He was then made a baron, and was offered, but declined, a pension. In 1808 he received command of the Channel Fleet, and in 1809 successfully attacked a French squadron off Aix, but a dispute which arose on this occasion with his subordinate, Lord Cochrane, led him to demand a court-martial, by which he was honorably acquitted. He was made Admiral of the Fleet on William IV.'s accession, and died at Iver, near Uxbridge, April 19, 1833.

GAN'GI, an old town of Sicily, province of Palermo, in a hilly region, 12 miles W. by N. of Nicosia. It is near the remains of the Sikelian *Enginum*, originally a Phœnician colony, where in Cicero's time was a famous temple of *Magna Mater* (or Aschera), despoiled by Verres. This older G. was destroyed by Friedrich II. in 1299. Guiseppe Salerno, a famous painter of the 17th c., was born at G., and was called *Lo Zoppo* ('the lame') *di G.* His 'Last Judgment' is in one of the churches. Pop. 10,535.

GANGUE is the mineral product which accompanies the ores in metalliferous veins.

GANSEVOORT, PETER, JR., born at Albany, N. Y., July 17, 1749. He was a member of Montgomery's expedition against Canada, and in 1777 defended Fort Stanwix against the English and Indians, commanded by St. Leger. He was thanked by congress for this service, and in 1809 was made brigadier-general U. S. A. Died July 2, 1812.

GA'PER SHELL, the popular name of a well-known genus of lamellibranchiate *Mollusca*, scientifically known as the *Mya arenaria*. The shell is common on many parts of the British coasts, the animal burrowing in sand and mud, and possessing long siphons or breathing-tubes for the purpose of conveying water to the gills. It is much sought after for bait, and is also eaten in many districts. The family *Myacidæ* is distinguished by the thick shell with 'gapes' behind, and by the foot being of small size. The genus *Mya* itself possesses an oblong shell, a straight 'foot,' a siphon fringed at its extremity, while the gills do not project into the siphon.

GARDEN CITY, a village of Long Island, N. Y., founded by the late A. T. Stewart, a wealthy merchant of New York City. It is about 18 miles from New York, with which it has direct communication by railroad. The original intention was to build up a large town, which should be occupied as a place of residence by business and professional men from New York. Numerous houses were built, a first-class hotel erected, and gas and water introduced, but the population has always remained small. Here Mrs. Stewart has erected a magnificent cathedral to the memory of her husband, and G. C. has become the cathedral city of the Protestant Episcopal diocese of Long Island.

GAR'DENER'S GAR'TERS, the popular name given to the variegated variety of *Phalaris arundinacea*, a grass frequently cultivated in cottage gardens.

GARDNER, in Worcester Co., Mass., on the Fitchburg & Boston and the Barre & Gardner railroads, 27 miles from Worcester. It is extensively engaged in the manufacture of chairs. Pop. 6500.

GARDNER, HARMONY C., an American authoress, born at East Weymouth, Mass., July 31, 1821, and married to Rev. Abel Gardner in 1842. Among her published works are the following: *Rosedale, a Story of Self Denial; Extracts from the Diary of a Country Pastor; Ellinor Gray; Annie Lee, and her Irish Nurse; Faultfinding, and what Came of It; Rosamond Dayton; The Power of Kindness; The King's Daughter; Miss Carrol's School; Harry Love;* and *Holiday Poems*. Her works have been distinguished by the purity of their tone and a keen sense of humor, and have had a wide circulation.

GAR'NETT, REV. RICHARD, a distinguished philologist, born at Otley, Wharfedale, July 25, 1789. His literary and scholarly bias led him to quit a business life and join the Church. In 1815 he became a curate at Blackburn, in 1821 priest-vicar in Litchfield Cathedral, in 1836 vicar of Chebsey near Stafford, and in 1838 assistant-keeper of printed books in the British Museum. He contributed frequently to periodicals, and died at London, Sept. 27, 1850. G. united vast learning, a keen scientific faculty, and a singular gift of luminous expression. His *Philological Essays* (Edinb. 1859), a selection from his contributions to journals, are a treasury of fresh research, lucid statement, and penetrating speculation. His essay on the Celtic tongues is an especially valuable contribution to the science of language. In the mellow humor and racy anecdotage with which he occasionally flavors his erudition he somewhat recalls the great scholars of the 16th c. See the memoir by his son prefixed to his *Philological Essays* (Lond. 1859).

GARRET, THOMAS, born at Darby, Pa., Aug. 21, 1783. Learning the cutler's trade, he removed to Wilmington, Del., and became a hardware merchant. He was an ardent abolitionist and lost his entire estate through fines and actions, resulting from assistance given to runaway slaves. He lived, however, to see the slaves set free, and succeeded in gaining a second competence before his death. Died at Wilmington, Del., Jan. 23, 1871.

GARR'OW (GARO) HILLS, a district of Assam, British India, S. of the Brahmapútra, bounded N. by Kamrup, S. by Mymensing. Area, 3390 sq. miles; pop. (1872) about 80,000. This tract was first brought under direct British management in 1866, and in 1872 the intervention of an armed force was required. The hills produce valuable timber and cotton. Elephants are numerous. The headquarters of the Deputy Commissioner are at Tura. The G. people, of whom there are about 13,000 in Bengal proper, and 14,000 in the rest of Assam, are a very primitive race. They are divided into villages, with headmen and priests, and into clans; descent and inheritance of property is traced through the female line. Human sacrifice was formerly practised. Slaves are numerous (Dalton's *Ethnology of Bengal*, Calcutta, 1872).

GAS-ENGINE is an engine of the same general structure as the ordinary steam-engine, but differs in obtaining its motive power from the explosion of a mixture of inflammable gas and air. As early as 1799 Lebon, a French artisan, had constructed and patented such a machine. The inflammable mixture, introduced alternately on each side of the piston, was fired by an electric spark. It was found to work well and effectively, but coal gas not having been at that time introduced for illuminating purposes,

the expense of preparing the mixture rendered the scheme a practical failure. Lenoir's engine, patented in 1860, was very much a reproduction of Lebon's; while the chief points of difference in Hugon's machine, constructed about the same time, consisted in firing the mixture by a gas jet and in introducing a little water, which, converted into steam by the great heat, lessened the violence of the action. Very different in action, and much more economical in the consumption of its fuel than any of its predecessors, is the invention of Otto and Langen of Köln, exhibited at Paris in 1867. The gaseous mixture, introduced beneath and fired by a permanent gas jet, shoots up the heavy piston to the top of the vertical cylinder. A partial vacuum ensues and the piston descends, urged down by its own weight and the atmospheric pressure. A heavy fly-wheel equalizes the motion as far as possible, and maintains the action during the moments when the piston is ineffective.

GASSE'RIAN GANG'LION is a swelling on one of the roots of the fifth cranial nerve, situated on the upper part of the petrous portion of the temporal bone. It gives off three branches—(1) the ophthalmic, which enters the orbit; (2) the superior maxillary, for the upper jaw; and (3) the inferior maxillary, for the external ear, the tongue, the lower teeth, and the muscles of mastication. The G. G. is on the sensory root of the nerve. Its special functions are unknown.

GASTEROMYCETES, one of the six orders into which the *Fungi* are divided, of which the Puffball is an example.

GASTROLO'BIUM, a genus of Leguminous plants embracing many species peculiar to Australia. They are chiefly shrubs with yellow flowers, and are very poisonous to cattle, large numbers of which die yearly by eating the foliage. The most fatal species are *G. bilobum* and *G. spinosum*. Several species are grown in British greenhouses.

GAT'LING, Richard Jordan, an American inventor, was born in N. Carolina, 12th September 1818. At an early age he was anticipated by Ericsson in the discovery of screw propulsion, but his ingenuity was successfully shown in devising a machine for sowing wheat in drills. G. studied medicine at Ohio and Cincinnati, 1847–49, and subsequently engaged in railway and real estate speculations. In 1850 he invented a double-acting hemp-breaker, and in 1861–62 elaborated his masterpiece, a mitrailleuse, or repeating machine gun. At the first trial of the 'G. gun,' in 1862, it fired 200 shots per minute. It has since been adopted in the United States, as well as by several European Governments, for use with troops, and for the flank defence of fortifications.

GAUGING, in mensuration, is the measurement of the capacity of a vessel of any kind, and is of great importance in the collection of the revenue. In most instances the determination is only approximate, the vessel being taken as some simple surface of revolution, such as a spheroid or paraboloid or simply a cylinder, to which it may bear some approximate resemblance.

GAUNT, John of, Duke of Lancaster, third son of Edward III., was born at Ghent—whence his name—in 1339, and married his cousin Blanche, daughter of the Duke of Lancaster, in 1359, succeeding to his father-in-law's estates in 1362. After fighting in Spain, he led an English army into France in 1372, but met no resistance, and retreated to Bordeaux with only a remnant of his troops. During Edward III.'s latter years he took a large share in the government, and rendered himself very unpopular by his overbearing insolence towards the commons, and by striving as the leader of the barons against the national party to undo the reforms of the Good Parliament. Being anxious to seize the wealth of the great churchmen, he for a time supported Wiclif, but afterwards withdrew his favor from the reformer. The peasant revolt of 1381 forced him to fly to Scotland, whence he shortly returned to England. Claiming the throne of Castile through his marriage with a daughter of Pedro the Cruel, he invaded Spain, and in 1388 married his daughter to the Prince of the Asturias. He afterwards tried fruitlessly to rule Guienne. G. died in 1399. He was the patron of Chaucer, and is the knight of *The Boke of the Duchesse*. He is the 'time-honored G.' of Shakspeare's *Richard II.*, where he delivers the famous panegyric on England. See Green's *Short History of the English People* (Lond. 1875).

GAUNT'LETT, Dr. H. J. G., musician, was born at Wellington, Salop, England, in 1805, and practised as a lawyer in London. He became organist of St. Olave's, Southwark, in 1827, was made Doctor in Music in 1842, and died 21st February 1876. He was a vigorous writer, a good organist, a prolific composer of hymn-tunes and anthems, and a strenuous promoter of congregational psalmody.

GAUR, or GOUR, the ancient Hindu capital of Bengal, of which only ruins now remain, situated in Maldah district, on the left bank of the Ganges, about 180 miles N. of Calcutta. The original Sanscrit name was Lakshmanawati or Lucknonti. Its history has been traced back to the 7th c. A.D. In 1202 it was taken by the Mohammedens, and remained the seat of government under the Afghan dynasty until the triumph of the Mogul Akbar in 1574. About this latter date the main stream of the Ganges deserted its old bed, and the city was depopulated by a pestilence. The area now covered by ruins was estimated by Rennell to extend over 30 sq. miles, and the population could hardly have been less than one million souls. The whole has relapsed into jungle, the most renowned shooting-ground for tigers in Bengal. A few mosques and gateways still stand, in an indifferent state of repair, but the majority of the buildings have been pulled down, and the materials used in the towns for fifty miles round. The most celebrated monument is a circular minar or tower, 81 feet high and 21 feet in diameter, which is described in Fergusson's *Indian Architecture*. There are several large tanks, with masonry banks, containing good drinking water, one of which is nearly one mile long and half a mile wide.

GAVAR'NI, the well-known pseudonym of Sulpice Guillaume Paul Chevalier, a French caricaturist, who was born in Paris in 1801. Beginning life as a mechanical draughtsman, he early discovered a genius for burlesque penciling. He first published sketches of the valley of Gavarni in the Pyrenees; hence his *nom de plume*. About 1835 he began to contribute regularly to *Charivari* and other comic journals the wonderful series of ever-varying social and character sketches, instinct with artful originality and scathing cynicism, which earned for him the name of the 'arch-fiend of caricature.' Among his best known works are *Les Enfants Terribles*, *Les Parents Terribles*, *Les Rêves*, *Comme l'on dîne à Paris*, *Les Fourberies de Femmes*, and *Impressions de Ménage*. He successfully illustrated many popular works, as Eugene Sue's *Wandering Jew* and Balzac's *Diable à Paris*. G. died at Anteuil, 23d November 1866. A selection from his sketches was published in Paris, 1845, in 4 vols. 8vo, with notes by Théophile Gautier, and 2 vols. subsequently under the title of *Perles et Parures* (1850).

GAY, Marie-Françoise-Sophie, a French authoress, whose maiden name was Nichault de Lavalette, born at Paris, July 1, 1776, married M. Gay, and wrote many romances and several dramatic pieces. Her salon was a famous resort of authors and artists. She died at Paris, March 5, 1852. Among her works are *Laure d'Estelle* (1802), *Anatole* (1815), *Le Moqueur Amoureux* (1830), *Scènes de Jeune Age* (1833), *La Duchesse de Châteauroux* (1834), *Les Salons Célèbres* (1837), *Le Mari Confident* (1849). See Gautier's *Notices Contemporaines*.

GEIK'IE, Archibald, F.R.S., LL.D., a distinguished geologist, was born at Edinburgh, Scotland, Dec., 28, 1835, and educated at the High School and University of that city. In 1855 he was appointed to the geological survey of Scotland, of which he became the director in 1867, and in 1870 obtained the Murchison chair of mineralogy and geology at Edinburgh University. On the death of Sir Robert Murchison in 1881 he was appointed Chief Director of the Geological Survey of Great Britain. Besides various geological memoirs in the journals of the Geological Society and elsewhere, which entitle him to a foremost place among geologists, he has published several works bearing more or less on his special department. See *The Phenomena of Glacial Drift of Scotland* (1863); *The Scenery of Scotland viewed in Connection with its Physical Geography* (1865); and *Memoir of Sir Roderick J. Murchison, &c.* (2 vols. 1872).—James G., the brother of the preceding, was born at Edinburgh, August 23, 1839, was appointed to the geological survey in 1861, and succeeded his brother in his professorship in the Edinburgh University. He is the author of *The Great Ice Age* (2d ed. 1876).

GEMBLOU'X (Flem. *Gemblours*, pron. *Changblu*), a quaint old town of Belgium, province of Namur, 25 miles S.E. of Brussels by railway. It has a famous Benedictine abbey, the origin of which is assigned to the 9th c., and from which proceeded the very useful *Chronik des Siegebert von G.* Since 1860 the abbey buildings have been used as a Royal Agricultural Institute. Don John of Austria gained a victory here over the Netherlanders, 31st January 1578. Pop. 3018.

GENERA'TOR, in mathematics, is a point, line, or surface by whose motion a curve or surface may be described or *generated*. Thus a point moving round a fixed point at a constant distance from it describes a circle, and a straight line rotating round a fixed line not in the same plane generates an hyperboloid.

GENTZ, Friedrich von, a distinguished German political writer and statesman. Born in 1764 at Breslau, he entered the Prussian public service in 1786. On the outbreak of the French Revolution, he was for a time its enthusiastic defender, but ere long became the most fanatical opponent of all attempts to establish free institutions. Both before and after G. passed from the Prussian to the Austrian service in 1802, he was zealous and influential in stirring up war against Napoleon; it was he who drew up the Berlin manifestoes of 1806 and the Austrian manifestoes of 1809 and 1813, and he was present at the Congress of Paris as first secretary. Soon he was known to Europe merely as the tool

of Metternich, and to the policy of reaction he wholly devoted his versatile and brilliant talents. He died suddenly, 9th June 1832. His political writings have been twice published in 5 vols. (by Weick in 1836–38 and by Schlesier in 1838–40), his letters in 1841 (new series 1877), and his diaries (*Tagebücher*) in 1861. See also the valuable *Dépêches inédites du Chevalier de Gentz aux Hospodars de Valachie*, by Count Prokesch-Osten (Par. 1876).

GEOFF'REY DE VIN'SAUF, an English didactic poet of the reign of Richard I., also known as Galfridus Anglicus. He studied at Oxford and in France and Italy, and was in Rome at the end of the 12th c. His metrical treatise *De Nova Poetria*—the earliest attempt at literary criticism made by an Englishman—was very popular in the middle ages. In it G. advocates a return to the style and measures of classic Latin poetry, and protests against the mediæval of rhyming Latin verse. A lively *Itinerary of King Richard* has been ascribed, but probably wrongly, to G.

GEOFFROYA, a genus of trees occurring in S. America, belonging to the *Leguminosæ*, but differing from most of that order in having succulent fruits. The principal species is *G. superba*, a magnificently branched tree with beautiful green foliage and bright yellow flowers. Its wood is hard; and its fruit when boiled is said to be largely used by the inhabitants of the Ilha de St. Pedro.

GEORG I. (CHRISTIAN WILLIAM FERDINAND ADOLF GEORG), King of Greece, second son of Christian IV. of Denmark and younger brother of the Princess of Wales, was born 24th Dec. 1845. He was educated at Copenhagen, entered the navy, and was chosen King of Greece in 1863. G. married the Princess Olga, daughter of the Grand Duke Constantine and niece of the Czar of Russia, in 1867.

GEORGETOWN COLLEGE, an American educational institution, at Georgetown, D. C., chartered by Congress in 1815. Besides the usual collegiate course, it maintains law and medical departments. It is under the control of the Jesuits.

GEPHYR'EA, the name given to a class of lower *Annulosa*, represented by such forms as the *Sipunculi* or 'spoon-worms,' found in the sand of the English coasts. They are nearly allied to the *Annelida* or true worms, but differ from them in some important particulars. Thus, while the body is usually annulated or segmented, it may be perfectly smooth. In the majority of cases it wants appendages, and the ventral nervous cord is not provided with ganglia or nervous enlargements. The sexes are distinct and the young appear to undergo a metamorphosis in the course of their development. *Sipunculus Bernhardus*, found burrowing in the sand of the coasts, is a familiar species. The anterior extremity is provided with a retractile trunk or proboscis, and the digestive system is convoluted. *Syrinx* is a second genus of G., and *Echiurus*, which occurs in the N. Sea, has posterior bristles.

GEPI'DÆ, or GEPI'DI, one of the chief Gothic tribes, are first mentioned about 280 A.D. as dwelling near the mouth of the Vistula. They gradually moved S. into Pannonia, and settled between the E. and W. Goths. Their power was destroyed by Alboin the Longobard in 566.

GERANIA'CEÆ, a natural order of Thalamifloral Dicotyledonous plants, including about seven genera and 700 species. They are found in various parts of the world. The species of *Pelargonium*, which have very showy flowers, and of which numerous hybrids are now cultivated in greenhouses, abound at the Cape of Good Hope. The genus *Pelargonium* is distinguished from that of *Geranium* by having the flowers irregular and spurred. The plants of the order are aromatic and astringent.

GER'HARD, JOHANN, born at Quedlinburg, 17th October 1582, died Professor of Theology at Jena, 17th August 1637. He is generally ranked next to Luther and Chemnitz amongst the great Lutheran divines. His *Loci Theologici* are the foundation of the more developed systematic form of orthodox Lutheranism, and were first published in 1610 in 10 vols. An enlarged edition (22 vols.) appeared 1622–89. The *Confessio Catholica* is polemic, while the *Meditationes Sacræ* are an outcome of the warmest personal piety.

GERHARDT, PAUL, one of the foremost of German hymn-writers, was born 12th March 1607, at Gräfenhainichen, in Saxony. After he came to Berlin as pastor in 1657, he was known as the leader of the extreme Lutheran party in the embittered theological strife of that period. As such he was deposed by the Government in 1666, though soon replaced. He died an archdeacon at Lübben, 7th June 1676. G.'s hymns (*Geistl. Andachten*), first published in 1666, are very popular; they have been frequently reprinted, the latest edition being that of Bachmann in 1866. Biographies of G. have been written by Langbecker (Berl. 1841) and Bachmann (Berl. 1863).

GER'MAN (Lat. *germanus*, 'derived from the same *germen*,' 'germ') is a term applied to those born or descended from the same father or mother, and thus related in full blood.

GERMAN'IC FOLK-LAWS. After the migrations of the Germanic races had subsided, their old laws were gradually embodied in Latin, generally by private effort. They are chiefly of a penal character, and are distinguished from the Roman law and the capitularies of the Frankish kings as *Leges Barbarorum* :—(1) *Lex Salica* and *Lex Ripuariorum*, the laws respectively of the Salic and Rhenish Franks; (2) *L. Burgundiorum* (before 501), or *L. Gundobaldi*, or *Loi Gombette* (from King Gundobald), a formal code, with traces of the influence of the Roman law; (3) *L. Visigothorum*, recorded by King Enrik at the end of the 5th c., but after the West Goths were driven back to Spain, so grafted on Roman law as to become a distinct growth, the main stem of the modern law of Spain, and which, incorporated into a law-book (the *Forum Judicum*) about the middle of the 7th c., was in the 13th c. translated into Spanish under the name *Fuero Juzgo;* (4) *L. Longobardorum* (the oldest part, 'Edictum Lotharis,' dating from 643), extended by successive Longobardic, Frankish, and German kings and emperors, and recognized as a system of law for all Italy, the whole being collected (beginning of 12th c.) under the title *Lombarda*, or *Liber Legis Longobardicæ*, and enriched with the glosses of the University of Bologna; (5) *L. Alamannorum* (the modern Swabians), coeval with the Ripuarian or Rhenish; (6) *L. Baiuvariorum* (or Bavarians), recorded between 622 and 638, and very like the preceding; (7) *L. Saxonum*, from the same time; and (8) *L. Angliorum et Werinorun, i. e., Thuringorum*, also from the beginning of the 9th c.

GER'MERSHEIM, a town of Rhenish Bavaria, at the confluence of the Queich and the Rhine, 8 miles S.S.W. of Speyer. It has some trade in corn, hemp, flax, &c. Pop. 10.180. G. was originally a Roman fortress and station. A 'burg' was built here by Konrad II., but the place first emerges as a town in the time of Rudolf of Hapsburg, who died at G. in 1291.

GERRY, ELBRIDGE, an American patriot and statesman, born in Massachusetts in 1744. He was a member of the Continental Congress in 1776, and was one of the signers of the declaration of independence. In 1810 he became governor of Massachusetts, and in 1812 vice-president of the United States. Died suddenly in 1814.

GERSTER, ETELKA, a well-known operatic singer, born in Hungary in 1856. She made her debut at Venice, and, after singing with success in the principal cities of Europe, came to America in 1877, where she has since sung in New York and the leading cities of the United States.

GES'NER, JOHANN MATTHIAS, a celebrated German humanist, born at Roth, near Nürnberg, 9th April 1691. After completing his studies at Jena, he became in 1715 con-rector and librarian at Weimar, in 1728 rector of the gymnasium at Ansbach, in 1730 rector of St. Thomas School, Leipsic, in 1734 Professor of Rhetoric, and in 1735 librarian in the University of Göttingen. He died 3d August 1761. G. labored with intelligence and zeal for the improvement of classical studies, and formed a wider and higher idea of culture than was customary among pedagogues. His chief works are his editions of the *Scriptores de Re Rustica*, of Quintilian, Claudian, Pliny the Younger, and Horace; his *Primæ Liniæ Isagoges in Eruditionem Universam* (new ed. Leips. 1784); *Novus Linguæ et Eruditionis Romanæ Thesaurus* (4 vols. Leips. 1749); *Opuscula Varii Argumenti* (8 vols. Bresl. 1743–45); and *Thesaurus Epistolarum Gesneri* (Halle, 1768).

GETTYSBURG, BATTLE OF, one of the most important engagements of the Civil War. In the month of June, 1863, General Lee, by a well executed stratagem, and rapid marching, passed by the Union army, then under Gen. Hooker, and crossing the Potomac river and the state of Maryland, entered Pennsylvania, thus changing the seat of war from southern to northern soil. The force under Lee numbered nearly 100,000 men, and the North was thrown into great consternation by this gigantic invasion, under the ablest military leader of the Confederacy. Hooker being made aware of Lee's movements, rapidly pursued him northwards. On the 28th of June, Gen. Hooker was removed from his position, and Gen. George G. Meade was placed in command of the Army of the Potomac. On June 30th these armies were brought face to face with each other near the little village of Gettysburg, Pa., and both North and South anxiously awaited that struggle which was to determine whether Lee's invasion should be checked, or should sweep triumphantly forward. The position occupied by the Union forces was one of unusual strength, and it was Meade's plan to fight entirely on the defensive. On the morning of July 1st the battle opened, and although desperately assailed during the day, the Union forces firmly held their position. At about noon of the following day the struggle was renewed by the Confederates, and fiercely maintained until the darkness of night put an end to the bloody conflict. On the morning of the 3d the battle was again renewed, and several important points were taken

by the Union forces. Lee finding his men met and repulsed at every point, determined to make one last and mighty effort to force his way through the hitherto impregnable line, that opposed his march. From 12 to 1 P. M., there was an ominous silence, which at the latter hour was broken by the thunders of 150 guns, opened simultaneously upon the Union lines. These were responded to by 80 guns, and for two hours this artillery battle was maintained without cessation. Then Lee massed 18,000 men in column and launched them against Cemetery Ridge. With hats drawn over their faces, through a deadly storm of iron and lead, this great mass moved gallantly and grandly forward, on and on, up to the very cannon's mouth; but it was in vain, and with shattered ranks, they were driven back. The battle was won, and Lee was compelled to retrace his steps into Virginia. The forces actually engaged were about 75,000 upon each side. The Union loss was about 23,000 and that of the Confederates about 32,000.

GHAZI, an Arabic word signifying 'champion or hero,' especially assumed by those Mohammedans who have slain infidels in battle, in the form of *ghazi-úd-din*, 'champion of the faith.'

GHER'IAH, the name of two places celebrated in Indian military history. One of these, also called Viziadrug, 170 miles S. of Bombay on the sea-coast, was captured from the Mahrattas in 1755 by a British fleet and army under Admiral Watson and Colonel Clive. At another G., near Mûrshedabad, on the Ganges, 140 miles N. of Calcutta, Major Adams, after a hard-fought battle, defeated the Nawab Mîr Cossim in 1763, and finally established the pre-eminence of the East India Company in Bengal.

GIARR'E, a large town in the province of Catania, Sicily, near the sea, and 42 miles S.S.W. of Messina. The vicinity is famous for its wine, and about 5 miles above the town, on the side of Mount Etna, are several trees of remarkable size and age, and the remains of the famous *Castagno di Cento Cavalli*, held to have been formerly the largest chestnut-tree in the world. Pop. 17,197.—G. RIPOSTO, about a mile distant to the E. of G., of which it is the port, is a station on the railway from Giardini to Catania. Pop. 6530.

GIDDINGS, JOSHUA R., an American statesman, born at Tioga Point, Pa., Oct. 6, 1795, removed to Ohio, with his father, when a child, studied law, and was admitted to the bar in 1821. From 1839 to 1859 he was a member of Congress, where he distinguished himself as a strong opponent of the encroachments of the slave power. By his outspoken policy he incurred the intense hatred of southern men, and was several times assaulted by them. In 1861 he was appointed Consul-general to British North America. Died at Montreal, May 27, 1864.

GIFFORD, SANFORD ROBINSON, an American landscape painter, born at Greenfield, Saratoga Co., N. Y., June 10, 1823, educated at Brown University, R. I., and pursued art studies in New York City. Among his best-known works are 'Mansfield Mount,' 'Shrewsbury River,' 'San Giorgio,' 'Tivoli,' 'On the Nile,' 'Venetian Sails,' and 'Baltimore in 1862.' Died in New York City, 1880.

GIL'BERT, SIR HUMPHREY, a famous Devonshire gentleman of the Elizabethan era, born at Dartmouth in 1539, educated at Eton and Oxford, adopted the profession of arms, and rendered distinguished service in the Irish wars (for which the Queen conferred upon him the honor of knighthood) and in the Low Countries. He sat in the parliament of 1571. In 1576 he wrote a treatise on the N.W. Passage to India, and two years after succeeded in obtaining from Elizabeth a patent authorizing him to 'discover and take possession of any remote heathen and barbarous lands not being actually possessed by any Christian prince or people.' Aided by his half-brother, Sir Walter Raleigh (G.'s mother was twice married, the second time to Walter Raleigh of Fardel, Devonshire), he fitted out a naval squadron for discovery and conquest in 1579; but his ships, damaged by tempest and beaten in an engagement with the Spaniards, were driven back to England. In 1583 he organized another expedition of five vessels and 260 men, which was still more disastrous. With four out of his five vessels G. reached Newfoundland, and in terms of his patent took possession of it in the Queen's name. Sailing southward G. lost the largest of his three remaining ships, with nearly all on board, off Cape Breton. On the 9th September in the midst of a storm, G., 'sitting abaft with a book in his hand,' more than once exclaimed 'We are as near to heaven by sea as by land.' On the evening of the same day the frigate in which he sailed went down with all on board. Besides being a conspicuously brilliant, chivalrous figure in an age renowned for brilliance and chivalry, G. is to be remembered as taking a prominent part in laying the foundations of English colonization in America.

GILLES'PIE, GEORGE, a notable Scotch divine, born at Kirkcaldy in 1612. He was ordained minister of Wemyass in 1638, translated to Edinburgh in 1642, and in the following year was appointed commissioner from the Church of Scotland to the famous Westminster Assembly. The ability which he showed in theological discussion excited the admiration even of his Erastian opponents. In 1648 G. was elected moderator, but died prematurely in the same year. His *Dispute against the English Popish Ceremonies*, *Aaron's Rod Blossoming*, and *Miscellany Questions*, are meritorious works, but his historic eminence is greater than his literary fame.

GILL'MORE, QUINCY ADAMS, an American military engineer, born at Black River, O., Feb. 28, 1825, and graduated from West Point in 1849. In 1861 he was made chief-engineer of the expedition against Port Royal, under Gen. W. T. Sherman. Under his directions the bombardment of Fort Pulaski, at the mouth of the Savannah River, was begun on April 9th, and that fortress was forced to surrender on the following day. In 1863 he conducted the operations against Charleston, S. C., which resulted in the capture of Fort Wagner and the destruction of Fort Sumter. He has published, among others, the following works: *Siege and Reduction of Fort Pulaski; A Practical Treatise on Limes, Hydraulic Cements and Mortars;* and *Engineer and Artillery Operations against the Defences of Charleston in* 1863.

GIMIGNA'NO, SAN, an old Italian town in the province of Siena, 22 miles S.S.W. of Florence. It has a mediæval appearance, and its tall towers, whence it was called *San G. delle belle torri*, are still standing. Of its churches the most interesting are *La Collegiata*, built in the 11th c., and *S. Agostino*, begun in 1280. G. was a thriving place in the 13th c. Pop. 7425.

GIPSY-MOTH (*Hypogymna dispar*), a species of Moths, belonging to the family *Arctiidæ*, in which the antennæ of the males are deeply notched, the wings being bent downwards in repose, and the proboscis small or wanting. The genus *Hypogymna* has no proboscis, and the wings are opaque. The feelers are comb-like in both sexes, and the male abdomen has a tuft at its tip. The male G.-M. is of dark-brown color; the female, greyish white. The front wings are marked with four transverse and wavy brown bands, and a V-shaped mark exists at the middle of their anterior margin. The G.-M. is common on the Continent.

GIRARD COLLEGE, an educational institution at Philadelphia, Pa., established in 1833–48 by the liberality of Stephen Girard. Mr. Girard, an eccentric banker of Philadelphia, who had accumulated a large fortune, at his death in 1831, left over $2,000,000 for this purpose. In his bequest he directed that the institution to be founded, should be open to white male orphans between the ages of eight and ten, and that they should be apprenticed to some industrial occupation between the ages of eight and fourteen. The buildings, which are composed very largely of marble, are spacious, and about 500 boys are accommodated.

GLAD'BACH (*Mönchen-G.*), the chief industrial town in Rhenish Prussia, on the Niers, 16 miles W. of Düsseldorf by railway. It has active manufactures of linens, cottons, silks, ribbons, druggets, velvets, tobacco, machinery, &c., besides large bleachfields and dye-works. Pop. (1875) 31,962. G. was founded in the end of the 8th c.—G. (*Bergisch-G.*), a town of Rhenish Prussia, 8 miles E.N.E. of Köln by railway. It has manufactures of paper, nets, and percussion-caps, and was included in the former Duchy of Berg. Pop. (1871) 6195.

GLADDEN, WASHINGTON, D.D., an American divine, born in Pennsylvania in 1836, and educated at Williams College. He has been pastor to several Congregational churches, one of the editors of the New York *Independent*, and has met with much success as a lecturer. He has published several works, among which is *Workingmen and their Employers*.

GLAND'FORD BRIGG, or simply BRIGG, a market-town in Lincolnshire, England, on the Ancholme, 18 miles W. of Great Grimsby by railway. It has a corn exchange, a horticultural society, railway works, malthouses, breweries, cornmills, and a large river trade in corn, coal, and timber. The river is navigable for sloops from the Humber. Pop. (1871) 2646.

GLASS-SNAKE (*Ophisaurus ventralis*), a species of *Lacertilia* or Lizards found in N. America, and so named from its snake-like aspect, the limbs being wanting. It is included in the family *Chalcidæ*, to which also belong several peculiar lizards, such as the *Chirotes* of Mexico, in which only the front limbs are developed; and the African *Bipes*, in which only the hind limbs are represented. The palate in the G.-S. is toothed, and two deep grooves extend along the sides of the body, which is marked with lines of black, yellow, and green, the belly being bright yellow, and the head mottled on its upper surface. The upper parts are occasionally black, and the under grey; but great variations of color are observable. The name 'G.-S.' is derived from the brittle nature of the animal's body, the sudden contraction of the tail-muscles causing the body to break in two when the animal is incautiously handled. The common blindworm (*Anguis fragilis*) exhibits the same peculiarity. The G.-S. is very common in plantations, and is often dug up in autumn along with the sweet

potato (*Convolvulus batatas*). It feeds on insects, smaller reptiles, &c.

GLAU'CIUM, a small genus of Herbaceous plants, belonging to the Poppy family, found generally on the sea-coasts of Europe and America. There are two Brititish species, viz., *G. luteum*, the yellow horned poppy, and *G. phœniceum*, the scarlet horned poppy. Several species are cultivated for their showy flowers. Most of them have an acrid poisonous juice.

GLEIM, Johann Wilhelm Ludwig, a German poet, was born near Halberstadt, 2d April 1719. Till 1747, when he settled finally in Halberstadt as cathedral secretary, he had been engaged as tutor and secretary in families of distinction. G.'s indefatigable efforts to encourage poetical and literary promise, and his zeal in promoting German unity and national feeling, have, quite as much as his own writings, secured for him the affectionate title of *Father Gleim*, by which he is generally called. He died 18th February 1803. Of his own poems, his *Kriegslieder* (Berl. 1778) are by far the best. *Halladat*, a didactic poem, had appeared in 1774; and *Fabeln und Erzählungen* were posthumously published in 1810. G.'s *Sämmtliche Werke* were edited in 7 vols. (Halb. 1811–13; new ed. 8 vols. 1841) by Körte, who also wrote his life (Halb. 1811).

GLOUCESTER CITY, in Camden Co., N. J., on the Delaware River, opposite Philadelphia and below Camden. It is largely engaged in manufacturing. Pop. 5347.

GLOVERSVILLE, in Fulton Co., N. Y., on the Fonda, Johnstown & Gloversville Railroad, 50 miles from Albany. It is engaged in manufacturing gloves and mittens, and carries on a large wholesale trade. Pop. 8600.

GLOXIN'IA, a genus of tropical American plants belonging to the order *Gesneraceæ*, several species of which are grown in British hothouses for their richly-colored foliage and graceful flowers.

GLUTÆ'US (Gr. *gloutos*, 'the buttock') is a term applied to various muscles which form that region. In man they are three in number, viz., the G. maximus, the G. medius, and the G. minimus—of which the first is the chief extensor of the hip-joint, while the two latter remove the thigh from the median plane of the body (that is, they are *abductors*), and they assist in supporting the body on one limb during the act of walking.

GLYP'TODON, an extinct genus of Edentate quadrupeds most nearly allied to the existing Armadilloes. The fossil remains of the G. occur in the Recent or Post-tertiary deposits of S. America —that is, in the region where existing armadilloes are found. This coincidence exemplifies Owen's 'organic succession of animal forms.' A well-known specimen is the *G. clavipes*, 9 feet long. The G. had no divisions of its armor-plating, which, as in the armadilloes, consists of bony pieces of hexagonal shape, firmly united by suture, thus rendering all movement of the casing impossible. The head and tail had each a cuirass of plates. The vertebræ of the spine were fused into a solid mass. The feet were large, and the last joints of the toes short and massive. No canine or incisor teeth were developed, but there were eight molars on each side of each jaw. The crowns of the latter teeth were fluted and divided into lobes.

GMUN'DEN, a town of Upper Austria, at the outflow of the Traun from the Traun or G. Lake, 36 miles S.W. of Linz by railway. It is the seat of an imperial 'direction' for salt-mines and forests, and has considerable fisheries and an active river trade. The fine castle of Ebenzweirer stands out in the lake. Pop. (1869) 5623.

GO'A (*Crocodilus palustris*), a species of Crocodiles belonging to Asia and Australia, known also as the 'marsh erocodile,' and 'mugger.' A large specimen may attain a length of 33 feet. The G. travels overland for considerable distances during the dry season in search of water.

GOALUN'DO, a town in the district of Furidpur, province of Bengal, British India, at the junction of the main streams of the Ganges and Brahmaputra, 152 miles N. of Calcutta by rail. It is the terminus of the E. Bengal Railway, from whence the Assam steamers start, and the registration depôt of the coolies for the tea plantations. The railway station and protective works against the river currents, erected at a total cost of £100,000, were swept away in the floods of October 1874, and are now abandoned. There is a trade in dried and salted fish. During the first six months of 1876 the traffic in boats was valued at £700,000; by railway at £600,000.

GODD'ARD, Arabella, an English pianist, was born in Brittany, January 1836. In 1848 she was placed under Mrs. Anderson, the Queen's pianist, and afterwards became the pupil of Kalkbrenner and Thalberg. Her first public appearance was in 1850. In 1854–56 she visited the Continent, and in 1873–76 America and Australia. G. excels in the performance of both classical and modern music.

GOD'UNOV, Boris Feodorovitch, a Russian noble of Tartar descent, was born in 1552. After he had long been the virtual ruler under the weak Feodor I., and had by the final conquest of Siberia done much to strengthen and extend the empire, he was in 1598 called by the Bojars to the throne. Although he inaugurated serfdom (1595), his reign greatly advanced civilization in Russia by many wise measures for the promotion of trade, education, and the strict administration of justice. He poisoned himself, 13th April 1605. His son Feodor G. (born 1589) succeeded his father as Czar, but was murdered in June of the same year by Demetrius, brother of Feodor I., who returned at the head of a Polish army.

GOD'WIN, Mary Wollstonecroft, an English authoress, born at Beverley, Yorkshire, April 27, 1759. In her youth she left her father's house and maintained herself as a schoolmistress and governess until 1787, when she entered on a literary life in London. Several tales which she issued won some notice, and in 1791 her *Vindication of the Rights of Women* made her generally known. She then visited Paris, where she became intimate with the leading Girondins, and formed a *liaison* with an American named Imlay, who left her in great distress. In 1797 she married William G., whose Radicalism she shared, and died in London, September 10 of the same year, in giving birth to Mary G., afterwards the wife of Shelley and authoress of *Frankenstein*. See William G.'s remarkably candid *Memoirs of Mary Wollstonecroft G.* (1798).

GODWIN, Parke, an American journalist and author, born at Paterson, N. J., Feb. 25, 1816, and graduated from Princeton College in 1834. He has been connected with various journals, particularly the New York *Evening Post*, and has published, among other works, the following: *A Popular View of the Doctrines of Fourier; Democracy, Pacific and Constructive; Vala*, a novel; *Handbook of Universal Biography; Political Essays; History of France; Cyclopædia of Biography;* and *Out of the Past*.

GOE'DEKE, Karl, a critic and historian of German literature, was born in 1814 at Celle, in Hanover, taught privately for many years at Göttingen, and was subsequently appointed a professor in the university there. G.'s principal work is a history of German poetry, *Grundriss zur Geschichte der Deutschen Dichtung* (3 vols. 1856–70). He has also published *Elf Bücher Deutscher Dichtung* (2 vols. 1849). *Deutsche Dichtung im Mittelalter* (1852), and has edited Lessing, Schiller, and Goethe, with notes and biographical introductions. His biography of Goethe has been published as a separate work.

GO'LAB SINGH, the founder of the present dynasty of Cashmere, feudatory to the British Government of India. By descent a Dogra Rajput, he entered the service of Runjit Singh, the Sikh Rajah of the Punjaub, in 1820. Though he himself never joined the Sikh sect, he became the most favored minister of Runjit, who conferred upon him the fief of Jummu, which lies at the mouth of the Cashmere valley. He used the Sikh soldiery to conquer for himself the additional province of Ladakh; and after the first Sikh war, in 1845–46, he received from the British the state of Cashmere, in consideration of paying £750,000 in a lump sum and an annual tribute of a few goats and shawls. Though often suspected, he continued loyal to the treaty then made, and on his death in 1857 his son succeeded to the state on the same terms. See Cashmere, and Cunningham's *History of the Sikhs* (Lond. 1853).

GOLDEN, a rapidly growing town of Jefferson Co., Col., on a fork of the S. Platte River, which affords fine water power. It has coal shafts, smelting works, copper-reduction works, and several large flouring mills. Pop. 2916.

GOLDSBOROUGH, Louis M., an American naval officer, born at Washington, D. C., Feb. 18, 1805, and entered the navy in early life. He was promoted lieutenant in 1825, commander in 1841, and captain in 1855. In 1861 he was placed in command of the North Atlantic blockading squadron, and in connection with Gen. Burnside, conducted an expedition that seized Roanoke Island and many important positions in North Carolina. In 1862 he was made rear-admiral, and in 1873 retired from the service. Died Feb. 20, 1878.

GOLUN'DA (*G. Barbara*), a genus of *Muridæ*, or Mice, familiarly known as the Barbary mouse, from its occurring in that country. This elegant animal has a rich brown fur, striped longitudinally with yellow, while the under parts are white. It is about the size of the common mouse. The G. becomes very tame in captivity.

GON'DA, the chief town of the district of the same name in the province of Oudh, British India, about 120 miles N. of Allahabad. Pop. (1869) 11,966.—G. *district*, which lies under the Himalaya, is watered by the Bapti and Gogra rivers, by which it exports to Bengal rice, other cereals, and oilseeds, and receives salt and iron. Area, 2629 sq. miles; pop. (1869) 1,167,816.

GONIAS'TER, a genus of Starfishes (*Echinodermata*), including those familiarly named 'cushion stars.' The body is pentagonal, and flat on either side; the rays inconspicuous, and only to be seen distinctly on the under surface. The 'knotty cushion star' (*G. equestris*) occurs abundantly round the British coasts. The genus is first represented in a fossil state in the jurassic rocks.

GONZA'GA, a town of Northern Italy, in the province and 15 miles S. of the city of Mantua by railway. It stands amid fertile plains, was doubtless formerly of great strength, and is said erroneously to have been the cradle of the Gonzaga family. Pop. 17,526.

GOODALE, Elaine and Dora R., sisters and poets, born in Massachusetts, in 1863 and 1866. Both exhibited remarkable poetic genius, when mere children. They have published *Apple Blossoms, In Berkshire with the Wild Flowers*, and *All Round the Year*.

GOOD TEMPLARS, a secret society organized in the cause of temperance, in New York State, in 1851. It rapidly spread throughout the entire Union, and soon acquired a large membership. Its members are solemnly pledged to total abstinence from all intoxicants.

GOODWIN, Thomas, D.D., an English divine, born at Rollesley, Norfork, 1600, studied at Cambridge, where he was made vicar of Trinity Church in 1632. Shortly afterwards he left the English Church, and withdrew to Holland, where he became pastor of the English church at Arnheim. He returned to England about 1640. In 1649 the Parliament made him President of Magdalen College, Oxford. After the Restoration he led a studious life in London until his death, February 23, 1679. Anthony Wood speaks of him as 'one of the Atlasses and patriots of Independency.' His works, which are theological, were published (Lond. 5 vols.) 1681—1704.

GOOD'YEAR, Charles, born at New Haven, Connecticut, December 29, 1800, became an iron manufacturer in Philadelphia, and in 1830 began to experiment on the uses of india-rubber. In 1836 he invented a nitric acid process for fitting it to be worn as waterproof shoes, &c., and in 1839 he perfected a method of vulcanizing india-rubber by sulphur. G. died at New York, July 1, 1860.

GOOROO', or GURU (derived from a Sanscrit word signifying 'heavy'), 'a person of weight or respectability,' a word used throughout India in two special senses—(1) for the village schoolmaster in the indigenous *pathsala;* and (2) the religious teacher or guide who communicates to his disciple the peculiar prayer which initiates him into any particular sect. In this latter sense it was commonly applied to the ten Sikh Gooroos, from Nanuk to Govind Singh, whose succession has now ceased. To this day the watchword of the Sikhs is *Wah gooroo* = 'Hail G.,' and Gurumuki is the name of that peculiar modification of the Sanscrit alphabet adopted by that sect. See Cunningham's *History of the Sikhs* (Lond. 1853).

GOOSEBERRY FLY (*Nematus grossulariæ*), a species of *Neuropterous* insects allied to the well-known Sand-Flies, and included in the family *Tenthredinidæ*. The antennæ are simple in the genus Nematus, and the tarsi are jointed. The G. F. is noteworthy from the ravages of its larvæ on the gooseberry trees and fruit.

GOPH'ER or MUNGOFA TORTOISE (*Testudo gopher*), a species of *Testudinidæ* or tortoises found in America, of a brownish-yellow color, mottled with dark brown. It attains a length of 13 or 14 inches, and the female is larger than the male. The back is greatly arched. The food of the G. T. consists of vegetable matter, and it is specially fond of the sweet potato. The eggs are larger than those of pigeons, and are highly esteemed as food.

GORDON, Lucy, Lady Duff, daughter of Mrs. Austin, was born in 1821, married Sir A. G. in 1840, and became known as an excellent translator of French and German works. She died at Cairo, July 14, 1869. Among her translations are Ranke's *History of Prussia*, Niebuhr's *Greek Legends, The Amber Witch, The Village Doctor*, &c. Her original works, marked no less by an exquisite feminine lightness and grace than by an almost perplexing freedom of religious sentiment, are *Letters from the Cape* (1864) and *Letters from Egypt* (1865) and *Last Letters from Egypt* (1875), with a *Memoir* by her daughter, Mrs. Ross.

GOSAIN', or GOSWA'MI (Sansc. lit. 'one who is master of his passions'), is the term used throughout India for a special class of professed religious mendicants. In S. India they are chiefly the reputed descendants of the religious reformer, Sankara Acharya; they are gathered into *maths* or convents, and profess celibacy. In N. India, they are generally members of the Vaishnav sect, who may marry and follow secular pursuits; but the name is loosely applied to all sorts of disreputable vagrants.

GOSHEN, a town of Elkhart Co., Ind., on the Elkhart River. It is the center of a rich agricultural district, and has good water power, which is extensively used in manufacturing. Pop. 5500.

GOSS, Sir John, an eminent composer, was born at Fareham in Hants in 1800. In 1811 he became one of the 'young gentlemen' of St. James' Chapel Royal, and in 1856 was made composer to the Chapels-Royal. He was organist of St. Paul's Cathedral from 1838 to 1872, and till recently Professor of Harmony at the Royal Academy. G. has published an *Introduction to Harmony and Thorough Bass* (1833), a collection of voluntaries (1864), and numerous glees and anthems. He composed the music for the funeral ceremony of the Duke of Wellington in 1852, and for the thanksgiving service for the Prince of Wales' recovery from fever in 1872; on the latter occasion he was knighted.

GOSSAN'DER (*Mergus*), the name of a well-known genus of Natatorial birds, belonging to the family *Anatidæ* or ducks, and to the special sub-family *Merginæ*. It is distinguished by the straight, compressed bill, which has its edges prominently toothed, by the short and rounded tail, and by the front toes being webbed, while the hinder toe has only an edging of membrane. The G. (*Mergus merganser*) arrives in Britain in November, and migrates northwards in March. A few specimens may be found remaining throughout the year in Britain. The northern coasts are the habitat of these birds, which subsist on fishes, and secure their prey by means of the sharp-toothed projections of the bill. These projections are merely prominences of the horny lining of the bill, and are in no sense to be regarded as physiologically corresponding to teeth. The average length of the G. is 2 feet. Its color is a deep metallic green on the neck and upper part of the back, the latter region being black, and the tail dark grey. The wing-coverts are white, and the breast and belly of a ruddy buff hue. The bill and legs are scarlet. The female has a reddish-brown head and neck, and a grey back. The nest is constructed in the neighborhood of water, and the eggs, which number six or seven, are of a pale buff color.

GOSSE'LIES, a town of Belgium, province of Hainault, 4 miles N.W. of Charleroi. There are coal-mines in the neighborhood, and G. has manufactures of woollen cloth, hats, &c., tanneries and bleachfields. Pop. (1870) 7000.

GÖ'THALAND, or GÖ'TALAND (also called GOTA RIKE, 'the Gothic kingdom'), southmost of the three provinces of Sweden, embracing eight läns or districts with the islands Gotland and Oland. Area, 28,126 sq. miles; pop. (1874) 1,991,021. The surface, though in general mountainous, is well watered and wooded, and presents many fertile tracts. The chief river is the Götha or Göta, once unnavigable from cataracts (Trollhättan, &c.), but now so fitted with canals and locks that vessels can reach Lake Venern, from whence the Göta Canal affords free passage to the Baltic. The chief towns are Göteborg, Malmö, Norrköping, Carlskrona, Jönköping, Lund, and Calmar. To Englishmen it possesses a special interest as the native land of the hero Beówulf whose adventures have been celebrated in one of the oldest and greatest of English poems.

GOTTS'CHALK, Louis Moreau, an American musician, born at New Orleans, La., May 18, 1829. Very early in life he began to evince musical genius, at the age of six years had given a concert, and when twelve years old was sent to Paris to complete his musical education. He gave piano concerts throughout Europe, and, upon his return home in the U. S., Mexico, and South America, and everywhere won universal applause. He was also a composer of high merit. Died at Rio Janeiro, Brazil, Dec. 18, 1869.

GOUGH, Hugh, Lord, a distinguished English general, born at Woodstown in the county of Limerick, Ireland, 3d November 1779, entered the army in 1794, served at the Cape of Good Hope and in the W. Indies, and was present at most of the battles of the Peninsular war, in which he was more than once severely wounded. He was sent to India in 1837, and to China in 1840, in command of the land forces; for his services in the latter country he was made G.C.B. and a baronet. From 1843 to 1850 he was commander-in-chief in India, and commanded in person throughout the two bloody Sikh campaigns of 1845–46 and 1848–49. On his return to England he was created baron and viscount, and received a pension for three generations; subsequently also he obtained a field-marshal's staff. He died 3d March 1869. Personally he was regardless of danger, and he was not sparing of the lives of his soldiers, preferring an immediate bayonet charge to the proper use of artillery.

GOUGH, Richard, an antiquary, born in London in 1735, studied at Cambridge University, and after a life of research died at Enfield in 1809. His works include *Anecdotes of British Topography, The Sepulchral Monuments of Great Britain, The History of Pleshy in Essex. Plates of the Coins of the Seleuculæ. Account of the Missal presented to Henry VI. by the Duchess of Bedford.* G. left all his MSS. to Oxford University.

GOUL'BURN, a town in New South Wales, 128 miles S.W. of Sydney, with which it is connected by railway. It is the center of an important agricultural district; while gold is found in the

vicinity, though not in rich quantities. Copper is also beginning to be worked. G. is a see of the Anglican and Roman Catholic Churches. Pop. of the town (in 1875), 4453; of the district, 13,756.

GOVERNOR'S ISLAND, a small island in New York harbor, occupied by government fortifications, and used as a military station. It is about three-fourths of a mile south of the southern extremity of New York City.

GOVIND', or GOVIND' SINGH', the tenth and last *guru* of the Sikhs, flourished 1660–1708. It was he who developed what had previously been a mere religious sect into a nationality of disciplined warriors. He gave the name of *khalsa* = 'select or liberated;' and a great part of the *Grunth* or Holy Book is composed of the elaborate ceremonies and rules of conduct which he imposed on his followers. See Cunningham's *History of the Sikhs* (Lond. 1853).

GOW'DIE, a name given to the Gemmeous Dragonet, a Teleostean fish allied to the Goby, and known scientifically as the *Callionymus lyra*. The term 'G.' refers to the golden lustre of the body.

GOWHAT'I (*Gauhati*), the chief town in the district of the Kamrup, province of Assam, British India, on the left bank of the Brahmaputra. Pop. (1872) 11,492. It was the capital of Assam under the early Hindu dynasty, and the fortifications can still be traced for miles on both sides of the river. All buildings have now entirely disappeared, but the soil is mainly composed of decaying brick and mortar, and sculptured stones are continually turned up by the plough. It is by far the most populous town in the province, indeed the only town, and is the seat of a considerable river trade; but owing to its unhealthiness, the headquarters of the Chief Commissioner have been removed to Debrugurh.

GOZZ'I, COUNT CARLO, an Italian dramatist, born at Venice in 1722. When a youth, he joined the army in Dalmatia, and after spending three years there returned to Venice, where he began to write fanciful fairy dramas, one of which, *L'Amore delle tre Melarance*, brought out in 1761, had such a complete success that G. for a time quite eclipsed his rival Goldoni. He produced many other wild romantic pieces, full of spectacle and bustle, and not without humor and pathos amid their lively trivialities. G. died April 6, 1806. His pieces were speedily displaced by Goldoni's. An edition of his works in 10 vols. was published in 1792. See his autobiography, called *Memorie inutili di Carlo G.* (Venice, 1797).

GRADISK', a town in the S. of Russia, province of Poltava, near the left bank of the Dnieper, 65 miles S.W. of Poltava. It has four churches, a monastery, and some grain and cattle trade. Pop. (1870) 7107.

GRAHAMS, THE, OF THE BORDER, are descendants from Sir John G. of Kilbride, second son of Malice 'with the bright sword,' first Earl of Strathern, and afterwards Earl of Menteith. The principal families are those of Plomp, Esk, and Netherby.

GRAIN, the origin of all weights in England, was a G. of dried wheat from the middle of the ear. Thirty-two grains made one pennyweight, twenty pennyweights one ounce, and twelve ounces one pound. Now twenty-four grains make one pennyweight. The G. is the smallest weight in common use.

GRAN CHACO, EL (i. e., 'the great hunting-ground'), also called CHACO GUALAMBA, is a wide expanse of llanos in S. America, comprising the N.E. of the Argentine Republic and the S.E. of Bolivia. Area and population uncertain. The surface is very level, in the S. waste, in the N. covered with luxuriant vegetation. It is watered by the Rio Salado, Vermego, Pilcomayo, &c. Little is known of the interior, which is occupied by scattered tribes of nomadic Indians.

GRAND COMBE, LA, a town of France, department of Gard, 9 miles N.N.W. of Alais by railway, has important manufactures of iron, and one of the richest coal-pits in France, yielding annually 15,000 tons of fuel. Pop. (1872) 9367.

GRAND FORKS, in Grand Forks Co., Dakota, on the St. Paul, Minneapolis & Manitoba Railroad, and on the Red River of the North, at the head of navigation. It is surrounded by a good agricultural region and carries on a large trade. Pop. 4800.

GRANGER, GORDON, an American general, born in New York City, in 1821, and graduated from West Point in 1845. He served gallantly during the Mexican war, and was present at the battles of Vera Cruz, Cerro Gordo, Contreras, Churubusco, Chapultepec, and the capture of the city of Mexico. He rendered valuable and heroic services during the civil war, and was made major-general of volunteers in 1862. He participated in the battles of Chickamauga and Missionary Ridge, and other engagements. Died Jan 10, 1876.

GRANVELL'A, ANTOINE PERRENOT, CARDINAL DE, the accomplished but unscrupulous Minister of the Emperor Karl V. and of Philip II., was born at Ornans, in Burgundy, 20th August 1517. In 1540 he became Bishop of Arras, and soon entered the diplomatic service of Karl V., under whom G.'s father had kept the great seal. G.'s sagacity and linguistic attainments—so great that he had perfect command of seven languages—soon raised him to high favor, and his influence over the great political negotiations of his time renders him one of the most prominent men of the 16th c. G. was present at the Diets of Worms and Ratisbon, and at the Council of Trent. He negotiated the marriage of Philip II. with Mary of England, and, as Minister of Margaret of Parma, he conducted the affairs of the Netherlands from 1559 till his unpopularity compelled him to retire in 1564. In 1570 he concluded the alliance of Spain and the Pope against the Turks, was for a time vice-king of Naples, and died at Madrid, 21st September 1586. For his services to Church and State, G. was successively rewarded with the archbishopries of Mechlin and Besançon and in 1561 he was raised to the cardinalate. The papers left by G. illustrate all the negotiations in which he was engaged, and extend to eighty folio volumes of MS. In 1842 the publication of them was begun, See Gerlache's *Philippe II. et G.* (Bruss. 1843).

GRAPH'IC REPRESENTA'TION is the practical application of the principles of co-ordinate geometry to the construction of curves, which show readily to the eye the relations existing between a series of numbers which refer to some one physical phenomenon. The construction of maps by means of meridians and parallels is a very perfect example of the nature of the methods commonly employed, except that in this particular case the co-ordinates are not referred to *rectangular* axes. In the elucidation of the laws by which a continually and regularly varying phenomenon is governed, the method of G. R. is of singular power.

As an example, take the variation of barometric pressure throughout the day. Measure along a horizontal line twenty-four equal spaces to represent hours, and at each point raise a perpendicular representing by its length the height of the mercury at the corresponding hour. The result will be a series of points, the curve through which will indicate on mere inspection the general variation of barometric pressure from hour to hour. In our best observations the barometer is made to record its variation in this way for every instant. A strong electric or lime light is thrown through the barometer tube upon a strip of sensitive photographic paper, which is moved slowly and equally along by clockwork. The column of mercury of course shuts off the light from the lower part of the paper, which is therefore not acted upon, and by this means a sharp line of demarcation is obtained upon the paper, which gives at once the law of variation. When there are three variables involved in the progression of any phenomenon, G. R. on a plain surface becomes more difficult. For instance, in mapping a country, we must take account of vertical elevation, as well as of latitude and longitude. The usual method of representing mountains on maps is not only inaccurate, but, as a rule, misleading. The true scientific method is by *contour lines*. A glance at an Ordnance Survey map will show at once the nature of this representation, which consists in drawing through points at the same elevation a line, which must be ultimately a closed curve. The principle is the same as in the drawing of isotherms or equipotential lines. The closer two different contour lines are, the steeper is the slope at that place; and if they touch, they indicate a perpendicular precipice.

In all branches of science graphical methods are coming into greater favor, and in practical science European engineers have developed a kind of applied geometry which they call graphical statics. By its methods the engineer can solve numerous statical problems by simple construction more easily and with as much accuracy as by calculations founded on analytical investigations. The leading treatise on this subject is the *Graphische Statik* of Professor Culman of Zurich (2d ed. 1875). See also Professor Dubois's *Elements of Graphical Statics* (New York, 1875).

GRAPHIS, a genus of Lichens which have their fructification resembling Oriental writing, hence they have been called 'scripture worts.' There are several species in Britain which grow on the bark of trees.

GRAPPLE-PLANT, the common name for *Uncaria* (Harpagophytum) *procumbens*, an American plant belonging to the order *Pedaliaceæ*. It has received the name G. P. from its fruits being furnished with very strong, sharp, branching hooks, which lay hold of animals, and travelers' garments, and with difficulty can be removed.

GRAY, DAVID, was born at Merkland, Dumbartonshire, 29th January 1838, studied at Glasgow University, and in May 1860 removed to London, where symptoms of consumption showed themselves. Sent by his friends (chief among them, Lord Houghton) to Italy, he derived no benefit from the change of climate, and returning to his father's house at Merkland, January 1861, died there, 3d December of the same year. His work, *The Luggie and Other Poems*, abounds in delicate and subtle descriptions of natural scenery, and in melodious and suggestive lines. Had he lived he

might have won fame. See *Life and Works of D. G.* (Lond. 1862), and *Poems of D. G.*, edited by Henry Glassford Bell (Glasg. 1874).

GRAY, HENRY PETERS, an American painter, born at New York, in 1819. The following are among his best known works: 'The Roman Girl,' 'Proserpine and Bacchus,' 'Wages of War,' 'Cleopatra,' and 'Origin of the American Flag.' Died at New York, in 1879.

GREAT BARRINGTON, a town of Berkshire Co., Mass., on the Housatonic Railroad. It is engaged in manufacturing, and has quarries of variegated marble. Pop. 4658.

GREAT FALLS, in Strafford Co., N. H., on the Salmon Falls River and the Boston & Maine and Eastern railroads, 74 miles from Boston. It is one of the largest cotton and woollen manufacturing places in the state. Pop. 5500.

GREEN BAY, in Brown Co., Wis., on the Fox River, at the head of Green Bay. It has four railroads and a fine harbor, and is engaged in lake commerce and the lumber and general jobbing trade. Pop. 7479.

GREENLEAF, SIMON, LL.D., an American law writer, born at Newburyport, Mass., Dec. 5, 1783, was admitted to the bar in 1806, and after having practiced at several places in Maine, was, in 1833, made Royall professor of law in Harvard University, and in 1846 was made Dane professor, succeeding Judge Story. His principal work was a *Treatise on the Law of Evidence*, in three volumes, which is everywhere recognized as an authority upon that subject. He also published a religious work, entitled an *Examination of the Testimony of the Four Evangelists by the Rules of Evidence as Administered in Courts of Justice, with an Account of the Trial of Jesus*, a work that has attracted considerable attention. Died at Cambridge, Mass., Oct. 6, 1853.

GREEN RIVER, a branch of the Colorado, rising in Wyoming, and after passing through Utah, unites with the Grand River. It is about 750 miles long. Coal and gold are found in the upper part of its valley.

GREEN, SETH, born in New York, in 1817, and noted for his successful efforts to promote fish culture. Through his energy, many of the rivers and lakes of the United States have been stocked with valuable fish.

GREENSBURGH, a town of Westmoreland Co., Pa., on the Pennsylvania Railroad, at its junction with the Southwest Pennsylvania Railroad. It is in an agricultural district; is a trade center and a prominent coal shipping point. Pop. 5000.

GREENVILLE, a city of Greenville Co., S. C., at the terminus of the Greenville and Columbus Railroad, 143 miles from Columbia, and also on the Richmond and Danville Railroad, 165 miles from Atlanta. It has a salubrious climate and is a favorite summer resort. Here are located Furman University, the Baptist Female College, and Greenville Military Institute. As a cotton market and business point, it ranks second in the state. The vicinity abounds in excellent water power and has numerous cotton factories. Pop. 8,350.

GREENWICH, in Fairfield Co., Conn., on Long Island Sound and the New York & New Haven Railroad, 27 miles from New York. It is surrounded by an agricultural community and contains the residences of many New York business men. Pop. 8,000.

GREENWOOD CEMETERY, in the southern part of the city of Brooklyn, celebrated for its beautiful and costly monuments, and the beauty of its scenery. It is one of the largest and most beautiful cemeteries of the world.

GREG, WILLIAM RATHBONE, was born at Manchester, England, in 1809, was made a Commissioner of Customs in 1856, and Controller of the Stationery Office in 1864. He has become well known as the author of *Essays on Political and Social Science*, *Enigmas of Life* (1872, 5th ed. 1873), *Literary and Social Judgments*, *Political Problems*, *The Creed of Christendom* (3d ed. 1873), *Rocks Ahead, or the Warnings of Cassandra* (1874). He is a singularly lucid and graceful writer, and a clear and original thinker, but his teachings are somewhat narrow, cold and dogmatic. In his fidelity to fact, in his earnest attachment to what truth he knows, no less than in his rigid attitude of hostility to convictions which he does not share, we can recognize both the good and the evil of his Puritan training.

GREN'VILLE, an important English family connected with the county of Buckingham since the reign of Henry I., became conspicuous in the 18th c., when RICHARD G., by his marriage with Hester, daughter of Sir Richard Temple, afterwards the Countess Temple, acquired great wealth and influence. Their son, RICHARD G., succeeded through his mother to the title and estates of the Temple family. In 1757 he was made Keeper of the Great Seal, and in the political strifes of the time was first the friend and afterwards the foe of Chatham, who had married his sister Hester. It is a compliment to his powers that some have attributed to him the authorship of the *Letters of Junius*. He died childless, 11th September 1779.

GRE'TRY, ANDRE ERNESTE MODESTE, a musical composer, was born at Liége, Belgium, February 11, 1741, became a choir boy in the Collegiate Church at the age of six, and in 1759 went to Rome to study counterpoint under Casali. He studied little, but he brought out an 'Intermezzo' in 1765 at a Roman theater. In 1767 he went to Paris. Between this and 1803 he wrote fifty—chiefly comic—operas, *e. g.*, *Le Huron* (1768), *Le Tableau Parlant* (1769), *L'Amant Jaloux* (1778), *Richard Cœur de Lion* (1785), *Guillaume Tell* (1791), *Delphis et Mopsa* (1803). G. acquired great renown, had a street named after him, was made member of many learned bodies, and received substantial benefits from Napoleon to compensate him for the loss of his wealth during the Revolution. He died at Montmorency, near Paris, 24th September, 1813. G.'s works suffered neglect at the time that Méhul and Cherubini began to compose, but they were afterwards revived with new honors. He lived among a circle of admirers, and is said to have disdained all music but his own. Strong in graceful and original melody and dramatic expression, he was extremely ignorant of the principles of his art, as his works abundantly show.

GREUZE, JEAN BAPTISTE, a famous French genre painter, was born at Tournus, Burgundy, in 1726. He studied at Lyons, Paris, and Rome, and for a time misdirected his powers through ambition to be an historical painter, but afterwards limited his efforts to genre and portraits, and achieved a remarkable success. He was long an Associate of the French Academy of Painting, and died at Paris, March 21, 1805. Among his chief works are 'La Petite Fille au Chien,' perhaps his masterpiece, 'La Bonne Mère,' 'Le Gâteau des Rois,' 'La Fille Confuse,' 'Une Jeune Fille tenant une Colombe,' &c. G.'s treatment is sometimes meretricious, and his modeling defective. He was especially successful in subjects from common life, and above all in roguish or languorous female faces, which he executed with peculiar softness and grace, with combined delicacy and richness of color.

GREWIA, a genus of small trees and shrubs belonging to the order Tiliaceæ found in warm regions, but absent from America. The wood of *G. elastica* and *G. occidentalis* is used for making bows and carriage shafts. The inner bark of many of the species yields a strong fibre.

GREY'NESS OF THE HAIR, or CANIT'IES, may be congenital, accidental, or senile. Congenital greyness is usually partial, occurring in the form of round patches; but cases have been met with in which the hair on one side of the head was brilliantly white, while on the other side it was jetty black. Accidental and senile greyness present varieties in extent. When white hair falls off it is not reproduced. Blanching of the hair commences at the root, and the colored part is gradually carried onwards, further and further from the integument. Black and brown hair is most liable to greyness, but blonde and auburn hair is more liable to fall off. When the hair is 'snowy,' of an opaque white, and of the thickness of ordinary hair, it contains abundance of calcareous salts; but when it is clear and transparent, assuming a yellowish tint on exposure to the atmosphere, it contains little or no calcareous salts. Senile greyness depends on diminished powers of the nervous system, resulting in the alteration of pigmentary deposits in the formative cells of the hair. In most cases the effects are gradual; but there are numerous instances on record in which the change took place within a few hours, owing to violent mental emotions. The hair of Marie Antoinette, the wife of Louis XVI., became grey in a short period, from grief. So also with Mary Queen of Scots, Sir Thomas More, and others. Rayer mentions a case in which several of the cilia became blanched within a short time in consequence of mental agitation, and there is an instance recorded of a young lady suffering from acute mania, whose eyelashes became white within ten hours, the hair of the scalp not being affected.

GRIFF'ARD (*Spizaëtus bellicosus*), a species of eagle sometimes known as the martial eagle, occurring in S. Africa. The color is dark brown, the feathers bordered by paler brown, and the quill feathers black. The tarsi are long and slender, the inner toe exceeding the outer in length. The nostrils are large and oblique. The bird is powerful and rapacious, and its cry is shrill and disagreeable.

GRIFFIN, CHARLES, an American general, born in Ohio, in 1826, and graduated from West Point in 1847. He served in the Mexican war, and in 1861 was made captain, and was present at the first battle of Bull Run. In 1862 he was made brigadier general of volunteers, and was in command of a brigade at the battles of Yorktown, Gaines's Mill, Malvern Hill, second Bull Run, Antietam, Fredericksburg, Chancellorsville, and Spottsylvania. For gallantry in the Rappahannock campaign he was made brevet major-general of volunteers. Died at Galveston, Tex., Sept. 15, 1867.

GRIFFIN, GERALD, an Irish poet and novelist, was born at Limerick, December 12, 1803. After several years of literary work in London, he joined the monastic order of the Christian Brothers of Cork, and died there, June 12, 1840. Several of his lyrics are tender and musical. Of his novels, the best is the *Collegians* (1828), a powerful tragic story, which won considerable popularity, and which is the groundwork of Boucicault's *Colleen Bawn*.

GRIGORIOP'OL, a fortified town of Russia, government of Kherson, on the left bank of the Dniester, 78 miles N.W. of Odessa. Founded by Armenian settlers in 1793, it was named after the national saint, Gregory the Illuminator. It has some manufactures of silks and cottons. Pop. 6477.

GRIMM'IA, a genus of Mosses found on walls and rocks, growing in cushion-like tufts, throughout the world. There are over a dozen species, found in Alpine and sub-Alpine districts. *G. pulvinata* is the commonest. G. is named in honor of Grimm, a German botanist.

GRIM'SEL, a mountain pass in the Bernese Alps, Switzerland, 7103 feet high. It connects the valleys of the Aar and Rhone, which have just emerged from their respective glaciers, and on its ridge lies the Todtensee ('lake of death'), where the Austrians and French buried their dead in the summer campaign of 1799. At the N. entrance of the pass is the G. Hospice, (6148 feet above the sea-level), a few miles W. of which the Aar glacier terminates.

GRISWOLD, RUFUS WILMOT, D.D., an American author, born at Benson, Vt., Feb. 15, 1815. He became a Baptist minister, but devoted most of his life to literary work. Among his works are *Washington and his Generals*, and *Napoleon and the Marshals of the Empire*. Died in New York, N. Y., Aug. 27, 1857.

GRIVEGN'ÉE, a town of Belgium, province of Liége, on the Ourthe, near the height of Espérance, 2 miles S.E. of Liége. It has large machine-works, fulling-mills, and coal-mines. Pop. (1873) 6234.

GRO'CYN, WILLIAM, one of the great scholars who brought the Renaissance learning into England, was born at Bristol in 1442. He was educated at Winchester and New College, Oxford, became divinity reader in Magdalen College, and in 1479 rector of Newton Longville in Buckinghamshire, and afterwards prebendary of Lincoln. From 1488 to 1491 he studied Greek under Chalcondylas in Italy. On returning to England, he taught the new language in Exeter College, Oxford, where its introduction, and especially G.'s new mode of pronunciation, were strongly opposed —the University being divided into two factions of Greeks and Trojans. G.'s lectures, however, were highly successful, and Oxford became a center of Hellenic culture. Erasmus, who studied under G., spoke with admiration of his wide knowledge. In 1506 G. was made Master of Allhallows College, at Maidstone, Kent, where he died in 1519. A Latin epistle to Aldus Manutius is his only extant work.

GROSSE'TO, the fortified capital of a province of the same name, Central Italy, on the Ombrone, 8 miles from the sea, and 65 S. of Florence by railway. The seat of a bishop, it has a beautiful cathedral, a *Compagnia di Misericordia*, several sugar refineries, a trade in coals, chemicals, wine-casks, &c. Pop. (1871) 4151. The huge ruins of the Etruscan *Rusellæ* lie 5 miles N.E., where are also the Bagni di Roselle (*Aquæ Rusellarum*), copious springs with a temperature of 28° 5′ R., rich in various salts.

GROU'CHY, EMMANUEL, MARQUIS DE, a noted French marshal, belonged to an ancient family of Normandy, was born at Paris, 23d October 1766. He entered the army at the age of fourteen, was a sub-lieutenant in the king's bodyguard in 1789, but eagerly embraced the cause of the Revolution. In 1792 he was made a brigadier-general, received the command of the cavalry in the army of the Alps, and took part in the conquest of Savoy. In 1793 he was engaged in the suppression of the Vendean revolt. The decree of the National Convention ordering the expulsion from the army of all aristocrats induced him to throw aside his title and re-enter the ranks as a private. In 1795 he was reappointed a general of division, served under Hoche in the army of the West, under Joubert in the army of Italy (1798), when he induced the Sardinian king to abdicate and deliver up his fortresses to France. He was with Moreau in his memorable Piedmontese campaign against the Austrians, commanded a division of the army of the Rhine, contributed to the success of Hohenlinden, and was made inspector-general of cavalry. In 1805 he commanded one of the divisions of the camp at Brest, distinguished himself (1806–7) in the war against Prussia, his corps being the first to enter Berlin after Jena. His brilliant cavalry charges at Eylau helped to decide the day. For his services at Friedland (1807) he obtained the grand cordon of the Legion of Honor; at Wagram (1809) the title of colonel-general of chasseurs and commander of the Iron Crown, which made him a grand officer of the empire. In the Russian campaign of 1812 he fought at Wilna, Krasnoï, Smolensk, Moscow, and commanded the *escadron sacré* which guarded Napoleon on the retreat. A quarrel with the Emperor prevented him from taking part in the Leipsic campaign, but he fought against the allies when they invaded France.

On the return of Napoleon from Elba, G. received the command of four divisions, forced the Duc d'Angoulême to surrender at Lyon, was made marshal, cleared the royalists out of the south, defeated Blucher at Ligny, 16th June 1815, but was unable to give the Emperor any help on the decisive day of Waterloo, owing to a rigid adherence to the orders he had received. Exiled after the second restoration of the Bourbons, G. came to live in America, but was permitted to return in 1821. The revolution of 1830 restored him his military honours, and two years later he was called to the House of Peers. He died at St. Étienne, 29th May 1847. G.'s conduct at Waterloo has been severely censured, and a whole library of acrimonious literature has been written on the subject, but no one now believes the base insinuation of his opponents that he betrayed his master or his country. See Thier's *Histoire du Consulat et de l'Empire*.

GROUSE DISEASE, the name given to a peculiar epidemic disorder affecting Grouse in certain seasons, and causing a great mortality in the moors. The disorder has received various explanations, some authorities, *e.g.*, Dr. Cobbold of London, ascribing the disease to the presence of parasites of various kinds, while others, *e.g.*, Dr. Farquharson of London and Dr. Andrew Wilson of Edinburgh, favor the theory of an infectious disorder of an epidemic and febrile type. That the latter view is correct is supported by the fact that even so-called healthy grouse are almost invariably infested with parasites (such as the *Tænia calva* and a species of *Strongylus*), whilst mere parasitism will not explain the sudden spread and extension of the disorder. Dr. Wilson, from his researches (see *Edinburgh Medical Journal*, April 1875), inclines to the belief that the respiratory mucous membrane is specially affected, and that the disease, in some cases at any rate, assumes the form of an acute inflammatory affection. A paper by Dr. Farquharson of London on the G. D. will also be found in the vol. of the *Edinburgh Medical Journal* for 1875, and Dr. Cobbold's contributions to this subject are contained chiefly in the British Association Reports.

GROWTH. During early life the tissues of the body increase in size by taking up materials from the blood which they convert into substances similar to themselves. For example, muscle grows by matters obtained from the blood, which are assimilated by the substance of the muscle. This increase in size constitutes G., as regards the individual tissues. Up to a certain period of life the body generally increases in size and weight. It may then remain nearly stationary in these respects for many years, in consequence of the amount of waste of tissue being nearly equal to the amount of repair. During this middle period of life, in one sense the body may have ceased growing, but still G. may be taking place in one or more of the tissues, as, for instance, in muscular tissue in consequence of being habitually exercised, or in fatty tissue. In the later years of life, the waste is in excess of the repair, and consequently the body decreases in size and weight. The general conditions regulating G. may be briefly stated as follows:—(1) A healthy quality of the blood; (2) a proper quantity of blood; (3) a proper influence of the nervous system; and (4) a healthy state of the various tissues of the body.

GRUNDTVIG, NIKOLAI FREDERIK SEVERIN, a distinguished Danish theologian, born 8th September 1783, near Vordingborg, in Zealand, was educated at Aarhus 'Latin school,' and Copenhagen University, and early chose as his favorite studies religion and mythology. In 1805, after a period of strong spiritual excitement, he caught an enthusiasm for Scandinavian antiquity from the poetry of Oehlenschlager, and for a poetic Christianity from the study of Schelling and Steffens. G.'s remarkable literary activity for the popular enforcement of his gradually developed views, dates from 1807. A course of sermons delivered at Copenhagen in 1810, awoke great interest, and led to his rebuke by the University Consistorium. In 1811, he became curate of his father's parish, and the next year published the first of a number of able and characteristic works on the history of the world, quickly followed by the first struggles of the many-sided literary warfare that stimulated most years of G.'s long life, whether he opposed Molbech, Oersted, Heiberg, Clausen, Rudelbach, or Martensen. After living at Copenhagen from 1813, in 1821 he became minister of Præstö, and the year after curate of St. Saviour's at Christianshavn, but resigned in 1825 under a censure, which was only removed in 1838. In 1839 he was appointed chaplain of Vartou Hospital, and in 1861 was made a bishop. He died in 1872. G.'s chief writings are: *Nordens Mythologi* (1808), *Nordens Kæmpeliv* (1810), *Nytaarsnat* (1811), *Bibelske Prædikener* (1816), *Bjovulfs Drapa* (1820), *Nytaarsmorgen* (1824), *Nordens Mythologi og Sindbilledsprog* (1832), *Verdenshistorien* (1833–36), *Christenhedens Syvstjerne* (1860).

GRUNTH (Sansc. *grantha*, 'a book'), the holy book of the Sikhs, divided into the *adî* or first G., which contains chiefly the sayings of Nanuk, the founder of the sect; and the tenth G., compiled by Govind Singh, the tenth and last *guru*. Both are in verse, and the language used is Hindi rather than Punjaubi; but the written character is that known as Punjaubi or Gurumukhi, from its having been adopted by the Sikh *gurus*. The earliest writer is Arjun, the fifth *guru* (1581—1606). The contents are chiefly prayers addressed to the One Great God, with some mythological stories. See Cunningham's *History of the Sikhs* (Lond. 1853).

GUADALUPE', the name (1) of a long spur of the Rocky Mountains between the Rio Grande and the Pecos; (2) of a beautiful grain-growing and sylvan county in the S.W. of Texas, U. S.; and (3) of a river rising in the S. of Texas, which flows S.E. through a fair, fertile region, and, after a course of 200 miles, joins the San Antonio, 13 miles from its mouth, in Esperitu Santo Bay.

GUANA'CO, a variety or sub-species of Llama (q. v.) inhabiting Patagonia, and distinguished by its long neck and its ruddy brown color. The height at the shoulder is about 3½ feet. The G. lives in herds of from ten to thirty or forty in number, and is kept for the sake of its wool, skin, flesh, and milk. It is wonderfully sure-footed, and in its native state is quiet and timid, but when domesticated shows fight on being irritated, and discharges saliva over its assailant.

GUEBWILL'ER, a German town in the province of Elsass-Lothringen, on the Lauch, 15 miles S.S.W. of Kolmar. Its church of Saint Leger is a very interesting edifice of the 12th c., and it has also a Dominican church of the 14th c. There is considerable trade in white wine; and ribbons, cottons and woollens, &c., are made. Pop. (1871) 11,338.

GUILFORD COURT HOUSE, BATTLE OF, an engagement of the Revolutionary war, near a small hamlet of the same name, in Guilford Co., N. C. On March 15, 1781, Gen. Green, with a Continental army of 4,000 men, 3000 of whom were raw militia, came upon Lord Cornwallis at this place, and an action ensued. Green's army, although making a gallant stand, were compelled to retreat before Cornwallis' 2500 veterans, but the British suffered so severely that their general deemed it wise not to pursue Green, and so fell back upon Wilmington.

GUILIEL'MA, a small genus of palms found in S. America. *G. speciosa* is the peach palm, largely grown on the banks of the Amazon by the Indians for food. The fruit, about the size of a fowl's egg, contains a quantity of starchy matter, and is either roasted or boiled. A beverage is also made from the fruit by fermentation.

GUIS'BOROUGH, a town in the North Riding of Yorkshire, England, at the foot of the Cleveland Hills, 5 miles from the mouth of the Tees. It is a station on a branch line of the North-Eastern Railway. G. has roperies, tanneries, and brickworks; and ironstone mining is carried on in the neighborhood. Pop. (1881) 6616. Some ruins are still extant of a famous monastery built in 1119 by Robert de Brus.

GUISE, a town in the department of Aisne, France, on the left bank of the Oise, 13 miles W.N.W. of Veroins. It was formerly strongly fortified, and has a castle built in 1649. Shawls, wool, and cotton are manufactured, and there are iron and copper foundries. Pop. (1872) 5659. G. has been repeatedly besieged in medieval and modern times. In 1443 it was handed over to Charles of Anjou; it afterwards passed to a branch of the house of Lorraine, who took from it their title of Duc de G.

GUJRANWALL'A, the chief town of the district of the same name, Punjaub, British India, N.E. of Lahore. It possesses a large square mud fort, the original residence of the family of Runjit Sing.—The *district* of G. has an area of 2657 sq. miles; pop. (1868) 550,576. It is bounded N. by the Chenaub river; the crops are wheat, rice, other cereals, and sugar-cane; the exports are wheat, wool, and ghee.

GULAN'CHA, or GALUN'CHA, the name in India for an extract prepared from *Tinospora cordifolia* and *T. crispa*, two plants belonging to the order *Menispermaceæ*. G. is used as a tonic and diuretic, and also as a specific for the poisonous bites of insects.

GUMMI RUBRUM, an exudation from the bark of the *Eucalyptus rostrata*, imported from Australia, and introduced into European practice by the late Sir Ranald Martin in cases of diarrhœa and dysentery. G. R. adheres with great tenacity to mucous surfaces, and is much used, in the form of lozenges, for the relaxed throat of public speakers; and, in combination with Cayenne, in cases of relaxed uvula. It is also administered in decoction, extract, syrup, and tincture.

GUMSUR', a town in the district of Ganjam, province of Madras, British India, notorious for the human sacrifices practised by the Konds, which required to be suppressed by armed force in 1845.

GUNGE (*ganj*), a word of Persian derivation used throughout India (commonly in compounds, as Sahibgunge) for a village with a market-place containing grain and other necessaries of life.

GUN'JA (*ganja*), a narcotic drug akin to bhang and haschisch, prepared from the leaves and flowers of the hemp plant (*Cannabis sativa* or *Indica*), which is extensively smoked throughout India. The cultivation is almost entirely confined to a small tract in the district of Rajshahye, Bengal, where about 1,000,000 lbs. are annually produced. It is the policy of the Government to check the consumption by a gradual enhancement of the excise duty, which has hitherto been effected without any diminution in the revenue. In 1874–75 the duty on G. in Bengal alone amounted to £105,817.

GUNN'ERA, a genus belonging to the natural order *Haloragegeaceæ*, but some authors place it in *Araliaceæ*. There are about a dozen species of G. known, chiefly natives of New Zealand, Java, and S. America. *G. scabra* or '*panke*' is grown in British gardens and pleasure-grounds as an ornamental plant. When growing in sheltered damp places, its leaves, which are very rough, attain a large size, and it produces a conical fleshy spike of minute flowers. Its roots are astringent, and are employed for tanning, and its leaf stalks eaten as rhubarb.

GUNNISON, an important mining town of Gunnison Co., Col. The surrounding country is rich in iron, gold, silver, and coal. There is also considerable land adopted to agriculture. Pop. 4000.

GUR, the Indian name for unrefined sugar, made from the date-palm. It is extensively manufactured in the districts of Jessore and Nuddea, in the delta of Bengal, and it enters largely into native sweetmeats.

GURH (*garh*), a word of Sanscrit derivation, used throughout India (especially in composition) for a fort, particularly when the walls are of mud.

GUR'KHA, a town in the state of Nepaul, India, 53 miles N.W. of Katmandu. It was the former capital of the present dynasty. The war between England and Nepaul in 1814 is known as the G. war. There are at present five battalions of Gurkhas in the Indian army, who have done good service both during the Mutiny of 1858 and in all subsequent border campaigns. They were sent to the Malay peninsula on the occasion of the disturbances at Perak in 1875. Accurately speaking the Gurkhas, who are an aboriginal tribe, ought to be distinguished from the Gurkhalis, who are the ruling race, are of mixed Hindustani origin, and claim to be Rajputs.

GURMUKTESAR' (*Garhmuktisar*), a town in the district of Meerut, North-West Province, British India, on the right bank of the Ganges, 887 miles N.W. of Calcutta, and 31 S.E. of Meerut. Pop. (1872) 7962. The river is always navigable to this point; and G., besides being the site of an important ferry and bridge of boats to Moradabad, carries on a thriving trade as the port of Meerut. There are four temples here dedicated to the goddess of the Ganges; and a fair is said to be annually attended by 200,000 persons.

GUTH'RIE, JAMES, son of the laird of Guthrie, was a zealous minister of the Kirk of Scotland, and one of the first to suffer for his opinions after the Restoration. He was born before 1617, and was educated at St. Andrews, where he afterwards became professor of Philosophy. In 1638 he was ordained at Lauder, and in 1649 was translated to Stirling, where he remained till his death. G. was the leader of the Protesters or extreme Presbyterian party in Church politics, and in 1650 publicly excommunicated the Earl of Middleton for his hostility to the covenant. In 1651 G. was deposed for disowning the king's authority in spiritual matters, and in 1661 he was brought to trial for the same offence, for writing two pamphlets *The Western Remonstrance* and *The Causes of the Lord's Wrath*. He defended himself with great eloquence, but was found guilty of treason, and condemned to death. The sentence was executed 1st June 1661. G. was also the author of an attack on Cromwell (*Considerations, &c., concerning Dangers which threaten Religion*, 1660; reprinted 1738), of sermons, and a treatise on ruling elders and deacons.—WILLIAM G., cousin of the preceding, was also an eminent Scottish churchman and divine. He was born 1620, and studied at St. Andrews. On receiving license to preach, he resigned his family estate of Pitforthy to one of his brothers, and was ordained minister of Fenwick, near Kilmarnock, in 1644. He soon became a popular preacher, and was appointed chaplain to the Scotch army, in which capacity he was present at the battle of Dunbar. Like his cousin, G. was a leader of the party of the Protesters. As a parish minister, he was much addicted to rural sports, especially fishing and fowling, and was popular even with those who did not adopt his views. Shortly after the Restoration in 1664, he was suspended from his charge by Archbishop Burnet, and never preached again. He died 10th October 1665. G. was the author of

the well-known work *The Christian's Great Interest*, which was translated into Dutch, German, and French. See Muir's *Memoirs and Letters of G.* (Edingb. 1827).

GUTH'RUM THE DANE, or GUTHRUM OF EAST ANGLIA, a Danish leader who long opposed King Ælfred. He was beaten by Alfred in a great battle at Edington in 878, and forced to surrender after standing a siege of fourteen days in his camp. He was then baptized as a Christian, and the peace of Wedmore was concluded.

GUTZ'KOW, KARL FERDINAND, one of the most prominent among recent German poets, essayists, and novelists, was born 17th March 1811 at Berlin. His early efforts were miscellaneous, and chiefly connected with journalism. Denounced in 1835 as a leader of the 'Young Germany' (*Junges Deutschland*) party, he was imprisoned, and for many years afterwards suspected by the German Government. After 1839 G. has chiefly been known as a dramatist, and as the author of novels bearing on the social questions of the time. His works are very numerous. Of his tragedies *Richard Savage* (1839) and *Uriel Acosta* (1847) are the most important, and of his comedies *Zopf und Schwert* (1844). His novels *Die Ritter vom Geiste* (in 9 vols. 1850, 4th ed. 1865) and *Der Zauberer von Rom* (also in 9 vols. 1859, 3d ed. 1863), at once made their mark, are rich in character and incident, and display a great power of grasping and delineating the different aspects of Roman Catholic and Protestant life. His *Gesammelte Werke* in 13 vols. appeared 1845–52; his *Dramatische Werke* in 20 vols. 1862–63, 3d ed. 1871.

GUYOT, ARNOLD HENRY, PH.D., LL.D., an eminent scientist, born near Neuchatel, Switzerland, Sept. 28, 1807, and graduated from the University of Berlin in 1835. From 1839 to 1848 he taught in an academy at Neuchatel, and during these years devoted himself to geological studies, paying particular attention to the glaciers. In 1848 he came to America, and in 1855 became professor of geology and physical geography in Princeton College, N. J. He has published numerous valuable scientific works, and a series of school geographies and maps. Died Feb. 8, 1884.

GWYNNE, NELL, a fascinating actress and a mistress of Charles II., born in London, February 2, 1650. At the Portugal Street Theater and at Drury Lane, she won the hearts of the town, especially by personating youthful gallants. Pepys calls her 'a mighty pretty soul!' She was a generous, witty, and very beautiful madcap, with a laughing face and curling golden-brown hair. It is said she received £60,000 in four years from Charles II., who intended to make her Countess of Greenwich, and whose last words were, 'Do not let poor Nelly starve.' She was pensioned by James II., and died in her thirty-eighth year, November 1687.

GYM'PIE, a town in Queensland, Australia, 116 miles N. of Brisbane. It is entirely dependent upon the yield of the auriferous quartz reefs which surround it, and to the discovery of which, in 1867, it owes its existence. The value of the gold produced at G. since that date is about £1,500,000. Pop. (1875) 5793.

GYO'MA, a town of Hungary, on the Körös, 89 miles S.E. of Pesth by railway. It is celebrated for its wine. Pop. (1869) 8587.

GYPS, a genus of vultures, represented by the griffon or fulvous vulture, and by other species.

GYPSY-WORT, the English name for *Lycopus Europæus*, a labiate plant found by ditches and river-banks in Britain and throughout Europe. It yields a black dye, which is used by gypsies to render their skins darker. Hence the name G.-W.

H.

HACKETT, JAMES HENRY, an American actor, born in New York in 1800; began his career as an actor in 1826, and rapidly rose to prominence in such characters as *Justice Woodcock*, *Dromio*, and *Rip Van Winkle*. His *Falstaff* was regarded as one of the best. Died at Jamaica, L. I., in 1871.

HAD'RAMAUT, the *Adramitæ* of Strabo, is the part of Arabia to the S. and S.E. of the great central waste. The name is more strictly applied to the smaller coast district to the N.W. of Aden, of which the chief town is Makulla. In the interior it is confined by the angle of the mountains Wadi Masilah and Wadi Doân, while a series of hills are dotted along the coast. The people, mostly in towns and villages, are of many tribes, and trade in camels, fine horses, dates, gums, &c. The country is rich in coal and copper. See Wrede's *Reise in H.* (1870).

HA'GEDORN, FRIEDRICH VON, a German poet, was born at Hamburg, 23d April 1708. He studied law at Jena, published a collection of poems in 1729, and shortly thereafter went to London. In 1733 he was appointed secretary to an English company at Hamburg, and there, having had abundant leisure to cultivate his muse and enjoy the delights of social intercourse, he died, 28th October 1754. Though lacking original power, H. was very successful in fables, short tales, and such poetic trifles as had hitherto been disfigured by the clumsiness of an imperfectly polished tongue. In purity of style and eloquence of versification, H. stands far above most of his contemporaries. An edition of his *Poetische Werke*, accompanied by a memoir, was published by Eschenburg at Hamburg in 1800 in 5 vols.

HAGEN, FRIEDRICH HEINRICH VON DER, a scholar who did much to awaken interest in the study of ancient German poetry, was born February 19th, at Selmiedeberg, in the N. of Brandenburg, entered into the public service at Berlin in 1803, and was in 1810 appointed Professor of the German Language and Literature at the newly-founded university, where he for the first time made the old German tongue a branch of university study. He died at Berlin, June 11, 1856. Besides editing the *Nibelungenlied* four times (viz., 1810, 1816, 1820, and 1822), the works of the *Minnesänger* (1838), and other ancient German poems, H. wrote a *Grundriss der Geschichte der Deutschen Poesie* (Berl. 1812).

HA'GENAU (Fr. *Haguenau*, 'the enclosed meadow'), a town of Elsass-Lothringen, Germany, on the Moder, and in the great Hagenauer Forst, 20 miles N. of Strassburg by railway. It is girt with old towering walls and broad moats, and has manufactures of leather, oil, soaps, madder, and other dyes. Pop. (1875) 11,726. H. was founded by Friedrich Barbarossa in 1164, suffered in the Thirty Years' War, and passed to France in 1648. The French gained two bloody victories over the Austrians here in 1793. In the Franco-German war H. was taken the day after the battle of Wörth by Badenese troops under General La Roche, August 7, 1870.

HAIDUCKS (Magyar, 'drivers'), originally cowherds, was in the 16th c. a name for a class of mercenary soldiers, who in 1605 had a district of country allotted to them on the E. side of the Theiss with several peculiar privileges. This territory has over 60,000 inhabitants, chiefly Magyars, and is still directly under the supreme Government. In the 18th c. the word came to be used for the servants of Hungarian officials and magnates.

HAIN'ICHEN, a town in the kingdom of Saxony, Germany, 10 miles N.E. of Chemnitz by railway. It spins and weaves woollens, has cotton manufactures, and extensive bleaching and dye works. Pop. (1875) 8468.

HAJIPUR' ('town of the pilgrim') is the name of several towns in India. The best known is at the confluence of the Gunduck with the Ganges, in the district of Mozufferpur, province of Bengal, just opposite Patna city. Pop. (1872) 22,306. In the neighborhood is held the great cattle fair of Sonepur in November, and H. itself has a large trade, valued at £600,000 a year: exports, indigo and saltpetre; imports, piece goods, indigo seed, and grain. It was a place of some importance under the Mohammedans.

HALE, EDWARD EVERETT, an American clergyman and author, born at Boston, Mass., April 3, 1822, was educated at Harvard College, and in 1846 entered the Unitarian ministry. He first preached in Worcester, Mass., and in 1856 was called to the South Congregational Church of Boston. He has been a voluminous writer, and the following are among his works: *The Rosary*, *Margaret Percival in America*, *Sketches of Christian History*, *Kansas and Nebraska*, *Letters on Irish Emigration*, *Ninety Days' Worth of Europe*, *Ingham Papers*, *Sybaris and other Homes*, *How to Do it*, *Ten Times One is Ten*, *Reformation*, *Level Best and Other Stories*, *Ups and Downs*, *Christmas Eve and Christmas Day*, *In His Name*, *Our New Crusade*, *and Workingmens' Homes*.

HALE, JOHN PARKER, an American statesman, born at Rochester, N. H., March 31, 1806. He was educated at Bowdoin

College, and began to practice law at Dover, in his native state. Although a Democrat during the early period of his political career, he was strenuously opposed to the extension of slavery, and, when in congress, refused to vote for the annexation of Texas, in opposition to the expressed legislative will of his state. He served several terms in congress, and in 1847 was elected to the U. S. senate. In 1852 he was the candidate of the Free-Soil party for president, but polled only a small vote. He was elected to the U. S. senate in 1855 and again in 1858, where he was an earnest supporter of Mr. Lincoln's policy during the civil war. In 1865 he was appointed minister to Spain. Died at Dover, N. H., Nov. 19, 1873.

HALL, CHARLES FRANCIS, an American explorer, born at Rochester, N. H., in 1821. He was for some time a blacksmith, but removed to Cincinnati, O., where he was a journalist and stationer. In 1860 he sailed from New London, Conn., upon an expedition of polar research. The ship George Henry had been fitted out for this purpose by a Mr. Grinnell of New York. Hall spent two years among the Esquimaux, after which he returned home. In 1864 he published a work entitled *Arctic Researches*. He soon afterwards set out upon a second and similar voyage, this time in the ship Monticello, which had also been equipped by Mr. Grinnell. In 1869 he returned from the polar regions, having with him relics of the famous Franklin expedition. In 1871 he sailed for the north on the Polaris, which had been fitted out by the government for the purpose. While on this expedition he died in Greenland, Oct. 10, 1871.

HALL, CHARLES HENRY, D.D., a prominent clergyman of the Episcopal Church in America, born in Georgia, in 1820. He was educated at Yale college, and has been rector of churches in Washington, D. C., and Brooklyn, N. Y. He is now (1885) rector of Holy Trinity in the latter city. He has published *Commentaries on the Gospels*, *True Protestant Ritualism*, &c.

HALL, JOHN, D.D., an eminent minister of the Presbyterian Church, born in the county of Armagh, Ireland, July 31, 1829, was educated at Belfast College, and was licensed to preach in 1849. After filling various positions in his native country, he was, in 1867, called to the pastorate of the Fifth Avenue Presbyterian Church in New York City. In 1875 a new and magnificent edifice was erected by his congregation at the corner of Fifth Avenue and Fifty-fifth street, where Dr. Hall has gathered about him one of the largest and wealthiest Presbyterian congregations in the U. S. He has published *Family Prayers for Four Weeks*, *Papers for Home Reading*, *Questions of the Day*, *God's Word through Preaching*, and others.

HALL'IWELL, JAMES ORCHARD, F.R.S., was born at Chelsea, June 21, 1820, and studied at Cambridge University. He has devoted himself to Shakspearian criticism, and among his many works are *Shakspeariana* (1841), *A History of Freemasonry* (1842), *Dictionary of Provincial and Archaic Words* (1844–45), *Life of Shakspeare* (1845), *Popular Rhymes and Nursery Tales* (1849), *An Account of the New Place, Stratford-on-Avon* (1864), an edition of *Shakspeare*—his greatest labor (1865), and *Illustrations of the Life of Shakspeare* (Part I. 1874). He has published large numbers of forgotten pamphlets, plays, &c., of the Elizabethan age, and has enriched his edition of *Shakspeare* with many archæological notes. A peculiarity of H.'s *Shakspeare* is its containing the novels and tales which supplied the plots of the dramas.

HALL'UIN, a town in France, department of Nord, 10 miles N.N.E. of Lille. It carries on weaving, cotton-spinning, bleaching linen, and calico printing. Pop. (1872) 12,946.

HAMILTON COLLEGE, an educational institution at Clinton, Oneida Co., N. Y., chartered by the state in 1812. It maintains, besides the usual collegiate course, a flourishing law school, and is the possessor of an unusually fine astronomical observatory, the gift of Edwin C. Litchfield of New York, after whom it has been named. It was formerly non-denominational, by is now controlled by the Presbyterian Church.

HAMLIN, HANNIBAL, an American statesman, born at Paris, Me., Aug. 27, 1809, and became a lawyer in 1833. In 1843 he was elected to Congress, in 1848 U. S. Senator, and in 1857 governor of Maine. This position he resigned, however, to accept that of U. S. Senator, to which he was subsequently elected in the same year. In 1860 he was elected Vice-President of the U. S., with Lincoln as President, and in 1869 he was again chosen U. S. Senator.

HAMM'ER-PURG'STALL, JOSEPH, FREIHERR VON, a celebrated Orientalist, was born at Gratz, in Styria, June 9, 1774, and educated at Vienna. After a long and varied official career, he died in the Austrian capital, Nov. 23, 1856. H.-P. was a most voluminous author, and his writings are valuable. Though deficient in critical insight, and not adequately equipped in philology, he has immensely enlarged our knowledge of Eastern tongues and of Eastern history and literature. Among his more important works are *Des Osmanischen Reichs Staatsverfassung und Staatsverwaltung* (2 vols. Tüb. 1816); *Geschichte des Osmanischen Reichs* (10 vols. Pesth. 1827–34), still the standard authority on Turkish history; *Geschichte der Assassinen* (Stutt. and Tüb. 1819); *Gemäldesaal Moslemischer Herrscher* (6 vols. Darmst. 1837–39); *Geschichte der Khane der Krim* (Vienna, 1856); *Geschichte der schönen Redekünste Persiens* (Tüb. 1818); *Geschichte der Osman. Dichtkunst* (4 vols. Pesth. 1836–38); *Geschichte der Arab. Literatur* (7 vols. Vienna, 1850–57), besides editions of numerous Eastern authors—Turkish, Persian, and Arabic. See Schlottmann's *Joseph von H.* (1857).

HAMME-SUR-DURME, a fortified town of Belgium, province of W. Flanders, 3 miles N. of Bruges. It lies at the intersecting point of two important canals, and has considerable trade and some industry in linens and lace. Pop. (1874) 10,518.

HAMMOND, WILLIAM ALEXANDER, an American physician and surgeon, born at Annapolis, Md., Aug. 28, 1828, and studied medicine at New York University. In 1862 he was made surgeon-general, U.S.A.; and, in 1864, was made professor of mental and nervous diseases and of clinical medicine in Bellevue hospital medical college in New York city. He has published numerous medical works of great value.

HAMPTON, WADE, an American politician, born at Columbia, S. C., in 1818, and graduated from South Carolina College. He was intensely southern in his prejudices, and an ardent supporter of the doctrine of secession, as advocated by the partisan statesmen of the South. At the outbreak of the civil war, he entered the Confederate service, and was present at the first battle of Bull Run. He was made brigadier-general and was engaged at Seven Pines, Antietam, and Gettysburg. He was three times severely wounded. Since the termination of the war he has been prominently connected with the Democratic party. He is now (1884) a member of the U. S. Senate.

HANCOCK, JOHN, LL.D., an American patriot, born at Quincy, Mass., Jan. 12, 1737. He was an earnest opponent of the tyranny exercised by Great Britain, and delivered an eloquent funeral oration over the remains of those slain at the Boston massacre. In 1774 he was president of the Provincial Congress, and of the General Congress from 1775 to 1777. He was the first signer of the Declaration of Independence. He was afterwards twice governor of Massachusetts, and a member of Congress. The possessor of a large fortune by inheritance, he used it liberally for every good and charitable work. Died Oct. 8, 1793.

HANCOCK, WINFIELD SCOTT, an American general, born in Montgomery Co., Pa., Feb. 14, 1824, and graduated from West Point in 1844. He served during the Mexican war, and was present at San Antonio, Chernbusco, Contreras, Molino del Rey, and the capture of the city of Mexico. For gallantry at Chernbusco and Contreras he was promoted. In 1861 he was made brigadier-general of volunteers, and was from that time until the termination of the war connected with the Army of the Potomac. He rendered gallant and valuable services at the siege of Yorktown and the battles of Golding's Farm, Garnett's Hill, Savage's Station, White Oak Swamp, Crampton's Pass, South Mountain, and Antietam; and in 1862 he was made major-general U. S. Volunteers. He commanded a division at Fredericksburg and Chancellorsville, and rendered gallant service at Gettysburg, where he was severely wounded at the very moment of victory. Here he commanded the left center, and repulsed the final and grand assault of Lee on the third day of the battle. Recovering from his wound, he was present at the Wilderness, Spottsylvania, and the assault upon Petersburg. He also commanded the Union forces at Deep Bottom and Ream's Station. In 1880 he was nominated for the Presidency by the Democratic party, but was defeated by Gen. James A. Garfield, the candidate of the Republican party.

HAND'ICAPPING, is the term given in horse-racing and other sports to the placing of competitors upon an equal footing by artificial means. Thus a superior horse is made to carry certain weights—the adjustment of which is left to a chosen handicapper.

HAN'SEN, PETER ANDREAS, a German astronomer, was born at Tondern, in Schleswig, December 8, 1795. In 1825 he became director of the Lieberg Observatory in Gotha, a position which he held for many years. He is the author of several astronomical works, as *Untersuchungen über die gegenseitigen Störungen des Jupiter und Saturn* (1838); *Theorie des Aequatoreals* (1854); *Geodätische Untersuchungen* (1865); and *Anwendung der Methode der kleinsten Quadrate auf Geodäsie* (1868). His great reputation, however, rests upon his *Sonnentafeln* (1854) and *Mondtafeln* (1857). In the preparation of the latter he was led to call in question the then universally accepted value for the sun's parallax, which had been deduced from the transit observations of 1761 and 1769. He found that, for the concordance of theory and observation, the parallax would require to be increased (*i. e.*, the sun's distance

diminished) by 1-30th. Leverrier was somewhat later led to the same conclusion, and their deductions have been fully verified by subsequent and more accurate determinations.

HARDEE, WILLIAM J., an American general, born in Georgia in 1838, and entered the army early in life. He served with distinction in the Mexican war. In 1861 he resigned from the U. S. army and entered the Confederate service, where he was assigned to duty with the rank of brigadier-general. For his gallantry at the battle of Shiloh he was made major-general, and for gallant services at Perryville, he was made lieutenant-general. He continued in active service throughout the war, and was one of the army under Johnston, which surrendered at Durham Station, N. C., in 1865. He was the author of *Hardee's Tactics*, a work that was adopted for use in the U. S. army. Died at Wytheville, Va., Nov. 6, 1873.

HARRIS, TOWNSEND, an American statesman, born at Sandy Hill, N. Y., in 1803, and in early life removed to New York, where he engaged in business. Here he became interested in educational matters, and to his efforts was largely due the establishment of the College of the City of New York. In 1854 he was made consul at Ningpo, Japan, and subsequently acted as representative of the United States, in effecting treaties between that country and Siam and Japan. He was afterwards consul-general of the U. S. to Japan; and, upon his return to his native land, assisted in founding the N. Y. 'Society for the Prevention of Cruelty to Animals.' Died in 1878.

HART, JAMES MCDOUGAL, born in Scotland, in 1828, and came to America when a child. He became an artist and is famous for his landscape scenes. The following are his most admired works: 'Autumn Woods,' 'Coming out of the Shade,' and 'Moonrise in the Adirondacks.'

HART, WILLIAM, brother of the preceding, born in Scotland in 1823, and came to America when young. He is also an artist, and has produced, among other works, 'Up the Glen in the White Mountains,' 'The Golden Hour,' and 'The Last Gleam.'

HARTE, FRANCIS BRET, an American poet and author, born at Albany, N. Y., Aug. 25, 1839. He has written numerous poems and stories of Western life, many of which have become very popular. Among his poems are 'The Heathen Chinee,' 'Plain Language from Truthful James,' 'John Burns of Gettysburg,' and 'The Society of the Stanislaus.' He is also the author of *The Luck of Roaring Camp* and *The Outcasts of Poker Flat*.

HART'INGTON, THE RIGHT HON. SPENCER COMPTON CAVENDISH, MARQUIS OF, eldest surviving son of William, 7th Duke of Devonshire, was born July 23, 1833, and educated at Trinity College, Cambridge, where he graduated B.A. in 1854 and was made LL.D. in 1862. He entered the House of Commons in 1857 as one of the Liberal Members for North Lancashire, moved a vote of no confidence in Lord Derby's Government in 1859, and was appointed a Lord of Admiralty in March 1863, and in the April following Under-Secretary for War. In 1866 he became Secretary for War in Lord John Russell's second administration. He lost his seat for North Lancashire at the general election of 1868, but was soon after returned for the Radnor Boroughs. In the Gladstone Cabinet he held the office of Postmaster-General till January 1871, when he became Chief Secretary for Ireland. Shortly before the assembling of Parliament in 1875, Mr. Gladstone resigned the leadership of the Liberal party, and in February 1876 the Marquis of H. was chosen his successor. During the momentous period from 1876 to 1880 he led the Liberal Opposition with skill, sagacity, and moderation. In the winter of 1877 he was elected Lord Rector of the University of Edinburgh, and about the same time addressed a great meeting in that city, when he enunciated the lines of policy on which he thought his party should move. It was at this time understood that he would be the head of the next Liberal ministry, but the enthusiasm evoked by the speeches of Mr. Gladstone during the years 1879–80 compelled the latter to resume the conduct of affairs in the Liberal ministry of 1880. The Queen indeed sent for the Marquis of H., and requested him to form a ministry, but he declined the responsibility and recommended Her Majesty to accept again the services of Mr. Gladstone.

HART'MANN, EDUARD VON, a retired officer of Prussian cavalry, and author of the most paradoxical and popular of recent metaphysical systems. H. was born in Berlin, 23d February 1842, was disabled by an accident from entering on active military service, and devoted himself to philosophy in 1864. The *Philosophie des Unbewussten* ('Philosophy of the Unconscious'), to which H. owes his fame, appeared in 1869, and in 1874 had reached a sixth edition. H.'s system is strictly monistic, the basis, principle, or cause of the universe being regarded as unconscious spirit, with the attributes of will and ideation. Both attributes attain to consciousness only in the animal world. With Schopenhauer H. is convinced that the universe contains upon the whole much more evil than good, and that it were much better that the universe did not exist. In so far H. is thoroughly pessimistic; but he declines to affirm that ours is the worst of possible worlds. On the contrary, the teleological perfection which an unconscious providence has brought about goes far to prove that this is the best of *possible* worlds. Still, man's chief end is to hope for, and to strive, according to prescribed methods, towards the extinction of existence, towards the blessedness of *Nirvana*. Like Schopenhauer, with whose system H.'s has the nearest affinity, H. has the deepest contempt for 'professor-philosophy,' and the professors are in return agreed that H.'s system is but dillettanti philosophizing. H. has also, though an adherent of the development theory, written against the mechanical aspect of Darwinism; and as an advocate of a return to a purified Brahmanical faith, published a work on the *Selbstzersetzung des Christenthums* ('Self-Dissolution of Christianity,' 2d ed. 1875). His *Gesammelte Studien* began to appear in Berlin in 1876. In 1877 he published *Wahrheit und Irrthum im Darwinismus*.

HARTRAUFT, JOHN FREDERIC, an American soldier and statesman, born at New Hanover, Pa., Dec. 16, 1830, graduated from Union College, Schenectady, N. Y., in 1853, and began to practice law in 1859. At the outbreak of the civil war, he entered the Union service, and served with gallantry until its termination. In 1864 he was made brigadier-general, and in 1865 brevet major-general. Since the close of the war he has been a prominent actor in Pennsylvania politics, holding various positions of public trust. In 1872 he was elected governor of that state and has recently (1884) been appointed collector of the port of Philadelphia.

HARTSUFF, GEORGE L., an American general, born in N. Y. in 1830, and educated at West Point. He served in the campaign against the Seminole Indians, and was also actively engaged in the civil war. At the battle of Antietam he was severely wounded. He rose to the rank of major-general. Died in 1874.

HARVARD, JOHN, the founder of Harvard University, born in England, in 1608, and removed to Massachusetts in 1637. At his death he left one-half of his estate to establish a college. This amounted to $4000, and with it the now famous university was founded.

HASS'AN, the chief town of the district of the same name, in the state of Mysore, India, 114 miles W. of Bangalore; pop. (1871) 6305. The *district* of H., which is mountainous, has an area of 3291 sq. miles; pop. (1871) 668,417. The crops are *ragee* (largely exported), rice, tobacco, chillies, and areca nuts. Coffee, introduced in 1843, is now grown on 50,000 acres; every native has a few coffee-trees. There is a fine breed of cattle, used for draught. Brassware of excellent quality is manufactured.

HASTINGS, a town of Dakota Co., Minn., on the Mississippi River, 20 miles below St. Paul. It is engaged in milling and manufacturing, and is a shipping point for grain. Pop. 3947.

HATFIED, EDWIN FRANCIS, D.D., an eminent American clergyman, born at Elizabethtown, N. J., Jan. 9, 1807; graduated from Middlebury College, Vt., in 1829; and, after a course of theological study at Andover Seminary, entered the ministry of the Presbyterian Church in 1832. After a brief pastorate in St. Louis, Mo., he was called to the Seventh Presbyterian Church of New York City, where he remained from 1835 to 1856. Here his labors were attended with a wonderful degree of success. Large congregations flocked to hear him, and multitudes were converted under his ministry. In 1856 he accepted a call to the North Presbyterian Church of New York, but in 1863 was compelled to retire from active work in the ministry on account of ill health. Among his published works are *Universalism as it Is* (1841), *Memoir of Elihu W. Baldwin, D.D.* (1843), *St. Helena and the Cape of Good Hope* (1852), *The History of Elizabeth, N. J.* (1868), *The Church Hymn Book with Tunes* (1872), and *The Chapel Hymn Book* (1873). Died in New York City, Sept. 22, 1883.

HAUFF, WILHELM, a popular German novelist, whose works very plainly show the influence of Sir Walter Scott, was born at Stuttgart, November 29, 1802, where he died, 18th December, 1827. His principal historical romance is *Lichtenstein* (1826); his *Marchen* reached a 9th edition in 1861. H. also wrote *Phantasien im Bremer Rathskeller Memoiren des Satan*, and *Der Mann im Monde* (all in 1827), together with many short tales.

HAUPT, MORITZ, a philologist, highly esteemed for his labors as an editor of classical texts and of the works of the early German authors. He was born 27th July 1808, at Zittau, in Saxony, studied at Leipsic, and became professor there in 1838. H.'s sympathy with the revolutionary movements in 1848 and 1849 led to his being expelled from his post; but in 1853 he was appointed to the chair in the University of Berlin, vacated by the death of Lachmann, and is a secretary of the Berlin *Akademie*. In the department of classics H. has given editions of Ovid, Horace, Catul.

ius, Tibullus, Propertius, and Virgil. In the native field H.'s most important publications are his critical editions of *Erec* (1839), of *Armer Heinrich* (1842), and of *Guter Gerhard* (1840); he has also superintended new issues of Lachmann's text of the *Nibelungen*, of Wolfram, and of Walther von der Vogelweide. He died in 1874. The first two volumes of his philological *Opuscula* appeared at Leipsic in 1876, and in 1877 his *Französische Volkslieder*, edited by Tobler.

HAUSS'MANN, Baron Georges Eugene, the rebuilder of Paris, was born in that city, March 27, 1809. He was educated at the Conservatoire de Musique, and subsequently received a legal training; but his marked administrative capacities brought him under the notice of Louis Napoleon, who in 1853 appointed him Préfet of the Seine. In this office H. displayed the utmost energy and resource; and the works which he undertook by way of developing the natural and architectural beauties of Paris completely changed the aspect of the capital. Public gardens, squares, markets, official buildings, bridges, hospitals, and asylums were all formed under his direction; and among his more important schemes may be mentioned the improvement of the Bois de Boulogne, the prolongation of the Rue de Rivoli, the construction of the Boulevard de Sebastopol, and the formation of about a score of additional boulevards in various quarters in the city. The success of his projects made H. for a time exceedingly popular; and he also stood high in favor at court, being promoted to the rank of Grand Officer of the Legion of Honor in 1856, and Grand Cross in 1862. In 1858 he was created a senator; and he became also a member of the Academy of Fine Arts, and of the Imperial Council of Public Instruction. His magnificent notions, however, could only be realized by an enormous expenditure of money; and as one loan succeeded another, public discontent began to be manifested. After several loans had been exhausted, the Municipality of Paris, by special powers, raised a further sum of 250,000,000 francs in 1865, and another of 260,000,000 four years later. On the formation of the constitutional Ministry under Ollivier (1870), H. was requested to resign his ædileship; and on refusing to do so, was dismissed by an imperial decree. After the fall of the Empire, he left France for a time; but ultimately returned, and became in 1871 Director of the Crédit Mobilier.

HAVEN, Erastus Otis, D.D., LL.D., an American educator, born at Boston, Mass., Nov. 1, 1820, and graduated from Wesleyan University in 1842. After devoting several years to teaching, he entered the Methodist ministry in 1842, and in 1854 became professor of Latin in the University of Michigan. He was president of the University of Michigan, 1863–69; president of Northwestern University, Evanston, Ill., 1869–72; and was made chancellor of Syracuse University in 1874. Among his publications are *Young Man Advised*, *Pillars of Truth*, and *Rhetoric*. Died at Salem, Oregon, Aug. 2, 1881.

HAVEN, Gilbert, a Bishop of the Methodist church in America, born in Massachusetts, in 1821. He was educated at Wesleyan University, and in 1851, entered the ministry. He was made Bishop in 1872. Died in 1880. He published numerous sermons and addresses.

HAVEN, Joseph, D.D., LL.D., an American scholar and educator, born at Dennis, Mass., Jan. 4, 1816; graduated from Amherst College, Mass., in 1835; and became a Congregational minister in 1846. He was professor of mental and moral philosophy in Amherst College, 1850–58; professor of systematic theology in the Chicago Theological Seminary, 1858–70; and, after an extended tour in Europe, was, in 1873, made acting professor of mental and moral philosophy in Chicago University. He published *Mental Philosophy* (1857), *Moral Philosophy* (1859), and *Studies in Philosophy and Theology* (1869). Died May 23, 1874.

HAV'ERFORD COLLEGE, in Delaware Co., Pa., founded in 1832, and controlled by the Quakers, or Friends. It has a fine property, and maintains the usual academic standard of education.

HAWLEY, Joseph Roswell, an American soldier and statesman, born at Stewartsville, N. C., Oct. 21, 1826, removed with his father when a child to New York, graduated from Hamilton College in 1847, and began to practice law in Hartford, Conn., in 1850. In politics he was a pronounced anti-slavery man, and was one of the organizers of the Republican Party in Connecticut. In 1857 he retired from the law, and became editor of the Hartford *Evening Press*, which under his management soon became one of the leading Republican organs of the country. At the outbreak of the civil war he entered the Union service with the rank of captain. He served gallantly during the entire struggle, and was made brigadier-general in 1864, and brevet major-general in 1865. After the war he returned to editorial work, and became manager of the Hartford *Courant*. He was subsequently a member of Congress, and U. S. Senator from Connecticut. He was chosen president of the Centennial commission to arrange for the celebration of the one hundredth anniversary of American Independence. He is one of the most eloquent and stirring political speakers of the Republican Party, and is now (1884) U. S. Senator from Connecticut.

HAWTHORNE, Julian, son of Nathaniel, born at Boston, Mass., in 1846. He was educated as an engineer, but has devoted his life largely to literary work. Among his works are *Garth*, *Bressant*, and *Idolatry*.

HAY, John, an American poet and journalist, born at Salem, Ind., Oct. 8, 1839; graduated from Brown University in 1858; and was admitted to the bar at Springfield, Ill., in 1861. He was assistant secretary to President Lincoln, and occupied various positions in the government service abroad until 1870, when he became a member of the editorial staff of the New York *Tribune*. He is best known by his dialect poems 'Little Breeches,' 'Jim Bludsoe,' and 'Banty Tim.' These, with others, have been published in *Pike County Ballads*. He has also published *Castilian Days*.

HAYES, Augustus Allen, M.D., an American chemist, was born at Windsor, Vermont, February 28, 1806. H. studied chemistry under Dr. Dana, devoted himself entirely to that science, and filled various important posts. Among his discoveries is that of the organic alkaloid sanguinaria, which produces most brilliant salts. He has also investigated the properties of chromium, and written on chemical differences in varieties of guano, and the action of sea-water below the surface. Died in August, 1882.

HAZEN, William B., an American general, born at Hartford, Vt., Sept. 27, 1830, and graduated from West Point in 1855. He was engaged in frontier duty until the civil war, when he raised the 41st Ohio volunteers, and entered the Union service. He was in command of a brigade at the battles of Shiloh, Perryville, and Stone River. In 1862 he was made brigadier-general of volunteers. He was present and rendered gallant services at the battles of Chickamauga, Chattanooga, and Missionary Ridge; was present at the capture of Atlanta; and marched with Sherman to the sea. In 1864 he was made major-general of volunteers. For his valuable services in the civil war he was made major-general U. S. A.

HEADLEY, Joel Tyler, an American author, born at Walton, N. Y., Dec. 30, 1814, educated at Union College, and for a time pursued the ministry, but eventually devoted himself to literary work. He has published *Letters from Italy*, *The Alps and the Rhine*, *Napoleon and his Marshals*, *Sacred Mountains*, *Washington and his Generals*, &c.

HEARNE, Thomas, an English antiquary, born at White Waltham, Berkshire, in 1678, studied at Edmund Hall, Oxford, became assistant librarian in the Bodleian in 1701, and lived in Edmund Hall till his death, June 10, 1735. His chief works are editions of Justin, Eutropius, Livy, Spelman's *Life of Alfred*; Leland's *Itinerary*; *Lelandi de Rebus Britannicis Collectanea*; Langtoft's *Chronicle*; *Aluredi Beverlacencis Annales*, &c. He also wrote *Ductor Historicus*, and *The History and Antiquities of Glastonbury*.

HEART-URCHIN, the name given to certain genera of *Echini*, or 'Sea-urchins,' from their heart-like or cordate shape. These 'urchins' are called 'irregular,' on account of their difference in form from the Common Echinus, which is spherical. The purple H.-E. is the *Spatangus purpureus* of the naturalist; the common species, the *Amphidotus cordatus*. A curious form is the 'Fiddle H.-E.' (*Brissus lyrifer*), so named from a mark of that shape on the shell or 'test.'

HEAVEN, that particular portion of space beyond our globe in which God has placed the everlasting home of faithful angels and men. We have seen, in the article Beatific Vision, how the trials of God's servants in this life are rewarded in the next by seeing Him face to face and possessing Him securely and forever. The article in Vol. III., page 743, sets forth the various traditional and instinctive beliefs of pagan peoples and others with regard to the existence and location of a future abode of bliss. It remains to supplement all this by a statement of the Catholic doctrine regarding the location of our eternal home and the precise nature of the beatitude or supreme happiness there enjoyed.—1. There exists no formal declaration or doctrinal sentence of the Church, deciding peremptorily where God reveals Himself to His saints. In Holy Writ there is no passage clearly pointing out the place of the Heaven which Christians believe in. That it is outside of our earth is alone certain. The Jewish commentators of the Old Testament writings only confused men's minds by favoring the belief in the seven heavens, of the Cabbala; from them this fantastic hypothesis passed to the Arabs and into the Koran. St. Paul speaks of a 'third heaven' into which he was 'caught up,' and saw and heard things indescribable and unspeakable. This third heaven St. Paul is thought by some to identify with the paradise of the just, others, however, deny that such was the thought of the Apostle, who merely mentions his having been 'caught up . . . even to the third heaven,' only as one stage of the journey which terminated in his being 'caught up into paradise.' The distinction was made by several of the Church Fathers. In medieval

times the Catholic schools adopted the current notions about the physical constitution of the universe. St. Thomas Aquinas fairly resumes them all by his hypothesis of three heavens, the sidereal, the crystalline, and the empyræan. The last mentioned, the outermost or highest portion of space, was, he maintained, the place where heaven existed. The 'scientific imagination' of our best modern scholars, if they weigh well the meaning of the medieval philosophers, will find but little to find fault with in thus locating the abode of the Blessed far away beyond the track of comet, or the orbit of the remotest star, the calm region of peace untroubled, and that 'land of the living,' where the Infinite Creator puts forth the magnificence of His power and love, to establish a dwelling place worthy of the society assembled there, the élite of good angels and good men, and His own life and light poured out on all there. The intellect and imagination of the most accomplished scientist easily conceive of a region of earth where perpetual springtide ever reigns, a region unvisited by the scorching heats of summer or the colds of winter, safe from storm and pestilence and earthquake. If he believes in the almighty power and goodness of a Creator, he can easily conceive of a globe as vast as our sun and revolving in an orbit uncrossed by any other, obeying laws devised by the Wisdom which made all things in weight and measure and number, and which knows how to devise for this 'house unmade by (finite) hands, eternal in the heavens,' conditions of physical perfection, beauty, and magnificence unseen by created eye hitherto and unconceived of by the mind of man. Thus, while we are taught that Heaven is placed beyond our globe, our imagination is allowed free scope in fixing its locality in space.—2. But Heaven is a state as well as a place, and we have to gather from the Church and her authorized teachers what, precisely, it is that constitutes that state or condition of Beatitude, or perfect bliss enjoyed by both Angels and Saints. All through the middle ages, as well as in more recent times, the most eminent theologians have been divided on the question,—whether the joy and happiness of the soul that sees God face to face, have their seat in the intellect, the truth-knowing faculty, or in the will, the loving power. St. Thomas Aquinas and his school affirm that the beatitude of the Blessed in Heaven derives its proper form from the act of the intellect by which they see the Divine Essence in itself. The will, they say, is in itself a blind appetite, tending impulsively toward its proper object and resting in its possession, whereas the intellect alone can perceive an immaterial object and make it by knowledge present to the soul. Thus it is the intellect which in the Beatific Vision apprehends the Infinitely Free and Good, judges it to be so, measures and estimates its perfection, reaches out, grasps, and possesses It, as the eye opens to the light, admits, and retains it with the forms of things it reveals. The delight, the joy, the blissful sense of possession experienced by the will, only arise from the judgment uttered to it by the intellect, that the object attained and grasped is the Supreme Good. This was perfectly in accordance with the teaching of Aristotle, who, in all questions within the competence of mere reason, was supreme with the Schoolmen. Man is by nature an intellectual being: this is his noblest characteristic. Now, according to Aristotle, 'that which is proper to each by nature, is best and sweetest for each; sweetest then for man is the intellectual life, since this chiefly constitutes man. Such a life therefore is most happy.'

Opposed to this is the opinion of the great Irish Doctor, the Franciscan Scotus, who makes the will the seat of beatitude, and its source the act by which it loves God (*amore amicitiæ*) with a love which friend entertains for friend. The dissension seems to arise from a mere misunderstanding, and from an imperfect analysis of the acts of our faculties. Man's reason or rational nature is made up of both intellect and will; for both are correllative and complete each other. In the soul the two faculties are distinguished from each other, but not distinct from the soul itself. It is the one spiritual essence within whose reach the intellect by perfect apprehension brings the Infinite Truth, and whose will or effective power with all its energy possesses itself of that Divine Object, its Supreme Good.—This undivided knowledge and love of the Infinitely Perfect constitutes the essential beatitude of Angels and Saints. The bliss derived from the society of that Blessed City above, from the charity which reigns supreme there, from the more perfect knowledge of all created things clearly seen in the light of the Divine Essence, as the effect is perceived and known in the Cause, is termed by theologians the accidental beatitude of Heaven. Add to this, after the Resurrection the reunion of soul and body for each member of the human family, and the increase of bliss to the soul of enjoying everlasting companionship with its glorified body, made to partake of the qualities of Christ's flesh arisen from the tomb. And then it is lawful to conjecture that the marvelous physical world amid which the Heavenly Paradise is placed, will complete for the purified and exalted bodily senses, the deep and overflowing and exhaustless cup of joy.

HEDGEHOG PLANT is applied to species of *Medicago* (more particularly *M. intertexta*) on account of the prickly legume being spirally twisted into a sort of ball. In like manner *Caucalis daucoides*, belonging to the *Umbelliferæ*, is called *Hedgehog Parsley* from its spiny fruit.

HEF'ELE, KARL JOSEPH VON, an ecclesiastical historian, was born 15th March, 1809, at Unterkochen, in the E. of Würtemberg, became in 1840 professor in the Catholic theological faculty of the university at Tübingen, and in 1870 Bishop of Rottenburg. He was known before and at the Vatican Council as a zealous opponent of the dogma of infallibility, but has since tacitly accepted it. H. published an edition of the *Patres Apostolici* (1839, 4th. ed. 1855); *Der Cardinal Ximenes* (1844, Eng. trans. 1860); but is best known by his great work the *Konciliengeschichte* (vols. i.—viii., 1855 to 1874), of which an English translation has appeared.

HEINRICH VON VELDEKE, one of the chief of the Minnesänger, and founder of the medieval German court poetry, flourished during the 12th c., resided at the court of Hermann, Landgraf of Thuringia, and took part in the wars of Wartburg. His works include *Eneid*, a love story, partly based on Virgil's *Æneid*, but drawing its inspiration mainly from French sources; *Herzog Ernst von Baiern*, and various love songs. A legend of St. Gervais is also ascribed to him. Gervinus says he was the first who gave German verse cadence and melody, and subjected it to fixed laws. See Ettmüller's *H. von V.* (Leips. 1854).

HEINTZELMAN, SAMUEL P., an American general, born in Pennsylvania, in 1805, and educated at West Point. He served in the Mexican war, and also in the civil war, participating in the engagements of Bull Run (first and second), Williamsburg, Fair Oaks, and Chantilly, and winning promotion to the rank of major-general. He retired from the service in 1869, and died in 1880.

HEL'DENBUCH (Ger. *Book of Heroes*), a famous collection of old German heroic poems dealing with events which happened in the time of the barbaric invasions of the Empire. It includes the tales of Dietrich of Bern, of the famous rose-garden of Worms, of the dwarf Elberich, and the emperor Otnit, &c. These were written at various times, but mostly in the 13th c., and among their authors were Heinrich von Ofterdingen and Wolfram von Eschenbach. The first printed edition of the H. appeared in 1491 (new ed. by A. Von Keller, 1867). A modernized edition was issued by Von der Hagen (Berl. 1811), and again by Simrock (6 vols. 2d ed. 1851); the original was published by Von der Hagen and Prunissier (Berl. 2 vols. 1820–24).

HELENA, a rapidly growing town of Phillips Co., Ark., on the Mississippi River, 80 miles below Memphis. It has five cotton seed oil factories and growing manufacturing interests. It is connected by railroad with St. Louis, Little Rock, and Memphis; is a landing place for river steamers, and is an important trade center. Pop. 3652.

HELENA, the capital of Montana Territory, on the Northern Pacific Railroad, 16 miles from the Missouri River. It is an important trade center. It is surrounded by an agricultural district, in which there are mines of gold, silver, and iron. Pop. 8000.

HE'LIOSTAT, an instrument for keeping a celestial object constantly in the field of view of the telescope. It effects this by throwing a reflected image of the object into the tube of the telescope from a plane mirror, which is kept in the necessary position by clockwork.

HELL, the place where fallen angels and lost men are eternally punished. Eternal Hell is the counterpart of a supernatural and everlasting Heaven. The article in Vol. III., page 754, is entirely unsatisfactory, especially at the present time in America, when the existence of a future state after death, and, in particular, both the existence of Hell and the eternity of its pains are openly and seriously called in question. As to the sinful act by which the eternal loss and separation which are the essence of the dreadful and mysterious penalty of Hell, it is said, that it is in opposition to the nature and attributes of a just and good God to inflict everlasting punishment for the act of a moment or the enjoyment of a guilty but short-lived satisfaction. The very nature of sin implies separation from God and loss of God; and this loss and separation is of itself final and irreparable. To sin is to offend knowingly and freely Him who is the author of the transgressor's being, his benefactor and master. Catholic doctrine asserts that the sin which deserves Hell is of necessity a mortal offence, entailing the extinction of friendship between the Creator and the offending creature. He who transgresses the divine law wills by his act that there were no law-giver to resent the infraction, no judge to punish it. The will, by its sinful choice, turns away from God and from His society, His promises, and forfeits all right to its supernatural destiny with its eternal rewards. Sin, therefore, opens between the Creator and the sinner a gulf of itself impassable. The condition of the soul is one of separation from the source of all holiness and bliss. It is loss of God in life, and, death supervening at any moment, only makes the loss irremediable. And this is simply eternal damnation (Lat. *damnum*,

loss). The act which entails such awful consequences is a free act, committed, in our supposition, with a full knowledge of the heinousness of the transgression. Of himself neither guilty man nor guilty angel can, if he would—and we suppose that he would not—restore the relation in which he stood toward his Maker before he fell by sin. And God is surely not bound to change the perverse disposition of the sinful will, or to lift up the sinner to the height from which he has fallen. Such are some of the grounds which reason illuminated by faith finds to justify the ways of God on this dread subject. To the soul who believes in Christ and in His saving mission, the spectacle of the Saviour hanging crucified between two criminals throws a vivid light on Hell. Dreadful must be the misfortune, eternal and incomparable must be the loss, from which He the eternal Son endeavors to save us by such a death of shame and agony. So much for a preliminary to the discussion of the doctrine itself relating to Hell and everlasting punishment.

1. Examining the Old Testament for the grounds of this belief in Hell, we find but few passages which can fit in with the formal and explicit declarations of our Lord, and with the positive and well defined teaching of the Eastern and Western Churches from the earliest times. Theologians quote, in support of the existence of Hell, three principal passages from the Hebrew Scriptures: Isaias xxx, 14; lxvi, 24; and Daniel xii, 2. The first is as follows: 'Sinners shudder in Sion: trembling seizes unholy men. O who will dwell in devouring fire? O who will dwell in eternal burnings?' The second is: 'All flesh shall come (to Jerusalem) to adore before my face, saith the Lord. And they shall go out and see the carcasses of the men that have transgressed against me: their worm shall not die, and their fire shall not be quenched: and they shall be a loathsome sight to all flesh.' The passage from Daniel is this: 'But at that time shall Michael rise up, the great prince who standeth for the children of thy people: and a time shall come such as never was from the time that nations began even until that time. And at that time shall thy people be saved, every one that shall be found written in the book. And many of those that sleep in the dust of the earth shall awake: some unto life everlasting, and others unto reproach, to see *it* always.' In the deuterocanonical or Greek Old Testament writings, we have two passages which are in striking conformity with the above. Ecclesiasticus vii, 17–19: 'Number not thyself among the multitude of the disorderly. Remember wrath, for it will not tarry long. Humble thy spirit very much: for the vengeance on the flesh of the ungodly is fire and worms.' Judith xvi, 20: 'Wo be to the nation that riseth up against my people: for the Lord Almighty will take revenge on them, in the day of judgment he will visit them. For he will give fire and worms into their flesh, that they may burn and may feel forever.'

In the New Testament the utterances of Our Lord are so clear and explicit as to leave no room for misconception or doubt with regard to the tremendous meaning of His words. He takes the name (Gehenna) of the place of everlasting punishment from the Valley of Hinnom, near Jerusalem, which was to the Jews a special object of horror. There under Achaz and other kings the Jews were wont to make their children pass through fire in honor of Moloch, or, it may be, sacrificed them as a burnt-offering to that idol. The holy King Josias polluted this glen; it became a place of execution for criminals, their bodies being cast into it to rot amid all kinds of filth and abominations. It was to the popular mind a vivid image of Hell, and such is the meaning of the word Gehenna so often used by Christ,

2. Coming to the nature of the pains inflicted on the damned, we find that they are twofold, according to the universal teaching of the Church, the pain of loss (*pœna damni*), and the pain of sense. The former arises from the consciousness of having lost forever the Beatific Vision, the society of the Blessed in Heaven, and the bliss consequent upon the possession of God. The pain of sense is caused, principally at least, by the fire of Hell. In the Council of Florence, the Decree of Union between the Eastern and Western Churches abstained from defining this pain of sense as caused by material fire, because Greek theologians hold that the fire is metaphorical, namely, the consuming remorse and burning anguish of souls suffering such loss, degradation, and hopeless banishment. That the fire of Hell is material is considered by the Roman Catholic Church a truth so certain, that it would be verging on heresy to maintain the contrary. With regard to the question how the souls of lost men before the Resurrection, and the purely spiritual substance of the fallen angels, can be made to suffer from a material fire, we can only say that God who created both matter and spirit can alone solve the difficulty. Our reason and personal experience, however, can help us somewhat toward a conception of the possibility of the thing. Our own soul is a simple, immaterial, and spiritual substance, and yet, created for an organic material body, it has spiritual, interior faculties corresponding with the bodily senses. It sees with the eyes, hears with the ears, feels with the sense of touch spread all over the body. It is the immaterial principal within us that feels pleasure or pain through the bodily organs. He who made the spirit for the body and, the body for the spirit, can make the avenging flames of the other life serve his will and do the work of His justice on the disembodied soul of man and on the degraded angelic substance.

3. The most awful portion of this revealed doctrine regards the endlessness or eternity of these pains. We said at the beginning of this article that there was, in Catholic teaching, a striking and most perfect correspondence in the twofold notion of an Everlasting and Supernatural Heaven, and an Everlasting Hell. Christ in His most solemn utterances on this subject,—utterances delivered on the slope of Mount Olivet overlooking the Temple and the scene of His approaching suffering and death, distinctly contrasted, in the final sentence which He is to pronounce as Judge of the living and the dead, the 'eternal life' reserved for the good, with the 'eternal fire prepared for the Devil and his angels,' into which the wicked are bidden to depart from Him, their would-be Saviour. The words which both in Hebrew and in Greek expressed in His age the notion of eternity, might be open to critical discussion, or leave possible room to doubt the everlasting and irrevocable nature of the doom. But the context makes doubt impossible. The Hell to which the accursed are sent is a 'hell, where their worm dieth not and their fire is not quenched' (St. Mark ix, 48).—Origen held the opinion, that the fire of Hell is purgative even for devils, who, after a period of punishment, will be restored to God's favor. This universal restoration approved itself to the mind of St. Gregory of Nyssa and St. Gregory Nazianzen. St. Jerome thought this hope of restoration might be held out to sinners who had died in the Catholic faith; a similar opinion to St. Jerome's was expressed by St. Ambrose. St. Augustine taught something widely different from these views,—which are plainly erroneous,—and that is, that the prayers and good works of men in this life may help to mitigate the sufferings of the damned. The Church has not condemned this opinion of St. Augustine.

4. As there exists a definite though unknown place for Heaven, so must there for Hell. Many theories have been propounded on this point, but the Church has not pronounced upon any of them. Some will have it that the eternal fires are in the center of our globe. St. Thomas Aquinas, quoting St. Augustine and St. Gregory the Great, confesses that no one can know where Hell is, unless he has had a special revelation on the point.

HELLADOTHE'RIUM, a remarkable extinct genus of *Ungulate* or 'hoofed' quadrupeds, allied to the existing giraffe. The H. fossils occur in the Upper Miocene (Tertiary) rocks of Attica. No horns were developed in these singular beings, and as regards their dentition they appear to have resembled the antelopes. Fossil giraffes occur in the tertiary deposits in the Siwalik Hills of India.

HELSINGBORG, a bathing-place and port of Sweden, in the län of Malmöhus, on the Sound, opposite Elsinore. It has frequent steam communication with Copenhagen, and carries on a trade in iron wares and pottery. Pop. (1874) 8103.

HENDERSON, in Henderson Co., Ky., on the Ohio River and the Louisville & Nashville Railroad. It is engaged in manufacturing tobacco, whisky, and flour; and carries on a considerable commerce. Pop. 6000.

HEN'DERSON, Thomas, a Scottish astronomer, was born at Dundee, December 28, 1798. In 1831 he was appointed director of the royal observatory at the Cape of Good Hope. Here he made those observations which resulted in the calculation of the parallax of a *Centauri*—the nearest fixed star to our system, and the first whose distance was calculated. In 1833 his health compelled him to return to England, and the succeeding year he was appointed Astronomer-Royal for Scotland, and Professor of Astronomy in the University of Edinburgh. H. died November 23, 1842.

HENDRICKS, Thomas Andrews, an American statesman, born in Ohio, Sept. 7, 1819; removed, when a child, with his father, to Shelby Co., Ind.; graduated from South Hanover College in 1841; and was admitted to the bar in 1843. He engaged actively in politics, and soon became one of the leaders of the Democratic Party in Indiana. He was a member of Congress, 1851–55; U. S. Senator, 1863–69; and in 1872 was elected governor of Indiana. In 1876 he was the Democratic candidate for Vice-President, with Samuel J. Tilden for President, but was defeated. In 1884 he was again nominated for the same position, with Grover Cleveland for President, and was elected. Mr. Hendricks has for years been recognized as one of the ablest and most influential men of his party.

HEN'LEY-ON-THAMES, a picturesque town of England, in Oxfordshire, on the left bank of the Thames, under shelter of the Chiltern hills, 23 miles S.E. of Oxford, and 35 W. of London by railway. It is a favorite summer resort, and has an inn of high repute. Its trade is in flour, malt, beech-wood, grain, &c. The

river, which here abounds with pike, perch, and eels, is crossed at H. by a bridge of five arches. Pop. (1881) 4604. H. was incorporated in the reign of Elizabeth as *Hemleygang* or *Hanneburg*.

HENRY, JOSEPH, LL.D., an American scientist, born at Albany, N. Y., Dec. 17, 1797, and educated at the Albany Academy. In 1826, he became professor of mathematics at that institution. Shortly afterwards he began a series of investigations, which led to valuable discoveries in electro-magnetism and electricity. In 1832 he was made professor of natural philosophy in the College of New Jersey, and in 1846 was elected secretary of the Smithsonian Institution at Washington. He was made the recipient of numerous honors at the hands of scientific associations and societies, and in 1871 was made chairman of the light-house board of the United States. He published besides numerous papers upon scientific subjects, *Contributions to Electricity and Magnetism* (1839). Prof. Henry's electrical discoveries proved of highest value in that department of science, and constituted a foundation for the many after discoveries and the subsequent rapid advancement in that field. Died in Washington, D. C., March 13, 1878.

HENRY OF HUNTINGDON, an English chronicler of the 12th c., who became canon of Lincoln and archdeacon of Huntingdon, and wrote a Latin history of England to the death of Stephen in 1154; a treatise, *De Mundi Contemptu*, which contains many interesting anecdotes of his contemporaries; several Latin verses, partly in the manner of Martial, &c. The date of his death is not known. H.'s history is, in the early part, based chiefly on Bede —whose style he imitates—and on Geoffrey of Monmouth, but in the later books has an independent value. An edition of it was published by Sir H. Saville among the *Scriptores Post Bedam* (Lond. 1596), and there is an English version in Bohn's *Antiquarian Library*.

HEN'RYSON, ROBERT, one of the best of the old Scottish poets, flourished during the 15th c., but of his birth and early years nothing is known. In 1462 he was made a member of Glasgow University, and is there referred to as the 'venerable.' He spent the most of his life at Dunfermline, where he was schoolmaster, and the date of his death is uncertain, but it must have been shortly before the close of the 15th c., about which time the plague ravaged Scotland. Dunbar, in his *Lament for the Death of the Makaris*, published in 1508, says of Death that—

> 'In Dunfermline he has done roun
> Gud Maister Robert Henrysoun.'

H., as a poet, shows deep, simple feeling, rich humor, varied descriptive power, and a full command of melodious verse. His chief work is *The Testament of Cresseid*, which continues Chaucer's *Troilus and Creseide*, and tells with exquisite pathos and quaint felicity of language how Cressida was punished by leprosy for her faithlessness. His other writings comprise *Orpheus and Eurydice*, mainly interesting as a reflection of the classical learning of the time; *The Bludy Serk*, an allegorical ballad; *The Moral Fables of Æsop in Scottish Metre*, abounding in naïve vivacity and quiet humor; and *Robene and Makyne*, a delightfully natural, animated, and musical Scottish pastoral, in the form of a dialogue between a youth and a girl. See *The Poems of R. H.* edited with a memoir by Laing (Edinb. 1865).

HENTZ, CAROLINE LEE, a popular American authoress, born at Lancaster, Mass., 1800. She was the daughter of Gen. Whiting, and 1825 married a French gentleman by the name of Hentz. She was unusually precocious, having written a novel, a poem, and a play before she was 13 years of age. Among her numerous publications, the following may be mentioned: *Linda* (1850), *Rena* (1851), *Helen and Arthur* (1853), *The Planter's Northern Bride* (1854), and *Ernest Linwood* (1855). Mrs. Hentz's works met with great favor and had an unusually large circulation. After living at various places in the U. S., she died at Marianna, Florida, Feb. 11, 1856.

HEPWORTH, GEORGE HUGHES, D.D., an American clergyman, born at Boston, Mass., in 1833, and, after studying theology, entered the ministry of the Unitarian Church. After filling pastorates in Boston and New York, he renounced Unitarianism, became a Congregationalist, and established the Church of the Disciples in New York. He is now (1885) pastor of a Congregational church in Newark, N. J.

HERAC'LEUM, a genus of umbelliferous plants found in Europe, America, and India. *H. giganteum*, a native of Siberia, which is cultivated in gardens as an ornamental plant, grows from 12 to 14 feet high. *H. sphondylium*, a common British species, popularly known as cow-parsnip, is used for feeding pigs. In the Caucasus, the young shoots of *H. pubescens*, which are aromatic, are used as food.

HERCULA'NO DE CARVAL'HO, ALESANDRO, a well-known Portuguese novelist and historian, was born in 1796 at Guimaraes, and received his education at Paris. Having there imbibed liberal ideas in politics, H. took part in those revolutionary measures which aimed at securing a constitutional government for Portugal, and which in 1820 effected this result. The earliest writings of H. were poetical, but he published in 1828 a volume of poetry called *A Voz do Propheta* ('The Voice of the Prophet'), in which he predicted a most unhappy future for his country, then distracted by civil war. This work produced a great sensation, and was followed in 1832 by *A Harpo do Crente* ('The Harp of the Believer'), a volume of romantic verse. H.'s next literary production was a novel, *Eurich, Priest of the Goths*, which proved less successful than his poetry, and from this time the author gave himself up to historical writing, his chief work, *Historia de Portugal*, appearing between 1845 and 1853. It shows great industry and erudition, is written in a pure and attractive style, and is marked by general fairness and moderation. Another important work of H.'s is *Da Origem e Establecimento da Inquisiçao em Portugal* (1854).

HERKIMER, NICHOLAS, an American general, born about 1720. His father was the owner of a large tract of land in what is now Herkimer Co., N. Y. In 1776 he was made brigadier-general by the State convention, and in that year led an expedition against Sir William Johnson, who was in command of a force of Tories and Indians. He led a force to the relief of Fort Stanwix, which was besieged by St. Leger. On Aug. 5, 1777, he was surprised by the Indians, and defeated in the battle of Oriskany. He was wounded in the leg, and after an unsuccessful amputation, died on Aug. 17th, at Danube, N. Y.

HERMOSILL'O, a town of Mexico, in the state of Sonora, 90 miles N. of Guaymas, a port on the Gulf of California. It is an entrepôt for the produce of the interior, and carries on a large trade in wine and brandy. Pop. 14,000.

HER'ULI, or ER'ULI, a Teutonic people, who seem originally to have dwelt in Scandinavia, and who, along with the Goths, invaded the Roman empire in 262 A.D. Numbers of them afterwards joined Attila's host, and they formed the greater part of the armies with which Odoacer founded a kingdom in Italy in 476 A.D.

HESS, the name of several distinguished painters.—1. KARL ADOLF HEINRICH H., known chiefly for his success in painting horses, left many proofs of his skill in military subjects. He was born at Dresden in 1769, and died near Vienna, 3d July 1849. —2. PETER VON H., a painter of battle scenes, born at Düsseldorf, 29th July 1792, was the son of a famous engraver. He died 5th April 1871.—3. His brother, HEINRICH VON H., devoted himself chiefly to historical subjects in his art. He was born 19th April 1798, became Professor in the Academy at Munich in 1827, and died 29th March 1863.

HETEROGEN'ESIS, a name used synonymously with *Abiogenesis* or *Archebiosis*, and therefore indicating a belief in the origin of living organisms from non-living or inorganic matter, without the pre-existence of parent germs or organisms.

HETEROP'ODA, a division of *Gasteropoda* represented by the genera *Carinaria, Firola, Atalanta*, &c., in which the shell is rudimentary or absent, the 'foot' being converted into a flattened ventral fin-like organ, while the animals are free-swimming and oceanic in habits. The H. are also known by the name *Nucleobranchiata*, the two included families being the family *Atalantidæ* and *Firolidæ*.

HEY'SE, JOHANN CHRISTIAN AUGUST, a German grammarian, born 21st April 1764 at Nordhausen, Prussian Saxony, studied at Göttingen, and after holding various scholastic offices, finally became director of the gymnasium and girls' school in Magdeburg, where he died, 27th June 1829. He was author of *Theoretisch-praktische Deutsche Grammatik* (5th ed. 1838–49), *Deutsche Schulgrammatik* (21st ed. 1868), &c.—KARL WILHELM LUDWIG H., a philologist, son of the preceding, born 15th October 1797 at Oldenburg; from 1819–27 was tutor in the family of Mendelsshon-Bartholdy; in 1829 was appointed Professor of Philosophy in Berlin University; and died there, 25th November 1855. He wrote *Handwörterbuch der Deutschen Sprache* (3 vols. Magd. 1838–49), *System der Sprachwissenschaft* (Berl. 1856), &c.—His son, PAUL JOHANN LUDWIG H., a favorite poet and novelist, was born 15th March, 1830, at Berlin, and educated there and at Bonn. After a lengthened tour in Switzerland and Italy, H. settled (1854) at Munich, where he married, and afterwards resided. Among his numerous works may be mentioned *Ulrica* (1852) and *Thekla* (1858), epics; *Ludwig der Bayer, Colberg*, and *Die Sabinerinnen* (1859), tragedies; and *La Rabbiata* (1858) and *Mexaner Novellen* (1864), romances. A beautiful novelette of Ligurian coast-life by H. appeared in the *Rundschau* (Berlin) of January 1877.

HEY'WOOD, an industrial town of England in Lancashire, on the Roach, 8½ miles N. of Manchester by railway. It has extensive manufactures of cotton goods, iron, boilers, machinery, &c., and in the vicinity are large coal-mines. The town has grown rapidly. Pop. (1871) 12,824.

HEY'WOOD, JOHN, surnamed the 'Epigrammatist,' was born (it is supposed) at N. Mims in Hertfordshire, and was educated at Oxford. He obtained the friendship of Sir Thomas More and of Queen Mary, but left England on the accession of Elizabeth, and died at Mechlin in 1565. H. is remembered in English literature as a writer of interludes or dramatic pieces of a satirical nature, intermediate both in point of time and character between the *Moralities* and the Elizabethan Plays. The best known are *A Merry Play between the Pardoner and the Frere, the Curate, and Neybour Pratt* (1532), and *The Foure P.'s, a very Mery Enterlude of a Palmer, a Pardoner, a Potecary, and a Pedlar*, the date of which is unknown. Besides interludes, H. wrote some 600 epigrams, none of which exhibit a very deadly wit. H. was an ardent Catholic, and his two son ELLIS and JASPER both joined the Society of Jesus. Before entering on an ecclesiastical career they had given evidence of literary talent. Jasper became Provincial of the Jesuits of England, and died at Naples in 1598. He contributed to the *Paradise of Dainty Devices*.—THOMAS H., an Elizabethan dramatist, was a native of Lincolnshire, and was educated at Cambridge; becoming a Fellow of Peterhouse. We find him writing for the stage in 1596, and for upwards of forty years he was a most industrious and prolific author. He died about 1641. Twenty-three of his pieces are still extant. Among others may be mentioned *A Woman Killed with Kindness, The English Traveler, A Challenge for Beauty, Lancashire Witches, Rape of Lucrece, Love's Mistress, Joan as Good as my Lady*, &c. H. has a fine poetic fancy, enriched with classic memories that are sometimes too much for him; his humor is genuine, and his songs have a true lyric flow and dainty sweetness of sentiment.

HICK'OK, LAURENS PERSEUS, D.D., LL.D., an American philosophical writer, born at Bethel, Conn., Dec. 29, 1798; graduated from Union College in 1820; and entered the Congregational ministry in 1824. After having filled pastorates at Kent, Conn., and Litchfield, Conn., he became, in 1836, professor of theology in Western Reserve College, and in 1844 was chosen to the same position in Auburn Theological Seminary. In 1852 he was made vice-president and professor of mental and moral philosophy in Union College, and in 1866 became president of that institution. In 1868 he retired from this position, that he might devote his time entirely to philosophical studies. Besides numerous contributions to the religious magazines, he published *Rational Psychology* (1848), *System of Moral Science* (1853), *Empirical Psychology* (1854), *Creator and Creation* (1872). *Humanity Immortal* (1872), and *Logic of Reason* (1875). Dr. Hickok ranks among the profoundest thinkers of America. Died June 10, 1876.

HIGGINSON, THOMAS WENTWORTH, an American author, born at Cambridge, Mass., Dec. 22, 1823; graduated from Harvard College in 1841, and entered the Unitarian ministry in 1847, but renounced that profession in 1858. Prior to the civil war he was an earnest opponent of slavery, and in 1862 entered the Union service. In November of that year he was made colonel of a South Carolina colored regiment; was wounded in August 1863, and in 1864 was mustered out of the service. Since the termination of the war, he has devoted himself to literary work, and the advocacy of social reforms. Besides pamphlets and magazine articles, he has published the following: *Out-Door Papers; Army Life in a Black Regiment; Atlantic Essays; Malbone, an Oldport Romance; Oldport Days; Young Folks' History of the United States;* and others.

HILDBURGHAUS'EN, a town of Germany, in the duchy of Sachsen-Meiningen, on the river Werra, and the Eisenach-Koburg Railway. It was the residence of the Dukes of Sachsen-H. till 1826; and has some interesting buildings, and also manufactures of cloth, tobacco, machinery, &c. Pop. (1875) 5162.

HIL'DEN, a thriving town of Prussia, in the Rheinland, and on the Itterbach, 9 miles E.S.E. of Düsseldorf by rail. It has extensive manufactures of cotton and linen goods, cassimeres, &c. Pop. (1875) 6799.

HILL, AMBROSE POWELL, an American general, born in Culpeper Co., Va., in 1825, and graduated from West Point in 1847. He participated in the closing scenes of the Mexican war, and was engaged at Huamantla and Atlixco. He served in Florida against the Seminoles, and in 1861 resigned his commission, to enter the Confederate service. As colonel of a Virginia regiment he was engaged at the first battle of Bull Run. Promoted to the rank of brigadier-general he served with great gallantry at Williamsburg, and was made major-general. He soon gained distinction as a division commander. Under Jackson, he took part in the battles of Cedar Mountain, Bull Run, and Chantilly. He was present at Antietam, Fredericksburg, and Chancellorsville. For his gallantry at the last, he was made lieutenant-general, and placed in command of one of the three divisions of the Army of Northern Virginia. He evinced great skill and bravery during the Wilderness campaign, and was present at the final assault before Petersburg, where he was shot and killed, April 2, 1865.

HILL, BENJAMIN HARVEY, an American statesman, born in Georgia, Sept. 14, 1823; graduated from the State University, in 1844; and began to practice law in La Grange, Ga., in 1845. He soon gained a brilliant reputation as a lawyer and public speaker. In 1861 he was a member of the Georgia secession convention, and at first rigorously opposed that step, but eventually voted for the measure. He was elected a member of the Confederate Congress which met at Montgomery, Ala., in that year; and in the fall of the year was chosen to the Confederate Senate. This position he continued to fill until the termination of the war. After the war he was arrested and confined for several months in Fort La Fayette, New York. Subsequently in his life he was prominently connected with the Democratic Party, and was elected to the U. S. Senate. Died from cancer, at Atlanta, Ga., Aug. 16, 1882.

HILLSDALE COLLEGE, at Spring Arbor, Mich., chartered in 1845, and controlled by the Freewill Baptists. It maintains preparatory, classical, and theological departments, and is well endowed. Co-education of the sexes is practiced.

HIL'VERSUM, a village of N. Holland, 15 miles S.E. of Amsterdam, has manufactures of cottons, carpets, spinning and dyeing wool, &c. Pop. 6300.

HIND'LEY, a rapidly increasing town of Lancashire, England, 3 miles S.E. of Wigan by railway, carries on cotton-spinning and cotton manufactures, and is surrounded by numerous coal-works. Pop. (1871) 10,627.

HINGHAM, in Plymouth Co., Mass., on the S.E. side of Boston Harbor, and on the Old Colony Railroad, 17 miles from Boston. It is engaged in manufacturing and is a favorite summer resort. Pop. 4485.

HINGUNGHAT', a town in the Central Provinces, British India, not far from the Wardha coal branch of the Indian Peninsula Railway. Pop. (1872) 9415. It is the emporium of the local trade, especially for raw cotton, of which it exports £120,000 worth in the year. The H. cotton has earned a name in the Bombay market as one of the best indigenous staples, and the seed has been distributed in other parts of India. A model cotton farm was established here in 1868.

HIPPURIS, a genus of aquatic plants, belonging to the natural order *Haloragaceæ*. H. *vulgaris* is the common mare's tail which is abundant in Britain, and also occurs in N. America. It is one of the plants that grow in the hot water proceeding from the geysers in Iceland.

HITCHCOCK, ROSWELL DWIGHT, D.D., LL.D., a distinguished American clergyman, born at East Machaias, Me., Aug. 15, 1817; graduated from Amherst College, in 1836; studied theology at Andover Seminary; taught in Phillips Academy and Amherst College; and was ordained to the ministry, in 1845. In 1852 he was made professor of natural and revealed religion in Bowdoin College, and in 1855 Washburn professor of church history in Union Theological Seminary, New York. Recently he has been chosen president of that institution. Dr. Hitchcock takes high rank as a scholar, instructor, and pulpit orator. He has written extensively for the religious quarterlies, and has published *A Complete Analysis of the Bible.*

HITCH'IN, a town of Hertfordshire, England, 14 miles N.W. of Hertford, on the river Hiz, and a station on the Great Northern Railway. It has large breweries, and carries on a trade in corn, malt, and flour. Straw-plaiting gives employment to a considerable number of females. Pop. (1881) 8434.

HIVAO'A, the island of the Marquesas, in the S. Pacific, about lat. 10° S. and long. 139° W. It is traversed by a mountain range that attains a height of 4200 feet. The inhabitants, 6500 in number, are amongst the wildest Polynesians, and have remained unaffected by various Catholic and Protestant missions.

HOBART, JOHN HENRY, S.T.D., a Bishop of the Episcopal Church in America, born at Philadelphia, Pa., in 1775. He was educated at Princeton College, entered the ministry, and was rector of churches in New Jersey and on Long Island. In 1816 he was made rector of Trinity parish, New York, and Bishop of the diocese. Died in 1830.

HOBBEMA, MINDERHONT, a well-known Dutch landscape painter of the 17th c. Except that he was a contemporary of Berghem, Lingelbach, and J. van Loo, who executed the figures in H.'s landscapes, we know nothing of his life, though, from a similarity of styles, it has been conjectured that he was a pupil of Ruysdael. His pictures, mostly forests with ruins, are scattered over the galleries of Vienna, Berlin, &c.

HO'DOGRAPH of a moving particle is the curve passing through the extremity of those lines which, drawn from a fixed point as origin, represent in direction and magnitude the velocities of the particle at the different points of its path. The H. of a projectile moving in a parabola is evidently a vertical straight line, since the horizontal component of the velocity at every point is constant. Again, the H. of a point moving uniformly in a circle is another

circle whose center is the origin from which the velocities were laid down. The H. of a planet is a circle which is, however, placed excentrically with respect to the origin. The method of construction of this curve shows that, just as the tangent at any point of an orbit gives the direction in which the particle is moving, so the tangent to the H. gives the direction of acceleration. This curve was invented by Sir W. R. Hamilton; and its application to planetary motion has resulted in most simple and elegant geometrical constructions. See Hamilton's *Quaternions*, Thomson and Tait's *Natural Philosophy*, Tait and Steel's *Dynamics of a Particle*, and Clerk Maxwell's *Matter and Motion*.

HOD'SON, MAJOR WILLIAM, one of the leading characters of the Indian Mutiny. In the early years of his service in India, he had been selected for civil employment under the Lawrences in the Punjaub. The outbreak of the Mutiny in May 1857 revealed his peculiar qualities. He was immediately appointed to the staff, and was intrusted with the raising of a new regiment of irregular cavalry—'Hodson's Horse.' Through the siege of Delhi he performed admirable service as chief of the intelligence department, which brought him into close communication with the rebel royal family. On the capture of the city, he received orders to bring in *alive* the last of the Mogul Emperors, who had taken refuge in the tomb of Humayun, outside the walls. This he safely effected, and then went to fetch the Shahzadas, or royal princes. They also surrendered to him; but on the way to the city he ordered his prisoners to strip themselves of their jewels, &c., and then he shot them dead with his own hand. The general wrote, 'H., as a partisan officer, has not his equal.' A few months afterwards H. was himself killed in the final storming of the Kaisar Bagh, the royal palace at Lucknow. See *Life of Major William H.* by his brother, and Sir J. W. Kaye's *History of the Sepoy War*.

HOFFMAN, CHARLES FENNO, an American author, born in New York City, in 1806, and educated at Columbia College. He was admitted to practice law, but gave himself almost entirely to literary pursuits. He was connected at various times with the New York *American*, the New York *Mirror*, and the *Knickerbocker Magazine*. Among his published works are the following: *A Winter in the West* (1835), *Wild Scenes in the Forest and Prairie* (1837), *Greyslaer* (1840), *The Vigil of Faith and Other Poems* (1842), *The Echo* (1844), and *Love's Calendar* (1848). Died in 1884.

HÖH'SCHEID, an important industrial town of Rhenish Prussia, 17 miles S.E. of Düsseldorf. Its chief industries are in lead and iron. Pop. (1875) 9958.

HOLLAND, JOSIAH GILBERT, a popular American author, born at Belchertown, Mass., July 24, 1819; studied medicine at the Berkshire Medical College, Pittsfield, Mass.; and followed that profession for several years. He then engaged in literary work, edited the *Springfield Republican*, and in 1870 became editor of *Scribner's Monthly*. The following are among his best known published works: *History of Western Massachusetts* (1855), *The Bay Path* (1857), *Letters to the Young* (1858), *Bitter Sweet*, a poem (1858), *Gold Foil* (1859), *Miss Gilbert's Career* (1860), *Lessons in Life* (1861), *Letters to the Joneses* (1863), *Plain Talk on Familiar Subjects* (1865), *Life of Lincoln* (1866), *Kathrina*, a poem (1867), *The Marble Prophecy* (1872), *Arthur Bonnicastle* (1873), *Garnered Sheaves*, a collection of poems (1873), and *The Mistress of the Manse* (1874). Some of these were published over the name of 'Timothy Titcomb,' and nearly all have met with popular favor and have had large circulations. Died at New York City, Oct. 12, 1881.

HOLMES, MARY J., an American novelist, born at Brookfield, Mass. She has written numerous works of a light character, which have had a large circulation.

HOLTE'NIA, a peculiar genus of sponges, inhabiting the deep seas, and known as an 'anchoring sponge,' from the fact that the body has no stem or root, but fixes itself in the mud of the seabed by a long beard or bunch of delicate thread-like spicules. The *H. Carpenteri*, named after Dr. Carpenter, one of its discoverers, is the familiar species. H. is one of the *Siliceous* or flinty sponges.

HOMELLSVILLE, in Stuben Co., N. Y., on the Canister River, and the terminus of three divisions of the N. Y., Lake Erie & Western Railroad, whose shops are located here. It is a manufacturing town and center of trade. Pop. 8195.

HONEY BEAR (*Cercoleptes candivolvulus*), a species of Carnivorous mammalia inhabiting S. America, and also known by the names Kinkajou and Potto. Its average size is that of a large cat, and its color is a light brown, marked with darker bands. The tongue is very long and protrusible, and is used, as indicated by the name of the animal, for searching in the nests of wild bees for the honey there accumulated. The tail is prehensile, and assists the animal in climbing upon trees. The H. B. appears to be nocturnal in its habits, and is readily domesticated.

HOOD, JOHN BELL, an American general, born in Kentucky, in 1831, and educated at West Point. At the outbreak of the civil war, he entered the Confederate service, participated in many important battles, and rose to the rank of lieutenant-general. Died in 1879.

HOOKER, JOSEPH, an American general, born at Hadley, Mass., Nov. 13, 1815, and graduated from West Point in 1837. He served against the Seminoles in Florida, and participating in the war with Mexico, was promoted for gallantry at the engagements of Monterey, National Bridge, and Chapultepec. In 1853 he resigned his commission and engaged in agricultural pursuits. At the outbreak of the civil war, in 1861, he entered the Union service, and was made brigadier-general U. S. volunteers. He was present at all the important actions of the peninsular campaign in 1862, rendering gallant service at Williamsburg, Fair Oaks, Frazier's Farm, and Malvern Hill. In this year he was promoted to the rank of major-general, and commanded a division at the battles of Manassas and Chantilly. He was engaged at South Mountain, Antietam, and Fredericksburg, being severely wounded at Antietam. In January, 1863, he was placed in command of the Army of the Potomac, and, in May following, fought the battle of Chancellorsville. Upon the invasion of Maryland and Pennsylvania by Lee in the same year, he was removed from his command, and Gen. Meade substituted in his place a few days before the great struggle at Gettysburg. He was placed in command of a corps of the Army of the Cumberland, and won highest commendation for his daring bravery and heroism at Lookout Mountain, Missionary Ridge, and Chattanooga. In 1868 he retired from the army with the rank of major-general, and spent the remainder of his life very largely at Garden City, Long Island. He was one of the most dashing and gallant soldiers of the civil war. Died at Garden City, Oct. 31, 1879.

HOOSAC TUNNEL, in the north-western part of Massachusetts, on the railroad route from Boston, Mass., to Troy, N. Y., distant from the former place 137 miles, and from the latter 54. This opening through the Hoosac Mountain, is 4¾ miles in length, and is sufficiently wide to permit a double-track railway. The work of tunneling was begun in 1856, and in 1875 it was opened for the passage of railway trains. The entire cost of this gigantic enterprise was nearly $13,000,000.

HOOSICK FALLS, a town of Rensselaer Co., N. Y., on the Hoosick River and the Troy and Boston Railroad, 27 miles from Troy. It is engaged in manufacturing agricultural implements, shirts, and malleable iron. Pop. 4600.

HOP CLOVER is *Trifolium procumbens*, and so called from the resemblance of its heads of flowers to little catkins of hops.

HOPKINS, JOHNS, an American philanthropist, born in Maryland, May 19, 1795, engaged in the grocery business, and accumulated a large fortune. He was a member of the Society of Friends or Quakers. In 1873 he established Hopkins Free Hospital in Baltimore, at an expenditure of $4,000,000; Johns Hopkins University at Clifton, near Baltimore, to which he gave 400 acres of land and $3,000,000; and a convalescent hospital, and orphanage for colored youth. Altogether his gifts to these and kindred objects, amounted to about $8,000,000. Died at Baltimore, Md., Dec. 24, 1873.

HOPKINS, MARK, D.D., LL.D., a distinguished American scholar, born at Stockbridge, Mass., Feb. 4, 1802, and graduated from Williams College in 1824. He was professor of moral philosophy and rhetoric in Williams College, 1830–36; president of that institution, 1836–72; and resumed his former position as professor of moral philosophy and rhetoric in 1872. He has published *Evidences of Christianity; Law of Love, and Love as a Law; An Outline Study of Men;* and others.

HOPKINSON, FRANCIS, an American patriot and author, born at Philadelphia, Pa., in 1737; graduated from Princeton College, in 1763; and was admitted to the bar, in 1765. He was one of the signers of the Declaration of Independence, and wrote numerous patriotic and sentimental pieces in verse, which were exceedingly popular. Among them were the following: *The Treaty, The Battle of the Kegs, Ode to Science*, and *Essay on Whitewashing*. Died at Philadelphia, Pa., May 9, 1791.

HOPKINTON, in Middlesex Co., Mass., on the Hopkinton Railroad. It is engaged principally in the manufacture of boots and shoes. Pop. 4602.

HOPPER, ISAAC TATEM, an American philanthropist, born at Deptford, N. J., Dec. 3, 1771. He was a member of the Friends or Quakers, a successful merchant, and an ardent abolitionist. Died in New York City, May 7, 1852.

HÖR'DE, a town of Prussia, province of Westphalia, on the river Emscher, 33 miles S. of Munster, with which it is connected by railway. It lies in the center of great coal-mines, and has quite recently set up immense ironworks. Pop. (1875) 12,852.

HOR'MAYR, Joseph Freiherr von, statesman and historiographer, was born at Innsbruck, January 20, 1781. In 1801 he became secretary to the court at Vienna, in 1809 planned the operations for the expulsion of the French from the Tyrol, and subsequently, in spite of the greatest difficulties, maintained the defence of the country. Called in 1815 to be imperial historiographer, he in 1828 passed into the diplomatic service of Bavaria, and died at Munich, 5th November 1848. Among his works are *Geschichte der Gefürsteten Grafschaft Tirol* (1806–08); *Œsterreichischer Plutarch* (1807–20, in 20 vols.); *Alleg. Geschichte der Neuesten Zeit* (1817–19, 2d ed. 1851); *Das Land Tirol und der Tirolerkrieg von* 1809 (1845).

HORNE, Richard Hengist, an English poet whose merit is somewhat greater than his fame, was born in London in 1803. Besides certain dramatic pieces, *Cosmo de Medici*, *The Death of Marlowe*, *Gregory the Seventh*, &c., he has written two notable works, an epic poem, entitled *Orion* (1843), and *A New Spirit of the Age* (1844), a collection of critical essays, partly the work of Elizabeth B. Browning. The former, although sarcastically published at a *farthing* (new ed. 1876 at 9s.), is really a poem of some classic purity and eloquence. In 1846 appeared his *Ballad Romances*. From 1852 to 1869 H. lived in Australia, holding the office of 'Gold Commissioner.' In 1877 he published *Letters of Mrs. E. B. Browning addressed to R. H. Horne* (2 vols.), chiefly concerning 'A New Spirit of the Age.'

HOROP'TER, a term used in physiological optics to denote that combination of all those points in space which, for any one position of the eyes, appears single. The H. is really a circular line, of which the chord is formed by the distance between the eyes, whilst the size of the circle is determined by three points, viz., by the two eyes and the point towards which their axes converge.

HO'THAM, a suburb of Melbourne, but under distinct municipal government. It is situated on the N.W. side of the city. Pop. 16,000.

HOUGHTON-LE-SPRING, a town of England, in Durhamshire, 6 miles N.E. of Durham, and 6½ S.W. of Sunderland by rail. It has a large trade in the fine coal, limestone, and freestone of the district, besides extensive iron foundries, breweries, brick-kilns, &c. H. was long the residence of Bernhard Gilpin, 'the Apostle of the North.' Pop. (1871) 5276.

HOUGHT'ON, Richard Monckton Milnes, First Baron, poet and politician, only son of R. P. Milnes, Esq., of Fryston Hall, Yorkshire, was born June 19, 1809. He graduated at Trinity College, Cambridge, in 1831, and entered Parliament as member for Ponterfract in 1837, which seat he held till 1863, when he was created a peer. Originally a Conservative, he afterwards became a supporter of the Whigs, advocating free trade, popular education, religious equality, and concurrent endowment. He sympathized with oppressed nationalities, and interested himself in penal reform, introducing a bill for the establishment of reformatories in 1846. He has published various works of travel and on politics, and has always been a generous friend of struggling merit. Several of his biographical sketches were reissued as *Monographs, Personal and Social*, in 1873. H.'s *Poems of Many Years*, *Palm Leaves*, &c., were collected in 1876, and published with a preface by himself. They display fine fancy, are rythmical, and written in a pure and simple style. Among the most popular are two dainty ballads, *The Brookside* and *Good Night and Good Morning*. H. edited the first complete collection of Keat's poems in 1877.

HOUSEBUILDER MOTH (*Oiketicus Sandersii*), a peculiar genus of moths occurring in the W. Indies, and so named from the habit of the larvæ in fastening bits of wood and leaves together, so as to form a habitation for itself. It (H. M.) appears to possess the power of closing the aperture at will. The females are wingless, and the body of the male is hairy. The antennæ are of comb-like form at the base, and the wings are covered with hairs.

HOWARD, Oliver Ottis, LL.D., an American general, born at Leeds, Me., Nov. 8, 1830; graduated from Bowdoin College in 1850, and from West Point in 1854. He commanded a brigade at the first battle of Bull Run, July 21, 1861; and, in September of that year, was made brigadier-general U. S. volunteers. At the battle of Fair Oaks, June 1, 1862, he was severely wounded, and lost his right arm. Recovering from his wounds, he returned to the army, and was engaged at Antietam and Fredericksburg; was promoted to the rank of major-general; and commanded an army corps at Chancellorsville and Gettysburg. In 1863 he was ordered with his command to Tennessee, where he participated in the actions of Lookout Valley and Missionary Ridge. In 1864 he commanded a corps of the Army of the Cumberland, was present at Resaca, Kenesaw Mountain, the siege of Atlanta, and was with Sherman on his famous march to the sea. After the war he served as commissioner of the Bureau of Refugees, Freedmen, and Abandoned Lands; and was president of Howard University, 1869–73.

HOWARD UNIVERSITY, at Washington, D. C., chartered by Congress in 1867. It was named after Gen. Howard, who was one of its founders, and its president until 1873. It was intended for the colored race, and maintains normal, preparatory, collegiate, theological, law, and medical departments.

HOWE, Elias, an American inventor, born at Spencer, Mass., July 9, 1819, and became a machinist. In 1845 he invented the sewing-machine, and obtained patents for it in the year following. A large part of his life was spent in poverty and distress, but eventually he made a large fortune by means of his invention. Died in Brooklyn, N. Y., Oct. 3, 1867.

HOW'RAH, the chief town of the district of the same name in Bengal, British India, included within Hooghly, on the right bank of the Hooghly river, which is here nearly one mile wide, exactly opposite to Calcutta; pop. (1872) 97,784. It is really a transpontine suburb of Calcutta, with which it was connected in 1875 by a massive pontoon bridge, at a cost of £220,000. H. is the terminus of the East Indian Railway. It has busy dock-yards, flourishing mills and manufactures, the botanical gardens and Bishop's College; here also reside many of the business people of Calcutta. At the end of last century it was a mere village.

HUAS'CO, a seaport of Chili, province of Atacama, at the mouth of a river of the same name, 90 miles S.W. of Copiapo. It owes its prosperity to the mining of copper, of which it exports $1,725,000 worth annually. Pop. 7000.

HUBB (Habb), the only river of Scinde, India, besides the Indus, which finds its way to the sea. It rises in Kelat, forms for some distance the boundary between Scinde and Beloochistan, and after a total course of 100 miles, falls into the Arabian Sea N.W. of Cape Monze. The water has been greatly utilized for irrigation by a Mohammedan proprietor.

HU'BER, Ludwig Ferdinand, a German author of note, was born at Paris in 1764, became secretary to the Saxon legation at Mainz in 1787, was editor of the *Allgemeine Zeitung* from 1798 to 1803, and died 24th December 1804. His *Sammtliche Werke*, consisting chiefly of plays original and adapted from the French, were published by his wife in 4 vols. 1806–9.—Therese H., wife of the preceding, was the daughter of the illustrious scholar Heyne, and was born at Göttingen, 7th May 1764. She was married first to Johann Georg Forster, and after his death to H. As a novelist she has a distinct place in German literature. She wrote for her own sex chiefly. An edition of her works, in 6 vols., was published by her son (Leips. 1830–33).—Victor Aimé H., an historico-literary and political writer, son of Ludwig F. and Therese H., was born at Stuttgart, 10th March 1800, became Professor of the History of Literature at Rostock in 1833, went to Marburg three years later as Professor of Modern Languages and Literature, and from 1843 to 1850 held the same appointment in the University of Berlin. He died at Wernigerode in the Harz, 19th July 1870. H. had a wide knowledge and a fine appreciation of the Romance literatures. Among his chief works are the *Geschichte des C.* (1829), *Chronica del lid* (1844), *Die Neu-Romantische Pœsie in Frankreich* (1833), *Die Skizzen aus Spanien* (1828–35), *Reise briefe aus Belgien* (1855).

HU'BERT, Saint, Bishop of Liège, son of Bertrand of Guienne, was chief functionary at the court of the Frankish king Theodoric. At the suggestion of his friend and teacher Bishop Lamprecht of Maastricht, and through sorrow for the death of his wife Floribane, he sought a hermit's life, but after the martyrdom of Lamprecht, returned to succeed him as Bishop of Maastricht and Liège in 1708. He died in 727, and the legend tells that long afterwards his body was found still undecayed. In 827 he was canonized, and his corpse buried in a Benedictine monastery named Ardenne, whose name was changed to St. H. Another legend tells how, when H. was hunting one Good Friday in the Ardennes Hills, he came upon a stag with a gleaming crucifix between its horns, which admonished him for his passionate love of the chase, and persuaded him to a life of contemplation. Oddly enough, this story made him the patron saint of hunters. Many orders of knighthood were formed in his honor, courts held great hunting feasts on his name-day (3d November), and the common people believed that St. Peter had intrusted him with the *key* to the cure of possessed persons and those bitten by mad dogs.

HU'BERTSBURG, a former royal hunting-castle in the circle of Leipsic, Saxony, near Mügeln, was built by Augustus III in 1721. It is now an asylum and prison. The peace of H., which ended the Seven Years' War, was signed here, 15th February 1763.

HUB'LI, a flourishing town in the district of Dharwar, province of Bombay, British India, 290 miles S.E. of Bombay. Pop. (1872) 37,961. It stands on the main road from the S. Mahratta country to the Malabar coast, on the line of the proposed State Railway, and is a great emporium for cotton.

HUGHES, Rev. John, D.D., a distinguished prelate of the Roman Catholic Church in America, born in County Tyrone, Ireland, June 24, 1797, came to America in 1817, and was educated at St. Mary's College, Emmittsburg, Md. He was admitted to the priesthood in 1825, and after filling several pastoral charges, became, in 1842, bishop of New York, and in 1850 was made archbishop of New York. He was a learned scholar and an eminent theologian; and was universally beloved by those over whom he ministered. Died Jan. 3, 1864.

HULL, Isaac, an American naval officer, born at Derby, Conn., March 9, 1775; entered the merchant-marine service when very young; and in 1798 became a lieutenant in the U. S. Navy. He was a member of the Barbary expeditions, where he won distinction by his bravery. In July, 1812, he sailed from Annapolis, Md., in command of the *Constitution*, was pursued for several days by a British fleet, and at last gave battle to one of their number, the *Guerriere*, and after a severe struggle compelled her to surrender. The *Guerriere* had been so injured, however, in the battle that it was found necessary to burn her. For this capture Hull was presented with a gold medal by Congress. Died at Philadelphia, Pa., Feb. 13, 1843.

HULL, William, an American general, born at Derby, Conn., Jan. 24, 1753, and was admitted to the bar in 1775. He entered the Continental service, and rendered gallant service in the war of the Revolution. After peace had been restored with England, he resumed the practice of law at Newton, Mass., where he met with great success. From 1805 to 1814 he was Governor of the Territory of Michigan. In the war of 1812, he was appointed brigadier-general, and placed in command of the Army of the Northwest. For surrendering Detroit to the British under Gen. Brock, he was court-martialed, convicted of cowardice, and sentenced to be shot. He was pardoned, however, on account of his age and former services. Died at Newton, Mass., Nov. 29, 1825.

HULL'AH, John P., musical composer and teacher, was born at Worcester in 1812. He studied theory under W. Horsley, and singing under Cruvelli (1829–35). H. exerted himself in spreading the knowledge of music among the middle classes by the system which bears his name. From 1844 to 1874 he was Professor of Vocal Music at King's College, London, and in 1876 the degree of LL.D. was conferred upon him by the University of Edinburgh. Among his works are *History of Modern Music* (1862–75), and *Lectures on the Transition Period of Musical History* (1865–76).

HUMAYUN', the second of the Mogul Emperors of India, son of Baber, and father of Akbar the Great. He reigned from 1530 to 1543, when he was defeated and driven out by his Afghan rival, Sher Khan. In 1555 he recovered his kingdom, but died in the following year. He lies buried under a white marble mausoleum at Delhi, erected by his widow, Hamida Banu, at a cost of $750,000.

HU'MEA, a genus of composite plants, of which *H. elegans*, a native of Australia, is the best-known species, and grown in gardens for its ornamental and graceful drooping habit. The plant when bruised emits a balsamic odor.

HUM'ERUS (Lat.) is the bone of the upper arm, extending from the scapula to the bones of the fore-arm, with which it is articulated.

HUMIRPORE', the chief town of the district of the same name, in the N.W. Provinces, British India, at the confluence of the Betwa and Jumna rivers, 155 miles S.E. from Agra, and 110 N.W. from Allahabad. Pop. (1872) 7007.—The *district* of H. has an area of 2287 sq. miles; pop. (1872) 529,137. It is noted for artificial lakes encircling rock temples, now used for irrigation. The principal crops are. gram, wheat, millet, and oil-seeds, with a little cotton; the trade is insignificant. As in the rest of Bundlecund, the Mutiny of 1857 was made the occasion for murder and rapine.

HU'MORALISTS, a term used in medical literature to designate a sect who based their pathology upon the influence of the humors.

HU'MULUS, the genus of plants to which the hop belongs.

HUN'GERFORD (formerly *Ingleford*, originally *Englaford*, 'the ford of the Angles'), an English market-town, partly in Wilts, partly in Berkshire, 61½ miles W. of London by railway, stands on the Kennet, a fine trout-stream, and is traversed by the old Roman road to Bath. Pop. (1871) 3064. Here William III. met James II.'s agents in 1688.

HUNTER, David, an American general, born at Washington, D. C., July 21, 1802, and graduated from West Point in 1822. In 1861 he was made brigadier-general of volunteers, and was in command of a division at the first battle of Bull Run. In August of the same year he was promoted to be major-general of volunteers. In 1862 he was placed in command of the department of the South, and while holding the position, declared slavery abolished in that department. This order was subsequently annulled by President Lincoln. In 1864 he commanded the department of West Virginia, and in 1865 was a member of the commission that tried the conspirators who were accessory to the assassination of Mr. Lincoln. In 1866 Gen. Hunter retired from active service.

HUNTING DOG (*Lycaon venaticus*), a species of Canidæ or dogs found in S. Africa, and also known by the name 'hyæna dog. These dogs live in packs, and in a natural state are wild and bold. The color is a reddish brown marked with black and white. The ears are large and prominent, and the nose and muzzle are black. The tail is bushy, and is white at its base and black at the tip. The fore feet possess four toes only.

HUNTING SPIDER (*Salticus scenicus*). sometimes also named the zebra spider, from its brown color being variegated with white bands, is a common British spider of active habits, found on walls and on trees, pursuing its prey with great persistence and agility. Three pairs of spinnerets exist in the H. S., which has also very long legs.

HUNTINGTON, Daniel, an American artist, born in New York City, Oct. 14, 1816; was educated at Hamilton College; and, in 1853, began to study art. He rapidly attained distinction as a portrait painter. Among his best known works are the historical pieces, *Henry VIII. and Catharine Parr*, *Mary Signing the Death-Warrant of Lady Jane Grey*, and *Lady Jane Grey in the Tower*.

HUNTINGTON, Jedidiah Vincent, an American writer and poet, born at New York, Jan. 20, 1815, graduated from the University of New York in 1835, and from the medical department of the University of Pennsylvania in 1838. He was a brother of Daniel Huntington, the artist. He entered the Episcopal ministry, but in 1850 became a Roman Catholic. He is best known to the public by his writings: *Poems* (1842), *Lady Alice* (1849), *Alban, The Forest* (1852), *The Pretty Plate* (1852), *Rosemary* (1860), *Blonde and Brunette* (1858), and *America Discovered*. Died at Pau, France, March 10, 1862.

HUNTINGTON, a town of Cabell Co., W. V., on the Ohio River. It has large car and other factories, and is a shipping point for coal, lumber, iron, and salt from the Kanawha region. Pop. 3147.

HUNTINGTON, a town of Huntington Co., Ind., on the Wabash River, 24 miles from Fort Wayne. It has two railroads and is on the Wabash & Erie Canal. It is actively engaged in manufacturing, and produces large quantities of lime. Pop. 6000.

HUNTINGTON, a town of Huntington Co., Pa., on the Juniata River, at the junction of two railroads, 96 miles from Harrisburg. It is engaged in manufacturing and mining. Pop. 4800.

HUP'FELD, Hermann, an eminent German linguist and theologian, was born at Marburg in 1796, studied Hebrew and exegesis under the guidance of Gesenius at Halle, he became Professor of Oriental Languages at Marburg in 1827, and was called to Halle as the successor of Gesenius in 1843. He died 24th April 1866. H. was a thoroughly scientific scholar in the circle of Oriental languages, and his work, though fragmentary, is of great value for the grammar and exegesis of the Old Testament. His masterpiece is the *Uebersetzung und Auslegung der Psalmen* (4 vols. Gotha, 1855–61). Other important productions are *Ueber Begriff und Methode der sog. Biblischen Einleitung* (Marb. 1844). *Die Quellen der Genesis aufs Neue untersucht* (Berl. 1853), and *Untersuchungen über die Feste der Hebräer* (Halle, 1851–64).

HURDUI, the chief town of the district of the same name, in the province of Oude, British India, and a station on the railway, 62 miles N.W. of Lucknow. Pop. (1869) 6415.—The *district* of H., which lies between the Ganges and the Gumti, has an area of 2292 sq. miles. Pop. (1869) 930,977.

HURRYHUR' (*Harihara*), a British cantonment in the State of Mysore, Southern India, on the right bank of the Tungabudra river, a tributary of the Kistna, 132 miles N.W. of Seringapatam, and 320 N.W. of Madras. Pop. (1871) 6401.

HURST, John F., D.D., an eminent American divine of the Methodist Church, born in Dorchester Co., Md., Aug. 17, 1834, and educated at Dickinson College, Pa., and Halle University, Germany. He entered the Methodist ministry in 1858. In 1870 he was made professor of historical theology in Drew Seminary, Madison, N. Y., and in 1873 was made president of that institution, but has since been made a Bishop of the Methodist Church. He has translated for publication Hagenbach's *History of the Church in the Eighteenth and Nineteenth Centuries*, Lange's *Commentary on Romans*, and Van Oosterzee's *Lectures on John's Gospel;* and has published *History of Rationalism. Outlines of Bible and Church History*, and *Martyrs of the Tract Cause*.

HUSCH, the chief town of the circle of Faltchi, Moldavia, near the border of Bessarabia, 8 miles W. of the Pruth, and 40 S.E. of Jassy. It was founded over 400 years ago by Hussites, is the seat of a Greek bishop, and has a trade in corn and wine. Here the Russians and Turks signed the treaty of 1701. Pop. 18,000.

HUSHIARPUR', the chief town of the district of the same name, in the Province of the Punjaub, British India, 90 miles E. of Lahore, and close by the old city of Hurrianah, has a special manufacture of white damask cotton cloth. Pop. (1868) 13,022.—The *district* of H., which lies in the Jullundhur Doab, between the Sutlej and Beas rivers, has an area of 2086 sq. miles; pop. (1868) 938,890. The crops are wheat, Indian-corn, barley, rice, cotton, and sugar-cane.

HUTCHINSON, Lucy, a Puritan lady, who has won a place in literature by an admirable memoir of her husband, Colonel John Hutchinson, was born 29th Jan. 1620, and married in 1638. Colonel Hutchinson was a member of the high court of judiciary that sentenced Charles I. to death. At the Restoration he was arrested, and died a prisoner in Sandown Castle, 11th Sept. 1664. His wife survived him many years. The work which has made both herself and her husband famous was not published till 1806. In a graceful and appreciative review, Lord Jeffrey compares her to 'the Valerias and Portias of antiquity.'

HU'ZARA (*Hazara*), the most northerly district of British India, province of the Punjaub. Area, 3000 sq. miles; pop. (1868) 367,218. It is bounded on the W. by the Indus; and the country is mainly mountainous. Snow falls as low as 4000 feet. The crops are maize, wheat, and barley, and there are large flocks of sheep and goats. The chief town is H. or Abbotabad, 125 miles E. of Peshawur, where there are cantonments for 1500 men. In 1857 the sepoy regiment mutinied, and was pursued and cut to pieces among the mountains.

HY'ADES (Gr. 'rainers,' from *hyein*, 'to rain,' Lat. *Pluviæ*), five stars clustered in the face of the constellation Taurus, the rise of which simultaneously with the sun was thought by the ancients to portend rainy weather. The story connected with them is variously given.

HYB'LA, three towns in Sicily, from one or other of which came the honey so often alluded to by ancient poets, namely, *H. Major*, on the S. slope of Ætna; *H. Minor*, or *Megara Hyblæa*, founded on the E. coast by Dorians of Megara in Greece in 728 B.C., under Syracuse from the earlier part of the 5th c. B.C., but insignificant after its sack by the Romans during the second Punic War; and *H. Heræa*, in the S., between Agrigentum and Syracuse.

I.

IANTHI'NA, a peculiar genus of *Gasteropodous* Mollusca, popularly known by the name of 'violet snails.' They inhabit the sea and are included in the family *Haliotidæ* or 'ear shells,' but may also form the type of a special family, that of the *Ianthidæ*. The shell exactly resembles that of the common snail in shape. It is of delicate texture, and of a deep violet hue at the base, the spire being white. The foot is small, but secretes a remarkable 'raft' or 'float,' formed of air cells, to the under surface of which the eggs are attached, the animal and its eggs thus floating about at the surface of the water. The I. occur in great numbers on the Atlantic Ocean, and may be driven by storms on the S. coasts of Britain.

IB'SEN, Hen'rik, a Norwegian poet, born at Skienin 1828. His chief works are dramatic, and divide themselves into two classes—his early dramas, drawn from middle-age history, *Gyldet paa Solhaug* (1856); *Fru-Inger paa Osterraad* (1857); *Hærmændene paa Helgeland* (1858); *Kongsemnerne* (1864); and his later ones, *Brand* (1866); *Peer Gynt* (1867); *De Unges Feorbund* (1869), in which subjects from the present time are treated with rare knowledge of human nature and the keenest irony. The last especially entitles him to high esteem, but his lyric poems, of which a collection came out at Copenhagen in 1871, are also very fine. Most think the drama *Kaiser og Galilæer* (1873, English translation by Catherine Ray, 1876) his greatest work. I. received a pension from the Storthing in 1866.

ICH'THUS (Gr. 'a fish'), the name given to the earliest kind of Christian amulets, because the initials of the Greek for Jesus Christ, Son of God, Saviour, made up this word.

IC'ICA, a tropical genus of *Amyridaceæ*, consisting principally of large trees, belonging to mid-America, and possessing the balsamic juice for which the order is noted. So highly saturated is *I. heptaphylla* with this odoriferous resin that the timber is used for torches, and is called in Guiana, incense-wood. Another species, *I. altissima*, from its fragrant smell, is termed cedar-wood. Like the cedar, it is distasteful to insect vermin, and is consequently in request for household furniture. On account of its large growth, its durability, and the facility with which it is wrought, it is also chosen by the Indians for the manufacture of their canoes. A third species of the same region yields elemi.

IGNAT'IEFF, Nicolas Paulovitch, a Russian general and diplomatist, born about 1830. While still young he became a general, and was sent on a mission to Pekin, where he negotiated a favorable commercial treaty with China. He had for some time charge of the Asiatic department in the Russian Foreign Office, and became Minister at Constantinople, July 26, 1864. Here he exercised great influence over the Sultan Abdul Assiz. On the latter's dethronement and the outbreak of the war with Servia and Montenegro, he strongly championed the Slavonian cause, and an ultimatum presented by him in October 1876 forced the Porte to grant an armistice. He was the Russian plenipotentiary at the Conference at Constantinople, Christmas 1876, and on its failure withdrew with the other ambassadors temporarily from that capital. In March 1877 he visited the principal courts of Europe on the Eastern question, and in London was the guest of the Marquis of Salisbury, his colleague at the Conference, the result of which was the signature of the London Protocol. He is understood to have great conversational powers, to be a master of diplomacy, and to be marked out for even greater advancement in the Russian state.

IGNATIUS, St., Patriarch of Constantinople, son of the Emperor Michael I., was born about 800. His original name was Nicetas, which he changed to I., when, on the deposition of his father by Leo V. (813), he was forced to become a monk. As such, I. was ordained priest by Basil of Paros, became abbot of the monastery of Satyrus at Constantinople, and in 846 succeeded Methodius in the patriarchate of that city. I. was a vigorous opponent of the Iconoclasts, and in this opposition was supported by Theodora, the regent for her infant son, Michael III.; but the latter, on attaining majority, was led by the intrigues of his uncle, Bardas, whose vices I. had reproved, to depose I. (858) and secure the election in his place of the iconoclastic Photius. Although Pope Nicholas I. refused to recognize the transaction, Photius retained the patriarchate till 867, when, under Basil I., he was in turn deposed and I. reinstated, an eighth general council assembling at Constantinople in 869 to ratify both events. I. died Oct. 23, 878.

ILHA'VO, a town of Portugal, province of Beira, 38 miles S. of Oporto, near the sea-coast, has large glassworks in its neighborhood at Vista Alegre. Pop. 8200, mostly fishermen.

ILION, a town of Herkimer Co., N. Y., on the Mohawk River, the New York Central and West Shore railroads, and the Erie Canal, 12 miles from Utica. It is engaged in manufacturing arms, sewing-machines, agricultural implements, and other articles. Pop. 4000.

ILLINOIS INDIANS, a confederacy composed of several tribes, occupying the territory, which now constitutes the State of Illinois. They probably belonged to the Dakota race. But few of this once powerful confederacy now remain, and they are found in the Indian Territory.

ILLINOIS INDUSTRIAL UNIVERSITY, at Urbana, Ill., established in 1861. Congress bestowed upon it a grant of 480,000 acres of land; Champaign County, in which Urbana is located, made a gift of $550,000 in buildings and lands; and the State donated $300,000 for certain specified purposes. There is connected with the institution a farm of 410 acres. There are seven departments, viz.: a college of agriculture and horticulture; a college of engineering and architecture; a college of natural sciences and natural history; a college of literature and art; a school of commerce; a military school; and a women's school of domestic science. Co-education of the sexes is practiced.

ILLU'SIONS are mental phenomena, depending upon a morbid condition of the organs of the special senses, but especially of the organ of sight.

ILYAN'THUS, a familiar genus of *Actinozoa* or sea-anemones, differs from its common neighbors by its conical shape, and its slender and pointed base. Probably I. lives with its base attached in the mud of the sea. The family *Ilyanthidæ* includes the nearly-allied genus *Arachnactis*, an anemone which lives a free life, and fixes itself at will. The common sea-anemones, on the other hand, are usually firmly rooted and fixed to rocks and stones. *I. Scoticus*, or the 'Scottish Pearlet,' is a familiar species.

INAJA' PALM. The I. P. of the Brazilians—the 'Cocurito' of Humboldt's writings—is the *Maximiliana regia* of botanists, a magnificent palm forming one of the most conspicuous ornaments of the primitive forests of the Amazon region. It frequently reaches 100 feet in height, bearing a crown of gigantic pinnate leaves 30 to 40 feet long. The woody boatlike spathes remain on the trunk for years after flower and fruit have fallen. They are used by the Indians for baskets, cradles, and cooking utensils.

INCH, in linear measure, is the twelfth part of a foot, or the thirty-sixth part of the imperial standard yard.

INCH'BALD, ELIZABETH, *née* SIMPSON, an English actress, dramatist, and novelist, born of Roman Catholic parents at Stanningfield, Suffolk, 15th October 1753, went to London at the age of sixteen to seek a theatrical engagement. From the dangers and temptations to which her youth and beauty exposed her she was only freed by her marriage in 1772 with Mr. I., an actor to whom she had applied for counsel and protection. The same year she made her début at Bristol, acted subsequently with her husband at Edinburgh, Glasgow, York, &c., and made a short tour in France. Mr. I. dying at Leeds in 1779, she contracted an engagement at Covent Garden, London (1780–89), and during this period produced a farce, *The Mogul Tale*, and other pieces, the success of which led her finally to quit the stage and apply herself wholly to literature. Mrs. I. died at Kensington, 1st August 1821. She published in all ten plays, three collections of plays, and two novels; but of these, the last—*A Simple Story* (1791) and *Nature and Art* (1796)—are the works by which she is now remembered, and have indeed taken their place among the standard novels of the language. Her Memoirs were published by J. Boaden (2 vols. 1833), but an autobiography, for which Philips the publisher had offered £1000, she destroyed by the advice of her director.

IN COENA DOMINI, or PASTORALIS, is the name of a Papal bull, which has been traced back to Gregory XI. (A.D. 1370), and which was regularly published at Rome every Holy Thursday down at least to 1773. It relates to discipline, and recognition has been denied to it by almost every country in Europe. Its rejection is made the subject of Article XVII. of the famous Declaration of the liberties of the Gallican Church. The bull anathematizes heretics and their abettors, those who read or print their books, schismatics, all persons and universities who appeal to a future council, pirates and wreckers, those who impose or augment tolls without leave of the Pope, those who supply the Saracen or Turk, or other enemies of Christ, with arms or aid, those who prevent persons coming to Rome, or stop supplies, those who appeal to secular power against the execution of the letter apostolic, secular judges who bring ecclesiastical persons before their tribunals, and those who exact contributions from such persons. It was the attempt of Clement XIII., in 1768, to enforce the bull in Parma, that led to a strong expression of opinion against it by several European powers, and ultimately to the triumph of the *Regalisti* party at Rome, and the suppression of the Jesuits. The English Roman Catholics hold the bull to be obsolete. See *Lord Arundel's Letter to Mr. Plumptre* (Lond. 1848), and various pamphlets published in the same year by Hatchard.

IN'CUS, one of the small bones in the middle ear. Shaped somewhat like an anvil or bicuspid tooth, it unites on the one side with the *malleus*, or mallet (which is connected with the membrane of the drum), and on the other with the *stapes* or stirrup, which fits into the oval window of the internal ear. It is thus the middle link in the chain of bones, and it transmits the vibrations of the *membrana tympani*, or drum of the ear, to the internal ear.

INDEFECTIBIL'ITY of the Church includes its Perpetuity, by which it is free from failure of its members, and its Inerrancy and Infallibility, by which it is free from failure in holding and declaring the truth. For the perpetuity of the Church such passages of Scripture are cited as Isa. lxi. 9; Dan. ii. 44; Matt. xvi. 18. xxviii. 20; John xiv. 16, 17, and the following arguments adduced: that 'the consummation of all things is delayed only till the servants of God are sealed' (1 Cor. xv. 28; Rev. vi. 9–11), so that when faith fails the end will be (Luke xviii. 8), and that as God will have all men to be saved, and come to the knowledge of the truth, the Church could not fail without a failure of God's mercy.

INDIAN RED, or PERSIAN EARTH, is a marone-colored ferruginous earth used as a painter's pigment, and obtained from the hills near Chingleput as well as from Persia. An imitation is manufactured in this country by mixing oxide of iron with colcothar.

INDU'SIUM, a thin membrane often covering the clusters of capsules or sporangia of ferns.

INFUNDIBULATA, the name given to one of the divisions of the class *Polyzoa*, distinguished by having the tentacles arranged in a round or orbicular fashion, and by the absence of an *epistome* or valvular lid for closing the mouth of the cells. The sea-mats or *flustræ* exemplify this group.

IN'GELOW, JEAN, an English poet and novelist, was born in Boston, Lincolnshire, about 1830. She published *Tales of Orris* in 1860. A collection of *Poems* which appeared in 1863, containing *Divided*, *Songs of Seven*, *The Letter I*, *Divided*, *The High Tide*, &c., established her fame, and has passed through many editions. Her subsequent works include *A Story of Doom and other Poems* (1867), *Mopsa the Fairy* (1869), *Little Wonder Horn* (1872), and *Off the Skelligs* (a novel in 4 vols. 1873). Her poems are remarkable for depth of feeling and high artistic power, and her tales for children are charming.

INGERSOLL, ROBERT G., an American infidel, born at Dresden, N. Y., in 1833. He studied law and located at Peoria, Ill., where he soon became prominent in his profession and as a political speaker. Of late years he has devoted much of his time to lecturing against Christianity. His method is to caricature it and then ridicule the creation of his own fertile imagination. By his brilliant oratorical powers and keen sense of humor he has drawn large audiences to hear him, and his lectures have undoubtedly proved profitable financially (an admission fee is always charged), although their coarse blasphemy has shocked the more sober-minded part of the community. For several years I. has resided at Washington, D. C.

INGLIS, THE RIGHT HON. JOHN, an eminent Scottish lawyer, son of the Rev. Dr. Inglis, a minister of the Established Church, was born in 1810, and studied at Glasgow and Oxford. He was called to the Scotch bar in 1835, was made Solicitor-General for Scotland in 1852, and shortly afterwards became Lord Advocate. He was appointed Lord Justice-Clerk of Scotland in 1858, and in the same year was returned for Stamford. In 1859 he was made D.C.L. and a member of the Privy Council. He was appointed Lord Justice-General and President of the Court of Session in 1867, and Chancellor of Edinburgh University in 1869. I. is one of the keenest, strongest, and most legal intellects adorning the Scotch Bench.

INGRAHAM, JOSEPH H., born at Portland, Me., in 1809. He engaged in mercantile pursuits, then taught in the South, and afterwards entered the ministry of the Protestant Episcopal Church and became rector of a church at Holly Springs, Miss. Among other works he published *Prince of the House of David*, *Pillar of Fire*, and *Throne of David*. Died in 1866.

IN'MAN, HENRY, an American artist, born at Utica, N. Y., Oct. 28, 1801. Early in life he turned his attention to art, studied under Jarvis, and soon gained a brilliant reputation as a portrait-painter. After having resided at Boston and Philadelphia, he traveled abroad for his health. In 1845 he returned to America, and soon afterwards died. Besides many portraits, he executed the following well-known works: *Birnam Wood*, *Rydal Water*, *Lake of the Dismal Swamp*, *Rip Van Winkle Awaking*, *Scene from the Bride of Lammermoor*, and *Mumble the Peg*.

INN'ES, COSMO, was born September 9, 1798, at Durris, on Deeside, Aberdeenshire, England, admitted to the bar in 1822, became Sheriff of Morayshire in 1840, and occupied that position with much credit until 1852, when he was appointed Clerk to the Second Division of the Court of Session. I. was elected to the Chair of History in the University of Edinburgh in 1846. In the labors of the Bannatyne, Maitland, and Spalding Clubs he took a prominent part, the fruits of which were shown in the collating and editing of nearly all the Chartularies of the religious houses. His patient study of public records and contemporary documents is seen to greatest advantage in *Scotland in the Middle Ages*, and in *Sketches of Early Scottish History*, whilst his keen insight into the political and ecclesiastical constitution of antique Scotland may be judged from his introduction to the first volume of *Scots Acts*. From 1865 until his death at Killin, July 31, 1874, he was chiefly engaged in preparing for the press the *Rescinded Acts*, in indexing the folio edition of the *Acts of the Scots Parliament*, a task for which his incomparable skill in deciphering and extracting the meaning of old writings rendered him peculiarly fit, and in preparing for the press his *Lectures on Scottish Legal Antiquities* (1872). Shortly before his death he wrote a brief and appreciative memoir of Dean Ramsay. See *Memoir of C. I.* (Edinb. Paterson, 1874).

IN'NESS, GEORGE, an American artist, born at Newburg, N. Y., May 1, 1825; studied engraving, but was compelled to renounced it on account of ill-health; and then turned his attention to landscape-painting, in which he soon rose to fame. Among

his best-known works are the following: *Peace and Plenty, The Sign of Promise, A Vision of Faith, The Valley of the Shadow of Death,* and *The Apocalyptic Vision of the New Jerusalem and the River of Life.*

IN'OSITE ($C_6H_{12}O_6$), a variety of glucose found in certain animal organs and in the unripe fruit of certain plants. Its prismatic crystals dissolve in water; and though not fermenting in yeast, it undergoes lactic fermentation when in contact with cheese or flesh.

INTERNA'TIONAL, The, a cosmopolitan association of trades unions, which has spread its ramifications throughout Europe, and whose primary principle was not political but social revolution, was organized at London in 1862, the year of the International Exhibition, 'to establish common interests among the working classes in different countries of the world.' At a meeting attended by delegates of ten nationalities held at St. Martin's Hall, London, September 28, 1864, under the presidency of G. Odger, a new character—that of political action—was imparted to the society by its voting the publication of the revolutionary statutes and manifestoes of Dr. Karl Marx, whose programme of administration was finally adopted, in preference to those of Mazzini and Bakunin, at meetings held in the four following years at Geneva, Lausanne, Brussels, and Basel. In 1868, the French branch of the I. was prosecuted by the Government, the names of Assi, Duval, and nine other leaders of the subsequent Paris Commune first emerging in the course of this trial. Among the avowed aims of the advanced members of the I. at this period should be noted the abolition of marriage, religion, and inheritance, and the constitution of land as collective property; while its workings were shown in the support of the Paris bronze-workers in their strike of 1867, and of the Geneva builders in 1868, by English trades unions, the latter in turn being upheld in their strikes by the prohibition on the part of the I. against the importation of cheap labor into England from the Continent. With the struggle of the Paris Commune in 1871, the I. may be said to have at present culminated. At a meeting held at the Hague, September 4, 1872, Marx, the president, denounced Favre as a wretch and Trochu as a traitor, and a resolution was passed expressing 'admiration for the heroism of the champions who have fallen for the rights of the people,' and sending 'a greeting to all those who are still in chains.' Still, these sentiments failed to find favor with a large body who desired simply an international trades union, while the leaders were bent on political revolution in their own communistic sense, and two days later the congress broke up in dissension, the English, Swiss, Spanish, and Italian delegates forming a European confederation apart from the extreme section, which, under Marx and the French Communists, has transferred its headquarters from London to New York. Except in Spain, where in 1873 Internationalist revolts broke out in Murcia, little has been heard during the last five years of the society. Its members are stated to be still on the increase in Europe; but in America, though possessing branches in most of the large cities, the I. cannot be said as yet to command a numerous or influential following, only 2000 persons taking part in the 'demonstration' held at New York, December 17, 1871. See Onslow Yorke, *The Secret History of the I.* (Lond. 1874).

IN'TROIT, music sung in the Roman Catholic service while the priest goes to the altar to celebrate the mass, and that sung in the corresponding part of the Anglican service.

IN'ULA, a genus of the *Compositæ* family, numbering some fifty species, of which six are natives of England, notably the ploughman's spikenard, the golden samphire, and the flea-bane; whilst elecampane is perhaps only naturalized from former cottage-garden cultivation.

IN VENTRE SA MERE, a term in English law denoting an unborn child. It is especially applied to the fœtus whose father dies before its birth. A child so born has the same legal rights as if born during the lifetime of its father.

IO'DOFORM (CHI^3), is a substance which is analogous in composition to chloroform, but differs from it in properties: it has been used in medicine in cases of neuralgia and sciatica, and in certain virulent diseases. It is prepared by acting on alcohol, and many other bodies, with iodine and potash. It is obtained in yellow crystalline scales, and has a peculiar smell. It is insoluble in water, but dissolves in chloroform and in ether, and sparingly in alcohol.

IONIA, a town of Ionia Co., Mich., on Grand River and the Detroit & Milwaukee and the Detroit, Lansing & Lake Michigan railroads. It is in the midst of an agricultural and lumber region. Pop. 4327.

IOWA COLLEGE, at Davenport, Ia., founded in 1847 by joint action of Congregationalists and Presbyterians, but since 1852 under the control of the former alone. In 1860 it was removed to Grinnell, Poweshick Co., where a colony of Eastern people had become established.

IPSWICH, in Essex Co., Mass., on the Ipswich River and the Eastern Railroad, 27 miles from Boston. It is engaged in manufacturing woollen and cotton hosiery. Pop. 4300.

IRIS, in physiology, is a muscular curtain in the eye, perforated by a hole known as the pupil. The I. is formed of involuntary muscular fibres arranged in two sets—(1) A radiating set, under the control of the sympathetic nerve, which on contraction dilate the pupil; and (2) a circular set, found chiefly near the margin of the pupil, under the control of the third cranial nerve, which have the effect of contracting the pupil. These fibres, through their nervous supply, are stimulated to contract by the action of light on the retina of the eye. Thus the amount of the dilatation of the pupil is regulated by the strength of the stimulus of light. With a strong light the pupil contracts, and with a weak light the pupil dilates. Certain substances have a definite action on the I. Thus atropine, the active principle of Belladonna, dilates, while physostigmine, the active principle of Calabar bean, contracts it. The functions of the I. are—(1) to regulate and moderate the amount of light passing into the eye; (2) to correct the defect of spherical aberration by cutting off the outer rays of the pencil of light; (3) to assist in accommodation for near objects by contracting and thus cutting off the outer divergent rays. Without the intervention of the I., these outer rays would, by the sphericity of the cornea and lens, be brought to a focus in front of the retina, and thus there would be an uneven or blurred image.

IRONTON, a city of Lawrence Co., O., on the Ohio River, 145 miles above Cincinnati. It has several railroads; is engaged in iron and coal mining; carries on an important river commerce; and has iron manufactories, machine shops, nail mills, and tool works. Pop. 10,500.

IRVING, John Henry Brodribb, a modern actor, was born February 6, 1838, and made his first appearance on the stage at Sunderland, September 29, 1856. He received a ten years' theatrical training in provincial theaters, playing successively in Edinburgh, Glasgow, Manchester, and Liverpool. His first London engagement was as Doriconrt in the *Belle's Stratagem,* at the Lyceum Theater. In the popular comedy of the *Two Roses* he played Digby Grand for three hundred nights at the Vaudeville. On November 20, 1871, he appeared at the Lyceum as Mathias in *The Bells,* a performance which caused a great sensation. At the last-named theater he appeared as Charles I., Richelieu, Eugene Aram, Hamlet, Macbeth, Othello, and Richard III., with great approbation. His first provincial tour in 1876 was an almost unprecedented triumph. In his Shakspearian impersonations he has shown a tendency to break through stage tradition, and may be regarded as the leader of the Realistic school. Critics differ as to the merits of these performances, but all agree that he is an actor of striking force and singular originality. In melodrama he has no living rival.

IS'ATIN ($C_{16}H_{10}N_2O_2$), the body produced by boiling indigo with nitric acid till the blue color disappears through oxidation. Brilliant red prismatic crystals form when the hot solution cools. It is soluble both in alcohol and in water, and turns violet on addition of an alkali.

IS'CHIUM is the name given to a portion of the innominate or pelvic bone. It forms the posterior and lower portion of this bone (in man), and in the sitting posture the body rests chiefly on the two ischia.

ISHPEMING, in Marquette Co., Mich. It has two railroads; and iron, marble, gold, and silver are found in the neighborhood. The iron mines of the vicinity are very profitable. Pop. 8763.

IS'MAELITES (*Ismaili*), a branch of the Mohammedan sect of the Shiites, or upholders of the claims of Ali to the califate, derived their name from Ismail (*circa* 722 A.D.), the seventh Imaum in descent from Ali. They seem to have existed under the early Abbasides, but were first organized in the 10th c. by Abdallah Ibn Maimun, a Persian, to whose influence may be ascribed the singular compound of Islamism and Zoroastrianism observable in the tenets of the I. This Abdallah preached the advent of a Messiah who should be greater than Mohammed, and by his esoteric interpretation of the Koran laid himself and his followers open to charges of atheism and immorality. The I. in their turn gave birth in the 11th c. to the Assassins; and by the remnants of that sect, after its suppression in 1272, Ismaelite doctrines have been handed down to our own time. At present there are the Syrian I. of Massyad, and the Persian I. of Rudbar in Khorassan.

ISMAIL PASHA, Khedive of Egypt, second son of Ibrahim Pasha, was born in 1830, and educated at Paris. He became general-in-chief of the Egyptian army in 1862, and succeeded his uncle, Said Pasha, as fifth viceroy in 1863, securing in 1866, by enormous presents to the Porte, a direct line of succession for his house. In the same year he sent 30,000 troops

to subdue the insurrection in Crete. In 1867 he received the title of Khedive. His assumption of sovereignty, and the regal style in which he entertained several crowned heads and 10,000 guests at the opening of the Suez Canal in 1869, excited the jealousy of the Sultan, and he was ordered to reduce his naval and military establishments. By a firman in 1873, however, he obtained complete control over his army, and several important concessions. Meanwhile, ostensibly to suppress the slave trade, he had sent various expeditions far southwards along the basin of the Nile, which greatly extended his sway. He employed many foreigners in the embellishment of his capital, and spent excessive sums for civil and warlike purposes. Notwithstanding the huge capital raised by him by loans in 1868 and 1873, his finances were in 1876 in so unsatisfactory a condition that he was compelled to sell his Suez Canal shares to the British Government, who sent Mr. Cave, as special commissioner, to investigate his accounts. Neither this mission nor that of Mr. Goschen and Monsieur Joubert later, in the interest of the British and French bondholders, restored his credit in any great degree. In the war of the Turks with Servia in 1876, and with Russia in 1877, he rendered the Porte active military assistance.

ISOCAR'DIA, a genus of *Lamellibranchiate* Molluscs, belonging to the family *Cyprinidæ*, and familiarly known as 'heart-cockles' from the form of the shells, the beaks of which are widely separate, and of sub-spiral arrangement. *I. cor* is a familiar species. These shells are first found as fossils in the Triassic rocks, and are very abundant in the Oolitic formations and in the Chalk system.

ISOCLIN'IC and ISOGON'IC LINES are lines of equal magnetic inclination and declination respectively.

ISTH'MIAN GAMES, forming one of the four Pan-Hellenic festivals, derived their name from the Corinthian Isthmus on which they were celebrated in honor of Poseidon (Neptune). The temple of Poseidon was situated at the narrowest part of the isthmus, and near it were the theater and stadium of white marble. This festival was said to have been instituted by Sisyphus and restored by Theseus, and was originally held every eighth year, but after Olymp. 49 every third year. The games were the same as those held at Olympia, including, besides athletic exercises and horse and chariot racing, contests in music and poetry. Victors were crowned with a simple pine-garland, and their statues were placed in the famous temple, while their envied success reflected high honor alike on their family and birthplace. The management of the games was conducted by the Corinthians, but certain honorable distinctions were reserved for the Athenians. In 228 B.C. the Romans were privileged to take part in the games, and it is conjectured that soon after the time of Cæsar, there began to be introduced fights with wild beasts. At a late period of the Roman Empire the games had been sunk into coarse gladiatorial shows, but they continued to be celebrated till the 4th c. A.D.

IT'RI, a town of S. Italy, in the province of Caserta, half-way between Fondi and Gaeta, is a poor but picturesque place, with a ruined castle, and is best known in connection with Fra Diavolo, who was born here in 1760. Pop. (1871) 6542.

I'TU, or Y'TU, a town of Brazil, in the province of São Paulo, 3 miles from the S. bank of the Tiete, and 48 N.W. of São Paulo, is a thriving center of agricultural produce, and has some fine churches, two convents, a lazaretto, &c. Large quantities of sugar are produced in the neighborhood, and I. has celebrated breeds of horses and mules. Pop. about 10,000.

IVAN'OVA, a village of Russia, on the river Uvod, in the government of Vladimir, 215 miles N.E. of Moscow, in a territory possessed by the Counts Sheremetieff since 1714. From the extent of its manufacturing industry, I. has been called the Russian Manchester. It has itself 130 calico factories, annually preparing one million pieces, and as the center of the cotton manufacture of Russia, gives employment to 50,000 operatives here and in the surrounding district, producing goods yearly to the value of 2⅛ million pounds sterling. Pop. (1870) 6000.

IXI'ON, according to early Hellenic tradition, was a Thessalian prince, and king of the Lapithæ or Phlegyes. After his marriage with Dia he treacherously murdered her father, Deïoneus, who had demanded certain bridal gifts. All the gods were indignant, but Zeus purified him of the crime, after which the ingrate strove to win the love of Hera. Zeus created a phantom resembling her, and by it I. became the father of the Centaurs. For his lust and treachery he was chained by Hermes to a winged or fiery wheel, which whirled perpetually in the lower world or in the air.

IXMIQUIL'PAN, a town of Mexico, in the state of Hidalgo, on the river Montezuma, 80 miles N. of the city of Mexico. In its vicinity are several silver-mines, owned by English companies. For several months in 1861 it was the headquarters of General Zuloaga, who claimed to be President of the Republic. Pop. 10,000, mostly Otomi Indians.

IZUCAR', a thriving town of Mexico, in the state of Puebla, near the base of Popocatepetl, and in the rich valley of the Mescala. It is the S. terminus of a railway from Puebla (constructed in 1875), and has a trade in the sugar and other products of the country. Pop. 12,000. General Matamoros gained a great victory at I. over the Spaniards, 24th February 1812.

J.

JABORAN'DI, a plant of the natural order *Rutaceæ*, said to be the *Pilocarpus pennatifolius* of Lemaire. An alkaloid named *Pilocarpine* has been extracted from the leaves and bark, and in lesser quantity from the wood, by Mr. Gerrard; and experiments on the lower animals showed the following results:—A $\frac{1}{10}$th of a grain injected into the jugular vein produced profuse salivation almost instantly, caused a retardation of the heart's action, and had a marked influence on the blood pressure. In frogs, the smallest doses produced an extremely viscid condition of the skin; larger doses, well-marked neurotic symptoms, and larger still, powerful tetanic spasms. J. applied to the eye contracts the pupil. More recent experiments show that J. has powerful chologue properties, and hence its denomination *vegetable mercury*. In the human subject J. is the most powerful sialogogue and sudorific known. See *Year-Book of Pharmacy* (Lond. 1875), *Edinburgh Medical Journal*, article J., by Dr. W. Craig (1876).

JAB'UA, the capital of the State of the same name, in connection with the Bheel Agency in Central India, 92 miles W. from Mhow. Area of the *state*, 1500 sq. miles; pop. 55,000, mostly Bheels; revenue, £25,000; tribute, £147. The chief is a Rajput, who was loyal during the Mutiny; he is tributary to Holkar.

JACITA'RA PALM (*Desmoncus macracanthos*), one of a genus peculiar to tropical America. The flexible stems climb or trail 50 or 60 feet, and the hooked spines of the leaves are a great annoyance to the traveler. The Indians plait strips of the stems into strainers to extract the poisonous juice from the mandioc.

JACKSON, Abraham Reeves, a distinguished American surgeon, born at Philadelphia, Pa., June 17, 1827, graduated from the Central High School of Philadelphia, Pa., in 1846, and received the degree of M.D. from the Pennsylvania Medical College, Philadelphia, in 1848. He practiced his profession at Strandsburg, Pa., and in 1870 removed to Chicago, Ill., where he took an active part in founding the Woman's Hospital of Illinois, and was made its surgeon-in-chief. He has published numerous papers upon medical themes of great value to the profession.

JACKSON, William, an English composer of great originality and grace, was born at Exeter, May 1730, studied under Travers of the Chapel Royal in London, and returning to his native city, was appointed organist of the cathedral in 1777. He published four collections of vocal and one of instrumental music, besides three operas, and was the author of *Thirty Letters on Various Subjects, On the Present State of Music*, &c. J. was also a landscape painter, closely following his friend Gainsborough. He died at Exeter, 12th July 1803.

JACKSON, in Madison Co., Tenn., on Forked Deer River and the Illinois Central and Mobile & Ohio railroads. It is a cotton market for several adjoining counties, and railroad repair shops are here located. Pop. 7500.

JACK'SONVILLE, a city of Illinois, situated in a fertile prairie, near the Mauvaiseterre Creek, a branch of the Illinois

River, 30 miles W. of Springfield by rail. It is known as the 'Athens of the West,' and among its public buildings are various State asylums and the Illinois College (Congregational), Illinois Female College (Methodist), Illinois Conservatory of Music, &c. Its industries in woollens, ironwares, and flour are rapidly developing. Pop. (1880) 10,928.

JACKSONVILLE, a city of Duval Co., Fla., on the St. John's River, and the terminus of three railroads. It is a popular winter resort, and is engaged in commerce and carries on an extensive lumber trade. Pop. 7648.

JACOBABAD, or KHANGURH, the chief town of the Upper Frontier district, Scinde, British India, near the border of Beluchistan, about 200 miles N. of Hydrabad. Pop. (1872) 10,714. It contains the cantonments of the Scinde Horse and Jacob's Rifle Regiment. The town was founded in 1847 by General Sir J. Jacob, to whom it owes its excellent roads, canals, and public buildings. It contains the stone mausoleum of its founder, who died here in 1858. See *Gazetteer of Scinde*, by A. W. Hughes (Lond. 1874).

JAC'OBUS, MELANCTHON WILLIAMS, D.D., LL.D., an American scholar and theologian, born at Newark, N. J., Sept. 19, 1816; graduated from the College of New Jersey, 1834; and graduated from Princeton Theological Seminary, 1838. He was instructor in Hebrew in Princeton Seminary, 1838–39; was called to a church in Brooklyn, 1839; and in 1851 was made Professor of Oriental and Biblical Literature in Alleghany Theological Seminary. He has published a series of popular commentaries on the New Testament, and a commentary on Genesis. Died at Alleghany, Pa., Oct. 28, 1876.

JAGELL'O, or JAGJELL'O, born in 1354, succeeded his father, Olgerd in 1381 as Grand-Duke of Lithuania. In 1386 he received the crown of Poland as Vladislav II., being chosen by the Polish nation husband to Hedwig, daughter of Lewis the Great of Hungary, on condition of renouncing and abolishing paganism. He founded the bishopric of Wilna and the University of Cracow (hence called the 'Academy of J.'), gained a decisive victory at Tannenberg (1410) over the Teutonic knights, and died May 31, 1434. His two sons, Vladislav III. and Casimir IV., followed him in succession, and J. was thus the founder of the *Jagellon Dynasty*, which ruled Poland till the death of Sigismund in August 1572, and gave Hungary three kings, of which the two last were also kings of Bohemia. By the marriage of Sigismund II.'s sister, Catharina Jagellonika, with the Swedish king Johan III., was formed a female line of Jagellons in the House of Vasa, which gave Poland three kings.

JAMESTOWN, a rapidly growing town of Dakota, on a branch of the Northern Pacific Railroad. The country about it is being rapidly settled. Pop. 3400.

JAMESTOWN, the first settlement of the English in the United States. On April 26, 1607, three vessels, bearing a company of 107 English colonists, under Wingfield, Christopher Newport, and Bartholomew Gosnold, sailed up the James River, Va. On the 13th this little band began the building of Jamestown, which, as well as the river upon which it was situated, they named in honor of England's reigning sovereign. The only remaining vestiges of this settlement to-day, are the ruins of a fort and a few houses.

JANAUSCHEK', FANNY, a distinguished actress, born at Prague, Bohemia, July 20, 1830. Educated for the stage, she, early in life, developed great tragic force. She has several times visited America, and has met with brilliant success, particularly in Shakspearian plays.

JANNY, SAMUEL M., an American author and member of the Society of Friends, born in London Co., Va., Jan. 11, 1801. Among other works he has published *The Country Schoolhouse*, a poem (1825), *Conversations on Religious Subjects* (1835), *Historical Sketch of the Christian Church* (1847), *Life of Penn* (1852), *Life of Fox* (1855), and *History of the Friends* (1867). Died April 30, 1883.

JAN OF LEYDEN (properly JAN BOCKELSON or BOCKOLD), born at Leyden about 1510, was a tailor in his native town, where he also kept an inn, amusing his guests with his poetry and acting. Making the acquaintance of Jan Mathison of Haarlem, a baker, in 1533, he accompanied him to Münster, where he soon became the chief of the Anabaptists. After his friend's death in 1534, B. was proclaimed king of 'the new Zion,' and gave himself out as a prophet. In order to marry Mathison's widow he introduced polygamy, and had at last seventeen wives. He lived with great magnificence, and practised the utmost cruelty. Considering himself the founder of the millennium, this madman sent out twenty-eight apostles, and appointed twelve 'dukes' to rule the world under him. The town was long besieged in vain by the Bishop of Münster, but was taken (24th June 1535) after a valiant defence; B. was seized with his ministers Knipperdolling and Krechting, and put to death, 23d January 1536.

JASPER, WILLIAM, an American patriot, born in South Carolina, about 1750. At the outbreak of the Revolution, he entered the Continental service, and at the bombardment of Fort Moultrie by the British, won distinction by leaping through an embrasure, and in the face of a severe cannonade, recovering the State flag, which had been shot away. Governor Rutledge was so impressed by the gallantry of the action, that he presented Jasper his own sword. He was killed Oct. 9, 1779, in an assault upon Savannah.

JAT, JUT, or JAUT, the name of the dominant tribe throughout the Punjaub, also found in Scinde, Rajputana, and the N.W. Provinces. In religion the Jats are indiscriminately Mohammedans, Hindus, or Sikhs, but the first of these three form the majority. In physiognomy they are decidely Aryan, and they make excellent soldiers. Their methods of cultivation are good, and they are also breeders of cattle and camels. The democratic village community exists among the Jats in its full perfection. Their language is a derivative of Sanscrit, not widely differing from the Hindi. A plausible theory assigns to the Jats a Scythic origin. See Campbell's *Ethnology of India*, in the *Journal of the Asiatic Society* for 1866.

JAY, WILLIAM, LL.D., son of John, born in New York, N. Y., June 16, 1789, and distinguished for his efforts to promote the cause of abolition and that of temperance. He was an active member of the anti-slavery, and for many years president of the peace society. He published several works, relating to these subjects. Died Dec. 27, 1853.

JEFFERSON, a city of Morgan Co., Tex., at the head of navigation on Big Cypress Bayou, which opens into the Red River. It is an important commercial center, and annually sends to New Orleans large quantities of cotton, beef, tallow, and wool. It was first settled in 1843, and is a place of rapidly growing importance. Pop. 5000.

JEFFERSON, JOSEPH, an American comedian, was born at Philadelphia, Feb. 20, 1829, and became an actor when very young. His *Rip Van Winkle*, which has been played almost continually since its first production at the Adelphi Theater, London, 1865, is admired as much in England as America as one of the finest of modern dramatic creations.

JEFFERSONVILLE, a city of Clarke Co., Ind., on the Ohio River. It is connected with Louisville, Ky., which is on the opposite bank of the Ohio, by a railroad bridge. It has excellent shipping facilities, extensive manufactures, and contains the Southern State penitentiary, and a large government depot of supplies. Population, 10,422.

JEFF'REYS, GEORGE, BARON, was born at Acton, Denbighshire, in 1640, educated at Shrewsbury and Westminster, entered the Inner Temple, and commenced pleading without being regularly called to the bar at Kingston Assizes in 1666. A drunkard and bully, but of quick and vigorous parts, he won an extensive Old Bailey practice as a Roundhead and persecutor of the Catholics. In 1677, however, he turned renegade, found a patron in James Duke of York, was knighted, and the year after appointed Recorder of London. Created successively King's Sergeant, Chief Justice of Chester, and baronet (1681); J. acted as crown's counsel or judge against Russell and Sydney, Baxter and Oates, was made Chief Justice of the King's Bench in 1683, and on the accession of James II. was raised to the peerage with the title of Baron J. of Wem. In the 'Bloody Assize' that followed Monmouth's revolt, J. found work after his own heart, hanging 350 prisoners and transporting 841 as slaves to the plantations. For these services he was rewarded by the Lord Chancellorship. He showed himself a ready tool to all the king's misdeeds, notably as head of the new High Court of Commission (1686), and in the trial of the Seven Bishops (1688). He sought to follow James's example of flight, but was caught disguised as a sailor in Wapping, and committed to the Tower, where he died, April 18, 1689.

JEHAN'ABAD, (1) a town of India, in the district of Burdwan, with a pop. (1872) of 13,409, is a center of the weaving trade; (2) a town in Gya District, India, with a pop. (1872) of 21,022, is also the home of cotton-weavers and of general commerce.

JEHANGIR' (*Jahangir*), a Moghul emperor who reigned at Delhi from 1605 to 1628. He was the son and successor of the great Akbar, and it was in his reign that the Rajputs first submitted to the Mohammedan power. J. himself married a Rajput princess; but his better-known wife was the beautiful Nur Jehan, whose name was placed on the imperial currency, and who lies buried with him in a marble mausoleum near Lahore.

JEISK, a town in the country of the Kuban Cossacks, in Cis-Caucasia, Russia, on a tongue of land between the Sea of Azov and the river Jeja, 50 miles S.W. of Taganrog, was founded in 1849, and is in a very flourishing state, being an agricultural center, with a pop. of 16,747.

JELLINGHI (*Jalangi*), a river of Bengal, the second offshoot of the Ganges, which branches off from the main stream at the

village of J., and joins the Bhagirutti at Nuddea to form the Hooghly. It is the least obstructed of the direct river routes to Calcutta; the annual boat-traffic is about 30,000 tons a year.

JELL'YFISH, the name given popularly to *Cœlenterate* animals belonging to the class *Hydrozoa*, and to the section *Discophora*. They are very common in the summer season around the British coasts. Each J. is a clear glassy bell, the clapper being represented by the *manubrium* or mouth of the animal. The smallest J. are the floating reproductive bodies of Zoophytes, the true J. or *Medusidæ* corresponding to the 'Naked-eyed' Medusæ of the earlier zoologists.

JENNER, Sir William, Bart., was born at Chatham in 1815, and was educated at University College, London. In 1844 he graduated as M.D., and four years later was appointed Professor of Pathological Anatomy in the University College. In 1852 he was elected Fellow of the Royal College of Physicians, and in 1862 was gazetted Physician in Ordinary to the Queen, and in the same year became Professor of the Principles and Practice of Medicine at the University College. In 1863 he was appointed Physician to the Prince of Wales, whom he attended during his severe illness in 1871–72. In recognition of his services then rendered he was made a K.C.B., having previously been created a baronet in 1868. He has written several papers of medical interest, and is widely known as the first who established that typhus fever and typhoid fever differed in kind.

JE'SI (the ancient *Æsis*), a town in the province of Ancona, Italy, 17 miles S.W. of the town of Ancona, with important manufactures of paper, silk, linen, and woollen hosiery, and trade in wine and olives. J. was the birthplace of the Romano-German Emperor, Friedrich II., and of Spontini, the composer. Pop. (1871) 13,472.

JEV'ONS, William Stanley, an English political economist, was born at Liverpool in 1835, and educated at University College, London, where he graduated in 1862. In 1866 he was appointed Professor of Logic, Mental and Moral Philosophy, and Cobden Lecturer in Political Economy, in Owen's College, Manchester, and in 1875 received the honorary degree of LL.D. from Edinburgh University. He has written several pamphlets bearing upon questions of political economy, but is best known by his *Elementary Lessons in Logic* (1870), and *Principles of Science* (1874).

JEW'EL, John, an English Protestant divine, born 24th May 1522, at Berrynarbor, Devonshire, entered Merton College, Oxford, at the early age of thirteen, but migrated to Corpus, whence he took his B.A. degree in 1540, and became a tutor of that college. On the accession of Edward VI. J. openly professed the Reformed faith, which he had previously practised in secret, and he acted as secretary to Peter Martyr on occasion of a public discussion at Oxford between the latter and certain Catholic divines. In 1551 he took his B.D., and at the same time obtained the living of Sunningwell, Berks, only to lose it in 1553 on the restoration of Catholicism by Mary. A temporary recantation was followed by flight, and for four years J. lived in exile at Frankfurt and Strassburg, at the latter place acting as vice-master of a college founded by his old friend Peter Martyr. Returning home at Mary's death, he was made Bishop of Salisbury by Elizabeth in 1559, and in that position signalized himself by his animosity to the old religion, and specially by a challenge, issued in a sermon preached at Paul's Cross, to produce a single writer of the first six Christian centuries who held the tenets of the Roman Church. This led to a controversy between the Jesuit Harding and himself, in the course of which he published his *Apologia Ecclesiæ Anglicanæ* (Lond. 1562), which has been translated into six different languages. J. died at Monkton Farleigh, Wilts, 21st September 1571. His *Works* have been edited by Dr. R. Jelf (8 vols. Oxf. Clar. Press, 1847).

JEWELL, Marshall, an American statesman, born at Winchester, N. H., Oct. 20, 1825. He was at first a tanner, but in 1850 engaged in business in Hartford, Conn., in which he was very successful. During the civil war he was an ardent supporter of the Union. He was elected governor of Connecticut in 1869, 1871, and 1872; was U. S. minister to Russia, 1873–74; and was made postmaster-general in 1874. Died at Hartford, Conn., Feb. 10, 1883.

JIKAD'ZE, or SHIKAT'ZE, the capital of the district of Zang, in Tibet, on the right bank of the Zangbo, 190 miles W. of H'Lassa. It contains a number of palaces, temples, and tombs, richly ornamented. The chief building is an immense palace or temple, the residence of one of the principal lamas, who has a suite of over 4000 persons. Pop. supposed to be about 100,000.

JOC'ELIN OF BRAKELOND, a Norman Englishman, native of St. Edmundsbury, who lived in the reign of King John, was monk and chaplain of the monastery of his native place. He wrote *Chronica Jocelini de Brakelonda* when in that position, recording the deeds of Abbot Samson, his superior, in a 'kind of monk or dog-Latin.' Carlyle in *Past and Present* gives a vivid, if occasionally strained, account of his book and contents, comparing him to Boswell, and describing him as a man 'of patient, peaceable, loving, clear-smiling nature.' 'Then also he has a pleasant wit.' See *Chronica*, edited by J. G. Rokewood (Camden Society, London, 1840).

JOHANN' VON SCHWABEN, also called Johann the Parricide, born about 1288, was the son of Rudolf, Duke of Swabia, and grandson of Rudolf, Duke of Habsburg. His uncle, the Emperor Albrecht I., having refused to make over to him, on his coming of age, the Duchy of Kyburg, which he had inherited from his mother Agnes, a Bohemian princess, J. conspired with some other Upper Swabian knights and killed him near Windisch, while he was crossing the river Reuss on an expedition to punish the mountaineers of the three rebel cantons of Switzerland. The conspirators fled, and all, save one Von Wart, died in wretchedness and obscurity, J., it is said by some, as a monk at Pisa in 1360.

JOHN I., afterwards canonized, was Pope from 523 to 526. Sent on a successful mission to the emperor at Constantinople by the Arian king Theodoric, he was nevertheless thrown into prison at Ravenna on his return, and died there.

JOHNSON, Bushrod R., a Confederate general, born in Ohio, Sept. 6, 1817, and graduated from West Point in 1840. He served in the Mexican war, and at the outbreak of the civil war, entered the Confederate service, and was made brigadier-general. He was engaged at Fort Donelson; was wounded at Shiloh; and was in command of a division at the time of Gen. Lee's surrender. He was promoted to the rank of major-general in 1864. Died in Illinois, Sept. 11, 1880.

JOHNSON, Eastman, an American artist, born at Lovell, Me., July 29, 1824. In 1845 he went to Washington, D. C., and soon acquired reputation by the merit of his works. In 1846 he removed to Boston, and in 1849 visited Düsseldorf, where he studied for a year. In 1858 he took up his residence in New York City. Among his numerous works the following are the most prominent: *The Card Players*, *The Savoyard*, *The Old Kentucky Home*, *The Drummer Boy*, *The Pension Claim Agent*, *The Boyhood of Lincoln*, *The Stage-Coach*, *The Kitchen at Mt. Vernon*, *Drop on the Sly*, *The Chimney-sweep*, *Post-boy*, *Organ-boy*, and *Lady at Prayer*.

JOHNSON, Edward, a Confederate general, born in Chesterfield Co., Va., April 16, 1816, and graduated from West Point in 1838. He served gallantly in the Mexican war, and was promoted for valuable services at Chapultepec and the city of Mexico. In 1861 he resigned his commission, and entered the Confederate service. He was made brigadier-general in 1862, and major-general in 1863. He was in command of a division at Gettysburg, and, with his entire command, was taken prisoner at Spottsylvania. At the close of the war, he retired to his farm in Virginia. Died at Richmond, Va., Feb. 22, 1873.

JOHNSON, Herschel V., an American statesman, born in Burke Co., Ga., Sept. 18, 1812, graduated from the State University in 1834, and entered the legal profession. He soon gained prominence as a lawyer and politician. He was elected governor of Georgia in 1853, and again in 1855; and in 1860 was a candidate for Vice-President, running on the same ticket with Stephen A. Douglas of Illinois. In 1863 he was elected a member of the Confederate Senate, which position he continued to fill until the fall of the Confederacy. After the war he was elected U. S. Senator, but was not permitted to take his seat under the reconstruction acts. Died in Jefferson Co., Ga., Aug. 16, 1880.

JOHNSON, Reverdy, an American lawyer and statesman, was born at Annapolis, Md., May 21, 1796. He was admitted to the bar in 1815, elected a Maryland senator in 1821, was a U. S. senator 1845–49 and 1863–68, and Attorney-General of the United States 1849–53. In June 1868 he was sent as ambassador to London, where he negotiated a treaty on the Alabama Claims. This was, however, rejected by the Senate, and he was recalled in 1869. Died at Annapolis, Md., Feb. 10, 1876.

JOHNSON, Richard Mentor, an American soldier and statesman, born in Kentucky, Oct. 17, 1780, was educated at Transylvania University, and entered the legal profession. He was a member of Congress, 1807–19, and in 1813 raised a regiment of volunteers, and rendered brilliant service under Gen. Harrison at the battle of Thames, where he was severely wounded. He was a member of the U. S. Senate, 1819–29, and a member of Congress, 1829–37. In 1836 he was a candidate for the Vice-Presidency, running upon the ticket with Martin Van Buren for President. The election was thrown into the Senate, no candidate having a majority of the electoral votes, and Mr. Johnson was chosen Vice-President by that body. Died at Frankfort, Ky., Nov. 19, 1850.

JOHNSON, Thomas, an English botanist, was born at Selby in Yorkshire, brought up as an apothecary in London, the University of Oxford conferring on him the degree of doctor of

physic, and died in September 1644 from a wound received whilst fighting in the royal cause at Basing. He was the first who published an account of a botanical exploration in England (*Iter Cantianum*, 1629), the first who gave a catalogue of a defined botanizing ground (*Ericetum Hampstediense*, 1632), the first who separated British plants from foreign ones (*Mercurius Botanicus*, 1634), and from his greatly improved edition of Gerard's *Herbal*, describing 2850 plants (1633).

JOHNSTON, Albert Sidney, an American general, born in Kentucky in 1803, and graduated from West Point in 1826. In 1836 he resigned his commission in the army, and removing to Texas, entered the Texan army. Beginning as a private, he was rapidly promoted until he was chief in command. His last promotion led to a duel with Gen. Felix Houston, whom he succeeded, in which he was wounded. In 1838 he was made Secretary of War of Texas, and in 1839 led a successful expedition against the Cherokee Indians. In 1840 he became a planter, and in 1846 entered the U. S. service against Mexico, in command of a regiment of Texan volunteers. He served gallantly throughout the war, especially distinguishing himself at the battle of Monterey. In 1857 he commanded a U. S. expedition against the Mormons, in conducting which he showed much energy and prudence. In 1861 he resigned his commission, and entered the Confederate service. He commanded the Confederate army at the battle of Shiloh, and was killed on the first day of that action, April 6, 1862.

JOHNSTON, Joseph Eccleston, an able Confederate general, was born in Virginia, February 1807. In 1829 he entered the U. S. army. He served as captain of engineers in the Mexican war and became a colonel. In 1860 he was made quartermaster-general, resigning April 22, 1861, to enter the Confederate service. He led the Southern soldiery at Bull's Run, and in the spring of 1862 held the command at Richmond. Wounded at Fair Oaks, May 31, 1862, on his recovery he was made general of the army in Tennessee. Here and in Georgia he sustained a series of reverses, and finally was superseded by Hood, July 17, 1864. Later he was called to lead the scattered forces in Georgia, S. Carolina, and Florida, but was unable to stem Sherman's victorious march. On hearing of Lee's surrender of the main army he capitulated to Sherman, April 26, 1865. Since the war he has resided in Georgia actively laboring for the resuscitation of the shattered South. See his *Narrative of Military Operations* (New York, 1874).

JOHNSTOWN, a town in Pennsylvania, between the Conemaugh River in the N. and Stoney Creek on the S., 79 miles E. of Pittsburg by rail. It is on the Pennsylvania Canal, and has a rolling-mill and Bessemer steel work (in 1875 employing 6000 men), a wooden-mill, tannery, cement works, &c. The surrounding hills are rich in iron, bituminous coal, limestone, cement and fireclay. Here are the extensive works of the Cambria Iron Company. Pop. (1880) 8386.

JOHNSTOWN, in Fulton Co., N. Y., on Cayadutta Creek, and the Fonda, Johnstown & Gloversville Railroad, 4 miles from Fonda. It is engaged in mercantile pursuits and manufacturing, and has a large number of glove and mitten factories. Pop. 5013.

JOHORE', a Mohammedan state on the most southern point of the Malayan peninsula, 15 miles S. of Singapore, founded in 1511 by the inhabitants of Malacca, who had been driven out by the Portuguese. Area, 20,000 sq. miles; pop. 40,000 Malays and 60,000 Chinese. Exports, gambier, pepper, and tea. British relations with the Sultan of J. date from 1818; six years later he ceded the island of Singapore. The present ruler is a most enlightened prince, and has greatly developed the resources of the country. In 1866 he visited England, and was created a Maharajah. He has also received the orders of the Star of India, and of St. Michael and St. George.

JOLIET, a city of Illinois, on the Aux des Plaines River and the Illinois and Michigan Canal, 36 miles S.W. of Chicago by rail. It is the seat of the state penitentiary, perhaps the largest institution of the kind in the country, usually containing 1300 convicts, who are employed industrially. J. has an immense iron and steel work (employing some 2500 men), large building-stone quarries, cement works and brickfields. It is near the Wilmington coalfields, and draws an abundant water supply from sixteen artesian wells. Pop. 20,000.

JONES, Owen, the Mæcenas of Welsh literature, was born in the Vale of Myvyr, Denbighshire, in 1741, and came early to London, where he made a considerable fortune as a furrier in Thames Street, and where he died September 26, 1814. He founded the Gwyneddigion Society (1771), published an edition of the poems of Davydd ab Gwilym (1789), the *Myvyrian Archæology of Wales* (3 vols. 1801–7), &c., and formed a collection of transcripts of ancient Welsh MSS. (50 vols. 4to.), which is now in the British Museum.

JOPLIN, a city of Jasper Co., Mo., 336 miles W. of St. Louis. It has two railroads, and is engaged in lead and zinc mining, manufacturing, and agriculture. Pop. 10,000.

JORTIN, John, D.D., an English divine and author of Huguenot descent, was born at London, Oct. 23, 1698. Passing from the Charterhouse to Jesus College, Cambridge, he gained a fellowship in 1719, and was ordained priest in 1723, having already published a volume of Latin poems, *Lusus Poetici* (Camb. 1722). In 1727 he accepted the college living of Swavesey, Cambridgeshire, but resigned it the year following, and repairing to London soon attracted notice by his eloquent sermons. After holding the rectories of St. Dunstan-in-the-East (1751) and Eastwell in Kent, he was appointed in 1762 domestic chaplain to Dr. Osbaldeston, Bishop of London, who also gave him a prebend of St. Paul's, the living of Kensington, and in 1764 the archdeaconry of London. He died Sept. 5, 1770. Besides sermons, J. published eleven works, which have been issued in an uniform edition, and of which may be noticed *Remarks on Ecclesiastical History* (3 vols. 1751–54), *Life of Erasmus* (2 vols. 1758–60), and *Remarks upon the Works of Erasmus* (1760).

JOWAR' (*Jawar*), the chief town of the native state of the same name, in India, 68 miles N. of Bombay. It is an insignificant place, lying within the British district of Tanna. The *state* of J. has an area of about 534 sq. miles; pop. (1872) 37,406; revenue about £6000; no tribute is demanded, but a nuzzurana or relief of £2000 is paid to the British on the accession of the Rajah. Timber is the most valuable of the productions. The dynasty is said to have been very powerful when founded 500 years ago.

JOWETT, Rev. Benjamin, D.D., an English scholar and theological critic, born at Camberwell in 1817, was educated at St. Paul's School, London, and became a student of Balliol College, Oxford, in 1835, a fellow in 1838, and tutor in 1842, in which year he was also ordained. In 1853 he served on and compiled the report of a commission to consider the application of the competitive system to the Indian civil service, of which Macaulay and Lord Ashburton were also members, and in 1855 was appointed, through Lord Palmerston, Regius Professor of Greek. An article by J., *On the Interpretation of Scripture*, in the famous *Essays and Reviews* (1860), led to his trial and acquittal in the Vice-Chancellor's court on a charge of heresy. In 1870 he succeeded Dr. Scott as Master of Balliol, and in 1875 received from the University of Leyden the honorary degree of D.D. J. has published a commentary on three of the Pauline epistles (1855), a translation of the *Dialogues of Plato* (4 vols. Oxf. 1871; 2d ed. 5 vols. 1876), and an edition of the *Republic*. He is a refined, subtle, suggestive, but inconclusive thinker.

JUDGMENT, The Day of, the day foretold by Christ, when He shall reappear to judge solemnly and finally the entire human race. The prediction in St. Matthew xxiv. 14, glances at the approaching destruction of Jerusalem both as a warning to His hearers of the doom which their obstinate incredulity is bringing on themselves, and as a pledge to those who are soon to behold the fulfillment of His prophecy, that the Great Day, 'the end,' 'the consummation,' announced by Him shall surely come. The near approach of His own death, and the gathering in Jerusalem for the Paschal celebration of the dispersed Jews from all parts of the Roman Empire, imparted a touching solemnity to our Lord's last pregnant instructions, and of themselves suggested the scene and the motive of the Last Day, with the preceding resurrection and the bringing together men and angels on the theater of the Redeeming Sacrifice.

1. There are to be visible, striking, and unmistakable events, forerunners of this termination of the present order of things, and signs held up before the nations warning them to prepare for Christ's second coming. 'This Gospel of the Kingdom shall be preached in the whole world, for a testimony to all nations, and thus shall the consummation come' (Ibid.). He does not say that all nations shall accept the Gospel and enter into the bosom of the Church before the Last Day. But they shall hear the saving truths of Christianity fairly proposed to them, so that they shall have no excuse for rejecting Christ and refusing to profit by His salvation. 'Representatives of all nations will, however, come into the Church, and bow to the Kingly power of the Father.' With this event of the Gospel brought home to every tribe of earth is coupled the conversion of the Hebrew race. 'I would not have you ignorant,' . . . St. Paul writes to the Romans, 'of this mystery . . . that blessedness in part has happened in Israel, until the fulness of the Gentiles shall come in, and so all Israel should be saved' (xi. 25, 26).

Probably the reappearance on earth and the preaching of Enoch and Elias, will have for immediate purpose the bringing to the feet of the Saviour of the entire descendance of Jacob. The sublimest poetry is thus intimately mixed up with the mighty events which are to close the terrestrial history of mankind. 'Elias indeed shall come, and restore all things!' Christ says in answer to His disciples, who had just inquired, 'Why then do the

Scribes say that Elias must come first?' Yes, Elias shall come; nay, as the question was asked immediately after the Transfiguration, Christ adds: 'But I say to you that Elias is already come, and they knew him not.' This our Lord meant of John the Baptist, as we are positively assured in St. Matthew xi. 14. He was the living image of Elias. But this coming by proxy, and his transient appearance upon the Mount of Transfiguration, were only a reaffirmation of the traditional belief among the Hebrews, that Elias would indeed walk the earth once more and preach before the end of all things. St. Augustine, in his turn, re-echoes the prophesy of Our Lord, and that of Malachias iv. 5, 'Behold I will send you Elias the Prophet before the coming of the great and dreadful day of the Lord.' Another sign is the general revolt from Christ consequent upon the appearance among the nations of that dreadful power called Antichrist. There are other physical and moral convulsions described by Our Lord in the Gospel. Still, He will not allow any one of His disciples to fix the precise time for the coming Doom. 'Concerning that day or hour no man knoweth, not even the angels in heaven, nor the Son, but the Father.' Ever since the first age of Christianity, the most saintly and learned men in the Church, have been led away by the calamities of their own times to predict the nearness of the Last Day. It is a temptation to which many such men have yielded in our own.

The best biblical scholars of our day, profiting by the mistakes of their predecessors as well as by the light let in upon this difficult subject by modern criticism, take a broad view of the divine plan with regard to the labors of the church and the extension of the Kingdom of God, that is, of His rule over the minds and hearts of men of all nations. The church has not, until now, had a fair chance to preach the Gospel, and foster the growth of Christian life and civilization among the peoples of Central Africa, let alone the vast and swarming regions of Asia, the countless tribes of South America, and those who inhabit Australia and Oceanica. Steam, electricity, and the constant advance of geographical and ethnological science, are only preparing pathways for the missionary hosts of the near future.

As to the mysterious power so much and so fanatically discussed as 'Antichrist,' it is sufficient to say, that we may adopt safely in the nineteenth century the description of that power or its impersonation given by the Apostle St. John in the very first century of the Christian era. 'Little children, it is the last hour: and as you have heard that Antichrist cometh, even now there have become (*i. e.*, there have been) many Antichrists; wherefore we know that it is the last hour. . . This is Antichrist, who denieth the Father and the Son' (1 Ep. of St. John ii. 18–22). In chapter iv.: 'Every spirit which confesseth that Jesus Christ is come in the flesh, is of God: and every spirit that dissolveth Jesus, is not of God: and this is Antichrist, of whom you have heard that he cometh; and he is now already in the world.' The Docetic heresy in the last years of the Apostle's lifetime, taught that Christ bore only the semblance of our human nature; this denial of His humanity was made by several other cotemporaneous sects. This is what St. John meant by saying that 'many Antichrists' had already come. This spirit of error which denied in Christ the union of the two natures, divine and human, the Apostle rightly designates as Antichrist. This spirit continued to disturb the Christian world for centuries after St. John. It reappeared under one form or another in every century down to the eighteenth, when Voltaire boldly raised the Antichristian standard and made open war on revealed religion with the watchword *Erasons l'Infame!* His spirit has waxed more and more powerful in France and throughout the ancient Christendom ever since his day. The scientific materialism of England and the Continent goes further than Voltaire; and all the governmental forces of France and even Italy are now employed in openly dechristianizing education, and in killing the faith in Christ in the minds and hearts of the French and Italian populations. So the spirit of Antichrist is, to all seeming, more threatening, more powerful, more aggressive, more deadly, than at any former period. But the spirit of Christ is also abroad, possessing itself of all the forces of modern science and civilization, and firing men's souls to spread the reign of Christ into every land and among every tribe of human kind. That the day shall come—a far-distant day—when 'the Antichrist,' some one awful power or personage, will be permitted to try men's souls to the utmost, must be admitted by anyone who has studied carefully the letter of the New Testament writings, and the authorized interpreters of Holy Writ down to our own days. It is the belief of the Fathers, beginning with St. Irenæus, and ending with the latest Doctors of the Church, that the Antichrist of the last days is a real, individual personage. Before his brief reign, however, is to come the glorious spread of Christianity over the whole earth, an era of Christian progress and civilization such as the world has not yet beheld. As history ever repeats itself, to this epoch will succeed one of downward reaction, when man, lifted up to the highest degree of enlightenment and possessed of the most abundant and accessible means of enjoyment, will imitate the example of the patriarchal nations before the Deluge, consider themselves too great to obey God. The degeneracy which is to come after this era of progress and enlightenment, is predicted as 'a revolt,' as 'an opposition to' and 'a being lifted up above all that is called God or that is worshiped.' No wonder that some pious souls who read of Nihilist conspiracies, or of the bold Anarchist associations of our time, should consider that the motto of these last named rebels against all law and society, *Ni Dieu, ni Maitre*, 'no God, no Master,' should portend the near approach of Antichrist. But the end is not yet—'The mystery of iniquity,' St. Paul tells us (2 Thess. ii. 7), 'already worketh. . . And that WICKED ONE shall be revealed, whom the Lord Jesus shall kill with the Spirit of His mouth and shall destroy by the brightness of His coming.' There will be no mistaking this capital enemy of God and man. It will require the personal reappearance on earth of Christ Himself to annihilate the impostor. Christian Art has left us one magnificent representation of this coming and of the gigantic impiety which is to be its occasion, in the frescoes of Luca Signorelli in the Sanctuary of Orwiets. The glorious masterpiece of the painter shows how clearly and firmly Catholic teaching placed all these prospective scenes of the last days of the world before the popular mind. The grandest Christian Temples of Catholic lands were pictorial Bibles recalling the history of the race of the past, and setting forth for the instruction of the people, as illuminated by the prophetic utterances of the Apostolic writings in the New Testament, the terrible and sublime scenes connected with the second coming of Him who is the Restoror of all things and the Judge of the whole earth.

St. Augustine, who wrote his great work *On the City of God*, while the Barbarians were overrunning and destroying the Roman Empire and the old order of things, and after they had taken, pillaged, and partially destroyed Rome itself, might have been justified in identifying Arius and Arianism with 'the spirit that dissolveth Jesus,' and in seeing in the general social disruption and the advancing lines of flame which marked the progress of the victorious Barbarians, the real fire sent before the face of the Lord to destroy and purify, and to prepare the world for judgment. His mind, however, reaches forward to the end of time, and calmly surveys, in the light of the divine oracles, the events immediately preceding the Day of Doom. He conjectures that the appearance of Elias will be the first certain warning of its near approach; then will come the conversion of the Hebrew race, the persecution of Antichrist, Christ's second coming, the resurrection, the separation of the good from the wicked, the destruction and renovation of the world. St. Thomas Aquinas differs from him in believing that there will be a general conflagration before the Judgment destroying all life on the earth, and purifying it for the coming of the Judge.

2. This brings us to the last day itself with the mighty events in which we shall all take part. St. Thomas says, that 'much cannot be known to a certainty as to the way in which that judgment will take place and in which men are to be brought together.' Jerusalem, in which the great sacrifice of Redemption was accomplished, is to be—such is the most probable opinion—the seat of these great assizes of the human race. We are not to forget, in estimating the possibility of collecting all mankind and the angelic hosts who had ministered to them, in any one limited spot of earth, that after the Resurrection and the ending of the present period of time, all the relations both of time and space will undergo a complete change. The blessed, once reunited to their bodies, will be like Christ Himself—the First-Born from among the dead—spiritualized in their whole being and elevated above the present conditions and laws of sense. At the 'Sound of a Trumpet,' the mere agent or symbol of the Creative Word which said, 'Let there be light, and there was light,' the new creation will take place; the dead will arise and come to judgment. To Christians who believe in the recital of the doings of that Eternal Word contained in the very first page of the Bible, there will be no questioning the power which gathers instantaneously the dust of these myriads of human bodies, without mistake or confusion. We believe in the Infinite God and in the almost infinite number of the angelic spirits who minister to His will, and guard throughout all the cycles of all the ages the sacred dust of every human body, made in the likeness of His body who became incarnate for us, and to prepare us for the glory and triumph of that Last Day. The dead having arisen and come together around these hills of Sion, the heavens will become suddenly illumined by 'the Sign of the Son of Man,' the effulgent Cross preceding the Crucified. 'You shall see'—it is the Saviour who speaks—'the Son of Man sitting on the right hand of the Power of God, and coming in the clouds of heaven' (St. Matth. xxvi. 64). The Angels who escort him—'the angels of His power, in a flame of fire yielding vengeance to them who know not God,' complete the heavenly apparition. This is the mighty army which has swept over the whole earth destroying Antichrist and all the Sons of Pride. The

Judge is seated. It is the great day for which the Eternal and all-patient God has been waiting, in order to vindicate, in presence of all intellectual beings ever created, his dealings with man and angel, to compel even Lucifer and his followers to proclaim that His ways are both wise and just.—The good are separated from the wicked, conscience itself and the irresistible force of truth, apart from the agency of the Angels, effecting this eternal separation, just as the long-compressed flames leap heavenward when set free, and the lead sinks by its own weight into the depths of the ocean. The good extend their shining ranks on the right hand of the Throne, gazing with rapture unspeakable on that thorn-crowned King, on the radiant wounds in hands and feet and side,—the scars received in the battle which He fought and won alone, and on whose issue depended the Eternal Years now beginning for them. The wicked look on Him, and read on His face, in the wounds of feet and side and outstretched hands, as in the Book written by Infinite Love and Truth, the condemnation of their own blindness, ingratitude, and inconceivable perversity. Catholics are taught that Death is the great revealer, tearing the mask from our own face, and removing the veil which hides from us in this life the invisible world,—the only real and eternal.

No angel and no man present on that day,—the triumph of Truth and Justice,—but must confess that God, the Father present and half-revealed to the Just in that 'Power' at whose right hand the Judge is seated, did indeed love the world and every soul in the world in giving the Son to the shameful death of which yonder cross is the emblem. Nearest to the Throne are the Apostles, the witnesses of His labors and death, of His resurrection and ascension, who sealed their witness with their blood and their mission with miracles as great as His and greater, while bearing His name to the nations. Nearer even to Him than these, is the Mother, the woman stronger than all womankind, who gave birth to Him in a stable and stood, comforting and supporting, beneath His cross.—In this presence, then, the examination and judgment proceed. The Apostles, the Fathers and Teachers of the new people whom Christ created for Himself on earth, are the Assessors of the Divine Judge. The Apocalypse (xx. 12) says the books will be opened. That is, as theologians explain it, the divine light in which the Infinite Intelligence holds the remembrance of all things, will so flood the memory of each person there as to bring the whole life into distinct and vivid recollection. The life of each will be made clearly visible to all as to one's self. Even the sins of the Just as well as their heroic repentance, and their generous imitation of the Master will stand forth to proclaim the Divine Mercy and the victory of Christ's grace. So with the wicked: in the overwhelming light of that Truth they will examine the guilt incurred by a long line of willful transgressions, of warnings neglected, opportunities lost, time ill-spent, God set at defiance, and all the advantages of birth, education, position, and intercourse with the virtuous turned against the God who gave them.

It is the belief of the most enlightened teachers, that each individual will be arraigned and sentenced separately. Here, again, we must make our Christian knowledge enlighten and correct our imagination. That Last Day will not be measured by the light of our longest in midsummer tide. The Creator of the light, who will preside at that solemn session knows how to dispense it according to the need of His creatures and His own wise purposes. And then, as St. Thomas Aquinas and all the great Schoolmen teach, for the human mind after the Resurrection, as for the Angelic, the measure of duration will be far different from that which is based on the revolution of the planets. Eternity will have begun for us, when the Resurrection Trump has sounded; they who stand for judgment on that awful day, will have little thought of reckoning the hours. Christ Himself describes the uttering of the sentence, and the general doom pronounced on the just and the unjust.

St. Thomas thinks that no oral utterance will be used toward each person in particular. The secret voice of God in the conscience would, in this supposition, seal the fate of the individual. To the multitude of the elect Christ will say: 'Come, ye Blessed of My Father, possess you the kingdom prepared for you.' And to the lost: 'Depart from Me, you cursed, into everlasting fire, which was prepared for the Devil and his angels.' Not the least noteworthy circumstance in this twofold utterance, is the fact that Christ bases the award in each case on the fulfillment or the neglect of the divine virtue of brotherly charity, making the discharge of its manifold offices as obligatory as if performed toward Himself. Thus the practical love of our brethren around us in the society in which we live, a love exalted by having our Saviour and Benefactor as its object, is to be the measure of our merit on that Last Day.

The neglect of these social charities, obligatory on all because the discharge towards our brethren of the infinite debt of gratitude due to the Creator and Redeemer of our souls, will be the cause of damnation to most men. 'I was hungry, and you gave Me to eat. I was thirsty, and you gave Me to drink. I was a stranger, and you took Me in; naked, and you covered Me; sick, and you visited Me. I was in prison, and you came to Me. . . Amen I say to you, as long as you did it to one of these My least brethren, you did it to Me' (St. Matth. xxv.). Never did human wisdom or the philosophy of the most cultured nations, or the far-seeing statesmanship of the most renowned legislators, conceive of such obligations as these or dream of such a sanction to their laws. It was reserved for One who was at the same time both very man and true God to make of our fellow-men His brethren, to transfer to them the debt of gratitude and practical love which all human beings owe Him; and on the loving discharge of this debt to found the title of each one of us to Eternal Life, on its non-discharge to base our doom to Eternal Death. The wonder is that our Socialists do not take up this twenty-fifth Chapter of St. Matthew, and with it appeal to all who believe in Christ to live up to its spirit and thus help to make of earth an image of Paradise, of this life a scene of brotherly love preparatory to Heaven.

JUDSON, ADONIRAM, D.D., an American missionary, born at Malden, Mass., Aug. 9, 1788; graduated from Brown University, 1807; and from Andover Theological Seminary, 1810. He engaged in teaching at Plymouth, Mass., and while so engaged published *Elements of English Grammar and Young Ladies' Arithmetic*. In 1812 he set sail for Burmah as a missionary, but changing his views relative to baptism on the way, he united with the Baptists. In Burmah he endured great hardships, spending two years in prison in momentary expectation of death; but he lived to see his work abundantly prosper, thousands of the natives being converted to Christianity. Died at sea, April 12, 1850.

JUG'ULAR VEIN, one of the large veins on either side of the neck, so named from Lat. *jugulum*, the collar-bone, which 'joins' (*jungere*) the neck and shoulders.

JULIAN. GEORGE WASHINGTON, an American statesman, born at Centreville, Ind., May 5, 1817; was educated at the public schools, and began the practice of law in 1840. He was a member of Congress, 1849–51, and was one of the organizers of the Republican Party. In 1861 he was again elected to Congress, which position he held until 1869. He has been an earnest advocate of woman's suffrage.

JÜ'LICH (Fr. *Juliers*), formerly a duchy (1600 sq. miles), on the W. bank of the Rhine, is now a part of Rhenish Prussia. It was a countship before its union with Berg in 1348.—J. (Lat. *Juliacum*), once capital of the duchy, on the river Roer, 26 miles W. of Köln, is said to have been founded by Julius Cæsar, has lively trade, and a pop. of 4802.

JUMALPORE' (*Jamalpur*), a town in the district of Monghyr, Bengal, British India, 721 miles N.W. of Calcutta; pop. (1872) 10,453. It contains the largest iron workshops in India, the property of the East India Railway.

JUNGIPORE' (Jangipur), a town in Murshedabad district, Bengal, British India, on the left bank of the Bhagirutti, 130 miles N. of Calcutta. Pop. (1872) 11,361. It is a great mart of river traffic, and also of the silk trade.

JUSTIN I. *the Elder*, Eastern Roman Emperor, was born in the hamlet of Tauresium (450 A.D.) in Dardania. Originally a Slav or Gothic shepherd, he went to Constantinople to seek his fortune. Being enrolled in the guards he made himself famous for courage in the wars with Persia, and rose from tribune to senator and commander-in-chief. On the death of Anastasius I. in 518 he was proclaimed emperor, though he could neither read nor write. J. left the administration of affairs to Proclus, allied himself with the adherents of the Orthodox Church, and (520) adopted his nephew Justinian. A war with the King of Persia, the occurrence at Antioch of a disastrous earthquake, and the measures he adopted for making good its ravages, are the chief events of his later career. He died August 1, 527.—J. II. *the Younger*, nephew of Justinian, ruled from 565 to 574, when he became insane. He died 26th September 578. In his reign the Lombards wrested Italy from the empire.

K.

KAISER-I-HIND (Emperor of India), the Persian, or rather Hindostani, title by which Queen Victoria was proclaimed Empress at the great Durbar at Delhi on 1st January 1877. This title, which was settled after much consideration, commends itself to Persian scholars. The term 'Kaiser' has been erroneously conjectured from its spelling to be borrowed from the German, but it is, in truth, a well-known Persian word, derived through the Arabic from the Greek, and is to be found in a hackneyed quotation from the epic poet Firdousi. Persian is the court and diplomatic language of India; and under the disguise of Hindostani, was until lately the regular language of British administration.

KÁKAPO, the Maori name of the ground or night parrot of New Zealand, *Strigops habroptilus*, belonging to the family Psittacidæ. It is remarkable as possessing a considerable development of wing, and yet never attempting to fly. On this account it is being rapidly exterminated, chiefly by dogs and rats, and is already very rare, except in the wild and uninhabited region at the S.W. extremity of the colony.

KALAFAT', or CALAFATU, a fortified town in the S.W. of Wallachia, on the left bank of the Danube, opposite the Turkish Widdin. It commands a winding stretch of the Danube, and was the scene of severe conflicts between the Russians and Turks in 1829 and again in 1854. Pop. 2500. There was continuous cannonading between K. and Widdin at the beginning of the Russo-Turkish war in May 1877.

KALAKAU'A, DAVID, seventh king of the Hawaiian Islands, born at Honolulu, Nov. 16, 1836, and educated at the royal school of Honolulu, an institution under English management. He was a descendant of one of the ancient kings of Hawaii. Upon the death of Lunalilo in 1874, Kalakaua was elected king of Hawaii.

KALI', the goddess who figures most prominently in the Hindu religion. As Parvati, she appears as the wife of the destroyer, Siva; as Durga, she has given her name to the Durga Pujah festival, the great annual holiday of Bengal; her other names are Bhawani and Devi. She has been identified with the Isis of Egypt and the Greek Hecate. K. was not known in the earliest period of the Mahabharata; and there is much plausibility in the theory that her bloody worship, with that of her husband, was borrowed from the aboriginal tribes. It is abundantly established that human sacrifices were, even to a recent period, offered in her honor, though such a practice is most abhorrent to the primitive spirit of Hinduism. K. is represented of a dark blue color, with distorted countenance, and a necklace of human heads. It is said that the name of Calcutta is derived from K.-ghat.

KAMEHA'MEHA I., a king of the Hawaiian, or Sandwich Islands. On the death of his uncle, Kalaniopu, King of Hawaii, he became head chieftain over a part of that island. A man of aspiring ambition and indomitable courage, he instituted a series of conquests, which made him monarch not only of Hawaii, but of the entire Hawaiian group. He has been called 'the Napoleon of the Pacific.' Died May 8, 1819.

KAMEHAMEHA II., LIHOLIHO, eldest son and successor of Kamehameha I. He failed to inherit the sterner virtues of his father, and was intemperate and dissolute. In 1820 he permitted missionaries to land upon Hawaiian shores and begin their work among his subjects. He visited England in 1823, taking with him his favorite queen, in the hope of securing the friendship of that nation, and was favorably received. But both he and his queen were taken sick with measles, and died in London, July, 1824. Their remains were returned to Hawaii by the British government.

KAMEHAMEHA III., KANIKEAVULI, a brother of Kamehameha II. He was educated by the missionaries, and in 1833 ascended the throne, two queens having acted as regents from 1823 to that time. Although somewhat dissipated in his earlier years, he was always willing to receive good advice on national matters, and usually pursued a wise course as ruler. He conferred upon his people a constitution and a code of laws; and treaties were made with the principal European nations. Great progress was made during his reign in education and agriculture—indeed, in all matters pertaining to civilization. He has justly been called 'Kamehameha the Good.' Died in Dec., 1854.

KAMEHAMEHA IV., ALEXANDER LIHOLIHO, a nephew of Kamehameha III. He was educated by the missionaries, and became King in 1854, upon the death of his uncle. He traveled abroad, visiting the United States, England, and France. He was a polished gentleman, and was fond of military pursuits and pageantry. He established the Queen's Hospital in Honolulu, by means of subscriptions which he himself had solicited in England. Died Nov. 30, 1863.

KAMEHAMEHA V., LOT KAMEHAMEHA, a brother of Kamehameha IV. In his early career he had been dissolute, but changed the manner of his life before ascending the throne, which he did in 1863, upon the death of his brother. His reign was marked by numerous dissensions with the foreign element, beyond which it was uneventful. Died Dec. 11, 1872.

KANGAROO APPLE, the popular name of the plant *Solanum laciniatum*, found in Australia, Tasmania, and Peru. When ripe the fruit is wholesome, but when unripe it is acrid and dangerous.

KANKAKEE, in Kankakee Co., Ill., on the Kankakee River. Four railroads pass through the place, and it carries on a large trade with the surrounding country. It has one of the finest water powers in the state, and is extensively engaged in manufacturing. It is the seat of the State Hospital for the Insane. Pop. 5783.

KARENS, a hill tribe in British Burmah, numbering about 330,000 souls. Some wander about the hills, while others have settled as cultivators on the plains. Their traditions have a singular Jewish tinge, and they have afforded to the American Baptist and French Roman Catholic Missions a most successful field of labor. Out of 330,000 in all British Burmah, about 30,000 have become converted. They have also signalized themselves by their readiness to accept British rule. See *The K. of the Golden Chersonese*, by Colonel Macmahon (Lond. 1876).

KARLS'BAD ('Karls' bath'), a celebrated watering-place of Bohemia, in the pine-clad valley of the Tepel, a tributary of the Eger, 76 miles W.N.W. of Prag by rail. The springs, according to a tradition, were discovered by Karl IV. in 1347. They have a maximum temperature of 167° F., and gush forth with violence from apertures in the hard rock (*Sprundelschale*) on which the most of the town is built. The oldest, hottest, and most copious spring is the Sprundel, which arises in a volume 1½ feet in diameter to a height of 3 feet (formerly 6 feet). Especially efficacious in liver complaints, the waters chiefly contain sulphur, salt, and carbonate of soda. About two million gallons are discharged daily. There were 18,000 visitors in 1872. K. has a theater and many fine hotels, reading-rooms, and cafés. Goethe frequently resided here. Pop. (1869) 7291.

KASANLIK', a town of Turkey, in the vilayet of Adrianople, at the entrance to the Balkan Pass, 85 miles N.W. of Adrianople. It lies in a fertile and well-irrigated plain, and produces fine attar of roses (5000 lbs. of blossoming rose-leaves yielding 1 lb. of perfume, valued at about $90), walnuts ($99,000 worth yearly), and beautiful walnut timber. Pop. 10,000.

KAUFF'MANN, ANGELICA, a well-known painter, born October 30, 1741, at Chur in the Grisons, received her first instruction from her father, and after 12 years' study in Italy removed to London (1765), where she achieved a brilliant success, painting the portraits of the royal family, and being elected one of the thirty-six original members of the Royal Academy. A marriage with a Swedish adventurer, the *soi-disant* Comte de Horn, was followed by a separation (1768), and in 1781 Angelica married a landscape-painter, Antonio Zucchi, who had followed her from Venice. Returning to Italy the year after, she there lost both husband and fortune (1795), and died at Rome. November 5, 1807. Her pictures—graceful but feeble allegories, often introducing her own beautiful portrait—abound in all the galleries of Europe; and a fresh interest has lately been lent to her history by its forming the basis of a charming fiction by Miss Thackeray—*Miss Angel* (Lond. 1875).

KAUF'MANN, K., VON, a distinguished Russian general of German descent, was educated at the Military School for Engineers, served with brilliant success in the Caucasus, acquiring the rank of general and the post of chief of the field officers under Mouravieff. During the Crimean War he was chosen to settle

with General Williams the conditions for the capitulation of Kars. He was successively appointed chief of the staff of the Grand Duke Nicholas, Minister of War, and Governor of Lithuania *vice* General Mouravieff, in 1865. To K. and Milliutin is due the credit of entirely re-organizing the army. In 1867 K. was nominated Governor-General of the vast Asiatic territories of the Sir Daría and Semivetshkaia. After long negotiations with the refractory Emir of Bokhára, K. defeated the forces sent against him, and concluded a treaty (1868) by which Samarcand and a large territory was ceded to Russia. In 1873 followed the taking of Khiva. K.'s masterpiece of generalship. Surrounded on all sides by immense deserts, Khiva was approached by three columns, comprising 12,000 men, from the Caspian, from Orenburg, and from Tashkend, the last of these being under his own command. The troops were skillfully extricated from the hardships of their terrible march, and Khiva was taken on the 10th June 1873. In consequence of a treaty between Russia and England the army was withdrawn from Khiva, but the campaign greatly extended Russian dominion, and established the unconditional authority of Russia in Central Asia.

KAYE, Sir John William, the distinguished chronicler of various epochs in the history of the British rule in India, was born in London in 1814. In 1822 he passed from Addiscombe into the Bengal Artillery, but resigned military service for literary pursuits in 1841. He founded the *Calcutta Review;* and eventually entered the Home Service, and filled the appointment of Secretary in the Secret and Political Department of the India Office from 1859 to 1874. K. died 24th July 1876. Among his works may be mentioned *The History of the War in Afghanistan; The History of the Sepoy War in India*, of which he lived to publish only the third volume, out of a promised four; and *The Life and Correspondence of Sir John Malcolm.* His peculiar merit is to have used his official and private sources of information so as to popularize among Englishmen the great events and leading heroes of Indian history.

KAZALY, a Russian town and fort in Turkestan, and on the Sír-Daría (anc. *Jaxartes*) 40 miles from its mouth. It is the first of the forts on the so-called 'line of the Sír-Daría,' and was founded in 1847. The earthworks of the fort, which is garrisoned by 1000 men, are 200 yards square, surrounded by a ditch. Between the fort and river is the navy yard, and on the land side is the thriving town of K. with a pop. of over 5000. There is here a Cossack colony, and the chief products are cotton and a wine of excellent quality.

KEARNEY, Dennis, born in Ireland, in 1847, and came to America when a boy. After following the sea for some time, he settled, in 1872, in San Francisco. He took an active part in politics and became noted for his violent speeches against capitalists and the Chinese. At one time he had large influence with the laboring classes of California, but this he has now lost. In 1880 he was sent to prison for six months, for the public use of incendiary language.

KEARNEY, Philip, an American general, born at New York, June 2, 1815, educated at Columbia College, and studied law. In 1837 he entered the army, and soon afterwards visited Europe. He pursued military studies in France, and served with the French in Algiers, where he was decorated with the Cross of the Legion of Honor. In 1840 he returned to the United States, and served in the Mexican war, winning promotion by his gallantry at Contreras and Churubusco, and losing an arm in the final assault upon the city of Mexico. In 1851 he again visited Europe, where he served in the Italian war of 1859, with the French. He was engaged at Magenta and Solferino, and by his gallantry again won the cross of the Legion of Honor. At the outbreak of the civil war he returned to America, and entered the Union service with the rank of brigadier-general of volunteers. He was in command of a division at Williamsburg and Fair Oaks, where he won distinction. In 1862 he was promoted to be major-general, and was killed at the battle of Chantilly, Sept. 1, 1862.

KEARNEY, Stephen Watts, an American general, uncle of Philip Kearney, born at Newark, N. J., Aug. 30, 1794, and entered the army in 1812. During the war of 1812 he rendered valuable services, particularly distinguishing himself at Queenstown Heights, and was promoted to the rank of brigadier-general. He also served with distinction in the Mexican war. For services in New Mexico and California he was made major-general. He published the following: *A Manual for the Exercise and Manœuvring of U. S. Dragoons. Organic Law, and Laws for the Government of the Territory of New Mexico.* Died at St. Louis, Mo., Oct. 31, 1848.

KEBLE COLLEGE, Oxford, England, founded by subscription as a memorial to the late Rev. John Keble, was incorporated by royal charter bearing date June 6, 1870, by which it is declared to be 'founded and constituted with the especial object and intent of providing persons desirous of academical education, and willing to live economically, with a college wherein sober living and high culture of the mind may be combined with Christian training, based upon the principles of the Church of England.' The college is governed by a warden and a council of not less than nine, nor more than twelve members. In 1876 it had five tutors, four lecturers, a precentor and a bursar, eleven scholars, five exhibitioners, three students of music, and 122 commoners. It presents to three livings. The buildings, of red brick, are from the design of Mr. W. Butterfield. The foundation-stone was laid April 25, 1860, and the dedication took place June 23, 1870. A splendid chapel has since been erected.

KE'DRON (Heb. 'turbid') is a 'mountain ravine (not a "brook," as in the A. V.), in most places narrow, with precipitous banks of naked limestone,' although in places the easy slopes and bottom are capable of cultivation. It begins in a slight depression on the summit of the plateau 1¼ mile N.W. of Jerusalem. Running for about ½ mile towards the city it turns to the E., and holds that direction for about ⅔ mile, at a distance of about ½ mile to the N. of the city. It then turns to the S. and widens; but is soon contracted again by the Mount of Olives on the E. and Bezetha on the W. Farther down, Moriah on the W. and Olives on the E. rise precipitously from a torrent bed. Below the point where it is joined by the Tyropœon, K. again expands into a level fruitful tract, which extends to the mouth of Hinnom, where K. ends, at a distance from its head of about 2¾ miles.

KELLEY, William Darrah, an American statesman, born at Philadelphia, Pa., April 12, 1814. He began life as a printer, but afterwards became a lawyer. In 1860 he was elected to Congress, and has remained a member of that body down to the present time (1885). He has given much attention to the monetary problem, and is an able debater.

KELLY, John, an American politician, born in New York City, N. Y., in April, 1822. He was first a rope-maker, then a printer, and afterwards a mason. Entering into politics, he soon rose to prominence, and in 1876 became the acknowledged leader of the Tammany Democracy, which position he continues to hold (1885). He has held various municipal offices, and, although he has been violently assailed by his political enemies, his personal integrity has never been questioned.

KELLOGG, Clara Louise, an American vocalist, born at Sumpterville, S. C., in July, 1842, and removed with her parents, when an infant, to New Haven, Conn., and later, to New York. Here she received her musical education at the hands of such masters as Millet, Rivarde, Albites, and Manzochi. In 1861 she appeared in opera in New York, and met with immediate success. In 1867 she appeared in London and there met with equal favor. She still remains one of the brightest ornaments of her profession.

KEM'PEN, a town in the province of Düsseldorf, Prussia, 27 miles N.W. of Düsseldorf, has manufactures of silks, cottons, linens, and hosiery, and was the birthplace of Thomas à Kempis. Pop. (1875) 5390.

KENNEDY, John Pendleton, LL.D., an American author and soldier, born at Baltimore, Md., Oct. 25, 1795, and graduated from the University of Maryland in 1812. In 1814 he was present at the battles of Bladensburg and North Point, as a volunteer, and in 1816 entered the legal profession. After filling various offices in his own state, he was, in 1835, elected to Congress; and in 1852 was appointed secretary of the navy, by President Fillmore. He was strongly opposed to slavery as an institution, and, during the civil war, his sympathies were with the Union cause. During his entire life, he devoted a considerable portion of his time to literary pursuits. Among other works, he published the following: *The Swallow Barn, Horse-shoe Robinson, Rob of the Bowe, Quodlibet,* and *Memoirs of William Wirt.* Died at Newport, R. I., Aug. 18, 1870.

KENOSHA, a town of Kenosha Co., Wis., on Lake Michigan, 35 miles S. of Milwaukee, and on the Chicago, Milwaukee & St. Paul Railroad and a branch of the Chicago & Northwestern Railroad. It has a good harbor, and carries on a considerable lake commerce. It is engaged in manufacturing wagons, furniture, organs, and numerous other articles. It is surrounded by a grazing and farming district. Pop. 6,000.

KENSETT, John Frederick, an American artist, born at Cheshire, Conn., March 22, 1818, and, while young, studied engraving. In 1840 he visited England and began to devote himself to landscape-painting. He attained great eminence in this art, and his works found ready purchasers. Died at New York, Dec. 14, 1872.

KENT, James, LL.D., an American jurist, born in Putnam Co., N. Y., July 31, 1763; graduated from Yale College in 1781; was admitted to the bar in 1787, and began the practice of law at Poughkeepsie. He removed to New York in 1793, was made a master in chancery, and became a professor in Columbia College Law School. In 1798 he was made a judge of the supreme court,

and chief-justice of that tribunal in 1804. He held this position for ten years, when he was made chancellor of New York. He remained chancellor until 1823, and in 1824 resumed his labors in connection with Columbia College Law School. He published *Commentaries on American Law* in 4 vols. (1826–30), which has been universally recognized as one of the greatest legal works in the English language. Died in New York, Dec. 12, 1847.

KENTON, a town of Hardin Co., O., on the Scioto River and the Indiana, Bloomington & Western, and Chicago & Atlantic railroads, 74 miles from Sandusky. It is surrounded by an agricultural and lumber district. Pop. 5000.

KENYON COLLEGE, at Gambier, O., established at Worthington, O., in 1825, and removed to its present site in 1828. It is under the control of the Episcopal Church, and maintains grammar, college, and theological departments. It is liberally endowed.

KERNAN, Francis, an American statesman, born at Tyrone, N. Y., Jan. 14, 1816. He was admitted to the bar, and began the practice of law in Utica, N. Y. For many years he was one of the leading spirits of the Democratic party, was elected to Congress, and was made U. S. Senator in 1875.

KEWANEE, a town of Henry Co., Ill., on the Chicago, Burlington & Quincy Railroad, 132 miles from Chicago. Coal-mining and manufacturing are its principal industries. Pop. 4500.

KEY, Francis Scott, born in Frederick Co., Md., 1779. He is famous as the author of *The Star Spangled Banner*, written during the bombardment of Fort McHenry, while a prisoner on an English vessel. Died at Baltimore, Jan. 11, 1843.

KEY, or KÉ ISLANDS (pron. K), a small group in the Banda Sea, between 5° and 6° S. lat., and in about 133° E. long. They consist chiefly of two islands, Great and Little K., the former of which measures 50 miles by 10. The islands are very mountainous and densely timbered. They are inhabited by Papuans, and by a mixed race who profess Mohammedanism. The inhabitants trade in trepang, wild nutmegs, and tortoise-shell, but especially excel in boatbuilding. They annually turn out some hundreds of boats, some of 30 tons each, of which Mr. A. R. Wallace says they 'can hardly be surpassed for beauty of form and goodness of workmanship.' See *The Malay Archipelago* (vol. ii. p. 107).

KHOI, a town in Azerbijan, Persia, 77 miles N.-W. of Tabiez, stands in a fertile valley. The houses are of mud, but the bazaars of brick, are, next to those of Shiraz, the finest in Persia. Cloths, linen, caps, socks, and copperware are the chief articles of trade. Near K. 30,000 Persians, under Shah Ismail, defeated 300,000 Turks, under Selim I. (1514), and the town was held by a Russian garrison (1827–28). Pop. 25,000—35,000.

KHUNDWA' (Khandwa), the chief town of the district of Nimar, Central Provinces, British India, 352 miles N.-E. from Bombay; pop. (1872) 14,119. It is a station on the Great Indian Railway, and the terminus of the Indore State Line; and as such, it is the center of a growing transit trade. K. is a place of great antiquity, the town being built on a mound which is full of ruins of old Jain buildings. It was burned by Tantia Topee during the Mutiny in 1858.

KIDD, William, better known to the public as Robert Kidd of piratical renown. He was the son of a Scotch minister, and in early life became a sailor. He set sail from Plymouth, England, in 1696, in command of the *Adventure*, a vessel fitted out for the suppression of piracy. It is generally believed that he turned pirate himself. In 1698 he came to New York with a large treasure, part of which was seized by the earl of Bellomont. Other treasure was discovered at Shelter Island, where Kidd had concealed it. He was sent to England and there hanged May 24, 1701.

KILPATRICK, Hugh Judson, an American general, born at Deckertown, N. J., Jan. 14, 1836, and graduated from West Point in 1861. In May of the year of his graduation he was made captain of volunteers and took part in the battle of Big Bethel, where he was wounded. On his recovery he was assigned to duty in the cavalry service, and in 1863 was made brigadier-general of volunteers. He commanded a division at Gettysburg, where he distinguished himself by his bravery. In 1864 he was attached to the army under Gen. Sherman, and was severely wounded at the battle of Resaca. He subsequently commanded the cavalry under Sherman on his march to the sea. He resigned his commission in 1866, and was minister to Chili from 1865 to 1868. Since the close of the civil war he has been an active member of the Republican party.

KIMBERLEY, Earl of, an English statesman, born Jan. 7, 1826, succeeded his father as third Baron Wodehouse, May 29, 1846. He was Under Foreign Secretary, 1852–56; Envoy at St. Petersburg, 1856–58; Under Foreign Secretary, 1859–61; Lord-Lieutenant of Ireland, 1864–66; Lord Privy Seal, 1868–70; and Colonial Secretary, 1870–74. His administration of Ireland during a critical period was firm and able. He was created Earl of Kimberley, June, 1866.

KIMMERIDGE COAL MONEY, a name given to the circular discs of Kimmeridge shale found abundantly in Dorsetshire, England, by antiquaries, who were long puzzled as to the origin and use of the discs. They are now believed to be the refuse parts of the solid pieces of shale from which the Britons and Romans turned bracelets and armlets.

KIMPOLUNG, a town of Wallachia, Roumania, 79 miles N.W. of Bucharest, and 18 S.E. of the Törzburg Pass, in the Carpathians, by which it carries on an active trade with Transylvania. Pop. 10,970.

KING, John P., an American statesman, born in Barren Co., Ky., April 3, 1799; studied law, and was admitted to the bar in 1819. He settled at Augusta, and rapidly rose to prominence in his profession. He was a member of the Georgia constitutional convention in 1883, where he played a prominent and influential part. In 1834 he was elected to the U. S. Senate, where he distinguished himself by his vigorous thought and eloquent oratory. In 1838, believing himself to have been unjustly censured by the press of his state for a speech against President Van Buren's administration, he retired from public life, and resumed the work of his profession.

KING, Rufus, LL.D., an American statesman, born at Scarborough, Me., March 24, 1755; graduated from Harvard College, 1777; admitted to the bar, and began the practice of that profession, in 1780, at Newburyport, Mass. In 1784 he was a member of the Continental Congress, and introduced a resolution prohibiting the introduction of slavery into the North-west Territories. In 1787 he was an active member of the convention that framed the U. S. Constitution. Removing to New York City in 1788, he was elected one of the first U. S. Senators from that state, his colleague being Gen. Schuyler. In 1796, President Washington, who had previously offered him the position of Secretary of State, appointed him minister to England. Returning to the U. S., he was at first opposed to the war of 1812, but after the burning of the capitol by the British, became one of its ardent supporters. In 1819 he was again elected to the U. S. Senate, where he opposed the admission of Missouri to the Union, as a slave state. Died at Jamaica, L. I., April 29, 1827.

KING, Thomas Starr, a distinguished Unitarian clergyman, born in New York, Dec. 16, 1824. Owing to the straitened circumstances of his father, a Universalist minister, he was denied the privilege of a liberal education, and spent the earlier years of his life as a clerk and teacher. His first pastorate was at Charleston, Mass., and in 1848 he was called to the Hollis Street Unitarian church in Boston, Mass. He removed to San Francisco, Cal., in 1860, to take charge of the Unitarian church in that city. During the civil war he rendered great service to the Union cause by his writings and addresses. He was a man of eloquent and forcible oratory. He published *The White Hills, their Legends, Landscapes, and Poetry* (1859). Died at San Francisco, Cal., March 4, 1864.

KING'BIRD (*Tyrannus intrepidus*), or Tyrant Flycatcher, a species of *Insessorial* birds belonging to the section *Dentirostres*, and to the family *Muscicapidæ*, or Flycatchers. The K. arrives in the United States in April, and leaves on its southward journey at the close of autumn. It derives its popular name from its tyrannical and active habits. The plumage is ashen-grey above; the head black, and provided with an erectile crest of feathers of an orange hue at their bases. The tail is black, tipped with white; the under parts, of a greyish-white hue. The average length is 8 inches.

KING-CHU, a walled city of China, province of Hu-pe, on the left bank of the Yang-tsi-Kiang. It lies 150 miles W. of Hankow, and is of some military importance. Pop. 500,000.

KING'S MOUNTAIN, Battle of, an engagement of the American Revolution, near the southern end of a mountain range of the same name, in South Carolina, Oct. 7, 1780. A British force under Lieutenant-Colonel Ferguson, was surprised and attacked by a body of Continental militia, commanded by Colonel Benjamin Cleaveland, and, after a desperate and bloody struggle, was captured.

KING-TE-CHING, a town in the province of Kiang-Si, China, on the Tchang-Kiang, 56 miles from its entrance into Lake Po-jang. It is the chief seat of the porcelain industry in the empire, and has a pop. of 200,000.

KIP, William Ingraham, D.D., a Bishop of the Protestant Episcopal Church in America, born at New York, N. Y., Oct. 3, 1811. In 1853 he was elected bishop of California. He is the author of several historical and devotional works.

KIRBY, Edmund, an American general, born in Jefferson Co., N. Y., 1840, and graduated from West Point, 1861. He was engaged at the battles of Bull Run and Ball's Bluff, and commanded

manded a battery at the battles of Yorktown, Fair Oaks, Savage Station, Glendale, Malvern Hill, Fredericksburg, and Chancellorsville. At the last he received severe wounds, from the effect of which he died at Washington, D. C., May 28, 1863, receiving his promotion to the rank of brigadier-general as he lay upon his death-bed.

KIRK KILISS'IA, or SARAN'TA-EKKLES'IÉS ('forty churches'), a town of Turkey, in the vilayet of Edirné, 32 miles E. of Adrianople. It carries on an active trade in wine, corn, cheese, and butter, and is famed for its sweetmeats prepared from grapes and walnuts. Pop. 14,000.

KIRKLAND, CAROLINE MATILDA, an American authoress, born in New York in January, 1801. Her father was named Stansbury, and she was married to Prof. William Kirkland of Hamilton College, N. Y. She lived for several years in Michigan, and afterwards conducted a successful school for young ladies in New York City. She wrote many of her works under the pseudonym of Mary Clavers. Among her works are the following: *A New Home, Who'll Follow?* (1839), *Forest Life* (1842), *Western Clearings* (1846), *Holidays Abroad* (1849), *The Evening Book* (1852), and *Personal Memoirs of George Washington* (1857). Died in New York City, April 6, 1864.

KISCHENEV', the capital of the government of Bessarabia, Russia, on the malarious Byk, an affluent of the Dniester, 95 miles N.W. of Odessa by rail. It lies in a hilly and finely wooded district, and has fourteen churches, a government library, many fountains, a theater, and a large trade in wheat, linseed, tallow, cattle, tobacco, &c. Its wine is famous. Pop. (1870) 102,427, extremely mixed, and in great part consisting of Jews. K. was little more than a village when it passed to Russia in 1812. It was the rendezvous of the Russian army, and the place where the declaration of war against Turkey was proclaimed, April 1877.

KIZ'IL-IRMAK' ('red river') the ancient *Halys*, a river of Turkey in Asia, rises on the Kösse Dagh, 97 miles W. by N. of Ersingan, flows first S.W., then N.W., and finally N.E. to the Black Sea, 40 miles E. of Sinope. It has a length of 450 miles.

KJÖLEN (Norse, 'The Keel'), the watershed stretching between Sweden and Norway from the Finmark to Röraas, with numerous peaks 6000 feet high.

KNOW NOTHINGS, a secret political party of the United States, which was organized in 1853, and in 1854 carried several of the Northern States. In the year 1856 it nominated Millard Fillmore for the presidency, taking as its name the 'American Party.' It was organized for the purpose of opposing the naturalization of foreigners. After 1856 it rapidly disappeared from existence.

KNOX, HENRY, an American general, born at Boston, Mass., July 25, 1750, and in his early life engaged in mercantile pursuits. At the outbreak of the American Revolution, he entered the Continental service, and soon acquired distinction as an artillery officer. He distinguished himself at Trenton and Princeton, and was rewarded by Congress with the rank of brigadier-general. He participated with gallantry in the battles of Brandywine, Germantown, and Monmouth, where he was in command of the artillery. He was present at Yorktown, and shortly afterwards was made a major-general. In 1785 he was made secretary of war and of the navy, which position he held for six years. In 1795 he removed to Maine, where he spent the remainder of his life. Died at Thomaston, Me., Oct. 25, 1806.

KOBELJAKI, a town in the government of Poltáva, Russia, on the Vorskla, 140 miles by rail S.W. of Kharkov. Pop. (1870) 12,989.

KOKOMO, a town of Howard Co., Ind., on the Wildcat River, 54 miles from Indianapolis. Four railroads pass through it, affording direct communication with Cincinnati, St. Louis, and other large cities. It is engaged in agriculture, stock-raising, lumbering, and manufacturing. Pop. 5,000.

KOLTSOF, ALEXIS VASILJEVITCH, a popular Russian lyrist, born in Voronezh, 14th October 1809. His father, a cattle-dealer, gave him only the merest rudiments of education; but a few books bought at fairs awoke his imagination, and in his wandering life as a herdsman it was roused to an enthusiasm for the steppe that reflects itself in all his songs. After imitating for a time the verse of such poets as Derzawin and Pushkin, K. went in 1831 to Moscow on business, and there found friends who inserted some of his poems in the journals. A visit to St. Petersburg in 1838 introduced him to Pushkin, Jonkovsky, and a wide circle of appreciative friends. He longed more and more to be rid of trade, and was just about to settle in St. Petersburg for a literary life, when he sickened and died, 31st October 1842. In June 1846 appeared a complete edition of his poems, with a biography by Bjelinsky. They are marked by deep poetic feeling, force of conception, and a charming naïveté of expression.

KOND, or KHAND, an aboriginal hill tribe of India, chiefly found in Orissa, where they number 77,000, and also in the N.E. of Madras. They are supposed to be of Dravidian origin, akin to the Gonds. Until the last few years they were notorious for human sacrifice, which they used to carry out in the most systematic and horrible manner. This practice demanded a military force for its suppression in 1847, when more than 1500 victims were rescued. It is said that all inclination to it has now died out. See Dr. W. W. Hunter's *Orissa*, and Colonel Dalton's *Descriptive Ethnology of Bengal* (Calcutta, 1872).

KOS'LOV, a town in the Russian government of Tambov, on the river Voronezh, 42 miles W. by N. of the town of Tambov by rail, with a large trade in corn and tallow. Pop. (1870) 25,522.

KÖ'THEN (Ger. 'the place of huts'), an old and well-built town in the duchy of Anhalt, S. Germany, 12½ miles W.S.W. of Dessau. It has a handsome railway station, and is at the junction of lines from Magdeburg, Bernburg, Halle, and Dessau. The old castle has a valuable zoological museum. Pop. (1875) 14,408.

KOTRI, a town in the district of Kurrachi, Scinde, British India, on the right bank of the Indus, opposite Hydrabad, and 105 miles N.E. by rail from Kurrachee; pop. (1872) 7949. K. occupies an important position, as the terminus of the Scinde railway, where goods and passengers are transhipped into the Indus steamers. It happens to be situated on a permanent bank of the river. There is a floating-dock here, and a steam ferry to Gidu Bundar, the port of Hydrabad.

KOTT'BUS, a town of Prussia, in the province of Brandenburg, on the Spree, 70 miles S.E. of Berlin, at the junction of lines of railway from Berlin, Halle, Leipzig, Breslau, and Posen. It has an old royal castle, and large manufactories of cloths, woollens, and linens. Pop. (1875) 22,650.

KRAUTH, CHARLES PORTERFIELD, S.T.D., LL.D., an eminent American theologian and scholar of the Lutheran Church, born at Martinsburg, Va., March 17, 1823; graduated from Pennsylvania College, Gettysburg, 1839; and was ordained to the ministry, 1842. After filling several pastorates, he was made Norton professor of systematic theology and ecclesiastical polity in the Lutheran Seminary at Philadelphia, in 1864; and in 1868 professor of moral and intellectual philosophy in the University of Pennsylvania; and in 1873 vice-provost of the latter. Besides numerous sermons and addresses he has published the following: *Pastoral Office, Chrysostom, Transfiguration, Popular Amusements, The Bible a Perfect Book, Poverty, Christ and His Kingdom in Shadows*, and others. Died in Philadelphia, Pa., Jan. 3, 1883.

KRIL'OF, ALEXIS ANDREJEVICH, a Russian poet and fabulist, born at Moscow, February 14, 1768, obtained in 1812 a post in the imperial library at St. Petersburg, and in 1830 a seat in the cabinet. He stood in high favor with the Czars Alexander I. and Nicholas, who loaded the closing years of his life with wealth and honor. K. died at Vassily-Ostrov, on the 21st November 1844. When a young man, K. wrote prose comedies; but his fame rests on his fables (published in 1808, 1811, and 1816), which are truly national poems, full of native thought and humor, and wholly free from the imitation of French models universally found in earlier Russian literature. They are familiarly known by all classes of society in Russia, and have been translated into German by Torney (Mitau, 1842). See W. R. S. Ralston's *K. and his Fables* (1871).

KRIS, or CREESE, the name for a dagger with wavy blade and carved wood hilt carried by the Javanese, and worn throughout the Malayan Archipelago generally. It is with this weapon that fanatical Bugis or Malays run *amok*, that is, under some sudden impulse, rush wildly through a village, wounding every person in their path.

KRUPP, FRIEDRICH, a celebrated German metal-founder, was born at Essen, in Rhenish Prussia, April 11, 1812. There, in 1827, his father established a foundry, which under the proprietorship of the son has grown to one of the most extensive manufactories in the world. In 1851 he exhibited in London at the Great Exhibition a block of steel, weighing 45 hundredweights, and cast after a method invented by him. The steel manufactured by this process is called Krupp's steel, and can now be cast in 100-ton blocks. His great fame, however, rests upon his steel guns, which were used so successfully by the Prussians at the siege of Paris during the late war (1870–71). He has cast an 80-ton breech-loading gun in steel, which is nearly 30 feet long, and will throw a projectile ¾ of a ton in weight, and has designed besides a 124-ton gun, to be made upon the same plan, whose projectile will weigh 1 ton.

KRU'SENSTERN, ADAM JOHN CHEVALIER VON, a Russian voyager, born 8th Nov. 1770 at Haggud in Esthonia, served (1793–1799) in the English navy, and after his return to Russia, commanded (1803–6) a Russian expedition to the N. Pacific in the interest of science and trade, described by himself in *Reise um die*

Welt (3 vols. 1810–12); Eng. trans. by Hoppner, 1813). Other works of his are *Atlas de l'Ocean Pacifique* (2 vols. St. Petersb. 1824–27), and *Beiträge zur Hydrographie der grösseren Oceane* (Leips. 1819). K. became a vice-admiral in 1829, and an admiral in 1841, and died Aug. 24, 1846.

KUE'NEN, ABRAHAM, a famous Dutch theologian, was born at Haarlem, 16th September 1828, and after attending the gymnasium there, was enrolled a student of theology at Leiden, 4th September 1846. On the 21st of June 1851 he was made a doctor of theology, after having defended as his thesis a *Specimen theologicum, continens Geneseos Libri Capita triginta quatuor priora ex Arabica Pentateuchi Samaritani Versione nunc primum edita cum Prolegomenis* (Leiden, E. J. Brill). After passing the ecclesiastical examinations (which give access to the office of a preacher in the Reformed Church), he was appointed on the 1st October 1851 *Adjutor Interpretis Legati Warneriani*, and as such charged under Professor F. W. J. Juynboll, *Interpres Legati Warneriani*, with the care of the Oriental MSS. of the University Library of Leiden. On the 30th December 1852 he was appointed Professor Extraordinary of Theology in Leiden. At his entrance on this office (12th March 1853) he delivered a discourse, *De accurato Antiquitatis Hebraicæ Studio Theologo Christiano magnopere commendando* (Leiden, P. Engels). On the 1st October 1855 he was appointed Ordinary Professor. In the academical year 1861–62 he was Rector of the University of Leiden, and on laying down office (8th February 1862) he delivered a discourse, *De Religione Christiana, per continuas Theologiæ Commitationes sibi constanti et incolumi* (Leiden, Van Doesburgh).

Before entering on the office of professor, K. was made Doctor of Literature *honoris causa* by the senate of the University of Leiden (2d February 1853). K.'s writings are *Liber Geneseos secundum Arabicam Pentateuchi Samaritani Versionem* (Leid. E. J. Brill, 1851); *Libri Exodi et Levitici secundum Arab. Pent. Versionem* (*Ibid.* 1854; in the *Bijbelsch Woordenboek voor het Christelyk Gezin* (Biblical Dictionary for the Christian Family), published in three vols. (Amst. P. N. Van Kampen, 1852–59), the articles *Jerusalem Samaritanen* (Samaritans), and a number of others on the books of the Old Testament; in the *Godgeleerde Bydragen* (Theological Contributions), published at Amsterdam, for 1855–66, a number of dissertations and sometimes extensive reviews of books, and among other things, a number of essays under the common title, *Het O. Testament in het N. Testament* (The Old Testament in the New Testament); in the periodical, *De Bijbelvriend, Nieuw end Oud, ter verklaring van den Inhoud en den Geest des Bijbels* (The Bible-friend, New and Old), for the explanation of the contents and the spirit of the Bible (Nymegen, H. C. A. Thieme, 1860—1872), a number of essays and articles, among which there is a series of sixteen *Schetsen uit de Geschiedenis van Israël* (Sketches from the History of Israel); *Historisch-kritisch Onderzœk naar het Onstaan en de Verzameling van de Boeken des Oudén Verbonds* (Historico-critical Inquiry into the Origin and Collection of the Books of the Old Covenant, 3 vols. Leid. 1861–65); [French Transl. of part 1, by A. Pierson, with an introduction by M. Renan (Par. M. Lévy, frères, 1866); Eng. transl. of chaps. i. and ii., *Pentateuch and Joshua*, by Bp. Colenso (Longmans, Lond. 1865)]. In the *Theologische Tijdschrift* (Theological Journal; Amst. and Leid. Loman and Van Doesburgh; later Leid. Van Doesburgh) for 1867 and following years, K. wrote a great number of essays, articles, shorter and larger reviews and notices, among other things, a series of ten *Critische Bydragen tot de Geschiedenis van den Israëlietischen Godsdienst* (Critical Contributions to the History of the Religion of the Israelites); *De Godsdienst van Israël tot den Ondergang van den Joodschen Staat* (The Religion of Israel to the Fall of the Jewish State, 2 vols. Haarl. 1868–70); *De vijf Boeken van Moses, eine Voorlezing* (The Five Books of Moses, a lecture, Leid. 1872); *De Profeten en de Profetie onder Israel: Historisch-dogmatische Studie* (The Prophets and Prophecy in Israel, an historical and dogmatic inquiry, 2 vols. Leid. 1875). There are English translations of the three last-mentioned works. Smaller brochures —published separately, or in collections of sermons—are not mentioned here. In the *Theological Review*, No. liv. (July 1876) appeared *Yahveh and the 'other Gods,'* and in the reports and communications of the Royal Academy of Sciences (Section of Literature), *De Samenstelling van het Sanhedrim* (The Composition of the Sanhedrim, 1st ser. vol. x.); *De Stamboom van den Masoretischen Tekst der O. Testament* (The Pedigree of the Masoretic text of the Old Testament, 2d ser. vol. iii.), translated into French by A. Carrière (Paris E. Leroux, 1875); *De Mannen der Groote Synagoge* (The men of the Great Synagogue, 2d ser. vol. vi.).

KU-KLUX KLAN, the name of a secret society, organized in the Southern states, during the period of reconstruction, which followed the civil war. Its object seems to have been to terrorize the colored population and white Republicans from the North.

KUNNOJ' (*Kanauj*; Sansc. *Kanyakubja*, 'round-shouldered girl'), a town in the district of Furruckabad, N.W. Provinces, British India, on the Kali stream, 52 miles N.W. of Cawnpore. Pop. (1872) 17,093. At present little more than 'an expanse of ruins, where the cultivated fields are composed of brick-dust and mortar.' K. was for many centuries the capital of Hindustan, being second in antiquity only to Oude, and it has given its name to the most honored sept of Brahmins. The Hindu dynasty was overthrown by Mohammed of Ghur in 1194; but the city owes its ruin chiefly to a change in the course of the Ganges, which now flows 2 miles to the E. In 1540 K. was the scene of the decisive defeat of the Mogul Emperor Humayun by his Afghan rival, Shere Shah.

KURIA MURIA ISLANDS belong to England (since 1854), and are situated in a bay of the same name on the S.W. coast of Arabia. They are six in number, have a total area of 21 sq. miles, and are inhabited by some thirty fishermen. There is a slight export of inferior guano.

KU'TUB MINAR' (the 'pillar of Kutub-ud-din,' the first Mohammedan emperor of Delhi), the name of the celebrated column or tower at Delhi, which is unique in the world. It is now 238 feet high, but was once higher. The base, which is of red sandstone, is a polygon of twenty-four sides. The shaft is circular, and tapers gradually to the summit. There are five stories, each with a balcony; the two upper ones are of white marble. It can easily be ascended by a spiral staircase inside. It was struck by lightning in 1368, and again in 1803 it required to be thoroughly repaired by the British Government. After much controversy, it has been decided that it was built in honor of Mahammed of Ghur (1200–20), and that Hindu artificers were probably employed.

L.

LABORDE', ALEXANDRE LOUIS JOSEPH, COMTE DE, born at Paris, 15th September 1774, was the youngest son of an eminent financier (guillotined 18th April 1794). Entering the Austrian service, he served through five campaigns against the French Republic, but returned to France after the Peace of Campo Formio, and having won the confidence of Napoleon, attended him in 1808 on his Spanish, and in 1809 on his Austrian invasion. On the fall of the empire, L. retired for a while from politics and devoted himself to the cause of education, visiting England in 1815 to study the Lancaster system, but in 1823 he entered the Chamber of Deputies as a member of the extreme Left, signed the Protestation of 1830, and after the July Revolution received the prefecture of the Seine. He died at Paris, 24th October 1842. L. was the author of many valuable works on travel and antiquarian research, of which may be mentioned *Voyage en Espagne* (4 vols. Par. 1807–18); *Itinéraire de l'Espagne* (5 vols. Par. 1809–27; 3d ed. with additions by Humboldt and St. Vincent, 6 vols. 1827–28); and *Les Monuments de la France* (2 vols. Par. 1832–36).—His son LEON EMANUEL, COMTE DE L., born at Paris, 15th June 1807, studied at Göttingen, traveled in the East, and was secretary to the French embassy at Rome (1829), London (1830), the Hague (1832), and Kassel (1834). Quitting diplomacy, he held the post of curator of modern sculpture in the Louvre (1848–51), and of director of the imperial archives from 1856 till his death, which took place at Paris, March 30, 1869. Like his father, he was a member of the Academy, and like him he published a multitude of works on travel, art, and archæology, as

Voyage de l'Arabie Pétrée (Par. 1830–33); *Voyage en Orient* (Par. 1837–64); *Histoire de la Gravure* (Par. 1839); and *Archives de la France* (Par. 1866).

LA BOURDONN'AIS, Bertrand François Mahé de, one of the great Frenchmen in India in the 18th c., was born at St. Malo, February 11, 1699. Destined for the sea from his youth, he became a captain in the service of the French East India Company in 1723, and in 1725 took Mahé, on the Malabar coast, which was called after him. In 1746, as governor of the Isles of France and Bourbon, he led a fleet to Pondicherry and put the British squadron to flight. In conjunction with Dupleix, he then attacked Madras, which surrendered; but he quarreled with Dupleix about the terms of the capitulation, and forthwith sailed away. On his return to France he was thrown into the Bastille; though acquitted on his trial, he died of a broken heart, September 9, 1753. See Colonel Malleson's *French in India*.

LACE-WINGED FLIES, the name given to certain species of *Neuropterous* insects belonging to the family *Hemerobidæ* (Leach). The genus *Chrysopa* includes the best known species. *C. perla* is a familiar form, which is notable for the habit of its larvæ, which prey upon the aphides or plant-lice so destructive to plants. The wings are of a delicate, gauze-like texture; the body is green, the eyes golden. These flies emit a disagreeable odor when touched. The eggs are supported on pedicles or stalks; the pupa stage being attained late in summer, and the winter being passed within a cocoon generally hidden in the crevices of the bark of trees. *C. oculata* is a familiar American species.

LACKAWANN'A, a small river of Pennsylvania, flows for some 30 miles of its lower course through, and gives name to the largest and richest anthracite coal-basin in America. The bed has an area of 198 sq. miles, and a thickness of 5–14 feet, at a depth of 100–400 feet below the surface. The annual out-put is over ten thousand tons.

LADD, William, an American editor, and author of some repute, born at Exeter, N. H., May 10, 1778, and graduated from Harvard in 1797. He helped to found the American Peace Society, and was its president for a number of years. He edited the *Friend of Peace*, and the *Harbinger of Peace*. Perhaps the most important of his writings was *An Essay on a Congress of Nations*. Died April 9, 1841.

LADY FERN (*Asplenium Filix-fœmina*), a beautiful and variable British fern of world-wide distribution, Australia excepted.

LAFAYETTE COLLEGE, at Easton, Pennsylvania, was chartered in 1826, and has now classical, scientific, and law (since 1875) schools, and technical ones of mining, civil engineering, and chemistry. It grants degrees, and the number of resident professors and tutors is 28, of non-resident lecturers 4, and of students 319.

LAG'OPUS, a genus of Rasorial birds, represented by the grouse (*L. Scoticus*), ptarmigan (*L. vulgaris*), and allied forms. The tarsi and toes are provided with hair-like feathers giving to the legs rather a clumsy appearance. The bill is short and broad, and the nostrils are feathered.

LAING, Malcolm, a Scottish historian, born 1762 at Strynzia, in Orkney, was educated at Kirkwall. He passed advocate at the Scottish bar in 1785, but was little employed as a lawyer, and devoted several years to historical study, after which he spent the later portion of his life in agriculture on his paternal estate in Orkney, and died there in 1818. His chief works were a *History of Scotland from the Union of the Crowns* (1603) *to the Union of the Kingdoms* (1707); *with Two Dissertations, Historical and Critical, on the Gowrie Conspiracy, and on the Supposed Authenticity of Ossian's Poems* (1800), an able, though prejudiced work, in which he is equally severe on Macpherson and on Mary; *The Poems of Ossian, &c., Containing the Poetical Works of James Macpherson, Esq., in Prose and Rhyme, with Notes and Illustrations;* and a second edition of his history in 1804, with a *Preliminary Dissertation on the Participation of Mary Queen of Scots in the Murder of Darnley*. L.'s works have few graces of style, but have gained him the character of an acute and judicious historian.

LAKE, Viscount, a distinguished Anglo-Indian general, born in 1744, was appointed commander-in-chief in India in 1800, during the administration of Lord Wellesley. He commanded the army in Hindustan Proper during the second Mahratta War of 1803–4; took Aligarh, Delhi, and Agra, and won the battles of Coel and Laswari, by which the power of Scindiah and Holkar was broken and that of England established in the N.W. Provinces. In two months he destroyed thirty-one battalions officered by Frenchmen, and took 426 guns. L. was created baron in 1804 and viscount in 1808, and died in 1809 after his return to England. See *Selection from the Wellesley Despatches* (Oxf. 1877).

LALLEMAND, Charles François Antoine, a French officer and adventurer, born at Metz, June 23, 1774, and entered the army in 1792. He won distinction in the Egyptian, Spanish, and Russian campaigns, and was made baron in 1811. He was with Napoleon during the campaign which terminated so disastrously at Waterloo, and, after Waterloo, was sent to Malta as a prisoner. He afterwards came to the U. S. with the intention of establishing a colony for imperialist refugees. After an unsuccessful attempt in Texas, the state or canton of Marengo was founded in Alabama, and the city of Eagleville laid out. Funds for this enterprise were secured by subscriptions opened in Paris. In 1823 he fought in the Spanish war, after which he returned to America, and conducted a successful school in New York. After the revolution of 1830 he was restored to all his military and political honors in France, whither he returned, and died in Paris, March 9, 1839.

LAMAR, Lucius Quintus Cincinnatus, an eminent American stateman, born in Georgia in 1826, and educated at Emory College of his native state. He moved to Mississippi; was elected to Congress in 1856, and was re-elected upon the expiration of the term, but upon the outbreak of the civil war, resigned his seat, and entered the Confederate army. Since the conclusion of the war he has been several times elected to Congress, where he has distinguished himself by his ability and eloquence. In 1877, he was elected to the U. S. Senate, and on the expiration of his term, in 1883, he was re-elected. He is now (1885) Secretary of the Interior under President Cleveland's administration.

LAMBAYE'QUE, a town of Peru, in Libertad, on the river L., 15 miles from the Pacific, and 425 miles N.W. of Lima. It has manufactures of woollens and cottons. Pop. 10,000.

LAMB'S-WOOL, a beverage of strong ale and pulped roasted apples, formerly much esteemed in England. In some parts of Scotland anything very delicious is said to 'gang down like lam'-oo.' The name is a corruption of the Cymric *la maes abhal* (pronounced *lamasool*), 'the feast or ingathering of apples.'

LANCASTER, a town of Fairfield Co., O., at the junction of two railroads, and connected by the Hocking Canal with the Ohio Canal. The surrounding country is devoted to farming. Pop. 7000.

LANDER, Frederick West, born at Salem, Mass., Dec. 17, 1822. He became engineer, but in 1861 entered the Union army, with the rank of brigadier-general, and served with gallantry in the civil war until the time of his death, at Paw Paw, Va., in 1862.

LANDER, Louisa, an American sculptor, born at Salem, Mass., in 1835. Her best works are *To-Day*, *Galatea*, *Virginia*, *The Exile of Siberia*, *Ceres Mourning for Proserpine*, and *A Sylph Alighting*.

LANDSKRONA ('the crown of the land'), a town in Sweden, in the lan of Malmohus, on a large harbor 30 feet deep on the E. shore of the Sound, 16 miles N.-E. of Copenhagen, and connected by rail with the interior of Sweden. It has iron foundries, and manufactures sugars and woollens. In 1870, 1189 vessels entered the port; cleared, 1175. Its fortifications were kept up till 1870, when its castle was made a prison.

LANE, Edward William, an English Orientalist, who for life-long devotion to study worthily bears comparison with the great Germans. He was born at Hereford in 1801, and spent many years in Egypt, where he was induced by the fourth Duke of Northumberland, who bore the main share of the expense, to undertake his great work, the *Arabic Lexicon*. The first volume was published in 1863; four more appeared before his death at Worthing, 10th August 1876, and the remaining three were left completed in his own manuscript. He also wrote *Manners and Customs of the Modern Egyptians* (Lond. 1835), and translated *The Thousand and One Nights*.

LANE, James Henry, an American soldier and statesman, born at Lawrenceburg, Ind., June 22, 1814, and began the practice of the law in 1840. In 1846 he entered the army with rank of private, and was rapidly promoted to colonel. He commanded a brigade at the battle of Buena Vista. Was a member of Congress from Indiana from 1853 to 1855. In 1855 he moved to Kansas, and took an active part in the struggle there waged between the free-soil and pro-slavery parties—on the side of the former. At one time he was compelled by the pro-slavery party to flee from the territory upon a charge of high treason. After the admission of Kansas as a state, he was elected to the U. S. Senate in 1861, and again in 1865. He committed suicide at Leavenworth, Kan., July 11, 1866.

LANG'ENBECK, Konrad Johann Martin, a German anatomist and surgeon, was born December 5, 1776, at Horneburg in Hanover. In 1804 he became professor in Göttingen, and in 1807 established there a surgical and ophthalmic hospital. He died January 24, 1851. His chief writings are *Nosologie und Therapie der Chirurgischen Krankheiten* (5 vols., 1822–40), *Icones Anatomicæ* (8 vols., 1826–39), *Handbuch der Anatomie* (4 vols., 1831–47).

LANG'HORNE, John, was born at Kirkby Steven, Westmoreland, England, in March 1735, and studied at Clare College, Cambridge. He spent the earlier years of his life teaching and

writing for the press, but obtained preferment in the Church through the influence of his wife's relatives, who were rich. He was first preacher at Lincoln's Inn Chapel, and afterwards prebendary of Wells Cathedral. Of his prose works nothing remains but his well-known translation of Plutarch's *Lives* (1770), executed with the help of his brother. L. died 1st April 1779. His poems, with a biographical memoir, were published by his son in 1804.

LANGSTON, JOHN MERCER, LL.D., born a slave, in Virginia, in 1829. He was liberated when six years of age, and afterwards going North, graduated from Oberlin College, O., in 1849. He became a lawyer; became professor of law in Howard University, D. C.; and, in 1877, was made minister to Hayti, which position he still holds (1885).

LANMAN, CHARLES, an American author and editor, born at Monroe, Mich., June 14, 1819. He followed mercantile pursuits for several years, and in 1846 became associate-editor of the Cincinnati *Chronicle*, and afterwards became a writer for the New York *Daily Express*. Subsequently he acted as American correspondent to the *Illustrated London News* and the *London Athenæum*. His principal published works are *Essays for Summer Hours*, *A Summer in the Wilderness*, *A Tour to the River Saguenay*, *Letters from the Alleghany Mountains*, *Occasional Records of a Tourist*, *The Japanese in America*. *Dictionary of Congress*, *Private Life of Danial Webster*, *The Red Book of Michigan*, and *Adventures in the Wilds of America*.

LAN'SINGBURGH, a post village of New York, on the Hudson River, nearly opposite the mouth of the Mohawk, 200 miles N. of New York City by rail. It is perhaps the chief point in the United States for the manufacture of brushes, oil-cloth, and crackers, and communicates with Waterford by a bridge over the Hudson. L. is named after Abraham Lansing, who settled here in 1771. Pop. 7437.

LA PAZ DE AYACUCHO, the chief commercial city of the republic of Bolivia, beautifully situated at the elevation of 12,226 feet, and on both sides of the Chuquiapo. It has a fine cathedral, 14 other churches, a university, &c., and carries on a large foreign trade with the Peruvian ports of Arica and Islay, with the latter by means of the Arequipo Railway to Puno on Lake Titicaca. It was founded in 1548. Pop. 76,372.

LAPHAM, INCREASE ALLEN, LL.D., an American civil engineer and scientist, born at Palmyra, N. Y., March 7, 1811. He was employed in the construction of several canals, and became secretary of the Ohio canal commission in 1833. He soon attained wide reputation among scholars by his geological and botanical researches, and published many valuable papers upon numerous scientific subjects. In 1836 he moved to Milwaukee, Wis., and in 1873 conducted a geological survey of that state with great skill. Died Sept. 14, 1875.

LAREDO, a town of Webb Co., Tex., on the E. bank of the Rio Grande River, 152 miles W. of San Antonio. It has an active Mexican trade, and is also extensively engaged in wool-producing and stock-raising. Pop. 7500.

LARYNGOT'OMY is performed by making a vertical incision in the mesial line, between the sterno-thyroid muscles, about an inch in length, and then a cross cut through the crico-thyroid membrane. A silver tube, curved on the flat, is then introduced into the air-passage and retained by tapes round the neck. The operation of L. is occasionally necessary, in order to save life, in cases of acute disease, more especially supervening on chronic laryngitis. In some cases the more difficult and dangerous operation of tracheotomy is necessary.

LAS VEGAS, a growing town of San Miguel Co., N. M., on the Atchison, Topeka & Santa Fe Railroad, about 40 miles E. of Santa Fe. The famous Las Vegas hot springs are located six miles from here. Pop. 9000.

LASWA'RI, a village in the Rajput state of Alwar, Central India, 128 miles S. of Delhi, famous for the battle in which Lord Lake, in 1803, defeated the army of Scindia. This victory, in conjunction with that of Wellington at Assaye, broke the Mahratta power, and established the British in the N.W. of India. A commemorative medal was presented to the survivors in 1851. See *Wellesley Despatches* (ed. Oxon. 1877).

LAURENS, HENRY, an American merchant and statesman, born at Charleston, S. C., in 1724, and early acquired a large fortune in mercantile pursuits. In 1776 he became a member of Congress, and in 1779 went as U. S. Minister to the Netherlands. In 1781 Congress appointed him a member of the commission to negotiate peace. Many of his writings have been given to the public in pamphlet form. Died at Charleston, S. C., Dec. 8, 1792.

LAURENS, JOHN, an American patriot, born in 1753, and in 1777 entered the Continental army, and was attached to the staff of Gen. Washington. He participated in many of the most important battles of the Revolution, and was wounded at Germantown and Cooshahatchie. In 1780 he went to France and negotiated a much needed loan. Returning to America he served under Gen. Green, and was killed in battle, Aug. 27, 1782. Laurens has been called 'the Bayard of the American Revolution.'

LAUR'VIK, a seaport town in Norway, 70 miles S.W. of Christiania, on a fjord of the same name at the mouth of the Numedalslaagen, which affords motive power to many manufactories. It has considerable trade, especially in timber, though much of its former importance has now been transferred to Horten, a sea-port 37 miles N.N.E. In 1873, 694 vessels entered the harbor of L., which is large and deep. Pop. (1875) 6509.

LAWRENCE, a beautiful city of Kansas, on the Kansas River, founded in 1854 by the free-soil party, which was at that time engaged in a fierce struggle with its antagonist, the pro-slavery party. In 1863 the city was burned by a band of southern freebooters, under the command of the notorious Quantrell, but was quickly rebuilt. It is the second city of its state in importance, and is the seat of large manufacturing interests. Pop. 10,000.

LAWRENCE, JAMES, an American naval officer, born at Burlington, N. J., Oct. 1, 1781, and entered the U. S. navy in 1798. He participated in the Tripolitan war, and in 1810 was placed in command of the *Hornet*. In Feb. of 1813 he captured, after a short but fierce engagement, the British sloop-of-war *Peacock*. In a few moments after its surrender, the *Peacock* sank, with many of her own crew and some of Lawrence's on board. Upon his return home, he was presented with a gold medal by Congress, promoted captain, and placed in command of the *Chesapeake*. On June 1, 1813, just outside of Boston harbor, he fought the British frigate *Shannon*, commanded by Capt. P. V. Broke. The result of the conflict was that Lawrence was severely wounded and his vessel taken by the enemy. As he was being carried below deck, he uttered the memorable and oft-quoted words, 'Don't give up the ship.' He died from the effects of his wound at Halifax, July 5, 1813.

LEADVILLE, a city of Lake Co., Col. It is the trade center of one of the richest mining regions, and produces one-third of the lead used in this country. Silver is also mined in large quantities. Pop. 15,000.

LEA, ISAAC, LL.D., an American geologist and scientific writer, born of Quaker parents, at Wilmington, Del., March 4, 1792. He was a merchant during his early life, but found time for study. He directed his attention particularly to geology, and made large collections of fossil shells and minerals found about Philadelphia, Pa. He made discoveries of great importance, and his works are full of interest to students of Natural History. The following are his principal works: *Contributions to Geology* (1833), and *Fossil Footmarks in the Red Sandstones of Pottsville* (1853). A complete edition of his works, in 13 volumes, has been published.

LEAVITT, JOSHUA, D.D., an American clergyman and editor, born at Heath, Mass., Sept. 8, 1794. He graduated from Yale College at the age of 20, and practiced law from 1819 to 1825. In the latter year he entered the Congregational ministry and became pastor of a church at Stratford, Conn. From 1828 until the close of his life, he was engaged in literary and editorial work. He edited the *Sailor's Magazine*, the *New York Evangelist*, and *Emancipator*. The last was devoted to the cause of abolition, of which Dr. Leavitt was an earnest advocate. In 1848 he became one of the staff of the *Independent*, which position he held at the time of his death in Brooklyn, Jan. 16, 1873.

LEBANON SPRINGS, a village and summer resort of Columbia Co., N. Y. It has a fine mineral spring, large hotels, and is near to several Shaker settlements. The adjacent scenery is noted for its wild beauty.

LEBANON, in Lebanon Co., Pa. It has five railroads, and contains a number of large iron works. Pop. 10,000.

LEBLANC', NICOLAS, a French chemist, was born at Issondun (Indre) in 1753. He studied medicine, and in 1780 became surgeon to the house of the Duc d'Orleans, but occupied himself chiefly with chemical researches. In 1786 the Academy of Sciences offered a premium for the invention of a new process for the manufacture of carbonate of soda. L. turned his attention to the subject, and in 1789 discovered the process now in use, by which the carbonate is prepared from common salt. The importance of this discovery in the development of chemistry is incalculable, but L. himself reaped no benefit from his labors. He was forced to explain his method to the Government, who published it; and after a long series of unsuccessful endeavors to obtain an indemnity, L. died by his own hand, January 16, 1806.

LEBRI'JA, a town of Spain, province of Seville, on a branch of the Guadalquivir, 40 miles N.N.E. of Cadiz by rail. It has a large Arabesque church, and its industries are chiefly weaving and brickmaking. There is a considerable trade in the fine oil and fruits of the vicinity. Pop. 10,338.

LECK'Y, WILLIAM EDWARD HARTPOLE, was born near Dublin, March 26, 1838, educated at Trinity College, and graduated B.A. (1859). In 1861 appeared his *Leaders of Public Opinion in Ireland* (new ed. 1871–72). Four years later his *History of the Rise and Influence of the Spirit of Rationalism in Europe* (2 vols. 5th ed. 1872), gained for him the respectful attention of the philosophical world. In 1869 the *History of European Morals from Augustus to Charlemagne* established his reputation for brilliant and scholarly generalization. His three works have been translated into German by Dr. H. Jolowicz.

LE CONTE, JOHN EATON, an American civil engineer and scientist, born in New Jersey, Feb. 22, 1784, and entered the engineer corps of the U. S. army in 1813. In 1831 he retired from the army with the rank of major, and devoted the remainder of his life to scientific pursuits. He published numerous articles of interest and permanent value. Died at Philadelphia, Pa., Nov. 21, 1860.

LEE, ALFRED, D.D., born at Cambridge, Mass., Sept. 9, 1807, and graduated from Harvard College in 1827. At first a lawyer, he subsequently entered the ministry of the Protestant Episcopal Church; and, after serving as rector of a church in Rockdale, Del., was, in 1841, made Bishop of Delaware.

LEE, NATHANIEL, an English dramatist, was born in 1650. Upon leaving Cambridge he took to the stage, but proved a bad actor, though a good reader. At the age of twenty-five he produced his first play, *Nero*. The best known of his productions are *The Rival Queens, or Alexander the Great* (1677); *Theodosius, or The Force of Love* (1680); *The Princess of Cleve* (1689); and *The Massacre of Paris* (1690). L. also joined Dryden in writing *Œdipus* (1679) and *The Duke of Guise* (1685). In these are to be found passages marked by wonderful delicacy of fancy and intense dramatic passion, but the style frequently degenerates into mere bombast. L., who was subject to fits of insanity and dissipation, died in 1692.

LEE, ROBERT, D.D., a leader of the liberal section of the Church of Scotland, was born at Tweedmouth, in Northumberland, 11th November 1804. He studied at St. Andrew's University, was ordained in 1832, was called to Arbroath in 1833, to Campsie in 1836, and, on the Disruption (1843) was made minister of Grey Friars', Edinburgh. In 1846 he became Regius Professor of Biblical Criticism in the University of Edinburgh, and the valuable results of his study of the Bible text appeared in *The Holy Bible, with about* 60,000 *Marginal References and Various Readings* (1854). His *Prayers for Public Worship* appeared in 1857, and for their use in Grey Friars' he was arraigned before the Presbytery of Edinburgh (1859), and later before the General Assembly, when he won a favorable verdict by a singularly eloquent defence. His *Reform of the Church of Scotland in Worship, Government, and Doctrine* (1860) discussed the liturgy, postures in worship, instrumental music, festivals and feasts, &c., with the view of bringing the Church into greater harmony with the age, and the opinions it contained were reported favorably on by the General Assembly in 1864. The first organ used in the service of the national church was introduced into Grey Friars' in April 1865. The General Assembly subsequently reversed the decision of 1864, and Dr. L. was preparing a case for the civil courts when he died at Torquay 12th March 1868. See the *Life of Dr. R. L.* by the Rev. R. H. Story (2 vols. 1870).

LEER, a town of Prussia, province of Hanover, on the Leda, near its junction with the Ems, and 16 miles S.E. of Emden by rail. It has considerable shipping, and manufactures sugar, chicory, tobacco, beer, and brandy. Pop. (1875) 9339.

LEEUWIN, CAPE, the S.W. extremity of Australia, is situated in 34° 19′ S. lat., 115° 8′ E. long. It consists of a bluff of granite, against which the sea beats with tremendous force.

LEGNA'NO, a town of N. Italy, province of Verona, 25 miles S.S.E. of Verona by rail. It lies in a swampy rice district, is of some strategic importance, and has leather and straw-hat industries. Pop. (1874) 13,355.—Another Italian town of the same name, 17 miles N.W. of Milan, has several interesting churches, containing rare pictures. It was the scene of a great victory won by the Milanese over Friedrich Barbarossa, 29th May 1176. Pop. (1874) 6685.

LEIGHTON, ALEXANDER, born in Edinburgh, Scotland, in 1568, studied at Leyden, where he obtained a medical diploma, and at Edinburgh, where he became Professor of Moral Philosophy (1603), removed to London (1613), and having failed to obtain the license of the College of Physicians to practice as a doctor, accepted the lectureship of a Calvinist meeting-house. In 1629 he had printed in Holland *An Appeal to the Parliament*, or *Zion's Plea against the Prelacie*, in which the prelates were denounced as men of blood, episcopacy as anti-christ, and the queen as a daughter of Heth. For this he was arrested, February 29, 1630, brought to trial June 4, and sentenced to be degraded from the ministry, whipped, pilloried, and branded with a double S. S. ('sower of sedition'), to have his ears cut off, and his nose slit, to pay a fine of £10,000, and to be imprisoned for life. He escaped, but was recaptured, and, after undergoing this barbarous punishment, lay in the Fleet Prison until released by the Long Parliament (1640), which also voted, but never paid him, £6000, and made him keeper (1642) of Land's palace at Lambeth, at that time a State prison. He is said to have died insane, either in 1644 or 1649.

LEITZMERITZ, a town of Bohemia, on the right bank of the Elbe, which is here spanned by an iron bridge 597 yards long, 35 miles N.N.W. of Prag, has a fine cathedral (founded 1045), six churches, five educational institutions, &c. Brewing, salmon fishing, straw plaiting, and agriculture are the principal industries, and large quantities of fruit are annually exported to Berlin and St. Petersburg. Pop. 10,023.

LEL'AND, CHARLES GODFREY, a versatile American writer, born at Philadelphia, August 15, 1824, graduated at Princeton College (1846), traveled in Europe, and studied at Heidelberg, Munich, and Paris, and returning to America in 1848, was called to the bar (1851). Relinquishing law for literature, he wrote for periodicals, and was editor of several American magazines, but shortly after the close of the Civil War, in which he saw some service, settled in England. L.'s fame rests chiefly on his *Hans Breitmann's Ballads* (5 parts, 1867–70; complete ed. 1872), written in the broken English of a Pennsylvanian German; somewhat similar to which is his *Pidgin English Sing-Song* (1876). He is also author of two works on the English gypsies, various translations from the German, the *Egyptian Sketch-Book* (1873); *Johnny-kin and the Goblins* (1876), &c.

LEMAI'TRE, FREDERIC, one of the greatest of French actors, was born at Havre, in July 1798, and studied for two years under Lafon at the *Conservatoire*. He played at the 'Odeon,' and 'Comédie,' but found his proper sphere at the 'Porte-Saint-Martin,' where his brilliant versatile powers gained him the name of the *Talma du Boulevard*. The ease with which he passed from the tragic through the airiest comedy to all the phases of the eccentric and grotesque, made him the great actor of the new romantic school of art and poetry. He embodied the finest conceptions of Dumas and Victor Hugo, and among his many leading parts were 'Ruy Blas,' 'Lucrèce Borgia,' 'Kean,' and 'Robert Macaire.' L. died 1st February 1876.

LE MOYNE, a distinguished French-Canadian Family.—I. CHARLES LE M. was born in Normandy, France, in 1626, and in 1641 removed to Canada. He was the father of eleven sons, nearly all of whom distinguished themselves in various ways.—II CHARLES, Baron de Longueil, born at Montreal, Dec. 10, 1656, played an important part in the settlement of Canada, participated gallantly in the wars against the English, was wounded at Quebec in 1690, became governor of Montreal in 1700, and died at Montreal, June 8, 1729.—III. JACQUES, born at Montreal in 1659, took an active part in the wars with the English, and in 1690 was mortally wounded at Quebec, in which engagement he was in command of the batteries which repulsed the English squadron.—IV. PAUL, born at Montreal, in 1663, participated in the above wars, went with Frontenac's expedition against the Iroquois Indians; and in 1704 he and 40 others were burned to death by these indians in a stockade.—V. JOSEPH, born at Montreal in 1668, served in the French army, took part in the settlement of Louisiana, captured Pensacola from the Spaniards (1719), was made captain (1720) and rear-admiral (1723), and died in 1734.—VI. ANTOINE, born at Montreal in 1683, entered the French army, participated in the settlement of Louisiana, defeated the English forces under Pepperell, at Louisburg, and died in France, in 1747.

LEN'CLOS, NINON DE, the French Aspasia of the 17th c., was born of good family at Paris, 13th May 1616. Her mother endeavored to train her piously; but her father cultivated with more success her taste for pleasure. She was singularly beautiful, spoke several languages with ease, excelled in other accomplishments, and enjoyed a yearly income of $50,000. When seventeen she left the maternal roof, some say under the protection of Richelieu, others, under that of the Duc de Coligny. It matters not which was first; her intrigues continued for fifty years, and with more than fifty lovers. In one instance, indeed, she remained with an amorous gentleman in the country for three entire years; but such a breach of her own rules was not to be tolerated, and her mob of admirers recalled her to Paris. In the case of one family—the Sevignés—she was mistress successively to father, son, and grandson. She closed her list of successful adorers with Chateauneuf at seventy, but was considered beautiful when nearly ninety. Of her two sons, one, ignorant of his parentage, made love to her, and shot himself on learning the truth. Despite her character, the best of society visited her; authors and authoresses were proud to correspond with her; and anxious mothers brought their children to her home to study society—for manners then took the place of morals. Ninon was no worse than many ladies

of her time—only more beautiful and more distinguished in her connections. She died in 1705. There are some genuine letters of hers in the works of St. Evremond, but those under her name addressed to the Marquis de Sevigné are spurious. See Sardière's *Vie de N. de L.;* Bret's *Mémoire sur N. de L.;* and Voltaire's *Lettre sur Mlle. de L.*

LENNOX, JAMES, founder of the Lennox Library in New York City, born in N. Y., in 1800. Inheriting a fortune, he was noted for his philanthropic liberality, extending throughout his entire life. Died at New York, in 1880.

LENT'HALL, WILLIAM. Speaker of the Long Parliament, was born at Henley-on-Thames, Oxfordshire, England, in June 1591; educated at Thame School and St. Alban Hall, Oxford, and called to the bar at Lincoln's Inn in 1616. Elected M.P. for Woodstock, he was chosen Speaker of the House of Commons (1640), and as such was desired by Charles I. to point out to him the five members whom he had come down to arrest, January 4, 1642. 'May it please your Majesty,' said L., falling on his knees, 'I have neither eyes to see, nor tongue to speak, but as the House directs me.' He was rewarded for his conduct on this occasion by the posts of Master of the Rolls, Commissioner of the Great Seal, and Chancellor of Lancaster, but shared in the expulsion of the Rump, and retired from public life until 1654, when he sat for Oxfordshire, as again in 1656. At the Restoration his name was exempted from the act of Indemnity, but he obtained a pardon, and retired to Burford Priory, Oxfordshire, where he died, September 3, 1662, having on his deathbed recanted his 'puritanical errors' to the Bishop of Chichester.

LEOMINSTER, a town of Worcester Co., Mass., on the Fitchburg and Old Colony railroads, 40 miles from Boston. It is engaged in manufacturing horn combs, jewelry, buttons, pianos, and paper. Pop. 5776.

LER'DO DE TEJA'DA, SEBASTIAN, a Mexican statesman, born at Jalapa, April 25, 1825, and was admitted to the bar in 1851. He became eminent as a lawyer, and soon gained prominence as a politician. He became a member of Congress in 1861, and was appointed minister of foreign affairs in 1863. He was a firm supporter of the national party during its struggle with the Emperor Maximilian, supported by French troops. Upon the success of that party in 1867, Lerdo was made president of the supreme court of justice, and in 1872 was elected president of the Republic.

LESLIE, FRANK, born in England, in 1821, and came to America in 1848. He took up his residence in New York City, where he became the successful publisher of numerous illustrated papers and magazines. Died in 1880.

LES'SEPS, DE, FERDINAND, VISCOUNT, a distinguished French engineer, born at Versailles, Nov. 19, 1805. He projected and executed the Suez Canal (1859–69), one of the most gigantic engineering enterprises of the world.

LESTER, CHARLES EDWARDS, an American author, born at Griswold, Conn., July 15, 1815. He was first a lawyer and then a Presbyterian minister, but devoted most of his life to literary work. Among his published works are *The Glory and Shame of England* (1841), *Condition and Fate of England* (1842), *Life of Vespucius* (1846), *The Napoleon Dynasty* (1852), *Life of Charles Sumner* (1874), and *Our First Hundred Years* (1874–75).

L'ESTRANGE, SIR ROGER, an English author, was born at Hunstanton Hall, Norfolk, England, 17th December, 1616. An ardent royalist by education and sympathy, he was imprisoned from 1644 to 1648, when he escaped to the Continent. He returned to England in 1653, and on the Restoration became censor of plays. He started the *Public Intelligencer* in 1663, and the *Observator* in 1679, journals in which he championed High Toryism with an able but virulent and vindictive pen. He was knighted by James II. His mind failed latterly. He died in London 11th September 1704. L. published many political pamphlets and classical translations.

LEUTZE, EMMANUEL, a distinguished painter, born in Württemberg, May 24, 1816, and in early life came to America. In 1841 he visited Europe for the purpose of study, and in 1859 returned to America. His best known works are *Western Emigration* (in the Capitol at Washington), *Washington Crossing the Delaware, Cromwell and his Daughter*, and *The Iconoclast*. There is wide difference of opinion as to Lentze's merits as an artist. Died at Washington, D. C., 1868.

LEWIS, DIO, M.D., an American reformer, born at Auburn, N. Y., March 3, 1823, and educated at the Harvard Medical School. He practiced medicine for a time, but has devoted most of his life to teaching and writing. He has published, among other works, *The New Gymnastics* (1862), *Weak Lungs, and How to Make them Strong* (1863), *Talks about People's Stomachs* (1870), *Our Girls* (1871), and *Chats with Young Women* (1874). His writings are of a high moral tone, and are full of common sense.

LEWIS, MATTHEW GREGORY (MONK LEWIS), was born in London, 9th July 1775. While in Germany he composed *The Monk*, his best known book, vigorously but coarsely written, full of murders, ghosts, and impurities. The *Bravo of Venice* (1804) was his second-best novel, and the *Castle Spectre* (1797) his only successful play. One or two stirring ballads of his still live, and his *W. Indian Journal* is a good book of travels. He died returning from a visit to his estates in the W. Indies, 14th May 1818. L.'s *Life and Correspondence* was published in 1839.

LEWIS, TAYLOR, LL.D., L.H.D., an eminent American linguist, born at Northumberland, N. Y., March 27, 1802, graduated from Union College in 1820, and began the practice of law at Fort Miller, N. Y., but soon after relinquished it, in order to devote his entire time to classical studies. He was professor of Greek in the University of New York (1838), and in Union College (1849). Among his published works are *The Six Days of Creation* (1855), *The Bible and Science* (1856), and *The Divine Human in the Scriptures* (1860). Died at Schenectady, N. Y., in 1877.

L'HOSPITAL, MICHEL DE, a great French statesman, born in 1505 at Aigueperse in Auvergne, studied law at Toulouse and Padua, was auditor of the Rota at Rome, came in 1534 to Paris, where he practised as an advocate and counselor for the Parliament, was appointed by Marguerite of Valois her chancellor, and in 1554 became superintendent of finance. On the accession of François II. (1559) he entered the Council of State, and in 1560 was made chancellor of the kingdom by Catherine de' Medicis. A good man, a genuine patriot, and a prudent councilor, he labored to restore order and smooth party differences, but his moderation was taken for secret heresy, and led to his losing the seals, 24th May 1568. He died at Bellebat, near Étampes, 13th March 1573, during the Civil War, against which he had constantly remonstrated. See his *Œuvres Complètes*, by Dufey (5 vols. Par. 1824), and the biographies by Villemain and Lévesque de Pouilly.

LICK, JAMES, an American philanthropist, born at Fredericksburg, Pa., Aug. 25, 1876. After following the business of pianomaking in New York and at various places in South America, he removed, in 1847, to San Francisco, Cal., where he amassed a large fortune. At his death, in 1876, he bequeathed over $1,700,000 to charitable and educational institutions, $700.000 of which was given to the University of California for the erection of an observatory and the construction of a telescope, the latter to be more powerful than any ever before made.

LIDD'ON, REV. HENRY PARRY, D.D., D.C.L., the greatest living preacher in the English Church, born in 1830, studied at Christ Church, Oxford, and graduated in 1850, became Johnson's theological student (1851), and having taken orders, was Vice-Principal of Cuddesdon Theological College (1854–59). He was made a canon of Salisbury in 1864, and as Bampton lecturer (1866) delivered a masterly course of sermons, *The Divinity of our Lord* (Oxf. 1867). In 1870 he was advanced to a prebend of St. Paul's Cathedral, and the same year became Ireland Professor of Exegesis in the University of Oxford. As a leader of the Anglo-Catholic party, L. has attended several of the Bonn conferences of the 'Old Catholics,' and in 1876 expressed his sympathy with the Greek Church by a visit to the revolted provinces of Turkey. He is the author of *Lenten Sermons, Some Words for God, Sermons Preached before the University of Oxford*, and *Some Elements of Religion*.

LILL'O, GEORGE, a London jeweler with a turn for writing plays, was born 4th February, 1693. The only one of his plays which kept the stage was *George Barnwell*, a tragedy played at Drury Lane for twenty consecutive nights in 1731, and a great favorite with Queen Caroline. *Fatal Curiosity* was his next best performance. Lillo wrote simply, with tenderness and good feeling, but no genius. He died 3d September, 1739. See the biographical memoir prefixed to Davies' edition of L.'s *Dramatic Works* (2 vols. Lond. 1770).

LILY-TREE, a name given to the *Dracæna Draco* or Dragon-tree of Teneriffe, as being a liliaceous plant, with a branching tree-like stem. Each branch is surmounted by a crowded head of lanceolate leaves, from amid which the flower-stalk rises forth. The common name is derived from the tree being one of the sources of Dragon's-blood. The colossal and historic specimen at Orotiva was by Humboldt's measurements 70 feet high and 48 feet in girth. Unfortunately it was totally destroyed during a hurricane in 1867, after a supposed existence co-eqnal with the Egyptian pyramids.

LIMA, a town of Allen Co., O., on the Ottawa River. It has direct communication with Cincinnati and Fort Wayne, by railroad; and is engaged in manufacturing and trade. Pop. 7569.

LIN'ACRE, THOMAS, a physician and scholar of the 'New Learning,' was born at Canterbury, England, about 1460, and became a Fellow of All Souls' College, Oxford, in 1484. Sent with De Selling on an embassy to the Pope, he studied Greek at Flor-

ence under Chalcondylas, and medicine under Hermolaus Barbarus at Rome, where he formed friendships with Grocyn and William Latymer, and translated several of Galen's treatises into Latin. On his return to Oxford, he lectured on Greek and physic, became tutor to Prince Arthur, and having taking orders (1507), held successively the livings of Mersham, Hawkhurst, Holsworthy, and Wigan, and prebends of Wells, York, and Westminster. He was also physician to Henry VII. and Henry VIII., and founder of the Royal College of Physicians (1518), of which he became first president. His death took place at London, Oct. 20, 1524. L.'s learning, styled by his pupil Erasmus 'deep, searching, and refined,' is enshrined in his nine Latin translations of Galen, Proclus, and Paulus Ægineta, in a Latin Grammar for the use of the Princess Mary, and in the treatise, *De Emendata Structura Latini Sermonis Libri Sex* (Lond. 1524).

LINCOLN, a town of Logan Co., Ill., on Salt Creek, 28 miles from Springfield. It has three railroads, is in the midst of a fine agricultural region, and is the largest grain shipping point between Chicago and St. Louis. Pop. 5500.

LINCOLN, BENJAMIN, a general of the American revolution, born at Hingham, Mass., Feb. 3, 1733. He served under Washington before Boston and in New Jersey; was with Gates in Northern New York, at the time of Burgoyne's surrender, and was wounded at Bemus Heights. He was in command of Charleston, at the time of its surrender, in 1780, and was again under Washington, at the time of Cornwallis's surrender at Yorktown. After the termination of the war, he held several political positions in his native state. Died at Hingham, May 9, 1810.

LINCOLN, the State Capital of Nebraska, on Salt Creek, 69 miles S.W. of Omaha. The Union Pacific and other railroads pass through it. It contains the State Penitentiary and Insane Asylum, and is the seat of several educational institutions, including the State University. There is considerable manufacturing and a large wholesale and jobbing trade is carried on. Pop. 18,000.

LINGUAGROSS'A, a town of Sicily, province of Catania, near the N.E. base of Etna, 9 miles W. of the railway station at Taormina. It has several good churches, and in the vicinity is some beautiful scenery. Pop. (1874) 8822.

LIN'LEY, THOMAS, an English musician and composer, born at Bath about 1725, studied under Paradies, a Venetian composer, and became conductor of concerts and oratorios in his native town. The marriage of his daughter to Sheridan led to his subsequently embarking in theatrical speculations. L. died in London, 19th November 1795. Along with his son, L. wrote the songs in Sheridan's *Duenna*, composed the accompaniments to the original airs in the *Beggar's Opera*, and published some exquisitely sweet and tender ballads.

LIPPINCOTT, SARAH JANE (*née* CLARKE), better known by her *nom-de-plume* of 'Grace Greenwood,' born at Pompey, N. Y., Sept. 28, 1823. She was married to Leander K. Lippincott, in 1853. She has written extensively for the press, and has published numerous books of stories for children. Her writings have been noted for their pure sentiment, and have had wide circulation.

LIR'IA, a town of Spain, province of Valencia, 15 miles N.W. of the town of Valencia, has considerable trade. Pop. (1870) 8500.

LISLE, CLAUDE CHRISTOPHE ROUGET DE, a French poet who by a single song, the *Marseillaise*, has won immortality. Born 10th May 1760, L. was an officer of artillery at the time of the Revolution. The song—both words and music—was composed at Strassburg in a single night, about the beginning of 1792. The author called it *Chant de Guerre de l'Armée du Rhin*. Everywhere it soon sent a fiery rapture through the volunteers of the Republic. When Barbaroux the Girondist leader, and deputy for Marseille, first introduced it to the Parisians, they being ignorant of its real authorship called it *Hymne des Marseillais*, by which name it has ever since been known. L. died near Paris, 26th June, 1836. The *Hymne* is now the 'National Anthem' of France.

LIS'TON, JOHN, an English actor, born in London, England, in 1776. Originally a master in Archbishop Tennison's school, Leicester Square, he was expelled for acting with the boys. He then took to the stage, and displayed the happiest comic talent. In 1806 he obtained an engagement at the Haymarket Theater. *Mawworm*, *Tony Lumpkin*, and *Bombastes Furioso* were among his best impersonations, but the greatest of all was his *Paul Pry*, first performed in 1825, the memory of which is ever green. He retired in 1837, and died March 22, 1846. His wife (*née* Tyres) was a popular singer and actress.

LITCHFIELD, a town of Montgomery Co., Ill., 43 miles from St. Louis. It has three railroads, and manufactures railway cars, machinery, and flour, coal and lubricating oil are found in the vicinity. Pop. 5000.

LIT'TLEJOHN, ABRAM NEWKIRK, D.D., a clergyman and bishop of the Episcopal Church in America, born in Montgomery Co., N. Y., Dec. 13, 1824, and graduated from Union College in 1845. He was ordained priest in 1850, was rector of churches in New Haven, Conn., and in Brooklyn, N. Y., and in 1868 became bishop of Long Island. He has published numerous sermons and addresses.

LITTLE ROCK, the capital of Arkansas, on the Arkansas River, 300 miles from its mouth. It is the terminus of several railroads, and is connected by steamboat with the various points on the Arkansas and Mississippi rivers. Besides its public buildings, it is an important cotton market, and has extensive cotton seed oil mills. Pop. 13,185.

LITTORI'NA, a genus of *Gasteropodous* mollusca, including the Periwinkle (*L. littoralis*), and a nearly allied species (*L. rudis*), &c. The genus L. forms the type of a special family, *Littorinidæ*, in which the mouth of the shell is entire (*holostomatous*). The shell itself is spiral, of depressed shape, and the *operculum*, or plate developed on the foot, is of horny nature.

LIVERMORE, GEORGE, an American writer, born at Cambridge, Mass., July 10, 1809. Although engaged in mercantile pursuits, he devoted much time to historical and literary pursuits, and wrote largely for the press. He was an earnest supporter of the Union during the civil war. Died at Cambridge, Mass., Aug. 30, 1865.

LIVERMORE, MARY ASHTON (*née* RICE), born at Boston, Mass., Dec. 19, 1821. She is best known to the public as a lecturer upon social themes, and an advocate of woman's suffrage.

LIVINGSTON, PHILIP, an American merchant and patriot, born at Albany, N. Y., Jan. 15, 1716, and graduated from Yale College in 1737. He was successful as a merchant in New York, was a member of the Continental Congress 1774–78, and was one of the signers of the Declaration of Independence. Died at York, Pa., June 12, 1778.

LOBOS ISLANDS (Span. *lobo*, 'a seal'), three islets in the Pacific Ocean, 12 miles off the coast of Peru, to which country they belong. They abound with seals, and contain valuable deposits of guano.

LOCAL PREACHERS, a class of preachers peculiar to the M. E. Church, established by Wesley early in the history of that denomination. While pursuing the ordinary secular callings of life, they are licensed to preach the gospel. There are in the U. S. about 22,000 local preachers, many of whom rank high for ability and scholarship.

LOCKE, DAVID ROSS, an American editor and humorist, born at Vestal, N. Y., Sept. 20, 1833. He has edited several papers in Ohio, and last of these the *Toledo Blade*. He is best known to the public by his 'Nasby' letters, a series of caustic satires on the Democratic party, written under the *nom-de-plume* of 'Petroleum V. Nasby.' He has also published numerous political pamphlets.

LOCK HAVEN, in Clinton Co., Pa., on the W. branch of the Susquehanna River and the Pennsylvania Canal. Its principal interests are the lumber trade and manufacturing. Pop. 5847.

LO'CRI, a people of ancient Hellas, divided into the three tribes of the L. Ozolæ, dwelling to the N. of the Gulf of Corinth, and the L. Epicnemidii and L. Opuntii, on the shores of the Euboean Sea. The two last claimed to be Autochthons, and are mentioned by Homer (*Il.* ii. 527–535); the L. Ozolæ first appear in history during the Peloponnesian War, but are believed to have founded L. Epizephyrii (683 B.C.), a town of Magna Græcia, on the S.E. coast of the Bruttian peninsula, 13 miles N. of the promontory of Zephyrium (*Capodi Bruzzano*), and 4 miles from the modern Gerace. This city, famous as possessing the first written code of laws in that of Zaleucus (*circa* 660 B.C.), after a long alliance with Syracuse against Rhegium, submitted to Rome in the early part of the 3d c. B.C., but revolting to Hannibal (215) was not recovered by the Romans until 205. It existed as a *civitas* as late as the reign of Valentinian II. (A.D. 375–392), and was probably destroyed by the Vandals in the 5th c.

LO'DI, the name of the Mohammedan dynasty that preceded the Moguls at Delhi. It was of Afghan origin, and had previously established itself at Lahore in the Punjaub. In 1450, Belol L. drove the last of the Sayyids from Delhi; his brother conquered Behar; but his son, Ibrahim, was completely defeated and killed at the first battle of Paniput, in 1526, by Baber, the founder of the Mogul Empire.

LOGAN, JOHN A., an American soldier and statesman, born in Jackson Co., Ill., Feb. 9, 1826. His early education was limited. At the outbreak of the Mexican war, he entered the army as a private, served gallantly until its close, and was promoted lieutenant. At the close of the war he studied law, and was admitted

to the bar in 1851. He rapidly attained success in his profession, and was elected to Congress by the Democratic party in 1858, and again in 1860. But in the latter year he resigned his seat in Congress that he might enter the Union army. He raised the 31st Illinois regiment in 1861, and in September of that year took the field with McClernand's brigade. He was wounded in the assault upon Fort Donelson, and, as major-general of volunteers, commanded the third division, 17th army corps, under McPherson, in the movement against Vicksburg, in 1863. In Nov. 1863, he succeeded Gen. Sherman in command of the 15th army corps. At the battle of Atlanta, he succeeded Gen. McPherson, on the latter's fall, and rallied the Union forces. After the war, he was elected to the 40th and 41st congresses, and to the U. S. Senate in 1871. In 1884 he was nominated for Vice-President by the Republican National Convention, held at Chicago, Ill., upon the same ticket with James G. Blaine, for President, but was defeated.

LOGAN, JOHN, was born at Soutra, Midlothian, in 1748. After studying at Edinburgh University, he became for a time tutor in the family of the Sinclairs of Ulbster. In 1770 he edited the poems of his friend Michael Bruce, then three years dead, adding to these several original compositions. One of the poems in the volume was the well-known *Ode to the Cuckoo*, claimed by L., but by not a few ascribed to Bruce. In 1774 L. was appointed minister of South Leith church. This charge he labored in for many years with much success, preaching sermons whose effect, when ultimately edited and published by Blair (2 vols. 1790; 5th ed. 1807), was astonishing. In 1781 he produced his *Poems* and *Elements of the Philosophy of History*, and three years later a tragedy entitled *Runnimede*, which failed on the boards of the Edinburgh theater. In London, whither he had gone to carry on literary work, he died, 28th Dec. 1788. L. was a graceful and natural poet, and the finest sermon writer among the Scottish clergy of the 18th c.

LOGAN, SIR WILLIAM EDMOND, a celebrated Canadian geologist, was born at Montreal, 23d April, 1798. He graduated at Edinburgh, and in 1818 went to London, where he entered the bank of his uncle. In 1829 he became director of copper-smelting works at Swansea, Glamorganshire, where he soon began to direct his study to geology. His researches among the coalfields attracted the attention of De la Beche, at that time the director of the English Geological Survey. In 1841 L. returned to Canada, and upon the formation of the Canadian Geological Survey was nominated its director. He began operations in 1843, and by his subsequent researches, especially among the ancient Laurentian deposits, established a world-wide reputation as a geologist. At the Paris Exhibition of 1855 he was presented with a gold medal, and the succeeding year was made a knight. L. died at Castle Malgwyn in Pembrokeshire, June 22, 1875.

LOGOMANIA, or Disease of the Faculty of Language. It frequently happens, in connection with cerebral lesions, that although the ideas are clear and distinct, and the faculty of speech but slightly impaired, it is impossible to represent the ideas in words by their appropriate symbols. Cases of true L. are extremely rare, and they depend more frequently on functional disorder than on organic disease.

LOMBARD LEAGUE, a league of the cities of N. Italy, formed in 1167 to oppose the ambition of the Emperor Friedrich. Verona and its neighbors were the first that banded together. Milan, Cremona, &c., soon joined them, and in 1176 they won a great victory at Legnano. By a second peace, that of Constanz in 1183, the L. cities were allowed to administer their own laws, and to make peace and war on their own account. Thus they became virtually independent, and soon showed great intellectual and commercial vitality, but at the same time an unfortunate disregard for each other's welfare, which in the long run made them the prey of petty despots.

LONG BRANCH, a sea-side summer-resort of Monmouth Co., N. J., on the Atlantic coast, within easy access of New York and Philadelphia. On a high bluff, fronting the sea, are numerous hotels and elegant cottages. The bathing is unsurpassed and the drives are fine. The summer population sometimes exceeds 30,000; that of the winter is about 6000.

LONG ISLAND CITY, in Queens Co., N. Y., an important suburb of New York City, on the East River, immediately N. of Brooklyn. It is the terminus of the various branches of the Long Island Railroad, and is extensively engaged in manufacturing. Pop. 24,000.

LONGSTREET, JAMES, a distinguished Confederate general, born in S. C., in 1820, and graduated from West Point in 1842. He served with gallantry during the Mexican war, was severely wounded at the assault upon Chapultepec, was brevetted captain for bravery at Contreras and Cherubusco, and major for bravery at Molino del Rey. In 1861 he resigned from the army, entered the Confederate service, and in 1862 was made major-general. He participatad under Lee in all the principal battles with the Army of the Potomac, and gained for himself high reputation as a gallant and skillful commander. Since the war he has lived at New Orleans and in Georgia. In 1880 he was sent, as U. S. minister, to Turkey.

LOPHOR'NIS, a genus of Humming-birds, of which the *L. ornatus*, or tufted coquette of N. Brazil, is a familiar example. The spangled coquette is another species, known scientifically as the *L. Reginæ;* others are the *L. Gouldii* and the *L. Helenæ*. These birds have a most brilliant plumage.

LORIMER, GEORGE CLAUD, D.D., an American divine, born in 1837. He was at first an actor, but in 1859 entered the ministry of the Baptist Church. After filling pastorates in Paducah, Ky.; Louisville, Ky.; Albany, N. Y.; and Boston, Mass., he was, in 1879, called to the First Baptist Church of Chicago, where he still remains (1885).

LORING, WILLIAM W., a Confederate officer, born in North Carolina in 1815, entered the U. S. army, took part in the Mexican war, was made lieutenant-colonel for bravery at Contreras and Cherubusco, and colonel for bravery at Chapultepec, and lost an arm at the Belen gate of Mexico. At the outbreak of the civil war, he resigned his commission and entered the Confederate service, where he served with distinction. At the termination of the war, he went to Egypt and organized the army of the Khedive.

LOTZE, RUDOLF HERMANN, a German philosopher and physiologist, born 21st May 1817, at Bautzen, studied medicine and metaphysics at Leipsic, where he was appointed extraordinary Professor of Philosophy in 1842. In 1844 he became Professor of Philosophy at Göttingen. Though of the school of Herbart, L. has an independent place, and in the struggle between transcendentalism and materialism he has distinguished himself as a powerful opponent of the latter. His works are *Gedichte* (1840); *Metaphysik* (1841); *Allgemeine Pathologie und Therapie* (1842); *Logik* (1843); *Ueber den Begriff der Schönheit* (1845); *Ueber Bedingungen der Kunstschönheit* (1847); *Allgemeine Physiologie* (1851); *Medicinische Physiologie* (1852); *Mikrokosmus* (1856–64); *Streitschriften* (vol. i. 1857); *Geschichte der Æsthetik in Deutschland* (1868).

LOUISBURG, a French fortress, built upon the Eastern coast of Cape Breton Island, and named from Louis XIV. In 1745, Massachusetts, assisted by Connecticut and New Hampshire, sent an expedition against it, consisting of about 4000 men. After a seige of nearly two months' duration, the French garrison was compelled to surrender. But the treaty of Aix-la-Chapelle gave Louisburg back to the French. In 1758 the fortress was attacked by a British force of 14,000 men and 38 vessels, under Gen. Amherst; and after a fierce bombardment, it was compelled to surrender. Near the ruins there is now a small village of fishermen.

LOULE, a town of Portugal, province of Algarve, 10 miles N.W. of Faro, is surrounded by a Moorish wall, has a ruined Moorish castle, and manufactures baskets of aloe thread. Pop. 12,000.

LOVEJOY, ELIJAH PARISH, an American anti-slavery agitator, born at Albion, Me., Nov. 9, 1802, and graduated from Waterville College in 1826. He entered the Presbyterian ministry in 1833, edited the *Observer* in St. Louis until compelled to leave that city by mob violence, and then removed to Alton, Ill. Here his printing press was twice destroyed by a pro-slavery mob, and he himself murdered by a mob, Nov. 7, 1837.

LOVEJOY, OWEN, a brother of Elijah P., and like him an anti-slavery agitator, born at Albion, Me., Jan. 6, 1811, and educated at Bowdoin College. He served several years in the Congregational ministry, and was in Congress 1856–64. Died in Brooklyn, N. Y., March 25, 1864.

LOW ARCHIPELAGO, or PAUMO'TAS, an archipelago of seventy-eight small coral islands in the S. Pacific, the center of the group being in 19° S. lat., 141° E. long. Their total area is 4125 sq. miles, and the pop. only 8000. The islands were discovered by De Quiros in 1606, and France established a protectorate over them in 1846. An active pearl shell fishery is carried on around them.

LOY'ALTY ISLANDS, a group of five thickly-wooded coral islands in the S. Pacific, to the E. of New Caledonia, lying between 20°–22° S. lat., and 167°–169° E. long. The largest island, Lifu, measures 37 miles by 15, and the area of the whole group is 1354 sq. miles. The inhabitants are Melanesians, and many of them have been converted to Christianity by the Roman Catholic missionaries, who have long labored among them. The L. I. belong to France.

LUBBOCK, SIR JOHN, BART., M.P., F.R.S., &c., was born in London, April 30, 1834. By profession a banker, and for several years Hon. Secretary to the London Bankers. In 1865 and 1868 he contested West Kent unsuccessfully in the Liberal interest, but in 1870 was returned for Maidstone. Though he has taken a leading part in certain financial and educational measures, it is chiefly

as a man of science that he is generally known. He has been President of the Ethnological and Entomological Societies, of the Anthropological Institute, and of the Royal and Linnæan Societies. As an author, he is widely known through his *Prehistoric Times, as Illustrated by Ancient Remains, and the Manners and Customs of Modern Savages* (3d ed. 1870). *The Origin of Civilization, and the Primitive Condition of Man* (1870), *The Origin and Metamorphosis of Insects* (1874), and *On British Wild Flowers considered in Relation to Insects* (1874), besides his *Monograph of the Thysanura and Collembola*.

LUDINGTON, a town of Mason Co., Mich., on the east shore of Lake Michigan, 96 miles from Milwaukee. It is engaged in the lumber trade; has iron works, and is also a fruit center. Pop. 6500.

LUDLOW, EDMUND, born at Maiden Bradley in Wiltshire, England, about 1620, studied at Trinity College, Oxford, and entered the Temple, but having joined the lifeguards of the Earl of Essex as a volunteer, fought at Edgehill (1642), and was taken prisoner at Wardour Castle in 1644. Soon exchanged, he was present at the second battle of Newbury, became high sheriff and member for Wiltshire (1645), actively promoted 'Pride's Purge,' was one of the king's judges, and voted for the abolition of the House of Lords. 'Firm as brass or oak timber,' he made himself obnoxious to Cromwell, who sent him to Ireland (1650) as lieutenant-general of the horse. Thence he retired to Essex (1655), and, having refused to take the oaths to Richard Crowwell, he joined the Wallingford House party, and held a brief tenure of supreme power in Ireland, but on the Restoration fled to Vevey in Switzerland, where he died in 1693, his reappearance in London (1689) having been met by a proclamation of arrest. His *Memoirs* (3 vols. Vevey, 1698–99) appear in Guizot's *Collection des Mémoires relatifs à la Révolution d'Angleterre* (Par. 1823).

LUDLOW, FITZHUGH, an American author, born at Poughkeepsie, N. Y., in 1837, and in 1855 began to write for the press, in which work he rapidly gained prominence. Among his published works are *The Hashish Eater*, *The Heart of the Continent*, and *The Opium Habit*. To the first and last of these peculiar interest attaches from the fact that Ludlow based them upon his personal experience in the use of these drugs. Died in Switzerland, Sept. 13, 1870.

LU'GOS, a market-town of Hungary, comitat of Krassó, 34 miles E.S.E. of Temesvár, has a gymnasium, a Minorite monastery, and fine barracks, is the seat of a Greek bishop, and carries on a lively trade in wine, silk, and leather. Pop. (1869) 11,654. L. was the last rallying point of the insurgent Hungarian government and army in 1849.

LUNDY, BENJAMIN, one of the leaders of the abolition agitation in America, born at Hardwich, N. J., Jan. 4, 1789, of Quaker parents. His early education was very limited, and he learned the saddler's trade in Wheeling, Va. He subsequently removed to St. Clairsville, O., where he practiced his trade. Becoming deeply impressed with the wrongs of slavery, he organized the humane society, and made a stirring appeal to the people of the U. S. on the subject. From this time forward he was unceasing in his efforts for the anti-slavery cause, conducting several papers at various times in its advocacy, delivering many addresses, and writing continually upon the subject. His life was repeatedly threatened, and he was assaulted and nearly killed near Baltimore by an enraged slave-trader. Died in 1839.

LUNDY'S LANE, BATTLE OF, fought July 25, 1814, between British forces, commanded by Gen. Drummond, and a U. S. force under the command of Gen. Brown. The struggle was fierce, but terminated slightly in favor of the Americans, who, however, were unable to follow up their advantage. During the battle, both Gen.'s Brown and Drummond were severely wounded.

LÜTT'RINGHAUSEN, a town of Rhenish Prussia, 20 miles S.E. of Düsseldorf, has manufactures of woollens, linens, cottons, cutlery, &c. Pop. (1875) 9493.

LYD'GATE, JOHN, an English poet, was a native of Suffolk, England, and was born not later than 1370. He studied at Oxford, Paris, and Padua, became a priest of the Benedictine monastery of Bury St. Edmunds in 1397, and established there a school of rhetoric or literature, which acquired a wide renown in his lifetime. He died in the reign of Henry VI. 'L.,' says Morley, 'was well read in ancient lore, mathematician also and astronomer, as well as orator and poet; a bright, pleasant, and earnest man, who wrote clear, fluent verse in any style then reputable, but who was most apt at the telling of such moral stories as his public liked.' His three chief works are *Troy Book*, *The Storie of Thebes*, and *Falls of Princes*. The first is a metrical adaptation from the French, the second a 'Canterbury Tale' in imitation of Chaucer, and the third is founded on Boccaccio's Latin work, *De Casibus Mustrium Virorum*. His *London Lickpenny* is a satire not yet forgotten.

LYNE'DOCH, THOMAS GRAHAM LORD, the ablest of Wellington's lieutenants, was born at Balgowan, in Perthshire, Scotland, in 1750. He lived quietly as a country gentleman till the age of forty-four, when the death of his wife affected him so deeply that he resolved to travel, in the hope of finding some solace for his grief. After serving as a volunteer under Lord Hood in the S. of France, he returned to Scotland, raised the first battalion of the 90th regiment, of which he was made colonel in 1794. He conducted the blockade of Malta, which the French were forced to surrender in 1801, served under Moore in Spain, and afterwards under Wellington with signal distinction. At Barossa, Vittoria, San Sebastian, and the passage of the Bidassoa, his brilliant and resolute genius proved irresistible. In 1814 L. was appointed commander of the forces in Holland, and raised to the peerage with a pension of £2000 a year. He died 18th December 1843. See Murray Graham's *Memoir of Lord L.* (1868; 2d ed., 1877).

LYON, NATHANIEL, an American general, born at Ashford, Conn., July 14, 1819, graduated from West Point, and entered the army in 1841. He participated in the Mexican war, was wounded at the capture of the City of Mexico, and for gallantry in this action was made brevet captain. In May, 1861, he was made brigadier-general U. S. volunteers. While leading a regiment, whose colonel had been killed, at the battle of Wilson's Creek, he was shot, and almost instantly killed, Aug. 10, 1861.

M.

MACINTYRE, DUNCAN BAN, commonly called by his countrymen Donacha Ban ('fair-haired Duncan'), one of the best Gaelic poets of modern times, was born in Glenorchy, Argyleshire, Scotland, 20th March 1724, became forester first to the Earl of Breadalbane, afterwards to the Duke of Argyll, and entered late in life the city guard of Edinburgh, where he died, October 1812. His poems were first published at Edinburgh in 1768, under the title, *Orain Ghaidhealach, le Donacha Mac-an-t-soir* ('Gaelic Songs, by Duncan Macintyre'). They were reprinted in 1790, and again in 1804. In the opinion of Celtic critics, M. is a master of all kinds of lyric composition, serious and humorous. His diction is pure, and versification harmonious. A monument has been erected to his memory on a hill near Dalinally, commanding a fine view of Loch Awe.

MACOMB, ALEXANDER, an American general, born in Michigan, in 1782, and in 1799 entered the army. He served with distinction during the war of 1812, defending Plattsburg against an English army, under Prevost, for which congress voted him a gold medal, and promoted him to the rank of major-general. Died in 1841.

MADEIRA WINES. The qualities and varieties of M. W. are numerous, and differ very widely in commercial value. The kinds chiefly known and appreciated in European markets are Malmsey, Tinto, Sercial, Bual, and Palhetinho, and the highest qualities are produced only on the S. side of the islands. M. W. are naturally rich in alcohol, but those sent to the English and American markets are, like most alcohol wines, artificially branded. They are generally fine keeping wines, improving greatly in bouquet by age, and a good Madeira can never be too long kept. Their mellowness and flavor are developed by heat and shaking, on which account the wines are frequently sent on voyages to the East or West Indies, and an East Indian Madeira is regarded as a great luxury.

MADISON UNIVERSITY, an educational institution, controlled by the Baptists, and located at Hamilton, N. Y. There are three departments: an academy, a college, and a theological

seminary. It has valuable buildings and an increasing endowment.

MAGEE', WILLIAM, D.D., born in county Fermanagh, Ireland, March 18, 1766, graduated at Dublin University (1785), was elected fellow (1788), ordained (1790), and after serving for some years as assistant professor of Oriental languages, was raised to the chair of mathematics (1806). In 1811 he published his *Discourses on the Atonement* (7th ed. 1841), and the year after, accepting the livings of Kappagh and Killyleagh, became Dean of Cork (1814), Bishop of Raphoe (1819), and Archbishop of Dublin (1822), where he died August 18, 1831. A complete edition of his works appeared in 1842.

MAGINN', WILLIAM, LL.D., son of a classical teacher, was born at Cork, Ireland, 11th November 1794, entered Trinity College, Dublin, at the early age of ten, and took the degree of LL.D. in 1816. During 1818–20 he was a frequent contributor to *Blackwood*, settled in London in 1823, and rapidly came to the front as a brilliant and versatile penman. In 1828 he joined the staff of the *Standard*, and was editor of *Fraser's Magazine*, when its pages were constantly irradiated with the flashes of youthful genius. He died at Walton-on-Thames, 21st August 1842. His *Homeric Ballads, Shakspeare Papers*, and critical essays have been edited by Dr. R. S. Mackenzie (5 vols. New York, 1855–57). M. was one of the gayest, brightest, and wittiest of those reckless litterateurs who half a century ago worshiped with equal devotion at the shrines of Apollo and Bacchus.

MAG'NUS or MAG'NI, JOHANNES, a Swedish historian, born at Linköping, 19th March 1488, studied at Louvain and Köln, and in 1523 was appointed Archbishop of Upsala, with the consent of Gustaf Vasa. His opposition to the Reformation led to his imprisonment for a short time in 1526, after which he visited Prussia, Poland, Germany, and afterwards Italy, where he died at Rome, 22d March 1544. During his exile he wrote a *Historia metropolitanæ Ecclesiæ Upsalensis* (Rome, 1557–60) and *Historia de omnibus Gothorum Sueonumque Regibus* (1554).—OLAUS M., brother of the above, born 1490, after holding various posts in the Swedish diplomatic service, accompanied his brother into exile as his secretary, and was after his death appointed titular Archbishop of Upsala, yet remained at Rome, where he died in 1558. He edited his brother's works, and himself wrote a comprehensive *Historia de Gentibus septentrionalibus earumque diversis Statibus* (Rome, 1555; Eng. trans. Lond. 1658), which was long the main source of knowledge of Sweden and the Swedes available to other nations.

MAGRUDER, JOHN BANKHEAD, a Confederate general, born in Virginia in 1810, and graduated from West Point in 1830. He served during the Mexican war, and was wounded at Chapultepec. At the beginning of the civil war he entered the Confederate service, and after participating in the Chickahominy campaign, was made major-general, and placed in command of the western department. Died at Houston, Tex., Feb. 19, 1871.

MAHABALIPURAM, or the Seven Pagodas, a ruined city on the Coromandel or E. coast of S. India, 33 miles S. from Madras. It is celebrated for its highly ornamented pagodas, and for carvings on the rocks. The city itself is said to be covered by the sea. See Fergusson's *History of Indian Architecture* (Lond. 1876).

MAHAN, ASA, D.D., an American theologian, born at Vernon, N. Y., in 1799, graduated from Hamilton College in 1824, and from Andover Seminary in 1827. He then entered the ministry of the Presbyterian Church, and in 1835 became President of Oberlin College, Ohio. He was afterwards President of Cleveland University and of Adrian College. Among his published works are the following: *Scripture Doctrine of Christian Perfection, The Science of Intellectual Philosophy, The Doctrine of the Will, The Science of Moral Philosophy, The Science of Logic*, and *A Critical History of Philosophy*.

MAHAN, DENNIS HART, LL.D., an American military engineer, born in New York, April 2, 1802, and graduated from West Point in 1824. He published numerous works on fortifications and military engineering. Was drowned in the Hudson River near Stony Point, Sept. 16, 1871.

MAHANOY CITY, in Schuylkill Co., Pa., on Mahanoy Creek, 13 miles N.E. of Pottsville. It is a mining and manufacturing town. Pop. 7181.

MAHÉ, a French settlement on the Malabar or W. coast of S. India, at the mouth of a small estuary, 7 miles S. from Tellicherry, and 636 from Bombay. Area about 2 sq. miles; pop. about 2000. It was finally restored to the French in 1815. The coasting trade in 1872–73 showed an export of $13,500, and an import of $12,175.

MAH'MUD THE GHIZNEVIDE, born at Ghuzni, 12th December 967, succeeded his father in the emirship of Khorasan and Bokhara (997), and having conquered the neighboring provinces of Persia, made Ghuzni his capital, and renounced his allegiance to the califs. He next turned his arms against India, which he invaded fourteen times (1001–28), ravaging Kanoge and Mathura, and carrying off the gates of the famous temple of Somnath. The first of the Mussulman invaders, to him is due the spread of Islam in India. Among a host of men of letters attracted by the splendor of his court, the poet Firdusi stands forth pre-eminent. M. died at Ghuzni, April 30, 1030. See Hammer-Purgstall, *Gemäldesaal Moslemischer Herrscher* (Darm. 1837).

MAHONE, WILLIAM, an American statesman, born in Virginia, in 1827. He became a civil engineer, and served in the Confederate army during the civil war, rising to the rank of major-general. He was made U. S. senator, in 1880, and became prominent as the leader of the 'readjusters,' a political party which sought certain modifications of the public debt of Virginia.

MAHO'NY, FRANCIS, better known by his *nom-de-plume* of FATHER PROUT, was born at Cork, Ireland, in 1805, educated for the Romish Church, and became incumbent of Watergrass Hill. His opinions were of the most cosmopolitan kind, and during the best days of *Fraser's Magazine* he was a constant contributor to its columns. His scholarship was wide, but was utilized by him chiefly for quaint and humorous reference. 'Modest distrust of his own power to please deterred Prout from obtruding much of his personal musings. He preferred chewing the end of classic fancies or otherwise approved and substantial stuff, delighting to invest with new and varied forms what had long gained universal recognition.' For many years he acted as Paris correspondent for the *Globe* newspaper, and for some years as Roman correspondent of the *Daily News*. Some of his lyrics are of a high order, *The Bells of Shandon* having attained a national reputation. He died at Paris, 18th May 1866. M.'s *Reliques*, collected from *Fraser* in 1836 (new ed. 1860), are the most characteristic of his writings in prose and verse. His later writings were edited by Blanchard Jerrold as *Final Reliques* in 1874.

MA'JOR or MAIR, JOHN, was born at Cleghornie, near North Berwick, in 1469, and educated, it is believed, partly at Oxford and Cambridge, and partly at the university of Paris. In 1506 he became a doctor of the Sorbonne, and in 1519 accepted a professorship at St. Andrews, but the political discord sent him back to Paris, where he devoted himself to teaching. In 1533 he was appointed provost of St. Salvator's College, University of St. Andrew's, an office which he retained till 1549. His opinions concerning ecclesiastical and secular government were of a bold and liberal order, and both upon Knox and Buchanan exercised considerable influence, though the latter speaks disparagingly of him—*solo cognomine, Major*. The *In quatuor Sententiarum lib. Commentarius* (published at Paris, 1516) won him a European reputation as a commentator, and his *De Historia Gentis Scotorum, seu Historia Majoris Britanniæ* published at Paris, 1521 (reprint, Edinb. 1740), began to tone down the fabulous element which held so large a place in Scotch annals. He died at St. Andrews about 1550.

MALL'ARD (*Anas boschas*), a well-known species of *Anatidæ* or ducks, popularly known also as the wild duck. The male is brilliant or metallic green on the head and neck, the lower part of the neck being encircled with a collar of white. The back is a chestnut-brown, and the remaining tints include a grey below various black markings. The female is of a sombre brown hue. The average length is two feet. The nest is made of grass, and is lined with soft down. It is placed close to the water's edge, and the eggs are large and white, tinted with green.

MALL'ET, originally MALL'OCH, DAVID, a Scottish *littérateur*, born at Crieff, Perthshire, about 1700, was for some time tutor in the family of the Duke of Montrose, and after traveling over the continent of Europe, settled in London, where he died 21st April 1765. He wrote several plays, *Eurydice, Mustapha*, the masque of *Alfred* (in conjunction with Thomson), a *Life of Lord Bacon*, &c., but is now only remembered, and that faintly, for his ballad of *William and Margaret*, in which some natural pathos finds expression through the conventional diction of the time. M. was an unscrupulous pamphleteer.

MALMESBURY, JAMES HARRIS, FIRST EARL OF, an English diplomatist, son of James Harris the philologist, was born at Salisbury, 9th April 1746, and educated at Oxford and Leyden. He was Secretary to the Embassy at Madrid in 1768, Ambassador at Berlin, 1772–76, at St. Petersburg, 1777–82, at the Hague, 1784–88, and again at Berlin, 1793–97. At the last named capital he negotiated a treaty of subsidies, and the marriage of the Prince of Wales (afterwards George IV.) with Princess Caroline of Brunswick. In 1796–97 he was sent on an unsuccessful mission to France to treat for peace. In 1798 he was created Baron, and in 1800 Earl of M. From his retirement from the diplomatic service till his death he was much consulted by statesmen on foreign affairs. He died November 21, 1820. His *Diary and Correspondence*, in 4 vols., a most valuable work for historians, was published by his grandson, the third earl, in 1845.

MAL'ORY, Sir Thomas. the compiler of *The Most Ancient and Famous History of the Renowned Prince Arthur*, of whom we only know that he was a knight, and that he completed his work in the ninth year of the reign of Edward IV. (1469–70). Of this quaint volume, based on the great prose romances of Merlin, Lancelot, Tristram, the Queste du St. Graal, and the Mort Artus, seven black-letter editions are known to exist—Caxton's (July 1485), of which the only complete copy is in the Earl of Jersey's library at Osterley Park, Middlesex; two by Wynkyn de Worde (1498 and 1529); Copland's (1557); two by Thomas East, one folio, the other 4to, both undated; and William Stansby's (1634), which last edition has been reprinted in *Walker's British Classics* (2 vols. 1816), by Joseph Haslewood (3 vols. 1816), and by Thomas Wright (3 vols. 1866). Of Caxton's original edition a reprint appeared in 1817, edited by Robert Southey.

MALVERN HILL, Battle of, an engagement of the civil war, July 1, 1862, between the army of the Potomac, commanded by Gen. McClellan, and a Confederate force under Gen. Lee. A desperate assault was made upon the Union force, while strongly posted upon M. H., about 11 miles from Richmond, which was repulsed. The Confederate loss was over 4000, that of Union army, about 2000. McClellan, however, continued the retreat, then in progress towards Harrison's landing.

MANAYUNK, in Philadelphia Co., Pa., on the Schuylkill River, 6 miles from Philadelphia proper. It has been called the Lowell of Pennsylvania, and it has 45 mills engaged in the manufacture of woollen and cotton goods, besides other industries. Pop. 20,000.

MANDHA'TA, an island in the Nerbudda, district of Nemur, Central Provinces, British India, nearly a square mile in area, whose banks rise precipitously 400 feet from the river. Here are two of the twelve original 'lingas' or emblems of Siva; and the whole island and the neighboring banks of the river are covered with ruined temples of the Sivaite, Vishnuvite, and Jain sects of Hindus. Not a single sculpture has been left unmutilated by Mohammedan fanaticism.

MANDU, the former capital of the Mohammedan kingdom of Malwa, now in the petty state of Dhar, 15 miles N. of the Nerbudda River, and 26 S.W. of Mhow. It was founded in the 4th c., and was the capital of Malwa from 1387 to 1570, when it was captured by Akbar. The circuit of the ramparts is said to be as much as 37 sq. miles; but inside all is deserted, overgrown with jungle, and the haunt of tigers. A Jumma Musjid, or great mosque, and the mausoleum of a king in white marble, are still well preserved.

MANDVI, the chief seaport and most populous town of the native state of Kutch, in political connection with the government of Bombay, India, on the N. shore of the Gulf of Kutch. Pop. (1872) 35,988. Ships of considerable burden anchor in the roads.

MANISTEE, in Manistee Co., on Lake Michigan, at the mouth of the Manistee River, about 100 miles from Grand Haven. Milling and salt and lumber manufacturing are carried on. It is the largest shingle manufacturing city in the world, producing about two million shingles per day. It has two large salt-producing works, and is surrounded by the great fruit-growing belt of Michigan. Pop. 11,000.

MANITOU, an Indian term, meaning any object of religious reverence, either good or bad. *Gitche Manitou* is the name applied to the Supreme Being by many tribes of the Indians of North America.

MANITOWOC, in Manitowoc Co., Wis., on Lake Michigan, at the mouth of the Manitowoc River, 77 miles from Milwaukee. It has a good harbor, is engaged in shipbuilding, and has foundries, machine shops, furniture factories, &c. Pop. 6367.

MANKATO, a town of Blue Earth Co., Minn., at the junction of the Minnesota and Blue Earth rivers, and the Chicago & N. W., and other railroads. About it is a fine agricultural district; and it has four large flouring mills and other manufacturing interests. Pop. 7000.

MANRE'SA, a town of Spain, province of Barcelona, on the river Llobregat, 30 miles N.W. of the city of Barcelona. It has cotton and silk manufactures. Pop. 9000.

MANSFIELD, in Richland Co., O., 176 miles from Pittsburgh and 180 from Cincinnati, at the junction of four railroads. It has large manufacturing interests, considerable wholesale trade, and is surrounded by an agricultural community. Pop. 9859.

MANT, Richard, D.D., born at Southampton, England, February 12, 1776, passed from Winchester School to Trinity College, Oxford, and was elected a fellow of Oriel (1798), taking his M.A. in 1800, and D.D. in 1815. Ordained in 1802, he was successively vicar of Great Coggeshall, Essex (1810); Bampton Lecturer (1812); chaplain to Archbishop Manners Sutton (1813); rector of St. Botolph's Bishopsgate (1815); and of East Horsley, Surrey (1818); bishop of Killaloe and Kilfenora (1820), and of Down and Connor (1823). He died at Ballymoney Rectory in the county of Antrim, November 2, 1848. M.'s best known work, prepared in conjunction with the Rev. George D'Oyly, D.D., is his edition of the Bible, with notes selected from the Anglican divines (3 vols. Lond. 1817; New York reprint, with additional notes by Bishop Hobart, 2 vols. 1818–20). He also published an annotated *Book of Common Prayer* (1820), a *History of the Church of Ireland* (2 vols. 1839–40), *Ancient Hymns from the Roman Breviary* (new ed. Oxf. 1873), &c. See his *Life*, by Archdeacon Berens (1849), and a complete list of his works in vol. xxxi. new series, of the *Gentleman's Magazine*.

MANTEGN'A, Andrea, a famous Italian painter and engraver on copper, was born at Padua in 1431, studied under Squarcione, married a daughter of Giacomo Bellini, and opened a school in Mantua which acquired a wide celebrity. He died in 1509. M.'s best works are the frescoes in the Church of the Eremitani (Padua), and in the Castello di Corte (Mantua), the altar-piece of St. Zeno (Verona), the 'Dead Body of Christ' (Berlin), and the cartoons of 'Cæsar's Triumph' (Hampton Court). M. is considered the head of the 'Paduan School,' which is distinguished by its close but servile study of the antique, and its comparative neglect of nature. His coloring is almost always dry. The most notable of his pupils was Correggio. M. had three sons, all of whom were painters.

MAN'WYNE, a town in the Chinese province of Yunnan, bordering on Independent Burmah, the scene of the treacherous murder of Mr. Margary, an enterprising British diplomatic officer, on 22d February, 1875. See *Journey of A. R. Margary from Shanghae to Bhamo, and back to M.* (Lond. 1876).

MA'RAH (Heb. 'bitterness'), the name of a place in the wilderness of Shur, three days' journey from the point where the Israelites crossed the Red Sea. The waters were so bitter that it was impossible to drink them, but they were sweetened by Moses casting in a tree which 'the Lord showed him' (Exod. xv. 23–25).

MAR'BLING is the art of imparting variegated patterns to sheets of paper or book edges. The colors, previously mixed up with wax and ox-gall, are superimposed on each other on the surface of a solution of gum contained in a shallow trough, and the particular pattern required is arranged by drawing a rod or comb through them. A sheet of paper is then laid flat on the colors and removed without disturbing their arrangement; the marbled paper is afterwards calendered. Book edges are dipped into the trough, and when dry are burnished with agate. Germany exports much marbled paper.

MARCY, William Learned, an American lawyer and statesman, born at Southbridge, Mass., Dec. 12, 1786, and graduated from Brown University in 1808. He was for several years a teacher, and then began to practice law in Troy, N. Y. He was a judge of the Supreme Court of New York, was twice elected governor, and U. S. senator. He was secretary of war under Polk, and secretary of state under Pierce. In the latter position he won high reputation for statesmanship. Died at Ballston, N. Y., July 4, 1857.

MAR'GARY, Augustus Raymond, a young Englishman, educated at Brighton College, who was appointed to a student interpretership in China at the age of twenty-one, and devoted himself to the study of the Chinese character and language. In 1874 he was selected for the important task of traversing S.W. China to the Burmese frontier, to meet and escort the mission sent by the Indian government from that quarter. This duty he successfully accomplished with admirable energy and tact; but in February 1875, while proceeding in advance of the Burmese party, he was treacherously killed at the Chinese town of Manwyne, in Yunnan, where he had just before been hospitably entertained. It was more than twelve months before retribution for this murder was exacted by diplomacy from the Chinese authorities. See *The Journey of A. R. M. from Shanghae to Bhamo and back to Manwyne* (Lond. 1876).

MARIETTA, a town of Washington Co., O., on the Muskingum River, at its entrance into the Ohio River. It has direct railroad connections with the principal points in the state. The Muskingum River is navigable from here to Zanesville, a distance of 80 miles. It is interested in manufacturing, river commerce, and trade; and is surrounded by the coal oil regions of Ohio. Pop. 6000.

MARIETTA COLLEGE, an educational institution located at Marietta, O. It was founded in 1835. It has a good library and is fairly equipped for collegiate work.

MARION, Francis, an American soldier and patriot, born in South Carolina in 1732. At the outbreak of the Revolution, he entered the Continental service, under Moultrie, with the rank of captain. He participated in the contests with the British in and about Charleston, and just prior to the capture of that city in 1780,

by the enemy, was sent into the country on account of a broken leg, the result of an accident. Here he raised a band of men, poorly equipped and rudely armed, with whom he waged a desultory strife against the British, much to their annoyance. His adventurous spirit and stragetic skill gained for him the title of 'the Swamp Fox.' The number of his troops having rapidly increased, he joined the army of Gen. Greene, and served under him until the evacuation of Charleston by the British, in 1782. Died near Eutaw, Feb. 29, 1795.

MAR'IVAUX, Pierre Carlet de Chamblain de, was born at Paris, 4th February, 1688, received but a poor education, and always affected a contempt for classical writers. In 1716, appeared his *L'Homère Travesti*, a foolish satire upon the *Iliad*. He was a voluminous writer for the stage, his comedy *Le Jeu de l'Amour et du Hasard*, which appeared in 1730, having firmly established his reputation among his contemporaries as an analyst of the eccentricities of the passion of love. His dialogue is invariably brilliant, but his discrimination of character weak. In the romance of *Marianne* (1731–36), he reached higher ground, being freed from the laws of the drama, under which his power of developing plot and character was hampered. It is still looked into by French readers. M. died at Paris, 12th February, 1763. His *Œuvres Complètes* were published at Paris in 12 vols. 1781. A more careful but less complete edition is that of Duviquet (10 vols. Par. 1827–30). See Sainte-Beuve's *Causeries du Lundi*, vol. ix.

MARLBORO, in Middlesex Co., Mass., on the Old Colony and Fitchburg railroads, 32 miles from Boston. It is principally engaged in manufacturing boots and shoes.

MAROT, Jean, a French poet, was born at Mathieu, near Caen, in 1463, and died at Cahors in 1523 as valet-de-chambre to François I. His works were first collected by Constelier (Par. 1723). —His son, Clement M., born at Cahors in 1495, served as page to the Seigneur de Villeroi, and having by his verses won the patronage of Marguerite de Valois, succeeded his father as valet to her brother, François I., with whom he was taken prisoner at Pavia (1525). A charge of heresy cast him, on his return, into prison, whence in his *Enfer* he launched a bitter satire against his persecutors, and in 1535 he was forced to seek a refuge at the court of Navarre. But even there his translations of the Psalms brought him once more into difficulties with the clergy. He withdrew to Geneva (1543), and thence—the sour Calvinism of the place ill assorting with his gay Bohemian spirit—to Turin, where he died, September, 1544, leaving a son, Michel, who was also a poet. The best edition of Clément's works is Gniffrey's (Lyon, 1869). See Colletet, *Notices Biographiques sur les Trois Marots* (Par. 1871); and H. Morley, *Clement M., and other Sketches* (Lond. 1871).

MARQUETTE, in Marquette Co., Mich., on Lake Superior, 200 miles N. of Green Bay. It has iron mines, blast furnaces, rolling mills, and other manufacturing interests. Pop. 6800.

MARSH, Othniel Charles, an American scientist, born at Lockport, N. Y., in 1831, and graduated from Yale College in 1860. He further pursued his studies in Germany, and, upon his return to America, was made professor of paleontology at Yale. He has conducted extensive explorations in the Rocky Mountains, of great scientific value.

MARSHALL, Humphrey, an American lawyer, born at Frankfort, Ky., Jan. 13, 1812, and graduated from West Point in 1832. In 1833 he resigned from the army, and having studied law, began its practice in his native place. He served in the army during the Mexican war, and was present at the battle of Buena Vista. He was several times elected to Congress, and served for a short time in the Confederate army with the rank of brigadier-general. At the close of the war he resumed the practice of law, in which he was very successful. Died at Louisville, Ky., March 28, 1872.

MARSHALL, John, LL.D., a distinguished American jurist, born at Germantown, Va., Sept. 24, 1755. In 1781 he began to practice law, and soon attained distinction by his legal abilities. After having served his state and country in many important positions, he was in 1801, made Chief-justice of the U. S. Here he soon displayed highest abilities, and won for himself a place among the greatest jurists of the world. He published a *Life of Washington* and a *History of the Colonies*. Died at Philadelphia, Pa., July 6, 1835.

MARSHALLTOWN, in Marshall Co., Ia., 70 miles W. of Cedar Rapids. It carries on a thriving trade with the adjacent country, and is also interested in manufacturing. Pop. 10,000.

MARSH'MAN, Joshua, an English missionary, born at Westbury Leigh, Wiltshire, 20th April 1768, was sent in 1799 by the Baptist Missionary Society to Serampore, India, where he labored for many years along with Carey, Ward, and others of the 'Serampore Brethren.' He mastered several Oriental languages, and translated a great portion of the Scriptures into Chinese. He published the *Works of Confucius* (the original text with a translation) in 1811, a Chinese grammar in 1814, and jointly with Carey a Sanskrit grammar in 1815, and a Bengali-English dictionary in 1825 (abridged 1827). He printed a discussion with Rammohun Roy on *The Deity and Atonement of Christ* in 1822. Rightly or wrongly, M. was held mainly responsible for the separation of the brethren from the parent Baptist Missionary Society in 1827. He died at Serampore, December 5, 1837. See Cox's *History of the Baptist Missionary Society*.—John Clark M., C.S.I., a leading man of letters in India, the eldest son of the preceding, was born at Serampore in 1794. He founded the first Bengali newspaper, the *Sumachar Darpan*, and also the first English weekly newspaper: the influential *Friend of India*, which has recently passed out of existence. In conjunction with his father's friend, Dr. Carey, he brought out the first complete *Bengali Dictionary;* and his popular *History of India from the Earliest Times to the End of the Eighteenth Century* is perhaps the most widely read of all books on the country which was his adopted home. He also wrote Lives of Carey, Marshman, and Ward, and memoirs of Sir Henry Havelock, who was his own brother-in-law. While in England he had been called to the bar, and in the department of Indian law he wrote many useful works. For ten years he filled the appropriate office of Translator to the Government of Bengal, and finally returned home in 1852. M. died 8th July 1877.

MARSTON MOOR, in the W. Riding of Yorkshire, England, 5 miles N.E. of Tadcaster, the scene of the second great defeat of the Royalists by the Parliamentarians (July 1, 1644). The former were commanded by Prince Rupert, the Marquis of Newcastle, and Sir Charles Lucas; the latter, by Fairfax, the Earl of Manchester, Cromwell, and Sir David Leslie; the forces on each side amounting to some 25,000. On one flank the king's horse broke through the Scotch, but on the other Cromwell's 'Ironsides' turned the fortune of the day. The Royalists lost 3000 killed and wounded, and 1500 prisoners, and the remnant of their forces, who threw themselves into York, were forced to capitulate after a few days' siege.

MAR'TYN, Henry, the martyr missionary of the East, was the son of a miner, and was born near Truro in Cornwall, in 1781. Educated in classical studies at the Truro Grammar School, he went up to St. John's College, Cambridge, in 1797. There he read mathematics, and graduated as Senior Wrangler in 1801. There also he came under the influence of the Rev. Charles Simeon, whose curate he presently became. In 1805 he went out to India as a military chaplain; in 1811 he betook himself to Persia, and died 16th Oct. 1812, at Tokat in Asia Minor, while traveling alone back to Europe. His career is rendered yet more interesting from the feeble health with which he had always to contend, and by the melancholy story of his persistent and unrequited love. He lived long enough to translate the New Testament into Hindostani and Persian, and to leave behind a heroic example of self-sacrifice. See memoirs of H. M. by Sargent, Wilberforce, and Sir J. Kaye.

MARX, Karl, born 1818 at Köln, studied law and philosophy at Berlin. From 1841 till its suppression he edited the *Rheinische Zeitung* at Köln, but went to Paris in 1844, where he joined the republican and socialist leaders; with Ruge, H. Heine, and Börnstein publishing *Deutsch-französische Jahrbücher*, and a newspaper, *Vorwärts*, but was forced to flee to Brussels, where he put himself at the head of the 'central committee' of the Socialists in 1848. The same year he returned to Köln, where he started the *Neue Rheinische Zeitung*, but removed to London in 1849, where in 1864 he established the 'International' of which he has since been the most prominent leader. In 1872 a disruption of the Society took place, and M., who headed the extreme section, withdrew to New York. His chief work is *Das Capital, Kritik der politischen Oekonomie* (1867).

MASSAY'A, a town of Central America, in Nicaragua, near a lake and volcano of the same name, 245 miles S.E. of the town of San Salvador. Palm-hats and wooden wares are manufactured. The surrounding district is fertile and well-tilled. Pop. 15,000 (mostly Indians).

MAS'CARA, an old town of Algeria, on the N. slope of the Atlas Mountains, 50 miles S.E. of Oran. It has considerable trade, and some industry in making burnus. Formerly a residence of Turkish beys, it was nearly destroyed by Marshal Clauzel, 6th December 1835. Pop. (1872) 9240.

MASON, Erskine, D.D., a distinguished American preacher, born in New York, in 1805. He was educated at Dickinson College, Pa., and pursued his theological studies at Princeton. He was pastor of Presbyterian churches in Schenectady, N. Y., and New York City, and attained great fame as a pulpit orator. He was subsequently professor of church history in Union Theological Seminary, New York, and died in 1851.

MA'SON, William, an English poet, born at Hull, England, in 1725, entered St. John's College, Cambridge (1742), graduated

B.A. (1745), was elected a fellow of Pembroke (1747), and published *Iris*, a satire on Oxford Jacobitism (1748), which was followed by four bombastic *Odes* (1756), and by two tragedies, *Elfrida* (1753) and *Caractacus* (1759), both acted and condemned at Drury Lane. Having taken orders, M. received a royal chaplaincy, with the living of Aston in Yorkshire (1754), and a canonry and precentorship in the cathedral of York (1762), where he died, April 7, 1797. Besides other poems—among them *The English Garden* (1772–82)—M. published works on painting and church music, but he is best remembered as the compiler of the *Memoir and Letters* of his friend the poet Gray (1775), the basis, it may be said, of all succeeding biographies.

MASON CITY, a town of Cerro Gordo Co., Ia., 115 miles N. of Des Moines. It has direct railroad communication with Chicago and Milwaukee, and is surrounded by a farming community. Pop. 5000.

MASSASOIT, a chief of the Wampanoag Indians, who showed great friendship to the settlers at Plymouth, Mass.; and who gave shelter to Roger Williams when banished from the colony of Massachusetts, on account of Baptist principles. Died in 1661.

MASSILLON, a flourishing city of Ohio, situated on the Tuscarawas River. It has large manufacturing interests, and is surrounded by valuable coal-fields. Population, 6837.

MAS'ULAH BOATS, a peculiar kind of craft used for the conveyance of passengers through the perpetually raging surf of the Coromandel or E. coast of the Indian peninsula, especially at Madras city. The materials are taken from any grove of mango and cocoanut. Mango planks are saturated with oil, bent into shape over a fire, and seamed and sown together with coir and straw. Such is their elasticity and toughness, that it has been proved by experiment that English-built lifeboats are less capable of resisting the tremendous strain caused by beating over the surf and the sandy beach. They have no keel, but a smooth and rounded bottom.

MATAMORAS, MARIANO, a Mexican general and revolutionist, born in Mexico in 1770. For some time he was a priest, but afterwards joined his countrymen in arms against the Spaniards. He soon gained himself a reputation as a military leader. At the battle of Puruaran, he was captured by the enemy, and was shot, Feb. 13, 1814, at Valladolid.

MAT'SYS, MET'SYS, or MESS'IS, QUENTIN, a Flemish painter, born at Louvain in 1466, is said to have been a blacksmith until his twentieth year—whence his nickname, the 'Farrier of Antwerp'—and to have exchanged the sledge-hammer for the brush from love of a maiden who would wed none but a painter. Genuine works by him are rare, the best known being the 'Descent from the Cross' in the Antwerp Museum, 'Mary Magdalen' in Lord Methuen's gallery at Corsham House, and a 'Madonna' at Berlin, while other specimens occur in the collections at Vienna, Munich, Frankfurt, and Dresden. The 'Two Misers' at Windsor has been of late years ascribed to his son Johann. M. died at Antwerp in 1531. See Van Even's *Recherches sur Quentin Messis* (Louvain, 1864).

MATTOON, in Coles Co., Ill., 173 miles from Chicago. It is a railroad center and a corn-growing and shipping point. Coal is found in the vicinity. Pop. 6300.

MAUCH CHUNK, a small town of Carbon Co., Pa., in the center of the Lehigh coal country. It is remarkable for the beauty and picturesqueness of the surrounding scenery, and is becoming a famous resort for summer travelers. Population, 3752.

MAY, SAMUEL JOSEPH, born at Boston, Mass., in 1797, and educated at Harvard College. He entered the ministry of the Unitarian church, and was pastor of churches in Brooklyn, Connecticut, and Syracuse, N. Y. He was one of the most outspoken and eloquent advocates of the abolition of slavery. Died in 1871.

MAYAG'UEZ, a town of Porto Rico, 66 miles S.W. of San Juan, is situated 1 mile inland, being connected with its port by a tramway. There is safe anchorage, and the town, well supplied with gas and water, is the most advanced place in the island. Estimated pop. (1875) 20,000.

MAY, THOMAS, a poet and historian, was born at Mayfield, Sussex, England, in 1594, and proceeded from Sidney College Cambridge, to Gray's Inn; but embracing the profession of letters, he became a favorite of Charles I., and during his residence at court produced five plays, two poems on the reigns of Henry II. (1633) and Edward III. (1635), and translations of Virgil's *Georgics* (1622) and Lucan's *Pharsalia* (1627), the latter with a supplement in seven books, which he afterwards rendered into Latin (1640). On the outbreak of the civil war, M. sided with the Commons, and, appointed secretary and historiographer to the parliament, wrote a *History of the Parliament of England which began Nov. 3, 1640* (Lat. vers. 1647; Eng. 1650; Fr. trans. 1823), and a *Breviary of the History of the Parliament* (1650). He died, choked by his nightcap strings, November 13, 1650.

MAZ'AMET, a town in the S. of France, department of Tarn, at the foot of the Montagnes Noires, and on the Annette, 33 miles S.S.E. of Albi by rail. It has considerable manufactures of woollens, which, with linens and hydraulic limestone, it produces annually to the value of $3.600,000. Pop. (1872) 10,600.

M'CARTHY, JUSTIN, novelist and journalist, was born in Cork, Ireland, November 22, 1830. He was on the staff of the Cork *Examiner* from 1846 to 1853, when he joined that of the *Northern Times*, Liverpool. In 1860 he became parliamentary reporter for the *Morning Star*, in 1861 foreign editor of the paper, and chief editor, 1864–68. During 1868–71, M. made a complete tour of the United States. Although a vigorous and accomplished contributor to political literature M. has won a wider fame in fiction. His novels are—*Paul Massie* (1866); *The Waterdale Neighbors* (1867); *My Enemy's Daughter* (1869); *Lady Judith* (1871); *A Fair Saxon* (1873); *Linley Rochford* (1874); *Dear Lady Disdain* (1875); and *Miss Misanthrope* (1877). These works are skillfully constructed, abound in incident, and are written in exquisitely beautiful English. Everywhere we can notice the play of a keen, incisive, and graceful intellect, of warm, tender sensibilities, and of a singularly pure and healthy spirit. M. has also written essays and papers on many subjects; *Con Amore* (a collection of essays, 1868); *Critical Notice of George Sand* (1870); *Prohibitory Legislation in the United States* (1872); *Modern Leaders* (biographical sketches, New York, 1872), &c. As a lecturer M. has few equals. The easy yet ornate elegance of his unwritten composition exerts a peculiar and unwonted charm.

MCCALL, GEORGE ARCHIBALD, an American officer, born in Philadelphia, Pa., March 16, 1802, graduated from West Point, and entered the army in 1822. He was engaged in the war against the Seminoles, and participated with gallantry in the Mexican war. He was promoted for bravery at the battles of Palo Alto and Resaca de la Palma. He participated in the civil war with the rank of brigadier-general of volunteers, and was engaged at Mechanicsville, Gaine's Mill, and Frazier's Farm. At the last battle he was taken prisoner. In 1863 ill health compelled him to retire from the army. Died at West Chester, Pa., Feb. 25, 1868.

MCCLERNAND, JOHN A., an American officer and politician, born in Kentucky, May 30, 1812, removed to Illinois when young, and began the practice of law in 1832. He was elected to Congress in 1843 and in 1851, and again in 1859. At the outbreak of the civil war he resigned from Congress, raised a brigade and entered the Union service with the rank of brigadier-general U. S. volunteers. He was present at Fort Donelson, Shiloh, and the capture of Vicksburg, and was in command of the expedition which captured Arkansas post. He resigned his commission in Nov. 1864.

MCCLINTOCH, JOHN, D.D., LL.D., an American scholar and theologian, born at Philadelphia, Pa., Oct. 27, 1814, graduated from the University of Pennsylvania in 1835, and in the latter year entered the ministry of the Methodist Church, where he soon became distinguished for eloquence and scholarship. Upon the founding of Drew Theological Seminary, through the munificence of Daniel Drew, in 1866, he was chosen its president, which position he filled up to the time of his death. Besides many sermons and essays, he published *Analysis of Watson's Theological Institutes* (1850), *Sketches of Eminent Methodist Ministers* (1863), and a translation of Bungener's *History of the Council of Trent* (1855). With Dr. Strong he edited the *Cyclopædia of Biblical, Theological, and Ecclesiastical Literature*. Died at Madison, N. J., March 4, 1870.

MCCLOSKEY, JOHN, D.D., an American cardinal, born at Brooklyn, N. Y., March 20, 1810, graduated from Mount St. Mary's College, Md., and entered the priesthood in 1834. He was pastor of a church in New York, and in 1841 was made president of St. John's College, Fordham, N. Y. In 1847 he became first bishop of the diocese of Albany, and on the death of Archbishop Hughes in 1864, was appointed his successor. In 1875 he was made cardinal.

MCCOOK, ALEXANDER MCDOWELL, an American general, born in Ohio, April 22, 1831, and graduated from West Point in 1852. At the beginning of the civil war, he was appointed colonel in the volunteer service, and in Sept. 1861 was made brigadier-general of volunteers. He was present at Shiloh, the siege of Corinth, and Perryville. He commanded the 20th corps at Stone River and Chickamauga with the rank of major-general.

MCCOSH, JAMES, D.D., LL.D., a distinguished metaphysician and philosopher, born in Ayrshire, Scotland, in 1811, and educated at the Universities of Glasgow and Edinburgh. In 1835 he became a minister of the Church of Scotland, and in 1868, having been called to the presidency of the College of New Jersey at Princeton, he came to America where he has since remained. His published writings are numerous, and he is universally recognized as a profound Christian scholar.

McDONOUGH. THOMAS, an American naval officer, born in Delaware, Dec. 23, 1783, and entered the navy in 1800. He took part in the war against Tripoli; and on Sept. 11, 1814, defeated a large and superior British squadron on Lake Champlain. For this brilliant victory Congress awarded him a gold medal, and Vermont voted him an estate. Died at sea, Nov. 16, 1825.

McDOWELL, IRWIN, an American general, born at Columbus, O., Oct. 15, 1818, and graduated from West Point in 1838. He served during the Mexican war, and was brevetted captain for gallantry at Buena Vista. At the outbreak of the civil war he was made brigadier-general, and placed in command of the army of the Potomac, which he commanded at the first battle of Bull Run, where he sustained a disastrous defeat at the hands of the enemy. In 1862 he was superceded by Gen. McClellan, and placed in command of a division under him. He commanded the 3d army corps at Cedar Mountain, Rhappahannock Station, and second Bull Run. In 1872 he was promoted to be major-general. Died at San Francisco, Cal., May 5, 1885.

McILVANE, CHARLES PETTIT, D.D., LL.D., D.C.L., a Bishop of the American Protestant Episcopal Church, born in New Jersey, in 1798; educated at Princeton College; and entered the ministry. After filling various minor positions, he was, in 1832, made Bishop of Ohio. He published *Lectures on the Evidences of Christianity*, *Family and Parish Sermons*, &c. Died in 1873.

McKEESPORT, in Allegheny Co., Pa., on the Monongahela and Youghiogheny rivers, and the Baltimore & Ohio and other railroads, 15 miles from Pittsburgh. It carries on a large trade in coal, lumber, and wrought-iron pipe. Pop. 9500.

M'CLURE', SIR ROBERT JOHN LE MESURIER, the discoverer of the N.W. Passage, was born at Wexford, Ireland, January 28, 1807. Educated at Eton and Sandhurst, he entered the Navy, served in the Arctic Expedition of 1836, on the Canadian lakes, and on the American and W. Indian coasts till 1846, gradually rose to the rank of first-lieutenant (1838), joined Sir James Ross in the search for Franklin (1848), and on his return was made commander. In 1850 he was nominated to the *Investigator*, and again dispatched in search of Franklin. The expedition, entering Behring Strait, reached 117° 10′ W. long. and 73° 10′ N. lat., 30 miles from Melville Strait (16th September 1851), but was there fixed in the ice. A sledge party sighted the N.W. Passage on the 22d October. After a vain attempt to press forward, the *Investigator* sailed round the S. end of Banks' Land for 30 miles, and was again checked by ice. In an inlet which they called Mercy Bay, the party were imprisoned till April 1854, when they were relieved by Captain Kellett, who conveyed them to England. M. was made post-captain, and received a knighthood, while the officers and crew were rewarded by a grant of £10.000. Subsequently M. served in the E. Indies and China, and died at Portsmouth, October 18, 1873.

McPHERSON, JAMES BIRDSEYE, an American general, born in Sandusky Co., O., Nov. 14, 1828, and graduated from West Point in 1853. During the year 1862 he was rapidly promoted for meritorious conduct, and in the latter part of that year was made major-general. He distinguished himself for bravery at Forts Henry and Donelson, Shiloh, Vicksburg, the siege of Corinth, Port Gibson, and Champion Hill, winning highest praise from Gen. U. S. Grant. He was with Sherman on his famous Atlanta campaign, and took a prominent part in all its battles. On July 22, 1864, he was shot before Atlanta, and was instantly killed.

MEADE, GEORGE GORDON, an American general, born at Cadiz, Spain, where his father was U. S. consul, and graduated from West Point in 1831. He served during the Mexican war under both Taylor and Scott, and was present at the battles of Palo Alto, Resaca de la Palma, and Monterey. For gallantry at the last, he was brevetted first-lieutenant. In 1861 he was made brigadier-general of volunteers, and assigned to a command in the army of the Potomac. He took part in the battles of Mechanicsville, Gaines's Mill, and Glendale; and at the last of these was severely wounded. He distinguished himself by his gallantry at South Mountain, Antietam, Fredericksburg, and Chancellorsville. On June 28, 1863, President Lincoln placed him in command of the army of the Potomac, and on July 1st, 2d, and 3d, he defeated the army of Gen. Lee in the battle of Gettysburg. Died at Philadelphia, Pa., Nov. 6, 1872.

MEADVILLE, a town of Crawford Co., Pa. It has some manufacturing interests, and is in the midst of the leading dairy section of Pennsylvania. Pop. 8860.

MEAGHER, THOMAS FRANCIS, an American general, born at Waterford, Ireland, Aug. 3, 1823, and in early life became an agitator against English supremacy. He was sentenced to death for sedition, but the sentence was commuted to transportation for life. In 1852 he escaped from Tasmania, and came to New York. During the civil war, he commanded an Irish brigade in the Union army, and won distinction by his gallantry. He was drowned in the Missouri River, at Fort Benton, Montana Territory, July 1, 1867.

MECHANICSVILLE, BATTLE OF, an engagement of the civil war, near the village of the same name, in Virginia, 7 miles from Richmond, June 26, 1862. The Union force was under the command of Gen. Fitz John Porter, while the Confederates were commanded by Gens. Longstreet and Hill. Crossing the Chickahominy, the Confederates made a desperate assault upon the Union lines, but were repulsed. Their loss was over 3000, while that of the Union force was but slight.

MEDFORD, a town of Middlesex Co., Mass., on the Mystic River, and the Boston & Maine, and the Boston & Lowell railroads, 5 miles from Boston. Manufacturing is carried on to a considerable extent. Pop. 7573.

MEGA'CEROS (Gr. 'large-horned'), or IRISH ELK, the name given to a large genus of extinct deer, the *M. Hibernicus* or *Cervus Megaceros* of palæontologists. The remains of this genus occur in Pliocene deposits in Ireland, England, and on the Continent; and it is doubtful if the M. existed in the Post-tertiary or Recent period. The antlers were large and spreading, sometimes measuring 10 feet from tip to tip. The M. was a true deer, allied to the fallow-deer and the reindeer.

MEGAL'ODON (Gr. 'large-toothed'), a genus of fossil *Lamellibranchiate* mollusca, belonging to the family *Cyprinidæ*. The shells of M. were very massive, and had large 'beaks.' They are characteristic fossils of the Devonian or Old Red Sandstone system.

MEGILP, a vehicle, generally formed of equal parts of linseed oil and mastic with a little sugar of lead, used by oil painters. It flows freely from the pencil, and on drying assumes a clear gelatinous consistency.

MEHEDPORE', a town of Central India, in the outlying dominions of the Rajah of Indore, on the right bank of the Seepra, a tributary of the Chumbul, 300 miles S.W. from Agra. In the neighborhood occurred the battle of M., in December 1817, when the Mahrattas under Holkar, and the Pindarees, were decisively defeated by General Hislop and Sir John Malcomb. The result was the pacification of Central India.

MEHEMET ALI PASHA, a distinguished Turkish general, is the son of a German musician, and was born in Magdeburg, Prussia, in 1829, his real name being Jules Detroit. When aged fifteen he sailed from Hamburg as a cabin boy, but on account of cruel treatment deserted from his ship at Constantinople. Here he secured the favor of Ali Pasha, then Foreign Minister, and subsequently Grand-Vizier, who sent him to the military college. He obtained a lieutenancy in 1853, and was on Omar Pasha's staff during the Crimean War. He served as general officer in the Servian campaign of 1876. In the early summer of 1877 he commanded a division of the army in Montenegro with such success that he obtained the rank of Mushir, and on Abdul Kerim's dismissal succeeded that officer in the supreme command of the Turkish armies in Europe. In September 1877 with the Turkish right he tried to drive in the Russian left on the river Lom, but after some apparent successes, he fell back to his original positions, and was deprived of the chief command in the beginning of October.

MEIGS, MONTGOMERY CUNNINGHAM, an American general, born at Augusta, Ga., May 3, 1816, and graduated from West Point in 1836. He was assigned to the engineer corps, and rapidly gained distinction. He supervised the reconstruction of several of the more important of our sea-board fortifications. During the civil war he was quartermaster-general U. S. A., and in that position rendered invaluable services to the cause of the Union.

MEKNAS, MEKINES, or MEKNASA, a well-built town in Marocco, N. W. Africa, 200 miles N.E. of the town of Marocco, in a fertile valley watered by the Bet, covered with olive groves, and surrounded by well-cultivated hills. M. has a splendid marble palace, the summer residence of the Sultan. It has considerable trade, and manufactures of leather and earthenware. Pop. 15.000 (in summer 55,000).

MEL'FI, a town of southern Italy, in the province of Potenza, on the N.E. slope of the volcanic Monte Vulture. Its chief buildings are a modern cathedral on the site of an older structure (1155), almost totally destroyed in the earthquake of August 14, 1851; the château of Prince Doria, formerly the castle of Robert Guiscard; a town-hall, bishop's palace, &c. There is a lively trade in wine, oil, cheese, and cattle. Pop. (1874) 11,640.

MELROSE, a town of Middlesex Co., Mass., on the Boston & Maine Railroad, 7 miles from Boston. Large shoe factory and rubber works are here located. Pop. 5071.

MELVILLE, SIR JAMES, was born at Halhill, Fifeshire, in 1530, and was page to Queen Mary of Scotland. In 1564 he was sent to the English court with friendly messages to Elizabeth concerning the approaching marriage with Darnley. Two years later

he acted as interim secretary to the Scotch Queen, and was an unwilling confident of Darnley, who remarked to him about the murderers of Rizzio, 'As they have brewed so let them drink.' The same year he was sent to announce the birth of James VI. of Scotland to the court of England. In 1567 he remonstrated with Mary in connection with her marriage with Bothwell, and received the answer that 'matters were not that far agaitwart.' He was afterwards carried with her a captive to Dunbar, and negotiated the surrender of Edinburgh Castle. M. was asked to undertake a mission to Denmark (1595) in connection with the proposed marriage of James VI. to the younger daughter of the King, but he escaped from the duty. 'He was,' says Burton, 'a man of a character and temper rare for that age—very pacific, yet no coward; a dealer with all parties, yet never, as it would seem, suspected of selling one party to another.' He received the last instructions of Queen Mary on the scaffold. His *Memoirs of Affairs of State*, one of the most valuable of historical references, was printed for the Bannatyne Club in 1827. He died 1st November 1607. See Burton's *History of Scotland*, vols. iv., v.

MENTA'NA, a small Italian village, 13 miles N.E. of Rome, noted for a battle fought November 3, 1867, in which Garibaldi was defeated by the combined French and Papal troops. On his retreat he was taken prisoner by the Italian regulars of Victor Emmanuel. In honor of the victory the pope instituted the M. medal.

MEPHISTOPH'ELES, in the Faust legend, is the *famulus* of that famous magician. Old German chapbooks and puppet-plays give three spellings of his name, M., Mephistophiles, and Mephistophilis, the last being also the form adopted by Marlowe, whilst Shakspeare (*Merry Wives of Windsor*, act i., sc. 7) has a fourth variant, Mephistophilus. The etymology again of the name is doubtful, whether it is a barbarous Greek compound, *me-phostophiles*, 'not loving the light;' a derivative of the Lat. *mephitis* and Gr. *philos;* or, as is most probable, from two Hebrew words, *mephir*, 'destroyer,' and *tophel*, 'liar.' The wholly human, mirthful, sneering M. of the medieval legend, invested by Marlowe with 'an awful melancholy,' stands forth in Goethe's drama as the spirit that denies, 'the devil,' as Carlyle says, 'not of superstition but of knowledge.'

MERCURY, the nearest known planet to the sun. Its greatest and least distances are 42,669,000 and 28,115,000 miles respectively, giving an eccentricity of ·2056. The mean sidereal year is 87·9693 days; but the period of rotation assigned (24h. 5m. 28s.) cannot be regarded as established, on account of the difficulty of getting a proper view of the surface. At its greatest elongation it appears only as a half disc, and its proximity to the sun renders it a very unfavorable object for observation. The orbit is inclined 7° 0′ 8″·2 to the ecliptic; but the inclination of the equator is not known. Its diameter is estimated at 3050 miles; its volume $\frac{1}{17}$ that of the earth; and its density $\frac{1}{10}$ greater than the earth's. Transits of M. across the sun's disc are frequent, and are important to the astronomer as affording him opportunities of observing the peculiarities of such phenomena, which are of so great value in the case of Venus. The orbital motions of M. show irregularities which, according to Leverrier, indicate the existence of intramercurial planets, whose combined mass is comparable to that of M.

MERIDIAN, a town of Lauderdale Co., Miss., on the Mobile & Ohio Railroad, 135 miles from Mobile. It has a large trade and is growing rapidly. Pop. 5500.

MET'CALFE, Sir Charles (afterwards Lord), a distinguished Indian civilian, was the son of a successful Bengal officer, and was born at Calcutta, 30th Jan. 1785. He was educated at Eton, and arrived in India as a writer at the age of fifteen. He was early selected for the political (or diplomatic) department, and in 1808 was sent on the first British embassy to Runjeet Singh, the Sikh Rajah. M. was afterwards Resident at Delhi and Hyderabad, and Member of Council at Calcutta. In 1835–36 he acted as Governor-General of India, and signalized himself by removing all restrictions on the press of that country. He was the first Lieutenant-Governor of the newly-formed N.W. Provinces. On his return to England, M. was appointed Governor of Jamaica (1839–41), and subsequently Governor-General of Canada (1843–45). In both colonies he acted with great moderation in troublous times. He was raised to the peerage in 1845, and died at Malshanger, near Basingstoke, 12th Sept. See Sir J. W. Kaye's *Lives of Indian Officers* (Lond. 1867).

METEORIC IRON, the metal of which the great mass of aërolites are composed, is an alloy of iron with nickel and cobalt. The iron meteorites often contain nodules of iron, phosphoret of iron, and nickel and graphite. When polished, the surface is very brilliant, but it usually rusts quickly from the presence of chlorine.

M'GEE', Thomas D'Arcy, a Canadian politician, was born at Carlingford, Ireland, 13th April 1825, went to Boston in 1842, where he became editor of the *Pilot*, returned to promote the 'Young Ireland' movement of 1848, escaped to New York, where he was editor of the *Nation*, 1848–50, and later of the *American Celt*. Displeased with the 'Know-Nothing' movement (1854–56) he removed to Montreal, Canada, advocated ardent royalism in the *New Era*, entered the Canadian Parliament in 1857, and was made President of the Executive Council in 1864, and Minister of Agriculture in 1867. He denounced the Fenian Society, and was assassinated by one of the body at Ottawa, 7th April 1868. M.'s chief works are *O'Connell and his Friends* (1845); *Irish Writers of the 17th Century* (1846); *Irish Settlers in N. America* (1852); *Canadian Ballads* (1858); *Popular History of Ireland* (2 vols. 1863); and *Speeches* (1865).

MIAMI UNIVERSITY, an educational institution, founded at Oxford, O., in 1824. It has suitable buildings, and its affairs are regulated by a board of 18 trustees, appointed by the governor of the state.

MI'CHAEL, St. (Heb. 'who is like unto God'), the 'first of the chief princes,' or archangels (Dan. x. 13), 'which standeth for the children of thy people' (xii. 1), he who 'disputed with the devil about the body of Moses' (Jude ix.; *cf.* 2 Peter ii. 11), and 'fought with his angels against the dragon' (Rev. xii. 7). In Rabbinical tradition he was regarded as the tutelar saint of the Jewish nation, as now he is the patron of the Church militant, and guardian of redeemed souls. He is usually represented in art as clad in armor, a sword in one hand, and in the other a pair of scales with which he weighs the souls of men. Michaelmas, or the Feast of St. M. and All Angels, falls on September 29.

MICHIGAN CITY, in La Porte Co., Ind., on Lake Michigan. It was three railroads, and is the only harbor in the state. It is extensively engaged in manufacturing, lake commerce, and the lumber trade. It ranks next to Chicago as a lumber market on the chain of lakes. Pop. 10,000.

MICHIGAN UNIVERSITY, one of the largest and leading educational institutions of the West, located at Ann Arbor, Michigan, and first opened for students in 1842. It has fine buildings, large libraries, several departments, and is managed by eight regents, chosen by the people of the state.

MICK'LE, William Julius, born at Langholm, Dumfriesshire, September 29, 1734, received two years' schooling at the Edinburgh High School, and having failed in business as a brewer, went to London in May 1763 to seek a livelihood by his pen. He gained the patronage of Lord Lyttelton, but was glad to accept the post of corrector in the Clarendon Press, Oxford (1765), and here it was that he wrote the *Concubine* (1767), a Spenserian poem, republished as *Syr Martyn* (1778); a translation of Camoen's *Lusiad* (1775; a new and revised edition appeared in 1877); his ballad of *Cumnor Hall*, and other poems. As secretary to Commodore Johnstone (1779) he visited Lisbon, where he was admitted a member of the Portuguese Academy, and in 1780 he became an agent of prizes. He died at Forest Hill, in Oxfordshire, October 28, 1788. There is a collected edition of his poems (3 vols. 1806), with a memoir by the Rev. J. Sim. The exquisite song, *There's nae Luck about the House*, probably written by M. prior to 1760, has been also attributed to Jean Adam, who died in the Glasgow Workhouse in 1765. See the *Athenæum*, January 27, 1877.

MIDDLEBURY COLLEGE, an American educational institution at Middlebury, Vt. It has a valuable property, and is controlled by the Congregational church.

MIDDLETOWN, a town of Orange Co., N. Y., on the N. Y., Lake Erie & Western and other railroads, 67 miles from New York. It is surrounded by a fine dairy and farming section, with which it carries on a considerable trade. Pop. 9500.

MIDHAT' PASHA', a Turkish statesman, was born in Constantinople in 1822. He entered the public service when very young, and held in succession various civil appointments. During the Crimean War he was sent to put down brigandage in Roumelia. He subsequently spent a few years in Paris, London, and other European capitals, where he imbibed a love of liberal institutions. In his first important office, governor of the vilayet of the Danube, to which he was appointed in 1864, he displayed ability and resolution, and encouraged improvements of all kinds. He afterwards became the leader of the Young Turkey party, and was appointed President of the Council of Justice. As a member of the cabinet of Mehemet Rushid he took a leading part in the deposition of the Sultans Abdul-Assiz and Murad. Early in 1876 he published a scheme of administrative reform, and on 19th December was created Grand Vizier, when he promulgated the new Turkish constitution. While advocating radical internal improvement, he was, however, vehemently opposed to foreign dictation, and was the soul of the Turkish resistance to the demands of the Constantinople Conference. M. was suddenly dismissed from his office and banished, February 5, 1877.

MIFFLIN, THOMAS, born at Philadelphia, Pa., in 1744. He served with distinction in the war of the Revolution, and rose to the rank of major-general. After its conclusion he held several positions of public trust. Died in 1800.

MILAN' IV. OBREN'OVITCH, Prince of Servia, born at Jassy, 22d August 1854, is the grand-nephew of Milosch Obrenovitch, founder of the reigning dynasty. His father, only son of Prince Ephraim, was married to a Moldavian lady. Adopted by the childless Michael III., the young M. was sent for education to Paris in 1864, but was recalled by the Skuptchina to occupy the throne in 1868 on the assassination of Michael. M. was crowned at Belgrade on attaining his majority in 1872, and married Natalie Keskho in 1875. In June of the latter year Servia joined Bosnia and Herzegovina in the revolt against the Porte, but in a brief campaign the Servians, in spite of the help rendered by an organized force of Russian volunteers, were repeatedly beaten by the Turkish troops, till finally the storming of Alexinatz, on the 1st September, opened the way to Belgrade, and thus placing Servia at the mercy of her opponent, compelled M. to sue for peace. The settlement of the terms of peace directly involved the interference of Russia, and led eventually to the Conference at Constantinople.

MILES, NELSON A., an American general, born in Massachusetts, in 1839. He followed mercantile pursuits, until the outbreak of the civil war, when he entered the Union army. He served with distinction, rising to the rank of major-general, and was three times wounded, at Fair Oaks, Malvern Hill, and Chancellorsville. After the civil war, he served upon the frontier, against the Indians.

MILLER, SAMUEL, D.D., an American clergyman of the Presbyterian Church, born in Delaware, in 1769. He was educated at Dickinson College, Pa.; was pastor of churches in the city of New York; and was one of the founders of the theological seminary at Princeton, N. J. Died in 1850. Among his works are the following: *Letters on Unitarianism; On the Eternal Sonship of Christ; On the Office of Ruling Elder;* and *On Baptism.*

MILLVILLE, a town of Cumberland Co., N. J., on the Maurice River and a branch of the West Jersey Railroad, 40 miles from Philadelphia. It is engaged in the manufacture of cotton, iron, and glass. Pop. 7660.

MILOSCH' OBREN'OVITCH, Prince of Servia, was born in 1784 in the village of Dobrinja, in the Servian circle of Uschica. He was the son of a day-laborer, and along with his half-brother Milan joined Czerny Georg in his struggle with the Turks. Milan died in 1810, but M. soon came to the front as one of the bravest and most successful warriors of the Servians. In 1813 his splendid defence of the village of Rawanj threw into the shade even the achievements of Czerny Georg himself. On the great uprising of the Servians, on the Palm Sunday of 1815, he placed himself at their head, and after long and chequered fighting finally secured the freedom of his country. At the peace of 1816 he was recognized by the Sultan as Woiwode of Servia, and in 1817 he was chosen by the nobles and clergy hereditary Prince of Servia. He ruled not without skill, but very despotically till 1839, when he was compelled to resign his authority and was banished. He was succeeded by his son, MILAN M. O., who died twelve days after he had assumed the government, and in turn was succeeded by M.'s second son MICHAEL (born 16th September 1823), who in 1842 was forced to make way for Karadgordgevitch, son of Czerny Georg. On the fall of the latter in 1858, the Servian Skuptschina recalled the gray-haired exile M., who died 26th September 1860.

MILTON COLLEGE, an educational institution at Milton, Wis., controlled by the Seventh-Day Baptists, and chartered as a college in 1867.

MINER, ALONZO AMES, D.D., an American minister of the Universalist church, born in New Hampshire, in 1814. In 1839 he entered the ministry, and has since acted as pastor of churches in Lowell, Mass., and Boston, Mass. He was for a time president of Tuft's College, but, in 1874, returned to his Boston pastorate. M. has attained high rank as a thinker and public speaker.

MINNEAP'OLIS, a city of Minnesota, on both sides of the Mississippi, at the Falls of St. Anthony, 8 miles N.-W. of St. Paul by rail, and 3 from the celebrated Falls of Minnehaha ('laughing water'). In 1877 it had 54 churches, 2 universities, 10 public schools, 21 flour-mills (producing 1,306,000 barrels yearly), 20 sawmills (turning out 200,000,000 feet of lumber), besides shingle and lath mills, machine shops, foundries, woollen, oil, and paper mills, &c. The total yearly product of its manufactories is about $17,000,000. The two halves of the city were connected (1877) by a suspension bridge, 111 feet high and with a span of 675 feet, erected at a cost of $200,000. Pop. 100,000.

MINNEHAHA, a beautiful waterfall in Minnesota, where the river of the same name plunges down a precipice, 60 feet high. The word Minnehaha, in the language of the Dakota Indians, means 'laughing water.'

MINNESOTA, UNIVERSITY OF, an educational institution at Minneapolis, Minn. Co-education of the sexes is practiced, and tuition in all departments is free. It has a large endowment of public lands and a growing library.

MIRAMICHI', a river in the province of New Brunswick, Dominion of Canada, flows in a N.E. direction, and, after a course of 200 miles, discharges itself by a wide estuary into the Gulf of St. Lawrence. It is navigable for large ships to Newcastle, and has a large export trade in timber. The salmon and cod fisheries at its mouth are valuable.

MIR'AMON, MIGUEL, born in the city of Mexico, September 29, 1832, entered the military academy of Chapultepec (1846), and received his commission (1852). He opposed the revolution of 1855, defeated Juarez at Salamanca (1858), and was appointed president *ad interim* in the room of Zuloaga (1859). He failed in an attack on Vera Cruz, and, execrated for his share in the 'massacre of Tacubaya,' was forced (1860) to take refuge in Europe, where he visited the French, Spanish, and Italian courts. On the accession of Maximilian to the throne of Mexico, M. was made grand-marshal (1863) and ambassador to Berlin (1864); but in 1866, on the withdrawal of the French troops, he hastened back to Mexico, and undertook the defence of Queretaro, which was captured May 15, 1867. Along with Maximilian and Tomas Mejia, M. was tried by court-martial, sentenced, and shot on the Cerro de las Campanas, June 19, 1867.

MISSOURI COMPROMISE, an enactment of Congress, which sought to compromise the difficulties then existing between the slave-holding and free states. When, in 1818–19, an effort was made to secure the admission of Missouri into the Union as a free state, the measure was violently opposed by the members from the southern states. These differences were, however, finally settled by the Missouri Compromise, which was passed largely through the influence of Henry Clay. By it Missouri was admitted to the Union as a slave state, and it was also enacted (Feb. 28, 1821), that slavery should be forever excluded from all that territory west of Missouri and north of the parallel of 36° 30'. This compact, however, was violated by the Kansas and Nebraska bills in 1854, and its violation led to the organization of the Republican party, and paved the way to the civil war.

MITCHEL, ORMSBY MCKNIGHT, LL.D., an American scientist and soldier, born in Kentucky, Aug. 28, 1810, and graduated from West Point in 1829. He taught for some time at West Point, practiced law in Cincinnati, and in 1834 was made professor of Natural Philosophy and Astronomy in Cincinnati College. Shortly after this he excited interest by a remarkable and interesting series of public lectures on astronomy, upon which subject he lectured extensively in the U. S. At the beginning of the civil war he entered the Union army with the rank of brigadier-general, and in 1862 was made major-general. He died from yellow fever at Beaufort, S. C., Oct. 30, 1862. He published *The Planetary and Stellar Worlds* and *The Orbs of Heaven.*

MITCHELL, DONALD GRANT, a graceful and polished American writer, born in Connecticut, in 1814. He was educated at Yale College, and became a lawyer, but has devoted his energies principally to literary work. He has written under the *nom-de-plume* of 'Ik Marvel.' The following are his best known works: *Fresh Gleanings; The Battle Summer; The Lorgnette; Reveries of a Bachelor; Dream Life, a Fable of the Seasons; My Farm of Edgewood; Rural Studies;* and *Doctor Johns.* He was U. S. Consul at Venice, 1853–55, and upon his return home took up his residence at Edgewood, near New Haven, Conn.

MIT'FORD, JOHN, an elegant English scholar, was born at Richmond, Surrey, England, 13th August 1781. After leaving Oriel College, Oxford, he obtained the living of Benhall, Suffolk, in 1810. In 1815 he was presented to the rectory of Weston St. Peter's, and in 1817 to that of Stratford St. Andrew, also in Suffolk. M. edited the *Gentleman's Magazine* from 1834 to 1850, and with fine critical acumen and ripe scholarship annotated many of the English poets in the Aldine edition. He died at Benhall, 27th April 1856.

MITTWEI'DA, an industrial town in the kingdom of Saxony, near the Zschopau, 35 miles S.E. of Leipsic by rail. It has large engineering works, cotton mills, dye-works, bleach-fields, and a trade in peat and building stones. Pop. (1875) 9093.

MODERA'TO, a musical term signifying that the time is to be taken at a moderate pace.

MODOCS, a tribe of North American Indians, noted for their treachery and murderous assaults upon white settlers. In 1864 these Indians were placed upon the Klamath reservation in Oregon. In 1872 a party of Modocs, who had fled under a chief called Captain Jack, refused to return to their reservation, fired upon the troops sent against them, and thus inaugurated what is

known as the Modoc war. During this war Gen. Canby and Peace-Commissioner Thomas were treacherously killed, while attending a conference with Modoc chiefs. Eventually the hostiles were captured, and Captain Jack, with three others, was hung.

MOIR, DAVID MACBETH, a minor poet, was born January 5, 1798, at Musselburgh, near Edinburgh, Scotland, and practised there as a surgeon. He early published *The Bombardment of Algiers*, and other poems, and became a contributor to *Blackwood's Magazine* under the *nom de plume* of Delta. *The Legend of Genevieve* (1824), *Domestic Verses* (1843), and *The Autobiography of Mansie Waugh* (1828) first appeared in the magazine. The last of these is an admirable picture of the small, vulgar, shrewd, conceited, yet kindly Scot. It displays something of the racy humor of Galt with more tenderness and poetry, and constitutes M.'s best claim to remembrance. In 1851 he published *The Poetical Literature of the Past Half Century*, and *The Lament of Selim*. He died at Dumfries, July 6, 1851. Aird edited his works in one vol. (1857).

MOLINE, in Rock Island Co., Ill., on the Mississippi River. It has railroad connections with Chicago from which it is distant 180 miles. It has fine water power and growing manufacturing interests. Pop. 10,000.

MOLINO DEL REY, BATTLE OF, an engagement of the Mexican war, near the City of Mexico, Sept. 8, 1847. The Mexican army was commanded by Santa Anna, and that of the United States, by Gen. Scott. By a desperate and fiercely resisted assault, M. D. R. was captured by Scott's army. Santa Anna's army numbered 19,000 men, that of his opponent, 10,000.

MOLOCH LIZARD (*Moloch horridus*), a species of lizard found in Australia, and presenting a singular appearance from its being covered with strong plates and spines, while the head bears two prominent processes. A protuberance armed with two spines occurs in the back of the neck.

MOMBAZ', a town of E. Africa, in the territory of the Sultan of Zanzibar, and on a coral islet at the mouth of two rivers. The harbor is good, but the town, inhabited by half-caste Arabs, is ruinous and filthy. It was visited by Vasco da Gama in 1497, and from 1529 to 1720 it was held by the Portuguese, who erected a strong rock-fort, the walls of which are still standing. M. was occupied by the English in 1824, but abandoned two years later. Pop. 10,000.

MONFERRA'TO, a former marquisate of Italy, bounded N. by the seigniory of Vercelli, E. by Milan and Genoa, S. by the Apennines, and W. by Piedmont. It had an area of 1300 sq. miles, and was divided by the Tanaro, an affluent of the Po, into upper and lower M. Casale was the capital. Aleran, the founder of the House of M., was created a marquis by Otho II. in 995. His successors played a prominent part in the Crusades, one of them, Konrad, being chosen King of Jerusalem (1192), and another, Guglielmo VII., marrying his daughter Yolande to the Byzantine emperor Andronicus Palæolus (1284). Theodoro, the second son of this marriage, succeeded to the marquisate, which remained vested in his descendants, until, on the death of the last of the line (1533), it passed to the House of Gonzaga. Since 1703 it has been incorporated with Savoy, and now forms part of the province of Turin.

MONGO'LIA, the land of the Mongols, and part of the Chinese empire, is a vast plateau 2000 feet above the sea, extending between Siberia on the N. and China Proper and Thibet on the S., and between Turkestan on the W. and Mantchuria on the E. Area estimated at 1,304,000 sq. miles; pop. 600,000. M. is in great part occupied by the Desert of Gobi, is girt by high mountain ranges (the Altai, Khin-ghan, &c.), and contains the head waters of the Amoor, Yenisei, and Angara. The climate is one of great extremes. Apart from the desert region the soil is mainly baked clay, affording root only to stunted bushes and tufts of saline grass. Yet in the more favored spots the Mongol manages to rear herds of camels, horses, and sheep, which he exchanges for Chinese tea, corn, and manufactured goods. The chief centers of population are Urga and Karakorum, and in the N.W. are the trading stations Uliassutai and Kohdo. See *M., the Tangut Country, and the Solitudes of Northern Thibet*, by Lieut.-Col. N. Prejevalsky (Eng. trans. with notes by Col. Yule, Lond. 1876).

MONK-BIRD (*Tropidorhynchus corniculatus*), a species of Insessores, belonging to the Tenuirostral section of the order. It receives its name from its bare head resembling the shaven crown of a monk. The M.-B. is a native of S. Australia, where it is also named the 'Friar Bird,' 'Leatherhead,' and 'Poor Soldier.' The bill is elevated at the base, and the fourth and fifth quills are longest. The tail is long and rounded. The feet and claws are very strong. The bird feeds on the nectar of flowers, and also on insects. Its voice is powerful but somewhat harsh. The wings are short, and the flight proportionally weak. The general color is a greyish-brown, the tip of the tail being white. Long white feathers decorate the breast, and the under parts are light brown.

MONMOUTH, BATTLE OF, fought between British forces, commanded by Sir Henry Clinton, and an American force, commanded by Washington, at Monmouth Court-house, N. J., June 28, 1778. The results of the fighting were slightly in favor of the Americans, and on the succeeding night Clinton retired from the scene of action.

MONMOUTH, a town of Warren Co., Ill., on the Chicago, Burlington & Quincy and the Central Iowa railroads. It is surrounded by a rich agricultural district, is engaged in manufacturing, and is the seat of Monmouth College. Pop. 5012.

MONSTRELET, ENGUERRAND DE, a French chronicler, was born about 1390, is supposed upon his own authority to have belonged to a noble family, was connected in 1430 with the court of Jean de Luxembourg, under whom he held some office until 1440. At Compiègne he saw Jeanne Darc, and witnessed the interview of the Duke of Burgundy with her. In 1444 he took the oath as Provost of Cambray, and died 20th July 1453. M.'s fame rests upon his *Chronique*, a work composed of three books, two only of which are his. The first extends from 1400 to 1422, and the second carries on the narrative to 1444. The work, compared with the vivacious pages of Froissart, is inexpressibly dull, but its value as an accurate record of facts is quite as great. The best edition is that of M. D'Ouët D'Arcq (2 vols. Par. 1857–58).

MONTBRISON, a town of France, in the department of Loire, on the Vizezy, 22 miles N.W. of St. Etienne by rail. Its chief buildings are the church of Notre-Dame-d'Espérance, the Mairie and Palais-de-Justice (both ancient convents), and a public library of 15,080 volumes. M. has tanneries, breweries, and a spinning-mill, and in the neighborhood are three mineral springs. Pop. (1872) 5386.

MONTCALM DE SAINT VÉRAN, LOUIS JOSEPH, MARQUIS DE, a celebrated French general, born at the Château de Candiac, near Nîmes, February 28, 1712, entered the army at the age of nine, obtained his captaincy (1729), and commanded the Auxerrois regiment in the battles of Plaisance and Exiles. Created a field-marshal (1756), he was immediately despatched to Canada, which was then threatened by an English invasion, and opened the campaign by the capture of Forts Oswego and Georges. Though to 60,000 English he could only oppose 3000 regulars, as many militiamen, and 1800 undisciplined Indians, M. inflicted a severe defeat on Lord Abercromby, under the wall of Ticonderoga (July 18, 1758). But in the following year three simultaneous attacks were made on Canada. Wolfe, advancing on Quebec (June 27), was at first repulsed, but scaling the Heights of Abraham (September 13), he appeared in M.'s rear. In the great English victory that followed, both generals fell, M. surviving his rival only by a day. A monument raised in Quebec by Lord Dalhousie (1827) bears the following inscription: *Mortem virtus communem, famam historia, monumentum posteritas dedit.*

MONTCLAIR, a town of Essex Co., N. J., on the Morris & Essex and the Greenwood Lake railroads, 14 miles from New York City. It is a beautiful town and contains the residences of many New York business men. Pop. 5146.

MONT-DE-MARSAN, a town of France, capital of the department of Landes, 61 miles N.W. of Tarbes by rail, on the Midouze, a navigable affluent of the Adour, formed by the confluence here of the Midou and Douze. The buildings, wholly modern, include a lyceum, theater, and public library of 12,000 volumes. M. has ironworks, distilleries, and crushing-mills for linseed and colza oils, and carries on a busy transit trade with Bayonne in Armagnac wines and brandies. Pop. (1872) 6964.

MONTEFIO'RE, SIR MOSES, a Jewish philanthropist, the descendant of a wealthy family of bankers, was born in London, October 24, 1784. He was knighted in 1837, when he held the office of Sheriff of London, and was created a baronet in 1846. Since 1840 he has undertaken various missions to the East on behalf of his co-religionists, and his earnest, unwearied, and successful services in procuring kindlier laws and greater freedom for them in many states, notably in Poland, Morocco, and Turkey, has made his name revered throughout the world-wide Hebrew community. His philanthropy has also been exerted in favor of oppressed Christian subjects in Mohammedan countries. He endowed a Jewish college at Ramsgate in 1867 in memory of his wife Judith (author of *Notes of a Visit to Egypt and Palestine*, 1844). On more than one occasion he has received the thanks of the Corporation of London for his humane efforts, and in 1873 he was presented with the freedom of the City. In June 1875, when over 90 years of age, he undertook a mission of investigation into the condition of the Jews at Jerusalem, and a special thanksgiving service for his safe return was held in the following September at the Great Synagogue, London. See Picciotto's *Anglo-Jewish History* (Lond. 1876). The centennial of his birth was celebrated in 1884.

MONTELEO'NE (the *Hipponium* of the Greeks, and *Vibo Valentia* of the Romans), a town of Southern Italy, in the province of

Cantazaro, 48½ miles S.S.W. of Cosenza, and 3 miles distant from the Gulf of St. Eufemia. It has manufactures of silk, and a trade in fruits and wine; played an important part in the Neapolitan wars of the Middle Ages; and suffered greatly from the earthquake of 1783, in which its castle, erected by Friedrich II., was almost totally destroyed. Pop. (1874) 11,840.

MONTEMAY'OR, JORGE DE, a famous Spanish poet, born about 1515 at Montemayor, near Coimbra in Portugal, served for some time in the army, but afterwards went to Castile, and became a singer in the royal chapel. He accompanied Philip II. on his visit to Germany, Italy, and the Low Countries. Later, the Queen of Portugal, Philip's aunt, invited him to her court. M. fell, it is supposed, in a duel in Italy about 1562. By his brilliant though unfinished *Diana Enamorada* (1st ed. 1545; mod. ed., Madrid, 1802), he became the founder of the Spanish pastoral romance, which exercised a wide influence in Western Europe. The *Diana* comprises seven books, partly in prose and partly in verse, and is distinguished by its inexhaustible fund of tender sentiments, and by the dignity and harmony of its versification. He also wrote a number of poems, first published at Antwerp in 1554, under the title of *Obras*, but in subsequent editions the collection was termed *Cancionero*. See Ticknor's *History of Spanish Literature*.

MONTEREY, BATTLE OF, an engagement of the Mexican war, Sept. 21–22, 1846. It consisted in the attack and capture of the strongly fortified city of Monterey, defended by 10,000 Mexicans, by an American army of 6,500 men, commanded by Gen. Zachary Taylor.

MON'TESPAN, FRANÇOISE, ATHENAIS, MARQUISE DE, daughter of Rochechouart Duc de Mortmart, was born in 1641, and in her youth bore the name of Mlle. de Tonnay-Charente. In 1661 she was married to the Marquis de M., who brought her to the Court of Louis XIV., where her beauty and vivacity soon attracted the notice of the monarch. She superseded the soft La Vallière in the royal regards, and after 1667 received his exclusive devotion. The Marquis de M. did not accept the situation with the grace of a courtier, and was, in consequence, successively imprisoned in the Bastille, banished to Cayenne, and finally divorced. But M. was doomed to be superseded in turn. She required a governess for the children whom she had borne to the king, and the lady whose services she obtained (Madame Maintenon) robbed her of his affections. In 1686 Louis finally broke off his relations with M., who in 1691 was ordered to leave Paris. She entered the order of the Daughters of St. James, and died 27th May 1707. By her intercourse with Louis she had three sons, the Duc de Maine, the Comte de Vexin, and the Comte de Toulouse, and three daughters, Mlle. de Nantes, married to the Duc de Bourbon; Mlle. de Tours (died 1681), and Mlle. de Blois, married to the Duc d'Orleans; besides other children who died young. M. was ambitious and haughty, and enjoyed the splendor of her shame. See *Memoires de Madame la Marquise de M.* (2 vols. Par. 1829).

MONTEVER'DE, CLAUDIO, an Italian composer, born at Cremona in 1568, and died at Venice in 1649. He produced many pieces of sacred music, several operas, including *Orfeo* and *Ariana*, and five books of motets and madrigals.

MON'TEZ, LOLA, was born about 1820. Her birthplace is variously given as Seville, Limerick, and Montrose in Scotland. After an adventurous life in London, Paris, and Brussels, she came to Münich in 1846, won the favor of King Ludwig I. of Bavaria, who made her Countess of Landsfeld. She moulded in some degree the policy of the Bavarian Court, and was opposed to the Ultramontanes. In consequence of public disturbances caused by her own rashness and pride, she was expelled from the country in February 1848, returned to England, thence came to America in 1852, where she excited a great *furore* as an actress, and latterly became a lecturer on social and moral questions. She published an *Autobiography*, and died at New York, 30th June 1861.

MONTFAUCON, BERNARD DE, a French antiquary, born Jan. 13, 1655, at the château of Soulage in Languedoc, served under Turenne, but in 1676 entered the Benedictine monastery of St. Maur, where he applied himself to the study of philosophy, theology, history, literature, and the dead and living languages. He received the post of keeper of the collection of medals at St. Germain des Prés (1694), made an antiquarian tour in Italy (1698—1701), was admitted member of the Academy of Inscriptions (1719), and died at Paris, in the Abbey of St. Germain des Prés, Dec. 21, 1741. In folio alone, M. published forty-four different works, among them *Diarium Italicum* (Par. 1702; Eng. trans. 1725), *L'Antiquité appliquée et representée en Figures* (15 vols. Par. 1719–24), and editions of Athanasius (1693), the Greek Fathers (1706), Chrysostom (1718), *Bibliotheca Bibliothecarum Manuscriptarum Nova* (2 vols. 1739), &c.

MONTGOMERY, ALEXANDER, a Scottish poet of James VI.'s time, born at Hazelhead Castle, Ayrshire, seems to have been an officer in the guard of the Regent Morton. What services he rendered the king cannot be ascertained; but from 1582 he enjoyed a pension of five hundred marks per annum. In 1586 he got royal license to travel for five years on the Continent; and it is certain he was confined for a time in some foreign prison. The dates of his compositions are unknown. Three short poems are quoted in Bannatyne's MS. (1568). His most famous poem, *The Cherrie and the Slae*, a long love allegory—virtue represented by the cherry, vice by the sloe—was first printed by Waldegrave in 1597. For the whole of his compositions see the edition prepared by Laing, with memoirs by Irving (ed. 1821). It is probable that M. survived at least till 1605, when his *Mindes Melodie* was printed by Charteris.

MONTGOMERY, WILLIAM READING, an American general, born in New Jersey, July 10, 1801, and graduated from West Point in 1825. He participated in the Mexican war, and was brevetted major for gallantry at Palo Alto and Resaca de la Palma, and lieutenant-colonel for gallantry at Molino del Rey. He took part in the first battle of Bull Run, and was shortly afterwards made brigadier-general. In 1864 he resigned from the army, owing to ill-health, and died at Bristol, Pa., May 31, 1871.

MOOD'Y, DWIGHT LYMAN, born at Northfield, Massachusetts, February 5, 1837, worked as a farm laborer till he was seventeen, and in 1856 went to Chicago. Here he opened a Sunday School for 1000 children, and became pastor of a Congregational Church, and here, in 1871, he was joined by IRA DAVID SANKEY, who, born at Edinburgh, Pennsylvania, August 28, 1840, had been in business at New Castle since 1855. Visiting Great Britain in 1873, the two held a series of gigantic revival meetings at Edinburgh, Glasgow, Dublin, London, and other cities, M. preaching, and S. singing the well-known hymns that go by his name. Their first audience at the Agricultural Hall, Islington, was estimated at upwards of 21,000, and the total expenses of the mission amounted to £28,396, of which a deficit of £138 was left by public contributions. Since their return to America (1875) they have continued their evangelistic work at Chicago, New York, and other places.

MOON-BLINDNESS, or Nocturnal Amaurosis, is a disease which, though rare in this country, is by no means uncommon in warm climates, and more especially among seamen. The first attack generally excites great alarm, being unaccompanied with any premonitory or constitutional symptons. M.-B. probably depends on come peculiar state of the retina, rendering the eye insensible except to light of a certain degree of intensity. The disease is generally curable.

MOOSEHEAD LAKE lies in the northern part of Maine, is about 36 miles long, and from 3 to 10 miles wide, and is much frequented by sportsmen for its gunning and fishing.

MOP'LAHS, a tribe of Mohammedans on the Malabar or W. coast of S. India, numbering about 600,000. They are an Arab race, recruited by converts from Hinduism during the persecution of Hyder Ali and Tippu. Hardworking cultivators and enterprising traders, they are liable to serious outbreaks of religious fanaticism. In 1855 the collector of Medura was murdered, and again in 1873 nine fanatics rushed upon the bayonets of a detachment of European troops who are always stationed in the district.

MORAN, THOMAS, a distinguished painter, born at Bolton, England, Jan. 12, 1837. In 1871 he came to America and went with Hayden's expedition to the Yellowstone. His best known works are *The Grand Cañon of the Yellowstone* and *The Chasm of the Colorado*. These two were purchased by the government for $20,000.

MORE, HENRY, born at Grantham, Lincolnshire, England, October 12, 1614, was educated at Eton, afterwards studying at Christ's College, Cambridge, where he obtained a fellowship. Early abandoning the Calvinism in which he had been reared, he gave himself up to mysticism, studying in particular the writings of the Neoplatonists. In 1642 he published *Psychodia Platonica, or a Platonical Song of the Soul*, containing much subtle thought clothed in poetry never better than Bunyan's. He likewise published *The Threefold Cabbala*, an explanation of the first chapters of Genesis, *The Mystery of Godliness*, *The Mystery of Iniquity*, *A Discourse on the Immortality of the Soul*, *Medela Mundi, or Cure of the World*, and other books of less importance. He was the last of those in England who embraced the Renaissance Platonism of Italy. His philosophy attempted to make matter contingent, metaphysics being with him the science of incorporeal existence. His ethics, like those of all Platonists, were high toned; practically, he was benevolent to a fault, and although displaying an amusing amount of naïve egotism, his writings imbue the reader with sincere admiration and respect for their author. He translated his works into Latin in 1679. Refusing tempting offers of church and university preferment, he lived the life of a recluse,

and died 1st September 1687. See his *Life* by Ward (Lond. 4th ed. 1712), and Vaughan's *Hours with the Mystics* (Lond. 1856).

MORE'LIA, capital of the State of Michoacan, Mexico, delightfully situated among the mountains, 6350 feet above the sea, and 130 miles N.W. of Mexico, was founded by the Spaniards in 1541, and called Valladolid till 1828, when it was renamed from the revolutionary chief Morelos, who as well as Iturbide was born here. It is the seat of an archbishop (since 1863), and has a beautiful cathedral (built 1745), a college, a splendid arched aqueduct for the supply of water, and a large cotton factory (since 1868), with 2500 spindles and 78 looms. Pop. 30,000.

MORGAN, JOHN H., a Confederate general, born at Huntsville, Ala., June 1, 1826, and served during the Mexican war in the cavalry. In 1861 he entered the Confederate service, and in 1862–63, conducted a series of daring raids through Kentucky. In 1863 he entered Ohio, but was captured and sent to the penitentiary. He escaped, and during another raid, was surprised and killed, near Greenville, Tenn., Sept. 4, 1864.

MOR'LAND, GEORGE, an English painter, born in London, 26th June 1763, sold his drawings at the age of six, and at sixteen was a finished artist and a sad blackguard—thanks to the education of a greedy father. He painted with great freedom and inimitable humor. His subjects were usually animals, occasionally rural landscapes and interiors. The two he especially affected were a litter of pigs and a pothouse parlor. He died a palsied drunkard in a sponging-house in Eyre Street, 29th October 1804.

MOR'LEY, HENRY, born in London, 1822, educated at Neuwied and King's College, London, and practised as surgeon at Madeley in Shropshire (1844–48); was a schoolmaster for two years at Liscard, Liverpool, and in 1851 settled in London as a journalist, writing for *Household Words* and the *Examiner*. Of the latter he became editor. In 1865 he was appointed Professor of English Language and Literature at University College, and in 1870 was appointed Examiner in English Language, Literature, and History to the University of London. M. has a richly cultivated mind, fine sympathies, a clear perception of literary beauty, and a vigorous critical faculty. Among his numerous writings may be noted *How to Make Home Unhealthy* (1850); *A Defence of Ignorance* (1851); *Life of Palissy the Potter* (1852); *Life of Jerome Cardan* (1854); *Life of Cornelius Agrippa* (1856); *Memoirs of Bartholomew Fair* (1859; new ed. 1874); *Fairy Tales* (1859–60; new ed. 1877); *Journal of a London Playgoer* (1866); *Tables of English Literature* (1870); *Clement Marot and other Essays* (2 vols. 1871); *English Writers* and *Illustrations of English Religion* (1877).

MORPHY, PAUL CHARLES, a distinguished chess player, born at New Orleans, La., June 22, 1837, and when a mere child developed wonderful skill at this game. He was admitted to the bar in 1857. In the same year he became the chess champion of the U. S. He afterwards visited Europe, and met and vanquished the best players of the continent. He also developed remarkable skill in conducting several games at once while blindfolded. Died July 10, 1884.

MORRIS, GEORGE P., an American poet, born in Pennsylvania, and in early life removed to New York and became engaged in journalistic work. He is chiefly known as a song-writer. He wrote *Woodman, Spare that Tree; We were Boys Together; My Mother's Bible;* and *The Deserted Bride*. Died in 1864.

MORRIS, GOUVERNEUR, an American financier, born at Morrisania, N. Y., Jan. 31, 1752, and graduated from King's College New York in 1768. He held important positions in his own state, and was in Congress 1777–80. He was a member of the committee that drew up the Federal Constitution in 1787, and was subsequently U. S. minister to France and U. S. Senator. Died at Morrisania, N. Y., Nov. 6, 1816. Mr. Morris was noted for his public-spiritedness and hospitality.

MORRIS, ROBERT, an American patriot, born in England, but came to America when a mere child. During his early life he followed mercantile pursuits in Philadelphia, Pa. He was a member of the first Continental Congress and one of the signers of the Declaration of Independence. During the Revolution he greatly aided the government financially, at times pledging his personal credit to large amounts. He was U. S. Senator from 1786 to 1795. During the latter years of his life he lost his fortune, and spent his closing years in prison for debt. Died at Philadelphia, Pa., May 8, 1806.

MORTON, HENRY, born at New York, December 11, 1836, graduated at the University of Pennsylvania (1857), and was successively appointed Professor of Chemistry at the Philadelphia Dental College (1863), secretary of the Pennsylvanian Franklin Institute (1864), Professor of Chemistry in the University of Pennsylvania (1869) and President of the Stevens' Institute of Technology at Hoboken, New Jersey (1870). Besides sixteen *Lectures on Light* (1867), which excited considerable attention in the learned world, M. is author of numerous able papers in the *Chemical News*, *Philosophical Magazine*, and other scientific journals.

MORTON, JOHN, was probably born at Milborne St. Andrew, in Dorsetshire, England, about 1420, and proceeded from Cerne Abbey to Balliol College, Oxford, where he graduated LL.D., and became principal of Peckwater Inn (1453). Introduced by Cardinal Bourchier to Henry VI., he had been made a privy councilor, rector of Bloxworth, chancellor of Cornwall, and subdean of Lincoln (1450). He was present on the Lancastrian side at the battles of Towton and Barnet, but after the defeat of Tewkesbury (1471) gave in his adhesion to Edward IV., and by him was appointed Master of the Rolls (1472), and Bishop of Ely (1479), with a host of minor preferments. Edward's death, however, was followed (June 13, 1483) by the famous 'strawberry scene' of Shakspeare's *Richard III.*, and by M.'s imprisonment in Brecknock Castle. Escaping to Ely, he passed over to Flanders, and there received the news of the victory of Bosworth (1485). On his return to England his attainder was reversed, and he was created lord chancellor and archbishop of Canterbury (1486), a cardinal (1493), and chancellor of Oxford (1494). He died at Knowle, in his native county, October 12, 1500. An eminent lawyer, with a prodigious memory, full of energy, but of polished manners, cursed with a besetting sin of avarice, yet princely in bestowing—such is the character that may be gathered from his life, and from the first book of the *Utopia* of Sir Thomas More, who was page in his household (1494–97). See vol. v. of Hooke's *Lives of the Archbishops of Canterbury* (Lond. 1867).

MORTON, OLIVER P., an American statesman, born in Indiana, Aug. 4, 1823, educated at Miami University, and began the practice of law in 1847. From 1861 to 1865 he was governor of Indiana, and in that position rendered most efficient aid to the Union cause. He was an ardent and eloquent supporter of the war, since which he has been elected several times to the U. S. Senate. Died Nov. 1, 1877, at Indianapolis, Ind.

MOSCH'ELES, IGNAZ, pianist and composer, was born of Jewish parents at Prague, 30th May 1794. He was a precocious child, and at the age of eleven was the best pianist in his native city. In Vienna he studied under Albrechtsberger and Salieri. After a professional tour over all Europe he took up his residence in London in 1820, where he was for more than twenty years professor in the Royal Academy of Music and conductor of the Philharmonic Concerts. He translated Schindler's *Life of Beethoven* into English 1841. At Mendelssohn's suggestion he accepted the musical professorship in the Conservatoire at Leipsic in 1846. He died 10th March 1870. M. published many beautiful concertos, sonatas, fantasias, and studies. He was unrivalled as a pianist in his own pure classic style. See *Aus Moscheles' Leben*, by his widow, 2 vols. (1872–73), translated into English by A. D. Coleridge (Lond. 1873).

MOTT, LUCRETIA COFFIN, born at Nantucket, Mass., Jan. 3, 1793, and removed to Boston (1804) and to Philadelphia (1809). She became a preacher in the Society of Friends, helped to organize the American Anti-Slavery Society, and advocated woman's suffrage. Died in the month of November, 1880.

MOTT, VALENTINE, M.D., LL.D., a distinguished American surgeon, born at Glen Cove, Long Island, Aug. 20, 1785. During his life he held professorships in several of the leading medical institutions of America, and acquired highest reputation by the success with which he performed the most difficult operations. He was not surpassed by any of the surgeons of his day, either at home or abroad. In addition to this he was a brilliant lecturer, and published many valuable articles on medical and surgical themes. Died in New York, April 26, 1865.

MOULTRIE, WILLIAM, an American patriot, born in South Carolina in 1731. From the beginning of the difficulties between the British Crown and the colonies, he strongly supported the cause of the latter. In 1776 he gallantly defended a rude fort on Sullivan's Island in Charleston harbor, against an attack of the British fleet, under Sir Peter Parker, whom, after ten hours' hard fighting, he compelled to retire. This fortress has since been known as Fort Moultrie. He was made brigadier-general, and took part in several struggles with the British. In 1782 he was made major-general, and after the close of the war, was twice elected governor of his state. He published *Memoirs of the Revolution*. Died at Charleston, S. C., Sept. 27, 1805.

MOUND BIRD. See TALLEGALLA in Chambers' En.

MOUNT VERNON, a town of Westchester Co., N. Y., on the New York & Harlem and the New York & New Haven railroads, 13 miles from New York. It is the home of many persons who do business in New York City. Pop. 6000.

MUALITCH, a town of Asiatic Turkey, 16 miles S. of the sea of Marmora, and 42 W. of the town of Brussa. It has considerable trade with Constantinople in wool, silk, and fruit. Pop. about 16,000.

MU'DIE, ROBERT, was the son of a weaver, and was born in the neighborhood of Dundee, Scotland, 28th June 1777. After holding the appointment of drawing master in the Inverness Acad-

emy and Dundee High School, he removed to London in 1820, and became a reporter on the *Morning Chronicle*. Worn out by a life of incessant literary toil, M. died 29th April 1842. In the course of twenty years he produced more than eighty volumes, only one of which still possesses any vital interest. The *Feathered Tribes of Great Britain* (2 vols. 1833), though desultory and incomplete, ranks as a British classic in natural history.

MUHLENBERG, WILLIAM AUGUSTUS, D.D., an American philanthropist and hymn-writer, born at Philadelphia, Pa., Sept. 16, 1796, graduated from the University of Pennsylvania in 1814, and entered the ministry of the Episcopal Church in 1817. After serving several churches, he came to New York in 1846, as rector of the Church of the Holy Communion. Here he was instrumental in founding St. Luke's Hospital. He has written many hymns, the best known of which is 'I would not live alway.' Died in New York City, April 1877.

MUKH'TAR, GHAZI AHMED, PASHA, a Turkish general, was born about 1836. He received command of the main Turkish army operating in Montenegro in 1876, when his campaign was unsuccessful. He was appointed commander at Erzeroum in February 1877, and on the outbreak of the war with Russia obtained the supreme command in Asia. He checked the Russian invasion at Zewin in June 1877, and by an active movement thereafter relieved Kars. On 25th August he won an important victory at Kezil-Tepe. He received the title of Ghazi or Victorious from his grateful Sultan, September 1877. Near the Russian frontier in the beginning of October he withstood a furious onslaught by the Russians, which lasted several days, and cost the assailants (according to M.), 15,000 men; but on the 14th, 15th, and 16th of October, in a succession of fierce battles, M., attacked in front and flank by an overwhelming force of Russians, was disastrously defeated, his position captured, his army cut in two —one portion surrendering and the other retiring on Erzeroum. The siege of Kars was in consequence vigorously renewed, and on the 18th of November, after a desperate resistance on the part of the Turks, the town was stormed by the Russians, the whole of the garrison not slain in the struggle were made prisoners, and 364 cannon captured.

MULBERRY JUICE, or MORI SUCCUS, the deep purple juice of the ripe fruit of the *Morus Nigra*, is used in medicine as a coloring matter for draughts, an agreeable addition to a gargle for sore throat, and as a refreshing drink, slightly laxative, in febrile cases. The only officinal preparation is the *syrup*, which may be given in doses of from 1 to 2 drachms.

MÜLLER, JULIUS, a German theologian, born at Brieg, Silesia, April 10, 1801. He was a profound thinker, and is best known to Americans by his work entitled *The Christian Doctrine of Sin*. Died Sept. 27, 1878.

MÜLLER, WILHELM, one of the most charming lyric poets of Germany, was born at Dessau, 7th Oct. 1794, studied philology and history under F. A. Wolf at Berlin (1812), acted as a volunteer in the German War of Liberation (1813), took part in the battles of Lützen, Bautzen, Hainau, and Kulm, and on the conclusion of peace resumed his studies at Berlin, devoting himself especially to the Old German language and literature. In 1817 he visited Italy, and some time after his return was appointed ducal librarian at Dessau, where he died, 1st Oct. 1827. M. had a certain nobility of character and love of comprehensive culture which reappear in his illustrious son; but it is as a poet he will be remembered by his countrymen. The first work that distinctly evinced his poetic power was *Gedichte aus den hinterlassenen Papieren eines reisenden Waldhornisten* (2 vols. 1821–24). His *Lieder der Griechen* (5 parts, 1821–24), simultaneously issued, show still finer work. But he is seen at his best in his *Lyrische Spaziergänge* (1827). They are marked by an inward truth and feeling, a fresh and vivid power of description, a noble ardor for the rights of the people, and a singular melody of language. A collection of his *Gedichte* was published at Leipsic in two vols. in 1837 (latest edition 1869). Schwab published M.'s *Vermischte Schriften* (5 vols. 1830), with a biographical memoir.

MU'LOCK, DINAH MARIA (Mrs. Craik), a popular English novelist, is the daughter of a clergyman, and was born at Stoke-upon-Trent, England, in 1826. Her earlier novels, *The Ogilvies* (1849), *Olive* (1850), *The Head of the Family* (1851), *Agatha's Husband* (1852), &c., led the way to her great success with *John Halifax, Gentleman* (1857), an admirable novel both in conception and tone. The reputation she had by this time achieved as an earnest and thoughtful writer, and accurate portrayer of middle-class life, has since been well maintained by *Mistress and Maid* (1863), *A Noble Life* (1866), *Hannah* (1871), *The Laurel Bush* (1876), and other novels. She has also written *Fugitive Poems* (1860), *Sermons out of Church* (1875), besides many short tales and sketches, and books for the young. She received a pension in 1864, and married Mr. George Lillie Craik in 1865.

MUNCIE, a town of Delaware Co., Ind., on the White River. It is connected by railway with the principal cities of the state, and is engaged in milling, pork-packing, and trade in agricultural produce. Pop. 6500.

MUNGOOSE, or MONGOOSE (*Herpestes griseus*), a species of Carnivorous quadrupeds, belonging to the family of the Ichneumons, and sometimes named the Indian Ichneumon. It attains the size of a cat, and is of grey color. Another species, named the banded M. (*Mungus fasciatus*), inhabits Africa. The Indian species is famous as a destroyer of that most deadly of snakes, the Cobra (*Naja tripudians*), and combats between it and the reptile almost invariably result in the death of the latter. Some observers think that the fur of the M. protects it; others that the M. may be bitten, but that, by eating some herb, it counteracts the effects of the poison; while a more likely theory is that the agility of the animal enables it to keep out of harm's way, and that it seizes and despatches the snake before the latter has time to bite.

MUNKACS', a town of Hungary, capital of the comitat of Bereg, on the Latorcza, 67 miles N.E. of Debreczin by rail. It has manufactures of cloth, furs, and hosiery; and iron, alum, and rock-crystals ('Hungarian diamonds') are found in the neighborhood. On an isolated rock (310 feet high) 2 miles E. of the town, stands the strong fortress of M. (1359), now converted into a state prison. Pop. (1869) 8602.

MU'RAL CIR'CLE is an astronomical instrument of large size, consisting of a telescope attached to a graduated circle which is firmly fastened to a solid wall of masonry. It is fixed in the meridian plane, and is intended for measuring angular distances in the meridian. Originally the telescope was used simply with a graduated arc or quadrant, but the circles constructed by Troughton in the beginning of the present century showed the many advantages which a complete circle has over an arc. The instrument cannot be used for accurately determining right ascensions; and consequently it is now giving place to the more complete structure known as the Transit Instrument.

MURDAN' (*Mardan*), a town in the district of Peshawur, Punjaub, British India, 33 miles N.E. from Peshawur. It is the permanent headquarters of the celebrated Guides Corps, more than 1000 strong, including horse and foot. In 1857 the Guides marched to the siege of Delhi, covering 580 miles in twenty-two days. M. has been the scene of the assassination of more than one British officer by Mohammedan fanatics. See Sir J. W. Kaye's *History of the Sepoy Mutiny* (vol. ii. Lond. 1860).

MURFREESBORO, a village of Tennessee, situated in a fertile plain 32 miles S.E. of Nashville. Pop. 3502. It is historically interesting as the scene of a prolonged contest, known also as the Battle of Stone River, between the Confederates and Federals, which resulted in the final retreat of the former, after the loss of 10,000 out of an army originally 35,000 strong. The fighting lasted from December 31, 1862, to January 4, 1863.

MURGER, HENRI, a French novelist, born at Paris, March 24, 1822; after receiving a meagre education, served as clerk to a notary (1836–38), and next secretary to a Russian nobleman, Count Tolstoi. He wrote poems, but could find no publisher for them, and plunged presently into that life of misery and adventure which he dubbed la vie Bohemienne, and has described in his first and ablest production *Scènes de la vie de Boheme* (Par. 1845). This M. frequently copied, but never equalled, in his *Pays Latin* (1851), *Scènes de Campagne* (1854), *Sabot Rouge* (1860), &c. He also published *Ballades et Fantasies* (1854) and *Nuits d'Hiver* (1861), besides several comedies, as *Bonhomme Judis* (1852), and *La Sermant d'Horace* (1860). M. died at Paris, January 28, 1861. A complete edition of his works has been issued in 10 vols.

MURRI (*Marri*), a hill station and sanitarium established in 1851 among the spurs of the Himalayas, 7330 feet above the sea, in the district of Rawul Pindi, Punjaub, British India, 39 miles N.E. of Rawul Pindi. Pop. (1868) 2346. The census was taken in midwinter; during the summer season the number of visitors may amount to 12,000. The scenery is very beautiful, and the climate healthy, though there have been disastrous outbreaks of cholera. There are 5 hotels and a thriving brewery. In September 1857, during the mutiny, M. was attacked unsuccessfully by the insurgent hill tribes. One of the Lawrence Memorial Asylums for the children of European soldiers is situated here, and is occupied by 70 boys and 56 girls.

MURRUMBID'GEE, a large river in the S. of New South Wales. It rises in the Snowy Range, an offshoot of the Australian Alps, and for the greater part of its course of 1300 miles flows W. until it unites with the Murray in 34° 35′ S. lat., 143° 20′ E. long. The country on its banks is for the most part well adapted for pastoral purposes, except near its junction with the Lachlan, where there is a vast morass. The M. is navigable by light-draught steamers for 500 miles.

MU'SICAL BOX, a case fitted with a mechanical contrivance for playing tunes. Such boxes first came into fashion about the beginning of the 18th c., when it was common to attach small ones as pendants to watch-chains. The mechanism consists of a steel board with tongues of different sizes called a comb, a cylinder fitted with small steel points, and a fly or regulator. The notes are produced by the revolving action of the cylinder on the comb; the shorter the tongues the quicker being the vibrations, and consequently the higher the pitch. Some boxes plays as many as 100 tunes. The most famous manufactories of these articles are at Geneva and St. Croix, Switzerland, at Prague, and at St. Susanne, France. Musical clocks are extensively manufactured in the Black Forest. The insertion of reeds, pipes, bells, castanets, &c., produce different kinds of boxes, such as the mandoline, organocleide, &c.

MUSICAL GLASSES, an instrument composed of glass goblets filled more or less with water, to be struck gently and rapidly with the end of a damped finger. A complete scale is formed by gradnating the quantity of water, the less the quantity, the lower being the pitch of the sound produced.

MUSKEGON, a city of Muskegon Co., Mich., near the mouth of the Muskegon River, 6 miles from Lake Michigan and 100 from Chicago. It has forty immense saw mills, and is the largest lumber-manufacturing city of the West. It produces annually about 600,000,000 feet of lumber. There are also other extensive manufacturing industries. Pop. 15,000.

MUTT'ON (Fr. *mouton*, 'a sheep') is the flesh of full-grown sheep. The best M. is obtained from animals from four to five years of age, but it is seldom sheep are kept more than from two to three years. The flesh of Southdown and of blackfaced sheep is esteemed the sweetest. M. contains considerably more fat and much less nitrogenous matter than beef, but next to beef it is the most valuable and extensively used flesh-food.

MUTT'RA, (*Mathurá*), the chief town of the district of the same name, N.W. Provinces, British India, on the right bank of the Jumna, 35 miles N.W. of Agra, and 97 S.E. of Delhi. Pop. (1872) 59,281. It is an ancient city, mentioned by Arrian and Pliny, and it is known to have been a religious center in the Buddhist period. But it is most famous as the scene of the birth and adventures of Krishna, and as such it is crowded by Vishnuvite pilgrims, for whose guidance there are 1400 families of Chowbays, a sect of Brahmins. The river is lined with *ghauts* or bathing-places, built from the neighboring quarries of sandstone. M. has twice been sacked by the Mohammedans: by Mahmud of Ghuzni in 1017, who carried off untold wealth from the golden and bejeweled idols, and again by the Afghans in 1757. It was acquired by the British in 1803 from the French adventurer Perron, who had received it as a fief from Scindiah. Its trade is now very great, and its merchants are reckoned extremely wealthy. The chief buildings are the Jumna Musjid of Aurungzebe, the Observatory of the Rajput Prince, Jey Singh, now both in a ruinous state; and the residence and Jain temple of Paruekji, the former treasurer of Scindiah, reputed to be the richest banker in India.—The *district* of M., which is crossed by the Jumna river, and watered by the newly-opened Agra Canal, has an area of 1612 sq. miles, and a pop. (1872) of 887,689. The crops are wheat, barley, millets, pulses, and sugar-cane. It contains the hills of Goverdhun, among which lies Brindabun, the scene of the amorous youth of Krishna. See *Travels of a Hindoo*, by Baboo Bholanauth Chunder (Lond. 1869).

MYER, ALBRT J., an American general, born in N. Y., in 1828, and graduated from Hobart College, in 1847. He studied medicine, and entered the U. S. army as Surgeon. He is chiefly renowned for his invention of a signal system, and his connection with the meteorological department of the signal service, which he himself organized. He rose to the rank of brigadier-general, U.S.A. Died in 1880.

MYO'PIA is the term used in ophthalmic medicine to denote short-sightedness or near-sightedness. It is the opposite condition of *Presbyopia*, or long-sightedness.

N.

NABATHÆ'ANS. In Scripture history Nebajoth was the first-born of Ishmael (Gen. xxv. 13; 1 Chron. i. 29), and father of a tribe in Western Arabia beside the tribe of Kedar (Isaiah lx. 7). This tribe is by Josephus (*Ant.* i. 12, 4) and Jerome (Gen. *in loc.*) identified with the N. or Nabatæans, who, according to these writers, gave their name to all the region from the Euphrates to the Red Sea, and who in the time of the Maccabees (about B.C. 160) occupied the same region (1 Macc. v. 25, ix. 33–37; Jos. *Ant.* xii. 8, 3). During the height of their power the country of the N. embraced the whole of Edom, from which they drove the Edomites, and the plain of Arabia between the northern half of the Red Sea and the Mountains of Nejd, being bounded on the west and north by Palestine and Bashan. Besides being rich in flocks and herds, nearly the whole commerce of Western Asia was in their hands. From their capital of Petra, the ruins of whose rock-hewn buildings yet testify to their great wealth and civilization, caravan tracks radiated in all directions: to Palestine, Phœnicia, Damascus, Palmyra, Mesopotamia, to the ports on the Persian Gulf and the Red Sea, and to Egypt. The first mention of a king of the N. is about 166 B.C. (2 Macc. v. 8). All their kings bore the title of Aretas or Obodas, and the country was called Arabia Petræa or simply the kingdom of Arabia. Herod Antipas married a daughter of the Aretas of the time (Jos. *Ant.* xviii. 5, 1), probably the same who captured Damascus and governed it by an Ethnarch (2 Cor. xi. 32). The first blow to their prosperity was received when a new route between the east and west was opened through Egypt. The kingdom was annexed to the Roman Empire in A.D. 105, and the cities ruined by the Mohammedan conquest.

NACHIMOV, PAUL STEPANOVITCH, a Russian admiral, born in 1803, in the government of Smolensk, circumnavigated the globe under Sasarev (1822–25), was present at the battle of Navarino (1827), and commanded a corvette in the blockade of the Dardanelles (1830). Appointed, on the outbreak of the Crimean War, to the command of the Russian fleet in the Black Sea, he annihilated a Turkish squadron off Sinope (November 30, 1853), and having played a gallant part in the defence of Sevastopol, was raised to the rank of Admiral (April, 1855). On the 10th July of the same year he was struck by a bullet, and died the following day.

NA'GA'S, a wild race of Aborigines, bordering on Assam, in the N.E. frontier of British India. They are divided into many tribes, some of whom are inoffensive and trade freely with British subjects. Their exports are cotton, caoutchouc, timber, and beeswax. Other tribes are very warlike, and are notorious for their practice of carrying off as trophies the heads of their enemies. Since 1866 a British officer has been stationed in political charge of the N. tribes between the State of Munnipur and Assam, who exercises a general control but no direct government. The area of the tract held by the N. is 4900 sq. miles; the pop. (1872) 68,918. In 1875, and again in 1876, officers were murdered who were engaged beyond the frontier on survey duties, but the prestige of the British name has now been restored.

NAHANT, a summer resort, in Essex Co., Mass., on Massachusetts Bay, 14 miles from Boston. It is famous for its fine beach; has many beautiful cottages; and is much frequented by Bostonians.

NAIRNE, CAROLINE OLIPHANT, BARONESS, a Scottish poetess of rare genius, was the third daughter of Laurence Oliphant of Gask, and was born at the mansion-house of Gask, in Perthshire, 16th July 1766. Her beauty was such that she was called the 'Flower of Strathearn.' In June 1806 she married William Murray Nairne, then an officer in the British army, who in 1824 succeeded to the title of Baron Nairne, which had been attainted since the Rebellion of the Forty-five. The Baroness survived her husband fifteen years, dying at Gask, 27th October 1845. During the last years of her life she evinced a deep interest in religion, and was particulary attached to the Free Church movement, though her charities, which were numerous and varied, took no sectarian shape. Except to a very few friends, she never divulged the secret of her authorship; and while all Scotland was ringing with the *Laird o' Cockpen*, *The Land o' the Leal*, *Bonnie Charlie's now awa'*, *the Auld House*, *There grows a Bonnie Brier Bush*, *The Hundred Pipers*, &c., she remained absolutely unknown to her

countrymen. There is an exquisite womanliness in her lyrics. Everything, whether humorous or serious, is tenderly, delicately, graciously touched; and everywhere there is stainless purity in word and sentiment. In 1850 Paterson & Sons, Edinburgh, published the first edition of the Baroness N.'s *Lays from Strathearn*, with pianoforte accompaniments by Finlay Dun. The seventh edition of this most beautiful collection appeared in 1876. See Charles Rogers' *Memoirs and Complete Lyrical Compositions of the Baroness N.* (Lond. 1869).

NAIRS, the dominant Hindu tribe on the Malabar or W. coast of S. India, to whom the Zamorin of Calicut belonged. They are a warrior caste, claiming to be second only to the Brahmins. In old times they never went abroad without a knife or crooked sword, which they were ready to draw on all inferiors. They do not recognize the marriage tie; and consequently all descent and inheritance to property is traced through the female line—a custom which still governs the succession to the throne in the native states of Travancore and Cochin on the Malabar coast.

NANUK', the founder of the Sikh religion, was born near Lahore in 1469, of the Rotri or trading caste. He traveled widely as a religious devotee, and studied the religious books both of Hindus and Mohammedans. 'Several Korans and Puranas had he read, but one God had he not found.' Finally he abandoned the garb of an ascetic, returned to his family, and passed the remainder of a long life in teaching men to worship the One Almighty Invisible God, to live virtuously, and to be tolerant of the failings of others. He admitted the authority of Mohammed and also of the Hindu incarnations, and inculcated alike veneration for the cow and abhorrence of the hog. He died in 1539, but his spirit is believed by the Sikhs to have been transmitted to each successive *gooroo*. Many of his sayings are embodied in the Grunth or Holy Book of the Sikhs. Outside the Punjaub his followers are often called Nanukshahis. See Cunningham's *History of the Sikhs* (Lond. 1853).

NAPH'TALI was one of the twelve tribes of Israel, numbering at the first census 53,400 fighting men, and at the second 45,400 (Num. i. and xxvi.), which had its territory in the extreme north of Canaan. It is held by some Biblical scholars that the writer of Genesis xxix. and xxx., who gives a detailed account of the birth of Jacob's sons, with an explanation of all their names (N., 'my conflict,' that is, in prayer with God for his mercy, which had seemed to be restricted to Leah), had the definite purpose before him of assigning to each of the *tribes* its proper rank and importance. According to this theory N., the son of Rachel's slave Bilhah, was inferior to the sons of Rachel and Leah, although superior to the two sons of Leah's slave, as Rachel was nearer Jacob's heart than Leah.

NAPOLEON D'OR, a French gold coin worth twenty francs, named after the Emperor Napoleon I.

NAR'DO, a town of S. Italy, province of Lecce, 22 miles S.S.W. of the town of that name, and 4 from the Gulf of Taranto. It is a bishop's see, and has a cathedral and old feudal castle. N. is the ancient *Neretum* of the Sallentini. From the 10th to the 15th c. it had a university of note. Pop. (1874) 10,220.

NAREV', a river in Poland, rises in the Lithuanian swamps of the Russian government of Grodno, flows past the small towns of N., Tikoczin (where it becomes navigable), Ostrolenka, and Pultusk, and after a W. and S.W. course of 295 miles, falls into the Bug at Sierock.

NARGHILEH (Turk., Pers. *kalioun;* Hind. *hookah;* Chin. *chouë-yin*), a species of pipe much used in the East, consisting of a long serpentine tube connected with a vase, which is half filled with perfumed water, through which the smoke passes before it reaches the mouth.

NARRAGANSETTS, a tribe of North American Indians, occupying, at the time of the settlement of America, the territory which now constitutes the state of Rhode Island. Under their chief Canonicus, they were at first friendly to the whites, but during King Philip's war (1675), they were suspected of aiding him, and they were twice attacked and defeated by the whites. A small remnant of the tribe still lives at Charlestown, R. I.

NASH, or NASHE, THOMAS, born at Lowestoft in Suffolk, England, about 1564, entered St. John's College, Cambridge, and graduated B.A. (1584), but shortly after was expelled the university for his *Terminus et non Terminus*, a satire on the authorities. After rambling awhile on the Continent, N. settled at London (1589), and plunging into the Martin Marprelate controversy, produced *A Countercuffe to Martin Junior*, *Pappe with an Hatchett*, and other caustic pamphlets. He assisted Marlowe in *The Tragedy of Dido* (1590), and his own comedy, *Summer's Last Will and Testament*, was played before Elizabeth (1592). He failed, however, as a dramatist, and in *Pierce Penilesse his Supplication to the Diuell* (1592), and *Christ's Teares over Jerusalem* (1593), describes himself as 'sitting up late and rising early, contending with scarcitie, and cursing the daie of his birth.' A fierce attack on Dr. Gabriel Harvey, *Haue with you to Saffron Waldron* (1596), was suppressed by the archbishop, and a satirical play, *The Isle of Dogs* (1597), lodged N. in the Fleet Prison. He died about 1600. 'A sharp wit, and the master of a scoffing satyricall merry pen,' is Isaac Walton's estimate of this most brilliant of the Elizabethan pamphleteers.

NASHVILLE, BATTLE OF, an engagement of the civil war, Dec. 15–16, 1864, on the heights surrounding Nashville, Tenn. The Union army was commanded by Gen. Thomas, and that of the Confederates, by Gen. Hood. There was severe fighting on both days, the Union army acting on the offensive, and in every instance driving the Confederates from the positions which they attempted to hold. The losses upon both sides were heavy.

NASHVILLE, UNIVERSITY OF, an educational institution, located at Nashville, Tenn., which had its beginnings in 1785. It has fine buildings, a superior museum, and a well patronized medical department.

NA'SMYTH, ALEXANDER, the founder of the Scottish school of landscape painting, was born at Edinburgh in 1757, studied art in London under Allan Ramsay, spent several years in Italy, and on his return to Scotland commenced practising as a portrait painter. To the friendship he formed with Burns we owe the only authentic likeness that exists of the national poet. The bent of N.'s genius, however, was to the delineation of scenes from nature; to this branch of the art he ultimately devoted himself, and his works were much in request by the Scottish nobility and gentry. N. died at Edinburgh 10th April 1843.—PETER N., eldest son of the preceding, was born at Edinburgh in 1786, and early showed a remarkable capacity for art. At the age of twenty he went to London, and soon attained a high reputation. His landscapes are thoroughly English, but nevertheless betray the influence of his favorite masters, Ruysdael and Hobbema. N. died at South Lambeth, near London, 17th August 1831.—Another son, JAMES N., born at Edinburgh, August 19, 1808, and educated at the High School of his native city, studied four years at the School of Arts, and entered the University. He removed to London (1828), and in 1832 opened a small engineering establishment at Manchester. The year following he removed to Patricroft, 4 miles from Manchester, where he realized a considerable fortune by his Bridgewater Foundry, and retired from business (1856). N. is the inventor of the steam hammer, a steam pile-driver, and of various improvements in telescopes and ordinance.

NAST, THOMAS, born in Bavaria, Sept. 27, 1840, removed to America, with his parents, when a child, and entered the service of Frank Leslie, as a draughtsman. N. has now (1885) been in the employ of the Harpers for many years, and has become famous through his political cartoons, which have appeared in *Harper's Weekly*. He has also lectured with considerable success.

NAS'UA (*N. rufa*), a species of Carnivorous quadruped, allied to the Racoon, and inhabiting S. America. It is sometimes known as the Red Coaiti, has a reddish fur, black ears and legs, and a long and pointed muzzle. It feeds on birds, eggs, and the smaller quadrupeds. An allied species is the *N. narica* or Quasje, often known as the Brown Coaiti, also a native of S. America.

NATCH'EZ, a tribe of North American Indians, which formerly occupied a section of territory east of the Mississippi River, where the city of Natchez now is. Their civilization was more advanced than that of their neighbors, and they were brave, although licentious. They were sun-worshipers, and had a large temple, where the sacred fire was never allowed to expire. After some difficulties with the French settlers, the latter combined with the Choctaws, killed many of the Natchez tribe, and sold over four hundred of them into slavery. The remainder of the tribe fled to Texas, where they have since lived with other tribes, although retaining their own language and religion.

NATICA, a genus of Mollusca belonging to the Gasteropoda. It is typical of the family Naticidæ, in which the shell is globular and consists of a few whorles. The 'spire' of the shell is small, and the outer lip acute. The genus is distinguished by a very large foot, and the mantle-lobes cover a great part of the shell.

NATICK, a town of Middlesex Co., Mass., on the Boston & Albany Railroad, 17 miles from Boston. It is engaged in the manufacture of boots, shoes, base balls, and clothing. Pop. 8480.

NATURAL BRIDGES. There are several of these in the U. S., the most remarkable of which is located in Virginia about 14 miles from Lexington. It is a nearly perfect arch over Cedar Creek. The crown of the arch is 40 feet thick. The bridge is crossed by a road which is about 240 feet above the water.

NAUDÉ, GABRIEL, born in Paris, February 1, 1600, studied philosophy and medicine at Paris and Padua (1626), and became librarian at Rome to the Cardinals Bagni (1629) and Barberini (1641), and at Paris to Mazarin (1642). Having formed the design

of founding a great national library, he made a bibliographical tour in Flanders, Italy, Germany, and England, and thus collected some 40,000 volumes for the Bibliothèque Mazarine, which was opened in 1648. On the dispersion of this library by the Fronde Parliament (Dec. 29, 1651), N. purchased 3500 of its medical works, and withdrew to Stockholm, where Christina appointed him her librarian. Recalled by Mazarin, he died on the homeward journey at Abbeville, July 29, 1653. N. was a voluminous writer, but his works (mostly in Latin) are extremely rare. The principal are *Apologie pour les grands Personnages faussement soupçonnés de Magie* (1625), *Advis pour dresser une Bibliothèque* (1627), and *Bibliographia Politica* (1633). See A. Franklin's *Histoire de la Bibliothèque Mazarine* (Par. 1860).

NAUGATUCK, a town of New Haven Co., Conn., connected with Waterbury by the Naugatuck Railroad. It manufactures rubber clothing, boots, shoes, woollen underwear, cutlery, buttons, and farming implements. Pop. 5043.

NAU'MANN, JOHANN FRIEDRICH, a famous German ornithologist, born 14th February 1780 at Ziebigk, near Köthen, and died there, 15th August 1857. His chief works are *Naturgeschichte der Vögel Deutschlands* (2d ed. 12 vols. 1822–44; *Nachträge*, 1846–60); *Taxidermie* (2d ed. 1848); *Haushalt der Nördlichen Seevögel Europas* (1824).—KARL FRIEDERICH N., a well-known German mineralist, born at Dresden, 30th May 1797, was Professor at Freiberg from 1826, afterwards at Leipsic from 1842 to 1870, and died 26th November 1873. He wrote *Lehrbuch der Krystallographie* (2 vols. 1830, 2d ed. 1858); *Elemente der Mineralogie* (8th ed. 1871); *Lehrbuch der Geognosie* (2d. ed. 3 vols. 1857–67).

NEALE, JOHN MASON, born in London, England, 24th January 1818, graduated M.A. of Cambridge (1840), was ordained (1842), and became rector of Crawley, in Sussex, and Warden of Sackville College, East Grinstead (1846). At the latter place he founded the well-known Sisterhood of St. Margaret (1856), and there he died, 6th August 1866. N., while leaning to the Eastern Church, was a warm supporter of the 'Anglo-Catholic' party in the Church of England, as may be seen from his *History of the Holy Eastern Church* (4 vols. 1847–51), *History of the so-called Jansenist Church of Holland* (1858), *Essays on Church History* (1863), &c. He was an able hymnologist, and his *Mediæval Latin Hymns* and *Hymns of the Eastern Church* (collected 1871) are widely popular.

NEBRASKA CITY, in Otoe Co., Neb., on the Missouri River, at the junction of several railroads, 57 miles E. of Lincoln. The town occupies the site of old Fort Kearney and was laid out in 1854. It contains the State Blind Asylum, an Episcopal College, a Catholic Academy, and a number of manufactories. It is surrounded by a fine fruit-growing section. Pop. 7000.

NEEDHAM, a town of Norfolk Co., Mass., extensively engaged in the manufacture of hosiery and other articles. Pop. 5254.

NEGLEY, JAMES S., an American general, born at East Liberty, Pa., Dec. 22, 1826, and was educated at Western University. He served in the Mexican war; and also in the civil war, on the Union side, rising to the rank of major-general. In 1869 he was elected to Congress, and again in 1884.

NEG'LIGENCE, in Law. Every man is legally bound to take care that he does not injure his neighbor. Therefore when a man receives an injury to his person or property by the fault of another—whether the fault be of omission or of commission, whether wilful or by N.—the law will give damage for the injury sustained.

NEGRAIS, a small island which gives its name to a headland in British Burmah, bounding the most W. mouth of the Irrawaddy, in the district of Bassein. An English settlement was established here as early as 1687. After having been more than once abandoned and reoccupied, it was attacked by the Burmese in 1759, when all the Europeans were killed. It is said to afford a very safe harbor, and there is a fine lighthouse on the adjacent reef of Algnada.

NEILL, JAMES GEORGE, GENERAL, one of the heroes of the Indian Mutiny, was the son of a Scottish gentleman of good family, and was born in 1810 in the neighborhood of Ayr. Before he was seventeen he joined the 1st Madras European regiment, now H.M. 102d Fusileers, with which regiment his name is ever associated, and of which he wrote an *Historical Record*. He served through the second Burmese war of 1853, and in 1855–56 was appointed second in command of the Anglo-Turkish Contingent. In April 1857 he returned to Madras as Colonel of his old regiment, and next month was summoned to Calcutta by the news of the Mutiny. His were the first troops to proceed up country, and his resolute treatment of the railway officials at Howrah has become a household story. He arrived in time to save Benares and Allahabad, and followed Havelock into Cawnpore, where it became his duty to inflict condign punishment for the massacre. He was killed while leading his brigade in the street-fighting of the first relief of Lucknow on 25th September 1857. A statute has been erected to his memory in the town of Ayr. See *Lives of Indian Officers*, vol. ii. by Sir J. W. Kaye (1867).

NEJ'ED, or NEJD, the central tableland of Arabia, is surrounded on three sides by the great sand-desert of Dhana, and is mainly occupied by the Jebel Tuweik range, which, nowhere exceeding 5000 feet of elevation, is intersected by a perfect network of fertile valleys and watercourses, dry, except in the rainy season. The heights are covered for a great part of the year with rich grass. The Wahabis form the bulk of the population. Their capital, Riad, is estimated by Palgrave to have 40,000 inhabitants, who live by agriculture and horse-rearing. See Palgrave's *Narrative of a Journey through Central Arabia* (1865); and Pelly, *A Visit to the Wahabee Capital*, in the *Journal of the Geographical Society* (1866).

NE'REIDS, the fifty daughters of Nereus and Doris, chief of whom was Thetis, mother of Achilles. They dwelt in the Ægean Sea, in shell-decked and vine-shaded caves on the seaboard or in the sea-depths along with their sea-born parents. The N. were the attendants of the great sea-gods, especially of Poseidon, whose power over the sea was supreme. Sailors paid honor to them. Milk, oil, honey, and goat's flesh were the gifts invariably offered. In works of art Nereus and his daughters appear crowned with sea-weed over eye, chin, and breast. See Hirst. *Mythol. Bilderb.* (p. 150, tabb. 18, 19).

NER'EUS, in the Greek myth, was the son of Pontus and Gæa, and the husband of Doris, by whom he became the father of the fifty Nereids. Under Poseidon he ruled the Mediterranean. His daughters, whose names are variously given by Homer (*Il.* xviii. 39), Hesiod (*Theog.* 240), and Pindar (*Isthm.* vi. 8), were distinguished, on the one hand, from the Oceanides, the dwellers in ocean, and on the other from the Naiades, the nymphs of streams and lakes.

NEUILLY, a town of France, department of Seine, 1½ miles N.W. of Paris, on the right bank of the Seine, which is here spanned by a magnificent five-arched bridge, 640 feet long, erected by Perronet (1768–73). The château of N., destroyed in the revolution of '48, was a favorite residence of Louis-Philippe, and the spot where his son Ferdinand was killed in a carriage-accident (July 13, 1842) is marked by a Byzantine chapel, designed by Ary Scheffer. Bleaching, distilling, and nursery-gardening are the principal industries. Pop. (1872) 15,466. Being wholly within the French lines, N. came little into notice during the Prussian siege of Paris, but it was the scene of several engagements between the Communists and the Versailles troops, April 20—May 21, 1871.

NEU'TRA or NEITRA (Magyar *Nyitra*), a town of Hungary, in the comitat and on the river of the same name, 75 miles N.W. of Pesth by rail. On Mount Zobor, E. of the town, is a strong castle. M. is a Catholic bishop's see, has three monasteries, two cathedrals, and a theological college. There is considerable trade in wine. Pop. (1869) 10,683.

NEVADA CITY, in Nevada Co., Cal., on Deer Creek, 65 miles from Sacramento. It is surrounded by the richest mining region in California, and is largely engaged in the cultivation of fruit. Pop. 4022.

NEVIANSK', a town of Russia, government of Perm, on the eastern slope of the Urals, 45 miles N.N.W. of Ekaterinburg, has a mint, with a celebrated leaning-tower; and in the neighborhood are extensive gold-washings, and iron-works which yield annually 4950 tons of iron. Estimated pop. 20,000.

NEW'ARK, a city of Ohio, situated on the Licking River, the Ohio and Erie Canal, 33 miles N. E. of Columbus by rail, lies in a rich agricultural district, near large coal-fields. It possesses two banks, several churches, and two newspapers, and, besides important manufactures, has a thriving trade in coal, grain, and live stock. Pop. (1880) 9600.

NEW BRIGH'TON, a town of New York, on Staten Island, and on the opposite side of New York Bay from Brighton. It has the largest dyeing and printing work in the U. S., a silk-printing factory, a paperhanging factory, the 'Snug Harbor,' an institution for aged mariners, and another for sailors' destitute children. Pop. 7495.

NEW CASTLE, a town of New Castle Co., Del., on the Delaware River, at the head of Delaware Bay. It has a good harbor, and is extensively engaged in manufacturing. The surrounding country is devoted to agriculture. Pop. 4,000.

NEW CASTLE, in Lawrence Co., Pa., at the junction of the Neshannock and Shenango rivers, which at this point unite and form the Beaver River. It is an important railroad center, and is engaged in manufacturing iron, glass, pottery, sewer pipe, fire brick, coke, and paper, and in mining bituminous coal, limestone, fire clay, iron ore, and sandstone for building. Pop. 16,500.

NEW JERSEY COLLEGE, founded under the auspices of the Presbyterian Synod of New York, was chartered by New Jersey in 1746, and opened in Elizabethtown in the following year. It was removed to Newark in 1748, and finally to Princeton in 1757. The Rev. Dr. James M'Cosh, elected president in 1868, has greatly advanced the interests of the college. In 1875 it had sixteen professors, four other instructors, and 483 students, endowments to the amount of $600.000, libraries comprising 44,000 volumes, various museums, and observatory.

NEWMAN, John P., D.D., born at New York, N. Y., Sept. 1, 1826, and entered the ministry of the Methodist church. From 1869 to 1874 he was chaplain of the U. S. Senate. He has traveled extensively in foreign lands, and has written *From Dan to Beersheba*, and *Babylon and Nineveh*.

NEWTON, R. Heber, D.D., a divine of the Protestant Episcopal church in America, born in 1840, and educated at the University of Pennsylvania. He became rector of Trinity church, Sharon Springs (1864); of St. Paul's, Philadelphia (1866); and of All Souls', New York (1869), where he still remains (1885). He has published *The Morals of Trade; Studies of Jesus; Womanhood; The Right and Wrong Uses of the Bible; The Book of Beginnings*; and *Lectures on Genesis*. N. is an eloquent preacher and one of the most advanced thinkers of the Episcopal church.

NEWTON, Rev. John, son of the master of a merchant-ship, was born in London, England, 24th July 1725, led a wild life in his youth, but was afterwards converted, and having attained a certain knowledge of Latin and Greek, was ordained curate of Olney, Buckinghamshire, in 1764. Here he made the acquaintance of Cowper the poet, over whom he exercised an influence more intense than wholesome. Together they wrote the famous *Olney Hymns*. In 1779 N. was presented to the living of St. Mary-Woolnoth, London. He died 31st December 1807. N. was deeply, not to say darkly, evangelical. The shadow of a libertine youth threw a gloom over his theology. In his views of human depravity we recognize the distorted image of his earlier self; but no man merits blame who, from whatever cause, is deeply impressed with 'the exceeding sinfulness of sin.' N. wrote, among other things, *Cardiphonia, or the Utterance of the Heart; the Messiah, a Series of Sermons;* and a *Narrative of his own Life*.

NEWTOWN, a town of Fairfield Co., Conn., on the Housatonic River, 19 miles from Bridgeport. It is engaged in the manufacture of belting, hats, and buttons, and has woollen mills. It is also a popular summer resort. Pop. 4013.

NEW YORK, University of the City of, an educational institution founded in New York in 1831, and opened in 1832. It is non-sectarian, and maintains classical, scientific, law, medical, and civil engineering departments. In 1884 it received liberal donations, and many improvements were made. Dr. John Hall is its present Chancellor (1884).

NEXT OF KIN is a legal phase, denoting those that are nearest to a person in relationship by blood. The wife of a testator is not included in the meaning expressed by this phrase, she not being a blood relation.

NGAN-HOI, a province in the E. of China, having an area of 54.001 sq. miles, and a pop., according to the last census, of 36,596,988. The capital is *Ngan-King*, on the left bank of the Yang-tse-Kiang, 190 miles S.W. of Nanking. It is noted for its green tea, porcelain, silks, ink, and varnish, and is the commercial depôt of a rich mineral district.

NICEPH'ORUS, born at Constantinople in 758, held the post of *notarius* to Constantine VI. (780–797), opposed the iconoclasts at the second Council of Nicæa (787), and was raised to the patriarchate (806). Deposed by Leo the Armenian for his opposition to the edict against images (815), he retired to the convent of St. Theodore, on one of the islands of the Propontis, and died there June 2, 1828. N. was one of the ablest of the Byzantine historians, his chief works—all in Greek—being *Breviarium Historicum*, a history of Constantinople from 602 to 770 (Par. 1616); *Chronologia Compendiaria* (Par. 1573); and *Indiculus Labrorum Sacrorum* (Par. 1609).—N. Callistus Xanthopulus, born towards the close of the 13th c., and died about 1350, was the author of an *Historia Ecclesiastica* (Par. 1630), which won for him the title of *Thucydides Ecclesiasticus*. He wrote nine other separate works, besides hymns, sermons, epistles, &c.

NICE'TAS ACOMINA'TUS or CHONIA'TES, a Byzantine historian, born at Chonæ (*Colossæ*) in Phrygia, about 1150, was appointed governor of Philippopolis by Isaac II. (1189), and later held the offices of *logotheta* and *præfectus sacri cubiculi*, with the title of senator. He fled from the sack of Constantinople by the Latins (1204) to the court of Theodore Lascaris at Nicæa, where he died about 1216. N.'s *Historia*, embracing in twenty-one books the period 1118–1206, was published by Wolf (Basel, 1557) and Becker (Bonn, 1835); his *Narratio de Statuis quas Franci destruxerunt*, by Wilken (Leips. 1830).

NICHOLAS OF GUILDFORD, the author of a bright and picturesque poem, called the *Owl and the Nightingale*. It is a fine specimen of Transition English, written in the dialect of the south of England, but free from broad provincialisms. Though composed in the rhymed octo-syllabic verse of the French Romances, it is a genuine English work, not more than twenty words being of French origin in the whole 1792 lines of which the piece consists. It has been assigned on internal evidence to the reign of Henry III., and is certainly not of later origin. The poem was edited for the Percy Society by Thomas Wright, M.A., in 1843.

NIC'HOLS, John, F.S.A., born at Islington, England, 2d February 1745, was the apprentice and successor of William Bowyer, and, during a busy life of authorship, edited the *Gentleman's Magazine* from 1778 till his death, which occurred 26th November 1826. Of the sixty-seven works of which he was either author or editor, the chief are a collection of *Miscellaneous Poems with Historical and Biographical Notes* (8 vols. 1780–82); *Biographical and Literary Anecdotes of William Bowyer, F.S.A., and of many of his learned Friends* (1782), a work recast and extended under the title of *Literary Anecdotes of the Eighteenth Century* (9 vols. 1812–15), and continued, with the aid of his son, in *Illustrations of Literary History* (8 vols. 1817–58); and *The History and Antiquities of Leicester* in four splendid folio vols. (1795–1815). See A. Chalmer's *Memoirs of J. N.* (1826).—John Bowyer N., son of the preceding, was born in London, 15th July 1779, educated at St. Paul's School in 1796, joined his father in business, and was sole proprietor of the *Gentleman's Magazine* from 1833 till 1856. From his press have issued many of the noblest specimens of English typography—*e. g.*, Ormerod's *Cheshire*, Clutterbuck's *Hertfordshire*, Surtees' *Durham*, Hoare's *S. Wilts*, Whitaker's *Histories of Whalley and Craven*, and Dallaway's *Rape of Arundel*. Among his own writings are a *Brief Account of the Guildhall* and *Anecdotes of Hogarth* (1833), and *Historical Notices of Fonthill Abbey* (1836). N. died at Ealing, Middlesex, 19th October 1863.—John Gough N., son of the preceding, was born in 1806, and was long editor of the *Gentleman's Magazine*, which ceased to be the property of the Nichols family in 1856. N. was one of the founders of the Camden Society, and edited several important works issued by it and by the Roxburghe Club, &c. He died at Holmwood, near Dorking, 13th November 1873.

NICKSICS' or NIKSCHITJ', a fortress and capital of a district of the same name, Herzegovina, near the N. frontier of Montenegro, and 34 miles N.E. of Cattaro, was held by the Turks during the late insurrection in Herzegovina, but capitulated to the Montenegrins, 8th September 1877.

NIC'OLAS, Sir Harris Nicholas, an English author, was born in Cornwall, March 10, 1799, entered the navy and rose to the rank of lieutenant (1815), but quitting the service on the close of the war, was called to the bar (1825), and thenceforward devoted himself to historical and antiquarian research. He was created a knight of the Guelphic Order (1831) and Chancellor of the Ionian Order of St. Michael and St. George (1832), and died at Cape Curé, near Boulogne, August 3, 1848. N.'s works are marked by singular industry and critical acumen, but also by an acrimony which embroiled him in frequent literary squabbles. The principal are—*Notitia Historica* (1824), *Scrope and Grosvenor Controversy* (1832), *Chronology of History* (1835), *History of the Orders of Knighthood* (4 vols. 1841–42), *Despatches of Lord Nelson* (7 vols. 1844), and an unfinished *History of the British Navy* (2 vols. 1847).

NIC'OLO, a variety of onyx, with parallel bands of a black or deep-brown and a bluish-white color, found chiefly in Bohemia. It was much used by the Romans in gem-engraving.

NICOSIA, a town of Sicily, province of Catania, has a cathedral, four large churches, and a college with a fine library. It carries on a lively trade in wine, oil, grain, and cattle; but has no manufactures, and is reckoned the most backward of all the Sicilian towns, 94 per cent. of its inhabitants being unable to read. The dialect shows the place to have been a Lombardic colony, founded probably by Roger II. Pop. (1874) 14,789.

NIEL, Adolphe, a French marshal, was born at Muret (Haute Garonne), 4th October 1802, entered the *Corps du Genie* in 1825, became captain in 1835, and led a company at the storming of Constantine. He was head of Marshal Vaillant's staff in the Roman expedition of 1849, was made a general of division in 1853, accompanied the French expedition to the Baltic under Baraguay d'Hilliers, and directed the siege of Bomarsund, and afterwards that of Sebastopol. In 1857 he became a senator, commanded the 4th corps d'Armée in the Franco-Austrian War of 1859, and fought with distinction at Solferino. In 1867 he was appointed Minister of War, and was actively engaged in reorganizing the French Army when he died, 14th August 1869.

NIEM'CEWICZ, Julian Ursin, a distinguished Polish author and statesman, born, 1757, at Skoki in Lithuania, entered the Polish army in 1777, which he left in 1788, with the rank of

major, to work in the Diet for a new constitution. In 1794 he was adjutant to Kosciusko, with whom he was taken prisoner, but liberated by the Emperor Paul, after which both came to America. In 1807 N. returned, and was made secretary of the Senate of the new grand-duchy of Warsaw, and in 1814 chairman of the Constitutional Committee, but lived chiefly on his estate, busied with study. After the failure of the Polish Revolution in 1830, he fled to England, which he afterwards left for Paris, where he founded a Polish library and historical society, and died 21st May 1841. His chief works are *Historical Songs of the Poles* (Warsaw, 1816. *et seq.;* Germ. trans. by Gandy, Leips. 1833); *History of the Government of Sigismund III. of Poland* (3 vols. *ib.* 1819); *Collection of Memoirs for Ancient Polish History* (5 vols. *ib.* 1822); *Levi und Sara, Briefe Polnischen Juden* (Berl. 1825); the novel *John of Tenczyn* (3 vols. Warsaw, 1825; Germ. trans., Berl. 1828); and the posthumous *Notes sur ma Captivité à Pétersbourg* (Par. 1843). His poetical works were collected in 12 vols. (Leips. 1840), and his life was written by A. Czartoryski (Par. 1860).

NIEP'CE, Joseph Nicephore, the first discoverer of photography, was born at Châlon-sur-Saône, March 7, 1765. On the outbreak of the Revolution he entered the army and served as a lieutenant in the Italian campaign in 1793. His weakness of sight, however, compelled him to return to France, where from 1795 to 1801, he acted as administrator of the district of Nice. He then settled in his native town and devoted his time to mechanics and latterly to chemistry. About 1813 the idea of taking pictures by sunlight appears to have suggested itself to him, and by 1824 the first practical difficulties had been overcome, and sun-pictures formed on glass or tin-plate. He communicated his discovery, concealing however, his methods, in 1827 to the Royal Society of London, and two years later entered into a partnership with Daguerre, who after the death of N. published the process, simplified and improved no doubt, under his own name. N. died at Châlon-sur-Saône, July 5, 1833.

NILES, a town of Berrien Co., Mich., on the St. Joseph's River, and the Michigan Central and other railroads, 93 miles from Chicago. The St. Joseph's River is navigable for small steamboats to this point, and affords abundant water power which is employed in several mills. It is surrounded by a fine agricultural districts. Pop. 5200.

NILS'SON, Christine, a leading *prima donna*, the daughter of a peasant, was born at Hussaby, near Wexio, Sweden, August 3, 1843. Her playing and singing at a country fair in June 1857 attracted the attention of a gentleman of means, F. G. Thornerhjelm, who placed her at a school at Halmstad, and afterwards with Franz Berwald, as her master, at Stockholm. On completing her education under Nasset and Wurtel at Paris, she made her first appearance in October 1864 at the *Théâtre Lyrique* in that city, where she obtained a three years' engagement. In the season of 1867 she made a brilliant *début* in London, where, as well as in Paris, St. Petersburg, Vienna, and New York, she has taken the highest rank as a public favorite. On the 20th of August 1872 she married M. Auguste Rouzaud, the son of a well-known French merchant. Her voice is a soprano of extraordinary range and richness, while her dramatic talent is a splendid ally to her wonderful vocalization. Among her grandest parts are Violetta in *Mariota*, and Valentine in the *Huguenots*. But she excels in the more poetical conceptions of the opera. In *Faust* she is the most perfect of Marguerites, in *Lohengrin* the most ideal of Elsas.

NISCE'MI, a town of Sicily, province of Caltanisetta, finely situated in a fertile district, 11 miles from the Tyrrhenian Sea, has corn and oil mills, and some remains of ancient dwellings. Pop. (1874), 10,750.

NISS'A (Turk. *Nisch;* the anc. *Naissos*), a town in the N.W. of Bulgaria, Turkey, on the right bank of the Nissava, an affluent of the Morava, 8 miles from the Servian frontier, and 85 N.W. of Sofia. It is the converging point of three great roads, and is strongly fortified by high walls, moats, palisades, marshes and redoubts. N. has eighteen mosques, two Greek churches, and a synagogue. Pop. 16,000, of whom nearly half are Turks and half Servians. N. was the birthplace of Constantine the Great, and the ancient capital of Servia. In the Russo-Turkish War it was captured by the Servians, January 11, 1878.

NIT'HARD, a Frankish historian, was born about 790. His father was Angilbert, governor of the Frankish borders, and his mother Bertha, daughter of Karl the Great. He died in 853. His *De Dissensionibus Filiorum Ludovici Pii* is valuable as containing the testimony of an eye-witness in regard to what he describes. Published in 1788 by Pithou, it has been reprinted in the collections of *Historiens de France* by Duchesne and Dom Bouquet.

NOAH, one of the patriarchs, who, with his family, was saved from the Deluge, by means of the ark.

NOAILLES, an illustrious French family, who from the 11th c. held the château and domain of N. in the modern department of Corrèze. The following merit special notice:—Adrien Maurice, Duc de N., born at Paris, Sept. 29, 1678, entered the army (1692), won a high reputation as a general in the Spanish War of Succession (1702–13), and was made president of the Council of Finance (1715), a post which he lost (1718) by his opposition to Law, the Scotch adventurer. He was created a marshal and commander-in-chief (1733); at the head of the Sardinian troops expelled the Imperialists from Italy (1734), and was defeated by George II. at Dettingen (1743). He served under Marshal Saxe at Fontenoy (1745), was despatched as ambassador to the Court of Spain (1746), and died at Paris, June 24, 1766. The *Mémoires* (6 vols. Par. 1777) ascribed to N. were composed by the Abbé Millot from materials furnished by the duke.—Louis Marie, Vicomte de N., grandson of the preceding, born at Paris, April 17, 1756, served through the American War of Independence with Lafayette, and married his sister. In the French Revolution N. espoused the cause of the people, sat with the Left in the National Assembly, and was elected its president (1791). Having taken a command in the army, he was defeated at Gliswel (1792), and despairing of his country's future, passed over to England, and thence to the United States, while the countess, who remained behind, was guillotined, July 22, 1794. Re-entering the French service in 1803, N. was despatched to St. Domingo, and in boarding an English corvette off Havana was mortally wounded, and died Jan. 9, 1804.

NODOSARIA, a genus of *Foraminifera* having a long shell resembling a beaded rod in shape, but with the first formed chambers or segments larger than the last. *N. hispida*, a familiar species, derives its name from the small processes that project from the surface of the shell. N. is one of the Polythalamons or 'many-chambered' foraminifera, the new chambers being formed by a process of budding or gemmation.

NO'MANSLAND, or NEW GRIQUALAND, a district of S. Africa, bounded on the N. by Basutoland, on the E. by Natal, on the S. by Independent Kaffraria, and on the W. by Tambookieland. Its length from E. to W. is 125 miles, and its breadth from 40 to 75 miles, the total area being about 8000 sq. miles. N. lies on the S. slope of the Quathlamba Mountains, and in its elevated portions the climate in winter is severe. Wheat is grown in considerable quantities, and the country is also well suited to sheep and cattle. It was thinly peopled by fragments of Kaffir tribes till 1862, when the Amaponda chief Faku ceded his nominal right of sovereignty over a portion of it to the government of Cape Colony, who thereupon parceled out the unoccupied land among 15 000 Griquas, who removed thither to escape the pressure of the Boers, and among various tribes of Basutos and Fingoes. This portion is commonly known as Griqualand E. In 1876 the Griqua chief Adam Kok died, and at the desire of the inhabitants N. was then annexed to Cape Colony. The pop. in 1875 amounted to 62,341.

NOOT'KAS, or AHTS, the name of the Indians of Vancouver's Island, comprising the Ahts proper (3500) who inhabit the W. shores of the island, the Quakewith (3000), scattered along both sides of this island and on the mainland, and the Cowichans in the E. of the island, numbering 7000. The Cowichans have been partly civilized by Protestant and Roman Catholic missions. *Nootka Sound*, on the W. coast of Vancouver's Island, is 10 miles long, and has a breadth of 500 yards.

NORD'ENSKJÖLD, Nils Adolf Erik, a celebrated Swedish naturalist, born 18th November 1832 at Helsingfors, where his father was Professor of Mineralogy, was appointed professor of the same science at Stockholm in 1858. After accompanying (1858 and 1861) the two expeditions to Spitzbergen led by Otto Torell, he himself led two others (1864 and 1868), in the first of which he descried Gillisland, marked on the maps as King Carl's Land, and in the second reached 81° 42' N. lat., the highest point hitherto gained by sea. During these voyages N. fixed astronomically the position of eighty places in the Spitzbergen Archipelago, and made valuable geological and other collections. In 1870 he visited Greenland, whose inland ice he traversed farther north than any previous explorer, and discovered in the S. of Disco Island the three largest meteoric stones yet found—5. 10, and 25 tons' weight respectively. See his *Redogörelse för en expedition till Grönland aar* 1870 (Stockh. 1871). In 1872 he led the fifth Swedish Arctic expedition. With Lindström, Stuxberg, and others, N. left Tromsö, 8th July 1875, made scientific researches on Novaia Zemlia from 23d June to 2d August, passed the Yugor Strait into the Kara Sea, reached the mouth of the Yenissei on the 15th August, sailed up that river for some distance, and then traveled overland to St. Petersburg, having opened the passage to the Siberian rivers, and proved that the Kara Sea was not a 'great ice-house.'

NORD'HOFF, Charles, an American author, born in Prussia, Aug. 31, 1830, and brought to the U. S. when a child. Since 1861 has been connected with New York papers, and has published *Man-of-war Life. The Communistic Societies of the United*

States, Politics for Young Americans, Whaling and Fishing, and other works.

NORTH ADAMS, a town of Berkshire Co., Mass. It has four railroads, and is engaged in cotton, woollen, shoe, and other manufactures. The west end of the Hoosic Tunnel is one mile from the town. Pop. 12,000.

NORTH'COTE, SIR JOHN, an English politician and patriot, was the eldest son of the sheriff of Devon, and was born early in the 17th c. He was elected to the Long Parliament for the village of Ashburton in 1640, and from the first was one of the small party who sought a *via media* between the extremes of monarchic absolutism and Puritan despotism. When the civil war broke out he sided with the Parliament, helped to organize the Devonshire Militia, was proclaimed a traitor by the King in 1642, took part in the defence of Plymouth, shared in the defeat at Modberry (27th Feb. 1643), was made prisoner by the Royalists in 1644 but was soon after exchanged. N. fell under the suspicion of the Cromwellian party in 1646, was 'secluded' before the trial of Charles, was passed over by Cromwell in the New Communion of Peace for Devon (1650), was re-elected to Parliament during the rule of Richard Cromwell, and was a member of the Convention that restored the monarchy. He died in 1676. During his attendance in Parliament he made notes of all the memorable debates—those on ship-money, the impeachment of Strafford, the levying of war against the King, the Scots articles, and the revision of the canons. N.'s valuable *Notebook* was published by Mr. Murray, under the editorship of Mr. A. Hamilton, in 1877.—SIR STAFFORD HENRY N., eighth baronet of the name, was born in London, 27th October 1818, and educated at Balliol College, Oxford, England, taking a first class in classics and a third in mathematics. He was called to the bar in 1847, entered Parliament in 1855 as a member for Dudley in the Conservative interest. N. was private secretary to Mr. Gladstone when the latter was President of the Board of Trade. In 1859 he was appointed Financial Secretary to the Treasury, in 1866 President of the Board of Trade, in 1867-68 Secretary of State for India, and in 1874 Chancellor of the exchequer, a post which he held till April 1880.

NORTHUM'BRIA, one of the Old English kingdoms, was founded in 547 A.D. by Ida the Angle. It extended from the Humber to the Forth, and from the North Sea inland to the eastern offsets of the Penine Range. Its western limit in the country now called Scotland is more uncertain, but would probably be fairly represented by a line drawn from the Liddel through Selkirk or Peebles to the neighborhood of Stirling. N. was sometimes divided into two kingdoms—*Deira* in the south, corresponding to the modern Yorkshire and Durham; and *Bernicia*, embracing the whole S.E. of Scotland and the modern Northumberland. In the reign of Eadwine (Edwin), who ascended the throne in 617, N. was converted to Christianity; and under him and his successors, it held the foremost place among the English states. It was the seat of the earliest English literature. Here Cædmon in the 7th century composed his sacred paraphrases; and here Bede in the 8th began the still unfinished work of translating the Scriptures into English. But for the destructive ravages of the Danes, who pillaged and burnt its monasteries, N. might perhaps have maintained its intellectual supremacy, and its dialect have become the classic tongue of the whole nation, instead of sinking into a rude though racy patois. Only in the poetry of the Scottish Lowlands—in Dunbar and Lyndsay and Burns—has the speech of Cædmon displayed in later times its ancient dignity and power. See Freeman's *Norman Conquest* (vol. i).

NORTON, THOMAS, was born at Sharpenhoe, Bedfordshire, England, 1532. In his youth he served the Protector Somerset, and in 1555 he entered the Inner Temple as a student. In 1561 he published a translation of Calvin's *Institutes*, which speedily went through five editions. In the same year he joined Sackville in the production of the first English tragedy, *Gorboduc*, first called *Ferrex and Porrex*, writing the first three acts. He also translated twenty-seven of the Psalms in the Sternhold and Hopkins version, and wrote some controversial tracts. N. died about 1584.

NORWALK, a town of Huron Co., O., at the junction of the Lake Shore & Michigan Southern and the Wheeling & Lake Erie railroads. It is in the midst of a dairying and stock-raising region. Pop. 7008.

NOSSI-BÉ ('great island'), an island on the N. W. coast of Madagascar, in 13° 14' S. lat., 48° 15' E. long.; area 74 sq. miles. It is volcanic, and has a number of extinct craters. The soil is rich, and the staple products are rice, sugar, and maize. The island also produces valuable timber, and among other exports are beeswax and tortoise-shell. It has been a French possession since 1843, and is subject to the Governor of Mayotta. The chief settlement, Helleville, has a fine harbor. Pop. of the island, about 15,000.

NOSTAL'GIA is a form of *melancholia*, manifested by an inordinate desire to return to one's native country, and to which is added the apprehension that he may never be able to return. Army surgeons often witness cases of N. According to Baron Larrey, the mental faculties are the first to be affected. Ninety-seven soldiers in the French army fell a sacrifice to this disease between 1820-26. In such cases, general paralysis is common; but death is the result of a gradual exhaustion of the vital powers. The Dutch, the Swiss troops, the Highlanders, and the Irish, are the most liable to this form of insanity. N. is a common affection among slaves who have been abducted from their native country; and the disease is evidently referred to by Dr. Livingstone, in his 'Last Journal,' when he states that many of the slaves abducted from Manyuema-land died from what he described as a new disease, 'Broken-heartedness.'

NOTHOSAURUS, an extinct genus of Reptilia, belonging to the order *Sauropterygia*, which also includes the *Plesiosauri* and other well-known fossil genera. In N. the neck, like that of the *Plesiosaurus*, was long, and was composed of at least 20 vertebræ. The vertebræ of the back were 'amphicoelous' (hollow at each end), and were thus modeled on the type of those of the fish; a conformation indicating that the animal possessed a flexible spine, and was probably an active swimmer. The teeth were conical in shape, and numerous; and proceeded from distinct alveoli or sockets. The limbs were in the form of swimming-paddles. All the species of N. are found in the Triassic rocks, and are especially plentiful in the Muschelkalk.

NOTT, ELIPHALET, D.D., LL.D, a successful American educator, born at Ashford, Conn., June 25, 1773, and graduated from Brown University in 1795. He served in the Presbyterian ministry until 1804, when he was elected president of Union College, which position he held until the time of his death, Jan. 29, 1866.

NOTT, GENERAL SIR WILLIAM, G.C.B., one of the heroes of the disastrous British expedition to Afghanistan of 1839-42, was born at Carmarthen in S. Wales in 1782, and joined the Bengal Infantry in 1800. During the winter of 1841, when the Cabul army was exterminated, he held the town of Candahar. In the following spring he joined the avenging army of Pollock at Cabul; and on his way captured for the second time and destroyed the citadel of Ghuzni, and carried away the famous gates of Somnauth. He received a pension of £1000, and was appointed President at Lucknow. He died in 1845.

NOVELL'O, VINCENT, an organist and musical writer, was born in London, England, of an Italian family, in 1781. He became organist to the Portuguese embassy, and published a *Selection of Sacred Music* (2 vols.), *Collection of Motets for the Offertory, &c.*, *Gregorian Hymns for the Evening Service* (in 12 books), *Biographical Sketch of Henry Purcell*, &c. He died at Nice, 9th August 1861. His life has been written by his eldest daughter, Mrs. Cowden Clarke.

NO'VI LIGU'RE, a town of Italy, in the province of Alexandria, 33 miles N.N.W. of Genoa by rail, contains twelve churches, a museum, picture gallery, and public library, and has important silk manufactures. Pop. (1874) 12,162. Here the French were defeated by a Russo-Austrian army under Suvaroff, and lost Joubert, their general, and 16,000 men, August 15, 1799.

NOY, WILLIAM, born at St. Buryan, Cornwall, in 1577; from Exeter College, Oxford, passed on to Lincoln's Inn. As a member of Parliament he at first attached himself to the 'Country Party,' but, being made attorney-general in 1631, went over to the Court, and is chiefly remembered as author of the tax called Ship-Money. He died in August 1634.

NOYES, GEORGE RAPALL, D.D., born at Newburyport, Mass., March 6, 1798; was educated at Harvard College; and entered the ministry of the Unitarian church. In 1840 he became professor of oriental languages and lecturer on biblical literature in Harvard. Died at Cambridge, Mass., in 1868.

NU'CHA, a fortified town in the Russian government of Baku (Transcaucasia), on the Kish-Tchai, which falls into the Alazan, a tributary of the Kur, 125 miles E.S.E. of Tiflis. N. consists of a Tartar town, with 2 large and more than 20 small mosques, and an Armenian town, the seat of an archbishop, with 3 churches. It has large manufactures of silk, and the surrounding district is covered with mulberry woods. Pop. (1870) 23,371, chiefly Mohammedans of the Shiite sect.

NU'DUM PAC'TUM is in law an agreement without Earnest or Consideration. *Nuda Pacta* are void in law.

NUGG'ET (a corruption of *Ingot*), a miner's term for a lump of native gold of any size. The largest masses, usually of very great purity and containing very little disseminated quartz, are found in the alluvium of auriferous districts. The names, places, and

year of discovery, and weights of several of the largest known nuggets are given below.

	Gross Weight. oz.	dwts.
'Welcome Stranger,' Dunolly, Victoria, 1869	2280	
'Welcome,' Ballarat, Victoria, 1858	2217	16
'Blanche Barkly,' Kingower, Victoria, 1857	1743	13
'Precious,' Berlin Diggings, Victoria, 1871	1621	
A N., Ballarat, Victoria, 1853	1619	
A N., Burrangdong, New South Wales, 1858	1286	
A N., near Bathurst, New South Wales, 1851	1272	
A mass found at Miask, Ural Mountains, 1842	1158	2
'Lady Hotham,' Ballarat, Victoria, 1854	1177	17
'Viscount Canterbury,' Berlin Diggings, Vict. 1870	1105	
'Viscountess Canterbury,' Berlin Diggings, Vict. 1870	884	10
'Kum Tow,' Berlin Diggings, Victoria, 1871	718	5

NULLIFICA'TION, a doctrine formerly held which insisted on the sovereign right of States to reject any law of Congress which they considered unconstitutional, and to secede from the Union if its enforcement were attempted. The leader of this party in the memorable controversy of 1832 was John C. Calhoun. The result of the Civil War (1861–65) has been to annihilate the doctrine, which now possesses only a historical interest.

NUR JEHÁN ('light of the world'), the celebrated wife of the Mogul Emperor Jehangir. She was born at Kandahar, of a noble Persian family, and was married by Akbar to a courtier, with the object of removing her from the sight of the young prince. But when Jehangir became emperor, the husband, who refused a divorce, was killed, and, after some years of genuine reluctance, N. J. was made empress in 1611. Her influence was unbounded; her name was placed on the coins, and by herself and her relations she conducted the whole administration. She died in 1646, having survived her second husband nineteen years.

NYACK, a town of Rockland Co., N. Y., on the Hudson River and the N. Y., West Shore & Buffalo and other railroads, 29 miles from New York City. It is surrounded by beautiful scenery and fine drives, and is a summer resort. Pop. 6000.

NYIREGYHA'ZA, a town in Hungary, in the comitat of Szabolcs, 32 miles N.N.E. of Debreczin by rail. It has large yearly fairs, and important manufactures of spirits, salpetre, soda, and oil. Pop. (1870) 21,896.

NYMPH, a term applied to the *chrysalis* or *pupa-stage* of insects. More frequently the term 'pupa' is employed to denote this stage, which in the perfect form of metamorphosis is marked by quiescence, the animal being enclosed in a pupa-case or cocoon.

O.

AK LEAF ROLLER (*Tortrix viridana*), a well-known species of moth belonging to the *Tortricidæ* or 'Leaf Rollers.' It is one of the most brightly-colored members of its family, and is of a prevailing brown hue, but the front wings are a bright green. It feeds on oak leaves, and does immense damage to these trees.

OBELISK (†) in printing, a mark of reference to a note. It was originally employed in Roman Catholic Church books to guide the priest where to make the sign of the cross.

OBERLIN COLLEGE was founded in 1833 at Oberlin, a village in Ohio, 35 miles S.S.W. of Cleveland. It was designed for the liberal education of both sexes, a special feature being that the students support themselves by manual labor. There are departments of theology (under Congregational control), of philosophy, the arts, literature and music, besides preparatory classical and English schools. The library contains 11,000 volumes. In 1875 the total income of O. C. was $20,603; the faculty consisted of a president, 12 professors, 3 principals, and 14 lecturers, and the number of students was 475.

OCC'LEVE, THOMAS, of whom little is known except through his writings, flourished about the beginning of the 15th c., living in Chester's Inn, Strand. He was a writer to the privy seal, and a very frigid but copious poet. A list of his poems, nearly all in MS., may be seen in Warton's *History of English Poetry*. His most successful attempt is a translation of *De Regimine Principum*, by the monk Egidius, in the prologue to which he gives us the only authentic portrait of Chaucer we possess.

OCELL'US, the name given to the rudimentary organs of sight found in lower animals (*e.g.* Jellyfishes, *Echinodermata*, etc.), and which are also found in Insects (in addition to compound eyes), in Arachnida, &c. In insects the O. in its simplest form consists of a modified group of pigment-cells derived from the skin-tissues. According to Newport, a typical O. consists of a 'convex, smooth, single cornea, beneath which is a spherical crystalline lens, resting upon the plano-convex surface of the expanded vitreous humor, the analogues of the transparent cones of the compound eyes.' Müller states that the function of the ocelli in insects is that of perceiving near objects; the compound eyes being used to perceive distant objects. In adult insects they usually number three. In lower animals the O. are simple masses of pigment, covered by a lens; they are adapted to receive impressions of light and darkness, but are useless for more perfect perception.

OCHI'NO, BERNARDI'NO, a noted Italian reformer, born at Siena in 1487, passed in 1525 from the Franciscan to the newly-founded and more rigorous Capuchin order, of which he was chosen general in 1538 and again in 1541. For forty years he had enjoyed a prodigious reputation for his oratory, purity of life, and devotion to the Catholic Church, when, suddenly in the August of 1542, we find him at Florence denouncing that Church as Antichrist. Cited to Rome, he fled to Geneva in the company, says Spondanus, of a young laundress, whom he subsequently made his wife. It is certain at least that he had four children, one of whom was married in 1562. After three years' stay at Geneva, O. visited Basel, Augsburg, and Strassburg, from the last place proceeding to England (1547), on the invitation of Cranmer, who made him a prebendary of Canterbury and Italian preacher at London. On Mary's accession (1553) he returned to Switzerland and held the post of pastor to an Italian church at Zürich from 1555 to 1563, when his *Dialogi XXX.*, containing an approval of polygamy, gave offence to Beza, who calls O. 'a most impure hypocrite, the concealed favorer of Arianism, and a mocker of all Christian doctrines.' Thenceforth O. was hunted like a hare by his co-religionists from Basel to Mühlhausen, and from Nürnberg to Frankfurt, dying at last of the plague at Schlakow, in Moravia, in 1564. He was author of various treatises, both Catholic and Protestant, a list of which is given by J. Voigt in his *Catalogus Librorum Rariorum* (Hamb. 1732). See Karl Benrath's *B. O. of Siena* (Eng. trans. Lond. 1877).

OCHTERLONY, SIR DAVID, a distinguished Indian officer of Scotch extraction, was born at Boston, Mass., February 12, 1758, entered the service of the East India Company, and took part in the wars against Hyder Ali at the close of the last century. In 1804 he defended Delhi with a small force against a Mahratta army under Holkar. In the Goorkha campaign of 1814, his was the only division which did not meet with disaster, and the successful issue of the war in the following year is mainly to be attributed to his wisdom and bravery. He was subsequently employed in the political or diplomatic department. He died July 15, 1825, at Meerut, while Political Resident for Delhi and Central India. A column of mixed architecture was erected to his memory in the Maidan, or Park of Calcutta.

OCK'LEY, SIMON, born at Exeter, England, in 1678, entered Queen's College, Cambridge (1693), became vicar of Swavesey, in Cambridgeshire (1705), and Professor of Arabic in the University of Cambridge (1711), and died at Swavesey, Aug. 9. 1720. His *History of the Saracens* (1708–18) is commended by Gibbon, who speaks of the author as 'an original in every sense, who had opened his eyes;' but it brought little profit to O., the second volume being dated from Cambridge Castle, where he was imprisoned for debt. Other works by O. were *Introductio ad Linguas Orientales* (1706); *An Account of South-West Barbary* (1713); and translations from Italian and Arabic.

O'CLERY, MICHAEL, the greatest of the 'Four Masters,' was born near Ballyshannon, in Donegal, Ireland, about 1575, entered the Franciscan Order, and spent his life in collecting materials for elucidating the history of his native island. He was assisted by three other Irish antiquaries, Conary O'Clery and Cucogry O'Clery, and Forfeasa O'Mulconry. The result of their labors was the *Annala Rioghachta Eireann* ('Annals of the Kingdom of

Ireland'), commonly called *The Annals of the Four Masters*. The best edition is that by Dr. John O'Donovan (3 vols. Dub. 1845–51, 2d ed., 7 vols. 1856), which contains, besides the Irish text, an English translation and valuable notes. Another work of O., *The Martyrology of Donegal*, a *Calendar of the Saints of Ireland*, was also edited by Dr. O'Donovan (Dub. 1864). O. died at Louvain in 1643.

O'CONOR, CHARLES, LL.D., a distinguished American lawyer, born in New York, 1804, and admitted to practice law in 1824. He rapidly rose to distinction, and conducted many important cases. He acted with the Democratic party throughout his life. Died at Nantucket, Mass., May 12, 1884.

O'CURR'Y, EUGENE, an admirable Irish scholar, was born in County Clare about 1795. Along with Dr. O'Donovan he was employed to transcribe and translate the ancient Irish laws, was afterwards appointed Professor of Irish History and Archæology in the Catholic University of Dublin, and died 30th July 1862. His *Lectures on the Manuscript Materials of Ancient Irish History* (1861) are among the finest fruits of Celtic scholarship, and are indispensable to every student of the national history.

ODE'ON (Gr. *Odeion*), a Greek building in the style of a theater, but of a smaller size, used for rehearsal of odes and music. The first O. was erected by Pericles; the most splendid was that of Herodes Atticus.

O'DON'OVAN, JOHN, LL.D., the prince of Irish scholars, was the son of a small farmer, and was born at Atateemore, in the county of Kilkenny, Ireland, 9th July 1809. In 1830 he was appointed to an office in the historical department of the Ordnance Survey, Ireland, and was employed to examine Irish MSS. and gather local information, for the purpose of fixing the orthography of places on the ordnance maps. O. was also conjoined with O'Curry in the transcription and translation of the Brehon Laws. In 1849 he was appointed Professor of the Irish Language in Queen's College, Belfast. He died at Dublin, 9th December 1861. No Irish scholar has equalled O. in the amplitude and accuracy of his philological and historical knowledge of the national language; his topographical erudition was also immense. His most important works are his *Grammar of the Irish Language* (1845), and his edition of *The Annals of the Four Masters* (2d ed. 1856), besides which, however, he edited several very interesting volumes for the *Irish Archæological and Celtic Society*.

ODON'TOPHORE, the name given to the dental apparatus characteristic of the highest classes of Mollusca (*Pteropoda, Gasteropoda* and *Cephalopoda*), which are hence collectively named *Odontophora*, in contradistinction to the *Lamellibranchiata* in which no O. is developed. The O. is often named the 'tongue' of Mollusca. It consists of a *cartilaginous skeleton*, of a *radula* or *lingual ribbon* armed with flinty teeth, and which is gradually reproduced from behind as it is worn away by the friction in front; and of the *muscles*, by means of which the radula is moved like a chain-saw, and thus rasps down the food on which the animal subsists.

ŒCODOMA, a well-known genus of the ant, celebrated for their intelligent habits. The species are abundant in America. *Œ. Mexicana* is common on the Gulf coast of Mexico; *Œ. cephalotes* and *Œ. sexdentata* are found in large numbers in Brazil. The Œ. are popularly termed 'leaf-cutters.' They cut and transport leaves to great distances. They build very large nests, occupying a surface frequently of many square yards. A large tree may be stripped of its leaves in a single night by these insects, who are also known to tunnel beneath rivers and streams when occasion requires.

ŒDENBURG, one of the oldest and most beautiful towns in Hungary, 37 miles S.E. of Vienna by rail, is situated among the spurs of the Leitha mountains, on the Ilka, a branch of the Raab, and two miles W. of the Neusiedler See. It has three large churches, several monasteries and a theater. The town watch-tower is reckoned the highest in Hungary. Cloth, sugar, and preserved fruit are manufactured, and in the surrounding district, one of the finest wines of Hungary is made. The coal obtained from the neighborhood forms also an article of trade in the town, whose annual cattle markets are much resorted to. Pop. (1869) 21,108.

OE'SEL, an island of Russia, in the Baltic, forming part of the government of Livonia, and stretching across the entrance of the Bay of Riga. It is 45 miles long with an average breadth of 25 miles. Area 1200 sq. miles; pop. 46,000. The soil is rocky; but in some places grain is raised and good pasture land obtained. Seal fisheries are also carried on. The only town is Arensburg (3378) on the S.E. coast. O. anciently belonged to the Danes, by whom it was ceded to Sweden in 1645. In 1721 it finally came into the possession of Russia along with Livonia.

OFF'A, KING OF MERCIA, began to reign about 757 A.D. He immediately set himself to deal with the troublesome Welsh on his western border, beating them back from Hereford, and forcing the King of Powys from his capital which changed its name from Pengwern to Scrobbesbyryg ('the town in the scrub;' mod. Shrewsbury). This position he maintained by planting settlements of English in the basin of the Severn. He likewise asserted his lordship over Kent and Wessex, and raised Mercia to a position of such importance as to incur the serious jealousy of Karl the Great, by whose intrigues, when O. died in 795, it was speedily reduced to insignificance. O. was a skillful soldier and a wise king, as the code of Mercian laws which bears his name testifies; but tradition lays to his charge some acts of revolting cruelty. See Green's *History of the English People* (new and enlarged ed. 1877).

Offa's Dike was a ditch and rampart extending from the mouth of the Dee to that of the Severn, built by Offa, King of Mercia, for the purpose of confining the marauding Welsh within their own country.

O'GLETHORPE, GENERAL JAMES EDWARD, a distinguished English soldier, was born at London, 22d December 1696. He entered the army in 1710, and served some time under Prince Eugene and Marlborough. In 1722 he represented Haslemere in Parliament, but having obtained a charter for the foundation of Georgia, he sailed for America in 1733. Two years after he revisited England, but returned in 1735 with John and Charles Wesley to Savannah, which he had founded two years previously. From 1737 to 1742 he commanded in Carolina and Georgia a regiment which he had brought over from Britain. Having returned to England in 1743, he served as major-general against the Pretender in 1745. In 1765 he became general and retired upon half-pay. O. died at Cranham Hall, Essex, 30th June 1785. See his *Life*, by Robert Wright (1867).

OHIO WESLEYAN UNIVERSITY, at Delaware, in the State of Ohio, was founded in 1843. Besides the president, there is a staff of 8 professors, 2 tutors, and a principal of the preparatory department. The University possesses a well-furnished laboratory, the Prescott collection of specimens in natural history, and the Mann cabinet of geological specimens.

OIL BEETLE, a name given to beetles of the genus *Melöe*, and specially to the *M. violaceus*, a common British species, which has the power of exuding a yellowish fluid of oily matter from between the joints of its legs. The color of the beetle is a dull indigo or metallic blue.

OLD'HAM, JOHN, an English poet, born 9th August 1653, was the son of a nonconformist minister at Shipton, in Gloucester. He studied at St. Edmund Hall, Oxford, where he took his degree in 1674. While an usher in a school at Croydon, his gift of verse was accidentally discovered by the Earls of Rochester and Dorset and Sir Charles Sedley. After a short time spent in tutoring, O. proceeded to London, and found a patron in the Earl of Kingston, but was prematurely carried off by small-pox, 9th December 1683. O. had a fine and strong wit, and might have won fame had he lived. His chief work is a series of *Satyrs upon the Jesuits*, in which he imitates Horace and Persius with considerable success.

OLIVENZA, a town of Spain, province of Badajoz, 10 miles S.S.W. of that city, on a small tributary of the Guadiana. It is strongly fortified, has manufactures of oil, cloth, and pottery, and carries on a trade in corn and wine. Pop. 10,000.

OLLIV'IER, EMILE, a French minister not likely to be forgotten, was born at Marseille, 2d July 1825, studied law, and passed advocate at Paris in 1847. At the Revolution of 1848, the Republican Government sent him to the Bouches du Rhône as *Commissaire général*, and soon after he was made préfet of Haute-Marne. Returning to Paris in 1849 he resumed his position at the bar, and rapidly attained distinction as an eloquent pleader. In 1857 he was elected one of the deputies for Paris against a Government candidate, and in the Legislative body became the nucleus of a Liberal opposition which, though very small in point of numbers, was composed of men of brilliant talents, and gave the Emperor much trouble. He took a prominet part in the discussions (1858) on the *Loi sur la Sûreté Générale*, the Franco-Italian War (1859), the liberty of the press (1860), &c. He was more than once 'suspended' professionally for his bold and incisive speech. Yet soon after 1863 he began to show a leaning towards the Imperialist policy, which increased every session, until finally on the 2d of January 1870 he became Minister of Justice and Religion, and nominally, but only nominally, head of the Cabinet. In July 1870 he pronounced passionately for war with Prussia. The 'light heart' with which O. went into the fatal conflict was no doubt heavy enough before the 10th of August, when he and his colleagues were overthrown, and General Montauban, Comte de Palikao, was charged by the Emperor to form a new ministry.

OLMSTED, DENISON, LL.D., an American Scientist, born at East Hartford, Conn., June 18, 1791, and educated at Yale College. From 1817 to 1825, he was pofessor of chemistry in North Carolina University, and from that time until his death was one of the faculty of Yale, first as professor of mathematics and af-

terwards of natural philosophy and astronomy. O. is the author of several valuable scientific works, the best known of which are *School Astronomy*, and *Compendium of Astronomy*. Died at New Haven, Conn., in 1859.

OLOT, a town of Spain, province of Gerona, Catalonia, on the Fluvia, about 12½ miles from the French frontier. Cotton-spinning and weaving, with manufactures of silks, woollens, hardware, and soap, are carried on. Pop. 10,000.

OLYMPIA, a rapidly growing city of Washington Territory, on Puget Sound. It was first settled in 1846, and now has schools, churches, papers, a fine library, and several factories. It has a population of 1600.

OMAHA INDIANS, a North American tribe, now numbering a little less than a thousand, and occupying a reservation in Nebraska. They are honest, industrious, and thrifty.

ONDERDONK, Henry Ustick, M.D., LL.D., an American bishop of the Episcopal church, born at New York in 1789, and graduated from Columbia College in 1805. For several years he pursued the science of medicine, but in 1815 entered the ministry of the Episcopal church. In 1827, he became assistant bishop of Pennsylvania, and on the death of Bishop White, became his successor. In 1844 he was suspended from office for immorality, but was restored in 1856. Died at Philadelphia, Pa., Dec. 6, 1858.

ONEGLIA, a town of Italy, province of Porto Maurizio, on the sea-coast, midway between Genoa and Nice. It is beautifully situated, has a good harbor, constructed in 1825, and receiving yearly some 100,000 tons of shipping. O. is the birthplace of Andrea Doria. Pop. 8047.

ONEIDAS, a tribe of North American Indians, located in Central New York, and one of the Five Nations. They have become civilized and maintain schools and churches.

ONION-FLY (*Anthosmyia ceparum*), a species of fly belonging to the *Muscidæ*, and noted for the habits of its larvæ in attacking the onion. The larvæ cause the affected plants to turn yellow and to die. The young flies become pupæ in two weeks, undergo their transformation in the root, and a fortnight later appear as perfect flies.

OPERA-BOUFFE, an exaggerated form of opera, is a farcical comedy usually in three or more acts, enriched by numerous sprightly airs and rattling choruses, and frequently enlivened by dances. Eccentric situations, ridiculous characters, bizarre costumes, and burlesque subjects are features of such pieces, while the music is often of a mock-heroic style designed to caricature that of the regular opera. Offenbach may be said to have created this species of entertainment, which has become almost as popular in England and America as in France. His most successful imitators and rivals are Lecocq, Hervé, and Johann Strauss.

ORCHARDSON, William Quiller, R. A., was born at Edinburgh, Scotland, in 1835, studied at the Academy there, and, after having gained a reputation as a painter of popular figure subjects, proceeded to London in 1863. His best known works are 'An Old English Song,' 'Flowers of the Forest,' 'Hamlet and Ophelia,' 'The Challenger,' 'Christopher Sly,' 'Day Dreams,' 'Toilers of the Sea,' 'A Hundred Years Ago,' 'On the Grand Canal, Venice' (1871), 'The Casus Belli' (1872), 'The Protector and Cinderella' (1873), 'Hamlet and the King,' and 'Ophelia' (1874), 'Too Good to be True,' and 'Moonlight on the Lagoons' (1875). O. was elected an A.R.A. in December 1877.

ORCHI'TIS, or, INFLAMMA'TION OF THE TES'TICLES, appears first in the interlubular connective tissue, but afterwards the tubuli themselves become loaded with lymph. O. may be caused by a blow, by metastasis in mumps, gonorrhœa, syphilis, &c. The *acute* form commences with rigors, sickening pain in the back and loins, as also in the testicles, heat and redness of the scrotum, swelling and tenderness of the epididymis, and distension of the tunica vaginalis. The treatment consists of rest in bed with the part supported, warm cataplasms, and leeches followed by warm bathing. Careful strapping of the organ is also beneficial. *Chronic* O. consists in a knotty enlargement of the various lobes of the gland, caused by infiltration of lymph into their connective tissue. It is best treated by keeping the patient in bed, and administering calomel and opium till the gums are slightly tender. This treatment should be followed by inunction of mercurial ointment into the scrotum, and the administration of iodide of potassium internally. *Scrofulous* O. occurs in persons of the strumous diathesis, and consists in the deposit of tubercle in and around the tubular structure, as is usually accompanied with enlargement of the vas deferens. The tubercles generally soften and terminate in the formation of abscess. The constitutional treatment is hygienic and dietetic, and the local treatment is that common to suppurating sores. Phosphorized cod-liver oil should be given.

ORD, Edward O. C., an American general, born at Cumberland, Md., Oct. 19, 1818, and graduated from West Point in 1839. He took an active part in the civil war, and was severely wounded at a battle on the Hatchie, Oct. 5, 1862. At the close of the war he held the rank of major-general of volunteers. In 1866 he was made brigadier-general in the regular army. Died at Havana, July 22, 1883.

ORDERS, RELIGIOUS, the societies of men or of women in the Catholic Church who live under a common rule and superiors, and are bound together by the three monastic vows of chastity, poverty, and obedience. The *Gerarchia Cattolica*, or the official catalogue of the Catholic Hierarchy with the Religious Orders, yearly issued from the Vatican, classes these Orders as follows:

I. Regular Canons:—The Lateran Canons of the Most Holy Saviour; the Premonstrateusians; the Canons of the Holy Cross.

II. Regular Clerics:—The Theatines; The Barnabites; The Order of Somascha; The Company of Jesus; The Minor Clerics; The Servants of the Sick; The Clerics of the Mother of God; The Piarists; The Passionists; The Redemptorists; The Fathers of the M. H. Hearts of Jesus and Mary.

III. Ecclesiastical Congregations:—The Fathers of the Christian Doctrine; The Fathers of the Mission (*Lazarists* or *Vincentians*); The Pious Workers; The Fathers of the Holy Ghost and of the Immaculate Heart of Mary; The Fathers of the Most Precious Blood; The Oblates of Mary Immaculate; The Institute of Charity (Rosminians); The Company of Mary (Marists); The Fathers of the Holy Cross; The Fathers of the Resurrection; The Salesian Fathers; The Society of Foreign Missions; The Brothers of the Christian Schools; The Brothers of Our Lady of Mercy. To these must be added the Christian Brothers (Irish), recognized and approved as a Congregation by the Holy See.

IV. Monks:—The Basilians; the Benedictines, comprising nine different Congregations, namely: 1. the Italian Congregation of Monte Cassino; 2. the Congregation of Monte Cassino of the Primitive Observance; 3. the Congregation of Hungary; 4. the Congregation of France; 5. the Congregation of Switzerland; 6. the Congregation of England; 7. the Congregation of North America; 8. the Congregation of Bavaria; 9. the Congregation of Brazil. The Camaldolese Congregation; the Camaldolese Hermits; the Reformed Hermits of Monte Corona; the Vallombrosians; the Cistercians; the Reformed Cistercians (the Trappists of La Grande Trappe); the Trappists of the De Rance Reform; the Congregation of Monte Vergine; the Silvestrines; the Olivetans; the Carthusians; the Antonians (or Chaldean Congregation of St. Hormisdas); the Maronites of the Congregation of Aleppo; the Maronites of the Congregation of Baladita; the Maronites of the Congregation of St. Isaias; the Armenians of Mount Libanon; the Armenian Benedictines (or Melchitarists of Venice); the Benedictine Armenians (or Melchitarists of Vienna); three congregations of Basilian Monks—the Melchite Greeks of St. Saviour, the Melchite Greeks of Aleppo, and these of the Soarita Baladita Congregation.

V. Mendicant Orders:—The Dominicans; the Franciscans (comprising: the Minors of the Observance; the Reformed Observantines; the Minors Recollects and Alcantarines; the Conventuals; the Capuchins; the Third Order of St. Francis living in Community); the Augustinians (comprising: the Hermits of St. Augustine; the Discalced Hermits of St. Augustine); the Carmelites (comprising: the Carmelites of the Primitive Observance; the Reformed Discalced Carmelites); the Servites or Servants of Mary; the Minims; the Order of Mercy for the Redemption of Captives; the Trinitarians (primitive); the Reformed Discalced Trinitarians; the Hieronymites or Order of St. Jerome; the Hospitalers of St. John of God; the Order of Penance (*Scalzetti*).

If we take up the history of Asceticism (Gr. *ἀσκέω*, *ἄσκητής*, exercise, discipline) in the Christian Church, we find that from the apostolic age the followers of Christ strove to imitate both Him and His precursor, the Baptist, in the endeavor either to retire into solitude for the purpose of meditation, prayer, and penitential practices, or to lead in the world a life of rigorous self-discipline, abnegation, and purity. The Apostolical Constitutions mention these Ascetæ as an intermediate class between the clergy and the laity. In 230 was born in the Thebais—the now half-barren wilderness around Egyptian Thebes—St. Paul the Hermit, who, at the age of 22, and during the persecution of Decius, fled into the solitudes near his native place, and lived a solitary life till his 90th year, when he was visited by St. Antony, the founder of monasticism in the East, and prepared by him for death. The early church, like that of later times, was slow to approve of a life of absolute solitude. Indeed among the men most experienced in asceticism, none were permitted to lead the life of a hermit, but such as were of approved constancy in virtue; and even then they were only permitted to live for a time thus separated from intercourse with their brethren. St. Anthony, who was born in 250 and died in 356, led for some time the life of a

hermit; but as a number of disciples gathered round him, eager to profit by his examples and teaching, he constructed cells for them in the neighborhood of his own. This was the first instance of what is known in the East as a *laura* or collection of hermit's cells round a church destined for common prayer and praise. From this there was only a step to the cœnobitic (Gr. κοινος, common, and βιος, life) life or community life.

This form was introduced among the Solitaries of the Thebais in 315, by St. Pachromius. St. Hilarion, a disciple of St. Antony, was the first to introduce this common or monastic life into Palestine. It spread all through Syria and Asia Minor; was introduced into Italy by St. Athanasius, during his exile there; was fostered in Milan by St. Ambrose, from whom St. Martin learned its rules; St. Martin, in his turn, establishing in Gaul, along the banks of the Loire, the monasteries of Marmontiers and Ligugé. St. Augustine, while in Milan, and immediately after his baptism, withdrew for a time into a monastery founded in the suburbs of the city by St. Simplician, who afterward succeeded St. Ambrose in the episcopacy. On Augustine's return to Africa, he led, even after he became bishop of Hippo, a semi-monastic life with his priests. St. Patrick, who had studied at Marmontiers and Lerins, then the most famous monastery and school of the West, took the monastic form with him to Ireland, and encouraged bishops and clergy, in every one of the numerous churches he founded all over the island, to lead a community life. It is certain that within the half-century following St. Patrick's death (493), Ireland was blessed with numbers of these monastic houses, all of them schools, and many of them most famous schools. Of the literary works produced in the monastic schools of Ireland during that half-century those which have survived, such as *The Book of Kells*, *The Book of Durrow*, &c., are incredibly beautiful monuments of the illuminator's skill. Both of these books are from the hand of St. Columbkille, who, as his historian relates, left upward of 300 such books, written and illuminated by himself. It is a matter of well-known history that Columbkille and his disciples spread monasticism and learning from Iona and Lindisfarn through England and Scotland and even as far as Iceland; that, later, St. Columbanus and his disciples were the apostles of Gaul, of Switzerland, southern Germany, and a part of northern Italy. There is not a county of England or Scotland that has not preserved the name of some Irish saint or scholar, who was, in these remote ages, the light of the land and the guide and benefactor of the people. But in the seventh Century the Rule or form of community life inaugurated by St. Benedict, supplanted both that of St. Martin and St. Columbanus. It spread all over Western Europe. Within the Benedictine monasteries themselves very important reforms sprang up in the 10th and 11th centuries, and were called the Orders of Cluny, Camaldoli, Chartreuse, and Citeaux. In the thirteenth century arose the Dominicans, Franciscans, Servites, Augustinians, and Carmelites; in the sixteenth were founded the orders of Regular Clerks, Theatines, Barnabites, Jesuits, &c. But from a very early period, at least from the eighth century, appeared among the parochial or secular clergy, the reform known in history as that of the Regular Canons.

The first person who is acknowledged to have originated it is Chrodegang, Bishop of Metz, who, anxious to promote among his priests a mode of life more conducive to edification and effective labor, gave them a rule (Canon, Gr. κανων) and induced those, at least, of his Cathedral Church to set the example by living together under the same roof, and by renouncing all personal property. The chanting in common of the Divine Office, which had been customary but subject to much irregularity, now became an obligation, to the great delight of the people. Other bishops hastened to effect the same reform in their respective Cathedral Churches, while other considerable churches in each diocese conformed to the discipline of the Cathedrals. Provisions were made by the bishops, princes, or noble personages for the support of the Chapters or Colleges of Canons thus established, relieving these from all anxiety about the morrow. Still these being ages of rude violence and lawless manners among the half-civilized Franks, Burgundians, Saxons, and Goths, the fervor with which this reform began soon cooled down.

In 816 a council of the Bishops of the Frankish Empire, assembled at Aix-la-Chapelle, drew up a rule for the Canons; but as this did not enjoin a vow of poverty, it effected little good. In the councils held at Rome in 1059 and 1063, a vow of poverty was added to the Rule of Aix-la-Chapelle. Nevertheless, the community life thus imposed on Chapters lacked many of the bonds of a strong monastic discipline. Only a minority of them faithfully observed the Rule, which now came to be called the Rule of St. Augustine, because the mode of common life it enjoined resembled that described in Letter cix. of the great African bishop. On this mode of life was moulded the semi-monastic communities implanted in Ireland and Great Britain, and which soon framed regulations of excessive severity, such as those enjoined by St. Columbanus.

The Regular or Augustinian Canons, who thus came into prominence in the eleventh century, became very popular both in Great Britain and in Ireland. Indeed it is a question whether in the latter they were not the natural outgrowth or development of the institutions bequeathed by St. Patrick, his associates, and immediate successors. It is remarkable that in Ireland the Religious Orders never have been accused—at least among the Celtic populations—of the irregularities they were accused of in England and on the Continent. At any rate, in 1537 Ireland possessed 223 Augustinian convents of Canons Regular with 33 nunneries, while in England, at the Suppression, the Order counted 203 houses. They had thus gradually developed into a well organized and perfectly disciplined monastic body.

The Augustinian or Augustine Canons claim an origin which dates from the Apostolic age. But the claim is not clearly established. The Hermits of St. Augustine, who advance similar pretentions to antiquity, existed as separate communities in the beginning of the thirteenth century. They were united into one body in 1265 by Alexander IV. They belong to the class called Mendicant Orders or Friars. A book published in Dublin in 1758, entitled 'Historical Collections,' &c., enumerates 26 houses of Austin-Friars in Ireland, whose Priors then existed and claimed precedence by order or antiquity; but the author states, on the authority of Father Lublin (*Orbis Augustinianus*) that before the Reformation this Order had 61 convents in Ireland.—With regard to the difference between the various groups of Religious Orders, as given in the *Gerarchia Cattolica*, it may be stated thus. Hermits and Monks aimed by their institute and mode of life at seclusion, self-discipline, and personal sanctification. The Canons-Regular were, primarily, priests in the active duties of the ministry, who, both for edification, the effective discharge of their duties, and their own advancement in perfection, adopted a common rule and a life of poverty. The Order of Piémontié served as a model to St. Dominick in the first stage of his order. The Franciscans and Dominicans aimed at laboring among the people, first of all: so that their life was to be one of external ministration, prepared and sanctified by contemplation, prayer, and study, as well as by the most rigorous poverty. The other Friars or Mendicant Orders, who followed in their path—Carmelites, Servites, &c.—only emulated their example and shared their labors.

The Regular Clerks—Theatines, Jesuits, and others above enumerated, while being trained for active labors among the people, are also careful to mould the intellectual and spiritual man by long study, self-discipline, and prayer. The Jesuits, in particular, aim at combining in the most perfect manner the active with the contemplative life. The long years spent by their young men in study, in teaching, in the most powerful ascetic discipline fit them in a peculiar manner for facing every species of active duty. The Ecclesiastical Congregations are all destined for the active life; but they are not subjected to the same rigorous monastic forms, although the Teaching Orders among them obey an exceedingly severe rule, and subject their members to a strong and most careful training.

Of Religious Orders of Women the 'Gerarchia Cattolica' makes no mention. In the first period of Monachism, women were encouraged to emulate men in their zeal for self-renouncement and ascetic generosity. St. Jerome bestowed no little care in cultivating this tendency among the patrician ladies of Rome; and when the great Scholar went to pursue his biblical studies in Palestine, and to seek the means and motives of greater spiritual perfection near Bethlehem, he was followed thither by St. Paula and her daughter St. Eustochium, who founded a convent for women near the scene of Christ's Nativity, where many of their Roman friends joined them. So was it with St. Ambrose in Milan, where his sister, Marcellina founded a house which she governed. In Ireland St. Patrick gave the monastic habit to St. Brigid who, in her turn, sent swarms from her hive at Kildare to various parts of the island, she and her sisters everywhere doing for the persons and children of their own sex, what the numerous houses of men were doing for the people in general and for the education of youth above all. The perpetual fire which Brigid kindled and fed so carefully near the oak groves of the upland on which her monastery arose, was only one form of the charity she and her sisters exercised toward the bodily and spiritual needs of the surrounding populations. St. Scholastica, the sister of the great St. Benedict, followed her heroic brother into the solitudes of the Apennines, and built a house for nuns not far from the monastery which Benedict had made the nursery of the religious life and spirit for all the west of Continental Europe. Thus monastic homes for both sexes flourished all through the middle ages. St. Francis of Assisi gave the religious habit to St. Clare, his towns-woman in the Church of St. Mary of the Angels, and Clare and her nuns vied in heroic poverty and heroic sanctity with Francis and his apostolic band. Even so St. Dominic in Bologna gave the veil to the noble Diana d'Andalò, whose brother afterward was the founder of the Knights of the Glorious Virgin Mary. And Diana's example was

followed in Italy, and all over Europe by noble women, who claimed St. Dominic as their spiritual parent. The Cistercians and the Augustinians beheld countless monasteries of women who acknowledged their respective rules. After the Reformation began to assail not only the center of authority and unity in the church, but the existence of the monastic orders, and the very principles of monastic life, there arose among the Religious of both sexes a tendency toward the active rather than the contemplative life, or, rather, a tendency to combine activity with contemplation, in order to meet the exigencies of their age and country, and to combat error and the prevalent corruption of morals by a greater devotion to education and the manifold labors of charity. Then sprang up in Italy the first great female order devoted to education, the Ursulines, whose houses were soon multiplied all over Europe, and emulated the Jesuits their contemporaries by sending their missionaries to the West Indies and to Canada. Since then, and especially since the French Revolution first overturned in Continental Europe all monastic institutions and began that propaganda of scepticism and incredulity, which has ruined religion and shaken all the foundations of society in ancient Catholic lands, the instinct of the Christian people and of the pastors of the Church has been to favor in preference the orders of both men and women who are most fitted to dispense instruction and have a care of the orphan, the sick, and the needy poor. St. Francis of Sales, in founding the Order of the Visitation, gave them a rule which enjoined the cloister as well as the care of schools. This was in imitation of the change made in the Ursuline Institute by St. Charles Borromeo, who made a cloistered order of Angela Merici's sisterhood.

But these in modern Italy, and after the recent war on religious orders and religion itself, have reverted to the Sainted Foundress's original idea: alongside of the few cloistered houses tolerated by the government have sprung up an army of zealous women, wearing a secular dress, living in their own families, and combining their best efforts to educate little children, to prevent young girls from being led astray, to minister to the sick, and practice charity in all its forms. St. Vincent de Paul had charity principally if not exclusively in view when he founded his great order of Sisters of Charity, whose fame is one of the household glories of all Catholics. Elizabeth Bayley Seton aimed at bestowing on the Church of the United States a similar benefit in founding her Sisterhood, who combine the duties of hospitalers with that of educators. So was it earlier with the foundress of the Grey Nuns of Montreal. Earlier still, in the first half of the 17th century, the Venerable Marguerite Bourgeoys endowed Canada with the Congregation of Notre Dame, whose primary object was to take charge of parochial schools. They have been blessed and multiplied exceedingly, and have offshoots in every part of the American continent. In the France of the nineteenth century nothing in all history has been more marvelous than the multiplication of Religious Orders of Women devoted to the education of all classes and the discharge of all the duties of Christian Charity—nothing, save what has taken place in poverty-stricken Ireland, and in that Greater Ireland which forms so large a portion of the Church in the United States. In France the name of these new and admirable Sisterhoods is 'legion.'

A few only can be pointed out: the Ladies of the Sacred Heart, with their twin-sisters, the Congregation of Notre Dame de Namur; the Sisters of Charity of St. Paul, who, besides hospital duty, take charge of poor schools, and thus supplement the Vincentian Sisters; the Sisters of St. Joseph, devoted to education and charity; the Sisters of Providence; the Sisters of the Good Shepherd, who add to their sublime duties of charity that of educating, wherever they are called on to do so; and a host of other societies of noble women. In Ireland Nano Nagle in the last half of the eighteenth century braved the Penal Laws and founded the Irish Ursulines at Cork and the Sisters of the Presentation. Mary Aikenhead, born a few years after Nano Nagle's death in the same city, founded in Dublin the Irish Sisters of Charity, whose rule is adapted from that of St. Ignatius, and whose manifold services in the twofold sphere of education and charity are the admiration of all who see them at work. The gentle and saintly Archbishop Murray, who fostered their growth, also encouraged the foundation of the Sisters of Loretto (Institute of the Blessed Virgin Mary) by Frances Ball, and that of the Sisters of Mercy by Catharine McAuley, the former devoted exclusively to education, the latter also taking charge of hospitals and orphanages.

There is something in the soil of Ireland, fertilized by the blood of so many generations of martyrs, which favors the growth of heroic devotion, something in the atmosphere of the Irish home, which prompts to the utmost generosity in the divine service. The Irish Catholics give their best to God, and contribute nobly to support those institutions. In England and the United States, Sisterhoods of all kinds are founded with the same liberal spirit. Charity has its armies of apostles; but Education—the great hope of the Church in her struggle with unbelief and licentiousness—has also its hosts of heroic women, the true parents of the future age. Only a few of the other Sisterhoods can be mentioned here: the Sisters of the Holy Child Jesus, an admirable order founded in England by an American lady; the Little Sisters of the Poor, God's visible providence to the aged poor—and a Sisterhood specially devoted to the education of colored children in the United States. Then, in modern times, the Sisterhoods attached to the great Mendicant Orders, Franciscans, Dominicans, Carmelites, &c., as well as the Redemptoristines, do their share in the divine works of education and charity.

ORI'ON, one of the most brilliant of constellations. It lies in the southern hemisphere, but is visible in northern latitudes during the winter months as a striking object above the southern horizon. Of its seven principal stars, two (Rigel and Betelgense) are of the first magnitude, and three of the others lie in a straight line forming the so-called belt. A little below the belt, forming part of the sword-sheath, is an irresolvable nebula, one of the few visible to the naked eye, and one of the most fantastic in shape.

ORME, Robert, the military historian of British India, was born in Travancore, in S. India, 1728. Educated at Harrow, he returned to India as a writer in the East India Company's service in 1744. The first volume of his history was published in 1763, and he was forthwith appointed historiographer to the Company, with a salary of £400 a year. The work was completed in 1778, and covers 'the military transactions of the British nation in Indostan' from 1745 to 1763. O. died at Ealing, Middlesex, 13th January 1801, leaving a valuable collection of MS. and other historical materials to the East India Company, which have never yet been properly catalogued. His literary style was scarcely equal to his industry; but the ornate manner in which he treated an important period of history has stimulated the patriotic spirit of many other readers besides 'Colonel Newcome.' Lord Macaulay, in his well-known essays on Clive and Warren Hastings, has borrowed entire passages from him with but little modification.

OR'MIN, ORR'MIN, or ORM, an author whose work, the *Ormulum*, named after himself, is one of the most valuable specimens of 'Transition English.' He was a canon regular of the order of St. Augustine, and wrote for the spiritual edification of his countrymen. His plan was to give a paraphrastic version of the Gospel for every day in the year, adding to each portion an exposition, in which, as a rule, he draws largely on Augustine, Ælfric, and Bede. Of this complete system of homilies we have nothing now beyond the text of the thirty-second. The metre of the *Ormulum* consists of lines of fifteen syllables pointed at the end of the eighth—one of the first English imitations of a Latin rhythm known. The handwriting, ink, and materials of the M.S. (a vellum folio now in the Bodleian Library, supposed to be in O.'s own hand), lead to the supposition that it was composed in the 13th c. The language is East Midland, with certain peculiarities of spelling, such as the doubling of consonants. Mr. Kingston Oliphant says of O.: 'He is the last of our English writers who can be said to have drunk from the undefiled Teutonic well; no later writers ever use so many prepositional compounds, and on this account we ought perhaps to fix upon an earlier year than 1200 for his date. In the course of his lengthy poem, he uses only four or five French words; his few Latin words are church phrases known in our land long before the Norman Conquest. On the other hand, he has scores of Scandinavian words, the result of the Norse settlement in our eastern shires 300 years before his day. His book is the most thoroughly Danish poem ever written in England that has come down to us; many of the words now in our months are found for the first time in his pages.' Dr. White edited the *Ormulum, with Notes and Glossary* (Oxford, 1852). See also Kingston Oliphant's *Sources of Standard English* (1873).

ORNITHODEL'PHIA ('bird-wombed'), the term given to the lowest division of the Mammalia, represented by the two genera *Ornithorhynchus* and *Echidna*. In these animals there exists a striking resemblance in the disposition of the female generative organs to that which obtains in birds. Thus the two *Fallopian tubes* or *oviducts*, instead of uniting, as in higher mammalia, to form a *uterus* or *womb*, remain separate and distinct throughout. These oviducts, moreover, open separately into a *cloaca* or common cavity, which receives the *rectum* or lower extremity of the intestine, and the *ureters*. A like disposition of parts exists in birds. Other characters of the O. are found in the fact that *marsupial bones* exist, as in *Marsupialia*. The bones of the shoulder also evince birdlike characters. The *coracoid bones* (which are mere processes of the shoulder-blade in other mammals) extend to the breast-bone, whilst a T-shaped bone (the *interclavicle*) supports the united collar-bones. The *cerebellum* or lesser brain is uncovered by the cerebrum. No teats exist on the mammary glands, which are situated posteriorly. The angle of the mandible lower jaw is not inflected, and there is no outer ear. The males have a kind of spur on the hinder feet, the use of this organ—which is perforated and connected with a gland—being unknown. The brain-hemispheres are smooth in *Ornithorhynchus*. The O. are

confined in their distribution to Australia and Tasmania. The higher divisions of the mammalia are the *Didelphia* and *Monodelphia*.

OROSZ'HAZA, a town of Hungary, county of Békés, and 31 miles N.E. of Szegedin by rail. It produces excellent wine, and has a large trade in cattle. Pop. (1869) 14,554.

ORU'RO (in full, San Felipe de Asturia de O.), capital of the province of Oruro, in the republic of Bolivia, S. America, on a plateau 12,442 feet above the level of the sea, and 207 miles N. by W. of Chuquisaca. Founded in 1590, it rose rapidly, its gold and silver mines being second only to those of Potosi, and about the end of the 17th c. it had 70,000 inhabitants, but it sank as rapidly as it had risen, when the mines had become worked out or less profitable, and now has a pop. of 7980.—The *province* of O. is about 21,600 sq. miles in extent, and has a pop. of 111,000. A considerable part of the surface is occupied with swamps and lakes, the largest of which is that of Aullagas (1075 sq. miles), which receives the river Desaguadero. Though the soil is fertile, agriculture is still in a very backward state.

ORYCTEROPUS, a genus of *Edentate* quadrupeds, represented by the *O. Capensis*, ground hog, or 'aard vark' of S. Africa. This animal somewhat resembles a clumsy pig in form. It has long ears; its body is covered with coarse hair, and it attains a length of 5 feet, inclusive of its tail. The toes are provided with very strong claws, by means of which the O. burrows in the earth. The O. is active at night. It subsists, like its neighbor the S. American Ant-eater, on ants, and other insects, which it captures by means of its long tongue and glutinous saliva. It has no incisor or canine teeth; the premolars number 14 above and 12 below, and there are 10 molars in each jaw.

OSAGE INDIANS, a branch of the once great family of the Sioux, are now settled in the Indian Territory and in Nebraska, S. of the river Plate, and N. of the Cherokees.

OS'BORN, Admiral Sherard, born April 25, 1822, entered the navy in 1837, and was present at the capture of Canton (1841), and of the Woodang Forts (1842). As commander of the *Pioneer* in the Franklin Discovery Expedition of 1849, he made a memorable sledge journey to the extreme western point of Prince of Wales' Land (1851); and as post-captain of the *Vesuvius* he led the advanced squadron in the Sea of Azof (1855), at the close of the Crimean war being made a C.B. and an officer of the Turkish Medjidie and French Legion of Honor. He served through the second Chinese war (1857), ascended the Yangtse as far as Hankow, 600 miles from its mouth (1858), and in 1862 accepted from the Chinese government the command of a squadron for the suppression of piracy. O. returned home (1864) to test the newly-turreted *Royal Sovereign*, was for some years managing agent of the Great Indian Peninsula Railway at Bombay, and at the time of his death (May 6, 1875) was serving on a committee for the Arctic Expedition of 1875. O. was author of *Stray Leaves from an Arctic Journal* (1852), *Quedah, or my Journal in Malayan Waters* (1857), *Japanese Fragment* (1860), &c.

OS'CANS (Lat. *Osci* or *Opsci*, Gr. *Opikoi*, connected by Mommsen with Lat. *opus*, 'work'), an ancient Italian race, occupying Campania, and closely connected if not identical with the Ausonians. Invaded from the N. by the Samnites in the 5th c. B.C., they became amalgamated with their conquerors, who borrowed at once the Oscan name and language. The latter, which stood in the same relation to Latin as French to Italian, continued a spoken dialect till the 1st c. A.D. Specimens of it, now rendered intelligible by the labors of Mommsen, are preserved to us in the *Graffiti* of Pompeii, in the legends of coins struck by the Confederates in the Social War, and in various inscriptions. The most famous Oscan inscriptions are the Bantine Tables, of thirty-eight lines, discovered at Oppido in 1793; the Cippus Abellanus, which till 1745 was employed as a doorstep at Avella; the Bronze Tablet of Agnone, discovered in 1848.

OSGOOD, Frances Sargent, born at Boston, Mass., in 1811, and, when 24 years of age, was married to S. S. Osgood. She edited several selections of poems, and was herself a graceful poetic writer. A collection of her poems was published in 1848. Died at Hingham, Mass., in 1850.

OSGOOD, Samuel, D.D., LL.D., born at Charlestown, Mass., in 1812, and graduated from Harvard, in 1832. He entered the ministry of the Unitarian Church, and was pastor of churches at Nashua, N. H., Providence, R. I., and New York, N. Y. In 1870 he entered the Episcopal Church, but never assumed charge of a parish. He published numerous works, among which the following may be noted: *American Leaves; Studies in Christian Biography; God with Men;* and *Mile Stones in our Life Journey*. He also wrote extensively for the various magazines. Died in 1880.

OSKALOOSA, a town of Mahaska Co., Ia., 62 miles from Des Moines and 100 from Burlington. It is extensively engaged in trade, coal-mining, manufacturing, stock-raising, and agriculture; and has fine railroad facilities. Pop. 6800.

OS'MAN PASHA, Ghazi, a distinguished Turkish general, is said to have been born at Tokat about 1832, and to have been educated at a school conducted by his brother, from which he was transferred to the military academy at Constantinople. He obtained a lieutenant's commission in 1853, and on the outbreak of the Crimean War was attached to the general staff at Shumla. After serving with distinction as major in the Cretan campaign, in 1867, he obtained rapid promotion to a colonelcy, and subsequently a generalship. He was commandant at Widdin during the Turco-Servian War in 1876, and for brilliant conduct at the battle of Saitschar was created a mushir or field-marshal. The declaration of war by Russia in April 1877 found him still at Widdin, whence he marched to Plevna immediately on the passage of the Danube, entering that town on 14th July. The enemy's vigorous attempts to oust him on the 24th and 31st of July were repulsed with terrible slaughter. From an open town he transformed Plevna into an entrenched camp, which for five months engaged a Russo-Rumanian army of more than 100,000 men, checked the general progress of the invaders, and cost them the lives or services of 50,000 gallant soldiers. In the desperate and unsuccessful assaults in the second week of September alone, their loss was estimated at 25,000 men. The Sultan conferred on O. in October 1877 the well-won title of Ghazi (Victorious). On General Todleben assuming the direction of the besieging forces he initiated an investment, and his cautious strategy succeeded where the brilliant onslaughts of Skobeloff had failed. Every hope of relief vanished, his stores exhausted, and his troops decimated by disease, O. made a grand but futile effort on the 11th of December to break through the circle of steel which encompassed him. He was himself wounded, and obliged to surrender with 40,000 troops. The Czar returned his sword to the heroic soldier, who has been treated as a prisoner with the greatest courtesy by his conquerors.

OSTRACODA, an order of the class *Crustacea*, represented by several genera of small organisms collectively named 'water-fleas.' To this group belongs the genus *Cypris*, found in fresh water; *Caudona*, in brackish streams; and the marine genera *Cythere* and *Cypridina*. The body is enclosed within a shell or *carapace*, which consists of two valves, united along the back by a flexible membrane. The valves are closed by the action of a special (*adductor*) muscle. The gills or branchiæ are attached to the hinder jaws. The O. are represented as fossils in rocks beginning with the Lower Silurian strata. They are known as fossils through the preservation of the valves of the shell.

OS'TU'NI (*Ostunium*), a town of S. Italy, province of Lecce, 22 miles W.N.W. of Brindisi by rail. It lies in a district rich in grain, vines, olives, and almonds, and has numerous churches and convents. Pop. (1874) 14,422.

OS'WALD, King of Northumbria, began to reign in 634 A.D., and restored to his subjects the Christian religion, which had been deserted for paganism by his predecessors Œric of Deira and Eanfrid of Bernicia. Cædwalla, the Welsh Prince, was slain by this king at Denisesburn (Dilston) after a long and bloody battle. Oswald was one of the mildest yet most capable kings of the Heptarchy, and along with Aidan, whom he made Bishop of Lindisfarne, sought so earnestly to cultivate the spiritual welfare of his people, that the ecclesiastical chroniclers never tire of detailing his acts of charity and his miracles. He died in battle against Penda, king of Mercia, in the thirty-eighth year of his age, 643 A.D. See Bede's *Hist. Eccl. Gent. Angl., Lib. III.*; Freeman's *History of the Norman Conquest;* and Green's *History of the English People* (new ed. 1877).

OTTUMWA, in Wapello Co., Ia., on the Des Moines River, 75 miles W. of the Mississippi. Four railroads connect it with the principal cities of the West. It has excellent water power, and is largely engaged in manufacturing. Pop. 11,500.

OTIS, James, an American patriot, born at West Barnstable, Mass., in 1725. He was noted for his strong support of the Colonial cause, and was the promoter of the Stamp-Act Congress, which met in New York. He was killed by lightning, at Andover, Mass., in 1783. He published numerous works relative to the difficulties between England and the Colonies.

OTOSCOPE, an instrument used by aural surgeons for examining the *membrana tympani*. In a very good light the membrane can be seen without a speculum; but a silver tube is usually necessary, the light of a lamp, with a reflector behind it, being thrown into the tube. In operative procedure a small mirror is placed on the forehead, in order to leave both hands free. An instrument sometimes called the O. consisting of an india-rubber tube about 18 inches long, is used by the surgeon to hear the air passing into the tympanum by the Eustachian tube, the one end of the india-rubber tube being placed in the ear of the patient and the other in the ear of the observer.

OTTAWA, a town of Franklin Co., Kansas, on the Marais des Cygnes River, and the Missouri Pacific and several other rail-

roads. It is the center of an extensive trade, and has flour mills, grain elevators, castor oil mills, railroad machine shops, &c. Pop. 5000.

OTTAWA, a town of Illinois, on the Illinois River, 80 miles W.S.W. of Chicago by rail, has large starch and glass industries, several fine hotels, stores, &c., and four newspapers, and is connected by canal with Plaines River and Lake Michigan. In a handsome park on the S. side of Illinois are great mineral springs. Pop. 10,000.

OTTENDORFER, Oswald, born in Moravia, in 1826, and in 1850 removed to New York City, where he established the *New Yorker Statts-Zeitung*, for many years the leading German paper in America. Died in 1884.

OTTO I., King of Greece from 1833–62, was the second son of King Ludwig of Bavaria, and was born at Salzburg, June 1, 1815. On the 13th February 1832 he was chosen by the Great Powers King of Greece. Being accepted by the Greeks, he arrived at Nauplia, then the capital, on the 30th January 1833, and on the 6th February made a solemn entrance into the town. Till the 1st July 1835 Greece was governed by a regency (under Armansperg, Maurer, and others), but even after O. himself took the government, German officials held the chief influence. In 1836 he married the Princess Amalie of Oldenburg, whose interference in the politics of the Greeks was disastrous. She was understood to be the instigator of that reactionary and autocratic policy that lasted till the revolution of September 1843 forced O. to grant a free constitution. Yet he would not fairly yield to constitutional government, but sought to secure an artificial majority in the Chamber by intrigues and bribery. His pro-Russian feeling during the Crimean war gained him some popular favor, which he soon lost, and at the beginning of 1862 O. appealed to Kanaris to form a ministry. But the attempt failed, as he would not accept Kanaris' terms, and in October of the same year an insurrection broke out at several places. On the 22d October O.'s deposition was proclaimed at Athens. He forthwith lodged his protest, and left for Bavaria. He died at Bamberg, 26th July 1867.

OTT'OKAR II., Przemysl, King of Bohemia 1253–78, son of King Wenceslaus III., was early chosen Duke of Austria, when the old ducal line had died out with Friedrich the Quarrelsome. At twenty-three he married Margaretha (then forty-six years old), sister of the latter and widow of Heinrich, son of the Emperor Friedrich II., but she was afterwards divorced by him. O. also gained possession of Steiermark, for which he had to fight with the Hungarians, whom he defeated at Marchfeld in 1260, and also of Carinthia and Carniola. Soon after his accession he undertook in 1254, in union with the Teutonic Knights, a crusade against the heathen Prussians, whom he subdued, and founded at Pregel a town which, in honor of the king, he named Königsberg. The imperial crown was offered to O., who refused it, but yet would not recognize the election of Rudolf, in consequence of which he had to yield Austria, Styria, Carinthia, and Carniola to Rudolf, and take Bohemia and Moravia as fiefs of him in 1276. When O. shortly after renewed the war, he fell, after a brave resistance, in a battle on the same plain where eighteen years before he had won a glorious victory, in the neighborhood of Vienna, August 26, 1278. See Lorenz, *Geschichte König O.'s II.* (Vien. 1866).

OT'WAY, CAPE, a bold headland, forming the S.W. extremity of the colony of Victoria, and the first land usually made by vessels bound to Port Phillip. It is situated in 38° 52′ S. lat., 143° 33′ E. long., and is crowned by a lighthouse.

O'VAR, a town of Portugal, province of Beira, at the mouth of a river of the same name, and on the lagoon of Ria d'Aveiro. It has a good trade and valuable fisheries. Pop. 10,374.

O'VEN BIRD (*Furnarius fuliginosus*), a species of Insessorial birds, so named from the peculiar shape of their nests, which are constructed in the form of a dome, the walls being fully an inch in thickness. The nest is formed of clay, grass, and vegetable fibres, packed so as to form a thick dense structure, which is usually placed in some exposed situation. These birds lay four eggs, and both sexes appear to assist in the formation of the nest. The plumage of these birds is of sombre color. They inhabit S. America.

OV'IDUCT, the name given to the canal leading from the ovary of animals to the *uterus*, or to the external surface of the body, and through which the eggs or *ova* are conveyed. In *Mammalia* the oviducts are named 'Fallopian tubes,' after the anatomist Fallopius, who first described them.

OVIPOS'ITOR, one of the appendages of the last abdominal segment of certain insects, used for the purpose of depositing the eggs in various situations. Other modifications of the terminal appendages form the 'sting' (*aculeus*) seen in bees, &c. The O. in all insects is formed on one and the same type. By the O. some insects (*e. g.*, gall-flies), slit open the bark of trees, and deposit their eggs therein, while others use the organ to penetrate into the tissues of animals for the same purpose.

OWEGO, in Tioga Co., N. Y., on the Owego River at its junction with the Susquehanna, 250 miles W. of New York. It is engaged in manufacturing and carries on an extensive lumber trade. Pop. 5526.

OWEN, Robert Dale, an American author, born at Glasgow, Scotland, Nov. 7, 1801, educated in Switzerland, and came to America, with his father, in 1823. In 1828 he, with Frances Wright, founded *The Free Inquirer*, a socialistic, irreligious paper. He was an active advocate of emancipation, and in 1863 was made chairman of the American Freedmen's Commission. Among his published works are the following: *Outlines of the System of Education at New Lanark* (1824), *Moral Physiology* (1831), *Hints on Public Architecture* (1849), *Footfalls on the Boundary of Another World* (1860), *The Wrong of Slavery and the Right of Freedom* (1864), *The Debatable Land between this World and the Next* (1872), and an autobiography in 1874. Died at Lake George, N.Y., June 24, 1877.

OWENSBORO, in Dairess Co., Ky., on the Ohio River, 40 miles above Evansville, Ind. It is connected by railroad with Nashville, Louisville, and other important places. It is an important steamboat landing, and is the principal shipping point for the Green-River country. The production of whiskey and tobacco is very large, there being nineteen distilleries and twenty-three tobacco factories in and around the city, which ranks as the largest tobacco and whiskey market in the West, and is one of the leading wood-working towns in the country. Pop. 11,500.

OZANAM, Antoine Frederic, a Frenchman of a singularly pure and earnest character, was the son of a physician, and was born at Milan, April 23, 1813. His father subsequently removed to Lyon, where O. was educated. In 1831 he published *Reflexions sur la Doctrine de Saint Simon*, went to Paris in the following year to study law, and was brought into relation with Chateaubriand, Ampère, Ballanche, Montalembert, and Lacordaire. Along with some other students, he founded (1833) a religious and charitable association which afterwards became the 'Society de Saint Vincent de Paul.' In 1839 appeared his *Dante et la Philosophie Catholique au XIIIe Siècle*, which is considered one of his finest works. After filling for a short time a chair of commercial law at Lyon, he was called at the close of 1840 to assist Fauriel at the Sorbonne in the chair of Foreign Literature, and was made professor in 1844. His career was a brilliant success. Gifted with a rare talent for exposition, both critical and poetic; rich in knowledge, and original in thought; of a sympathetic heart; winning in manner, and chaste in ethics, he drew crowds of admiring auditors, and inspired them for the time with something of his own exalted enthusiasm and religious faith.

Withal, he was a robust Liberal in politics, and never wavered in his hatred of despotism and his hope for democracy. Even the miserable Revolution of 1848 did not discourage him. He died of consumption at Marseille, September 8, 1853. No finer embodiment of the Christian character has appeared in modern France. Among his other works may be mentioned *Études Germaniques pour servir à l'Histoire des Francs* (Par. 1847–49); *Documents inédits pour servir à l'Histoire d'Italie depuis le VIIIe. jusqu'au XIIIe. Siècle* (Par. 1850); *Les Poëtes Francisicans en Italie au XIIIe. Siècle* (Par. 1852). His *Œuvres Complètes* were published at Paris (8 vols. 1855). See Montrond, *Fr. Ozanam. Tableau Historique et Biographique* (Lille, 1869), and Kathleen O'Meara, *Frédéric Ozanam, Professor of the Sorbonne; his Life and Works* (Edinb. 1877).

OZO'CERITE, or OZO'KERITE (Gr. *ozo*, 'I smell,' and *keros* 'wax') is a native mineral wax or paraffin found in sufficient abundance to be of commerical importance in Moldavia and Galicia. It is of a dark greenish brown color, sub-translucent, soft, and waxy, and can be kneaded in the hand. When purified it forms a hard paraffin, having a high melting point, which has been utilized in candle-making. O. is found in small nodular masses at Uphall in Linlithgowshire, and at Urpeth Colliery, near Newcastle-on-Tyne; but these deposits are of no commercial importance.

P.

PACINI, Giovanni, an Italian composer, son of Luigi P., the famous bass buffo-singer of Syracuse, was born 11th February 1796, studied at Rome, Bologna, and Venice, in the last of which cities he brought out the first of his 90 operas, *Annetta e Lucinda*, at the age of eighteen. For thirty years he was Director of the Conservatorio at Viareggio, near Lucca. Among his best operas are *Saffo*, *L'Ultima Giorno di Pompeia*, and *Medea*. He was deficient in originality, imitating alternately Rossini, Bellini, and Donizetti. P. died December 6, 1867, leaving an interesting book of *Memoirs*.

PACU'VIUS, Marcus, a Roman dramatist, the nephew of Ennius, was born at Brundusium about 220 B.C., lived at Rome, where he earned his bread as a painter and actor, and died at Tarentum, having nearly attained the age of ninety. His dramas, modeled on those of Sophocles and Euripides, but less slavishly than was the case with his predecessors, were held in high esteem by his contemporaries and by the later Romans. The fragments still extant have been collected by Ribbeck in his *Tragicorum Latinorum Reliquiæ* (Leips. 1852).

PADDLEFISH (*Spatularia* or *Polyodon Spatula*), a peculiar species of *Ganoid* fishes, belonging to the *Sturionidæ* or sturgeon family. The snout is long and flattened, while the body is smooth and destitute of the hard bony plates and scales so typical of other members of the sturgeon family. The P. inhabits several N. American rivers.

PADDOCK, Benjamin Henry, a Bishop of the Protestant Episcopal church in America; born in Connecticut, educated at Trinity College, Hartford; was rector of churches in New York City, Norwich, Conn., Detroit, Mich., and Brooklyn, N. Y., and in 1873 was made Bishop of Massachusetts.

PAER, Ferdinando, an Italian composer, was born at Parma, 1st June 1771. In his fifteenth year he produced the opera of *Circe* at Venice, where he completed his musical education. In 1801 he was appointed chapel-master to the Elector of Saxony at Dresden, where he composed several operas—*Leonora*, *Camilla*, *I Fuorusciti*, &c.—which were performed with brilliant success. After the battle of Jena he became conductor of the chamber music and composer to the Emperor Napoleon, and took up his residence for the remainder of his life at Paris. In 1810 he produced his *chef d'œuvre*, *Agnese*. For three years (1823–26) he was director of the Italian opera in the French capital. P. died 3d May 1839.

PAHARIAS, an aboriginal tribe in British India, inhabiting the hills of Rajmehal, overlooking the Ganges, in the Bengal district of the Sonthal Pergunnahs, number about 70,000. Ethnologically they are important, as their language proves them to be the most northerly colony of the Dravidian races, whose home is in S. India. See Colonel Dalton's *Descriptive Ethnology of Bengal* (Calcutta 1872).

PAINT'ED LA'DY (*Cynthia Cardui*), a well-known species of *Lepidoptera*, or butterflies, common in the S. parts of England in summer.

PALÆOLITH'IC (Gr. *palaios*, 'old,' and *lithos*, 'a stone'), the name applied to the races of men that existed in the Postpliocene age. The absence of metals and the presence of stone implements in deposits of this age indicate a very primitive state. P. man was a contemporary of the mammoth and other species of extinct mammals.

PALÆ'OPHIS (Gr. *palaios*, 'old,' and *ophis*, 'a serpent'), a genus of serpents, the fossil remains of which are found in rocks of Tertiary age in the United States, and in rocks of a similar age in England. *P. typhæus* occurs in the Eocene beds of Brackleshan. Another species (*P. toliapicus*) has been found in the London clay of Sheppey, and is the oldest known example of a fossil snake.

PALÆOP'TERIS (Gr. *palaios*, 'old,' and *pteris*, 'a fern'), a genus of fossil ferns, highly characteristic of the Carboniferous period. P. was one of the so-called tree-like or arborescent ferns, and presents, along with such genera as *Caulopteris* and *Psaronius*, a striking resemblance to the tree-ferns found in New Zealand at the present day.

PALAMPORE, a town in the district of Kangra, Punjaub, British India, among the lower slopes in the Himalayas, 317 miles S. by mountain passes from the commercial center of Leh in Cashmere. A fair was established here in 1867, to develop local trade and promote intercourse with Central Asia. In November 1871 it was attended by Lord Mayo. 30,000 people are sometimes present, and goods sold to the value of $150,000. English cloth, metal ware and ornaments are exchanged for shawl wool, ponies, borax, musk, and gold. P. is also a center of tea-planting industry under European supervision.

PALAY' is an Indian name for *Cryptostegia grandiflora*, a twining shrub, belonging to natural order *Asclepiadaceæ*, and a native of Hindustan. It abounds in a milky juice, which, when exposed for a short time to the sun, is converted into caoutchouc. The stem yields a very fine strong white fibre.

PALGHAUT', a town in the district of Malabar, Madras Presidency, British India, 332 miles S.W. of Madras by rail, and 74 miles from the W. terminus of the railway at Beypore. Pop. (1871) 30,752. It occupies an important position, commanding the only pass across the steep range of the W. Ghauts, and contains a strong fort built by Hyder Ali; but is now best known for the export of timber, chiefly teak, and its transit trade.

PALINU'RUS, a genus of *Decapodous* crustacea, including the *P. vulgaris* or Spiny Lobster, frequently exposed for sale in the markets under the name of 'sea cray-fish.' It has a spiny carapace or shell, with three prominent spines in front. The members of the family *Palinuridæ*, of which P. is the type, are distinguished by their long and cylindrical body. The outer antennæ is very long and thick, and its basal joint is large. The walking feet are terminated by a single claw, and the sternal plate is wider than in the common lobster. The claws are not large. Its flesh is palatable, but is reckoned somewhat coarser than that of the lobster. An average specimen will weigh 4 or 5 lbs. and attain a length of from 16 to 18 inches. Its color is a purple brown beautifully variegated with lighter spots and markings. *P. ornatus* is a species which may attain the enormous length of from 3 to 4 feet.

PALLISER, Lieut.-Colonel Sir Wm., fifth son of Colonel Wray Palliser of Comragh, Waterford, Ireland, was born at Dublin, June 18, 1830. After leaving the Staff College, Sandhurst, he obtained a commission as ensign in the Rifle Brigade in 1855, and was transferred to the 18th Hussars in 1858. He retired from the army in 1871. He was knighted June 21, 1873, and received the Cross of the Commander of the Crown of Italy in March 1875. He is the author of many improvements in fortifications, the arming of ironclads, &c., but is best known as the inventor of the projectiles and guns which bear his name. The Palliser projectiles now used in the British navy and fortifications were a vast improvement in economy and efficiency on anything previously designed for piercing armor-plated ships. An immense quantity of old smooth-bore cast-iron guns were converted by a simple process invented by Sir W. P. into rifled compound guns, and are known as 'P. guns.'—John P., eldest brother of the preceding, born in 1817, has earned a name as an active and enterprising explorer. He published the *Solitary Hunter, or Sporting Adventures in the Prairies*, an account of travels in North America in 1853. He had command of a British expedition to the Indian country in 1856–57, and was a boundary commissioner in fixing the line of division between British North America and the United States from Lake Superior to the Pacific in 1857–60. His report on the topography and resources of the region was published in 1861.

PAL'MAS CAPE, a low headland on the coast of Northern Guinea, in 4° 21′ N. lat., 7° 44′ W. long. The anchorage on its E. side is the best on the Guinea coast.

PALMER, a town of Hampden Co., Mass., 15 miles from Springfield. It has two railroads, and is largely interested in manufacturing. Pop. 5504.

PALMER, Erastus Dow, an American sculptor, born in N. Y., in 1817. His best known works are 'The Landing of the Pilgrims,' 'The Sleeping Peri,' and 'The White Captive.'

PALM'ER, Edward Henry, an Oriental scholar, born at Cambridge, August 7, 1840, entered St. John's College, and graduated B.A. (1867). He served on the Survey Expedition to

Sinai (1868–69) and to Moab (1869–70), was appointed Lord Almoner's Professer of Arabic in the University of Cambridge (1871), and was called to the bar (1874). Among his numerous works are *The Negeb, or S. Country of Scripture* (1871), *The Desert of the Exodus* (1871), a *Persian Dictionary* (1875), and verse translations of *The Poetical Works of Beha-Ed-Din Zoheir of Egypt* (1877). *The Song of the Reed* (1877), &c.

PALMER-FLIES form well-known flies used as bait by anglers, and especially in summer in trout-fishing.

PALMER, RAY, D.D., an American clergyman and hymn-writer, born at Little Compton, R. I., Nov 12th, 1808, and graduated from Yale College in 1830. He is the author of many favorite hymns, and is at present (1884) pastor of a Congregational Church at Newark, N. J.

PALO ALTO, BATTLE OF, fought May 8, 1846, in the southern extremity of Texas, near Matamoras, between a Mexican army, commanded by Gen. Arista, and U. S. forces under the command of Gen. Taylor. The Mexicans numbered 6,000, while Taylor had with him only 2,300 men. After five hours' fighting, the Mexicans were driven from the field. The losses on both sides were slight.

PALUDAN-MÜLLER, FREDERIK, was born at Kjerteminde in Zealand, and educated at the Cathedral-school of Odense and at Copenhagen University. His first works, *Fire Romancer* (1832), and *Kjærlighed ved Hoffet*, had already considerable success, when the beautiful poem *Danserinden* (1833) gave him the high place he afterwards maintained by *Amor and Psyche* in 1834, and from 1835 to 1838, when he traveled to Italy, by *Zuleimas Flugt*, *Eventyr i Skoven*, *Alf og Rose*, *Trochœr og Iamber*, *Fyrste og page*, *Beatrice*, *Vestalinden*, and *Slaven*. The latter year closed his first or 'æsthetic period,' while the drama *Venus* (1841), and the first part of his greatest poem, *Adam Homo* (1841–48), appearing after his return, are the expression of his second or 'ethical period.' Two mythological poems, *Tithon* and *Dryadens Bryllup*, lead on to the third, or 'religious-speculative' period, whose chief works were *Luftskipperen og Atheisten* (1852), *Kalanus*, *Paradiset*, *Abels Död*, *Kain eller Vredens Barn*, *Ahasverus*, and *Benedict og Hans Amme*. *Ivar Lykkes Historie*, the comedy *Tiderne Skifte* (1874), and the poem *Adonis* (1874) were his last works. He died 28th Dec. 1876. P.-M. is one of the greatest of Danish poets. His characteristics are a high moral earnestness, a richly developed power of reflection, and transparent clearness of style.

PALUDI'NA, a genus of *Gasteropodous* Mollusca, forming the type of the family *Paludinidæ*, in which a conical or globular shell exists with a rounded and entire or unbroken aperture. The *Operculum* is horny or shelly. These gasteropods are inhabitants of fresh or brackish waters. P. is represented by living species, of which *P. vivipara* is a good example. The fossil representatives of the genus begin in the Jurassic or Chalk formations.

PAM'PHILUS, one of the most famous artists of ancient Greece, the founder of its most celebrated school of painting, and the instructor of Apelles, was born at Amphipolis, and flourished in the middle of the 4th c. B.C. In the school of P. the course of study, which embraced drawing, arithmetic, geometry, anatomy, and painting, extended to ten years.

PAMPLONA, the chief town of the province of Navarre, in N. Spain, 40 miles S.S.W. of San Sebastian, with which it is connected by rail, and 19 from the French frontier. Situated in a fertile plain 30 miles in circumference, on the left bank of the Arga, a tributary of the Ebro, on an eminence 1378 feet above the sea, it is strongly fortified, and has a citadel founded by Philip II. Though very uneven, the town is finely built, has three squares, of which Plaza del Castillo is the finest, an Episcopal palace and a Gothic cathedral founded in 1397 by Carlos III. of Navarre, and containing the graves of the kings of Navarre. P. has a medical school, a college with a library and botanic garden, a casa de esposítos ('foundling hospital'), a theater, and a plaza de toros ('bull arena'), the largest in Spain, capable of holding 10,000 people. There is some trade in wine, leather, linen, wax, and guitar-strings. Pop. 22,896. P., the ancient Pompeiopolis, was taken by the Goths in 466, and by Karl the Great in 778. Its Moorish conquerors corrupted the Roman name to Bambloua, whence the modern P. It was taken by the French in 1808, but surrendered to the Duke of Wellington after the Battle of Vittoria, in 1813.

PANACHE (Fr., Old Fr. *pennache*, Ital. *pennachio*, from Lat. *penna*, 'a feather'), in Heraldry, a plume of feathers placed upright in front of the helmet, and so arranged as to form a crest.

PAN'FISH, a name applied to a species of king crabs (*Limulus cyclops*) found in the E. Indies, where it is also known as the 'sancepan crab.' When limbs and tail have been removed, the buckler-shaped body or shell presents some slight resemblance to a sancepan.

PANN'US, or VAS'CULO NEB'ULOUS COR'NEA, is a vascular state of the cornea, with thickening of its epithelium, the result of chronic inflammation. Idiopathic P. is the result of corneitis, and the vascularization of P. differs from other forms of vascularity in that the vessels proceed to the cornea from the conjunctiva and ramify upon the cornea in an irregular manner, with considerable intervals between them, the internal surface of the eyelid being smooth and natural. The blood-vessels of P. are also derived from those of the sclerotica, and they may pervade the whole of the lamellated tissue of the cornea to such a degree as to render it almost impervious to light.

PANTOP'ODA, a division of *Arachnida*, represented by the 'sea-spiders' belonging to the genus *Pycnogonum*, of which *P. littorale* is a familiar species. These animals are notable from the fact that the digestive system extends into the legs, of which there are four pairs. The abdomen is rudimentary, and there are no specialized breathing-organs. The sexes are distinct.

PARADOX'IDES, a well-known genus of *Trilobites*, forming the type of the family *Paradoxidæ*, the members of which have long bodies, the segments of the thorax or chest being free, and numbering from eight to twenty-three. The caudal or tail-shield is small. Some of the largest of the trilobites belong to this group. Its members are chiefly found as fossils within the well-known 'primordial zone' of the Upper Cambrian rocks.

PARADOX'URE (*Paradoxurus typhus*), a species of *Carnivorous* quadrupeds allied to the *Viverridæ* or weasels, &c., and found in India. The common P., or luwack as it is named, is a familiar Indian species, as is also the musang (*P. musanga*) of Java. The luwack is of a dingy yellow color, spotted with black. The tail is long and is capable of being closely coiled or twisted. The musang is noted for its ravages on rats and mice, but it also feeds on berries and fruits.

PAR'ALLEL, a term of extensive application in geometry. According to Euclid, P. lines are straight lines which are in the same plane, and which being produced ever so far both ways never meet. Similarly P. planes are planes which extended ever so far in any direction never meet. Such planes have evidently the same normal; and the definition that P. planes are such as have the same normal can be applied to any curves or surfaces. Generally, then, P. curves or surfaces are any curves or surfaces which have the same system of normals. Concentric circles or spheres form a P. system; also confocal ellipses and ellipsoids, and all involutes of a common evolute. To the mathematician such a conception of parallelism presents no difficulty. At the very beginning of the study of P. lines, however, there is a peculiar difficulty, to surmount which has been the endeavor of many famous geometers. The difficulty is not one of conception but one of demonstration—to pass, namely, from the definition to the proposition that a line falling upon two P. lines is equally inclined to both. To prove it, Euclid was forced to assume as an axiom that, 'if a straight line meet two straight lines so as to make the interior angles on the same side of it less than two right angles, these straight lines being continually produced will at length meet on the side on which the angles are which are less than two right angles.' This, however, is as much a proposition as the seventeenth in the First Book, of which it is the converse, and is therefore not a self-evident truth. Later geometers—Wolfius, Boscovich, Simpson, &c.—have substituted for it other axioms; but these also are open to the same objection, and are more fitly called postulates. Legendre has met the difficulty by establishing the whole theory of P. upon the proposition that the three angles of a triangle are together equal to two right angles. In Euclid this proposition depends for its demonstration upon the previous propositions respecting parallels; consequently Legendre was compelled to prove it by a totally different method. This demonstration is exceedingly refined and subtle, but for that very reason is not admissible into books on elementary geometry.

PARAMŒ'CIUM, a familiar genus of *Infusorian* animalcules, popularly, and from its shape, described as the 'slipper-animalcule.' It is a typical member of the infusorian group, and is found in stagnant water and amidst organic infusions. The *cilia* fringing the body can be well seen in P. *P. bursaria* and *P. aurelia* are familiar species.

PAR'ASOL (Fr. *parasol*, Ital. *parasole*, from *parare*, 'to ward off,' and *sole*, 'the sun'), a small umbrella carried by ladies as a shade from the sun's rays. Sunshades of larger dimensions than those of the present time are of great antiquity. The primitive civilized nations of the East regarded the P. as an emblem of royalty or high nobility, in the same way as the umbrella is now used as a canopy of state among certain barbarous races. The P. was esteemed an article of luxury in ancient Greece and Rome, a lady always having a female slave in attendance carrying the shade. Coryat, the English traveler, mentions the use of the P. in Italy early in the 17th c., and probably it soon thereafter extended to France and England. It is supposed that the P. owes its origin to the practice of the Aryan nations carrying boughs at festivals; the Feast of Tabernacles affords an example of a simi-

lar Jewish custom. The symbolism of these shady boughs is obscure, but probably they had some connection with a sun-myth, and may have typified the death of the sun in the shades of night.

PARASU-RAMA ('Rama with the axe') is the sixth incarnation or avatar of Vishnu, described in the Bhagarata Purana. In this character Vishnu undertook the complete extirpation of the Kshatriya or warrior caste, who were arrogating dominion over the Brahmins.

PARATI or PARATY, a thriving seaport of Brazil, situated on the Bay of Angra, at the mouth of the river of the same name, 90 miles S.-W. of Rio de Janerio. Pop. 10,000.

PARBUTTI (Párvatí='mountain-born') a popular name in India for the goddess Kali or Durgah, the wife of Siva, who is the daughter of the Himalaya Mountains.

PARK, EDWARDS AMASA, D.D., LL.D., an American theologian, born at Providence, R. I., in 1808, and educated at Brown University and Andover Seminary. After serving for a brief period as pastor of a church in Massachusetts, he became professor of Christian theology at Andover, which position he has since held. He is a keen logician and profound thinker.

PARKE, JOHN, an English musician, born in 1745, died in 1829, was celebrated as the best oboe player of his time. His brother, William Thomas P., was an eminent performer on the same instrument.

PARKER, JOHN HENRY, C.B., F.S.A., son of a London merchant, was born in 1806. After being educated at Dr. Haines' school, Chiswick, he entered the book trade in 1821, and in 1832 succeeded to the business of his uncle, Mr. Joseph P., at Oxford. He has devoted himself chiefly to the study of architecture, on which subject he has published some important works. In 1869 he was appointed by the University of Oxford keeper of the Ashmolean Museum, with a salary of £250, further supplemented by a grant of £200, to assist him in prosecuting the excavations which were (1878) being carried out at Rome under his superintendence. He has also been created an honorary M.A. of Oxford. His principal works are *Glossary of Architecture* (3 vols. 1836); *Introduction to the Study of Gothic Architecture* (1849); *Domestic Architecture of the Middle Ages* (3 vols. 1853–59); *Archæology of Rome* (Parts i.–xi., 1874–77).

PARKER, WILLARD, M.D., LL.D., an eminent American physician, born at Lyndeborough, N. H., Sept. 2, 1800, and graduated from Harvard College in 1826. He served as professor of anatomy in the Vermont Medical College, in the Berkshire Medical College, and from 1839 to 1869 was professor of surgery in the New York College of Physicians and Surgeons. In 1869 he became professor of clinical surgery in the same institution. He first reported and described what is known as malignant pustule. Died at New York, 1884.

PARKER'IA, a genus of *Foraminifera*, found in a fossil state in the Upper Green Sand of the Chalk series. It is interesting from its large relative size, a diameter of two inches being common. Its shell was *arenaceous*, that is, it contained sandy particles as elements in its formation.

PARKERSBURG, a town of Wood Co., W. V., on the Ohio and Little Kanawha rivers, 96 miles below Wheeling. It has two railroads; is engaged in oil refining, manufacturing, and trade; and is the second city of West Virginia in point of population and business importance. Pop. 6582.

PARK'ESINE (named after the inventor, Mr. A. Parkes of Birmingham, England), a factitious material, fluid, plastic, or perfectly hard, procured originally from a solution of gun-cotton, and afterwards from cotton, tow, and similar waste substances, by an undivulged process. As it resists the action of the atmosphere or acids, it was proposed to employ P. as a substitute for guttapercha in its various applications in telegraphy and otherwise, and for ebonite in making combs, knife-handles, &c., but it has never come into commercial competition with either of these substances.

PARKMAN, FRANCIS, JR., an American author, born at Boston, Mass., in 1823, and was educated at Harvard College. Most of his life has been spent in Boston, and he has devoted himself largely to a critical study of the career of the French in America. He has published *Pioneers of France in the New World; The Jesuits in North America; The Discovery of the Great West;* and *The Old Régime in Canada.*

PARNELL, THOMAS, an English poet whose reputation surpasses his merit, was born in Dublin in 1679, studied at Trinity College, took holy orders in 1700, and was made Archdeacon of Clogher in 1705. At first a Whig, he joined the Tories towards the close of Queen Anne's reign, obtained a prebend by the help of Swift, and in 1716 was made vicar of Finglass. The death of a charming wife induced habits of intemperance, and P. died at Chester, July 1717, at the early age of 38. In 1722 his friend Pope published a collected edition of his *Poems*, not one of which except the *Hermit* now survives in any human memory, and it is amazing that *it* should survive.

PARNELL, CHARLES STEWART, born in Ireland, in 1847, and educated at Cambridge, England. He was one of the promoters of the 'Irish Land League,' and in parliament has labored arduously for the amelioration of the condition of the Irish people. He visited the United States in 1880, but failed to arouse any extended interest.

PARROTT, ROBERT PARKER, born at Lec, N. H., in 1804, graduated from West Point, and entered the army. He is principally famous as the inventor of the gun which bears his name, and which was used with great effect during the civil war.

PARSONS, a town of Labette Co., Kansas, 49 miles from Fort Scott. It has five railroads, and is surrounded by a flourishing agricultural community. Pop. 7000.

PAR'SONS, ROBERT, born at Nether Stowey in Somersetshire, England, June 24, 1546, passed from Taunton free-school to St. Mary's Hall, Oxford, and became a fellow and tutor of Balliol College. In 1574 he studied law and medicine at Louvain and Padua, at Rome became a convert to Catholicism, and entered the Society of Jesus, July 4, 1575. He came with Campian to England in 1580, and after a year of infinite perils, only escaped that martyr's fate by taking refuge in Normandy, where he founded an English School at Eu (1582). As rector of the English College at Rome (1587) P. labored from afar for England's conversion, pouring forth a flood of controversial tracts, and making several journeys to the Spanish Peninsula, where he founded the colleges of Valladolid (1589), Lucar (1591), Lisbon and Seville (1592), besides St. Omer's in France (1593). He died at Rome, April 15, 1610. Among the pseudonymous writings ascribed to P. are *A Brief Discourse containing the Reasons why Catholics refuse to go to Church* (Douai, 1580), *The Book of Resolution, or Christian Directory* (Rouen, 1581), *Treatise of the Three Conversions of Paganism to the Christian Religion* (3 vols. St. Omer, 1603–4), &c.

PARSONS, THEOPHILUS, born at Newburyport, Massachusetts, February 24, 1750, graduated at Harvard (1769), was called to the bar (1774), and commenced legal practice at Newburyport (1777). As a member of the 'Essex Junto,' he published the famous *Essex Result* (1778), a pamphlet upholding the constitutional doctrines of the New Englanders, and he was one of the framers of the Constitution of 1779. He removed to Boston (1800), became chief-justice of the supreme judicial court (1806), and died October 30, 1813. A Memoir of him has been published (Bost. 1859) by his son, THEOPHILUS P., who was born at Newburyport, Massachusetts, May 17, 1797, graduated at Harvard (1815), and after a tour in Europe and some years' legal practice at Taunton and Boston, was appointed Dane Professor of Law in Harvard College (1847). He is author of treatises on mercantile and maritime law, on marine insurance, and on promissory notes, of *Deus Homo* (1867), *The Infinite and the Finite* (1872), and other theological works in support of Swedenborgianism, and *The Political, Personal, and Property Rights of a Citizen of the United States* (1875). Died 1882.

PARTIAL PAYMENT. No one is bound to accept P. P. of a debt. But a creditor in two or more separate debts, cannot refuse to accept payment of one of these, though the creditor decline to pay even the interest of the others. The holder of a bill is not bound to take payment of a smaller sum than the bill carries; but he is entitled to take a P. P. from the acceptor without cutting off his recourse against the other parties, provided he protest the bill, in so far as it is not paid, and in other respects duly negotiate the bill.

PAR'TIZAN (Fr. *pertuisane*), a kind of halberd, introduced into warfare during the reign of Edward IV., and restricted to the use of body-guards about the close of the 16th. c., when it was usually richly engraved. The blade was long and double-edged, with two lateral projections curving upwards instead of the axe.

PARTON, JAMES, born in England, in 1822, and came to New York when a child. He at first taught, but eventually turned his attention to literary pursuits, and soon attained success. The following are among his chief works: *Life of Horace Greely; Life of Aaron Burr; Life of Andrew Jackson; Famous Americans;* and *Caricature and the Comic Arts.*

PARTON, SARA PAYSON (*née* Willis), born in Maine, in 1812. She wrote numerous articles and sketches for the *New York Ledger*, under the *nom de plume* of 'Fanny Fern.' She also published several novels. In 1856 she married James Parton (her third husband), and spent the remainder of her life in New York. Died in 1872.

PASHMI'NA, the trade name for the shawl-wool of Turkestan and Central Asia, which is exported to a considerable extent by native traders, to be woven in the towns of Cashmere and the Punjaub. In 1875–76 the registered imports into the Punjaub were valued at $1,020,000, showing a decrease on the preceding

year; and it is officially stated that the trade is declining, owing to the absence of demand in Europe.

PASSAIC, in Passaic Co., N. J., on the Passaic River and the New York, Lake Erie & Western and other railroads, 11 miles from New York City. It is extensively engaged in manufacturing. Pop. 6532.

PASSION MUSIC is music illustrative of the Passion of Our Lord as narrated in the Gospels. In the Roman Catholic Church from an early period it was usual to assign the recital of the Gospel of the Passion during Holy Week to a number of different priests who intoned the words of Jesus, Pilate, the High Priest, &c., and the words of the people (turbae) to the congregation or choir. From this custom the Passion-plays, so popular during the Middle Ages, and the German P.M., seem alike to have sprung. After the Reformation, original compositions were introduced into the P.M. of the Lutheran Church instead of the traditional church tones, and such pieces of music were made suitable for performances at other times and places than at particular services in the church.

The oldest known version of P. M., printed at Wittenberg, in 1573, with recitatives and four-part choruses, has been attributed to Antonio Scandell. Heinrich Schütz was the inventor of the feature of a reflective chorus, and Johann Sebastian (about 1672) introduced orchestral instead of organ accompaniments. At the beginning of the 18th c. Keiser utilized original libretti instead of the Gospel narratives for his P. M., *Der Blutige und Sterbende Jesus*, &c., and adopted the 'soliloquia,' a frequent reflective and recitative passage, in which he was followed by Telemann, Handel, and Johann Sebastian Bach. The last-named great master in his two works on the Passion according to St. Matthew and St. John, the most sublime compositions of this kind, made effectual use of the chorale; and selecting simple hymn tunes as his basis, which he grandly harmonized, pressed into his service the voices of the entire congregation. The harmony of the small choir was enforced with the accompaniment of organ and orchestra. It is not customary now, however, in Germany, for the congregation to take any part in the music; and, in the London performances of Bach's works, the singing of the chorales by the choirs, without any instrumental accompaniment, has been found admirable and effective.

PAS'TORAL (in Music), a simple melody of a P. style, usually in $\frac{6}{8}$ time. The term is also applied to music intended to depict P. scenes and incidents.

PATRONS OF HUSBANDRY, a secret society, organized in the U. S., in the year 1867, for the promotion of the best interests of agriculturists. Its origin was the result of the depression that followed the civil war, and which rested very heavily upon the farming interests. The order is thoroughly organized, and in its inner workings, is patterned after Masonry and the ritual of the Odd Fellows. The association is strong in many of the western states, but it has never secured much of a footing in the New England or Middle states.

PATTENS (Fr. *patin*, 'a clog,' 'a high-heeled shoe'), a name applied so early as the 14th c. to wooden shoes, and used in the 17th and 18th centuries to denote the sandals or shoes of wood, having iron rings on the soles, worn by ladies during wet weather. These are still common in country parts of England.

PATTESON, John Coleridge, D.D., born in London, England, April 1, 1827, passed from Eton to Balliol College, Oxford, gained a Merton fellowship (1850), and was ordained to the curacy of Alphington (1852). In 1854, he accompanied Bishop Selwyn to New Zealand, where he labored as a missionary till 1861, when he was consecrated Bishop of Melanesia. The next ten years of his life were spent in cruising among the islands that formed his diocese, in efforts for their improvement, and above all in striving to check the kidnapping of natives to supply the Queensland labor market. This infamous traffic caused his death, for landing in Santa Cruz, he was murdered by the infuriated natives, September 20, 1871. See Miss Yonge's *Life of Bishop P.* (2 vols. Lond. 1874).

PAUCHON'TI or PAUL'EY TREE, are respectively the Malay and Tamul names for *Isonandra acuminata*, a large E. Indian tree brought under the notice of the British Government in 1857 by Dr. H. Cleghorn as likely to prove of considerable economic value. It has a close affinity to *I. gutta*—the gutta-percha tree of commerce—yielding, like it, a non-conducting gum elastic. The trunk rises to an immense height without branching, and the hard, tough wood proves useful in carpentry, &c. It is common in the densely-wooded tracts of Coorg and the Cochin territories.

PAU'ER, Ernst, composer and pianist, was born at Vienna, December 21, 1826. A son of the great Mozart was among his teachers. While Director of Music at Mainz (1847–51), he composed several works, including the operas *Don Riego* and the *Masques Rouges*, and several concertos for the pianoforte. In 1851 he removed to London, England. His opera *La Fiancée* was produced at Mannheim in 1861. P. gave six lectures with musical illustrations in chronological order at Willis' Rooms in 1864, and is well known throughout Great Britain as a lecturer and pianist. He has published many sonatas, tarantellas, valses, songs, &c., among his most popular pieces being *Pensées Fugitives* (1854), two Hungarian melodies for the pianoforte (1865), *Recollections of Meyerbeer* (six transcriptions, 1867). He has arranged and edited the works of many classic composers: Beethoven's *Overtures* (1856) and *Symphonies* (1868); Weber's *Complete Pianoforte, Works* (1872); *The Schumann Album* (1872); Chopin's *Nocturnes. Mazurkas.* and *Valses* 1872–74; 32 *Songs*, and the *Complete Pianoforte Works of Schubert* (1874); *The Complete Works of Mozart* (1874), &c. P. is the author of a primer on the *Pianoforte* (Novello, Ewer, & Co. 1878).

PAUL'DRONS, in armor, were plates introduced early in the 15th c. to protect the shoulders. They sometimes had passguards, or ridges to ward off the blow of a lance, attached.

PAU'LI, Georg Reinhold, a German historian, was born at Berlin, May 25, 1823, and studied at the universities of Berlin and Bonn. He visited England in 1847 to prosecute historical researches in the Scotch and English libraries, and from 1849 to 1852 held the post of private secretary to Baron Bunsen, then Prussian ambassador at the English court. Returning to Bonn (1855), he was successively apointed Professor of History at Rostock (1857), at Tübingen (1859), at Marburg (1867), and at Göttingen (1870), his removal from Tübingen being due to an attack on the Würtemberg Government, published by him in the *Preussische Jahrbücher* (August 1866). P. is author of *König Alfred und seine Stellung in der Geschichte Englands* (Berl. 1851; Eng. trans. 1852), a continuation of Lappenberg's *Geschichte Englands* (vol. iii.–v. Gotha, 1853–58), *Bilder aus Altengland* (Gotha, 1860; 2d ed. 1876; Eng. 1861), *Geschichte Englands seit den Friedenschlüssen von* 1814 *und* 1815 (3 vols. Leips. 1864–73), *Simon von Montfort* (Tüb. 1867; Eng. 1876), *Aufsätze zur Englischen Geschichte* (Leips. 1869). P. has also edited with great care and critical acumen Gower's *Confessio Amantis* (3 vols. 1857).

PAULI'NUS, a follower of Augustine, the first missionary to the English, is memorable as the chief agent in the conversion of the Northumbrians to Christianity during the reign of Eadwine. The story of the great debate among the Northumbrian witan is one of the immortal passages in Bede. In 625 P. became Archbishop of York. On the overthrow of Eadwine at Hatfield, 633 A.D., by the combined forces of Penda, the heathen king of Mercia, and Cadwallon the Welsh prince, P. left the North and returned to Kent, where he was made Bishop of Rochester, and where he died, 10th October 644. The restoration of Christianity in Northumbria was due to the zeal of Iona, and not of Canterbury. Bede's *Hist. Eccl. Gent. Angl.* (Moberly's ed., Macmillan & Co., 1869); Green's *History of the English People.*

PAULL'US, Lu'cius Æmil'ius, surnamed Macedon'icus, a distinguished Roman general, son of the consul of the same name that fell at Cannæ, was born about 229 B.C. In 193 he was appointed proconsul of the province of Further Spain, where he waged a war against the Lusitani, in which he was ultimately victorious. In 182 he was associated in the consulship with Cn. Baebius Tamphilus. When above sixty years of age, he was elected consul a second time 168, and intrusted with the command of an army in the war against Perseus, King of Macedonia, whom he completely defeated near Pydna on the 22d June of that year. P. arrived in Italy in 167, and was honored with one of the most splendid triumphs Rome had ever seen. His successes, however, were greatly embittered by the loss of his two sons, one of whom died only five days before, and the other three days after his triumph. P. died B C. 160. He was declared by a contemporary to be 'one of the few Romans of that age to whom one could not offer money.' See Plutarch's *Life of Æ. P.*

PAUMBAUM (*Pámbám*), a town in the district of Madura, Madras Presidency, British India, on the N.W. extremity of the island of Rameswaram, which runs out towards Ceylon to form Adam's Bridge across Palk Straits. Pop. (1871) with the adjacent town of Rameswaram, 9407. P. has given its name to the narrow channel by which coasting craft avoid the circuit of Ceylon. Since 1822 this channel has been under the care of Government; by convict labor it has been deepened 14 feet, and a lighthouse has been erected. P. is annually used by 2100 native vessels, with an aggregate tonnage of 174,000.

PAWN (*pan*, from Sanse. *parna* = a leaf), the aromatic leaf of the *Piper betel* or *Chavica betel*, which is universally chewed by the natives of India, acting as a carminative and antacid tonic. It is rolled round a few small pieces of the *Areca* or *supari* nut, with a little caustic lime, a few heads of spice, and sometimes a little catechu. Inclosed in gold paper, it forms a common present to guests, &c. The European term 'betel' is derived from the Bengali *bira*, a corruption of the Sanscrit *vitika*. Its cultivation, which is monopolized by a special caste, is highly remunerative,

though a large initial outlay is required on the *buruj* or P. garden, which is a kind of leafy hothouse.

PAWNEES, a tribe of American Indians, hereditary enemies of the Dakotas, formerly occupying Central Nebraska. They are superior physically to most Indians of the Plains, and at one time numbered 2000 warriors, but have been greatly reduced by wars with the Sioux. They removed to the Indian Territory in 1875.

PAYNE, JOHN HOWARD, an American actor, editor, and poet, born in New York, June 9, 1792. When still in his 'teens' he edited the *Thespian Mirror*, and subsequently *The Pastime*. In 1809 he made his appearance as an actor and met with success. He wrote several successful plays, published a volume of poems, and (1826–27) edited *The Opera Glass* in London. Payne is best known by his poem *Home, Sweet Home*, which, wherever it is sung, touches the tenderest chords in the human heart. It was written for one of his dramas, entitled *Clari, or The Maid of Milan*. Died at Tunis, Africa, where he had gone as U. S. consul, April 10, 1852.

PEABODY, a town of Essex Co., Mass., on the Eastern Railroad, two miles from Salem. It is engaged in tanning, currying, and the manufacture of morocco. Pop. 9028.

PEACOCK, THOMAS LOVE, born at Weymouth, October 18, 1785, was educated at Englefield, in Berkshire, and in 1801 commenced a course of independent reading at the British Museum. He went to Flushing as under-secretary to Sir Home Popham (1809), held an appointment at the India House (1819–56), and died at Shepperton, January 23, 1866. He was author of the poems *Palmyra* (1806) and *The Genius of the Thames* (1812), and of the novels *Headlong Hall* (1816), *Nightmare Abbey* (1818), *Crochet Castle* (1831), and *Gryll Grange* (1860). The lyrical beauty and fine comedy of his novels have charmed, as Shelley says, 'the chosen spirits of the time,' but their strain is 'too learned for a shallow age,' and their covert satire, disregard of plot, and strange blending of the Pantagruelic and Johnsonian elements, have rendered them *caviare* to the multitude. See H. Cole's edition of his collected works, with a memoir by his granddaughter, and a preface by Lord Houghton (1875).

PEALE, REMBRANT, an eminent American portrait-painter, born in Pennsylvania, Feb. 22, 1778. In 1801 he went to Europe, where he studied under West in London, and under the leading artists of France, in Paris. In 1809 he returned to Philadelphia, where he rapidly rose to distinction as a portrait-painter. Among his most celebrated works are *The Roman Daughter* and *The Court of Death*. Died at Philadelphia, Pa., Oct. 3, 1860.

PE'BA (*Tatusia peba* or *T. septemcinctus*), a species of Armadillo found in Guinea, Brazil, and Paraguay, and which may attain a length of thirty inches. The color is a brownish-black. The flesh is tender and palatable.

PE'COCK, REGINALD, born about 1395 in Wales, entered Oriel College, Oxford, of which he became fellow (1417). Ordained priest (1421), he received the mastership of Whittingdon College, along with the rectory of St. Michael-in-Riola (1431), was consecrated Bishop of St. Asaph (1444), and translated to the see of Chichester (1449). P. wrote in English several treatises against the Lollards, in which, however, he himself fell into heresy on the questions of infallibility, transubstantiation, and liberty of conscience. Accordingly, he was cited and condemned by the Archbishop of Canterbury (1457), and in spite of a recantation at Paul's Cross in the presence of 20,000 persons, was deprived of his see, and confined in the abbey of Thorney, Cambridgeshire, where he died about 1460. The best known of P.'s writings, *Repressor of overmuch Blaming of the Clergy* (1449), has been edited, with an Introduction, by Mr. C. Babington (2 vols. 1860).

PECU'LIUM, in Roman law, was that property which a slave, or a *filius familias*, could acquire with his master's or father's consent. It might be acquired in war, or in exercise of public duty, or of the liberal arts, or derived from a stranger, or from the father.

PEDES'TRIANISM, taken in its most general meaning, is the art of walking, running, or otherwise engaging in foot exercise. With the development of artificial and more speedy means of transit, P., as a mode of traveling, has fallen greatly into disuse, and consequently in the present day the word is understood nearly always to mean what might be distinguished as *professional* P. Just as we have our professional cricketers, oarsmen, swimmers, boxers, &c., so have we our professional pedestrians. The most popular and most prevalent form of P. is foot-racing, which has always held a high position as a training exercise amongst nations where athletics were practised.

For short races under half a mile speed is a great desideratum, but for long stretches of several miles speed is not of such importance as staying power. In 1861 various long races were held between Deerfoot, a Seneca Indian, and English and other champions. In these competitions the Indian showed to advantage, running 12 miles in 65 minutes 5 seconds. He was beaten, however, in 1863 by White, who ran 10 miles in 52 minutes 14 seconds. In walking feats we have another phase of P., which has excited considerable attention. The famous journeys of Powel, Barclay, and Manks have been excelled by the pedestrian triumphs of Weston, O'Leary, and Gale. In 1788 Richard Powell walked from London to York and back, a total distance of 400 miles in 140 hours. Captain Barclay, in 1809, undertook to walk 1000 miles in 1000 successive hours, and won in accomplishing his task a large wager. This feat was repeated with similar success by Richard Manks, a native of Warwickshire, in 1850. In 1876 the feats of E. P. Weston, attracted general attention. In 48 hours (on February 15 to 17) he accomplished 180 miles 668 yards—a distance never before covered in the same time—and (starting 23d December) 460 miles in 33 minutes less than 144 hours. Long distances have been accomplished in several six days go-as-you-please contests by Rowell, Hazael, and Fitzgerald. The last is now (1885) the long-distance champion of the world.

PEDICELL'INA, a genus of 'social' *Polyzoa*, somewhat resembling moss, and consisting of a series of organisms united together by root-like processes. They are found in the sea, are of soft consistence, and the tentacles are arranged in a horse-shoe or crescentic shape. *P. echinata* is a familiar species.

PEEKSKILL, in Westchester Co., N. Y., on the Hudson River and the Hudson River Railroad, 48 miles from New York City. Several iron foundries are located here, which give employment to a large number of workmen. Pop. 5742.

PEG'ANUM is a monotypic genus of *Zygophyllaceæ*, interesting botanically from possessing certain characteristics of *Rutaceæ*. The species *P. Harmala* is common in S. Europe and Asia Minor, and is a powerfully-smelling herb, with alternate, entire, or divided stipular leaves, white axillary flowers, and a capsular fruit opening by three valves. In Turkey the seeds are used as a vermifuge, and also, it is said, as a spice and for dyeing red.

PEKIN, in Tazewell Co., Ill., on the Illinois River, 10 miles below Peoria. It has three railroads, and is connected by steamboat with the various points on the Illinois and Mississippi rivers. It has large manufacturing, grain, and pork-packing interests, and adjoins extensive coal beds. Pop. 7500.

PEL'AMIS, a well-known genus of water-snakes or *Hydrophidæ*, of which the *P. bicolor* or black-backed P. is a good example. It is essentially a sea-inhabiting species, and is found swimming in the ocean at great distances from land. The tail is compressed, to fit it for serving as a swimming organ, and the nostrils are valvular. The color is black above and yellow beneath, the tail being variegated with these colors. The average length is 2½ feet. The P. is poisonous, and belongs to the sub-order of *Colubrine* snakes.

PEL'AMYS, a genus of *Teleostean* fishes, belonging to the *Scomberidæ* or mackerel family, and represented by the Bonito.

PEMBERTON, JOHN C., a Confederate general, born at Philadelphia, Pa., in 1817, and graduated from West Point in 1837. He served during the Mexican war on the staff of Gen. Worth, and was brevetted captain for bravery at Monterey, and major for bravery at Molino del Rey. At the outbreak of the civil war he resigned, and entered the Confederate service. He rose to the rank of lieutenant-general, was defeated at Champion Hills (May 16, 1863) and Big Black (May 17, 1863), and falling back upon Vicksburg, was compelled to surrender the city and his army to Gen. Grant. After the war he became a farmer in Virginia. Died July 13, 1881.

PEN'DA, a famous Mercian king of the 7th c., who for a time successfully resisted the progress of Christianity in England. In 626, at the age of fifty, he ascended the throne. A heathen reaction was beginning to show itself in several of the English states —Kent, East Anglia, and Essex. In this movement P. saw a chance of Mercia freeing itself from the overlordship of the Christian kingdom of Northumbria, and allying himself with the Cymric prince Cadwallon, he attacked and slew Eadwine at Hatfield in 633. Nine years later he defeated and slew Oswald, the successor of Eadwine, at Maserfield. P. now stood supreme in England. Northumbria alone stubbornly resisted his overlordship, though year by year he wasted the land in ruthless invasions. Nor could he extirpate Christianity or daunt the courage of its missionaries. Everywhere they were at work and his power was quietly undermined in spite of his valor and craft. His own son, whom he had made king of the Middle English, received baptism from the monks of Lindisfarne. At last the extension of Northumbrian influence along the eastern coast stirred the aged monarch to a fresh, and, as it proved, a final struggle. In his eightieth year he marched against Oswi, the Northumbrian king. The two armies met at Winwidfield, by Leeds, in 665. P. was utterly routed, and fell along with thirty men of kingly family. 'The river over which the Mercians fled was swollen with a great rain; it swept away the fragments of the heathen host, and the

cause of the older gods was lost forever.' See Bede's *Hist. Eccl. Gent. Angl.; The English Chronicle;* and Green's *History of the English People* (1877).

PENIN'SULA (Lat. *pæne*, 'almost,' and *insula*, 'an island') a portion of land nearly encircled by water, and connected with the mainland by an isthmus.

PE'NIS, the term applied to part of the male organs of generation in animals, the P. being the copulatory organ. It is found in many Invertebrates (*e.g.*, some insects, molluscs, &c.), and may be wanting in some vertebrata (*e.g.*, fishes, &c.). In mammalia it is attached to the *Symphysis pubis*, and consists, in the human subject, of a body, root, and glans. The root is attached to the pubis by two fibrous processes, the *crura*, and by a fibrous membrane termed the *suspensory ligament*. The body of the organ is covered by a very thin integument, which at the *glans* or extremity becomes folded on itself, to form the *prepuce* or *foreskin*. The mucous membrane covering the glans is unprovided with sebaceous glands, but its surface is covered with *papillæ* which are highly sensitive. The substance of the body consists of erectile tissues, capable of undergoing distension when filled with blood. These tissues are disposed in three chief masses, of which the two *corpora cavernosa* are the chief, the *corpus spongiosum* forming the remainder of the organ. The corpora cavernosa lie side by side and form the upper portion of the P., whilst the corpus spongiosum encloses the *urethra*. Each of the former bodies consists of a strong envelope of fibrous tissue, containing erectile tissues. The corpus spongiosum is also erectile in its nature, and in addition contains a layer of muscular fibres. The *veins* of the P. are very numerous, and form the chief elements in the erectile tissue. They are largest in the middle of the corpora cavernosa, and open into the *dorsal vein* of the P. The *arteries* are derived from the *internal pudic* branch, and the nerves from the *internal pudic nerve* and *hypogastric plexus*.

PENNAIR', or PINAKINI ('the bow of Siva'), the name of two rivers in S. India, both of which rise near Nundidrug in Mysore, and flow E. into the Bay of Bengal. (1) The north P. falls into the sea about 19 miles below Nellore town. Total length, 355 miles. Area of drainage basin, 20,500 sq. miles. It is useless for navigation, being liable to heavy floods, which in 1874 carried away an important railway bridge. At Nellore ferry an *anicut* or weir was constructed in 1857, and repaired in 1869 by Sir A. Cotton. It is now capable of irrigating 64,000 acres. The canal of the Madras Irrigation Company, completed in 1871, connects the P. with the river Krishna. (2) The south P. falls into the sea a few miles from Cuddalore. Total length, 245 miles. Area of drainage basin, 6200 sq. miles. In the upper portion of its course the water is collected in large reservoirs for irrigation.

PENNSYLVANIA, UNIVERSITY OF, an American educational institution, located at Philadelphia, Pa. It was chartered as a college in 1755, and as a university in 1779. It has well equipped departments of arts, sciences, law, medicine, and engineering.

PEN'TAIL, a remarkable species of *Insectivorous* quadrupeds, scientifically known as the *Ptilocerus Lowii*. It inhabits Borneo, and derives its popular name from the length of its tail, which is hairless except at its tip, where rows of stiff hairs are developed on either side, after the fashion of the barbs on the sides of a feather. The hairless portion of the tail is scaly. The P. attains the size of a small rat. Its color is a blackish-brown above, and a yellowish-grey beneath. The tail is black, the feather-like tip white.

PENTAM'ERA (Gr. *pente*, 'five,' and *meros*, 'a part'), one of the subdivisions of the order *Coleoptera*, or that of the beetles. The P. has five joints in the *tarsi* or feet.

PENTAS'TOMA (Gr. *pente*, 'five,' and *stoma*, 'a mouth'), a genus of lower *Arachnidans*, allied to the mites, &c., and forming the type of the order *Linguatulina* or *Pentastomida*. *P.* (or *Linguatulina*) *tænoides* is a familiar species inhabiting the liver and lungs of herbivorous mammals in a sexless state, and attaining sexual and mature development in the frontal sinuses of dogs and other *Carnivora*. The body is worm-like, the mouth being surrounded by a horny ring. The sexes are distinct, and the females are larger than the males.

PE'ON, a word of most uncertain derivation, adopted by all European nations in India for a kind of civil orderly or footman in the departments of police, justice, and customs. They usually wear an official badge, and formerly bore arms.

PEPUSCH', JOHANN CHRISTOPH, a German musician, born at Berlin about 1667, settled in England in 1700, and after an engagement at Drury Lane Theater became a teacher of music. He received the degree of Mus. Doctor from Oxford in 1713. He wrote the overture and set the music to Gay's *Beggar's Opera*, and published a treatise on *Harmony* (1731). P. died in 1752, and was buried in the Charter-House, of which he had been organist for fifteen years.

PEQUODS (or PEQUOTS), a tribe of American Indians, originally occupying what is now Eastern Connecticut. They were nearly exterminated in 1637 by a war with the whites, known as the 'Pequot War.' A remnant of the tribe still live at Green Bay, Wis.

PERCIVAL, JAMES GATES, an American poet, born in Connecticut in 1795, and was educated at Yale College. He was professor of chemistry at West Point, 1824–27, and at the time of his death, in 1856, was State Geologist of Wisconsin. He was the author of numerous poems, some of which are highly meritorious.

PERENNIBRAMCHIA'TA ('perpetually gilled'), a name applied to those members of the Amphibian order *Urodela*, which retain the external gills of early life, in addition to the lungs with which they are also provided. Of the P., the Proteus, Siren, and Axolotl are good examples.

PERI, JACOPO, born in Florence about 1570, is celebrated as the earliest operatic composer. He introduced recitative, and his *Dafne* (1597) and *Euridice* (1600) were the first real operas known to have been performed. He died about 1638, but the exact date is unknown. See Fétis, *Biographie des Musiciens* (Par. 1878).

PERIHEPATI'TIS, or INFLAMMA'TION OF THE CAPSULE OF THE LIVER AND GLISSON'S CAPSULE, is generally caused by disease of the liver itself, or by inflammation of neighboring structures, such as peritonitis and pleurisy. The prominent symptoms are: tenderness on pressure, motion, or deep inspiration; but the disease is not serious unless the inflammation extends to the portal or hepatic veins, or causes obstruction of the larger bile-ducts.

PERITYPHILI'TIS is the term used in medicine to denote inflammation of the areolar connective tissue round the *caput cæcum*, a lesion of frequent occurrence during typhoid fever. It may be caused by accumulations of fæces or of foreign substances in the vermiform appendix. When perforation takes place where the bowel is free from peritoneal covering, an abscess generally appears in the iliac region occupied by the cœcum; but when perforation takes place directly into the peritoneal cavity, the result will be fatal peritonitis. In the early stage, leeches, followed by hot fomentations and poultices, should be applied, and opium should be given internally. Drastic purgatives should be avoided, and only liquid food should be used.

PEROUSE', JEAN FRANÇOIS DE GALAUP, COMTE DE LA, born at Guo, near Albi, department of Tarn, August 22, 1741, became a midshipman in the French navy in 1756. He was taken prisoner in the battle of Belle Isle (1759), and in 1762 returned to France, and served in the East Indies from 1773 to 1777. In 1782 the French Government sent him to destroy the English settlements in Hudson's Bay. He took the forts of Prince of Wales and York; but the expedition ended in the peace of 1783. In August 1785, P. was sent to explore the Pacific. He doubled Cape Horn, followed the W. Coast of America to California, crossed the Pacific, and traced the Asiatic coast from Manila to Petropaulovsk. The 'Strait of La P.,' between the island of Saghalien and the Japanese island of Yesso, still bears his name. From Petropaulovsk he sent his journals and charts to Paris. In September 1787 he started southwards, and a letter was received from him dated Botany Bay, 7th February, 1788. After this the expedition disappeared. Searches were made by D'Entrecasteaux in 1791, and by Dumont D'Urville in 1828; and it is now supposed that it was wrecked at Vanikoro, in the New Hebrides, in 1788.

PERRON, JACQUES DAVY DU, born at Saint Lo, Normandy, November 15, 1556, was educated at Switzerland, passed from school at ten, and at twenty was a *savant* in Latin, Greek, Hebrew, mathematics and philosophy. Presented by Count Mantignon to Henri III., and by Henri to the poet Desportes, he was persuaded to abjure Protestantism for Roman Catholicism, and he was soon preaching eloquently before the king. Henri IV. appointed him Bishop of Evreux. For his success in converting the king to Catholicism, and for other services to the Church, he was appointed successively Archbishop of Sens, Grand Almoner and Commander of the Order of the Holy Ghost, and Cardinal. In his threefold character of poet, controversialist, and pamphleteer, he was one of the leading men of the age. He died at Paris, September 5, 1618. His works, of which the principal is a *Treatise on the Eucharist*, were printed in 1620. See the Abbé Ferret's *Le Cardinal du P., Orateur, Controversiste, Ecrivain: Etude historique et critique* (Par. 1877).

PERRY, MATTHEW CALBRAITH, COMMODORE, an American officer, born at South Kingston, R. I., in 1795, and entered the navy in 1809. In 1854 he negotiated a treaty with Japan, which for the first time brought that country into commercial relations with the United States. Died in New York City in 1858.

PERRY, OLIVER HAZARD, an American naval officer, born at South Kingston, R. I., Aug. 23, 1785, and entered the U. S. navy

in 1799. He took part in the war with Tripoli, and in 1813 served on Lake Erie under Com. Chauncey. He afterwards fitted out a squadron of nine small vessels, with which he defeated and captured the British fleet, on Sept. 10, 1813. This victory, sometimes called the 'battle of Lake Erie' and sometimes 'Perry's victory,' was one of the most brilliant known to American naval warfare. At its conclusion, Perry sent to Congress the famous despatch, 'We have met the enemy and they are ours.' Congress rewarded him for his gallantry on this occasion with a vote of thanks and a medal, and promoted him to the rank of captain. He continued in active service until the time of his death, at the island of Trinidad, from yellow fever, Aug. 23, 1819. Monuments have been erected to his memory in various parts of the U. S., and the story of his life has been fully written by Capt. A. S. Mackenzie (1841).

PERSIA'NI, MADAME FANNY, operatic singer, was the daughter of Signor Tacchinardi, a celebrated tenor, and was born at Rome, October 14, 1818. She was a leading soprano in the Italian Opera-Houses of London and Paris from 1838 to 1850. Among her greatest successes were in the operas of *Matrimonia Segreto*, *Lucia di Lammermoor*, *L'Elisire d'Amore*, and *Linda di Chamouni*. She excelled in light and sprightly characters.

PERTAPGHUR (*Pratapghar*, 'fort of Pratap'), (1) The capital of the native state of the same name in the N.E. of Rajputana, India, 33 miles S. of Neemuch, and 206 N. of Baroda, the *state* of P. has an area of 1460 sq. miles; pop. 150,000, the majority of whom belong to aboriginal tribes; the gross revenue is £60,000, of which £20,000 is enjoyed by feudatories, and £7200 paid as tribute through the British Government to Holkar, the Mahratta Rajah of Indore. The crops are maize and millet. The title of the chief is Maharawul.—(2) *Pratapgarh*, the chief town of the district of the same name in Oudh, British India, 2 miles from the right bank of the Saee river, 32 miles from Allahabad, and 90 S.E. of Lucknow; pop. (1869) 6240. It is an old town with a ruinous rampart and fort of mud. The *district* of P., which lies in the S. corner of the province, has an area of 1458 sq. miles; pop. (1869) 784,156. The crops are rice, wheat, Indian-corn, barley, sugar-cane, &c.; saltpetre is also produced.

PERTH, the capital of W. Australia, is picturesquely situated on the Swan River, 12 miles from its mouth, in 31° 20′ S. lat., 115° 46′ E. long. It consists principally of one main street nearly two miles long and lined with trees, and contains some good public buildings. The chief of these are the City Hall (built entirely by convict labor), the basement of which is used as a market, and the Protestant and Roman Catholic cathedrals. Pop. (1870) 5007, including the military and 400 convicts.

PERU, a town of La Salle Co., Ill., on the Illinois River, at the mouth of the Illinois & Michigan Canal, and on the Chicago & Rock Island Railroad, 100 miles from Chicago. Coal is here found in abundance, and mining is extensively carried on. Pop. 5057.

PERU, a town of Miami Co., Ind., on the Wabash River and the Wabash & Erie Canal. Distant 75 miles from Indianapolis and 56 from Fort Wayne, it carries on a large trade with the surrounding agricultural district, and is also engaged in manufacturing to a considerable extent. Pop. 5800.

PETAU'RIST, a name given to various species of Marsupial mammals, and, among others, to the opossum mouse (*Acrobates pygmæus*), a creature attaining to the size of a common mouse, and which, like the other members of the family *Phalangistidæ* or phalangers, is marked by an expansion of the skin of the sides of the body, serving as a kind of parachute, and enabling the animal to take flying leaps from tree to tree. The P. is brown above and white beneath. The Taguan (*Petaurista Taguanoides*), another animal belonging to this family, and also known distinctively by the name of P., inhabits New Holland. This animal is blackish-brown on the upper parts and white below.

PETAU'RUS, a genus of *Marsupial* mammalia belonging to the family *Phalangistidæ* or that of the phalangers, and including a species known as 'flying phalangers.' The great flying phalanger or Hepoona Roo (*P. Australis*) of New Holland is a familiar species. It is about 3 feet in length. Its color is a greyish-brown above and white below. Its tail is as long as the body. The squirrel P. (*P. sciureus*) of Norfolk Island is another species. Its length is about 16 inches, and its fur is of a brown color tinted with grey. The tail is long and bushy, and the wing-membrane is well developed. The aerial P. (*P. Ariel*) is the size of a small rat, and exceedingly graceful in its leaping.

PE'TERMANN, AUGUST, a celebrated geographical writer and cartographer, was born at Bleicherode, near Erfurt, April 18, 1822, and educated first at Nordhausen, and after 1839 at the geographical school founded by Berghaus at Potsdam. After working for Berghaus, he went to Edinburgh in 1845, and was there employed on Keith Johnson's physical atlas. In 1847 he removed to London, and became known as a contributor to the *Athenæum* and *Encyclopædia Britannica* on such subjects as the Franklin search, the travels of Barth, Overweg, Vogel, &c. In 1854 he was appointed professor of geography at Gotha, and editor of the *Mittheilungen aus Justus Perthes Geographischer Anstalt*, a periodical famous throughout the world for scientific method and thoroughness, as well as for freshness and range of information. Many of its maps are from his own hand, and on the subject especially of Arctic exploration he has contributed many valuable articles. Among P.'s finer maps are those of Australia and the United States, many in Sticler's *Hand Atlas* (1874), and one of the Eastern States of the American Union in the *Mittheilungen* (Part xi., 1877). P. died at Gotha, 27th Sept. 1878.

PETERS, HUGH, the regicide, born at Fowey, Cornwall, in 1559, entered Trinity College, Cambridge, and graduated M.A. (1622). He first went on the stage, then taking orders, held the lectureship of St. Sepulchre's, London, till an intrigue with a married woman forced him to fly to Rotterdam, whence in 1634 he sailed for America. He was pastor for five years at Salem, returned to England in 1641, became Cromwell's chaplain, and took an active part in the trial and condemnation of Charles I. Kennet even maintains that he was one of the masked executioners. At the Restoration P. was exempted from the Act of Indemnity, and hanged with nine others, October 16, 1660. He was author of *Lectiones in Psalmos* (1647), and *Last Legacy to an Only Child* (1660). See Samuel Peters' *History of the Rev. H. P.* (New York, 1807).

PETH'ERICK, JOHN, an African traveler, of English parentage, was born in 1820, entered the service of Mehemet Ali as a mining engineer in 1845, and became a merchant in 1849 at Khartum, where he was made British consul. He subsequently made two journeys (1857–58 and 1861–63) in the basin of the Upper Nile and the Bahr-el-Ghasal, its great western tributary. He published *Egypt, the Soudan, and Central Africa* in 1861, and sent home much valuable geographical intelligence. Schweinfurth says P. was 'the first to open mercantile transactions with the tribes of those remote regions.'

PE'TRE, an English Catholic family, descended from Sir William P., 'the silent man,' who was Secretary of State under four reigns, and died in 1572. His only son, Sir John P., was raised to the peerage as Baron P. of Writtle, in Essex, July 21, 1603. William, the fourth baron, on Oates's discovery of the 'Popish plot' (1678), was sent to the Tower, where he died, January 5, 1683. His kinsman, Edward P., the famous Jesuit (born 1631), shared his captivity, but was released on the accession of James II., and called to the Privy Council (1687). Hated and threatened by the populace as James's evil genius, he escaped at the Revolution to the Continent, was rector of St. Omer (1693–97), and died at Watten, May 15, 1699. Another ecclesiastic, Francis P., consecrated bishop *in partibus* (1750), and appointed Vicar Apostolic of the northern district of England, died December 24, 1775.

PETROGALE, a genus of kangaroo, popularly including the species named rock kangaroos. Of this genus the *P. pencillata* is the most familiar. Its length is about 4 feet, the tail measuring 23 inches. The color is a purple grey, which is light on the under parts. The P. has no canine teeth, the muzzle is bald, and the tail is tufted at its tip. It is a native of the N.W. of Australia.

PETTICHAPS, the name applied to several kinds of warblers or *Insessorial* birds of the sub-family *Luscininæ*. The greater P. is the Garden White-throat (*Sylvia hortensis*), a bird attaining a length of 6 inches, of a brown color above and white below, the throat being pale brown. Its song is very melodious. The lesser P. (*Sylvia rufa*) is otherwise named the 'Chiff-Chaff' from its cry. It is ashen brown above, and white, tinted with light brown, beneath. Its length is 5 inches. These birds are migratory.

PETT'IE, JOHN, R.A., born in 1839 at Edinburgh, studied at the Royal Academy classes there from 1855 till 1862, and in the latter year removed to London, where he has won a brilliant reputation for vigor, variety, and resource in art. He was elected Associate of the Royal Academy in 1866, and Royal Academician in 1873. Of his numerous works, which are chiefly historical or higher *genre*, it is impossible to mention more than a few of the more prominent, as 'What d'ye lack, Madam?' (1861), 'The Trio' (1863), 'The Rival Roses' (1871), 'The State Secret,' 'Juliet and Friar Lawrence' (1874). 'The Sword and Dagger Fight' (1877), and 'Disbanded' (1878). His painting is remarkable for character, force, and technical dexterity, and in portraiture he occupies a high place.

PETT'Y, SIR WILLIAM, the earliest English economist, was born at Romsey, in Hampshire, May 16, 1623, and was educated at the grammar school of his native town, and at Caen in Normandy. After serving for a short time in the navy, he studied medicine for three years at Leyden, Utrecht, and Paris, and returning to England (1646), obtained a patent for his 'pantagraph' or copying-machine. He went to Oxford (1648), became a fellow of Brasenose (1649) and anatomical professor (1650), and was one

of the earliest members of the Royal Society. Appointed physician to the army in Ireland (1652), he obtained the surveyorship of the forfeited Irish estates (1654), a post which brought him in £10,000, and afterwards became secretary to Henry Cromwell and member for West Looe (1658). At the Restoration he was knighted and created surveyor-general of Ireland, where he did much to promote the mining, timber, and fishing industries, whilst at London he was one of the chief revivers of the Royal Society. He died at Westminster, 16th December 1687, leaving two sons, the second of whom was the ancestor of the Lansdowne family. Besides his valuable treatises on population, P. wrote *Taxes and Contributions* (1662), the financial *Quantulumcunque* (1682), *The Political Anatomy of Ireland* (1692), &c.; and he was the inventor of a double-bottomed ship, which was to sail against wind and tide, but came to an untimely end whilst crossing the Irish Channel.

PEUTINGER, Konrad, a celebrated German antiquary, was born at Augsburg, 14th October 1465. After an education at Padua, Bologna, Florence, and Rome, he returned to Germany about 1486, and became town-clerk of his native city about 1493. After his death (24th December 1547) his valuable library fell to his own family, afterwards, however, to the Jesuits at Augsburg. P. wrote several works on antiquities. He discovered in a Benedictine monastery at Tegernsee the so-called Tabula Peutingeriana, a map of the military roads of the West Roman Empire, dating from the 4th c. A part of it was published by Marcus Welser as *Fragmenta Tabulæ Antiquæ ex Peutingerorum Bibliotheca* (Venice, 1591). From this date the map was mislaid till 1714, when, being discovered among P.'s MSS., it was sold to a bookseller, from whom it was bought by Prince Eugene, who presented it to the Vienna Library. Complete editions have been published by Franz Christoph von Scheyb (Vienna 1753), by Mannert (12 vols. Leips. 1824), who gives a complete account of its fortunes from the 4th to the 19th c., and by D'Urban in his *Recueil d'Itinéraires Anciens* (Par. 1845).

PEYER'S GLANDS, an important group of glands, occurring chiefly in the small intestine, and which appear to be specially affected in typhoid fever. They are most abundant at the terminal part of the *ileum*, near the *ileo-cæcal valve*. These glands are met with in two forms, *solitary* and *agminated*, the latter being also known as *P.'s patches*. The patches vary from 1 to 3 inches in length, and attain a width of about half an inch. They are of oval form. Each gland is from half a line to a line in diameter, and consists of a network of fine fibres containing lymphoid corpuscles. The glands are penetrated by blood-vessels and surrounded with lymphatic vessels. Their functions would appear to be that of absorbing certain materials from the *chyle* or digested food. P. G. are largest in the young, and disappear in adult life.

PHAL'ANX, the name given to each of the joints or small bones of which the digits of vertebrates are composed. Three *phalanges* exist in each digit of man, with the exception of the great toe and thumb, in which only two are found. In some mammals (and particularly in Cetacea) the number of P. is very great.

PHASCOLARC'TOS, a genus of *Marsupial* mammals, represented by the koala or kangaroo bear (*P. cinereus*), also named the 'native sloth' by the Australian colonists. The koala attains a length of 2 feet, and is covered with a bluish-grey fur. The tail is rudimentary, and the claws are strong, and adapt the animal for an arboreal life. The great toe is opposable to the other toes, and the fingers are divided into two sets, so as to constitute a hand-like member capable of grasping the boughs of trees.

PHASCOLOTHE'RIUM, an extinct genus of mammalia, believed to include species of insectivorous marsupialia. The remains of this genus are among the earliest relics of mammalian life on the globe. They occur in the Stonesfield slates of the Lower Oolites. The extinct P. is regarded as being most nearly represented by the existing Opossum.

PHELPS, Elizabeth Stuart, born in Massachusetts, in 1815. She was a daughter of Prof. Stuart of Andover Seminary, and became the wife of Prof. Phelps of the same institution. She published numerous works, such as *The Sunny Side, Tell Tale, Angel over the Right Shoulder*, &c., and died in 1852.

PHELPS, Elizabeth Stuart, daughter of the preceding, born in Massachusetts, in 1844. She has written numerous works, many of which have had wide circulation. Among them are *Men, Women, and Ghosts; Hedged In; The Silent Partner; Story of Avis;* and *Gates Ajar*.

PHIL'IBEG (Gael. *feilcadh*, 'cloth or covering,' and *beag*, 'little'), an article of male apparel, and the characteristic garment of the Scottish Highlanders. It resembles a short petticoat, being suspended from the waist and only extending to the knees. In the lowlands of Scotland and in England the P. is better known by the name *kilt*, a Saxon word signifying 'a tucked-up garment.' The P., which is made of tartan, is usually covered in front by the *sporan* (Gael. 'a purse or pouch'), formed of an animal's skin, and frequently tasseled and otherwise ornamented.

PHILIPPS'BURG, an ancient imperial fortress on the Rhine, 16 miles N. of Carlsruhe. After the Thirty Years' War, in which it played a prominent part, it was ceded to France; in the War with Louis XIV. it was recovered for Germany by Charles of Lorraine; and in 1688 it was taken by the French under Vauban, but restored at the Peace of Ryswick. Again captured by the French in 1734, when their leader the Duke of Berwick was killed, it was only held till 1735. It was finally dismantled by the French in 1800. There is a village of the same name with 2317 inhabitants.

PHILL'IPS, Thomas, R.A., the successor of Fuseli as professor of painting in the Royal Academy, and an able lecturer and art critic, was born at Dudley, Warwickshire, England, in 1770, apprenticed to a glass-painter at Birmingham, and removed to London in 1790. He first exhibited in the Royal Academy a view of Windsor Castle (1792), became an associate in 1804, a full member in 1808, and professor of painting in 1824. Early in his career he painted classical and historical subjects, but afterwards found his true vocation in portrait-painting, in which, though a contemporary of Lawrence, he achieved much distinction. P. died 20th April 1845.

PHILL'IPS, Wen'dell, one of the most distinguished advocates of the abolition of slavery in America, was the son of John Phillips, the first Mayor of Boston, and was born at Boston, November 29, 1811. He was educated at Harvard College, where he graduated in 1831. He then entered the Cambridge Law School, and after remaining there for two years, was admitted to the Suffolk bar in 1834. But he soon gave up the study of law to throw himself heart and soul into the anti-slavery movement, which was then, under the powerful advocacy of William Lloyd Garrison, beginning to agitate American society. He made his *début* as an orator in 1837, at a meeting held in Boston to protest against the murder of the Rev. E. P. Lovejoy, the editor of an anti-slavery newspaper in that town, who had fallen a victim to the fury of a mob; and from that time until the abolition of slavery (February 1, 1865), he was incessantly occupied in promoting the end to which he had devoted his life and his fortune. With a great amount of solid learning, P. united an oratory distinguished for its powerful logic, its pungent wit, and its rich variety of language. He spoke without notes, in a manner grave and dignified, using gesture seldom, but always with great effect. After the abolition of slavery, P. devoted himself chiefly to lecturing on temperance and women's rights. He published *The Constitution of a Pro-Slavery Compact* (1844); *Can Abolitionists Vote or take Office under the United States Constitution?* (1845); *Speeches* (1852); *Defence of the Anti-Slavery Movement* (1853); *Addresses on Slavery, Temperance, &c.* (1859); *Speeches, Lectures, and Letters*, 1853–63 (1863). Died Feb. 2, 1884.

PHIL'POTTS, Henry, D D., born at Bridgewater in Somersetshire, England, May 6, 1778, passed from the College School, Gloucester, to Corpus Christi College, Oxford, graduated B.A. (1793), and was elected a fellow of Magdalen. He became chaplain to the Bishop of Durham (1806), prebendary of Durham (1809), rector of Stanhope (1819), Dean of Chester (1828), and Bishop of Exeter (1830). A strong High Churchman, he was the originator of the Gorham Controversy, whilst in the Parliament he signalized himself by his bitter eloquence against the Reform Bill, the Ecclesiastical Commission, and other Liberal measures. He died at Torquay, September 18, 1869.

PHLYCTENÆ or PHLYCTENULÆ, are semitransparent vesicles, filled with watery fluid, which occur during *humid* mortification, and frequently on the edges of the eyelids, especially at the inner canthus, sometimes single, often in groups, varying in size from a mustard seed to a pea.

PHOTOPHO'BIA (Gr. *phos*. 'light,' and *phobos*, 'fear') is an intolerance or dread or light characteristic of some forms of ophthalmia, more especially those of a strumous nature. In cases of recurrent vascular ulcer, the P. is excessive, and the child hides its head in the darkest corners or in its mother's dress, screams and struggles at every attempt to expose it to the light, and contracts the orbicular muscles spasmodically. The subjects of this disorder are nearly always strumous children, and the state of their eyes often renders them additionally unhealthy.

PHYSOSTOMATA, a division of Teleostean fishes, represented by the eels, herring, salmon, pikes, &c. In this group the air-bladder opens into the throat by means of a pneumatic duct, and the fin-rays are 'soft' or many-jointed. The scales are cycloid, although some of the fishes included in this group are destitute of scales, and in one or two cases ganoid scales may be developed. Ventral fins may be absent, as in the eels (*A. poda*), and when present, they are abdominal in position (*e.g.*, salmon).

PHYTOL'OGY (Gr. *phyton*, 'a plant,' and *logos*, 'a description') is that part of Botany that treats of plants in general.

PIAT'RA, an old town of Moldavia, Roumania, on the W. bank of the Bistritza, an affluent of the Sereth, about 40 miles N.W. of Bakau, a station on the Sereth valley railway. It has paper-mills, and one of the oldest churches in Moldavia. Pop. 20,000.

PIATTI, ALFRED, violoncellist, was born at Bergamos, in N. Italy, in 1825. He received his first lessons in music from Zanetti, after which he was a pupil of Merighi at the Conservatorio of Milan. After obtaining a high Continental reputation, he took up his residence in England in 1846, where he was without a rival as a performer on the violoncello, particularly in chamber music. He has composed some excellent music, including *Un Passetemps Musicale*, *Mazurka Sentimentale*, &c. One of the best of his songs is *The Swallow*.

PIAZ'ZA (Italian *piazza*, 'square, market-place'), an uncovered space enclosed by buildings.

PIAZ'ZA ARMERI'NA, a town of Sicily, province of Caltanisetta, on the left bank of the Terranova, 17 miles E. by S. of Caltanisetta. It has an episcopal palace, several good churches enriched with pictures, and many fine villas. Its trade is in grain, wine, oil, chestnuts, and walnuts. Pop. (1874) 20,310. P. is said to have been founded by Greeks from Platæa.

PICCINI or PICCINNI, NICOLO, a composer of extraordinary fertility, born at Bari, Naples, in 1728, studied for twelve years at the Conservatorio de St. Onofrio under Leo and Durante. On leaving this institution in 1754, he produced his first opera, *Le Donne Dispettose*, followed by shoals of similar works, among the best of which were *Allesandro nell' Indie* (1758) and the graceful *Buona Figlinola* (1760). He visited Paris in 1778, where he produced *Roland* (1778), *Atys* (1780), *Iphigénie in Tauride* (1781), and *Didon* (1783), with such success that many critics pronounced him superior to his great contemporary Glück, a verdict which posterity has scouted. He died at Passy, 7th May 1800. P. wrote over 150 operas, and numerous oratorios and cantatas.—LUIGI P., a second son of the preceding (born 1766, died 1827), had also some musical talent, and composed a number of operas, &c., now forgotten.

PICCOLOMINI, MARIETTA, an operatic singer, born at Siena in Tuscany in 1835. Visiting England with a great Italian reputation, she made her first London appearance as 'Violetta' in *La Traviata* (specially written for her by Verdi) in 1856, and achieved a great success in that country. In 1861 she married, and withdrew from professional life at the early age of twenty-six. Among her best characters were 'Lucia di Lammermoor' and 'Zerlina' in *Don Giovanni*.

PICKENS, ANDREW, an American patriot, born at Paxton, Pa., in 1739, and removed to South Carolina, when young. He served in the Continental army, during the Revolution, and for his gallantry at Cowpens, was presented with a sword by Congress. Died in 1817.

PICKETT, GEORGE E., a Confederate general, born at Richmond, Va., Jan. 25, 1825, and graduated from West Point in 1846. He rendered gallant service during the Mexican war, and was promoted for bravery at Contreras, Churubusco, and Chapultepec. In 1861 he resigned, and entered the Confederate service with the rank of colonel. He was severely wounded at Gaines' Mill, and on July 3, 1863, led the fierce assault that was made upon the Union lines at Gettysburg. Died at Norfolk, Va., July 30, 1875.

PIC'TON, SIR THOMAS, a distinguished English general, was the second son of John Picton, Esq., of Poyston, Pembrokeshire, where he was born in 1758. He entered upon his military career as an ensign in the 12th Regiment of Foot in 1791, was sent to the Antilles in 1794, and after the capture of Trinidad in 1797 he was appointed governor of that island, with the rank of colonel. In 1809 he assisted at the siege of Flushing, and after it had been taken was appointed governor. He afterwards took part in the Spanish war, and stormed the citadel of Badajos in the face of a deadly fire. Appointed in 1815 to the command of the 5th Division of the army, P. saw a large part of his troops destroyed in the engagement at Quatre-Bras, and he himself received a wound. Notwithstanding, he resumed active command at the battle of Waterloo two days after, and was killed by a cannon-ball as he charged the enemy at the head of his men, June 18, 1815. A monument to his memory was erected by command of Parliament in St. Paul's Cathedral.

PIE, the lowest fraction of the Indian currency, being $\frac{1}{12}$th of an anna, or half a farthing in value, used only in accounts. The actual coin in use is the pice = 3 pies, or $1\frac{1}{2}$ farthings.

PIE'TRASAN'TA, a town in the province of Lucca, Italy, on a hill 2 miles inland, and 20 N.W. of Lucca. It is girt by a castellated wall, and has many fine buildings of the 14th and 15th centuries. P. is the chief place from which the Serravezza marble is sent to market. The vicinity produces much oil and wine. Pop. (1874) 13,227.

PIGEON ENGLISH, a mixed dialect, consisting of English, Chinese, Portuguese, and Hindustanee words, employed for business purposes in China. The words are few and it is never printed. A dialect very similar to it is used in some of the western cities of the U. S., where there are large Chinese populations.

PIKE, ZEBULON MONTGOMERY, an American general, born at Lamberton, N. J., Jan. 5, 1779, and entered the army in early life. He conducted surveys of large parts of the Louisiana purchase, for which he received special thanks from Congress. In 1813 he was made brigadier-general, and was killed, April 27 of the same year, while leading an assault upon York (now the city of Toronto), Canada. His life has been written by H. Whiting.

PILE'OLUS, a fossil genus of *Gasteropodous* molluscs, the shells of which are of small size and of limpet shape, and occur in the Lower Oolitic rocks. It belongs to the family *Neritidæ*.

PILLOW, GIDEON JOHNSON, born in Tennessee, in 1806, and became a successful lawyer, at Columbia, in his native state. He served with distinction during the Mexican war, and was twice wounded, at Cerro Gordo and Chapultepec, winning, by his gallantry, promotion to the rank of major-general. At the outbreak of the civil war, he entered the Confederate service, and continued therein until the termination of that struggle. Died in 1878.

PILOTY, KARL, one of Germany's greatest painters, was born at Munich, October 1, 1826, and studied first under his father, Ferdinand P., an eminent lithographer (died January 8, 1844), and afterwards in the Academy of Munich under Schorn. Shortly after his return from a journey to Paris, Brussels, and London, he was commissioned by the king to paint 'The Founding of the Catholic League (1854), and the fame which this picture gained him was greatly enhanced by his 'Seni before the Corpse of Wallenstein' (1855). In 1856 P. became a professor in the Munich Academy, and its director in 1874. He has painted some fine portraits, but his masterpieces are the great historical pictures 'Nero on the Ruins of Rome' (1861), exhibited at the London International Exhibition of 1862, 'Galileo in Prison' (1864), 'The Death of Cæsar' (1866), 'Thusnelda in the Triumphal Procession of Germanicus' (1873), and 'The Arrest of Anne Boleyn' (1874).

PINCKNEY, CHARLES COTESWORTH, LL.D., an American lawyer and statesman, born at Charleston, S. C., Oct. 23, 1750, was educated at Oxford, England, and began the practice of law in his native city in 1769. He served with distinction in the war of the Revolution, was one of the framers of the U. S. Constitution, was special minister to France (1796–97), was the candidate of the Federalist party for Vice-President in 1800, and was the author of the oft-quoted words, 'Millions for defence, but not one cent for tribute.' Died at Charleston, S. C., Aug. 16, 1825.

PINDAR'IS, a collection of freebooters who established a system of terrorism in Central India at the beginning of the present century. They were mostly Mohammedans, but were bound together by no common nationality or discipline. They followed in the wake of the Mahratta armies, and were encouraged by the Mahratta leaders. In 1812 their numbers were estimated at 60,000 horsemen, armed with spear and matchlock. Their plunderings, torturings, and other excesses knew no bounds; and in 1817 Lord Hastings' resolution to restore order in Central India led to what is sometimes known as the fourth and last Mahratta War, in which the names of Elphinstone and Malcolm figure conspicuously. One of the Pindari chiefs, Ameer Khan, agreed to disband his followers in consideration of a *jageer* which has now become the State of Tonk. Of the other three principal chiefs, one took poison, one surrendered himself, and the third was miserably destroyed by a tiger in the jungle. Their Mahratta allies, the Peishwa and Holkar, were completely defeated, and thirty hill fortresses were captured in a few weeks. The native states of Central India and Rajpootana were formally taken under British protection; order was enforced among the Bheels and other wild tribes, and this part of India was placed in the direction of progress which it has since continued to pursue.

PINE BLUFF, a town of Jefferson Co., Ark., on the Arkansas River, at the head of low water navigation, 45 miles from Little Rock. It is surrounded by an agricultural region, and cotton is the principal staple. Pop. 4126.

PINNIGRA'DA and PINNIPE'DIA, terms applied to that section of *Carnivorous* quadrupeds, including the seal and walrus, in which the limbs are modified to form swimming paddles. In these animals the body is long and fishlike. The tail is short and rudimentary, and the limbs are also short. The hinder legs are placed far back on the body, so that their axis nearly corresponds to that of the body itself, and the hind limbs together with the posterior extremity of the body form an admirable swimming apparatus.

The toes are provided with strong nails. External ears may be wanting, and at most are rudimentary. Both ears and nostrils are valvular, and may be closed at will. The bones are of spongy texture and light construction. The canine teeth are long and pointed.

PIQUA, a town of Miami Co., O., on the Great Miami River and the Miami & Erie Canal. It has two railroads, and is 73 miles from Columbus and 28 from Dayton. It has some manufacturing and is a place of considerable trade. Pop. 6031.

PITCAIRNE', ARCHIBALD, a Scotch physician, born at Edinburgh, Scotland, 25th December 1652, studied at the university of his native city and at Paris, and acquired a wide reputation at home as a practising physician. His celebrity even secured him 'a professorship' in Leyden University, which, however, he held only for a year. He died 20th October 1713, and was buried in Greyfriars' Churchyard. P.'s chief professional work, *Elementa Medicinæ Physico-Mathematica* (1718), consists of his Leyden lectures. It was long a standard treatise on its subject. The author was an ardent disciple of Harvey in his great doctrine of the circulation of the blood. An elegant scholar, and a verse-maker of some skill, P. occasionally employed his leisure in irritating his Presbyterian countrymen by satirical effusions which exposed him to the charges of atheism and impiety.

PIT'MAN, ISAAC, born at Trowbridge, Wilts, England, January 4, 1813, was educated at the grammar-school of his native town, and at the Normal College of the British and Foreign School Society in London, became master of the British School at Barton-on Humber, Lincolnshire (1832), and established a similar school at Wotton-under-Edge, Gloucestershire (1836), publishing his *Stenographic Sound-hand* (1837). He removed to Bath (1839), and there elaborated a phonetic system, which Max Müller pronounces the best of its kind, his *Phonography, or Writing of Sound*, appearing in 1840. In 1843 he founded the Phonetic Society and the Phonetic Institute, the latter a printing-office, from which have issued the *Phonographic Reporter's Companion* (1853), a large number of standard works in phonetic spelling, and the *Phonetic Journal*.

PITT, THOMAS, the founder of the famous family of English statesmen, was born at St. Mary's Blandford in 1653. Towards the close of the century he went to the East, and was governor of Fort St. George, Madras (1698–1702). In 1714 he was made governor of Jamaica. He sat in four Parliaments, and died 28th April 1726. The P. diamond is so called from having been in his possession. His son, ROBERT P. of Boconnoc in Cornwall (died 1727), was father of the illustrious Earl of Chatham.

PITTA, a genus of Insessorial birds, belonging to the Dentirostral group of the order, and including, among other forms, the Giant Ant-Thrush or Giant Breve (*P. Bengalensis*), the Black-headed P. (*P. melanocephala*), and the Crimson-headed P. (*P. granatica*). The true ant-thrushes are found in both Old and New Worlds; the breves are confined to the former.

PITTSTON, in Luzerne Co., on the N. branch of the Susquehanna River, at the head of Wyoming Valley. It has coal mines and considerable manufacturing. Pop. 7472.

PLAC'ODUS, an extinct genus of Vertebrate animals, the remains of which occur in rocks of *Triassic* age. It was formerly regarded as a fossil fish of the *Ganoid* kind, but is now held to be reptilian, and is included in modern systems of classification in the order *Sauropterygia*, a group to which the *Plesiosauri* and other extinct reptiles belong. In P. the teeth occupied distinct sockets. They were of rounded form, and resembled the flat plate-like teeth found in some rays and sharks, and which are adapted for crushing the hard shells of crustaceans, &c. A double series of teeth were developed in the upper jaw of the P.; only a single row in the lower jaw.

PLAGUES OF EGYPT were ten calamities brought upon the country by Moses, with the purpose of compelling Pharaoh to let the Hebrews leave Egypt and set out for Canaan. Opinion regarding these P. (enumerated Exod. vii.–xii.) has been somewhat modified of late years. Travelers have discovered that they correspond in a remarkable degree with natural phenomena which occur in the country: *e. g.*, the Nile at certain season has a blood-red appearance; extraordinary numbers of frogs sometimes make their appearance; the country is sometimes visited by a murrain among the cattle, or a plague of locusts; a species of stinging fly and a painful skin disease occasionally afflicts man and beast; and a wind from the desert at times raises such clouds of sand as to obscure the air for days. Accordingly, while the Rationalistic school consider the P. myths have arisen out of the natural phenomena, the ablest conservative critics explain the first nine as 'having become signs and wonders through their vast excess above the natural measure of such natural occurrences and their supernatural accumulation.'

But by many the greatest difficulty is felt to be the implied idea that the displeasure of God is expressed by physical disaster, an idea which, though universally held in ancient times, is now regarded by educated people with considerable suspicion. Again, perhaps the greatest difficulty encountered by rationalizing critics is how to account for what the magicians of Egypt are said to have done. According to the Christian Fathers they did it by the help of demons, or according to the latest theory it was mere jugglery. But that the writer meant that the magicians did the same things as Moses in certain of the wonders, is just as clear to a candid reader as that he understood the P. to be miracles. And hence the real difficulty here is the implied belief, which was also universally held in ancient times, that magicians could do things which far surpassed the power of ordinary mortals. See *The Speaker's Commentary* (vol. ii. Lond. 1872), *The Bible for Young People*, by Oort, Hooykaas, and Knenen (vol. ii. Eng. trans. 1875).

PLAITING, or PLATTING, is the art of interlacing flexible materials in order to produce a basket, mat, or other articles. This art, which is allied to weaving, only differing from it in the fact that the fibres employed are not previously spun, has been universally practised from the most remote ages to the present time. Many degraded races, ignorant of the art of weaving, are very expert in P., while in civilized communities it is the foundation of the straw-plait and basket-making industries.

PLANT-CUTTER (*Phytotoma*), a genus of Insessorial birds, allied to the *Plantain-Eaters* and found in S. America. The Chilian P. (*P. vara*) is a familiar species. It attains the size of a thrush, and derives its name from its habit of cutting the stalks of cereals with its sharp bill. The color is grey tinted with bronze above; the breast and belly are a slaty-blue. The quills of the wing and tail are black.

PLAN'ULA, the name given in zoology to the general form of the embryo in *Cœlenterate* animals, and especially in the class *Hydrozoa*. The P. is a minute speck of protoplasmic matter, of oval shape, and having numerous *cilia*.

PLATANIS'TA, a genus of *Cetacea* belonging to the Dolphin family, inhabiting the estuary of the Ganges. It has a very long slender muzzle, and about 120 teeth. The beak is somewhat expanded in the middle. It is of a greyish-black color above and white below. The eyes are very small. There is no dorsal fin. The P. is familiarly known as the 'Soosoo,' and as the 'Gangetic Dolphin.'

PLA'TEN-HALLERMUND, more commonly PLATEN-HALLERMÜNDE, AUGUST GRAF VON, a German poet, born at Ansbach, 24th October 1796, studied philology at Würzburg and Erlangen, and first appeared as an author in his *Ghaselen* (Erlang. 1821). This was followed by *Lyrische Blätter* (Leips. 1821), and *Vermischte Schriften* (Erlang. 1822). The fruits of a visit to Italy are seen in his *Sonette aus Venedig* (Erlang. 1825). Later works as *Das gläserne Pantoffel*, *Das verhängnissvolle Gabel* (1826), *Der Romantische Œdipus* (1829). *Schauspiele* (Stuttg. and Tüb. 1828), *Die Liga von Cambrai* (Frankf. 1833), and *Geschichte des Königreichs Neapel von* 1414–43 (Frankf. 1833). His last work was *Die Abbasiden* (Stuttg. 1835), a large poem in nine cantos. P. died of fever at Syracuse, 5th December 1835. His *Gesammelte Werke* were published at Stuttgart in 1838 (later editions 1847 and 1853). A complete edition of his *Gedichte* appeared at the same place in 1848 (new ed. 1852). P. was a true and earnest if not a great poet; somewhat didactic and formal, but pure in spirit and of high intent. See Minckwitz, *Graf P. als Mensch und Dichter* (Leips. 1838), and *Briefwechsel zwischen P. und Minckwitz* (Leips. 1836). P.'s *Tagebuch* was edited by Pfeufer (Stuttg. 1860).

PLATYCRI'NUS, a genus of fossil *Crinoids* or lily-stars. *P. tricontadactylus* of the Carboniferous series is a familiar species. The stalk or column was of oval or elliptical shape, and had its articulating surfaces or facets marked by striæ or lines radiating from the center of the joint. P. is one of the Palæocrinoids or older group, attaining its highest developments in Palæozoic rocks.

PLATYRHI'NA (Gr. 'broad-nosed'), a genus of *Quadrumana* or Monkeys, confined to the New World. In this division the Marmosets (*Hapale*), Spider monkeys (*Ateles*), Howlers (*Mycetes*), the Capuchins (*Cebus*), &c., are included. The P. have no callosities or cheek ponches. The tail is long and is usually prehensile. The thumbs are wanting in *Cebus*. The nostrils are placed far apart and separated by a broad septum—hence the name 'P.' The premolar teeth number 6 in each jaw. These monkeys live on trees.

PLAYFAIR, LYON, son of Mr. George P., chief inspector-general of the hospitals of Bengal, was born at Meerut, May 21, 1819, and commenced his chemical studies at St. Andrews and the Andersonian University, Glasgow (1834). After revisiting India to recruit his health (1837), and studying organic chemistry under Liebig at Giessen (1838), he became head of some large calico printworks at Clitheroe, whence he was called to the chair of Chemistry in the Manchester Royal Institution (1843). He served on the commission to inquire into the sanitary condition of towns (1844); for his services as special commissioner of juries

in the Great Exhibition of 1851 was made a Companion of the Bath, and received a joint-secretaryship with Mr. Cole in the newly-founded department of Science and Art (1853). He became inspector-general of Government museums and schools of science (1856), President of the Chemical Society of London (1857), and Professor of Chemistry in the University of Edinburgh (1858), besides acting on the mines, Scotch fisheries, cattle plague, and other commissions. A Liberal in politics, he represented the Universities of Edinburgh and St. Andrews, in parliament, held office as Postmaster-General in the Ministry of 1869–74, being also made a Privy Councilor and Chairman of Committees of House of Commons (1880). Besides some translations of Liebig's works, he has published *Science in its Relation to Labor* (1853); *On Primary and Technical Education* (1870), and other treatises.

PLAY'FORD, JOHN, a writer and publisher of music, was born in England, in 1613. His *Introduction to the Skill of Music* passed through ten editions from 1665 to 1684. He also published *Court Ayres* and *Psalms and Hymns in Solemn Music*. He died about 1693.—His son, HENRY P., published *Orpheus Britannicus*, the celebrated collection of Purcell's works.

PLEAS'ONTON, ALFRED, an American general, born in the District of Columbia, in 1823, and graduated from West Point in 1844. He served in the Mexican war, and was promoted for gallantry at Palo Alto and Resaca de la Palma. In 1862 he was made brigadier-general of volunteers, and placed in command of a division of cavalry of the army of the Potomac, which he led at Boonsboro', South Mountain, Antietam, Fredericksburg, and Chancellorsville. For his valuable services at the last of these, he was promoted to be major-general. He was present at Gettysburg, and was afterwards transferred to Missouri, from which state he drove Gen. Price. He resigned from the army in 1868.

PLECO'TUS, a genus of *Cheiroptera* or Bats, including the *P. communis*, the common long-eared bat of Britain, and other species. In this genus, which belongs to the insectivorous family *Vespertilionidæ*, the ears are large, and are united at their basis. The teeth number 36. The length of the *P. communis* is 3 inches, its wing membrane when spread out to its fullest extent from 13 to 14 inches. The fur is a greyish-brown.

PLENTY, BAY OF, a bight on the N.E. coast of the N. Island of New Zealand, so named by Cook on account of the abundance of food and water he there obtained. It is about 100 miles wide, and is studded with a number of small islands, one of which contains a hot lake, geysers, and mud springs. The shores of the B. of P. are for the most part thickly wooded, but the western portion is more open, and adapted to agriculture and sheep-farming. The principal settlement is Taoranga, near the W. extremity. It has a good harbor.

PLEURACANTHUS, a genus of fossil Elasmobranchiate fishes, belong to the Rays. The remains of P. consist chiefly of fin-spines or ichthyodorulites which occur in the Carboniferous rocks. The spines were provided with a double row of sharp processes or 'teeth.' P. remains are the oldest known fossil traces of Rays.

PLEUROBRACH'IA, a typical genus of *Cœlenterate* animals belonging to the order *Ctenophora*. *P. pileus* is a well-known species, attaining the size of a lemon or orange, and having a body of the shape of these fruits, and of clear colorless nature and gelatinous consistence. The mouth is at one extremity or pole of the body, which is divided into spaces externally by eight meridional bands of *cilia*, arranged in comb-like fashion and named *ctenophores*. Two long tentacles are also present, which are capable of being retracted at will. From the stomach of P. three pairs of canals (*radial*, *apical*, and *paragastric*) are given off, and at the lower or apical pole of the body there is a small sense-organ named a *ctenocyst*, together with a nervous ganglion, the latter being one of the first defined appearances of a nervous system in the animal world.

PLEURODONT LIZ'ARDS, a group of Lizards including those which have the teeth inserted in a groove on the inner side of the jaw. The term is used in contradistinction to 'Acrodont,' which is applied to lizards having teeth ossified to the summit or top of the jaw-bones.

PLEV'NA, a fortified town in Bulgaria, on a tributary of the Vid, 5 miles E. of the main stream, and 25 S.S.W. of Nicopolis on the road leading, *via* Lovatz, across the Balkans to Philipopolis. It was an unimportant open town till Osman Pasha surrounded it with entrenched works, and it is mainly remarkable as the scene of the great decisive struggle in the late Russo-Turkish War. Osman Pasha advanced from Widdin with thirty-six battalions and forty-four guns to the relief of Nicopolis, but arriving too late for this object, was allowed, without opposition, to occupy P. on the 14th July 1877. Krudener sent Schilder with three regiments against P. on the 24th July, only, however, to be repulsed with terrible loss. The importance of the position being at length realized by the Russians, a determined effort to take it at any cost was ordered to be made under Krudener and Schakofskoy. All the available troops were hurled against P. on July 31, but the result was a repulse even more disastrous than the first. The two leaders acted independently; Schakofskoy went recklessly forward, while Krudener was unable to give him support. The whole plan of the campaign had to be altered, as a general advance was impossible with P. untaken on the flank. A period of inactivity followed, in which the Russians brought up reinforcements, and Osman strengthened his fortifications. Early in September the Grand Duke Nicholas was at the head of 60,000 men, but military critics considered that the task required double the number. After four days bombardment the great assault was made on September 11th, in presence of the Czar himself. It was repulsed with heavy loss at all points except the center, where the Roumanians took and held the Grivitza redoubt, and the S., where Skobeleff took two redoubts from which he had to retire on the following day.

This crushing defeat compelled the Russians to turn the assault into a siege, and General Todleben was charged to invest and starve P. into surrender. By adroit management on the part of the Turks, large reinforcements and convoys of provisions and ammunition were safely got into P. before the investment was complete. But Gourko and Skobeleff, driving the Turks from a line of villages, eventually closed the road to Orkanye, where Chefket Pasha was contributing to the relief of P. and providing a retreat for Osman. Not only was P. now hemmed in, but the assailants were strengthened by the arrival of the Imperial Guards. Week after week passed, however, and Osman, cut off from the world, held out with heroic firmness, until to hold out longer was impossible. On December 11, he failed in a supreme effort to break through the encircling band in the direction of Widdin, and was forced to surrender with an army reduced by this time to little more than 20,000 men and with sixty guns. The Russian loss has been estimated at 50,000 lives, 25,000 in the September assault alone.

PLI'OCENE PERIOD is the third and highest member of the Tertiary Period. Above 50 per cent. of its fossil shells are existing species. The formations belonging to this age are of small development in Britain, being met with only in Suffolk and Norfolk, where, spreading over the Lower Eocene, they overlap the Chalk. Three groups are distinguished—(1) *The Coralline Crag*, a series of soft, marly, whitish sands, sometimes speckled with green, containing occasionally thin bands of limestone. Of the 350 species of marine mollusca, about 30 per cent. are extinct. (2) *The Red Crag*, a group of beds of red sands and gravel, with accumulations of rolled shells. It is usually found side by side with the Coralline Crag, though here and there in hollows of the latter portions of it exist. Of its 256 marine shells 25 per cent. are extinct. (3) *The Norwich Crag*, a series of beds of sand, gravel, and loam, which contain a mingling of marine, freshwater, and land shells, with bones of several extinct mammals. There is evidence of the beginning of that severity of climate which attained its climax in the glacial period. Pliocene formations are found in Belgium, in Italy flanking the low heights of the Apennines, in Sicily covering nearly one-half of that island, and in S. Russia round the coasts of the Caspian and Aral Seas, and the N.-western shores of the Black Sea.

PLOJES'TI, a town of Roumania, on the Dimbow, a sub-affluent of the Danube, 33 miles N.N.E. of Bucharest by rail. It is embowered amid gardens and groves, and has some trade in grain, wool, &c. During the Russo-Turkish War (1877–78) it was for some time the headquarters of the Russian Emperor. Pop. (1870) 26,468.

PLOVER-CREST (*Cephalephis Delalandii*), a species of Humming-bird, found in the southern parts of Brazil. The males have a very prominent head-crest. The color is green above; the under parts are violet.

PLUME BIRD (*Epimachus*), a genus of Insessorial birds belonging to the *Tenuirostral* group of the order, and to the family *Upupidæ* or Hoopoes. It forms a sub-family (*Epinachinæ*), in which the bill is slender and arched, and the wings of moderate size and rounded. The hinder toe is very long, as is also the tail. The tarsi are scaled in front, and the sides of the body are covered with expanded feathers. The P. B. is an inhabitant of Australia and New Guinea, where it represents the Humming-bird. The Superb P. B. (*E. magnus*) has a small body; the plumage, however, being developed to such an extraordinary extent that the body appears to measure about 4 feet in length. The head, neck, and under parts are green, the back and wings being of a lustrous violet tint. The Twelve-thread P. B. (*E. albus*) somewhat resembles the 'Bird of Paradise' in appearance, and derives its name from the silken plumes of the back, which give off long thread-like prolongations. The plumage is for the most part of a rich violet hue.

PLUMPTRE, REV. EDWARD HAYES, born August 6, 1821, obtained a scholarship at University College, Oxford, and was

elected fellow of Brasenose (1844). He became chaplain at King's College, London (1847), Professor of Pastoral Theology in that institute (1853), Prebendary of St. Paul's (1863), and Professor of New Testament Exegesis (1864). In 1869 he was presented to the rectory of Pluckley, and in 1873 to the vicarage of Bickley, both in Kent. Professor P. has published *Sermons at King's College* (1859); *Lazarus and other Poems* (1864); *Christ and Christendom: the Boyle Lectures for* 1866 (1867); translations of Sophocles (1866) and Æschylus (1870); *Biblical Studies* (1870); *Popular Exposition of the Epistles to the Seven Churches of Asia* (1877), &c.

PNEUMOTHOR'AX (Gr. *pneuma*, 'wind,' and *thòrax*, 'the breast'), or air within the cavity of the pleura, may be caused by fractured ribs, or blows; but, in the great majority of cases, air is admitted by the bursting of a small cavity into the pleura in the progress of phthisis. The symptoms of P. are sudden and severe pain, faintness and dyspnœa, followed by swelling and lividity of the face and lips. The percussion sound on the affected side is abnormally clear or dull, the intercostal spaces are bulged out, and the respiration sounds are absent, or are greatly diminished. In general, there is, in addition, an influx of fluid, which may be detected at the base of the pleura by dullness on percussion, and by a splashing sound when the patient is shaken.

POCOCK, Edward, D.D., born at Oxford, England, November 8, 1604, passed from Thame free school to Magdalen Hall, Oxford (1619), and thence to Corpus Christi, of which he became a fellow (1628). Having already studied Oriental languages, he went to the Levant in 1630 as chaplain to the English factory at Aleppo, and there perfected himself in Arabic, made great progress in Syriac and Ethiopic, and collected for Laud a vast number of Oriental MSS. Returning to Oxford (1636), he was appointed Laudian Professor of Arabic, but shortly repairing to Constantinople on a second quest after MSS., came back to find the archbishop in the Tower. P. thereupon retired to his college living of Childrey, Berkshire, but in 1647 regained his professorship through the offices of Selden, and a year later was promoted to the chair of Hebrew, with a Christ Church canonry annexed. He was ejected from the latter (1650), but reinstated at the Restoration, aided Brian Walton in his Polyglot Bible (6 vols. 1657), and died at Oxford, September 10, 1691, leaving two sons, Edward and Thomas, who were also distinguished Orientalists. P. published *Specimen Historiæ Arabum* (1649), *Porta Mosis; or, Six Discourses of Maimonides* (1655), *Carmen Abu Ismaelis Tograi* (1661), commentaries on Micah, Malachi, Hosea, and Joel, &c. His *Theological Works* were edited by L. Twells, with a life prefixed (2 vols. Oxf. 1740).—Richard Pococke, D.D., a member of the same family as the preceding, was born in 1704 at Southamptom, entered Corpus Christi College, Oxford, and graduated LL.D. (1733). He traveled on the continent (1734–36), and in Egypt, Syria, Mesopotamia, and Asia Minor (1737–41), publishing on his return to England *A Description of the East and of some other Countries* (2 vols. Lond. 1743–45). He became precentor of Waterford (1744), Archdeacon of Dublin (1745), and Bishop of Ossory (1756). Hence he was translated to Elphin, and lastly to Meath, where he died, September 1765.

POINTE-A-PITRE, the chief town of the division Grand Terre in the French island of Guadeloupe, on the Petit Cul-de-Sac, 20 miles N.E. of Basse Terre. It has an excellent harbor, and carries on an active export trade in sugar, rum, coffee, tobacco, &c. Pop. 15,000.

POI'TREL is the name that was applied to the hinged or flounced plate which covered the breast of an armor-clad warhorse in the 15th c.

POLE'WIG (*Gobius minutus*), a species of Teleostean fishes belonging to the Gobies, and distinguished by its small size and transparent grey color, varied with black dots and dark patches.

POLITICAL PARTIES IN THE UNITED STATES. Under a republican form of government it is essential that there should be at least two political parties, in order that each may serve as a safeguard against the other; and it is perhaps desirable that they should be nearly balanced in power. Then, if the party in authority, should violate its trust, the people can promptly remedy the evil, by transferring their allegiance to the other. It is the purpose of this article to briefly outline the careers of the parties which have appeared from time to time in the political history of the U. S. During the exciting times which immediately preceded the Revolutionary struggle, and during that struggle, the colonists were divided into Whigs and Tories.

The former of these were ardent patriots and in full sympathy with the movement for independence, while the latter still clung to the mother government and aided the armies of Great Britain in every possible way, many of them taking up arms and entering the British service. The conflict with England having been brought to a happy conclusion, the next question which engaged the minds of American statesmen, had reference to what mode of government should be permanently adopted. This gave rise to a difference of opinion and resulted in producing what are known as the Federal and Anti-Federal parties. The Federalists favored a strong central government, and were led by such men as Hamilton, Madison, and Jay. The Anti-Federalists, on the other hand, were opposed to making the Union of the States anything more than a loose confederation. They were led by Patrick Henry, Samuel Adams, and others. The former of these parties desired the adoption of a constitution, while the latter were opposed to any great modification of the original Articles of Confederation. In this struggle the Federalists were the victors.

In 1787 a convention met at Philadelphia and framed a Federal Constitution, which was subsequently ratified by the requisite number of states. The Anti-Federalists eventually developed into the Republican Party, and by 1793, the line between the two parties, Federalists and Republicans, was plainly drawn. The latter opposed all further grants of power by the states to the Union, and charged their opponents, the Federalists, with monarchical tendences. It does not lie within the province of this article to pursue the struggle between these parties in its details, the general character of their aims having already been indicated. Among the leaders of the Federalists were John Adams, Thomas Pinckney, De Witt Clinton, Alexander Hamilton, and Rufus King; while among the Republican leaders were George Clinton, Thomas Jefferson, Aaron Burr, Madison, Monroe, and others. Early in the present century, about 1805, the Republicans dropped their name and accepted that of Democrats, thus beginning the history of the Democratic Party of to-day.

In 1828 the National Republican Party appeared upon the scene of action, and nominated J. Q. Adams for the presidency against Andrew Jackson. This party subsequently developed into the Whig Party, which, in 1840, elected Harrison president over Van Buren, Democrat. The struggle between Whigs and Democrats, principally over matters of public improvement, continued down to 1856, when the Republican Party, an outgrowth of the Free Soil Party and anti-slavery Whigs, appeared. The struggle between these two parties for dominance has continued down to the present day. The first issues between the Democratic and Republican parties were with reference to slavery, but since the abolition of that institution through the Civil War, new issues are springing up, and the memory of old ones is ceasing to influence voters. Besides these there have been numerous other political parties, based upon lesser issues, and failing to influence large votes. In 1856 the American Party nominated Fillmore for president. This party, sometimes called Know-Nothings, was based upon opposition to the foreign element in American politics, and had but an ephemeral existence. See Anti-Renters and Anti-Masons in Am. Supplement.

POLK, Leonidas, a Confederate general, born at Raleigh, N. C., in 1806, and graduated from West Point in 1827. Having resigned from the army, he was in 1831 admitted to the ministry of the Episcopal church; in 1838 became bishop of Arkansas and the Indian Territory; and in 1841 was made bishop of Louisiana. In 1861 he entered the service of the Confederate States, with the rank of major-general. He was engaged at Murfreesboro', Chattanooga, and Chickamanga, and was killed at Pine Mountain, Ga., June 14, 1864.

POLLARD, Edward A., an American historical writer, born in Virginia in 1838. During the civil war, he edited the Richmond *Examiner*. His principal works are *The Lost Cause Regained*, *Eight Months in Prison*, *Life of Jefferson Davis*, *Southern History of the War*, *Life of Jefferson*, *The Lost Cause*, and *Lee and his Lieutenants*.

POLLILORE, a town in the district of Chingleput, Madras Presidency, British India, near Conjeveram, and 43 miles S.W. from Madras. It is the scene of two battles. In 1780 Colonel Baillie was here completely defeated and taken prisoner by Hyder Ali. This was the greatest defeat the British had hitherto sustained in India. The lives of the prisoners were only saved by the intervention of Hyder's French officers. Paintings commemorative of the victory are still to be seen at Seringapatam. But in the following year, on the anniversary of the former battle according to the lunar calendar, Sir Eyre Coote won his first victory over Hyder Ali on the same spot.

POLL'OCK, Sir George, a son of David P., saddler to George III., was born in Westminster, England, 4th June 1786, and educated at a school in Vauxhall. He entered the Military Academy of Woolwich (1801), sailed for Calcutta (1803), and received his commission as lieutenant of artillery in the service of the East India Company (1804). He was present at the storming of Deeg and the unsuccessful assault on Bhurtpore (1805), in the Nepaulese campaign commanded the artillery under General Wood (1817), and for his services as lieutenant-colonel in the war with Burmah received the Companionship of the Bath (1825). In the Afghan War of 1842, with a single battalion of infantry, one regiment of dragoons, and fourteen guns, he forced the Khyber Pass, defeated Akhbar Khan, and by his occupation of Cabul effected the relief

of Jellalabad, being rewarded for these splendid services by the thanks of Parliament, the Grand Cross of the Bath, and a life pension of £1000 from the East India Company. He was appointed envoy at the court of Oude (1843) and military member of the Supreme Council (1844), returned to England (1846), and took up his residence at Clapham, obtaining his promotion as lieutenant-general (1851) and general (1859), whilst holding the senior directorship of the Company (1854–56). He was created field-marshal (1870), Constable of the Tower (1871), and a baronet (1872), and dying at Walmer, 6th October 1872, was buried in Westminster Abbey. See C. R. Low's *Life and Correspondence of Sir George P.* (1873).—SIR FREDERICK P., elder brother of the preceding, was born in London, 23d September 1783, and passing from St. Paul's School to Trinity College, Cambridge (1802), was Senior Wrangler and Smith's Prizeman (1806), and obtained a college fellowship (1807). Called to the bar at the Middle Temple in the same year, he traveled the Northern Circuit, dividing its honors with Brougham, Scarlett, and Campbell, was made a King's Counsel (1827), and returned as Conservative member for Huntingdon (1831). Having served as Attorney-General in Peel's Ministries of 1834 and 1841, he was created Lord Chief Baron of the Exchequer (1844), on the resignation of which office in 1866 he received a baronetcy. He died 23d August 1870.

POLYCYSTI'NA, a group of *Protozoa*, belonging to the class *Rhizopoda*, and allied to the *Foraminifera*. These animals are all microscopic, and possess shells of flinty material, and of exceeding delicacy of form and beauty of outline. They are usually included in the group *Radiolaria*. Many species occur in a fossil state, the so-called 'Infusorial earth' of Barbadoes being almost entirely composed of the minute shells of P. This deposit is of Tertiary age.

POL'YGAR (*palegara*, 'tent-man'), the name applied to a class of petty chieftains, who were found by the British at the close of the last century established in the S. of India, especially in the Carnatic. They occupied hill forts, and lived by plunder. They offered a strenuous opposition to the pacification of the country; but the majority were dispossessed, and the remainder, deprived of their independence, have settled down into ordinary *zemindars* or landholders.

POLY'PIDE, a name used in Zoology to indicate the separate individuals composing a *Polyzoön*, or member of the class *Polyzoa*.

POLYPRI'ON, a genus of Teleostean fishes represented by the Stone Basse (*P. cernium*), or Couch's P., and by other species. It is nearly allied to the perch, and is included in the family *Percidæ* itself. Its color is a dark brown, tinted with purple. The first fin rays are spiny. The Stone Basse usually swims near floating timber and wreckage, and appears to feed on smaller fishes.

POMEROY, in Meigs Co., O., on the Ohio River, 239 miles below Pittsburgh. It is connected with Cincinnati and the other river towns by a daily line of packets, and is engaged in coal-mining and the manufacture of salt. Pop. 7600.

PONCE, a town on the S. coast of the Spanish island of Puerto Rico, standing about 3 miles inland from its harbor, has a Catholic church in semi-Moorish style, an Anglican church (1874), a well-built townhall, a theater with accommodation for 2000 people, and an hospital erected (1875) at a cost of $40,000. The streets are lit with gas, and waterworks have been constructed. The steamers of the Royal Mail Company touch weekly at the port, and there is telegraphic communication with Jamaica and Santa Cruz. The exports (sugar, molasses, coffee, and tobacco) amounted in 1884 to $2,400,000; the imports (hardware, lumber, provisions, &c.) to $2,100,000. Estimated pop. (1877) 12,000.

PONSÆ'LION is the name of a new and beautiful scarlet pigment prepared by boiling cyanide of potassium with binoxide of mercury, adding a solution of caustic potash, and when cold bisulphide of carbon. The resulting precipitate passes rapidly through a variety of tints, and after a day's exposure to the air assumes a brilliant vermilion hue, which is permanent. P. was first obtained from Newcastle coals, and it derives its name from *Pons Ælii*, the Roman Newcastle-on-Tyne.

PONTIAC, a North American Indian chief of the Ottawa tribe, born in 1712. He early allied himself with the French, and it is thought that he was present at Braddock's defeat. In 1760 he organized a vast conspiracy with other tribes for the extirpation of the English. The effort, however, proved a failure, and, deserted by his followers, he was forced to submit to English rule. In 1769 he was murdered by an Illinois Indian. An account of his life can be found in Parkman's *Conspiracy of Pontiac*.

PONTIAC, in Oakland Co., Mich., on the Clinton River, and the Detroit, Grand Haven & Milwaukee and other railroads, 26 miles from Detroit. It is one of the principal wool and produce markets of the state, and is a place of active trade. The Eastern Michigan Insane Asylum is here located. Pop. 5100.

POOLE, PAUL FALCONER, R.A., a self-taught painter, was born at Bristol, England, in 1810. He exhibited his first Academy picture, 'The Well, a Scene in Naples,' in 1830; his second, 'The Farewell,' in 1837, after which he was a regular exhibitor, being elected A.R.A. in 1846 and R.A. in 1861. His works, if somewhat defective in drawing and monotonous in color, are strikingly original and harmonious. Among his later productions are 'Philomena's Song by the Beautiful Lake' (1867), 'The Spectre Huntsman of Onesti's Line' (1870), 'Imogen before the Cave of Belarius' (1871), and 'A Lion in the Path' (1873), the last a noble Poussinesque landscape.

POPE, JOHN, an American general, born in Louisville, Ky., March 16, 1823, and graduated from West Point in 1842. During the Mexican war he won promotion, by his gallantry at Monterey and Buena Vista. In 1861 he was made brigadier-general of volunteers, and given a command in Missouri, where he captured a Confederate camp at Milford, with large supplies, in Dec. of that year. In 1862 he was made major-general, and in April of that year led the force which captured Island No. 10, an important Confederate station in the Mississippi. By this victory nearly 7000 prisoners and large quantities of arms were taken from the enemy. In July, 1862, Pope was brought East, and placed in command of the army of Virginia, but after the battles of Bull Run, and Chantilly, he resigned the position, and was returned to his command in the North-west. He is now (1884) living at Fort Leavenworth, Kansas.

POPERINGHE, a walled town of Belgium, province of W. Flanders, within 4 miles of the French frontier, and 10 W. of Ypres by rail. It has manufactures of linens, woollens, lace, tobacco, and pottery, and a trade in hops, which are extensively raised in the vicinity. Pop. (1873) 10,868.

PORCELAIN CRAB, the general term applied to the members of the family *Porcellanidæ*, in which the shell is smooth and porcelain-like. The *Porcellana platycheles*, or broad-clawed porcelain crab, is a familiar species.

PORCUPINE CRAB (*Lithodes hystrix*), a species of crab occurring on the coasts of Japan, and so named from the numerous spines that everywhere spring from its shell and limbs. The hinder pair of legs are small. The northern spine crab (*Lithodes maia*) of the English coasts also belongs to the genus of P. C.

PORDENONE, properly, GIOVANNI ANTONIO LICINIO, one of the greatest of the Venetian fresco and oil painters, was born at Pordenone, in Friuli, in 1484, and was the contemporary and the not unsuccessful rival of Titian and Giorgione. Many specimens of his best works are to be seen in the churches and mansions of Upper Italy; his noblest oil-painting is the altar-piece in the church of Santa Maria dell' Orto, Venice; while in England he is represented by portraits and other subjects in the National Gallery, South Kensington, and in private collections. P. died in 1540 at Ferrara.

POR'PORA, NIC'OLO, a musician, born in Naples in 1689, died in 1767. He was a pupil of Scarlatti, and the composer of about fifty operas and a number of religious compositions, which, though now but little known, were received with great favor at the time. His style in recitative has always been highly esteemed. See Fétis, *Biographie Universelle des Musiciens* (1878).

PORR'IDGE (a corruption of *pottage?*) is a very nutritious article of food, made from oatmeal by sprinkling it in boiling water, slightly salted, and constantly stirring till the whole thickens. It is usually eaten to breakfast with milk, butter, or treacle, and is a favorite diet of the Scottish peasantry.

PORTAL VEINS, the system of veins existing in Vertebrate animals for the purpose of conveying blood to the liver, for the manufacture or secretion of bile. This system of veins consists of four trunks, receiving the venous blood from the digestive system. These four trunks are the *inferior* and *superior mesenteric*, *splenic*, and *gastric* veins. The single vein (*vena portæ*) formed by their union enters the liver. It is destitute of valves. The splenic and gastric veins unite with the other two veins, the inferior and superior mesenteric; and these two in turn unite to form the *portal vein*. The union of the two mesenteric veins takes place in front of the vena cava, and behind the upper border of the larger extremity of the *Pancreas* or sweetbread.

PORT BLAIR, the chief town of the Andaman Islands, and the headquarters of the Indian convict settlement. The penal settlement contains 7000 prisoners, arranged in six classes, and employed in clearing jungle, cultivation, &c. The annual cost is about $500,000. It was on the pier of the harbor at this place that Lord Mayo, the Governor-General of India, was stabbed by a Mohammedan convict from the N.W. frontier on 23d February 1872.

PORTER, FITZ JOHN, an American general, born at Portsmouth, N. H., in 1822, and graduated from West Point in 1845. He served in the Mexican war, was promoted for his gallant con-

duct at Molino del Rey and Chapultepec, and was wounded in the assault upon the capital. In 1861 he was made brigadier-general of volunteers, and in the latter part of that year, was placed in command of a division of the army of the Potomac. He participated in the battles of Mechanicsville, Gaines' Mill, Malvern Hill, Second Bull Run, and Antietam. In Nov. of 1862 he was tried by court-martial for disobeying the orders of his superior, Gen. Pope, at Manassas, and on Jan. 21, 1863, was cashiered from the service. He is now (1884) living in New York City, where he holds the office of police commissioner.

PORTER, Noah, D.D., an American philosopher and author, born at Farmington, Connecticut, December 14, 1811, graduated at Yale College (1831), was a schoolmaster at New Haven (1831–33) and a tutor at Yale (1833–35). He became pastor of the Congregational Church at New Milford (1836), removed to Springfield (1843), and was chosen Clark Professor of Metaphysics and Moral Philosophy at Yale College (1846), succeeding Dr. Woolsey in the presidency of that institution (1871). A scholarly metaphysician, and in particular well versed in modern German philosophy, P. has written *The Educational Systems of the Puritans and the Jesuits Compared* (1851), *The Human Intellect* (1868). *Books and Reading* (1870). *Elements of Intellectual Philosophy* (1871), *The Science of Nature versus the Science of Man* (1871), &c.

PORTER, Sir Robert Ker, K.C.H., an English artist and traveler, brother to the novelists Jane and Anna Maria P., was born at Durham in 1780, and became a student in the Royal Academy in 1790. Two years afterwards he produced his first large work, 'The Storming of Seringpatam,' which was followed by 'The Siege of Acre,' 'The Battle of Agincourt,' 'The Battle of Alexandria,' and 'The Death of Sir Ralph Abercromby.' In 1804 he visited Russia, was created historical painter to the Emperor, and executed some important works, including the decoration of the Admiralty Hall at St. Petersburg. Here he became acquainted with the Princess Mary, daughter of Prince Theodore von Scherbatholff, whom he married in 1811.

After accompanying Sir John Moore throughout the Spanish campaign to the final catastrophe at Corunna, P. returned to England, where he was knighted by the Prince Regent in 1813. From 1817 to 1820 inclusive he was occupied in making those extensive travels in Asia, of which he has given an interesting and valuable account in his work *Travels in Georgia, Persia, Armenia, Ancient Babylonia, &c* (2 vols. 1821–22). From 1826 to 1841 he resided as consul at Caracas, Venezuela, where he painted three of his best pictures, viz., 'Christ at the Last Supper Blessing the Cup,' 'Our Saviour Blessing the Little Child,' and an 'Ecce Homo.' In 1841 he revisited St. Petersburg in company with his sister Jane, and died there, May 4, 1842. His other books are *Traveling Sketches in Russia and Sweden* (2 vols. 1808); *Letters from Portugal and Spain. Written during the March of the Troops under Sir John Moore* (1809); and *Narrative of the late Campaign in Russia* (1813).—Jane P., sister of the preceding, was born at Durham in 1776, and educated at a school in Edinburgh, and afterwards in London. In 1803 she published her first novel, *Thaddæus of Warsaw*, which was translated into several languages, and led to her being afterwards elected 'lady canoness' of the Teutonic order of St. Joachim. In 1809 appeared *The Scottish Chiefs*, which greatly added to her fame as a 'historical' novelist. The best known of her other works are *The Pastor's Fireside; Duke Christian of Luneburg; The Field of Forty Footsteps; Sir Edward Seaward's Diary*. She also wrote along with her sister *Tales Round a Winter's Hearth*. In 1842 she went with her brother to St. Petersburg, returning to England after his death. She died at Bristol, 24th May 1850.—Anna Maria P., sister of the two preceding, was born in 1780, and died at Bristol, 21st June 1832. Like her sister, she wrote tales chiefly of a historical character, of which the principal are *Octavia* (1798); *The Hungarian Brothers* (1807); *Don Sebastian* (1809); *The Barony* (1830), and *Artless Tales* (1793).

PORT HURON, in St. Clair Co., Mich., on the Canada Grand Trunk and other railroads, 56 miles from Detroit. It is engaged in lumbering, ship-building, and lake commerce. It is also an extensive grain and wool market. Pop. 11,000.

PORT JERVIS, a town of Orange Co., N. Y., on the Delaware River, the Delaware & Hudson Canal, and the N. Y., Lake Erie & Western Railroad, 88 miles from New York City. It is connected with Monticello, the county seat of Sullivan Co., by the Port Jervis & Monticello Railroad. Extensive tracts of timber lands are within easy reach. Pop. 9500.

POSAUNE, a reed organ-stop. The pipes in connection with the manuals are generally metal, 8 feet in length; those in connection with the pedals, metal or wood, 16 or 32 feet in length. The tone is peculiarly rich and resonant.

POST'-HORN, a wind instrument formed by a simple metal tube.

POTENTIAL is a function of great importance in the theory of attractions. Its value was first recognized by Laplace in his investigations upon the figure of the earth, but it received its present name from Green, who applied it with great power to electrical problems: and now it forms the central conception of the mathematical theory of attraction. Sir W. Thomson has defined the P. of a conductor charged with positive electricity as the work which must be spent in removing an unit of negative electricity from the surface to an infinite distance, supposing the distribution to remain constant during the operation. With a slight modification the definition may be made to apply to the cases of magnetism and gravitation. Further, the P. at any point with reference to the attracting body is the work which must be done to remove an unit quantity from that point to an infinite distance. Hence the work done upon an unit quantity in removing it from one point to another is measured by the difference of the potentials at these points. If the points are very close together, then the work done may be represented by the product of the distance into the average force overcome through that distance; and therefore the force at any point in any direction due to an attracting system is the rate of increase of the P. at that point per unit of length in the given direction. In electrokinetics there cannot be a transfer of electricity without a difference of P. Accordingly, P. is in the theory of electricity what temperature is in the theory of heat, what pressure is in hydrodynamics. As heat flows from a body of higher temperature to a body of lower temperature, as fluid flows from the place of greater pressure to the place of less, so does electricity flow from the region of higher P. to the region of lower. In the mathematical theory of attractions, the existence of a P. for a given system of forces is the criterion that that system is a conservative system—*i. e.*, that it satisfies the principle of the conservation of energy. All known forces belong to this category.

POTICHOMANIE is a process by which pretty and tasteful imitations of opaque painted porcelain can be made from vases, &c., in plain clear glass. It consists in gumming painted or printed designs, cut out of paper, to the inside of the glass article, coating the paper with size, and afterwards applying white or tinted oil paint over the whole internal surface.

POTTER, Alonzo, D.D., LL.D., an eminent American bishop of the Episcopal church, born at La Grange, N. Y., July 10, 1800, and graduated from Union College in 1818. After holding various important positions in his denomination, he was made bishop of Pennsylvania in 1845. Died at San Francisco, Cal., July 4, 1865. He published *Political Economy, Handbook for Readers and Students, Religious Philosophy*, and other works.

POTTER, Cipriani, an English musician, born in London, England, in 1792, was principal of the Royal Academy of Music from 1832 to 1859. He composed nine symphonies, a number of overtures, the cantata of *Medora e Corado* (1830), several violin quartets, and a great quantity of works for the piano. P. greatly improved the English school of pianoforte playing, and trained many of the most distinguished players and teachers of that instrument. He died September 26, 1871.

POTTER, Horatio, D.D., LL.D., brother of Alonzo, born in Dutchess Co., N. Y., in 1802, and educated at Union College. He entered the ministry of the Protestant Episcopal Church, and, after presiding over several parishes, was, in 1854, made provisional bishop of the diocese of New York; and, in 1861, became bishop, upon the death of Bishop Onderdonk, which position he continues to hold (1885).

POTTINGER, Eldred (Major), the hero of the siege of Herat, was born in 1811 at Mount Pottinger in County Down. At the age of seventeen he went out to Bombay as an artillery cadet. His uncle, Sir Henry P., was Resident in Scinde, and under his patronage he started from Peshawur in 1837 as an independent traveler to penetrate Afghanistan. He adopted the disguise of a *Syud* or holy man, which he did not put off till he had reached Herat, after many risks. This town, then held by an Afghan prince, was forthwith besieged by the Persians, led by the Shah in person, and it held out for almost a year, until relieved by a British diversion in the Persian Gulf. The successful defence is entirely attributed to the exertions and courage of P. As political agent during the disastrous Afghan war of 1841–42, he was compelled to sign the treaty which Lord Ellenborough repudiated. In 1843 he died of fever at Hong-Kong, while on a visit to his uncle, Sir H. P. See *Lives of Indian Officers*, by Sir J. W. Kaye (Lond. 1867).—Sir Henry P., uncle of the preceding, born in 1789, was also a distinguished Indian officer in the political or diplomatic department. For his services in Scinde he received a baronetcy in 1839. He was ambassador to China (1841–42), governor of Hong-Kong (1843–44), of Cape Colony (1846–47), and of Madras (1847–54). P. died at Malta, 18th March 1856.

POWHATTAN, an Indian chief of Virginia, who with his confederated tribes, occupied the country about Jamestown, at the time of its settlement in 1607. He was the father of Pocahontas.

the Indian princess, who interfered, and saved the life of Capt. Smith, when he was about to be put to death by her father's orders. The number of Powhattan's subjects has been estimated at about 8000. Died in 1618.

POYN'INGS LAW, or Statute of Drogheda, passed in 1495, provides that all Acts then or lately passed in England concerning its common weal should be effectual in Ireland. It further provided that no parliament should be held in Ireland until the Lord-Lieutenant had certified to the English crown the cause for holding it, and license had been given by the sovereign. P. L. was repealed, and the Irish Parliament emancipated, in 1783.

PRAED, WINTHROP MACKWORTH, a kinsman on his mother's side of the 'Father of Massachusetts,' was born in London, England, July 26, 1802, and sent in his ninth year to Langley Broom School, near Colnbrook. Thence he passed to Eton (1814), where his career was singularly brilliant, his editorship of the *Etonian* (1820–21) revealing to Charles Knight, its publisher, 'an unbounded fertility of mind and readiness of resources.' Entering Trinity College, Cambridge (1821), he gained six university medals for Greek and English verse, came out third in the classical tripos (1825), and was elected fellow of his college (1827). At Cambridge, with Macaulay, Moultrie, and Sidney Walker, he wrote for Knight's *Quarterly* (1822–23), and during a residence at Eton as tutor to the Marquis of Ailesbury's son (1825–27) had the chief management of the short-lived *Brazen Head*. In 1829 he was called to the bar at the Middle Temple, and traveled the Norfolk circuit with high success; but a seat in Parliament had always been his ambition, and in 1830 he stood for St. Germains as a Conservative, he and Macaulay having changed places in politics, since the days when they debated at the Cambridge Union. This borough was disenfranchised two years later, and P. afterwards sat for Yarmouth and Aylesbury, in 1834 filling the post of secretary to the Board of Control. His parliamentary career was hardly equal to the expectations formed of him, and its possibilities were closed by his early death, July 15, 1839. P.'s mock heroics, charades, *vers-de-société*, and political pasquinades, many of which appeared in the *Literary Souvenir*, are admirable in their kind, sparkling with subtle wit and polished sarcasm, while their freedom from the least taint of bitterness reflects the lovable nature of their author. Some of them were collected and reprinted at New York in 1844 and 1859, but the first complete edition is that published at London (2 vols. 1864), with a Memoir prefixed by Derwent Coleridge.

PRA'TI, GIOVANNI, an Italian poet, born at Dascindo, near Trent, January 27, 1815, studied jurisprudence in the University of Padua, and in 1841 published the sorrowful love-poem *La Edmenegard*, which won so wide a popularity that its author resolved henceforth to devote himself entirely to the Muse. Early inspired by the vision of a united Italy, he nevertheless incurred the suspicion of his countrymen by his devotion to the House of Savoy, and on the outbreak of the Revolution of 1848 was hunted from Padua to Venice, and from Florence to Turin. In 1849 P. was appointed *Poeta Cesareo* to Charles Albert; in 1862 he was elected a deputy in the Italian Parliament. P.'s earlier romantic and political poems are infinitely superior to his later productions, in which he seeks to develop a mystic philosophy, though both are marked by a grace of thought and diction which go far to make up for a lack of spontaneity and original conception. To the former class belong *Canti Lirici*, *Canti per il Popolo*, and *Ballate* (1843). *Memorie e Lacrime* (1844), and *Passegiate Solitarie* (1847); to the latter, the epics *Rodolfo* (1855), *Il Conte Riga* (1856), and *Ariberto* (1860). A complete edition of his works appeared at Milan (1862). See Marchese, *Le Poëte P.* in the *Revue des Deux Mondes* (March 1856).

PRATO ('the meadow'), a town of Italy, province of Florence, 10 miles N.W. of the city of Florence, lies in a fertile plain on the right bank of the Bisenzio, and is a station on the Florence and Pistoja Railway. It has an ancient citadel, a magnificent cathedral, manufactures of straw-plait, silk, and woollen fabrics, and important publishing works. Pop. (1874) 39,594.

PREBLE, EDWARD, an American naval officer, born at Portland, Me., Aug. 15, 1761. In 1779 he entered the Continental navy, and by his daring courage, rapidly gained distinction. From the close of the Revolutionary war until 1799, he was engaged in the merchant service. In 1803 he was placed in command of the fleet sent against Tripoli. In this enterprise he met with highest success, and, upon his return home, was awarded a gold medal, with the thanks of Congress. Died in Portland, Me., Aug. 21, 1807.

PRELL'ER, FRIEDRICH, a German painter, was born at Eisenach, 25th April 1804, and educated at Weimar, Dresden, and Antwerp. He resided from 1827 to 1831 at Rome, whence he returned in the latter year to become a professor at Weimar. Among the chief works of P., who excelled equally as a landscape and historical painter, are the series of mural paintings from the *Odyssey* in the museum at Weimar, the landscapes from Wieland's *Oberon* in the 'Wielandzimmer' of the grand-ducal palace of Weimar, and his sixteen cartoons from the *Odyssey* in the museum at Leipsic (reproduced by M. Jordan, Leips. 1875, and chromo-lithographed by Steinbock, Minn. 1876 *et seq.*). P. produced another series of forty illustrations to the *Odyssey* (engraved on wood by Brend'amour and Oertel; 2d ed. Leips. 1873), and more recently a series of similar cartoon illustrations to the *Iliad*. He died in April 1878.—LUDWIG P., born at Hamburg, 15th September 1809, after studying (from 1828) philology at Leipsic, Berlin, and Göttingen, settled first (1833) as a 'privat-docent' at Kiel, then as a professor at Dorpat (1838–43), and in 1844 became professor at the University of Jena. Appointed in 1847 chief librarian at Weimar, he traveled in 1852 through Greece and Asia Minor, and died at Weimar, 21st June 1861. P.'s chief works are *Demeter und Persephone* (Hamb. 1837); *Griechische Mythologie* (3d ed. by Plew, 2 vols. Berl. 1872–75); *Römische Mythologie* (2 ed. Berl. 1865); *Historia Philosophiæ Græcæ et Romanæ*, which he wrote in conjunction with Ritter (5th ed. by Teichmüller, Gotha, 1875); and *Aufsätze aus dem Gebiet der klassischen Alterthumswissenschaft* (edited by R. Köhler, Berl. 1864).

PREN'TICE, GEORGE DENISON, an American editor and wit, born at Preston, Conn., Dec. 18, 1802, and graduated from Brown University in 1823. He was admitted to practice law in 1829, but devoted his life solely to literary pursuits. For a short time he conducted the Hartford *Weekly Review*, but in 1830 became editor of the *Louisville Journal*, which sheet he continued to edit during the remainder of his life. He was the author of numerous poems, and was celebrated for his keen and ready wit. Died at Louisville, Ky., Jan. 22, 1870.

PRENTISS, ELIZABETH PAYSON, a distinguished American writer, born in Portland, Me., Oct. 26, 1818. She was the daughter of Dr. Edward Payson, and wife of Dr. George L. Prentiss. She wrote numerous works of fiction, which were noted for their sweet Christian sentiment. Her best known work, and the one upon which her fame principally rests, is *Stepping Heavenward*, which has had an enormous circulation both in the U. S. and in England. Died Aug. 13, 1878.

PRESBYO'PIA, a term used in ophthalmic science to denote long-sightedness. The opposite condition of vision is termed *Myopia*, or short-sightedness.

PRESBYTES, a genus of *Catarhine* or Old World monkeys, represented by the Simpai of Sumatra (*P. melalophos*), or Black Crested monkey; by the Entellus (*P.* or *Semnopithecus entellus*), and by the Proboscis monkey (*P. larvatus* or *Kahau*). In these monkeys the cheek-pouches are rudimentary, the thumbs short, and the tail may exceed the body in length.

PRES'IDENCY, the name given by the East India Company to their settlements at Fort William, Fort St. George, and Bombay, each of which was placed under a Governor and Council, who exercised a delegated authority over the neighboring commercial factories. Ultimately the P. of Fort William or Bengal being interpreted to include all the rest of British India which was not either Madras or Bombay, owing to the supremacy of the Governor-General, became unwieldy and has been split up into five manageable provinces, under Lieutenant-Governors or Chief Commissioners. The threefold division, however, survives in the administration of the army, and the nominal organization of the Covenanted Civil Service; and the three capitals are still known as the P. towns.

PRESSEN'SÉ, EDMOND DE, D.D., a French Protestant minister, born at Paris, 27th January 1824, was educated there, at Lausanne under Vinet, and at the Universities of Halle and Berlin. He settled in Paris as pastor of the Taitbout Chapel, and soon became celebrated as an eloquent, learned, and liberal preacher. In 1863 the degree of D.D. was conferred upon him by the University of Breslau. He has written numerous works, many of which have been translated into English:—*Histoire des Trois Premiers Siècles de l'Église Chrétienne; Jésus-Christ, son Temps, sa Vie, son Œuvre* (1866); *Discours Religieux* (1859; Boston 1867); *L'Église et la Révolution Française* (1864; Eng. trans. 1869), and *Études Évangeliques* (1867). P. is the founder of the *Revue Chrétienne*, and the *Bulletin Théologique*.—MADAME DE P., wife of the preceding, is favorably known as a writer of religious and educational works.

PRETO'RIA, the capital of the Transvaal territory, S. Africa, is situated in 25° 50′ S. lat., 28° 40′ E. long., 1050 miles N.E. of Capetown. It derives its name from Pretorius, one of the Boer leaders, and is a thriving place, well-built and with a considerable trade. Since the annexation of the Transvaal by Great Britain, the progress of P. has been so rapid that its population can only be approximately stated. It is probably 5000. P. is the see of a Bishop, who was consecrated in 1878. The surrounding district is very fertile, being capable of producing wheat, tobacco,

indigo, coffee, cotton, and the sugar-cane. Coal and other minerals are also found within it.

PRICE, Bonamy, born in Guernsey, May 22, 1807, entered Worcester College, Oxford, gained a double first in classics and mathematics (1829), became an assistant master at Rugby (1831), and was appointed Professor of Political Economy in the University of Oxford (1868). He is author of *The Anglo-Catholic Theory* (1851), *The Principles of Currency* (1869), *Currency and Banking* (1876), *Chapters on Practical Political Economy* (1878), &c., and has been a frequent contributor to the *Edinburgh* and other reviews.

PRICE, Sterling, a Confederate general, born in Virginia in 1809, and when 21 years of age removed to Missouri. He served with distinction during the Mexican war, and in 1853 was elected governor of Missouri. At the ontbreak of the civil war, after a futile attempt to lead Missouri into secession, he entered the Confederate service, in which he reached (1862) the rank of major-general. He participated in the battles of Pea Ridge, Iuka, and Corinth. In 1863 he entered into a combination with Clement L. Vallandingham and other sympathizers with the South, and established the 'Knights of the Golden Circle,' a secret association, animated by treasonable designs. In 1864 he marched into Missouri with a force of 20,000 men, but failing to receive the assistance he had anticipated from the 'Knights of the Golden Circle,' he was compelled to retreat before the army of Pleasanton and Curtis. After the termination of the war he went to Mexico, and upon land granted by Maximilian, established a colony of ex-confederates. Upon the downfall of the empire, he returned to the U. S. in very reduced circumstances, and died at St. Louis, Mo., Sept. 27, 1867.

PRIDEAUX, John, born at Stanford, Devonshire, England, September 17, 1578, entered Exeter College, Oxford, as a servitor (1596), obtained a fellowship (1602), took orders (1603), and was elected rector of his college (1612). In 1615 he became Regius Professor of Divinity, canon of Christ Church, and rector of Eweline, and in 1641 was consecrated to the See of Worcester. The outbreak of the civil war, and P.'s adherence to the king, lost him its revenues, and he was forced to find bread for himself and his children by the sale of a precious library. He died at Bredon, in Worcestershire, July 12, 1650.

PRIM, Juan, a Spanish soldier and politician, born at Reus, in Catalonia, December 6, 1814, rose rapidly in the army of the Christinos to the rank of colonel (1837), and as a *Progressiota* aided Narvaez in his overthrow of the regent Espartero (1843). By the new government he was created count, general, and governor of Madrid, but in 1845 his opposition to Narvaez led to his arrest and condemnation to six years' imprisonment. Christina, however, pardoned him, and he held the governorship of Puerto Rico, till, being dismissed in 1848, he rejoined the opposition, and in 1853 was banished to France. He served as a volunteer in the Turkish army (1854), under O'Donnell's ministry was returned to the Spanish Senate (1858), and in the war with Morocco won by his services as commander of the reserves the title of Marquis de los Castillejos (1860). Appointed to the command of the Spanish contingents in the Mexican war of the Allied Intervention, he formed with Juarez the Convention of Soledad (1862), which measure he barely justified by his three days' defence before the Cortes. In 1864 he was banished to Oviedo on a charge of conspiracy, and after an abortive rising at Aranjnez (1866) fled to Portugal, thence to England, and finally to Belgium. From Brussels he directed the insurrection of 1868, which resulted in the flight of Isabella and in his own triumphal entry into Madrid, where he was minister of war in Serrano's provisional government, and became marshal, commander-in-chief, and president of the cabinet (1869). As such he had successively offered the vacant throne to Espartero, Prince Leopold of Hohenzollern, and Amadeus, when on December 27, 1870, he was shot in his carriage by some unknown assassins, and three days later died at Madrid. A splendid monument was consecrated to his memory in the Atocha Basilica, June 5, 1875.

PRIMATICCIO, Francesco, the founder of the Fontainebleau school of painting, was born at Bologna in 1490, and became a pupil of Giulio Romano, whom he helped in the decoration of the Palazzo del Tò at Mantua. In 1531 Duke Federigo Gonzaga recommended him to François I. of France, who, after employing him to collect statues and casts, bestowed on him the office of court-painter, with the abbacy of St. Martin de Troyes. He was appointed Superintendent of the Royal Buildings by François II. (1559), and died in 1570. The grace and harmonious coloring of P.'s allegorical frescoes at Fontainebleau go far to redeem their tasteless and often obscure subjects and their frequent faultiness of design. Other works by him are the 'Continence of Scipio' in the Louvre, 'Moses striking the Rock' at Vienna, and 'An Angel showing a Young Man the way to Heaven' at Darmstadt.

PRIME, Samuel Irenæus, D.D., a prominent American clergyman and editor, born at Ballston, N. Y., Nov. 4, 1812, and graduated from Williams College in 1829. He pursued theological studies at Princeton Seminary and was admitted to the ministry of the Presbyterian Church. He filled several pastorates, and in 1840 became editor of the New York *Observer*, which he has made one of the leading religious journals of America, and which he still edits (1885). He has published *Life of Samuel F. B. Morse. Travels in Europe and the East, The Alhambra and the Kremlin, Letters from Switzerland, The Bible in the Levant*, and others.

PRINCETON, Battle of, a battle of the Revolution, fought near where Princeton College, N. J., now stands, between Continental forces, under the command of Washington, and a British force, commanded by Lord Cornwallis, Jan. 3, 1777. The Americans surprised their adversaries and routed them, after a fierce struggle of less than a half hour, with severe loss. Washington took 230 prisoners, and his own losses were slight. The result of the battle did much to inspire the disheartened colonists with new hopes.

PROCŒ'LIA, a division of the order *Crocodilia*, including all the living members of the group, and named from the form of the bodies of the vertebræ or joints of the spine, these being hollow, or concave in front and convex behind. Extinct crocodiles had *amphicœlous* or fish-like vertebræ (*i. e.*, hollow at either extremity) or *opisthocœlous* vertebræ—the opposite of the procœlous.

PROCTOR, Richard Anthony, a distinguished astronomer, born at Chelsea, England, March 23, 1837, and educated at King's College, London. He has published numerous works on astronomical subjects, the most celebrated of which is *Other Worlds than Ours*. He has twice visited the U. S. and lectured before large audiences in our largest cities.

PROCYON, a star of the first magnitude in the costellation *Canis Minor*. It is readily found from its proximity to Orion, which it follows through the heavens. It forms with Sirius and Betelgeuse a nearly equilateral triangle.

PRODD, a light crossbow used in sporting, especially by ladies, during the 16th and 17th centuries. Queen Elizabeth is reported to have been very expert in shooting deer with it. In the reign of Charles I. the P. was sometimes combined with the petronel.

PRODUC'TA, a well-known genus of Brachiopodous shells, forming the type of the family *Productidæ*. In this group, which includes only fossil forms, the shell was free, or was attached to rocks directly, and without the intervention of a stalk. No 'carriage-spring apparatus' existed for the support of the arms. The genus P. itself first occurs in a fossil condition in the Devonian period, and ranges through the Carboniferous to the Permian rocks. It is thus exclusively Palæozoic in its distribution. *P. Cora* of the Carboniferous is a typical example. The shell is long, crosswise, and may have ear-like proeesses. The hinge-line is straight, and the ventral-valve is convex. The shell surface is marked with prominent lines.

PROME, the chief town of the district of the same name in British Burmah, on the left bank of the Irawaddy, 175 miles N. of Rangoon; pop. (1872) 25,631. It was captured in the first Burmese war of 1825, and permanently annexed after the second war in 1852. P. has considerable commercial importance, as the highest station in British territory of the steamboat traffic on the Irawaddy, and the frontier town towards Independent Burmah. In 1877 a state railway was opened from Rangoon to P.—The *district* of P., which lies on the E. bank of the river, has an area of 2887 sq. miles, and a pop. (1872) of 274,872.

PROOF, in engraving is an early impression from an engraved copper or steel plate, and when it is taken on thin paper, of a pale buff color, prepared from bamboo stalks, and imported from the East Indies, it is called an *India-P.* In printing, the first impression is called a *first-P.*; after correction, the second is termed a *clean-P.*; then follows a *revise;* and finally a *press-P.*

PROTHALL'US (Gr. *pro*, 'forth,' and *thallos*, 'a young shoot'), a term used by botanists to denote the first results of spore germination in the higher cryptogams. This is a kidney-shaped membrane in ferns, a bulb-like form in adder's tongues, and a bundle of adnate threads in horsetails. In all these cases the new plant springs from the impregnation of a cell in peculiar organs called archegonia.

PROTOR'NIS (Gr. 'first bird'), a genus of fossil *Insessorial* or Tree-Perching Birds. The *P. Glarisiensis* of the Eocene deposits of Switzerland represents the oldest known fossil of Insessorial birds. P. appears to have been related to the existing larks.

PROV'IDENCE is the name given to the order of nature in reference to the provision made beforehand for the existence and well-being of all living creatures, especially mankind. In a wider sense P. is made to refer also to inanimate nature, and is sometimes used as a synonym for God.

PROVINCETOWN, a town of Barnstable Co., Mass., on the Northern extremity of Cape Cod, and the terminus of the Old Colony Railroad, 120 miles from Boston. It has a commodious harbor, and is extensively engaged in mackerel, cod, and whale fisheries and ship-building. It is also a summer resort, and is celebrated as the first landing place of the Pilgrims in America. Pop. 4345.

PROVO CITY, in Utah Co., Utah, at the junction of the Denver & Rio Grande and the Utah Central Railroads. It contains grist and saw mills, tanneries, a large woollen factory, and the Territorial Insane Asylum. The surrounding community is engaged in agriculture. Pop. 5200.

PTEROSAU'RIA (Gr. 'winged lizard'), an order of extinct reptiles represented by the *Pterodactyl*, &c., and which possessed powers of flight. Their fossil remains are limited to Mesozoic rocks. The chief genera besides the *Pterodactyl* are *Ramphorhynchus*, which had no teeth in the front of either jaw, and *Dimorphodon*, which had large well-developed front teeth. The tail in the latter genus was probably abortive; that of *Ramphorhynchus* was long and slender.

PTERYGO'TUS (Gr. 'wing-shaped'), a well-known fossil genus of *Crustaceans* belonging to the order *Eurypterida*. *P. anglicus* attained a length of 6 feet. Its remains occur in rocks ranging from the Upper Silurian to the Upper Devonian. The front part of the body was covered by a carapace; two large compound eyes, and small single eyes were developed, and five pairs of legs were present. Thirteen segments succeeded the head, and the *telson* or tail-segment was frequently spinous. These extinct Crustaceans appear to be related to the living *Limuli* or King Crabs.

PUBLISHERS IN AMERICA. It is intended under this title to give a brief account of the leading publishing houses in America, at the present time (1885).

APPLETON, D. & Co., of New York City, founded by Daniel A., who was born at Haverhill, Mass., Dec. 10, 1785; and who, after pursuing the dry-goods business and book-selling, in 1831, began his career as a publisher. In 1838 William H. Appleton, son of Daniel A., became a member of the firm, and in 1848, the father retired and John A., and Daniel S. A., became members. Daniel A. died in 1849. This house has rapidly grown to be one of the largest in the United States. Among multitudinous publications, its most pretentious work, has been Appleton's *New American Encyclopedia*, begun in 1857 and completed in 1863. The firm at present consists of William H., John A., Daniel S., and W. W. Appleton.

BARNES, A. S., & Co., in New York City, and founded by Alfred S. Barnes. Mr. Barnes began his business as a publisher at Hartford, Conn., in 1838; two years later removed to Philadelphia, Pa.; and, in 1845, came to New York. By his energy and enterprise, Mr. B. soon laid the foundation of an extensive business. Some of the best of American school-books, in all the departments of education, have been published by this well-known firm. Mr. A. S. Barnes still remains at the head of the house, but has associated with him several of his sons.

BELFORD, CLARKE, & Co., of Chicago, Ill., organized in 1880, with the following officers: A Belford, Pres.; J. Clarke, Sec'y; and M. A. Donohue, Treas. This house, although young, is one of the most enterprising in the West.

DODD, MEAD, & Co., established in the City of New York, in 1839, by W. W. Dodd. He continued in business for 31 years, during which time he issued some of the best known theological works in America. In 1870 he was succeeded by his son, Frank H. Dodd, and his nephew, Edward S. Mead, under the firm name of Dodd & Mead. Six years later, Mr. Bleecker Van Wagenen, was admitted to the firm, and these three gentlemen still carry on the business. Among other works, D. & M. have published the popular novels of E. P. Roe.

HARPER & BROTHERS, established at New York, in 1817, by James and John Harper, who were brothers. Their first publication was *Seneca's Morals*. Two other brothers, Joseph Wesley, and Fletcher, became members of the firm, the former in 1823, and the latter in 1825. These four brothers lived to see their business become one of the largest and most lucrative of its kind in the world, and died as follows: James, March 27, 1869; Joseph Wesley, Feb. 14, 1870; John, April 22, 1875; and Fletcher, May 29, 1877. The business is continued under the same firm name, by sons of its founders. Besides countless books of every kind, the Harpers publish several illustrated periodicals.

JOHNSON, A. J., & Co., established at New York, in 1854, by A. J. Johnson, who was born at Wallingford, Vt., in 1827, and who died in New York City in April 1884. The works of this house have been sold by subscription only, and have always been of the highest order. A. J. J. has been called the 'father of the subscription book business.' *Johnson's New Universal Encyclopædia*, which was planned by Horace Greeley shortly before his death, is a publication of this house, and has met with an enormous sale.

LIPPINCOTT, J. B., & Co., established at Philadelphia, in 1836, by J. B. Lippincott, under whose judicious management there rapidly sprung up one of the largest book-making concerns in the United States. This firm has published many of the standard works of our language, and has been second to none in enterprise. J. B. L. now has associated with him in the firm two sons, Walter and Craige, and J. B. Mitchell, J. Shoemaker, George Wood, R. P. Morton, and W. S. Washburn.

PORTER & COATES, organized at Philadelphia, in 1867, by George M. Coates, Robert Porter, and Henry T. Coates. The business of this house has grown with unparalleled rapidity, and there has been a corresponding increase of capital, making it today one of the strongest and best.

SCRIBNER'S, CHARLES, SONS, established by Charles Scribner, in 1846. Mr. Scribner in that year entered into a co-partnership with Isaac D. Baker, under the firm name of Baker & Scribner, and the business thus begun, has been continued down to the present day, essentially the same, although the name of the firm has been occasionally changed, as its membership has been affected by the death of old and the entering in of new members. This house has devoted its energies very largely to American works, and has produced many of the best works of our native authors. Charles Scribner, the founder of the firm, died in 1871.

Besides these there are other publishing houses in America, with large capital, and constantly increasing business, many of which are developing an energy which brings them into strong rivalship with the older firms.

PUB'NA, the chief town of the district of the same name, Bengal, British India, on the right bank of the Ichamutti, a channel which joins the Ganges and the Brahmaputra, 130 miles N.E. of Calcutta. Pop. (1872) 15,730. It conducts a considerable trade in jute and rice.—The *district* of P., which lies at the angle formed by the junction of the two great rivers above mentioned, has an area of 1966 sq. miles. Pop. (1872) 1,211,594, of whom 70 per cent. are Mohammedans. The staple crops are rich and jute. Besides the two great bordering rivers, the whole country is intersected with navigable watercourses. In 1876–77 the total exports were valued at £2,205,000, including jute £863,000, rice £142,000, oil-seeds £276,000; the imports were valued at £2,324,000, including piece goods £421,000, salt £360,000, sugar £126,000. The trade is conducted both by country boats and by steamers. The manufactures are gunny, indigo, and paper.

PÜCKLER-MUSKAU, HERMANN LUDWIG HEINRICH, FURST VON, was born of an ancient family at Muskau in Lausitz, October 30, 1785. After studying law at Leipsic (1800–1803), he entered the body-guard at Dresden, and subsequently traveled in Austria, France, and Italy, returning to Muskau to succeed his father in 1811. Here he lived in retirement until the war of 1813, when he entered the Russian service as major. He became adjutant to the Duke of Weimar, and a lieutenant-colonel. In 1815 he returned to private life, and soon after visited England, where he remained more than a year. After returning to Muskau he began to form his extensive and celebrated park-gardens, which he has himself described in his *Andeutungen über Landschaftsgärtnerei* (Stuttg. 1834). In 1817 he married the Countess of Pappenheim, but was separated from her in 1826. In 1822 he was elevated to princely rank by the king of Prussia, and in 1828 he again visited England, remaining there and in France for a year. Afterwards he traveled through Algeria and the N. of Africa, Greece, Egypt, and part of Asia. On his return he lived at Muskau, until he sold that property in 1845. He died at Branitz, February 4, 1871, without issue. As a writer, P. was first known by his *Briefe eines Verstorbenen* (4 vols. Mun. 1830, and Stuttg. 1831). This is a diary of travel in England, Wales, Ireland, France, Germany, and Holland, and contains vigorous painting of manners and customs. His other works are *Tutti frutti; aus den Papieren des Verstorbenen* (5 vols. Stuttg. 1834); *Jugendwanderungen* (Stuttg. 1835); *Semilasso's vorletzter Weltgang; Traum und Wachen; aus den Papieren des Verstorbenen* (3 vols. Stuttg. 1835); *Semilasso in Africa* (5 vols. Stuttg. 1836); *Der Vorläufer* (Stuttg. 1838); *Südöstlicher Bildersaal* (3 vols. Stuttg. 1840); *Aus Mehemed-Ali's Reich* (3 vols. Stuttg. 1844); *Die Rückkehr* (3 vols. Berl. 1846–48). P.'s literary remains (letters and diaries) have been edited by Ludmilla Assing-Grimelli (8 vols. Berl. 1874, *et seq.*), who has also written a biography of P. (Hamb. and Berl. 1872–74). See also Petzoldt's *Fürst H. von P.-M. in seinem Wirken in Muskau und Branitz, sowie in seiner Bedeutung für die bildende Gartenkunst Deutschlands* (Leips. 1874).

PUEBLO, in the county of the same name, Col., on the Arkansas River, 118 miles S. of Denver. It has 3 railroads, and is a supply point for the San Juan mining country, and a commercial center for the agricultural, stock, and mining sections of Southern Colorado and New Mexico. It is surrounded by an agricultural and stock-raising district; and extensive iron and steel works are here located. Pop. 8000.

PUEBLOS, a race or class of American Indians, living in New Mexico and Arizona. They are semi-civilized, and are divided into several tribes, which speak different languages. They have attained considerable skill in manufacturing and agriculture, the latter of which they successfully conduct by a system of irrigation. They number about 7000, and own property to the value of more than $500,000. Many of them have been converted to the Roman Catholic Church, but the majority adhere to the idolatrous worship of their ancestors.

PUGHE, William Owen, born at Llanfihangel-y-Pennant, in Merionethshire, August 7, 1759, at the age of seventeen removed to London, where he found a patron in Owen Jones. With him he edited the poems of Dafydd ap Gwilym (1789), and at his cost produced a Welsh and English Dictionary (2 vols. 1793–1803), a work, says Williams, 'ruined by hobby-horsisms, a horrid cacophony, and a barbarous orthography.' P. also wrote a *Cambrian Biography* (1803), translated into Welsh the *Paradise Lost* and other poems, and was editor of the *Cambrian Register* (1796–1818) and a Welsh magazine, *Y Greal*. He was a Fellow of the Society of Antiquaries, a D.C.L. of Oxford (1826), and one of Joanna Southcott's 'four and twenty elders.' In 1806 he returned to Wales, and died at Talyllyn, near Dolgelly, June 4, 1835.

PUGIN, Augustin, an architectural draughtsman, born in France in 1762, visited London after the Revolution, and was engaged for some time in the office of Nash the architect. He afterwards opened an architectural studio and school. P. published a number of works which did much to develop a widespread taste for medieval architecture in this century; *e. g.*, *Specimens of Gothic Architecture* (114 plates, 1821–23), *Architectural Illustrations of Normandy* (1825–28), &c. He died December 19, 1832. —Augustin Welby Northmore P., a distinguished architect, son of the preceding, born in London, March 1, 1812, was educated at Christ's Hospital. Possessing a decided genius but erratic temperament, he became a proficient in various kinds of artistic work, and led a roaming life till 1834, when he joined the Roman Catholic Church and became one of its most devoted adherents and ablest adorners. His treatise on *Gothic Furniture* and *Iron and Brass Work* appeared in 1835. Such works as *Contrasts* (1836), *True Principles of Pointed or Christian Architecture* (1841), *Apology for the Revival of Christian Architecture* (1843), were published at the time of the great Tractarian movement, and his eloquent advocacy of Gothic architecture caused his services to be eagerly sought throughout the country. He refused, however, to lend his ecclesiastical services except to those of his own communion. He designed a vast number of Roman Catholic churches and buildings, including five cathedrals. Among his secular designs, the internal mouldings, fittings, furniture, and decorations of the Houses of Parliment hold a high place. He published a *Glossary of Ecclesiastical Ornament* in 1844 and a work on *Floriated Ornaments* in 1849. He served as a juror in the Great Exhibition of 1851. His herculean labors and probably his religious ascetieism brought on an attack of mental aberration in 1852, and he died at Ramsgate, 14th September of that year. See *Recollections of A. W. N. P. and his father A. P.* by B. Ferrey (1861).—E. Welby P., eldest son of the preceding, born in 1834, succeeded to his father's practice, and is well known as the architect of St. Michael's Priory, Belmont; the church of St. Peter and Paul at York; the magnificent mansion of Scarsborough Hall, Lancashire, &c. For the erection of the church of Notre Dame de Dadezeille he received from the Pope the Order of St. Sylvestre. He died at Ramsgate, 5th June, 1875.

PULASKI, Casimer, Count, born in Lithuania, March 4, 1747. Compelled to flee from his own country by the failure of the revolution, in which he had been a leader, he met Franklin in Paris, and offered his services to the colonists, which were accepted. He came to America in 1777, distinguished himself at the battle of Brandywine, and was made a brigadier-general. At the siege of Savannah, he commanded the French and American cavalry, and was fatally wounded in an assault. He was carried on board U. S. vessel *Wasp*, and there died Oct. 11, 1780.

PULLMAN, a town of Cook Co., Ill., on the Illinois Central Railroad, 13 miles from Chicago. The Pullman car shops are located here. Pop. 7000.

PULO NIAS, the largest of a chain of islands lying off the W. coast of Sumatra. Area, 2751 sq. miles; pop. estimated (1878) at 500,000. The surface is mountainous, rising in the S. and S.W. to 2000 feet. The chief rivers are the Modjeija on the N., the Sohu and Idanoi on the E., and the Moroo and Nojo on the W. Earthquakes are frequent. The temperature ranges from 68° to 75° Fahr. The products are maize, sweet potatoes, sago, rice, and cocoa-nuts. The Dutch E. India Company in the 17th c., and the English in 1820, concluded commercial treaties with Nias chiefs, and in 1857 the whole island was taken possession of by the Dutch Government, who had, in 1878, only one fixed settlement therein—viz., at Gunong Sitoli on the E. coast. See Verbeek and Nagel in the *Jaarboek van het Münwezen in Ned. O. Indië* (1874 and 1876).

PUN'DIT (*pandit*), the Indian title for a learned Brahmin, especially one who makes some branch of Sanscrit learning his special study, and teaches it. Study and instruction form one common religious duty, and the same word is applied to the student and the teacher. The P. is highly respected; he is abundantly supported by charity or endowments, and demands no remuneration. Some of the students of the Veda are able to repeat the whole by heart, numbering more than 10,000 lines; others apply themselves especially to logic. P. has, in some cases, become a proper name.

PUR'CHAS, Samuel, born at Thaxted, Essex, England, 1577, was educated at St. John's College, Cambridge, and in 1604 was appointed vicar of Eastwood in Essex. This position he resigned to his brother, and proceeded to London with a view to literary work. Receiving the rectory of St. Martin's, Ludgate, and being also made chaplain to Archbishop Abbot, he gave his whole attention to the collection of works of travel, and in 1613 he produced a thick folio entitled *P. his Pilgrimage, or Relations of the World, and the Religions observed in all Ages, and Places discovered from the Creation unto this Present*. A greatly enlarged edition, with maps by Mercator and Hondius, appeared in 1625. More than 1300 authors were laid under contribution for this work. In 1616 the manuscripts of Hakluyt fell into the hands of P., and continuing Hakluyt's plan, P. in 1625 produced four folio volumes.—*Hakluytus Posthumus, or P. his Pilgrimes*. Vols. iii. and iv. relate to America, and contain the earliest narratives of English explorers of the W. P. is at pains to make it clear that the *Pilgrimage* is his own work, as to plan and language, while the *Pilgrimes* is simply compiled in the words of others. P. was buried in St. Martin's, Ludgate, 30th September 1626. Some say that he died in prison under debt contracted in the publication of his valuable books; but according to Anthony Wood, he died in his own house. P. also wrote *Microcosmus, or the History of Man* (1619), and *The Kings Tower and Triumphant Arch of London* (1623). He is a quaint, garrulous, metaphorical writer; and his immense stores of knowledge have been very useful to later authors.

PUSHTU, the vernacular name of the language spoken in Afghanistan, and by the border tribes of the Dera Jat within the Punjaub, British India. It was long supposed to be of Semitic origin, and thus to give a support to the cherished theory that the Afghans represent the lost tribes of Israel. But the labors of Dorn, Raverty, Trumpp, Bellew, &c., have now established that it belongs to the Indo-European family, being most closely allied to the Zend or Iranian branch, but having borrowed much from the Sanscrit. It forms a regular subject of examination for British officers at Lahore. The name has been plausibly connected with the Paktyes of Herodotus. See *Original Letters and Papers of the late Viscount Strangford upon Philological and Kindred Subjects* (Lond. 1878). For a list of P. proverbs, &c., see *Bannu, or Our Afghan Frontier*, by Mr. S. S. Thorburn, C. S. (Lond. 1876).

PUTNAM, a town of Windham Co., Conn., on the Quinnebaug River, 26 miles from Worcester. It has two railroads, and is engaged in manufacturing cotton, woollen, silk, boots, and shoes. Pop. 5827.

PUTNAM, Israel, an American patriot, born at Salem, Mass., Jan. 7, 1718. His early education was very limited, and in 1739 he removed to Connecticut and became a farmer. Shortly afterwards a she-wolf, that had been ravaging the flocks of the neighborhood, was pursued by the settlers, and driven into a cave. All efforts to dislodge her having failed, Putnam at midnight, with a torch in one hand and a musket in the other, was lowered into the cave, and just as she was about to spring upon him shot her dead. He participated in the French war, where he had some very narrow escapes from death. On one occasion, the Indian allies of the French had tied him to a tree, and were about to burn him, when he was saved by the interference of a French officer, named Molong. He manifested great bravery at Crown Point and Ticonderoga.

At the close of the war he returned to his farm in Connecticut. When the news of the battle of Lexington reached him, he was engaged in ploughing, but immediately turned his oxen loose, mounted his horse, and hastened to Cambridge. He was present at and took an important part in the battle of Bunker Hill. He was one of the four major-generals appointed by Gen. Washington, and served through the remainder of the war with distinction. Died at Brooklyn, Conn., May 19, 1790.

PUT'NEY, a town of England, in Surrey, 5¾ miles W.W.S. of the Waterloo terminus, on the S. bank of the Thames, which is here spanned by a wooden bridge 805 feet long. It has two churches, St. Mary's and St. John's (1859), almshouses, a convent, Jesuit's College, &c., and numerous villas have risen up round the Heath. Thomas Cromwell and Gibbon were natives

of P., which is now a great boating place, being the point from which the university boat-race starts. Pop. (1881) 13,221.

PUTT'ENHAM, GEORGE, born about 1530, educated at Oxford, distinguished himself at the court of Edward VI., by composing an eclogue entitled *Elpine*, traveled on the continent, and on his return became a gentleman-pensioner of Queen Elizabeth. P. mentions a dozen of his own works; but only two of these have reached us. *Partheniades*, a set of twenty little adulatory pieces, was offered to the Queen as a birthday gift in 1579. The other work extant is its author's best—*The Art of English Poesie, in Three Books; the first of Poets and Poesie, the second of Proportion, the third of Ornamente*. This book was published anonymously in 1589, but as early as 1605 was attributed to P. It is full of curious matter, and is of peculiar interest for its disquisition on shaped figures, as the lozenge, or rombus; the fuzie spindle, or romboides; the triangle, or tricquet; the square, the pilaster, the taper, or piramis, rondel, egg, &c. P. says an Eastern traveler informed him that the fashion of writing verses in these forms was brought from the courts of China and Tartary. The *Partheniades* and *Art of Poesie* were reprinted, with notice of the author, by Hazlewood in 1811. The *Art* also forms one of Arbor's excellent reprints (1869).

PYROLU'SITE is an iron-black mineral, crystallizing in small rectangular prisms, and sometimes occurring fibrous, radiated, massive, or remiform. It is the binoxide of manganese. It is extensively worked in Thuringia, Moravia, and Prussia, and is used for discharging the brown and green tints of glass. Usually associated with it is *Psilomelane*, which differs from P. in containing some barium or potassium, and is distinguished by its superior hardness. By some it is regarded as merely an impure variety of P.

PYTH'EAS of Massilia in Gaul, a celebrated Greek navigator, probably a contemporary of Alexander the Great, said to have voyaged 334 B.C. from his native city to Cantium (now Kent), and from thence to Thule, afterwards relating his adventures in his work *On the Ocean*. In this or another voyage P. coasted along the whole of Europe from Gadeira (Cadiz) to the 'Tanais' (for which he probably mistook the Elbe), and visited the 'Amberland,' which, according to Ukert, was the Cimbrian Peninsula, or Denmark. P. appears to have been the first to determine the latitude of a place by the sun. Certain fragments of his work called *Periplus* or *Periodos* have been collected and annotated by Arwedson (Upsala, 1824) and Schmekel (Mersebnrg, 1848). In modern times the voyages of P. have been discussed by many writers, as Adelung, D'Anville, Barth, Forster, Mannert, but especially Lelewel in his *Entdeckungen der Karthager und Griechen im Atlantischen Ocean* (Berl. 1831), and Straźéwicz in *P. de Marseille et la Géographie de Son temps* (Par. 1836; Ger. by Hoffman, Leips. 1838). See also Fuhr, *De Pythea Massiliensi* (Darmst. 1835); Redslob, *Thule: Die phönizischen Handelswege nach dem Norden* (Leips. 1855); Bessell, *Ueber P. von Massilien* (Gött, 1858); Ziegler, *Die Reise des P. nach Thule* (Dresden, 1861).

Q.

QUACKENBOS, GEORGE PAYN, LL.D., an eminent American educator, born at New York, N. Y., Sept. 4, 1826; graduated from Columbia College, in 1843; taught in North Carolina; subsequently removed to New York, and there established a school. He is the author of a series of text-books, embracing grammar, arithmetic, history, natural history, rhetoric, etc.

QUAG'LIO, a Munich family of Italian extraction, fourteen of whose members have distinguished themselves in the annals of art. Its founder, Giulio Q., born at Laino, on the Lago di Como, in 1601, studied painting under Tintoretto, and was ennobled by the Emperor Leopold I. His son and namesake (died 1720), painted some fine frescoes at Vienna and in Laibach Cathedral, and left a son (Giovanni-Maria 1700–65), who devoted himself to architecture at Milan, and filled the post of imperial engineer-in-chief. Giovanni's sons, Domenico (1723–60) and Lorenzo (1730–1804), were the one an historical painter, the other court-architect at Munich; and of Lorenzo's three sons, Giulio (1746–1801), Giuseppe (1747–1828), and Giovanni-Maria (1772–1813), the two first were court-architects, the last an architect, painter, and engineer. Giuseppe, again, had four sons—Angelo (1778–1815), a celebrated lithographer; Domenico (1786–1837), the reviver of architectural painting in Germany, and author of *Sammlung merkwürdiger Gebäude des Mittelalters in Deutschland* (2 vols. Karls.), *Ansichten merkwürdiger Gebäude in München* (2 vols. Mun. 1811), &c.; Lorenzo (1796–1869), a talented *genre* painter; and Simone (1795–1878) who was succeeded by his son Angelo (born 1829) in the office of Court scene-painter at Munich. Francesco (born 1844), a brother of the last, has produced some admirable *genre* and battle-pieces.

QUAN'TIC, in the higher algebra, is generally understood to be any rational integral homogeneous function of two or more variables, but includes also non-homogeneous functions which may be supposed to have resulted from substituting unity in place of one or more of the variables of a homogeneous function. Quantics are classified according to their dimensions. Thus, ax^2+by^2 is of two dimensions in the variables, and is called a *quadric;* and similarly we have *cubics, quartics, quintics*, &c., denoting quantics of the third, fourth, fifth, &c. degrees. Further, quantics are distinguished as *binary, ternary, quarternary*, &c., according as they contain two, three, four, &c. variables. Thus a ternary quintic is a rational integral and homogeneous function of the fifth degree in three variables. See Salmon's *Higher Algebra*, and the numerous memoirs of Cayley, Sylvester, and other analysts.

QUARLES, FRANCIS, was born in 1592 at Romford, England. He studied at Christ's College, Cambridge, and Lincoln's Inn, became cupbearer for a while to the Queen of Bohemia, and in 1621 went to Dublin, where he was appointed secretary to Bishop Usher. After several years he returned to England, was appointed chronologer to the City of London, and devoted himself to literary labors. His first published work was *A Feast for Wormes in a Poem on the History of Jonah*, with *Pentalogia, or the Quintessence of Meditation* (1620). In 1621 appeared *Hadassa, or the History of Queen Esther*, and soon after Q. published *Argalus and Parthenia*, founded on Sydney's *Arcadia*.

These poems were written in decasyllabic couplets. Next came *Job Militant, with Mediations Divine and Moral*, and *Sion's Elegies, Wept by Jeremie the Prophet* (1624). In 1625 there followed *An Alphabet of Elegies*, and *Sion's Sonnets, sung by Solomon the King, and Periphrased;* and a collection of his pieces, entitled *Divine Poems*, was printed in 1630. Two years later came *Divine Fancies, Digested into Epigrammes, Meditations and Observations*. The quaintest and most truly poetical of Q.'s works, the *Emblems, Divine and Moral*, was brought out side by side with the *Emblems* of Wither (1635; new ed. 1877). The *Emblems* follow a fashion traced back to the great Italian lawyer, Andrea Alciati, and seem specially inspired by the *Pia Desideria* of the Jesuit Herman Hugo. They are distinguished by fantastical expression, sometimes by pathos, often by bathos, and are best described as conceits. Q.'s next work was *Hieroglyphics* (1638). In 1641 he collected a number of short essays and aphorisms into a volume entitled *Enchiridion of Meditations*. This book is full of pithy maxims, often overstrained; every sentence contains an antithesis, like a nut with two kernels. In the Civil War, Q. espoused the cause of Charles I., and gave offence to the Parliament in *The Loyal Convert;* and having joined the king at Oxford, he lost all his property, even his books. He was twice married, and had eighteen children by his first wife. He died 8th September 1644, overwhelmed with troubles. After his death were published *Solomon's Recantation, a Paraphrase on Ecclesiastes; The Virgin Widow* (a feeble comedy); and the *Shepherd's Oracles*.

QUATREFAGES DE BRÉAU, JEAN LOUIS ARMAND DE, was born at Berthezenne, near Vallerangue, February 10, 1810. In 1833 he was appointed assistant professor of chemistry at Toulouse, and there he published two treatises, *Recherches d'Embryogénie sur les Limnées et les Planorbes* (1834), and *Recherches sur les Axolontes* (1835). This last work led to his appointment as professor of zoology at Toulouse in 1838. In 1840 he threw up his post, went to Paris, and there pursued his studies, contributing with pen to the *Revue des Deux Mondes*, and with pencil to the *Règne Animal Illustré*. In 1852 he was appointed professor of natural history at the Henri IV. Lyceum, and was elected member of the Academy of Sciences. Five years after, he renounced

the natural history chair at the Lycenm for that at the Museum. Q.'s popular works have nearly all passed through the *Revue des Deux Mondes* in serial form. The records of a scientific expedition, thus published, were collected under the title of *Souvenirs d'un Naturaliste* (2 vols. 1854), and translated into English (*Rambles of a Naturalist;* Bohn, 1857). Other contributions to the *Revue* specially worthy of mention are *Métamorphoses de l'Homme et des Animaux* (1855–56), and *L'Unité de l'Espèce Humaine* (1860–61). Q.'s most purely scientific articles were contributed to the *Annales des Sciences Naturelles* and the *Institut*. His various essays on *Les Mollusques Phlébentérés*, detailing the modifications of the digestive and circulatory systems of these animals, raised a discussion in which the greatest of European naturalists took part; and in the end Q. triumphed. Q. made many voyages in pursuit of his science, the most noted being that undertaken in company with Milne Edwards and Blanchard. They explored the coasts of Sicily between Trapani and Catania. Q.'s results were published under the title of *Recherches Anatomiques et Zoologiques faites pendant un Voyage en Sicile* (1855). The Academy of Sciences commissioned him to inquire into the diseases of silkworms, and in 1859 he produced *Études sur les Maladies Actuelles des Vers à Soie*, a work followed in 1860 by *Nouvelles Recherches sur les Maladies Actuelles des Vers à Soie*. In 1862 he published *Métamorphoses de l'Homme et des Animaux;* in 1869, *Histoire de l'Homme;* in 1870, *Charles Darwin;* in 1871, *La Race Prussienne;* in 1875, *Crania Ethica*.

QUATREMÈRE DE QUINCY, Antoine Chrysostome, was born at Paris, October 21, 1755. After finishing his education at the college of Louis-le-Grand, he was sent by his parents to study law, but a passion for art developed at school led him to neglect law for architecture and sculpture. In 1776 he went to Italy, and carefully examined the treasures of Rome and Naples. In 1785 appeared his *Mémoire sur cette Question; Quel fut l'État de l'Architecture chez les Egyptiens, et qu'est-ce que les Grecs en ont emprunté?* This performance was crowned by the Academy of Inscriptions, and led to the author's being engaged to write the *Dictionnaire d'Architecture* for Panckoucke's *Encyclopédie Méthodique* (1st vol. 1788), which was followed in 1790 by *Considérations sur les Arts du Dessin en France, suivies d'un Plan d'Académie ou d'École Publique et d'un Système d'Encouragement*. Q. took an active part in the Revolutionary movement, and was for a time imprisoned. In 1815 Q. was elected perpetual secretary and professor of archæology to the Académie des Beaux Arts, and was charged with the art department of the *Journal des Savants*. In that year he produced *Le Jupiter Olympien, ou l'Art de la Sculpture Antique*, and *Lettres écrites de Londres à Rome, sur les Marbres d'Elgin*. These letters were addressed to Canova. In 1824 Q. edited the letters of Poussin. Among his other works are, *Essai sur la Nature, le But et les Moyens de l'Imitation dans les Beaux Arts* (1823); *Histoire de la Vie et des Ouvrages de Raphael* (1824); *Histoire de la Vie et des Ouvrages des plus Célèbres Architectes du Onzième Siecle jusqu'à la fin du Dix-Huitième* (2 vols., 1830); and *Histoire de la Vie et des Ouvrages de Michel Ange Buonarotti* (1835). Q. died at Paris on the 28th of December 1849.

QUEEN'S COLLEGES, Ireland, established in 1845 to afford the highest education to all religious denominations, were opened in 1849 at Belfast, Cork, and Galway. In 1850 the Queen's University was founded at Dublin, with power to confer degrees on students attending these three colleges, and a month latter the whole institution was condemned by the Irish Catholic bishops at the Synod of Thurles, on account of its unsectarian character. A supplemental charter, granted in 1866, created much opposition, and was allowed to expire in 1868. Each college has several scholarships of from £40 to £20, and is governed by a president. In June 1878 there were 52 professors at the three colleges, and 886 students, of whom 230 were Catholics. A bill proposing to sectarianise Belfast in favor of the Presbyterian Church, with a view to ultimately making Cork and Galway Catholic colleges, was rejected in the House of Commons by a majority of 206, May 25, 1878.

QUESALTENAN'GO, capital of the province of Q., and the second city of Guatemala, in Central America, on the river Samala, 44 miles from the Pacific coast, and 65 miles W.N.W. of New Guatemala. It was founded by Alvarado in 1524 on the site of the ancient Felahuh, and is a well-built town. Q. manufactures cottons and woollens. Pop. 25,000, mostly Indians

QUEUE (Fr. 'a tail'), the tie of a wig.

QUICHUA, an Indian race inhabiting Peru, as well as parts of Ecuador, Bolivia, and the Argentine Republic. With the Aymarás the Q. Indians formed the bulk of the population of the ancient empire of the Incas, in which the Q. language was predominant. Cuzco, the Inca capital, continues to be the center of Q. influence. At the present day the Q. language, which contains twenty-six consonants and eight vowels, is spoken by a million and a half of people in Peru, and by half a million more in Bolivia, &c. The word Q. signifies 'temperate climate,' as opposed to *puna*, or 'cold climate,' and derives its origin from its being in the first instance used to designate the inhabitants of the temperate portions of Peru, as distinguished from those of the punas, or cold table-lands.

QUICK'LIME, pure oxide of calcium, is prepared by driving off by heat carbonic anhydride from marble, common limestone, or other carbonate of lime. It is a white caustic powder, which combines energetically with water to form *slaked* lime. Q. has many important uses, the chief of which are as an ingredient of mortars and as manure.

QUILLO'TA, a town in Chili, capital of a department of the same name. It is situated on the Aconcagua river and Valparaiso and Santiago Railway, 20 miles from the former town. Rich copper mines are worked in the vicinity. At the census of 1875 the pop. of the town was 11,347; of the department, 45,211.

QUINCY, a city of Norfolk Co., Mass., on Quincy Bay and the Old Colony Railroad, 8 miles from Boston. It is celebrated for its granite quarries, from which large quantities are shipped to all parts of the United States. Pop. 11,500.

QUINCY, Josiah, Jr., an American patriot, born at Boston, Mass., Feb. 23, 1744, and graduated from Harvard in 1763. He chose the legal profession as his calling, and located in his native city. He was one of the strongest opponents of the series of impositions perpetrated upon the colonies by England, and which led to the war of the Revolution. In 1774 he visited England, and died upon the return voyage, April 26, 1775.

QUINT, an organ stop sounding a fifth above the foundation stop, 5⅓ feet in length on the manuals, and 10⅔ feet on the pedal.

QUITMAN, John Anthony, born at Rhinebeck, N. Y., Sept. 1, 1799, became a member of the legal profession, after several years devoted to teaching, and settled at Natchez, Miss. He became actively engaged in politics, and in 1836 visited Texas, and assisted the people of that state in their war for independence against Mexico. He then returned to Natchez, but, upon the outbreak of the Mexican war, entered the U. S. army. He was present at Monterey, Vera Cruz, and Cerro Gordo, and for his gallant services, was made major-general, and presented with a sword by congress. Returning to Mississippi, he was, in 1850, elected governor of that state. Died at Natchez, in 1858.

QUIV'ER, a case for arrows slung from the shoulder or from the waist-belt. In ancient Egyptian paintings the Q. is represented strapped to the side of the chariot. Although leather arrow-cases were used in England during the Old English period, the name Q. (old Fr. *cuivre*) seems not to have come into use till the 17th c., and its origin is obscure.

R.

RAB'ENER, Gottlieb Wilhelm, a German satirist, was born at Wachau, near Leipsic, September 17, 1714. After studying at the College of Meissen, in 1734 he entered the University of Leipzig, where he devoted himself to the study of law. His special knowledge of financial matters led to his appointment in 1741 as inspector of customs for the Leipzig district, and to his being summoned to Dresden (1753), and nominated (1764) counselor of customs to the king. He died at Leipzig, March 22, 1771. From 1741 to 1744 R. made many contributions to the *Belustigungen des Verstandes und Witzes*, and in 1744, together with Gartner, Cramer, A. Schlegel, Schmid von Lübeck, Ebert, and Zachariae, established the *Bremer Beiträge*. R.'s contributions to these two journals make the first two vols. of his *Sammlung Satirischer Schriften* (Leips. 1751), to which he added a third vol. (*Satirische Briefe*) in 1752, and a fourth in 1755, and which went through ten editions prior to 1772. His *Freundschaftlichen Briefe* were edited with a life of the author by Weisse (Leips. 1772), who also issued a complete edition of P.'s works (6 vols. Leips. 1777; latest ed. by

Ortlepp, 4 vols. Stuttg. 1840). R. had great influence in his own time, and was an important factor in the literary development of Germany. To some extent he took Lucian as his model, but in genius he came far short of his great original.

RACALMU'TO, a town of Sicily, province of Girgenti, on an affluent of the Platani, 15 miles N.E. of Girgenti. It is of Saracenic origin, and was long under the Chiaramonte family, whose castle is 2½ miles distant. Hitherto a notorious haunt of brigands, it is rapidly improving, and is developing a trade in fruit, sulphur, gypsum, and saltpeter. Pop. (1874) 12,250.

RA'DIAL AR'TERY, the almost direct continuation of the *Brachial artery*, or main artery of the arm. It commences just below the bend of the elbow, and passes along the radial side of the forearm to the wrist, where it is felt as the pulse. The *ulnar artery* is larger than the radial, and is given off from the brachial artery close by the origin of the radial vessel. It also lies deeper in the forearm.

RA'DIANT EN'ERGY. The recognition of energy as a something which has as true an existence in the physical universe as matter, has resulted during the last thirty years in a rapid development in all branches of science. Energy cannot be regarded as a property merely of matter; indeed, the most plausible theory of the ultimate nature of matter, the vortex theory of Sir W. Thomson, suggests that matter, *as we know it*, is a form of energy. Laying aside such hypotheses, however, the physicist recognizes matter and energy as distinct, but yet so related that we know of the existence of either only by means of the other. We perceive an object solely by reason of certain transformations of energy which are inseparable from it. Energy is the active agent which works through matter; matter is in itself passive, and is that by which we recognize the workings of energy. It is now an accepted truth in physics that when energy passes from any one system of bodies to any other it must pass through a material medium—that, in other words, action at a distance is unphilosophical, because of necessity making other and less admissible assumptions than are required for action through a medium.

Light is understood to depend physically upon a certain undulatory motion executed in the ether. What is commonly called radiant heat differs from light only in the greater length of its wave-lengths, and to the same category belong the actinic rays, whose wave-lengths, though too short to affect our eyes, produce such miracles in photography. All these forms of energy are conveniently grouped under the name R. E. They are of the same nature and are subject to the same laws. They move in straight lines with the same velocity, they are reflected and refracted in precisely the same way, and they can all be polarized. It is thus evident that radiant heat resembles light more than that which we ordinarily understand as heat. Indeed, we have no reason to regard it as heat. All we can say is, that when a body receives this kind of radiation, certain effects are observed which are usually regarded as effects of heat, implying at most, however, a transformation of R. E. into heat.

RADIOM'ETER, a very delicate instrument, invented by William Crookes of London for showing certain remarkable phenomena of apparent repulsion and attraction discovered by him. In a very perfect vacuum four light vanes are suspended horizontally and radially, like the vanes of an anemometer, so as to be capable of free rotation round a vertical axis. Each disc or vane has its one side white and its other side black, so that when the system is rotating, all the discs are moving in the direction of similarly colored sides. When in the dark, the system is motionless; but when it is brought into the light, the vanes begin to rotate in a definite direction. Any source of light and heat brought near it acts so as to repel the blackened surface of the disc which is facing it. The true agent is radiant heat, which raises the temperature of the blackened surface higher than that of the white surface. The effect of heat upon the molecules of a gas is to make them go faster; and hence the molecules still present (for an absolute vacuum is not possible) rebound off the blackened surface with greater velocity than off the other, and the recoil forces the vanes round. The true explanation was arrived at independently by several physicists; and Stokes has done much to elucidate many curious and at first sight contradictory phenomena in connection with it.

RA'DIUS, one of the two bones existing in the forearm of man and other Vertebrate animals, and lying, when the arm is in the supine position, to the thumb-side of the limb. By the movements of the radius on the ulna and humerus, the forearm can be readily turned or rotated. The exact representative of the R. in fishes has not yet been determined. In birds the R. is the smaller of the two bones of the forearm, but in most other Vertebrates it is the more constantly developed. In the horse, for example, the R. is large, whilst the ulna is rudimentary. In the frog and camel, again, it attains a large development, the ulna, its companion bone, being fused with it.

RAFF, JOACHIM, a modern German composer, born at Lachen, Switzerland, May 27, 1822. He was devoted to literature and science in his youth, but about 1843 began to publish a number of fantasias, caprices, rondos, &c., for the pianoforte, and their success induced him to renounce school teaching for musical composition. Soon afterwards he produced the opera of *König Alfred* at Weimar without much success. He belongs to the Wagner school, and has glorified his master in his book *Die Wagnerfrage*. His pianoforte compositions number over 200, and he has also written songs and concerted pieces. His fame, however, rests principally on his symphonies, particularly those entitled *Leonore* and *Im Walde*, which are rich in fine effects of instrumentation and orchestral color.

RAFT (Dan. *raft*, 'a spar or pole') is the name given to an assemblage of pieces of timber fastened together to act as a float. When the R. is composed of timber sawn into marketable shape, and joined simply for convenience of transport down a river to the shipping port, it is called a *lumber* R. Rafts in some places are employed to carry freight; and in many cases of emergency at sea, poles and spars require to be lashed together for the purpose of saving life. In some large ships, precautions are taken against disaster in the provision of life-rafts of ingenious construction, based principally on the American tubular system. The American life-R. originally consisted of a collapsible material, such as india-rubber, which had to be inflated before launching; but now metal tubes have been adopted, two or three being connected by girders, between which air- and water-tight tanks for holding provisions are fitted. These tanks have screw taps at top and bottom, so that it is immaterial which side of the life-R. falls uppermost. Christie's and Roper's cellular life-rafts of metal and wood are recent important English additions to the means of saving life at sea. They are carried stretched across the deck, parallel to the captain's bridge, and they may be launched from either side of the ship.

RAIPUR, the chief town of the district of the same name, Central Provinces, British India, 180 miles E. of Nagpur. Pop. (1872) 19,116. It is an old town, with a massive fort and many tanks, gardens, and temples. It has now a large trade. In 1875–76 the exports, chiefly oil-seeds and lac, were valued at £89,000; the imports, piece-goods, rice, metal-ware, &c., at £106,000. The main street is 2 miles long, well laid out, and the houses are ornamented with wood carving.

RALES, sometimes called Ronchi or Rattles, are thoracic sounds of a morbid type evolved during the acts of respiration.

RÁMÁNUJA, the founder of a sect of Vishnuvite Hindus who are numerous at the present day in S. India. He was born near Madras in the middle of the 12th c. His teaching was founded upon the supremacy of Vishu over the other members of the Hindu Trinity, as the cause and creator of all things. In N. India the similar sect takes its name from Ramananda, said to have flourished at Benares in the 14th c. To Kabir, a pupil of Ramananda, may be traced the monotheism of the Sikhs. See Monier Williams' *Hinduism* (1877).

RAMLER, KARL WILHELM, a German lyrical poet, born at Kolberg, 15th February, 1725, studied at Halle, was from 1748 to 1790 a teacher in the Cadet School at Berlin, and from 1790 to 1796 director of the theater. He died 11th April, 1798. Of the poems of R. all that are now interesting are his imitation of antique metres, as his *Oden-ans dem Horaz* (Berl. 1769), which served as models to Voss and others. See his *Poetische Werke* by Göckingk (2 vols., Berl. 1800–1), and Heinsius, *Versuch einer Biographischen Skizze R.'s* (Berlin, 1798).

RAMSAY, EDWARD BANNERMAN BURNETT, was born at Aberdeen, 31st January, 1793. His father, Alexander, second son of Sir Thomas Burnett, Bart., of Leys, was Sheriff of Kincardineshire, where the family estates lay. Edward, when very young, was taken in hand by his uncle Sir Alexander R., who sent him to school in Yorkshire, at Harsley, near his own house. Harsley was the most retired village in the county. In its church the Bible lay in chains of Edward VI.'s period; no turnpike road passed through it; and all the letters of the villagers were written by Sir Alexander's gardener.

Sir Alexander died in 1806, leaving the Estates to Edward's father, who obtained a baronetcy from Fox. In 1815 Edward graduated at St. John's College, Cambridge, and next year he obtained the curacy of Rodden, Somersetshire. This charge he soon conjoined with that of Buckland Dinham. An account of his work among the Methodists of Buckland was written by Dr. Guthrie in the *Sunday Magazine* for January 1865. In 1823 he removed to Edinburgh, where he became first incumbent of St. George's Episcopal Chapel, next, incumbent of St. Paul's Church, Carrubber's Close (1826), in 1827 assistant minister of St. John's, and in 1846 Dean of the Diocese of Edinburgh. He was offered the Bishopric of New Brunswick, that of Glasgow, and the position of Coadjutor-Bishop of Edinburgh; but declined the pre-

ferment. His *Advent Sermons* appeared in 1850, *Diversities of Christian Character* in 1858, *Christian Life* and *Manual of Catechising* in 1859, *On the Canon Law of the Episcopal Church* in 1861, and *Christian Responsibility* in 1864. These represent the literary work he did as a Churchman. He published in 1827 a *Memoir of Sir J. E Smith*, in 1850 a *Memoir of Chalmers*, in 1862 *Genius and Works of Handel*, in 1866 *Preachers and Preaching*, in 1868 *Pulpit Table-Talk*, and in 1869 *The Art of Reading and Preaching Distinctly*. In 1857 appeared the work which has carried the best of Scotch humor over the world, *Reminiscences of Scottish Life and Character*. It had first taken the form of a little book of fifty pages, entitled *Some Changes in Social Life and Habits*. This kindly humorist, who occupied a unique and delightful position in Edinburgh society, died 27th December 1872. In 1873 appeared *Memorials of Dean R.*, by Rogers.

RANDALL, Samuel J., an American statesman, born at Philadelphia, Pa., in 1828, and became engaged in mercantile pursuits. He has been a member of Congress from 1863 down to the present time (1885), and has several times been chosen speaker of that body. He is a clear thinker, a brilliant debater, and is one of the recognized leaders of the Democratic party.

RAMSAY, William, youngest son of Sir W. Ramsay of Bamff, was born in 1806, and educated at the universities of Edinburgh and Glasgow. He graduated B.A. at Trinity College, Cambridge, in 1831, and two years before this had begun to act as Professor of Mathematics in Glasgow. In 1831 he resigned the chair of Mathematics for that of Humanity. He contributed largely to Dr. Smith's *Classical Dictionaries*, and published *Selections from Ovid and Tibullus* (new ed. 1859), *Manual of Roman Antiquities* (4th ed. 1859), a fine annotated edition of *Cicero pro Cluentio*, since adopted by the Clarendon Press (1869), and *Manual of Latin Prosody* (1859). R. died 12th February, 1865. R. was a ripe scholar, and poured forth his learning with a certain diffuse eloquence that enraptured students.

RAN'DOLPH, Thomas, an English poet, was born at Newnham, Northamptonshire, in 1605. Educated at Westminster School along with Mayne, he proceeded to Trinity College Cambridge, where he took the degree of M.A., and obtained a fellowship. Ben Jonson made a bosom friend of him. He wrote several lively dramas entitled *Aristippus, the Muses Looking-Glass* (1630), *The Conceited Pedlar*, *The Jealous Lovers* (1632), *Amyntas* (1638), and *Hey for Honesty*. Several of the songs scattered through these works—as much masques as set plays—are spirited and graceful. R. led a life of dissipation, and died 17th March 1635. His *Dramatic Works* were edited by W. C. Hazlitt in 1875.

RASP, a species of file having distinct abrading prominences formed by indentations of a pointed punch, instead of with a chisel, as is the case with a file. The R. is almost exclusively used for operating on wood, bone, and the softer metals.

RASPAIL, François-Vincent, a French chemist and politician, was born at Carpentras, January 29, 1794, where he received his education from a priest. He was sent to Avignon to complete his education, and in 1811–12 he delivered lectures on theology and philosophy, but declined to enter the Church. In 1816 he went to Paris, took various scholastic engagements, studied law and natural science, and between 1827 and 1830 made many important contributions to organic chemistry in the *Annales des Sciences Naturelles* and the *Bulletin des Sciences*. Into the Revolution of 1830 R. threw himself with great impetuosity on the democratic side and received a severe wound. He was then offered the administratorship of the Museum of Natural History, but declined it. In 1831, for a violent letter in *La Tribune*, he received fifteen months' imprisonment, and, with the exception of brief intervals, he continued in custody until 1836, because of his outspoken hatred of royalty. But his scientific studies were prosecuted with unabated fervor. In 1843 he began to develop his theory of disease, and to advocate the antiseptic virtues of camphor. He even prosecuted a lucrative practice, until he was stopped on the ground of illegality. He was one of the leaders of the Revolution of 1848, and exercised a great influence by his writings in *L'Ami du Peuple* and his speeches in the clubs. In 1849, however, for advocating the abolition of the Presidency in offensive language, he was imprisoned for five years, during which time he was twice elected to the Assembly. In 1854 he retired to Belgium, and continued his devotion to science until 1869, when he was elected to the Corps Législatif, where he associated himself with Communism in its most extreme enunciation. After the fall of the Empire he became the idol of democratic Lyon, which returned him regularly as its member. The aged demagogue died at Paris January 10, 1878, leaving a reputation for consistency and earnestness which, however, bore no fruit to his party on account of the impracticability of his views.

RASSE (*Viverra mallacensis*), a species of Carnivorous quadrupeds, inhabiting India and other parts of E. Asia, and allied to the civet. It is about 3 feet in length, is of a general greyish-brown hue, variegated with longitudinal rows of black spots. The tail is long and marked by black rings. Like the civet, the R. secretes an odoriferous substance, which is in high repute amongst the Javanese, by whom it is named 'Dedes.'

RAV'ENSBURG, a town of Würtemberg, in the fertile Schussenthal, 11 miles N. of Friedrichshafen on the Bodensee by rail. It has one Protestant and two Catholic churches, a medieval rathhaus, a lyceum (1809), a realschule, and a wealthy hospital. There are cotton, woollen, hemp, and flax manufactures; paper, oil, and grain mills. Pop. (1875) 10,034.

RÁVÍ, one of the five rivers of the Punjaub, identified with the Hydrastes of the Greeks, and still called Trastee in certain parts of its course. It rises among the Himalayas, and flows S.W. past the city of Lahore, till its junction with the Chenaub: total length, about 450 miles. At Madhapore, where it debouches on the plains, a large canal system takes off to irrigate the sandy desert of the Bari Doab, which lies between the R. and Bias rivers. The total cost has been £2,000,000 sterling, and the net profit is £50,000 per annum. The main canal is 212 miles long, and there are 692 miles of distributaries. The number of acres irrigated in 1872–73 was 228,000; the rate for water varies from 12s. to 8s. per acre.

RAWLINS, John A., an American general, born at East Galena, Ill., Feb. 13, 1831. Owing to the poverty of his father, he did not attend school until he was 20, and four years later was admitted to the bar in his native state, and began the practice of law at Galena. He rapidly rose to success in his profession, and although a pronounced Democrat, at the outbreak of the Civil War, became a strong supporter of the government. He accepted a position on the staff of Gen. Grant, and was with him in all his battles and campaigns up to the close of the war. In 1865 he was made brigadier-general U. S. A., and was afterwards brevetted major-general. Upon the election of Grant to the Presidency, he was appointed Secretary of War. Died at Washington, D. C., Sept. 6, 1869.

RÁWUL PINDI, the chief town of the district and division of the same name, in the Punjaub, British India, on the Grand Trunk Road, 160 miles N.W. of Lahore. Pop. (1868) 19,228, with an additional 6581 in the cantonments, which lie S. of the town. R. has a considerable trade in country produce; and since 1860 the largest horse-fair in N.W. India has been held here, under Government patronage.—The *district* of R., which lies among the spurs of the Himalayas between the rivers Indus and Jhilum, has an area of 6216 sq. miles; pop. (1868) 711,256. It contains the ruins of Taxila city, visited by Alexander; Attock, where the Indus has been always crossed, and the sanitarium of Murri. The crops are wheat, millet, and barley. The camels, mules, donkeys, and horses of the district are celebrated.

RAYMOND, Henry Jarvis, LL.D., a prominent American politician and journalist, born at Lima, N. Y., Jan. 24, 1820, and graduated from the University of Vermont in 1840. He became assistant-editor of the New York *Tribune* in 1841, office editor of the *Courier and Enquirer* in 1848, and on Sept. 15, 1851, editor of the New York *Times*, which, under his management, soon became one of the leading journals of the country. Mr. Raymond was one of the founders of the Republican party, and up to the time of his death, was one of its most active and earnest supporters. Died suddenly, from apoplexy, in New York, June 18, 1869. He published *The Life and Public Services of Abraham Lincoln*.

READ, Thomas Buchanan, an American poet, born at Chester, Pa., March 12, 1822. He studied sculpture in Cincinnati, O., and afterwards locating in New York, devoted his time to painting, in which he was moderately successful. He subsequently removed to Philadelphia, and in 1850 went to Italy, where he resided until 1872, when he returned to the U. S. He published numerous poems, the most popular of which is *Sheridan's Ride*. Died in New York, May 11, 1872.

REAL' SCHOOLS (Ger. *realschulen*), in Germany, are secondary schools giving a general *practical* training, and are thus distinguished from gymnasia, which lay the foundation of a general *philosophical and liberal* education. A. H. Francke, at the Halle Orphanage, made the first attempt to place 'Realia' on a level with classical studies. His method was carried out by Semler in his 'Mathematical and Mechanical Real School' at Halle, between 1706 and 1740, and Semler's assistant Hecker founded at Berlin in 1747 the 'Economico-Mathematical Real School,' which was favored by Friedrich the Great, and named by him the 'Royal Real School.' The ascendancy of Philanthropinism, with its worship of bare utility, checked the movement for a time, but in 1822 Spilleke's reconstruction of the Real School at Berlin laid a firm basis for the modern system. The subjects of instruction in R. S. are mathematics, the natural sciences, and modern languages.

RECEPTAC'ULITES, a curious fossil organism of doubtful nature. It is referred by most authorities to the *Spongida* or Sponges, but some maintain its affinities with the Foraminifera, or the corals. The fossil remains of R. occur in Lower and Upper Silurian strata. They are of cylindrical, ovoid, and discoid shape. The bodies are hollow, and have an aperture on their upper surface. Below, a thickened portion seems to indicate the original *nucleus* or beginning of the organism, the walls of which exhibit an outer and inner layer, with a spicula layer between. The inner layer is pierced by numerous apertures.

RED AD'MIRAL BUTTERFLY (*Vanessa Atalanta*), a well-known species of Butterflies, of a glossy black color above, the front wings being marked with a band of red which passes across the wings to their hinder margin. The hinder wings have a red border, and the under parts are yellowish. The R.A.B. occurs in England, Scotland, on the Continent, and in N. America. The larvæ feed on nettles, and are dark green in color, the sides being marked with a yellowish band.

RED CORAL (*Corallium rubrum*), a well-known species of *Sclerobasic Corals*, found in the Mediterranean Sea, and valued on account of the red hue and for the lustre it is capable of showing after being highly polished. As in all other sclerobasic corals, the R. C. has the living parts external to the coral, the latter forming a hard central axis. In the living bark the *coral-polypes* are found imbedded. Each polype has the eight fringed tentacles characteristic of the order *Alcyonaria*, or that including the familiar 'Dead-Man's-Finger' polype (*Alcyonaria digitatum*) of the British coasts. The R. C. is of slow growth, and strict laws have been framed for the regulation of the fishery. The animal nature of the R. C. was discovered by Jean André de Peysonnel, a French naturalist, whose discovery was rejected by the French Academy of Sciences, but afterwards fully confirmed by independent research.

REDFIELD, Isaac Fletcher, LL.D., born at Weathersfield, Vt., April 10, 1804, graduated from Dartmouth College, and became a lawyer, practising first in his native state, and subsequently in Boston. He published *Law of Railways; Law of Wills; Law of Carriers;* and *Leading American Cases*. Died in 1876.

RED'GRAVE, Richard, R.A., the son of a manufacturer, was born at London, 30th April 1804, and received his earliest art instruction as a designer in his father's factory. He became a student at the Royal Academy in 1826, and his first success as a painter was a picture exhibited at the British Institution, 'Gulliver on the Farmer's Table,' bought for the purpose of engraving. He acquired a high reputation for his genre painting, happy specimens of which are 'The Wedding Morning' (1844) and 'Country Cousins' (1848); and was subsequently even more successful in landscape subjects, such as 'The Woodland Mirror' (1852) and 'Old English Homestead' (1854). During the latter years of the Government School of Design he was headmaster, and subsequently Inspector-General of Art-Schools, an office which he resigned in 1875, after about thirty years' service, receiving a pension of £750 a year. Subsequently, together with Mr. Cole he formed the Museum of Ornamental Art at Marlborough House, now the Museum of Art at South Kensington. Since 1858 he has been surveyor of Crown pictures, and has prepared a catalogue of such works. He is also favorably known as the author of *An Elementary Manual of Colors* (1863) and *A Century of Painters of the English School* (1866), the latter in conjunction with his brother, Samuel R., who died 20th March 1876, and whose valuable *Descriptive Catalogue of the Historical Collection of Water-Color Paintings in the South Kensington Museum*, with a preface on the history of this branch of art, appeared in 1877.

RED JACKET, a famous chief of the Seneca Indians, born in Central New York, about 1752. During the American revolution, he rendered valuable services to the English, and towards the close of his life became a confirmed inebriate. Died on the Seneca reservation, in 1830. His life has been written by Stone (1867).

REDOWAK, a Bohemian dance in triple time, somewhat resembling a polka.

RED WING, in Goodhue Co., Minn., on the Mississippi River, about 41 miles from St. Paul. It has two railroads; is a local wheat market, and one of the leading manufacturing cities of the state. Pop. 6500.

REED, Edward James, C.B., M.P., naval constructor, was born at Sheerness, England, September 20, 1820, and educated at the School of Mathematics and Naval Construction, Portsmouth. He gained practical experience in shipbuilding in Sheerness Dockyard, after which he edited the *Mechanic's Magazine*, and became secretary to the Institute of Naval Architects. In 1859 he drew attention to the room for economy of time and cost in the building of ironclads, and he was appointed Chief Constructor of the Navy in 1863. His views regarding turret ships not meeting with acceptance, he resigned this appointment in July 1870. He was returned to Parliament for Pembroke as a Liberal in February 1874. In 1877 he proposed without success the appointment of a Secretary of State for the Navy. Mr. R.'s services as a designer have been largely made use of by the British and many foreign Governments, from whom he has received numerous orders of distinction. He has written largely on naval and other subjects. *Our Ironclad Ships* (1869); *Our Naval Coast Defences* (1871); *Letters from Russia* (1875), &c.

REED, Joseph, an American patriot, born at Trenton, N. J., in 1741. He studied law, and began the practice of that profession in his native place, but afterwards removed to Philadelphia. At the outbreak of the Revolution, he entered the Continental army, and served as aid-de-camp to Washington. Died at Philadelphia, March 5, 1785.

RENO, Jesse L., an American general, born in Virginia, in 1823, and graduated from West Point, in 1846. He served with distinction in the Mexican war, and after its close, was professor of mathematics at West Point. In 1861 he was made brigadier-general of volunteers, and, after participating in several of the battles of the civil war, was killed at South Mountain, Sept. 14, 1862.

REES, Abraham, born at Llanbrynmair, Montgomeryshire, Wales, in 1743, was educated for the Presbyterian ministry at Caermarthen and Coward's Academy, Hoxton. He was appointed mathematical tutor in that institution (1762), three years later was ordained to the pastorate of a Southwark congregation, and in 1786 accepted the chair of natural science in a newly-founded college at Hackney, which he held till 1795. He was a member of the Royal Society and a D.D. of Edinburgh at the time of his death, June 9, 1825. R.'s success as editor of the second edition of *Chambers's Cyclopædia* (4 vols. 1776–85), which he entirely recast, emboldened him to publish his own far larger *New Cyclopædia* (45 vols. Lond. 1802–20), and he was also for some years Dr. Kippis' coadjutor in the *Monthly Review*, and author of *Practical Sermons* (1809), various social and political treatises, &c.

REEVE, Clara, an English novelist, born in England, in 1738, was the daughter of a clergyman with whom she read through Rapin's *History of England*, the Greek and Roman histories, and Plutarch's *Lives*, while a mere child. In 1762 she displayed her learning by translating from the Latin Barclay's fine old romance of *Argenis*, under the title of *The Phœnix*. Five years afterwards appeared *The Champion of Virtue*, which in the second edition changed its name to *The Old English Baron*. The authoress in the preface informs us that the romance is 'the literary offspring of the *Castle of Otranto*.' It uses much of the supernatual machinery Walpole and Mrs. Radcliffe were so fond of, but is much more verbose and feeble. Her other books, quite forgotten, are:—*The Two Mentors* (1783); *The Progress of Romance* (1785); *The Exile* (1788); *The School for Widows* (1791); *Plans of Education* (1792); *Memoirs of Sir Roger de Clarendon* (1793); *Destination* (1799); and *Edwin, King of Northumberland* (1802). Miss R. died at Ipswich, 3d December 1803. See Sir Walter Scott's *Biographical Memoirs* (1852).

RE'GAL, or RIGOLE', a small portable organ formerly much in use, fitted usually with one, but sometimes with a double row of pipes. Its principal function was to support treble voices.

REGALE'CUS, a genus of *Teleostean* fishes, belonging to the family *Trachypteridæ*, and including the curious tape-fish (*Regalecus Banskii*), so named from its long thin shape. The body is much compressed in this genus; the ventral fins are long and attenuated, and the dorsal fin is spiny.

REGNIER, Mathurin, the creator of classical satire in French literature, was born at Chartres, December 21, 1573. He was the nephew of the poet Philippe Desportes, under whose auspices he first cultivated poetry. In 1593, he accompanied Cardinal Joyense to Rome, returning after a stay of eight years, disappointed in his hopes of advancement—a result which was perhaps due to the irregularities of his life. He visited Rome once more in the train of Béthune, ambassador of Henri IV., and seems to have availed himself of his opportunities to make a careful study of Italian poetry. In 1609 he became canon of the church of Notre Dame in Chartres, and from this period he was able, without anxiety, to cultivate his poetical tastes, and to abandon himself 'à la bonne loi naturelle.' He enjoyed the friendship of some of the most distinguished men of his time, and was known among his friends as 'le bon R.' He died at Rouen, October 22, 1613. Editions of his works are numerous. The chief are those of Paris (1608), Leyden (1652), Amsterdam (1729), Paris (1780, 1808, 1819), the best are those by M. Viollet le Duc (Paris, 1822, reproduced 1853), and Barthélemy (Paris, 1862), and Lacour (1867). See Sainte-Beuve, *Tableau de la poésie Française au Seizième Siècle*.

REGUAR'DANT, a heraldic epithet applied to an animal with its head turned backwards.

REID, Mayne, a distinguished traveler and author, born in Ireland in 1818. In 1838 he came to America, and traveled ex-

tensively in the western part of the U. S., and afterwards took up his residence in Philadelphia, Pa., and devoted himself to literature. He served with great bravery in the Mexican war, and was wounded at Chapultepec. He has published numerous works of romance and adventure, which have had large sales. Among his works are the following, the title in most instances being suggestive of the character of the work: *The Cast-aways, The Rifle Rangers, The Marooners, The Scalp-Hunters, Osceola, The White Chief*, and *The Quadroon*. Died Oct. 22, 1883.

REID, WHITELAW, an American editor, born at Xenia, O., Oct. 27, 1837, and graduated from Miami University in 1856. He was for a time Superintendent of Schools at Charleston, S. C., was connected with the Xenia *News* and Cincinnati *Gazette*, and in 1869 became connected with the editorial staff of the New York *Tribune*, then under the management of Horace Greeley. When Mr. Greeley, in 1872, was nominated for the Presidency by the Liberal-Republican and Democratic parties, Mr. Reid became editor-in-chief of the *Tribune*, which position he still holds (1885). He has always been actively identified with the Republican party, and has been one of its strongest supporters.

RE'I INTERVEN'TUS, a term of Roman law denoting the doing, or refraining from doing, some act, on the faith of a bargain or promise; in consequence of which act the law holds that neither party can draw back. To give R. I. this effect, it must flow from the contract or promise, and must be known to the party against whom it is pleaded.

REINKENS, HUBERT JOSEPH, the first of the 'Old Catholic' bishops, was born at Burtscheid, near Aachen, 1st March 1821. After working for three years in a spinning-mill, he entered the university of Bonn (1844), was ordained priest (1848), and held the chair of ecclesiastical history at Breslau (1857–74). A pamphlet published on the occasion of the jubilee of his university (1861) had brought him into conflict with his superiors, and shortly after the promulgation of the Infallibility Dogma (1870) he appeared as a leader of the *soi-disant* 'Old Catholics.' His deposition from the professorship by Bishop Förster (1871) remained unrecognized by the Prussian government, but was followed up by excommunication. Thrust out of one Church, R. proceeded with the formation of another, of which he was consecrated bishop, August 11, 1873. As such he has been recognized by Prussia, Baden, and Hessen, though not by Bavaria, and as such he has addressed a pastoral to the 'Old Catholic Church' in Germany (1875). He is author of *De Clemente Presbytero Alexandrino* (1851), *Hilarius von Poitiers* (1864), *Martin von Tours* (1866), *Aristoteles über Kunst besonders über Tragödie* (1870), *Ueber Päpstliche Unfehlbarkeit* (1871), *Luise Hensel und ihre Lieder* (1877), &c. See *The New Reformation, a Narrative of the Old Catholic Movement* (Lond. 1875).

REMI'GIUS, ST., the apostle of Gaul, was born in 437, at Cerny in Laonnais, and raised in his twenty-second year to the archbishopric of Rheims. His labors were sealed by the baptism of Hlodwig in 496, and ere his death in 533 he saw almost the whole of his vast diocese converted to Christianity.—Another ST. R., archbishop of Lyon from 852, opposed Hincmar in the strife engendered by the monk Goltschalk, and prevailed on the Synod of Valence (855) to recognize as orthodox the teaching of a twofold predestination. He died Oct. 28, 875.

RENO, MARCUS A., an American officer, born in Illinois, in 1835, and graduated from West Point in 1857. He served with the army of the Potomac during the civil war, being present at Antietam, Cedar Creek, and other important battles. In 1868 he was made major U. S. cavalry.

REP (probably a corruption of *rib*), a woollen fabric so woven as to present a ribbed appearance transversely. It is used for ladies' dresses. Any stuff exhibiting this feature is said to be *repped*.

REPROBA'TION is the name given to a doctrine alleged to be involved in the Calvinistic doctrine of Election, but repudiated by Calvinists in the sense sought to be given to it. The word R. does not occur in the *Confession of Faith*, but the following language seems sufficiently explicit: 'By the decree of God, for the manifestation of his glory, some men and angels are predestinated unto everlasting life, and others foreordained to everlasting death' (chap. iii. sec. 3). Yet in sec. 7 of the same chapter it is further stated that it hath pleased God 'for the glory of his sovereign power over his creatures, to pass by, and to ordain them (the non-elect) to dishonor and wrath *for their sin*, to the praise of his glorious justice.' The phrase 'for their sin' is held to introduce the moral element that clears the doctrine of the character ascribed to it by its adversaries.

RESACA DE LA PALMA, an important battle, fought at a ravine of the same name, near Matamoras, between a Mexican army under Gen. Arista, and a U. S. army under Gen. Taylor, May 9, 1846, in which the latter won a decided victory.

RESORCIN, is a colorless crystalline compound obtained by fusing galbanum with potassium hydrate, dissolving the fused product in water, neutralizing with sulphuric acid, and mixing the clear filtered solution with ether. The R. is taken up by the ether, which is afterwards driven off by distillation. R. acted on by sulphuric acid yields a fine purple red coloring matter, which, with several other dyes derived from R., is used in dyeing and calico-printing. R. is closely allied to orcin, and its composition is represented by the formula $C_6H_6O_2$.

RETZ, JEAN FRANÇOIS PAUL DE GONDI, CARDINAL DE, was born at Montmirail, France, October 1614. His father was general of the galleys, and his uncle was Archbishop of Paris. Destined for the Church, in which an early developed aptitude for diplomacy seemed to promise him promotion, he was educated by Vincent de Paul, who had to wink at a good many of his pupil's follies. Up to the age of eighteen the young divine was known only as a successful gallant, though he was small and ill-formed; but in 1622 he published the *Conjuration de Fiesque*, a book which caused Richelieu to remark, '*Voilà un dangereux esprit.*' At twenty he preached before the court, and making a name at the Sorbonne as a theological debater, he was introduced to the notice of Louis XIII., who on his deathbed appointed him coadjutor to his uncle, the Archbishop of Paris. For seven years he was the implacable adversary of Mazarin, to thwart whom he set at defiance the authority of the crown, and obstinately refusing to resign his ecclesiastical position, became the most energetic and unscrupulous of the Frondeurs. On Mazarin's fall, he was selected as Minister by the Queen-regent, Anne of Austria, and after much plotting, received the cardinal's hat in 1651. Mazarin, on his return to power in the following year, had him imprisoned on a charge of conspiracy, but he escaped to Spain, and thence to Italy. During this exile he worked hard in the cause of Charles II. On the death of his enemy Mazarin (1661) he returned to Paris, but Louis XIV., having declared that he should never regain the archbishopric, he was forced to resign, gaining instead the abbacy of Saint Denis and several other benefices, with leave to retire to Commercy. He then sold his estates and paid off his heavy debts, of which he had once arrogantly said, when reproached with their number, that Cæsar, at his age, had six times as many. During his retirement he composed his inimitable *Mémoires*, in which the society he moved in down to 1655 is faithfully portrayed. Than these, even in French literature, there exist no memoirs more perfect in literary grace, or more valuable for historic truth. De R. died at Paris, August 24, 1679. The *Mémoires* were first published in 1717; the best editions are those of Champollion-Figeac (4 vols. 1859), and Feillet and Gourdalt (8 vols. Par. Hachette & Co. 1874–77). See also Léonce Curnier, *Le Cardinal de R. et son Temps* (2 vols. 1862); Topin, *Le Cardinal de R., son Génie et ses Écrits* (1872); Grazier, *Les Dernières Années du Cardinal de R.* (1876), and Chantelauze, *Le Cardinal de R. et l'Affaire du Chapeau* (2 vols. 8vo. 1878). The last work is the first instalment of an elaborate biography of the coadjutor for which M. Chantelauze has been collecting materials for sixteen years. The correspondence of De R. with the Abbé Charrier, discovered by M. Chantelauze, occupies the second volume, and is followed by letters of Louis XIV., Mazarin, the Comte de Brienne, Scarron, &c., all relating to the negotiations so indefatigably prosecuted at Rome for the purpose of obtaining a cardinal's hat for the coadjutor.

REUMONT, ALFRED VON, born at Aachen, August 15, 1808, studied at Bonn and Heidelberg, and, after filling various diplomatic posts at Florence, Constantinople, and the Papal Court, was successively Prussian Minister at Florence, Modena, and Parma, from 1851 till 1860, when he retired into private life. He has since resided at Bonn and Rome, and in 1876 received the freedom of the city of Florence. R. is author of valuable works on Italian history. *Beiträge zur Italienischen Geschichte* (6 vols. Berl. 1853–57), *Geschichte der Stadt Rom* (3 vols. Berl. 1867–70), *Lorenzo de Medici il Magnifico* (2 vols. Leip. 1874; Eng. trans. 1876), *Geschichte Toscanas seit dem Untergange des Florentinischen Freistaat* (2 vols. Gotha. 1876-77), &c. See his *Biographische Denkblätter, nach Persönlichen Erinnerungen* (Leip. 1878).

REVELGUNGE', a town in the district of Sarun, Bengal, British India, at the junction of the Gogra with the Ganges, on the left bank of both rivers, 31 miles N.W. of Patna. The old name was Godna; but in 1788 Mr. Revell, Collector of Customs, founded a bazaar which has since become the greatest river mart for oil-seeds in India. It is the station where commodities from the N.W. Provinces and Oude are transhipped. In 1876–77 the exports were valued at £471,000, chiefly oil-seeds; the imports at £563,000, including grain, salt, and piece-goods. A great fair and religious gathering is held here twice a year. Pop. (1872) 13,415.

REVERE, PAUL, an American patriot, born at Boston, Mass., Jan. 1, 1735. He was a strenuous opponent of British tyranny, and on the night of April 18, 1775, secretly left Boston, and rode towards Concord every where arousing the people, by his announce-

ment of the British expedition of the following day, and thus enabling them to prepare for the battle of Lexington. This service has been immortalized in Longfellow's poem, *The Midnight Ride of Paul Revere*. He continued to render effective service to the Continental cause until its success had been accomplished. Died at Boston, May 10, 1818.

REVOL'VING FUR'NACE. Furnaces to which a motion of rotation is communicated have been introduced with marked success in some chemical manufactures, and a measure of success has also attended the introduction of a rotary furnace in the laborious operation of puddling in the malleable iron manufacture. The rotation of the furnace keeps the charge it contains in constant motion, exposes it uniformly to the heat, and saves a great amount of disagreeable manual labor. The soda ash produced is not only made at much less cost, but it is also of finer quality than that made in a reverbatory furnace. The apparatus is applicable to many chemical processes in which reverberatory furnaces are at present used. Of R. F. employed in the iron manufacture, that invented by Danks for mechanical puddling has met with much attention, and Dr. C. W. Siemens' rotary furnace for making malleable iron direct from the ore is an invention which may yet be productive of great changes in the iron manufacture.

REY'NOLDS, John, D.D., born at Pinho in Devonshire, England, in 1549, studied at Merton College, Oxford. In 1563 he was made Fellow of Corpus Christi, where he lectured on Aristotle, till 1586, when he was elected reader of the theological lecture founded by Sir Francis Walsingham. In 1593 he became Dean of Lincoln, but resigned this office and refused a bishopric on being chosen President of Corpus Christi. He was the leader of the Puritan party, and was profoundly read in Hebrew and theology. At the Hampton Court conferences of 1603, he suggested and strongly urged that a new translation of the Bible should be made, a work in which he took a prominent part, the weekly meetings of the translators being held at his chambers. He died at Oxford in 1607. Besides sermons, controversial treatises, academical discourses, &c., he wrote an elaborate work against the reception of the Apocrypha into the Old Testament Canon, *Censura Librorum Apocryphorum Veteris Testamenti* (Oppenheim, 2 vols. 1611).

REYNOLDS, John F., an American officer, born in Pennsylvania in 1820, and graduated from West Point in 1841. He served with distinction during the Mexican war, and was promoted for gallantry at Monterey and Buena Vista. During the civil war he participated in the battles of Mechanicsville, Gaines' Mill, and Glendale. At the last of these he was taken prisoner, but was shortly afterwards exchanged. In 1862 he was made major-general of volunteers. He was engaged at Fredericksburg, Chancellorsville, and at Gettysburg was shot, and died a few moments afterwards.

RHEYDT, a town in Rhenish Prussia, on the left bank of the Niers, an affluent of the Maas, 17 miles W.S.W. of Dusseldorf by rail. It manufactures silk, velvets, yarn, hosiery, shawls, linens, leather, soap, glue, paper, and vinegar. Pop. (1875) 15,857.

RHINE'HART, William H., an American sculptor, born in Frederick Co., Md. He learned the trade of marble-cutting in Baltimore, but early developed a taste for sculpture, and when 30 years of age, visited Europe to prosecute his studies in that line of art. In 1858 he located in Rome, and rapidly attained prominence and success. The following are among his most famous works: *Angel of the Resurrection of Jesus*, *Woman of Samaria*, *Love Reconciled with Death*, and *Clytie*. The last was regarded by Rhinehart as the masterpiece of his life. Died at Rome, Oct. 28, 1874.

RHIZOCRI'NUS, a genus of *Crinoids* or Lily Stars, represented by the *R. Lofotensis*, observed by Sars of Christiania in 1867 in the North Sea off the Loffoden Isles. The interest attaching to this form arises from its forming the existing representative of an interesting fossil family (*Apiocrinidæ*) of 'Pear encrinites;' the group, prior to the discovery of R., having been regarded as extinct. R. is permanently rooted to the sea-bed, and has a flexible jointed stem, destitute of branches save at its root-extremity. The arms are furnished with *pinnules* or branches, and the *calyx* or body-cup is well developed.

RHIZOPHORA'CEÆ, an order of polypetalous dicotyledons, consisting of tropical trees or shrubs with opposite entire leaves, and axillary flowers either single or in clusters. The stamens are sometimes twice as numerous as the petals. The ovary has two or more cells, and the fruit has few seeds. The order includes some fourteen genera variously found in the continents of Asia, Africa, and America.

RHO'DEZ, the chief town of the department Aveyron, France, on the steep N. bank of the river Aveyron, 80 miles N.E. of Toulouse, with which it is directly connected by rail. Its cathedral is one of the finest Gothic structures in the S. of France, dating from the 13th and 14th centuries, having a lofty tower and magnificent stained glass windows. R. has several other interesting buildings, and is rich in Roman remains. Its manufactures are woollens, serges, leather, paper, playing-cards, &c., and its trade is chiefly in cattle, horses, and cheese (*fromages du Cantal*). Pop. (1872) 12,111. Anciently *Segodunum*, the chief town of the Celtic *Ruteni*, R. was in the Middle Ages, as *Rutena*, capital of the *Pagus Rutenicus*, and later, that of the principality of Rovergne (*Comitatus Rodensis*). After varying fortune, it passed by marriage to Henri III. in 1526.

RHÖNGEBIR'GE, a group of volcanic hills, part of the German Mittelgebirge, to the S.W. of Thüringerwald, between the valleys of the Fulda and Werra. The principal heights are the Milseburg (2813 feet), the Pferdskopf (3100), the Wasserkuppe (3074), and the Kreuzberg (3042). Much of the group is well-wooded, and the plateau of Vorderrhön, in the N., is in part cultivated.

RHYL, a watering-place of N. Wales, in Flintshire, 16 miles E. of Conway by rail, has a large and handsome church designed in First Pointed style by the late Sir Gilbert Scott (1861), a Romanesque Catholic church (1864), a townhall (1876) comprising board-offices, meat, fish, and vegetable markets, an aquarium and winter garden (1877), and a promenade pier, 2000 feet long, constructed in 1867 at a cost of £17,000. There are three English and one Welsh weekly newspapers, and steamers ply daily between R. and Liverpool. Pop. (1871) 4229.

RICH, Edmund, born at Abingdon, in Berkshire, England, towards the close of the 12th c., was sent at the age of twelve to a school at Oxford, and thence with his brother Robert proceeded to the University of Paris. Summoned home by the last sickness of his saintlike mother, he hired a hall at Oxford, and lectured there for several years, being one of the chief introducers of Aristotle to the English schools, and counting Grosseteste among his pupils. When a boy at school, he had already vowed himself to celibacy, and with quaint devotion plighted troth to an image of the Blessed Virgin in an Oxford church; now one night in a dream his mother bade him study the mystic symbol of the Trinity in place of Euclid's diagrams, and Edmund accordingly took orders, becoming treasurer of Salisbury Cathdral (*circa* 1220). In 1227 he preached the sixth crusade, when miracles attested a holiness that seven years later caused his elevation to the see of Canterbury.

As primate he strove to follow in the steps of his great foregoer, Langton, upholding the national party in opposition to Henry's foreign hirelings, lay and ecclesiastical. But though at the Council of Gloucester, in the month succeeding his consecration, he sternly rebuked the king for his murder of the Earl Marshal, Richard of Pembroke, and effected the temporary downfall of Roches and Rivaulx, he found himself thwarted at every turn by these and other favorites, foremost among them the legate Otho le Blanc; and from Rome, where he sought redress in 1238, he returned with a heavy heart. Two years later he left England for France, and, worn out by extreme asceticism, died at the priory of Soissy, near Provins, November 19, 1240. He was canonized in 1249 as St. Edmund of Pontigny, the place of his burial, whither in September 1874 four hundred English pilgrims repaired to pay their devotions at his shrine. See vol. iii. of Hook's *Lives of the Archbishops of Canterbury* (1863).

RICH'ARDS, Brin'ley, an English composer, was born in Carmarthen in 1819. He obtained the King's Scholarship at the Royal Academy of Music in 1835, and again in 1837, and subsequently became a professor in that institution. R. has written a large number of concertos, tarantelles, studies, &c., for the pianoforte, and some hundreds of songs, including 'God Bless the Prince of Wales,' which has become a sort of supplementary national anthem. He is also celebrated as a pianist.

RICH'ARDSON, Benjamin Ward, M.D., F.R.C.S., a distinguished physician and scientist, was born at Somerly, Leicestershire, October 31, 1828, and graduated at St. Andrews in 1854. He undertook the editorship of the *Journal of Health* in 1855, and in the following year gained the Astley-Cooper prize for a treatise on the coagulation of the blood, and the Fothergillian gold medal for an essay on diseases of the fœtus. He is the originator of several novel and original medical processes, such as the use of ether spray for local pain, and methyline bichloride as a general anæsthetic, and is one of the ablest and most successful experimenters in his profession.

His writings include *Clinical Essays* (1862, &c.), *For and Against Tobacco* (1865), *Alcohol, its Action and Use* (6 lectures, 1869), *Diseases of Modern Life* (1876; 4th ed. 1877), and *Hygeia, a City of Health* (1876). The last-named work made a great impression on the public mind.

RICH'ARDSON, Charles, LL.D., born in England, July 1775, abandoned the study of law for that of lingnistics, and in 1815 produced his *Illustrations of English Philology*. Intrusted with the lexicographical portion of the *Encyclopædia Metropolitana* (1818), he afterwards published the results of his labors separately

as a *New Dictionary of the English Language* (2 vols. 1835–37; new ed. 1863). R. was also author of a treatise *On the Study of Language; an Exposition of Tooke's Diversions of Purley* (1854), and a frequent contributor to the *Gentleman's* and other magazines. He died at Feltham, in Middlesex, October 6, 1865.

RICH HILL, in Bates Co., Mo. Coal mining and zinc smelting are carried on extensively, and there is a Holly system of water works. Pop. 5000.

RICHMOND, in Madison Co., Ky., 140 miles E. of Louisville. It is the center of the celebrated Blue-Grass region. Large quantities of fine stock are raised and shipped to southern and eastern markets. Pop. 3000.

RICHMOND COLLEGE, an educational institution, located at Richmond, Va., and under the control of the Baptists. It was founded as a theological seminary in 1830, and was developed into a college in 1844. It has suitable buildings, and a small endowment.

RICH'MOND, Legh, was born at Liverpool, England, 29th January 1772, studied at Trinity College, Cambridge, and in 1805 obtained the rectory of Turvey, Bedfordshire, where he died, 8th May 1827. He wrote several religious works, once widely read and much admired. The chief are *The Fathers of the Church*, and a volume of tales entitled *Annals of the Poor* (new ed. with Memoir, 1877). Some of these—*e.g.*, *The Dairyman's Daughter* and *The Young Cottager*—are not yet quite forgotten.
